CONTENTS

Contributors xvii

Preface xix

Chapter 1. Basic Concepts of Heat Transfer

1.1

- Heat Transfer Mechanisms / 1.1
 - Conduction / 1.1
 - Radiation / 1.3
 - Convection / 1.4
 - Combined Heat Transfer Mechanisms / 1.10
- Conservation Equations / 1.11
 - The Equation of Continuity / 1.13
 - The Equation of Motion (Momentum Equation) / 1.14
 - The Energy Equation / 1.18
 - The Conservation Equations for Species / 1.21
 - Use of Conservation Equations to Set Up Problems / 1.22
- Dimensionless Groups and Similarity in Heat Transfer / 1.23
- Units and Conversion Factors / 1.29
- Nomenclature / 1.31
- References / 1.36

Chapter 2. Thermophysical Properties

2.1

- Conversion Factors / 2.1
- Thermophysical Properties of Gases / 2.3
- Thermophysical Properties of Liquids / 2.26
- Thermophysical Properties of Solids / 2.46
- Thermophysical Properties of Saturated Refrigerants / 2.69
- Acknowledgment / 2.73
- Nomenclature / 2.73
- References / 2.73
- Selected Additional Sources of Thermophysical Properties / 2.74

Chapter 3. Conduction and Thermal Contact Resistances (Conductances)

3.1

- Introduction / 3.1
- Basic Equations, Definitions, and Relationships / 3.2
 - Shape Factors / 3.3
 - Shape Factors for Ellipsoids: Integral Form for Numerical Calculations / 3.11
 - Shape Factors for Three-Dimensional Bodies in Unbounded Domains / 3.15
 - Three-Dimensional Bodies with Layers: Langmuir Method / 3.19
 - Shape Factors for Two-Dimensional Systems / 3.20
 - Transient Conduction / 3.23
 - Introduction / 3.23
 - Internal Transient Conduction / 3.23
 - Lumped Capacitance Model / 3.24

Heisler and Grober Charts—Single-Term Approximations /	3.24
Multidimensional Systems /	3.25
Transient One-Dimensional Conduction in Half-Spaces /	3.26
External Transient Conduction from Long Cylinders /	3.28
Transient External Conduction from Spheres /	3.29
Instantaneous Thermal Resistance /	3.30
Transient External Conduction from Isothermal Convex Bodies /	3.31
Spreading (Constriction) Resistance /	3.34
Introduction /	3.34
Definitions of Spreading Resistance /	3.34
Spreading Resistance of Isoflux Arbitrary Areas on Half-Space /	3.35
Circular Annular Contact Areas on Half-Space /	3.36
Doubly Connected Isoflux Contact Areas on Half-Space /	3.37
Effect of Contact Conductance on Spreading Resistance /	3.38
Spreading Resistance in Flux Tubes and Channels /	3.39
Effect of Flux Distribution on Circular Contact Area on Half-Space /	3.39
Simple Correlation Equations of Spreading Resistance for Circular Contact Area /	3.40
Accurate Correlation Equations for Various Combinations of Contact Area, Flux Tubes, and Boundary Condition /	3.40
General Spreading Resistance Expression for Circular Annular Area on Circular Flux Tube /	3.41
Spreading Resistance Within Two-Dimensional Channels /	3.41
Effect of Single and Multiple Layers (Coatings) on Spreading Resistance /	3.43
Circular Contact Area on Single Layer (Coating) on Half-Space /	3.46
Circular Contact Area on Multiple Layers on Circular Flux Tube /	3.47
Transient Spreading Resistance /	3.48
Transient Spreading Resistance of Isoflux Hyperellipse Contact Area on Half-Space /	3.49
Transient Spreading Resistance of Isoflux Regular Polygonal Contact Area on Half-Space /	3.50
Transient Spreading Resistance Within Semi-Infinite Flux Tubes and Channels /	3.50
Contact, Gap, and Joint Resistances and Contact Conductances /	3.51
Point and Line Contact Models /	3.51
Thermal Contact, Gap, and Joint Conductance Models /	3.55
Gap Conductance Model and Integral /	3.59
Acknowledgments /	3.60
Nomenclature /	3.60
References /	3.67

Chapter 4. Natural Convection

4.1

Introduction /	4.1
Basics /	4.1
Equations of Motion and Their Simplification /	4.1
Problem Classification /	4.5
Heat Transfer Correlation Method /	4.6
External Natural Convection /	4.12
Flat Plates /	4.20
Cylinders /	4.26
Open Cavity Problems /	4.32
Cooling Channels /	4.32
Extended Surfaces /	4.36
Natural Convection Within Enclosures /	4.40
Introduction /	4.40
Geometry and List of Parameters for Cavities Without Interior Solids /	4.40
The Conduction Layer Model /	4.43
Horizontal Rectangular Parallelepiped and Circular Cylinder Cavities /	4.44
Heat Transfer in Vertical Rectangular Parallelepiped Cavities: $\theta = 90^\circ$ /	4.50
Heat Transfer in Inclined Rectangular Cavities /	4.55
Heat Transfer in Enclosures with Interior Solids at Prescribed Temperature /	4.58
Partitioned Enclosures /	4.60

Transient Natural Convection /	4.63
External Transient Convection /	4.63
Internal Transient Convection /	4.66
Natural Convection with Internal Generation /	4.68
Internal Problems /	4.68
Convection in Porous Media /	4.69
Properties and Dimensionless Groups /	4.69
External Heat Transfer Correlations /	4.71
Internal Heat Transfer Correlations /	4.72
Mixed Convection /	4.73
External Flows /	4.73
Internal Flows /	4.78
Acknowledgments /	4.80
Nomenclature /	4.80
References /	4.87

Chapter 5. Forced Convection, Internal Flow in Ducts

5.1

Introduction /	5.1
Scope of the Chapter /	5.1
Characteristics of Laminar Flow in Ducts /	5.1
Characteristics of Turbulent Flow in Ducts /	5.2
Hydraulic Diameter /	5.3
Fluid Flow Parameters /	5.3
Heat Transfer Parameters /	5.4
Thermal Boundary Conditions /	5.5
Circular Ducts /	5.5
Laminar Flow /	5.6
Turbulent Flow /	5.18
Transition Flow /	5.30
Concentric Annular Ducts /	5.32
Four Fundamental Thermal Boundary Conditions /	5.32
Laminar Flow /	5.33
Turbulent Flow /	5.50
Parallel Plate Ducts /	5.59
Laminar Flow /	5.59
Turbulent Flow /	5.65
Rectangular Ducts /	5.67
Laminar Flow /	5.67
Turbulent Flow /	5.72
Triangular Ducts /	5.73
Laminar Flow /	5.73
Turbulent Flow /	5.78
Elliptical Ducts /	5.82
Laminar Flow /	5.82
Turbulent Flow /	5.84
Curved Ducts and Helicoidal Pipes /	5.84
Fully Developed Laminar Flow /	5.85
Developing Laminar Flow /	5.90
Turbulent Flow in Coils with Circular Cross Sections /	5.90
Fully Developed Laminar Flow in Curved, Square, and Rectangular Ducts /	5.91
Fully Developed Turbulent Flow in Curved Rectangular and Square Ducts /	5.92
Laminar Flow in Coiled Annular Ducts /	5.92
Laminar Flow in Curved Ducts with Elliptic Cross Sections /	5.92
Longitudinal Flow Between Cylinders /	5.93
Laminar Flow /	5.93
Fully Developed Turbulent Flow /	5.97

Internally Finned Tubes / 5.99	
Circular Ducts with Thin Longitudinal Fins / 5.100	
Square Ducts with Thin Longitudinal Fins / 5.101	
Rectangular Ducts with Longitudinal Fins from Opposite Walls / 5.101	
Circular Ducts with Longitudinal Triangular Fins / 5.101	
Circular Ducts with Twisted Tape / 5.102	
Semicircular Ducts with Internal Fins / 5.104	
Elliptical Ducts with Internal Longitudinal Fins / 5.104	
Other Singly Connected Ducts / 5.105	
Sine Ducts / 5.105	
Trapezoidal Ducts / 5.106	
Rhombic Ducts / 5.107	
Quadrilateral Ducts / 5.107	
Regular Polygonal Ducts / 5.107	
Circular Sector Ducts / 5.108	
Circular Segment Ducts / 5.108	
Annular Sector Ducts / 5.110	
Stadium-Shaped Ducts / 5.111	
Moon-Shaped Ducts / 5.113	
Corrugated Ducts / 5.113	
Parallel Plate Ducts with Spanwise Periodic Corrugations at One Wall / 5.115	
Cusped Ducts / 5.116	
Cardioid Ducts / 5.117	
Unusual Singly Connected Ducts / 5.117	
Other Doubly Connected Ducts / 5.117	
Confocal Elliptical Ducts / 5.117	
Regular Polygonal Ducts with Centered Circular Cores / 5.118	
Circular Ducts with Centered Regular Polygonal Cores / 5.118	
Isosceles Triangular Ducts with Inscribed Circular Cores / 5.120	
Elliptical Ducts with Centered Circular Cores / 5.120	
Concluding Remarks / 5.120	
Nomenclature / 5.120	
References / 5.125	

Chapter 6. Forced Convection, External Flows

6.1

Introduction / 6.1	
Definition of Terms / 6.2	
Two-Dimensional Laminar Boundary Layer / 6.2	
Uniform Free-Stream Conditions / 6.2	
Surface with Streamwise Pressure Gradient / 6.28	
Two-Dimensional Turbulent Boundary Layer / 6.46	
Turbulence Transport Mechanisms and Modeling / 6.46	
Uniform Free-Stream Conditions / 6.54	
Transitional Boundary Layers / 6.72	
Transitional Boundary Layers for Uniform Free-Stream Velocity / 6.72	
Complex Configurations / 6.74	
Nomenclature / 6.75	
References / 6.80	

Chapter 7. Radiation

7.1

Introduction / 7.1	
Radiation Intensity and Flux / 7.2	
Blackbody Radiation / 7.3	
Nonblack Surfaces and Materials / 7.6	

Radiative Exchange: Enclosures Containing a Nonparticipating Medium / 7.12	
Black Surfaces / 7.12	
Exchange Among Gray Diffuse Surfaces / 7.16	
Radiative Exchange with a Participating Medium / 7.19	
Fundamentals and Definitions / 7.19	
Solution Techniques for the RTE / 7.24	
Solutions to Benchmark Problems / 7.43	
Radiative Properties for Participating Media / 7.44	
Radiative Properties of Gases / 7.44	
Radiative Properties of Particulates / 7.55	
Radiative Properties of Porous Materials / 7.66	
Radiative Properties of Semitransparent Materials / 7.69	
Combined Modes with Radiation / 7.70	
The General Energy Equation / 7.70	
Interaction with Conduction and Convection / 7.71	
Interaction with Combustion and Turbulence / 7.71	
Closing Remarks / 7.72	
Appendix A: Radiative Property Tables / 7.73	
Appendix B: Radiation Configuration Factors / 7.76	
Nomenclature / 7.84	
References / 7.86	

Chapter 8. Microscale Transport Phenomena

8.1

Introduction / 8.1	
Time and Length Scales / 8.2	
Kinetic Theory / 8.3	
Formulation / 8.3	
Thermal Conductivity of Crystalline and Amorphous Solids / 8.5	
Boltzmann Transport Theory / 8.9	
General Formulation / 8.9	
Fourier and Ohm's Laws / 8.11	
Hyperbolic Heat Equation / 8.12	
Mass, Momentum, and Energy Conservation—Hydrodynamic Equations / 8.12	
Equation of Radiative Transfer for Photons and Phonons / 8.15	
Nonequilibrium Energy Transfer / 8.16	
Joule Heating in High-Field Electronic Devices / 8.17	
Radiative Heating by Ultrashort Laser Pulses / 8.21	
Summary / 8.23	
Nomenclature / 8.24	
References / 8.25	

Chapter 9. Heat Transfer in Porous Media

9.1

Introduction / 9.1	
Single-Phase Flow / 9.4	
Conduction Heat Transfer / 9.4	
Convection Heat Transfer / 9.7	
Radiation Heat Transfer / 9.13	
Two-Medium Treatment / 9.32	
Two-Phase Flow / 9.35	
Momentum Equations for Liquid-Gas Flow / 9.36	
Local Volume Averaging of Energy Equation / 9.38	
Effective Thermal Conductivity / 9.41	
Thermal Dispersion / 9.42	
Phase Change / 9.44	
Condensation at Vertical Impermeable Bounding Surfaces / 9.44	
Evaporation at Vertical Impermeable Bounding Surfaces / 9.51	

Evaporation at Horizontal Impermeable Bounding Surfaces / 9.52
 Evaporation at Thin Porous-Layer-Coated Surfaces / 9.58
 Melting and Solidification / 9.60
 Nomenclature / 9.68
 Glossary / 9.72
 References / 9.76

Chapter 10. Nonnewtonian Fluids

10.1

Introduction / 10.1
 Overview / 10.1
 Classification of Nonnewtonian Fluids / 10.1
 Material Functions of Nonnewtonian Fluids / 10.2
 Rheological Property Measurements / 10.3
 Thermophysical Properties of Nonnewtonian Fluids / 10.7
 Governing Equations of Nonnewtonian Fluids / 10.8
 Use of Reynolds and Prandtl Numbers / 10.9
 Use of the Weissenberg Number / 10.11
 Laminar Nonnewtonian Flow in a Circular Tube / 10.11
 Velocity Distribution and Friction Factor / 10.11
 Fully Developed Heat Transfer / 10.13
 Laminar Heat Transfer in the Thermal Entrance Region / 10.13
 Laminar Nonnewtonian Flow in a Rectangular Duct / 10.14
 Velocity Distribution and Friction Factor / 10.14
 Fully Developed Heat Transfer—Purely Viscous Fluids / 10.17
 Heat Transfer in the Thermal Entrance Region—Purely Viscous Fluids / 10.21
 Laminar Heat Transfer to Viscoelastic Fluids in Rectangular Ducts / 10.23
 Turbulent Flow of Purely Viscous Fluids in Circular Tubes / 10.29
 Fully Established Friction Factor / 10.29
 Heat Transfer / 10.30
 Turbulent Flow of Viscoelastic Fluids in Circular Tubes / 10.31
 Friction Factor and Velocity Distribution / 10.31
 Heat Transfer / 10.35
 Degradation / 10.38
 Solvent Effects / 10.40
 Failure of the Reynolds-Colburn Analogy / 10.41
 Turbulent Flow of Purely Viscous Fluids in Rectangular Ducts / 10.42
 Friction Factor / 10.42
 Heat Transfer / 10.43
 Turbulent Flow of Viscoelastic Fluids in Rectangular Ducts / 10.43
 Friction Factor / 10.43
 Heat Transfer / 10.44
 Anomalous Behavior of Aqueous Polyacrylic Acid Solutions / 10.45
 Flow over Surfaces; Free Convection; Boiling / 10.45
 Flow over Surfaces / 10.45
 Free Convection / 10.45
 Boiling / 10.46
 Suspensions and Surfactants / 10.46
 Flow of Food Products / 10.46
 Electrorheological Flows / 10.46
 Nomenclature / 10.46
 References / 10.49

Chapter 11. Techniques to Enhance Heat Transfer

11.1

Introduction / 11.1
 General Background / 11.1
 Classification of Heat Transfer Enhancement Techniques / 11.1
 Performance Evaluation Criteria / 11.3

Treated and Structured Surfaces / 11.6	
Boiling / 11.6	
Condensing / 11.9	
Rough Surfaces / 11.9	
Single-Phase Flow / 11.9	
Boiling / 11.15	
Condensing / 11.15	
Extended Surfaces / 11.16	
Single-Phase Flow / 11.16	
Boiling / 11.21	
Condensing / 11.24	
Displaced Enhancement Devices / 11.29	
Single-Phase Flow / 11.29	
Flow Boiling / 11.32	
Condensing / 11.33	
Swirl-Flow Devices / 11.34	
Single-Phase Flow / 11.34	
Boiling / 11.38	
Condensing / 11.40	
Surface-Tension Devices / 11.41	
Additives for Liquids / 11.41	
Solid Particles in Single-Phase Flow / 11.41	
Gas Bubbles in Single-Phase Flow / 11.41	
Liquid Additives for Boiling / 11.42	
Additives for Gases / 11.44	
Solid Particles in Single-Phase Flow / 11.44	
Liquid Drops in Single-Phase Flow / 11.45	
Mechanical Aids / 11.45	
Stirring / 11.45	
Surface Scraping / 11.46	
Rotating Surfaces / 11.46	
Surface Vibration / 11.46	
Single-Phase Flow / 11.46	
Boiling / 11.49	
Condensing / 11.49	
Fluid Vibration / 11.49	
Single-Phase Flow / 11.49	
Boiling / 11.51	
Condensing / 11.52	
Electric and Magnetic Fields / 11.52	
Injection / 11.54	
Suction / 11.55	
Compound Enhancement / 11.55	
Prospects for the Future / 11.56	
Nomenclature / 11.57	
References / 11.60	

Chapter 12. Heat Pipes

12.1

Introduction / 12.1	
Fundamental Operating Principles / 12.2	
Capillary Limitation / 12.3	
Other Limitations / 12.8	
Design and Manufacturing Considerations / 12.10	
Working Fluid / 12.11	
Wicking Structures / 12.11	
Materials Compatibility / 12.12	
Heat Pipe Sizes and Shapes / 12.12	
Reliability and Life Tests / 12.13	

Heat Pipe Thermal Resistance / 12.14
 Types of Heat Pipes / 12.15
 Variable-Conductance Heat Pipes / 12.15
 Micro-Heat Pipes / 12.16
 Nomenclature / 12.17
 References / 12.18

Chapter 13. Heat Transfer in Packed and Fluidized Beds

13.1

Introduction / 13.1
 Hydrodynamics / 13.3
 Packed Beds / 13.3
 Fluidized Beds / 13.4
 Heat Transfer in Packed Beds / 13.8
 Particle-to-Fluid Heat Transfer / 13.9
 Effective Thermal Conductivity / 13.9
 Wall-to-Bed Heat Transfer / 13.13
 Relative Heat Transfer / 13.14
 Heat Transfer in Fluidized Beds / 13.14
 Gas-Solid Fluidized Beds / 13.14
 Liquid-Solid Fluidized Beds / 13.34
 Concluding Remarks / 13.37
 Nomenclature / 13.38
 References / 13.41

Chapter 14. Condensation

14.1

Introduction / 14.1
 Modes of Condensation / 14.1
 Condensation Curve / 14.2
 Thermal Resistances / 14.2
 Film Condensation on a Vertical Plate / 14.4
 Approximate Analysis / 14.4
 Boundary Layer Analysis / 14.10
 Film Condensation on Horizontal Smooth Tubes / 14.15
 Single Tube / 14.15
 Tube Bundles / 14.17
 Film Condensation on Horizontal Finned Tubes / 14.22
 Single Tube / 14.22
 Other Body Shapes / 14.25
 Inclined Circular Tubes / 14.25
 Inclined Upward-Facing Plates / 14.25
 Horizontal Upward-Facing Plates and Disks / 14.26
 Bottom of a Container / 14.27
 Horizontal and Inclined Downward-Facing Plates and Disks / 14.27
 General Axisymmetric Bodies / 14.28
 Horizontal and Inclined Elliptical Cylinders / 14.29
 Vertically Oriented Helical Coils / 14.29
 Condensation with Rotation / 14.30
 Zero Gravity / 14.31
 In-Tube Condensation / 14.31
 Flow Regimes / 14.31
 Vertical Tubes / 14.33
 Horizontal Tubes / 14.34
 Pressure Losses / 14.38
 Condenser Modeling / 14.40
 Noncircular Passages / 14.41

Direct Contact Condensation / 14.41
Condensation on Drops (Spray Condensers) / 14.41
Condensation on Jets and Sheets / 14.42
Condensation on Films / 14.43
Condensation on Vapor Bubbles / 14.44
Condensation of Mixtures / 14.45
Equilibrium Methods / 14.46
Nonequilibrium Methods / 14.48
Nomenclature / 14.49
References / 14.54

Chapter 15. Boiling**15.1**

Introduction / 15.1
General Considerations / 15.1
Manifestations of Boiling Heat Transfer / 15.2
Structure of This Chapter / 15.2
Phase Equilibrium / 15.3
Single-Component Systems / 15.3
Multicomponent Systems / 15.5
Nucleation and Bubble Growth / 15.6
Equilibrium of a Bubble / 15.6
Homogeneous Nucleation / 15.7
Heterogeneous Nucleation / 15.9
Bubble Growth / 15.18
Bubble Release Diameter and Frequency / 15.26
Pool Boiling / 15.30
Pool Boiling Heat Transfer Before the Critical Heat Flux Limit / 15.31
The Critical Heat Flux Limit in Pool Boiling / 15.56
Heat Transfer Beyond the Critical Heat Flux Limit in Pool Boiling / 15.66
Cross Flow Boiling / 15.75
Heat Transfer Below the Critical Heat Flux Limit in Cross Flow Boiling / 15.77
Critical Heat Flux in Cross Flow Boiling / 15.81
Heat Transfer Beyond the Critical Heat Flux Limit in Cross Flow Boiling / 15.83
Forced Convective Boiling in Channels / 15.84
Heat Transfer Below the Critical Heat Flux Limit in Forced Convective Boiling in Channels / 15.89
Critical Heat Flux in Forced Convective Boiling in Channels / 15.112
Heat Transfer Beyond the Critical Heat Flux Limit in Forced Convective Boiling in Channels / 15.132
Thin Film Heat Transfer / 15.137
Evaporating Liquid Films: Laminar Flow / 15.138
Evaporating Liquid Films: Turbulent Flow / 15.140
Evaporating Liquid Films: Multicomponent Mixtures / 15.140
Evaporating Liquid Films with Nucleate Boiling / 15.141
Heat Transfer to a Nonevaporating (Subcooled) Falling Liquid Film / 15.141
Film Breakdown / 15.142
Rewetting of Hot Surfaces / 15.143
Nomenclature / 15.145
References / 15.152

Chapter 16. Measurement of Temperature and Heat Transfer**16.1**

Introduction / 16.1
Temperature Measurement / 16.2
Basic Concepts and Definitions / 16.2
Standards and Temperature Scales / 16.3
Sensors / 16.8
Local Temperature Measurement / 16.51
Calibration of Thermometers and Assurance of Measurements / 16.54

Heat Flux Measurement /	16.58
Basic Principles /	16.58
Methods /	16.59
Thermal Resistance Gauges /	16.60
Measurement by Analogy /	16.64
Introduction /	16.64
Sublimation Technique /	16.65
Electrochemical Technique /	16.66
Acknowledgments /	16.68
Nomenclature /	16.68
List of Abbreviations /	16.71
References /	16.71

Chapter 17. Heat Exchangers

17.1

Introduction /	17.1
Classification of Heat Exchangers /	17.2
Shell-and-Tube Exchangers /	17.2
Newer Designs of Shell-and-Tube Exchangers /	17.14
Compact Heat Exchangers /	17.15
Exchanger Heat Transfer and Pressure Drop Analysis /	17.25
Heat Transfer Analysis /	17.27
The ϵ -NTU, P-NTU, and MTD Methods /	17.30
Fin Efficiency and Extended Surface Efficiency /	17.34
Extensions of the Basic Recuperator Thermal Design Theory /	17.47
ϵ -NTU _o and Λ - Π Methods for Regenerators /	17.55
Single-Phase Pressure Drop Analysis /	17.62
Single-Phase Surface Basic Heat Transfer and Flow Friction Characteristics /	17.66
Experimental Methods /	17.69
Analytical Solutions /	17.76
Experimental Correlations /	17.84
Influence of Temperature-Dependent Fluid Properties /	17.88
Influence of Superimposed Free Convection /	17.89
Two-Phase Heat Transfer and Pressure Drop Correlations /	17.89
Flow Patterns /	17.89
Two-Phase Pressure Drop Correlations /	17.95
Heat Transfer Correlations for Condensation /	17.97
Heat Transfer Correlations for Boiling /	17.103
Thermal Design for Single-Phase Heat Exchangers /	17.105
Exchanger Design Methodology /	17.105
Extended Surface Heat Exchangers /	17.105
Shell-and-Tube Heat Exchangers /	17.111
Thermal Design for Two-Phase Heat Exchangers /	17.120
Condensers /	17.120
Vaporizers /	17.125
Flow-Induced Vibration /	17.127
Tube Vibration /	17.127
Acoustic Vibrations /	17.128
Design Guidelines for Vibration Mitigation /	17.136
Flow Maldistribution /	17.136
Geometry-Induced Flow Maldistribution /	17.136
Flow Maldistribution Induced by Operating Conditions /	17.141
Mitigation of Flow Maldistribution /	17.145
Fouling and Corrosion /	17.146
Fouling /	17.147
Corrosion /	17.152
Concluding Remarks /	17.153
Nomenclature /	17.154
References /	17.162

Chapter 18. Heat Transfer in Materials Processing**18.1**

Introduction /	18.1
Heat Transfer Fundamentals Relevant to Materials Processing /	18.2
Conduction Heat Transfer /	18.2
Conduction Heat Transfer in Beam-Irradiated Materials /	18.2
Conduction Heat Transfer with Thermomechanical Effects /	18.9
Single-Phase Convective Heat Transfer /	18.12
Two-Phase Convective Heat Transfer /	18.26
Radiation Heat Transfer /	18.35
System-Level Thermal Phenomena /	18.43
Heating of a Load Inside Industrial Furnaces /	18.43
Quenching /	18.51
Processing of Several Advanced Materials /	18.57
Concluding Remarks /	18.61
Nomenclature /	18.61
References /	18.65

Index follows Chapter 18
