INTRODUCTION

This Handbook informs students about and systematically guides them through the graduate program in Clinical Psychological Science. In addition to summarizing the requirements and expectations of the Department of Psychological Sciences, it advises students about the sequence and timing of various requirements. It is the responsibility of all students to become familiar with the procedures described in this Handbook and to seek clarification from their advisors, the appropriate Director of Training, the Graduate Coordinator, or other faculty about those requirements or procedures not clear to them. Students are strongly encouraged to monitor their progress in the program through use of the attached *Student Progress Checklist* (in the Forms Section of the Handbook).

Also appended to this Handbook are "model" programs for completing the doctoral degree in Clinical Psychological Science (Appendix F), a number of the forms students complete at various stages of their training, and many of the policies that describe in detail the requirements for completing the program. These model programs are only illustrative and obviously do not replace the need for students to plan their training carefully and to seek faculty advising. Many students will find it helpful to track their progress in the program by using the Completed and Projected Course of Study form in the Forms Section.

Generally, the Graduate Handbook that is in effect during the first Fall semester in which a graduate student enrolls is the Graduate Handbook that guides a student's program requirements. Because graduate training evolves over time, it may be the case, however, that there will be changes to program requirements over the course of a student's program of study. Should the training committee(s) deem such changes as necessary, the director of the training program will notify students in writing as to when such changes take place and for whom they apply.

In addition to this Handbook, it is the responsibility of graduate students to familiarize themselves with policies and procedures outlined in the Graduate Catalog. The Graduate Catalog can be found online at: <http://www.kent.edu/graduatestudies/graduate-catalog>.

<p align="center">THE “QUICKSTART” GUIDE TO THE CLINICAL PSYCHOLOGICAL SCIENCE TRAINING PROGRAM</p>
--

These tables are designed to be a quick reference to major tasks, timelines, relevant handbook pages, and forms encountered while progressing through the program. While designed to be helpful, this table should not substitute for reading the handbook in full.

Year 1 Begin requirements for MA in Psychological Science			
Fall	Petition for transfer credits	p.10	
Spring	Submit materials for annual evaluation	p.14	Research Activity Report (p. 44)
Summer	Assemble thesis committee, and submit thesis topic approval form by end of Summer Session 3	p.16-17	Thesis topic approval form

Year 2 Continue requirements for MA in Psychological Science			
Fall	Indicate interest in Quantitative Methods Minor by end of Fall	p.23	
Spring	Submit materials for annual evaluation	p.14	Research Activity Report (p. 44)

Year 3 Complete requirements for MA in Psychological Science / Begin Candidacy			
Spring	Defend thesis by end of spring semester	p.17	Report of Thesis Final Examination Form Thesis Eval Form 2 Thesis Signature Forms
	Submit final formatted thesis, following most current style guide requirements	p.17	A&S Style Guide
	Apply for admission to doctoral candidacy	p.17	Application (p. 42)
	Distribute candidacy proposal to committee by June 15th	p.18	
	Submit materials for annual evaluation	p.14	Research Activity Report (p. 44)
Summer	Distribute candidacy paper to committee by August 15th	p.18	

Year 4 Complete Candidacy / Pursue Dissertation			
Fall	Complete candidacy paper requirements by November 15 th ; advisor informs training director of outcome.	p.18	Report of Candidacy Form (to be initiated by Graduate Secretary upon passing of candidacy).
	Assemble dissertation committee, and submit dissertation topic approval form	p.20	Graduate Faculty Roster
	Distribute dissertation prospectus by Sept 15th of year that student intends to apply for internship	p.20	
	Defend dissertation prospectus	p.20	Dissertation Topic Approval Form
	Petition CTC for 6th year funding by October 15 th , if necessary	p.21-23	Appendix A
Spring	Submit materials for annual evaluation	p.14	Research Activity Report (p. 44)

Year 5 Complete Dissertation and PhD in Clinical Psychology			
	Schedule dissertation defense, advisor requests grad faculty representative	p.20-21	Grad Faculty Rep Request Form
	Defend dissertation	p.21	Report of Dissertation Final Exam Form 2 Diss Signature Forms
	Submit final formatted dissertation, following the most current style guide requirements	p.21	A&S Style Guide

OVERVIEW OF GRADUATE PROGRAMS

The Department of Psychological Sciences offers training leading to the Master of Arts in Psychological Science and Doctor of Philosophy degrees in Clinical Psychology and Psychological Science, with further specialization possible in both areas. The Clinical Psychological Science program allows specialization in adult psychopathology, assessment, neuropsychology, child clinical/adolescent, and health psychology.

The graduate program recognizes the necessity for students to acquire a fundamental knowledge of general psychology as well as more specialized training. The program is designed to acquaint students with the theoretical and research content in their areas of specialized study and to teach them the research skills necessary to become competent investigators. The Department considers research training important for all psychologists, regardless of their specific occupational goals, and believes it should begin as early as possible.

The Clinical Psychological Science Training Committee, which consists of all full-time Clinical faculty, monitors the progress of students in the Clinical Psychological Science PhD program. The Psychological Science Training Committee, which consists of all full-time Psychological Science faculty, does the same for students in the Psychological Science PhD program. The Chair and Graduate Coordinator, who oversee the graduate programs, are ex officio members of both committees.

The Clinical Psychological Science and Psychological Science programs are well integrated. Since the philosophy and expectation of the Department is that all graduates of the program receive some training in general psychology, there are several shared course requirements, overlapping methodology requirements, and representation of both Clinical Psychological Science and Psychological Science faculty members on all thesis and dissertation committees.

THE CLINICAL PSYCHOLOGICAL SCIENCES PhD PROGRAM

The Clinical Psychological Sciences program adheres to the Clinical Scientist model of training, which emphasizes integration of science and clinical practice. The aim is for the student to develop a comprehensive knowledge of general and clinical psychology, an area of special expertise in research, and relevant clinical skills.

Clinical Psychological Science students are expected to complete their M.A. by the Spring semester of their third year and their doctorate within seven years of entering the program with a B.A., and five years if entering with an M.A. In order to promote adequate student planning and cohesion in their doctoral program, Clinical Psychological Science students should develop a comprehensive doctoral program of study, including their research plans. This plan should be developed in the spring semester of their first year, in consultation with the student's advisor.

ADVISING

In most cases, students are admitted to work with a particular Graduate Faculty member who will serve as their research mentor and advisor. Students should meet with their advisor during the first week of the fall semester. It is the Department's expectation that all graduate students will have completed their coursework by the end of the Spring semester of the third year. Hence, students should plan their academic program with their advisor. In addition, students are required to get their advisor's signed approval of their course registrations each semester.

The advisor will also supervise the student's master's thesis and dissertation. When the dissertation advisor is an associate member of the Graduate Faculty, the student and advisor need to select a co-advisor who is a full member of the Graduate Faculty.

In cases when a student feels it may be appropriate for their training and/or research interests to change their research advisor, the Department recommends that the student speak first with their respective training director who can help the student navigate the process of switching advisors. The training director may also consult with the Chair and/or the Graduate Program Coordinator during this process. If another faculty member is willing to serve as the student's new advisor, the training director will work with the new and former advisor to develop a clear plan for transition.

MENTORING

Given the training model espoused by our Department, each graduate student should take advantage of the mentoring provided by his/her faculty advisor. Generally, a graduate student's primary mentor is his/her research advisor. However, there are several circumstances in which a graduate student is required to establish a secondary mentoring relationship with another faculty member. For example, a Clinical Psychological Sciences student who works with a Psychological Science faculty member must have an advisor among the Clinical Psychological Sciences faculty with whom he/she establishes a mentoring relationship that focuses on his/her professional development in the clinical realm. Similarly, graduate students pursuing the Minor in Quantitative Methods must have a mentor among the faculty in the quantitative area with whom they establish a mentoring relationship that focuses on advising and consultation related to the student's program of study in the quantitative area.

Mentoring involves many activities, ranging from development of a course plan to meet one's career goals, development of skills related to teaching and research and the provision of constructive feedback related to these domains, and consultation on professional issues and career development. At a minimum, a graduate student should expect the following from his/her mentor: the development of goals/objectives for a specified time period; availability for periodic meetings; the provision of regular and constructive feedback regarding student progress; and any other responsibilities stipulated by Departmental policy or the Graduate Handbook. However, it is important to keep in mind that mentoring involves a relationship; thus, it is the responsibility of the graduate student to seek out these mentoring activities and to follow through in a timely fashion with any activities on which he/she and his/her mentor agree.

If problems arise in a student's mentoring relationship with a faculty member, he/she should contact the director of his/her training program to discuss the problem(s) (Approved 4/12/12).

REGISTRATION REQUIREMENTS

Students are expected to register for a minimum of eight (8) credits each semester of the academic year and six (6) credit hours for the Summer sessions throughout the time they are graduate students. This may be any combination of traditional/lecture courses, individual investigations, research, clinical practica, supervised clinical experience, thesis, or dissertation credits.

TRANSFERRING GRADUATE CREDITS

Students may submit to their Training Director a request to receive credit for previously completed graduate courses. The courses are evaluated by faculty teaching the analogous KSU courses. The appropriate Training Director is notified in writing whether or not the course is equivalent to the KSU course. Where a course equivalency is determined, the course requirement is waived. After all evaluations for course equivalencies for a particular student are completed, the appropriate Training Director informs the student of the equivalencies. The decision of the Training Director may be appealed to the Graduate Coordinator.

1. Discipline Specific Knowledge (DSK) courses - Where a course equivalency is determined, the DSK area requirement is waived. All four DSK areas may be satisfied by such equivalencies.
2. Quantitative Statistical Analysis I and II - Where a course equivalency is determined, the course requirement is waived. One or both courses may be satisfied by such equivalencies. Quantitative requirements beyond these two courses will typically not be waived, except under unusual circumstances.
3. For Clinical Psychological Science students, up to three of the six clinical core courses and up to four electives may be satisfied through course equivalencies. Practicum requirements typically will not be waived, except under unusual circumstances.

CLINICAL PSYCHOLOGY COURSE REQUIREMENTS

Course requirements may be grouped into the following categories: (1) Quantitative and Methodology, (2) DSK Requirements, (3) Clinical Core, (4) College Teaching of Psychology, (5) Elective Courses, and (6) Clinical Practica. The course requirements are also summarized in Appendix E.

QUANTITATIVE AND METHODOLOGY REQUIREMENTS. All students must complete the following two courses during the first year in the graduate program:

PSYC 6/71651	Quantitative Statistical Analysis I
PSYC 6/71654	Quantitative Statistical Analysis II

Clinical students also must complete **PSYC 61685: Clinical Research Methods**, and at least **one additional quantitative methodology course (PSYC81691 Seminar in Quantitative Methods)**.

The Department currently offers four different sections of this seminar: Hierarchical Linear Modeling; Longitudinal Data Analysis; Psychometrics; Structural Equation Modeling.

DISCIPLINE SPECIFIC KNOWLEDGE REQUIREMENTS. These courses (listed below) should be completed before the M.A. is awarded. Prior to completion of the M.A., Clinical Psychology students must complete one course from each of the first three groups and Social Psychology.

PSYC 6/71350	Physiological Psychology
PSYC 6/71054	Learning and Conditioning
PSYC 6/70413	Cognitive Neuropsychology
PSYC 6/70453	Introduction to Cognitive Psychology
PSYC 70604	Cognitive Development
PSYC 70604	Cognitive Development
PSYC 6/71580	Social Psychology

From time to time, faculty may offer Special Topics courses in the core areas that may fulfill competency in the area. Please check with the Director of Clinical Training if you would like to take one of these Special Topics courses in lieu of a core course in order to make sure that the course will meet core competency requirements.

CLINICAL CORE. The Clinical Core consists of the following courses:

PSYC 6/70272	Introduction to Psychological Assessment*
PSYC 6/70273	Advanced Psychological Assessment: Adult*
<i>* Note: Students in the Child Clinical Specialization take SPSY 6/77951 and SPSY 6/77955 instead of these courses</i>	
PSYC 6/70371	Introduction to Psychological Therapy
PSYC 6/70105	Developmental Psychopathology
PSYC 6/70592	*Practicum in Diagnostic Interviewing (*Students will register for 2 credits in the first year and 1 credit in their second year.)
PSYC 6/70324	Professional and Ethical Issues in Clinical Psychology
PSYC 80391	Emotion

COLLEGE TEACHING OF PSYCHOLOGY. Students assigned to teach their own section of courses must complete PSYC 71894: College Teaching of Psychology. Ideally, students would enroll in this course during the same semester in which they are teaching. The course is typically taken during the fall semester of the third year. This course may not be used to satisfy an elective requirement.

SUPERVISION OF TEACHING FELLOWS (TFs). Since graduate students take College Teaching of Psychology just prior to and during the first semester they teach, the faculty member who teaches College Teaching is responsible for supervising their teaching during that first

semester. After the first semester of teaching, each TF's advisor supervises the TF during his/her second semester of teaching. His/her advisor will review a syllabus and at least one exam and will attend at least one lecture. The advisor will provide written feedback to the student and meet with the student to discuss the feedback. TFs who receive satisfactory evaluations will not be required to have their faculty advisor supervise subsequent years of teaching. The Advisor Feedback form for Graduate Teaching Fellows can be found in the Forms Section.

If there are problems:

- 1st Semester – If after reviewing the student evaluations, it appears that a TF has had difficulty during his/her first semester of teaching, the Chair will notify the student's advisor and consult with the faculty member responsible for the College Teaching of Psychology course.
- 2nd Semester – If after reviewing the student evaluations, it appears that a TF has had difficulty over two semesters, the Chair will involve the TF's advisor, and the advisor will work with his/her student to improve his/her classroom performance.
- If, after teaching satisfactorily for two semesters, a TF's student evaluations suggest emerging difficulties, the Chair will consult with the TF's advisor, and together make appropriate recommendations. If a TF fails to perform satisfactorily in the classroom after working with his/her advisor and other designated individuals, whether or not he/she can continue teaching in the Department will be at the Chair's discretion. These same recommendations would apply if undergraduate students have filed verifiable complaints about the teaching fellow that are considered legitimate. (Policy Adopted 8-31-06)

ELECTIVES: Five additional elective courses are required. They must be chosen in consultation with the student's advisor and have relevance to the student's proposed plan of study. Courses outside of the Department of Psychological Sciences usually will not be approved for meeting this requirement. However, if students feel there are unique educational reasons to take an elective course outside of the Department, they may petition the Clinical Psychological Sciences Training Committee to take such a course to fulfill an elective requirement.

COURSE WAIVERS FOR RESEARCH PROJECTS. Clinical Psychological Sciences students may substitute research project(s) for elective courses. The guidelines for requesting a course waiver are as follows:

1. The student selects a full-time faculty member from the Department of Psychological Sciences who agrees to supervise the project. The faculty member decides whether the student needs to register for research credits for the project; the student does not register for the course being waived.
2. The student prepares a proposal for the research project detailing its (a) goals, (b) methods of research, (c) proposed product (e.g., manuscript submitted for publication), and (d) proposed schedule for completion of the project. The general criteria for the project are:
 - a. The proposed research may not be a direct part of the student's research assistantship responsibilities, thesis, or dissertation research;
 - b. the student must take the initiative and assume primary responsibility for the project, although it may be collaborative with a faculty member;

- c. the project should require a time commitment comparable to that of a graduate course (or two if two course waivers are requested) although it is recognized that it may not be possible to complete the research within the time-frame of one semester;
 - d. the proposed research must fall within the scope of feasibility for a student project; and
 - e. the project must yield a written product. A copy of the written product is placed in the student's file.
3. The proposal is submitted to the advisor and the Director of Clinical Training for approval, along with the Research Waiver Approval form (see Forms). If the proposed project, is approved, the advisor will notify the student in writing of the approval, and place a copy of the proposal and the signed approval form in the student's file, at which time the student may begin the project. During the period in which the student is conducting this project, he or she should enroll in 3 CH's of Research under the supervision of the advisor. If a student pursues more than two course waivers, the Clinical Psychological Science Training Committee will review the student's proposal and make a recommendation to the Director of Clinical Training.

Clinical Psychological Science students may request waivers for up to four elective courses. The number of courses waived per research project is negotiated on an individual basis, depending on the magnitude of the research project. In general, this research should not be part of the thesis/dissertation, although it may be an extension of the thesis/dissertation. The criterion for acceptable completion of the research project can be any of the following:

- a. a manuscript suitable for submission for publication;
- b. preparation of a grant proposal;
- c. preparation of a book chapter;
- d. oral or poster presentation at a regional/national conference with the student as senior author.

When the project has been completed, the responsible faculty member acknowledges fulfillment of the written product obligation in a letter to the student, completes and signs the last part of the student's Research Waiver Approval form (see Forms), and gives the form to the Graduate Secretary to be recorded and placed in the student's file.

CLINICAL PRACTICA. Clinical Psychological Science PhD students also must complete eight semesters of practica, 1000 hours of field placement in a departmentally arranged community agency, and a full-time, APA-accredited internship of a calendar year's duration. While participating in practica or a clinical placement, students should be registered for these activities, including during a summer term, by enrolling for a minimum of one course credit. During students' internship, they should continue their registration for dissertation credits.

Practicum experiences are structured in a developmentally progressive manner, requiring increasing levels of clinical skills and professional independence. To that end, second year students are assigned a grade of "IP" at the end of the fall semester. At the end of the spring semester, students are assigned a grade of "S/U" and are advised about their progress in developing the skills necessary for going on placement. At the end of students' third year, the CTC will be actively involved in deciding whether a student is ready to go on placement. The two major criteria in making this decision are whether the student has completed their M.A. and whether the student has developed the skills necessary to function at the level of professional

independence required in placements. Failure to meet either of these criteria is likely to prevent the student from going on a clinical placement, which is likely to have serious implications for completing the remaining degree requirements and for the student's continued financial support.

COURSE REMEDIATION POLICY. A grade lower than a B- in any course must be remediated in order to receive credit for the course toward completion of degree requirements. The specific remediation plan needs to be developed by the course instructor and approved by the Director of Clinical Training and will consist of one of the following: (a) repeat the course the next time it is offered; (b) take a comparable course; (c) write a paper; and/or (d) pass an exam prepared by the instructor. Regardless of the specific remediation agreed upon, the student is expected to demonstrate mastery of the course material at a level considered by the instructor to be equivalent at least to a grade of "B-". If a course is successfully remediated, the student will be considered to have met that course requirement; however, the grade for the course will not be changed. The student must discuss remediating a course grade with the instructor within one semester after completing the course.

CLASSROOM CONDUCT. Professional behavior is expected of graduate students at all times, including in classes. Graduate students are expected to attend all graduate classes and arrive to each class on time. In the event that a student must miss a class it is the student's responsibility to notify the faculty instructor as soon as possible and provide a justification for the absence. Graduate students are expected to complete all course assignments in a timely manner and take exams when they are scheduled. In the event that it is impossible for a student to complete an assignment by the deadline, it is the student's responsibility to notify the faculty member immediately and explore what, if any, arrangements can be made. Students are expected to be actively engaged in class and computers should be used for purposes of taking notes only, and phones should remain stored. Violations of professional behavior may be reported to advisors and training directors.

Students are also expected to attend departmental colloquia.

EVALUATIONS

The guiding principle in student evaluations is whether the student is making adequate progress in completing program requirements. Students should be aware that some of the time limits specified in this Handbook are shorter than those indicated in the Graduate School Catalog. These shorter time limits supersede those specified in the Graduate School Catalog.

Each student's progress is evaluated on two levels, first by the advisor and then by the appropriate Training Committee. Evaluations are based on academic achievement, research activity, and professional standards criteria. These criteria include grades in courses and seminars, scholarly activity as reflected in students' *Research Activity Reports* (see Forms), quality of performance and timeliness of thesis and dissertation research, performance in clinical practica and placements, performance in research, performance of graduate assistantship duties, and such activities as attendance at brown bags, colloquia, conferences, and presentation and publication of research papers. These criteria are evaluated by the advisor,

practicum and placement supervisor(s), assistantship supervisor(s), and other faculty members having contact with the student.

It should be noted that students in the Clinical Psychological Sciences program are also evaluated by the Clinical Psychological Sciences faculty on their capacity and potential to function as clinical psychologists. Students are evaluated in areas such as their ability to function in professional roles in clinical practice, on clinical placements, and on their internship. While it is impossible to specify precisely all the variables that might influence one's ability to function professionally, these include the ability to develop and maintain appropriate relationships with clients, the capacity for professionally appropriate intimacy, and the personal integrity not to exploit clients. Furthermore, students' professional functioning should reflect increasing levels of maturity, judgment, and professional independence as they progress in the program. When Clinical Psychological Sciences students' performance in professional such as assessment and psychotherapy suggests that their own adjustment interferes with their professional functioning, they may be asked to obtain various types of remediation, such as additional courses, guided readings, and/or personal psychotherapy. If the Clinical Psychological Sciences Training Committee determines that the process of remediation has not been effective, it may recommend that the student be dismissed from the Clinical Psychological Sciences program, even if the student's performance in courses, research activities, and other more objectively measured tasks has been satisfactory.

Regular evaluation of student performance is a part of our training programs in Psychological Sciences, as well as a requirement of the College of Arts and Sciences' policy on academic standing for graduate students (see <http://www.kent.edu/graduatestudies/guide-to-graduate-education/section-5.1> for these additional policies). Students are evaluated for their performance in the Spring semester every year by the appropriate training committee. The results of each evaluation are summarized in a letter to the student. If the evaluation identifies concerns about the student's performance, the training committee will specify remediation conditions that the student must meet. Failure to meet these conditions may be grounds for suspending funding or recommending dismissal. Dismissal from the program may be recommended for poor academic performance, failure to complete program deadlines in a timely manner, a lack of trainability as determined by the training committee, failure to demonstrate professional behavior, or ethical violations. Also, a student may fail to be admitted to doctoral candidacy because the relevant training committee considers the student to lack the potential to complete the doctoral program in a timely and appropriately scholarly manner. Students in the graduate program in Clinical Psychological Science also may be dismissed for a failure to perform adequately in their clinical work. (See Appendices C and D for additional information.) The Clinical Psychological Science Training Committee may delay acting upon the student's request for admission to candidacy until the student has had the opportunity to seek professional remediation.

The *Appeal of Dismissal and Grievance Procedure* in Appendix C summarizes the review process involved and students' rights to participate in this process. Whenever students believe that their rights have been disregarded, or if they do not agree with their training committee's decision (and have exhausted their appeal options), they have access to University grievance procedures that can be found online in the *University Policy Register* (University Policy 4-02.3 Student Academic Complaints, Section G).

REQUIREMENTS FOR THE MASTERS DEGREE

The M.A. in Psychological Science degree is designed to provide students with a general background in psychology and is a prerequisite for more specialized training leading to the Doctor of Philosophy degree. The M.A. is a research degree, awarded after the student has satisfied the Department's scholarship and research requirements. The general requirements are described below.

COURSE REQUIREMENTS. The M.A. degree requires a minimum of 30 hours of credit, including completion of the first-year quantitative sequence, Clinical Research Methods, and six credits of continuous registration in Thesis I. If the M.A. has not been completed after enrollment in six credits of Thesis I, students should register continually for Thesis II each semester, including summer, until all degree requirements are met. (See *Graduate School Catalog* for rules pertaining to thesis credits). While progressing toward completion of the M.A. degree, students should strive to complete as many of the remaining course requirements as time and scheduling permit. The focus, however, should be on timely completion of the M.A. degree.

GRADES. In order to qualify for graduation with an M.A. degree, the College of Arts and Sciences requires students to have a 3.00 (B) average from all graduate courses attempted. The minimally acceptable grade in the required methodology courses (PSYC 6/71651, Quantitative Statistical Analysis I and PSYC 6/71654, Quantitative Statistical Analysis II) is a B-. Students who receive a grade lower than this will be expected to remediate this deficiency after consultation with the specific course instructor.

A master's degree candidate who receives a combination of more than eight hours of "B-" or lower grades, or more than four hours of grades lower than a C, is subject to dismissal. Furthermore, when the Training Committee deems that the number of Incompletes (I's) on a student's record indicates poor progress toward completion of a degree, it may recommend dismissal of the student.

ADDITIONAL REQUIREMENTS. Clinical Psychological Sciences students are expected to have a formal thesis topic approved by their advisor and committee by the end of the Spring semester of their first year. The Thesis Topic Approval Form must be filed by the end of Summer III of the first year of graduate school. For Clinical Psychological Science students, completion of the M.A. by the Spring semester of the third year is considered satisfactory progress. Students needing an extension beyond the third full year must submit a request in writing to the Clinical Psychological Science Training Committee by the end of the third year.

THESIS TOPIC APPROVAL. When a thesis topic has been approved by the student's thesis advisor, the student should fill out the *Thesis Topic Approval Form* and turn it into the Graduate Coordinator for approval to begin his/her thesis project. The Graduate Coordinator will file the form with the College of Arts and Sciences, and, according to Graduate College procedures, this must be done no later than the semester preceding that in which the student expects to receive the degree. However, for graduate students in the Clinical Psychological Science program, the deadline for filing this form is earlier; clinical students must file these forms by the end of Summer III of their first year in graduate school. The form is available from the Graduate Secretary or online at <http://www.kent.edu/graduatestudies/forms-library>.

Prior to the actual initiation of the thesis research, the student, in consultation with their advisor, should seek approval from the *KSU Institutional Review Board* or *Animal Care and Use Committee*. Initiating appropriate paper work is the student's responsibility. Failure to file this form can delay graduation.

THESIS REGISTRATION. When a student is ready to begin his/her thesis research, he/she must register continuously for Thesis credits, including summers, until all requirements for the master's degree are met. Students must register for 6 CH of Thesis I, and they generally fulfill this requirement by registering for 3 CHs of Thesis I in two consecutive semesters. Once students have completed 6 CH of Thesis I, they must continuously register for 2 CHs of Thesis II through the semester in which they graduate with their master's degree.

THESIS ORAL EXAMINATION. Each M.A. candidate must defend his/her thesis in an oral examination. The thesis document must be distributed to the thesis committee at least 10 days in advance of the oral defense. The examination committee will consist of at least four faculty members, including the advisor and three other departmental faculty members. At least one member of the examining committee must be from the Psychological Science faculty and one from the Clinical Psychological Science faculty. This committee evaluates the quality of the thesis and the quality of the student's thesis defense. For both Clinical Psychological Science and Psychological Science students, the committee offers opinions concerning the likelihood that the student will be able to complete a doctoral dissertation that meets departmental standards (see the "Masters Thesis and Defense Evaluation Form" in Forms). Students should come to the defense with the appropriate form available for the committee to complete. The student should also bring to the defense a completed *Report of Final Examination* form, which must be filed with the College of Arts and Sciences in order to receive the Master's degree. The form is available from the Graduate Secretary and online at <http://www.kent.edu/graduatestudies/forms-library>. Initiating appropriate paperwork is the student's responsibility.

At times, students delay initiating their thesis research because of their misperceptions about the scope of the task. The M.A. thesis should be primarily a demonstration that the student has acquired the methodological skills to conduct empirical research, evaluate appropriately the data collected, report the findings in a professionally prescribed manner, and interpret the significance of the research at an appropriate level of generalization. Guidelines for writing the M.A. thesis may be found in Appendix D.

REQUIREMENTS FOR DOCTORAL CANDIDACY

APPLICATION FOR ADMISSION TO DOCTORAL CANDIDACY. After completion of the M.A. thesis defense, typically no later than the end of the Spring semester of their third year, students may apply for admission to doctoral candidacy by submitting an *Application for Admission to Doctoral Candidacy* (see Forms) to their training director. Admission to doctoral candidacy does not occur automatically, but is based upon a demonstration of excellence in a variety of areas, including the student's performance in the classroom and the quality of his/her research/professional activities. Clinical Psychological Science students also must have performed satisfactorily in clinical practice. The quality of their clinical work, the timeliness with

which they have completed their thesis, the quality of the thesis and defense, and the judgment of the faculty about a student's professional and personal development are all considered. Students are expected to have a grade point average of at least 3.3 (B+) when they apply for admission to doctoral candidacy.

When Clinical Psychological Science students' performance in professional activities such as assessment and psychotherapy suggests that their own adjustment interferes with their professional functioning, they may be asked to obtain various types of remediation, such as additional courses, guided readings, and/or personal psychotherapy. The Clinical Psychological Science Training Committee may delay acting upon the student's request for admission to doctoral candidacy until the student has had the opportunity to seek professional remediation.

DOCTORAL CANDIDACY REQUIREMENT. Clinical Psychological Science students admitted to doctoral candidacy are required to fulfill a candidacy requirement by writing a candidacy paper. The candidacy paper is a thorough integrative review of the literature on a topic of choice. Students are expected to aim toward making some theoretical or methodological contribution to the area of scientific psychology that may be related to the student's future dissertation project, but not identical to the introduction of the dissertation. Papers may advance theory, or systematically evaluate alternative theories or methods. Papers must represent an advanced graduate level of understanding and writing concerning the topic and will potentially be suitable for publication in a journal that publishes review papers, or as a book chapter. Length limits are from 30-70 pages.

Procedures: The candidacy paper is evaluated by a committee of three departmental faculty members, at least two of which must be members of the Clinical Psychological Science Training Committee. This committee is chaired by the student's advisor. The second member of the committee is chosen by the student and advisor, and the third is appointed by the Director of Clinical Training. The student first submits a 2-3 page proposal describing the aims, goals, and scope of the proposed paper, a detailed outline of the paper, and a preliminary reading list or list of references. The committee must approve the proposal and outline. Committee members may offer input and request revisions before approving them. Once the proposal and outline are approved, the student writes the paper independently, without help from his/her advisor or anyone else, and submits it to the committee.

The committee reads the paper, and each member provides a written review and votes on options: pass, pass pending revisions, revise and resubmit, or fail. Candidacy paper committee members will have two weeks to read and evaluate the paper, and provide feedback. If a committee member will not be able to meet this deadline during the summer months, he/she will work out an alternate schedule with the student's advisor. The individual reviews may be given to the student, or the committee may choose to synopsize them into one larger review. For a student to pass, no more than one member may vote anything other than pass. If a paper has been revised and resubmitted once and still does not pass, the student fails the candidacy requirement. In such a case, the Clinical Training Committee will decide on a course of action, which may involve recommending dismissal of the student.

Students apply for admission for doctoral candidacy after they complete their master's thesis

and have sufficient practicum experience to allow for evaluation of their clinical skills. Students entering with a master's degree with a thesis equivalent may apply for admission to doctoral candidacy after they have completed sufficient practicum experience to allow for evaluation of their clinical skills. Students entering with a master's degree who have to complete a thesis equivalency project may apply for admission to doctoral candidacy after completing their thesis equivalency project and sufficient practicum experience to allow for evaluation of their clinical skills. All clinical students are expected to apply for admission to doctoral candidacy no later than the end of Spring semester of their third year. The final paper must be completed no later than November 15th of their 4th year, after completion of (a) all requirements for the Master's degree, (b) all discipline specific knowledge, clinical core, and quantitative core course requirements (not electives), and (c) the third year clinical practicum.

Once the student's performance has been evaluated, the student's advisor communicates the outcome of the exam to the Director of Clinical Training, who notifies the Graduate Coordinator and Graduate Secretary.

To facilitate completion of this requirement in a timely way, the Clinical Training Committee **strongly recommends** the following timeline at the latest. Students are encouraged to work on their candidacy paper ahead of the proposed schedule. Students should complete and distribute their candidacy paper proposal to their committee for review and approval no later than June 15th of their third year. Students should distribute the candidacy paper to their committee by August 15th of their 4th year. These dates will allow sufficient time to make any revisions in time to meet the November 15th completion date. In order to complete/pass candidacy by the November 15th deadline, revised candidacy papers must be distributed to the committee no later than November 1st. In the extraordinary circumstances that a second revision becomes necessary, the student must apply for an extension. Extensions of 1 month can be granted with the approval of the Candidacy Committee and Director of Clinical Training. Extensions longer than 1 month require the approval of the Clinical Training Committee.

Extension of deadlines for submitting the Candidacy paper and first revision will only be granted in extenuating circumstances. If a student feels that he/she has an extenuating circumstance, he/she will have to appeal to the Clinical Psychological Sciences Training Committee in advance of November 15th. Students will be required to submit a written statement explaining their extenuating circumstances, a written plan for completing their Candidacy requirement, and written support from their advisor. Students who appeal for extensions of their Candidacy requirement may be required to meet with the Clinical Psychological Science Training Committee to request an extension.

READINESS FOR INTERNSHIP. Clinical Psychological Science graduate students must be endorsed for internship by the Clinical Psychological Science Training Committee prior to applying for internship. In order to receive endorsement of the Clinical Psychological Science Training Committee, students must have completed their thesis, Candidacy requirement, and have submitted their prospectus to their committee no later than September 15th of the year in which they are applying. In addition, the student must complete at least one year of clinical placement in their 4th year. Students can apply for internship in their 4th year, as long as they are simultaneously in their 4th year clinical placement. In order for a student to receive the

endorsement of the Clinical Psychological Science Training Committee for applying for internship, the student must have satisfactory evaluations of their clinical skills, including competencies appropriate to their level of training.

REQUIREMENTS FOR THE PH.D.

DISSERTATION REGISTRATION. Once students have completed their coursework and have been admitted to doctoral candidacy, they may register for dissertation hours. Students must register for two consecutive semesters of Dissertation I (15 CH each semester), and, after completing 30 CH of Dissertation I, they must register continuously for 15 CH of Dissertation II each semester, including summer, until all requirements for the degree have been met. Failure to be registered continually will result in the student being classified as "inactive." An inactive student will need to petition the appropriate training committee to be reinstated to active status.

DISSERTATION PROSPECTUS. Upon the successful completion of the candidacy requirement, the Ph.D. candidate will prepare a dissertation proposal under the supervision of a faculty advisor. The prospectus should be distributed to the committee at least two weeks in advance of the prospectus defense.

Clinical Psychological Science students must have a dissertation prospectus approved before their applications for internship will be endorsed by the Director of Clinical Training, which is a requirement of all APA-accredited internships. In order not to penalize students for possible delays caused by difficulties in scheduling dissertation committee meetings, internship applications will be endorsed if the dissertation prospectus has been approved by the student's advisor and copies have been distributed to the dissertation committee by September 15. While there is some variability among internship sites with respect to application deadlines, careful planning is needed to complete the dissertation prospectus prior to applying for an internship.

DISSERTATION COMMITTEE. The advisor, in consultation with the student, will appoint a dissertation committee to provide guidance to the candidate in the planning and execution of the research project. The committee consists of the advisor, two or more faculty members from the Department of Psychological Sciences (including at least one Psychological Science and at least one Clinical Psychology faculty member) and one graduate faculty member from another department. Only one of the members of the committee may hold A-3 or F-3 graduate faculty status; all other members must hold F-4 graduate faculty status. The current graduate faculty roster (with graduate faculty statuses) can be found here, which can aid students and advisors in identifying appropriate members of the committee: <http://www.kent.edu/graduatestudies/graduate-faculty-status>.

After the prospectus has been accepted by the dissertation committee, but prior to the actual initiation of the dissertation research, the student should obtain approval from the *KSU Institutional Review Board* or *Animal Care and Use Committee*. After the *Dissertation Topic Approval Form* is signed by the advisor and committee members, it is submitted to the Graduate Coordinator. The forms are available online: <http://www.kent.edu/graduatestudies/forms-library>. (See *Graduate School Catalog* for rules pertaining to dissertation credits.).

The Prospectus must be defended and the Dissertation Topic Approval Form must be filed with the College of Arts and Sciences no later than the semester preceding that in which the candidate expects to receive the degree.

FINAL ORAL EXAMINATION. When the final dissertation document is deemed ready to distribute to the committee, the advisor will ask the Dean of the College of Arts and Sciences to select a Graduate Faculty Representative, who is the second graduate faculty from another department to be on the dissertation committee. The advisor makes this request at <http://www.kent.edu/cas/graduate-faculty-representative>. The dissertation will be read by the members of the dissertation committee. After all members have read the dissertation, the advisor will schedule a pre-orals meeting (without the student) to determine if the dissertation is ready to be defended. The dissertation should be distributed to the committee at least two weeks before the pre-orals meeting. The advisor selects another faculty member from outside the department to serve as moderator for the final oral examination. It is possible for the Graduate Faculty Representative to serve as moderator if he/she agrees to do so. The moderator does not examine the student but merely coordinates the proceedings (e.g., allowing each member of the committee equal time for questioning). The final oral examination schedule is disseminated to the Department and is open to the university community. After concluding the orals, a completed *Report of Final Examination Form* must be filed with the College of Arts and Sciences. This form is available from the Graduate Secretary and online at <http://www.kent.edu/graduatestudies/forms-library>.

Each training program has time limits for completion of the Ph.D. Students needing an extension beyond those time limits must submit a request in writing to the appropriate training committee. An extension may be granted with or without qualifications, which may require the student to demonstrate their currency in the field by repeating the candidacy requirement. Denial of the extension results in dismissal. Approval of the Dean of the College of Arts and Sciences is required for extensions beyond the first year.

FINANCIAL SUPPORT FOR CLINICAL PSYCHOLOGICAL SCIENCE STUDENTS

All students doing satisfactory work can expect financial support during their first three years in the program in the form of a graduate assistantship or teaching fellowship, subject to the availability of funds and provided they are making adequate progress, as determined by the Clinical Psychological Science Training Committee. In the fourth year, Clinical Psychological Science students who have completed their M.A. and have demonstrated the development of adequate clinical skills and professional independence will be supported by departmentally arranged placements with local mental health/social/ medical/forensic facilities. Most of these placements start on July 1. Students who stay for a fifth year in the program before internship may be provided with a second placement if enough placements are available. In some cases, students in the 4th and 5th years may be placed in community settings part-time, approximately 10 hours/week, and teach an undergraduate course on campus.

Students who complete a graduate assistantship request form are obliged to accept the assistantship they are assigned. Although uncommon, students may be interested in an assistantship/financial support outside the Department of Psychological Sciences. Students in

residence who are interested in seeking financial support outside the Department of Psychological Sciences need to seek approval from their advisor and training program director. Students who are receiving support outside the Department need to demonstrate the relevance of the experience to their training. The Department will only consider those requests that clearly demonstrate that the experience is directly relevant to the student's training program.

All graduate students who expect to be supported by a graduate assistantship or on a clinical placement are required to apply for federal work study (FWS) funds every year, although they are not required to accept FWS. Because many sources of student support are based on the academic year, there may be greater variability in the amount and availability of support for summers.

Students need to be aware of two circumstances which may have significant financial impact in their fourth year. Many of the agencies with which the department affiliates accept only students who have completed their M.A. degree. Thus, students need to have completed their master's degree by the end of the Spring semester of their third year. Additionally, fourth year Clinical Psychological Science students do not receive full tuition fellowships. The department's contribution during the fourth year covers only Dissertation I or II credits and two credits of Supervised Clinical Experience. A student who has been admitted to the doctoral program by the end of the third year, and therefore can register for Dissertation credits (which are relatively inexpensive), will have no out of pocket expenses. Failure to meet these requirements in a timely manner will result in out of pocket expenses. See the Policy on Graduate Funding in Appendix A.

Given that the Department relies heavily on clinical placements to fund advanced Clinical Psychological Science students, it is the Department's expectation that all fourth year Clinical Psychological Science students who expect to be funded during their fifth year will provide a ranking of clinical placements during the Spring semester of their fourth year. Should a student's mentor have funding for an advanced graduate student or the student has his/her own fellowship funding, he/she has the option of forgoing a second placement.

In the event that there are more students seeking placements than are available, the following criteria are used in determining placement priorities: a) students who have had no prior placement, then b) students who have completed/defended their M.A. If sufficient placements are available for students interested in a second clinical placements, priority for the second placement will be based upon progress through the program.

One issue that arises is how the Clinical Psychological Science Training Committee gauges student progress through the program. The graduate program in Clinical Psychological Science has been designed such that it can be completed in five years (including a full-time APA-approved internship). However, our data suggest that the median number of years to graduation (including an APA-approved internship) is six years.

It is the CTC's expectation that students will complete the following progress markers in a timely fashion:

- Students will have filed their Thesis Topic Approval Forms by the end of Summer III of their first year of graduate school;

- Students will have completed the following coursework by the end of the Spring semester of their third year: Departmental Core, Clinical Core, Quantitative/Methodology requirements, and elective courses;
- Because the majority of clinical placements expect that students will have their master's degrees before they begin placement (see below), students will have graduated with their MA degree by the Spring semester of their third year;
- Students will complete Clinical Practicum in a satisfactory manner, thus demonstrating readiness for clinical placement;
- Students will complete their candidacy requirement within six months of completion of all requirements for the Master's degree, which means completion of (a) the thesis defense and (b) all departmental, clinical, and quantitative core course requirements (not electives), and (c) the third year clinical practicum. Except in special circumstances that have been approved by the training committee, the candidacy requirement should be completed by November 15th of the 4th year;
- Students will complete their clinical placement in a satisfactory manner, thus demonstrating readiness for internship;
- Students will distribute their dissertation prospectus to their committee members by September 15th of the year that they intend to apply for internship. For those students who intend to complete the program in five years, they will distribute their dissertation prospectus by September 15th of their fourth year. For those students who intend to complete the program in six years, they will distribute their dissertation prospectus by September 15th of their fifth year.

Funding for advanced graduate students will be contingent upon availability of funds and satisfying these progress markers in a timely manner. The procedures for requesting funding for a sixth year are detailed in Appendix A. The CTC recognizes that there are, at times, extenuating circumstances that may interfere with a student's progress through the program. It is the student's responsibility to inform the CTC regarding any extenuating circumstances. When appropriate, the CTC will consider such extenuating circumstances when marking recommendations regarding an advanced graduate student's priority for funding.

RESPONSIBILITY FOR TUITION/FEES DURING CLINICAL INTERNSHIP. When on internship, Clinical Psychological Science students are responsible for paying their tuition and fees, and should budget accordingly.

OUTSIDE EMPLOYMENT. Although neither the University nor the Department has any rules regarding students' employment outside of the University while they are enrolled as full-time students, past experience, as well as common sense, would suggest that students' progress in completing their graduate training in a timely fashion is very likely to be impeded if they are working beyond the requirements of an assistantship or placement. Students are strongly encouraged to avoid outside employment and to seek consultation from their advisor and Training Director before encumbering themselves in this manner.

MINOR IN QUANTITATIVE METHODS (Optional)

As the field of psychology continues to advance at a rapid pace, it is becoming quite evident that quantitative methods are integral to psychological research. Knowledge of advanced statistical

techniques can open new pathways to the study of human behavior by allowing social scientists to examine hypotheses using a new framework or paradigm. Students in both programs have the option to pursue a Minor in Quantitative Methods (MQM).

The goal of the MQM is to train individuals in some of the more recent developments of statistical science and, particularly, the application of these developments to real-world psychological data. One unique feature of the MQM is the focus on the application of quantitative methods; although each faculty member has expertise in an area of statistics, he or she also conducts research in a substantive area of psychology. The MQM is intended for those students who intend to pursue academic careers, wherein the use of advanced quantitative methods in one's own program of research is highly valued, and who also intend to teach undergraduate or graduate courses in statistical methods.

Coursework: The courses required for the MQM are intended to supplement, rather than compete with, students' training in substantive areas of research. Therefore, the MQM requires only 15 credits of quantitative coursework. Six credits are earned by successful completion of the first-year quantitative psychology sequence (PSYC61651/61654), which is required of all graduate students in the department. Students then must successfully complete three additional courses (nine credits) beyond the first year sequence, which may also count as departmental electives. Examples of courses and seminars that have been offered include Multivariate Statistics, Hierarchical Linear Modeling, Longitudinal Data Analysis, Structural Equation Modeling, and Psychometrics. Students may also choose to complete courses from other departments, pending approval of the quantitative faculty.

To encourage the application of quantitative training to real-world data sets, students have the option of replacing one of the three advanced electives with an independent research project (3 credits). This independent research project must have a quantitative focus, and must be approved by all of the quantitative faculty members; the supervisor of the project, however, can be any of the department's graduate faculty members. Prior to engaging in the project, students should consult with both their advisor and a quantitative faculty member regarding the topic of this independent research project. A brief written proposal (1-2 pages) must be approved by the student's advisor and the quantitative faculty before the student can register for this research project. Successful completion of this project will allow the students to waive one elective course.

Teaching Experience: Psychologists with strong quantitative skills are often expected to disseminate statistical knowledge to their colleagues; thus, students who pursue the MQM must have at least one practicum experience. This teaching experience can be as an instructor of an undergraduate course (PSYC 21621: Quantitative Methods in Psychology; PSYC 31684: Quantitative Methods in Psychology II), or being the teaching assistant for the first year graduate sequence.

Research Experience: Students who complete the MQM should need to either (a) complete a thesis/dissertation that has a strong quantitative component, or (b) publish a first-authored quantitative-focused paper or a first-authored content paper with sophisticated analyses, as determined by the student's quantitative mentor. Specifically, students should demonstrate that they are able to appropriately conduct and interpret sophisticated statistical analyses. Note, however, that this requirement does not necessarily suggest that students need to develop a

new statistical technique or methodology.

Application and Identification of Mentor. Students interested in pursuing the minor should, by the end of the fall semester of their second year, identify a mentor from the quantitative faculty and submit a short application to the Coordinator for the Quantitative Minor Program, Dr. Was. This application should include a brief paragraph indicating how their career would benefit from pursuing the quantitative minor and information on grades for quantitative courses. Starting Fall 2016, in order to gain admission to the quantitative minor program, students cannot have less than an A in the quantitative sequence courses. To earn the quantitative minor, students must have no more than one B in the three additional courses. This application will be reviewed by the quantitative faculty with input from the student's primary faculty mentor. To track progress, students should complete the Quantitative Minor Sheet (see Forms).

SPECIALIZATIONS (Optional)

Students may complete specialized training in Adult Psychopathology, Assessment, Neuropsychology, Child/Adolescent, or Health Psychology. Any of these specializations can be completed without taking additional courses beyond those required for all students. The requirements are as follows:

ADULT PSYCHOPATHOLOGY. This specialization entails the following courses, practica, and thesis/dissertation:

- 1) **Courses:** In consultation with the advisor, students identify an area of concentration within adult psychopathology. Students must then take at least three courses that are relevant to their concentration in psychopathology. It is also recommended that students take PSYC 6/71260: Theories of Personality as an elective.
- 2) **Practica/Placement:** For third year practicum, students should either take the adult advanced general practicum or a specialty practicum related to their concentration. Students should seek field placements and internships in facilities that offer opportunities for adult assessment and/or treatment.
- 3) **Thesis/Dissertation:** The thesis and dissertation topics must be related to adult psychopathology, specifically in the identified area of concentration.

ASSESSMENT. This specialization entails the following courses and practica:

- 1) **Courses:** In addition to the Departmental and Clinical Core courses, students should take elective assessment courses including:

Child Assessment
Neuropsychological Assessment
Seminar: Advanced MMPI-2 Interpretation

Some of these elective course requirements may be waived to give students more time for involvement in additional research projects

The Forensic Psychology course will also be of interest to many Assessment Psychology students.

- 2) Practica:** Assessment Psychology students should select a third year practicum experience and a fourth year community placement that will enhance assessment skills.

NEUROPSYCHOLOGY. This specialization is modeled after the Houston Conference recommendations and requires completion of the following activities:

- 1) Courses:** The following courses must be completed:

PSYC 60276/70276 Neuropsychological Assessment
PSYC 80391 Introduction to Functional Anatomy
PSYC 60895/70895 Psychopharmacology

- 2) Practica:** Third year practicum in neuropsychology, in addition to other clinical and clinical research experiences.

- 3) Dissertation:** The dissertation topic must be related to neuropsychology.

- 4) Internship:** Completion of an APA-accredited internship with significant neuropsychological training, including both patient care and didactic activities.

CHILD/ADOLESCENT/PEDIATRIC. This specialization entails the following courses, practica, and dissertation:

- 1) Courses:** Instead of PSYC 6/70272 (Introduction to Psychological Assessment) and PSYC 6/70273 (Advanced Psychological Assessment: Adult), graduate students in the Child/Adolescent specialization take the following two courses in their first year, through School Psychology:

SPSY 6/77951 Cognitive Assessment of Children in Schools
SPSY 6/77955 Instructional Assessment for School Psychologists

In addition, the courses listed are required.

As part of the Departmental Core, students must take:

PSYC 6/71054 Learning and Conditioning
PSYC 70604 Cognitive Development

As part of the Clinical Core, students must take:

PSYC 80391 Emotion

As electives, students must also take:

PSYC 6/70376 Child Psychotherapy, must be completed in first or second year
Pediatric Psychology, or other appropriate elective

2) Practica: Third year specialty practicum in child/adolescent. Field placement in a facility which provides an opportunity to work with children and families for at least part of the placement experience is typically available.

3) Dissertation: The dissertation topic must be related to child and/or family issues.

HEALTH PSYCHOLOGY. This specialization entails the following courses, practica, and thesis/dissertation:

1) Courses: Complete 3 courses that cover at least 2 of the following areas. Other courses from other departments (e.g., Public Health) may be permissible but will need approval by the Health Psychology faculty.

Biological Aspects of Health

- Psychobiology
- Psychobiological Aspects of Health Psychology
- Psychopharmacology
- Functional Neuroanatomy

Social Aspects of Health

- Health Behavior
- Psychosocial Aspects of Health
- Psychology of Risk Communication

Clinical Aspects of Health

- Clinical Aspects of Health
- Pediatric Psychology

2) Practica: To the extent possible gain supervised clinical experience or research experience in clinical intervention in Health Psychology. Third year practicum students might gain this experience either at SUMMA or other settings providing Health Psychology services.

3) Thesis/dissertation: Complete a master's thesis and/or doctoral dissertation on a health topic.

**POLICY FOR GRANTING DEPARTMENTALLY
SANCTIONED CLINICAL HOURS**

From time to time students have requested the CTC to sanction clinical hours for work that is carried out in external agencies that are not part of departmentally assigned externships or clinical placements. That is, the department does not typically allow these hours to be counted in internship applications as part of the student's supervised training experience. However, the department recognizes that sometimes students have the opportunity to participate in clinical work that could be legitimately construed as a valuable addition to their supervised clinical

training. If students present a written request, the CTC will consider such requests on a case by case basis. The request must be submitted to the CTC **prior to beginning the activity**. Retroactive requests will not be considered. The request should describe (a) the student's specific goals, (b) the nature of the activity, (c) the time commitment per week, (d) the number of weeks, and (e) the supervision to be received. The following conditions should be satisfied in order for the CTC to grant such a request:

- The clinical activity is supervised by a licensed psychologist
- The activity is delimited and specific in nature (e.g. a time limited group experience).
- The activity is not available through other parts of the training program.
- The activity is approved by the student's faculty advisor.
- The student is making adequate progress toward his/her degree.

APPENDICES

- A. Departmental Policy on Graduate Funding
- B. Procedures for Leaves of Absences and Dismissal
- C. Appeal of Dismissal from Graduate Program(s)
- D. Guidelines for Writing MA Thesis
- E. Procedures for Requesting Change of PhD Program
- F. Course Requirements for Clinical Psychological Science
- G. Model Program for Clinical Psychological Science
- H. Procedures for Requesting Change of PhD Program

APPENDIX A: DEPARTMENTAL POLICY ON GRADUATE FUNDING

General Policies

Continued graduate funding is contingent on adequate performance and progress in the program and availability of funds.

All students are expected to graduate with their M.A. within three years of entry into the graduate program. For Clinical Psychology students, the deadline is earlier (completion of the M.A. degree by the Spring semester of the third year), because clinical placements expect students to have their master's degree when they begin their clinical placement. Psychological Science students are expected to complete their M.A. degree by the Summer of their third year.

Upon completion of the master's degree students are eligible to register for Dissertation I. Accordingly, for all 4th year students, the department will cover the cost of registering for Dissertation I or Dissertation II in the fall and spring semester. For 4th year Clinical Psychology students, the department also covers 1 credit hour of Supervised Clinical Experience. All 4th year students who have not defended their thesis will have tuition and fees that exceed these allocations and will be responsible for the balance, which is typically several thousand dollars/semester.

Exceptions can be made when the student's training committee determines that the student has not completed the master's thesis because of extenuating circumstances beyond the student's control. To be granted an exception, students must first appeal to their training committee.

Departmental Funding Policy for Advanced (Sixth Year) Students

Historically, there have been some circumstances under which sixth year graduate students may receive an assistantship. These have included the following: (1) a graduate student's faculty mentor has funding, and he/she has an assistantship available for an advanced graduate student; or (2) a graduate student is nominated for and receives a competitive University fellowship.

Should there be additional assistantship funding available for sixth year graduate students after the Department has accommodated the funding needs of less advanced students, assistantship funding only will be available to graduate students who have made satisfactory progress through the program as determined by the student's training committee. In addition, the student must have a complete copy of the dissertation prospectus distributed to his/her dissertation committee by October 15th of his/her fifth year of graduate school. Those students who have met these criteria and who are requesting funding for their sixth year must petition their training program by April 1st of their fifth year. In this petition, they must certify that their dissertation prospectus was distributed by October 15th of their fifth year, they must provide the date of their prospectus defense, and they must justify their need for assistantship funding during their sixth year. Students will be notified by May 1st of their 5th year whether they have funding for their sixth year.

For advanced (sixth year) graduate students, academic year assistantships and summer assistantships are awarded separately. Summer assistantships will be available to sixth year graduate students under the following conditions: (1) the Department has funds available for advanced graduate students; (2) the graduate student has continued to make satisfactory progress through the program; (3) during the annual evaluations completed by each training committee in the Spring, the training committee determines that the graduate student should have priority for summer funding; and (4) the student will be in residence during the time required by the summer assignment.

The Clinical and Psychological Science training committees recognize that there are, at times, extenuating circumstances that may interfere with a student's progress through the program. If an advanced graduate student is requesting assistantship funding, it is the student's responsibility to inform the CTC or the ETC regarding any extenuating circumstances. When appropriate, the training committees will consider such extenuating circumstances when making recommendations regarding an advanced graduate student's priority for funding.

If an advanced graduate student is ineligible for assistantship funding, he/she may be eligible for part-time teaching. It is important to know that for part-time teaching, instructors are compensated for each course they teach. Students who are interested in part-time teaching should be sure to complete the teaching request form when it is distributed (Approved 4/26/12).

APPENDIX B: PROCEDURES FOR LEAVES OF ABSENCE AND DISMISSALS

LEAVES OF ABSENCE (LOAs): A student may request a leave of absence for a legitimate educational or personal reason. The student should submit a written request for a leave of absence, detailing his/her reason for the leave and a projected date of return, to his/her Training Director. The Training Director will take the request to the training committee, who considers the request. If the training committee recommends that the request be granted, the Training Director will notify the student, the Graduate Coordinator, and the Department Chair, and the student will request the LOA through their Flashline account, following the procedures outlined here; <http://www.kent.edu/graduatestudies/faq-leave-policy>. The request is then reviewed by the Department chair, the Dean of the College of Arts of Sciences, and the Dean of Graduate Studies, who approves or disapproves the request. Prior to requesting a LOA, students should familiarize themselves with University Policies regarding LOAs, which are detailed here: <http://www.kent.edu/graduatestudies/faq-leave-policy>)

If a student's leave of absence is approved and takes effect during a semester, he/she will need to make provisions to withdraw from his/her classes.

DISMISSAL: If a student fails to meet program requirements, the appropriate training committee may recommend to the Chair that the student be dismissed from his/her program. Dismissal from the graduate program may be recommended for poor academic performance, failure to complete program deadlines in a timely manner, a lack of trainability as determined by the training committee, failure to demonstrate professional behavior, or ethical violations.

Students in the graduate program in Clinical Psychological Science also may be dismissed for a failure to perform adequately in their clinical work. As mentioned previously, while it is impossible to specify precisely all the variables that might influence one's ability to function professionally, these include the ability to develop and maintain appropriate relationships with clients, the capacity for professionally appropriate intimacy, and the personal integrity not to exploit clients. Furthermore, students' professional functioning should reflect increasing levels of maturity, judgment, and professional independence as they progress in the program. If the Clinical Psychological Science Training Committee has recommended a course of remediation and subsequently determines that the process of remediation has not been effective, it may recommend that the student be dismissed from the Clinical Psychological Science program, even if the student's performance in courses, research activities, and other more objectively measured tasks has been satisfactory.

Students have two levels of appeal: one within the Department and one at the College level. (Appendix C outlines departmental procedures for appeal of dismissal from a graduate program.) If the student chooses not to appeal a decision of the training committee, the Training Director sends a letter to the Chair recommending dismissal. The Chair will then inform the Dean of the College of Arts and Sciences recommending dismissal. If the Dean accepts the recommendation, he then notifies the student regarding his/her dismissal.

APPENDIX C:
APPEAL OF DISMISSAL FROM GRADUATE PROGRAM(S)

The training committees evaluate graduate student performance on an ongoing basis, with the stipulation that evaluations occur at least once per academic year. The Clinical Training Committee is responsible for evaluating the performance of students enrolled in the Clinical Psychology PhD program and the Psychological Science Training Committee is responsible for evaluating the performance of students enrolled in the Psychological Science PhD program. Criteria for evaluating student performance are elaborated in the Graduate Student Handbook.

After an evaluation of a particular student's performance in the masters or doctoral program, the training committee may recommend dismissal from the program. In such a case, the student will be sent a letter by the appropriate training director regarding the decision of the training committee. The letter will inform the student that she/he can appeal the decision to the appropriate training committee. The student will have two weeks to notify the training director in writing that she/he plans to appeal and the grounds for the appeal. As part of the appeal process, the student may submit to the director any written materials that she/he wants to have the training committee review. The student also may choose to address the training committee in person. The director will notify the student of the date by which written materials must be submitted and the date of the student's presentation, if any, to the training committee. If the Graduate Coordinator is not a member of the training committee, he/she will be invited to attend the appeal meeting but will not have a vote.

After the training committee reviews materials submitted by the student and/or hears the student's presentation to the committee, another vote will be taken concerning dismissal. The director of the training committee will notify the student in writing of the outcome of the appeal. If the vote is in favor of not recommending dismissal of the student, dismissal actions will be terminated. If the vote is in favor of recommending dismissal of the student, the training director also will inform the Chair of the recommendation in writing. The Chair then will inform the Dean of the College of Arts and Sciences. The student will be notified that she/he may appeal the training committee's recommendation to the Dean of the College of Arts and Sciences. For a description of the appeal process at the College level, please refer to University Policy 4-02.3 Student Academic Complaints, Section G.

It should be understood that the procedures described in this section pertain to recommendations of dismissal from a graduate program to which a student previously has been admitted and not to recommendations concerning admission to a doctoral program.

Revision Approved by Faculty: March 17, 2011

Revision Distributed to Graduate Students: March 18, 2011

APPENDIX D: GUIDELINES FOR WRITING THE MASTER'S THESIS

A major purpose of the master's thesis is to help students acquire skills for becoming competent scientific researchers. The most common form of writing required of researchers in all settings is the empirical journal article. Because this form of writing differs in significant ways from other forms of prose, developing students' skills in the use of this writing style is an important aspect of graduate training. Therefore, the master's thesis should be written in a form modeled after an empirically-based article submitted to a scholarly journal. Students writing their thesis document should approach the task in exactly the same way as if they are preparing a manuscript to be submitted to a journal.

The thesis should be written in APA format unless another format is called for in a specific sub-discipline of psychology.

The introduction should emphasize the specific theoretical and empirical rationale for the particular research (i.e., why this particular study with these particular methods was conducted) rather than a comprehensive review of all the potentially relevant literatures. However, students should be familiar with all relevant literatures and will be subject to questions about them during thesis oral defenses.

The thesis should be brief. A typical thesis should be about 20-30 typed, double-spaced pages (depending in part on the number and/or complexity of the reported studies, etc.). There may be some differences between the master's thesis and a journal article. For instance, the master's thesis may include a slightly more elaborate review of the relevant literature, more complete report of results, or more comprehensive discussion of results. However, students should keep the empirical journal article in mind as the prototype to be matched as closely as possible. Any modifications of the journal article format should be discussed with and approved by the advisor.

For some studies, it will be important to make available to interested readers supplementary materials, such as copies of scales, extended data tables, etc. Such materials can be placed in appendices, but it should be possible for a reader to understand the thesis without reference to such materials.

The Graduate College has agreed to accept theses that are prepared according to the journal article format. However, the final document must conform to the guidelines prescribed by the Graduate College in the "Style Guide and Instructions for Typing Theses and Dissertations" found online at: <https://www.kent.edu/cas/style-guide-dissertations-theses>. It should be noted that the guidelines provided by the Graduate College deal exclusively with the typing of the document (e.g., margins, pagination, table of contents) and not with the content of the thesis.

**APPENDIX E:
PROCEDURES FOR REQUESTING
CHANGE OF PHD PROGRAM**

Occasionally, due to a genuine change in professional interests, a graduate student may be interested in changing PhD programs: e.g., from Clinical Psychology PhD to Psychological Sciences PhD, or vice versa.

These changes do not occur automatically at a graduate student's request, and require evaluation by the training program that the student wishes to transfer into. In such circumstances, the student should first seek guidance from their mentor as well as the training director of the program to which the student wishes to transfer, to understand the ramifications of the change for coursework and timeliness of completion of the PhD.

The training committee into which the student wishes to transfer will evaluate the candidate based on the following materials, which should be submitted to the training director of the program that the student wishes to transfer into: (1) a written statement by the student indicating why a transfer is requested and how pursuit of the PhD in the new training program will further their professional goals, as well as any other explanations for the request, (2) a written statement by the student's research mentor to indicate support for the transfer, (3) a current CV, (4) copies of all yearly student evaluations by the originating training program, and (5) copies of all student teaching evaluations (if applicable).

The training program into which the student wishes to transfer will evaluate these materials, and consider the request. In order for such a transfer to be approved, 75% of the faculty votes by the training committee must be "Yes" votes.

APPENDIX F: CLINICAL TRAINING PROGRAM REQUIREMENTS

METHODOLOGY COURSES

Quantitative Statistical Analysis I
Quantitative Statistical Analysis II
Clinical Research Methods
One elective course

DISCIPLINE SPECIFIC KNOWLEDGE REQUIREMENTS

One course from each of the following groups:

Biological Aspects of Behavior: Physiological Psychology or Learning and Conditioning

Cognitive Aspects of Behavior: Cognitive Neuropsychology; Introduction to Cognitive Psychology; Cognitive Development

Social Bases of Behavior: Social Psychology

Developmental Aspects of Behavior: Cognitive Development

CLINICAL CORE

Introduction to Psych Assessment (or SPSY 6/77955 for Child/Adolescent students)
Advanced Psychological Assessment (or SPSY 6/77951 for Child/Adolescent students)
Introduction to Psychological Therapy
Developmental Psychopathology
Practicum in Diagnostic Interviewing
Professional and Ethical Issues in Clinical Psychology
Emotion

ELECTIVE COURSES

Five additional courses or seminars that best fit the student's plan of study; courses in other departments must be approved by the Clinical Psychological Science Training Committee. Practicum, field placement, research, etc. do not count. Up to four of the elective requirements may be waived by doing additional approved research projects.

RESEARCH

Masters thesis and doctoral dissertation based on original empirical research. Both requirements involve a final oral exam before a committee of faculty.

DOCTORAL CANDIDACY EXAMINATION

A candidacy paper that reviews and integrates the literature on a broad area of interest in psychology.

CLINICAL EXPERIENCE

Eight semesters of practicum in the Psychological Clinic. Two practica (Psychotherapy Prepracticum, Integration Practicum, and Advanced Practicum: Supervision and Consultation) are didactic practica; three practica are "general practice" ones; and two practica may be either "advanced general" or specialized (eating disorders, sexual offenders, neuropsychological assessment, child/adolescent, etc).

1000 hours of half-time field placement.

2000 hours of APA-accredited internship.

APPENDIX G: MODEL PROGRAM FOR CLINICAL STUDENTS

This program is based upon the following requirements: 4 Discipline Specific Knowledge courses (DSK); 4 Quantitative courses (Q); 6 Clinical Core courses (CL); 8 semesters of Practicum (P); 5 Electives (E), at least 1 clinical placement, and an APA-accredited internship. This program of study can be completed in 5 years; most students take an additional year.

YEAR 1 -- FALL

Intro. to Psych. Assess. (CL 1)
Developmental Psychopathology (CL 2)
Practicum in Diagnostic Interviewing (CL 3)
Intro. Psychotherapy (CL 4)
Quantitative Methods I (Q 1)

YEAR 1 -- SPRING

Clinical Research Methods (Q 2)
Quantitative Methods II (Q 3)
Adv. Psych. Assess.: Adult (CL 5)
Psychotherapy Practicum (P 1)

YEAR 1 -- SUMMER

Department Core (DSK 1)
Elective (E 1) **or** Dept. Core (DSK 2)
Integration Practicum (P 2)
Thesis Topic Approved

YEAR 2 -- FALL

Practicum in Diagnostic Interviewing (CL 3)
Department Core (DSK 2/3)
Clinical Practicum (P 3)
Ethics (CL 6), Emotion (CL 7) **or** Elective (E 1/2)
Thesis I

YEAR 2 -- SPRING

Department Core (DSK 3/4) **or**
Elective (E 2/3)
Elective (E 2/3/4)
Thesis I
Clinical Practicum (P 4)
Department Core 4 (DC4)

YEAR 2 -- SUMMER

Elective (E 3/4/5)
Thesis II
Clinical Practicum (P 5)

YEAR 3 -- FALL

Quantitative course (Q 4)
Clinical Practicum (P 6)
Clinical Core (CL 6) **or**
Ethics (CL 6), Emotion (CL 7) **or** Elective (E 4/5)
Possible Thesis Defense

YEAR 3 -- SPRING

Elective (E 5)
Clinical Practicum (P 7)
Possible Thesis Defense
Begin Candidacy Paper

YEAR 3 -- SUMMER

Advanced Practicum: Supervision & Consultation
Candidacy Paper **or**
Dissertation I
Placement (July 1st)

YEAR 4 -- FALL

Dissertation I
Placement

YEAR 5 -- FALL

APA-accredited internship
Dissertation II

YEAR 4 -- SPRING

Dissertation II
Placement

YEAR 5 -- SPRING

APA-accredited internship
Dissertation II

RESEARCH & SCHOLARLY ACTIVITIES

Publications:

Presentations:

RESEARCH/TEACHING EXPERIENCE

Assistantships:

Courses Taught:

HONORS, AWARDS & PROFESSIONAL AFFILIATIONS

RESEARCH ACTIVITY REPORT: CLINICAL PSYCHOLOGY

NAME: _____

SEMESTER, YEAR: _____

Using the format indicated on this page, describe all of your research activities **since starting at Kent State, but please boldface or otherwise mark clearly the activities you have done since last year's evaluations**, including work on assistantships, thesis/dissertation, and any additional research. Be sure to provide information for every listed category; indicate "none" or N/A where appropriate.

1. **PUBLICATIONS.** List all publications that have appeared in print or that are currently in press. Do not include published abstracts for paper/poster presentations at scientific meetings.
2. **MANUSCRIPTS UNDER REVIEW.** List all manuscripts, including title & authors, that have been submitted for publication.
3. **MANUSCRIPTS IN PREPARATION.** List manuscripts you are currently preparing or are helping to prepare for publication by giving the tentative title of the paper and a list of the authors of the paper. In a few sentences, describe your contribution to the writing that has been accomplished this semester, including a brief list of the major sections of the paper that are completed or are near completion.
4. **PRESENTATIONS AT NATIONAL OR REGIONAL CONFERENCES.** Give complete citation. Include abstracts already submitted for future meetings.
5. **OTHER PRESENTATIONS.** These should include presentations of your research for brown bags, the APC, the KSU Graduate Research Conference, etc.
6. **OTHER RESEARCH ACTIVITY.** Describe all other research activities not listed above, including, for example, 1) studies you designed or helped design, 2) data you collected, 3) materials, apparatus, software, etc. which you prepared, 4) data analyses you conducted, 5) supervision of undergraduate assistants or other administrative activities related to research, 6) literature searches/reviews, 7) writing not described above, and 8) any other research-related activities, 9) course waivers requested and their status.
7. **COURSE WAIVERS.** Requested and their status.
8. **GRANTS.** List all grant proposals you submitted or grants you were awarded this semester (e.g., Sigma Xi Dissertation Grant). For each, list the following information:
Title:
Granting Agency/Organization:
Status (pending, funded, etc.):
9. **RESEARCH AWARDS, DISTINCTIONS, AFFILIATIONS.** Include memberships in professional organizations.

10.COMMENTS ON RESEARCH OPPORTUNITIES AND OBSTACLES. If you wish, describe any factors that have facilitated or hindered your research progress this semester. Your comments might be especially appropriate if 1) unusual circumstances have impeded your progress or 2) you have ideas that might improve research opportunities for yourself or other students.

TEACHING ACTIVITY

If you have taught this year, please update the teaching activity table, which should include your scores (and the norms) for the three items (questions 19, 20, & 21) from your student evaluations. Please just complete the table below, with each row including values from a single course. This teaching activity log should include evaluations from ALL the courses you have taught.

Course	No. of Students	No. of Evals	Question #19		Question #20		Question #21	
			Section	Norm	Section	Norm	Section	Norm

RESEARCH WAIVER PROJECT APPROVAL

Part I: To be completed when the project is proposed

Student Name _____

Faculty Supervisor _____

Project Title _____

Course Waiver # (circle one): 1 2 3 4

The attached project proposal is approved as a course waiver project. When completed it will allow the student to waive the following elective course requirement(s):

Number of courses to be waived by this project _____

Signatures:

Faculty Supervisor	Date
--------------------	------

Director of Clinical Training _____ Date _____

The signed form should be placed in the student file.

Part II: To be completed after the project has been done:

The above course waiver project has now been completed satisfactorily. The product is attached.

Signature:

Faculty Supervisor	Date
--------------------	------

This signed form and the project product should be turned in to the Graduate Secretary for recording and placing in the student file.

RESEARCH MENTOR EVALUATION OF STUDENTS

Student's Name _____

Year in Program _____

Person Completing Form _____

Instructions: Use checkmarks to rate the student on the following items. Competencies are worded as final competencies. Students completing their Ph.D. are expected to meet all competencies. Students earlier in training are not expected to be competent in all of the skills. Rather, the expectation is that they will be developing each competency. While performance can vary across research projects, provide a global evaluation.

	Minimal evidence of competency	Emerging evidence of competency	Adequate demonstration of competency	Superior demonstration of competency	Not Observed
Shows appropriate interest in research					
Critically evaluates research literature					
Synthesizes and integrates empirical literature					
Critically evaluates research methodology					
Develops research hypotheses based on literature and/or theory					
Develops research protocols					
Identifies and addresses ethical issues in research					
Completes IRB application					
Adheres to ethical and legal standards in data collection, storage, and entry					
Exhibits knowledge of and proficiency in using basic quantitative methods					
Recognizes appropriate quantitative methods and seeks consultation if needed for advanced quantitative methods					

Integrates research findings with current literature					
Effectively and professionally trains research assistants					
Effectively and professionally interacts with collaborators					
Writes cogent and appropriate abstracts for submission to national conferences					
Demonstrates strong scientific writing for dissemination of research and/or grant applications					
Effectively and professionally discusses research					

Areas of Strength: list any strengths the student has demonstrated as a part of your research team

Areas of Concern: list areas where student is not functioning in a way you consider acceptable for their level in the program. Describe remediation plan.

Meeting held with student on _____

Signature of student _____

Signature of mentor _____

Student comments, if desired:

THESIS/DISSERTATION EVALUATION FORM

Student:

Evaluator(s):

All students will be rated on the following domains after the oral examination. Ratings will include performance during the oral defense and the manuscript.

Note: Expectation is that students at completing the master's thesis will not have all competencies present. Students completing a dissertation are expected to have achieved all competencies.

	Competency Not Present	Competency Emerging	Competency Present	Competency Exemplary
1. Knowledge of scientific underpinnings for the study a. Document accurately identifies and articulates the degree of research support for relevant theories.				
b. Document integrates relevant theory and empirical findings to generate predictions or research hypotheses.				
2. Literature review is thorough and adequately covers the constructs being examined in the study.				
3. Articulation of rationale for hypotheses and study a. Document integrates relevant theory and empirical findings to generate clear research hypotheses.				
b. Document and oral presentation and responses reflect clear and testable hypotheses.				
4. Knowledge of research design and limitations a. Research design is appropriate to address hypotheses.				
b. Appropriate specification and measurement of independent and dependent variables.				

c. Demonstrates understanding of limitations of the study (e.g., internal and external validity including generalizability to diverse populations.)				
5. Statistical knowledge, including why analyses chosen, power, assumptions of their statistics, and limitations of their statistics a. Analyses address hypotheses and are appropriate for the data collected.				
6. Demonstrates ability to interpret data and draw appropriate conclusions.				
7. Demonstrates knowledge of cultural/diversity implications for research.				
8. Demonstrates knowledge of ethical issues related to research a. All of the relevant ethical, legal, and/or professional standards or guidelines were appropriately identified and addressed in the final exam and/or dissertation document.				
9. Demonstrates ability to propose future research directions in research and applied implications, if appropriate.				
10. Writing is clear, concise, and scientific and attributes ideas to appropriate sources.				
11. Student communicates the information orally in a clear, concise, thorough, and scientific manner.				
12. Student demonstrated appropriate and effective communication skills during final exam (e.g., clear and articulate verbal and non-verbal conveyance of information; effectively responds to questions/criticisms/concerns)				

Based on thesis manuscript and defense, likelihood of successfully completing Dissertation	Highly Likely	Likely	Questionable	Unlikely
Votes:				

CANDIDACY PAPER GRADING

Name: _____

Date: _____

	Competency Not Present	Competency Emerging	Competency Present	Competency Exemplary
1. Writing is concise, clear, and adheres to APA publication standards.				
2. Literature review is thorough and inclusive.				
3. Paper used structured review procedures (e.g., PRISMA guidelines)				
4. Paper demonstrates advanced graduate level synthesis of body of literature.				
5. Combines and integrates theories and/or empirical findings to generate new integrative ideas and directions; goes well beyond simply listing and reviewing studies.				
6. Provides an in-depth and accurate critique of existing literature, including an understanding of ambiguities and limitations.				
7. Paper makes a methodological or conceptual/theoretical contribution.				
8. Paper demonstrates an advanced graduate level of understanding of the topic.
