
ANNOUNCEMENTS

TUTORIAL ON NEOPLASTIC HEMATOPATHOLOGY

A Tutorial on Neoplastic Hematopathology will be held at the University of Chicago Center for Continuing Education, September 21–25, 1981. The Tutorial will be under the direction of Henry Rappaport, M.D.

The registration fee (not including meals or housing) is \$750.00.

Further information may be obtained by writing Mr. Claude M. Weil, Associate Director, University of Chicago, Center for Continuing Education, 1307 East 60th Street, Chicago, Ill. 60637. Telephone: (312) 753–3186.

THE AMERICAN SOCIETY OF PEDIATRIC HEMATOLOGY/ONCOLOGY

Who is eligible to join? Any person holding a doctoral degree who is doing research in pediatric hematology or pediatric oncology may be eligible for membership. Physicians who have served residencies in pediatrics and in pediatric hematology/oncology, as well as physicians who are trained in specialties and disciplines allied to pediatric hematology/oncology, may join the society. This would include persons trained in pediatric surgery, pediatric pathology and pediatric radiology. Likewise, physicians trained in internal medicine as well as in hematology, oncology, or both, and who have a special interest in the treatment of blood diseases and cancer in children may be eligible for membership.

This new Society offers a forum for exchange of ideas on issues of special interest and concern to people in our specialty. There will be annual scientific and business meetings and a newsletter. The dues for the Society are \$25 per year.

For more information write: Dr. Carl Pochedly, Secretary–Treasurer, The American Society of Pediatric Hematology/Oncology, Nassau County Medical Center, East Meadow, N.Y. 11554. Telephone: (516) 542–3336.

Man, Cancer and Immunity

A.J. Cochran

University Department of Pathology, Western Infirmary, Glasgow, Scotland

1978, 206pp.

0.12.177550.X

Evidence has been accumulating during the last decade to suggest that some cancer patients react against their tumours, and that the immune system is involved in this reaction. In this book, studies *in vivo* and *in vitro*, which demonstrate such interactions, are critically discussed. These include assessments of membrane characteristics of tumour cells, the different classes of tumour-associated antigens, the immunological reactions to such antigens and the mechanisms whereby tumour cells may survive and proliferate in the presence of established anti-tumour immunity. Also considered are the more clinical aspects, detection and quantification of immune responses to tumour cells and the effects of conventional forms of treatment of cancer on such responses. The utility of immunological assessment in cancer diagnosis, prognosis, treatment planning and monitoring the clinically tumour free individual is discussed. Whereas much of the previously published work on this subject has devoted attention to studies in animals, in this volume the author concentrates on studies in Man.

"The best parts of this book are those which deal with Dr Cochran's extensive research on this subject, for we are following an explorer on his own voyages of discovery. When he is recounting his own work the book is vivid, well illustrated, and written in a strong and eager prose which carries the reader along with little effort. The other sections of the book also have many virtues." British Medical Journal, Jan. 1979

HEMATOLOGIST/ ONCOLOGIST:

Sought by the Department of Medicine, University of California, San Francisco, for appointment at the Assistant Professor in Residence level, for full-time performance with the Medical Service at the San Francisco VA Medical Center. Candidates should be trained in Internal Medicine, preferably board certified and have board eligibility in the field of hematology or oncology or both. Clinical interest must be strong, and successful candidate will have requisite background to establish an independent research program. Inquiries and CV's, please, to Marvin Sleisenger, MD, Chief, Medical Service, 111, VA Medical Center, 4150 Clement Street, San Francisco, CA. 94121. The University of California is an Affirmative Action/Equal Opportunity Employer.

WILMOT CANCER RESEARCH FELLOWSHIPS

The University of Rochester School of Medicine is offering training in cancer research to individuals with an M.D. degree and at least one year of postdoctoral experience. Research Fellows can train for up to three years in any discipline relevant to the cause, diagnosis, treatment or prevention of cancer.

Stipends range from \$22,000 to \$25,000, depending on the number of years since the M.D. degree was achieved. There is also an annual allowance of \$4,000 for other research costs.
