

# 100% Clean Energy

Big ways Washington can move the needle in 2019

## Thanks for your support!

On Monday March 11th, local elected officials, business owners, and community members from across the state will send a message to the Washington State Legislature to pass strong policies for climate action. Our collective goal is to show visible, statewide support for accelerating the path to 100% clean energy. It's time to commit to a fossil free future. You are necessary to make this a reality!

While we'd love for everyone to join us in Olympia, we know life is busy. Good news! You can still support a clean energy economy from right where you are!

## You can do something on Monday March 11!

1. **Raise your voice! Text "100forWA" to 52886 or go to [bit.ly/100forWA](http://bit.ly/100forWA)** and follow the instructions to connect with your legislators' offices by phone. Don't worry, it's easy, we've got you.
2. **Take a picture or post a video!** Print out our sign and share a 100forWA selfie; include **#100forWA** and the link [bit.ly/100forWA](http://bit.ly/100forWA). Tell us why 100% clean energy matters to you.

# Join the movement!

100% clean is good for our health, our economy, and Washington

## What's happening right now?

Big, bold climate action is possible in this 2019 legislative session. Our state can lead the way by reducing our reliance on harmful fossil fuels to achieve 100% clean energy and a secure healthier, prosperous future for all Washingtonians.

### ELECTRICITY

**The foundation for going 100% Clean is moving to a 100% fossil-free electricity grid.** A clean grid will play an increasingly important role in making sure Washington State reduces our global warming pollution. As we transition more of our transportation and building sector from fossil fuels to the grid, we must ensure that our homes and vehicles are powered by clean and renewable electricity. A strong 100% Clean Electricity Standard will do just that.

### TRANSPORTATION

**Transportation fuels are responsible for nearly half of our global warming pollution in Washington.** They are also the largest sources of air pollution, which health professionals link directly to asthma, lung cancer, and other respiratory diseases. Lower income communities and communities of color who are often closer to major transportation corridors are even more impacted. We can reduce these harms and support our regional economy by instituting a Clean Fuel Standard allowing Washington residents to choose electrification and less-polluting fuels to power the ways we move around in our communities.

### BUILDINGS

**Buildings and built infrastructure account for a fifth of Washington State's greenhouse gas emissions.** We can reduce these emissions—and our reliance on fossil fuels—through deeper investments in energy efficiency. Efficiency is our largest, cheapest, and lowest-risk energy resource, and can help us meet our increasing energy needs over the next decades, while cleaning up our whole energy system.

### ENVIRONMENTAL JUSTICE

**Where you live, work, your income, race or language ability should not determine your health outcomes.** Yet people across our state experience high exposures to pollution based upon where they live and work, impacting their well-being and shortening their lives. We can define and enforce environmental justice in our state and do better to protect all people in Washington and the health conditions of where we live and work.
