

## MathPack: Quest

Are you ready for a challenge that will change the way you think about mathematics? *MathPack: Quest* explores the origins of mathematical concepts and provides a fun format for learning and practicing these ideas. Each of the 16 chapters has a different focus, ranging from tessellations to probability. Each chapter has three components: the Quest, which gives you the information you need to solve the problems in the lesson; the Puzzler, a warm-up activity; and the Checkpoint to assess your understanding of the lesson's concepts. The workbook includes an answer key and a tracking chart for recording your progress, as well as suggested Web and print resources to keep you interested in pursuing your mathematical quest.

Duke TIP's Learn on Your Own *MathPack: Quest* unit was produced by the Duke University Talent Identification Program.
