SECTION II – SCOPE OF WORK

The Town of Smyrna, Tennessee (“Smyrna”) is requesting a replacement of the existing fiber optic network that is used to connect the town’s various offices and other facilities within the town. This ISQ is for the initial construction and ongoing maintenance of a fiber optic network.

Ownership Options

Smyrna requests two options regarding ownership of the fiber network.

1) Outright ownership by Smyrna. Option 1 is for Smyrna to completely own the fiber network with the vendor providing ongoing maintenance services as specified below.

2) Ownership by vendor. Option 2 is for the vendor to retain ownership of the fiber network, but entering into an Irrevocable Right of Use (IRU) agreement with Smyrna for a specified term (see cost section). Maintenance shall be provided as specified below for the length of the IRU. The option allows for the vendor to co-locate their commercial fiber along the same route, but provide fiber strands dedicated to Smyrna as per the terms of this bid. Other IRU terms will be considered. Upon mutual agreement of both parties, one or more ten (10) year renewals of the IRU shall be made.

Locations

Town Hall is the primary location where all facilities will terminate. Town Hall and the other locations are as follows:

**SPECIFICATIONS**

**General Description**
Minimally, the fiber network shall consist of six (6) strands of dedicated Single-Mode Fiber (SMF) originating at Town Hall and extending to each of the other Active Locations, as listed above, except for the Justice Center, which shall have twelve (12) strands. Although this results in a hub and spoke configuration, the Town also requests options for a ring configuration utilizing an additional six (6) stands. The vendor shall provide termination in specified patch panels. The Town shall provide and is responsible for any electronic equipment and patch cables required at each of the sites.

Additionally, there shall be an option for dark fiber extended from Town Hall to each of the locations indicated under Future Expansion. The strand count is listed in the above chart. This fiber shall end in a 100’ slack loop and terminated in an appropriate aerial or underground enclosure.

**Engineering and Route Selection**
It is up to the vendor to perform any engineering and design work associated with this bid. This allows the vendor to optimize the route such that it might be mutually beneficial to both parties.

**Fiber Specifications**
The optical fiber shall be OS2 single mode fiber conforming to ITU-T G.652C/D. Fiber shall be Corning® SMF-28e+ or approved equivalent. The fiber shall be terminated in wall mount or standard 19” rack mount fiber patch panels with UPC SC connectors. APC connectors shall not be used.

All installation shall be in accordance with the fiber manufacturer’s specifications and recommendations and follow all federal, state, and local laws and
specifications. Any deviation from these specifications must be approved in writing by the Town.

Optical Characteristics
Attenuation @ 1310 nm ≤ 0.35 dB/km
Attenuation @ 1550 nm ≤ 0.20 dB/km

Point Discontinuity
No point discontinuity greater than 0.05 dB at either 1310 nm or 1550 nm.

Color Coding
Buffer tubes and individual optical fibers within those buffer tubes shall adhere to EIA/TIA-598, “Coding of Fiber Optic Cable,” as noted below:

1 = Blue          5 = Slate          9 = Yellow
2 = Orange        6 = White         10 = Violet
3 = Green         7 = Red           11 = Rose
Optical Loss Budget
Each strand shall have an operating optical loss budget according to the following:

- Transmit (Max / Min dBm) = -3 / -9.5
- Receive (Max / Min dBm) = -3 / -19

Installation
All fiber shall be installed in accordance to manufacturer’s instructions and recommended “Best Practices”.

Pole to Building Transition
The route from the pole to the building should be via underground conduit when at all possible. Aerial entrances should be avoided. Upon obtaining a location approved by Smyrna, external, vertical conduit can be used to run from underground, up the side of the building, and penetrate the outside wall above the interior ceiling.

Inside Plant Termination
The fiber optic cable shall terminate inside each facility at a location determined by the Town. Upon outside wall penetration, the cable shall be enclosed within orange innerduct up to the termination point. Other cable enclosure methods can be used only after written approval from the Town. Termination shall be in wall mounted or standard 19” rack mounted fiber patch panels. Wall mount patch panels shall be lockable with a common key among all patch panels. Before installation, patch panel models must be approved by the Town. Each strand shall terminate in an UPC SC connector with a maximum insertion loss of .30 dB.

Tracer Wire
For any underground installation, tracer wire capability shall be provided for each segment. Terminal access for tracer wire is required at each vault, hand hold, and anchor site.

Fiber Optic Cable Testing
Each strand shall be tested according to the following procedures and specifications:

Upon completion of the installation and termination of the fiber optic cable, each and all fiber strands shall be tested for continuity, events above 0.30dB, and total attenuation of the cable. The test shall be conducted on the 1310 nm single mode. This test shall be performed with an Optical Time Domain Reflectometer (OTDR) by an appropriately qualified technician. From these tests shall be produced graphic representations of the fiber, known as “traces.” These traces shall demonstrate dB/km loss not to exceed +3 percent of the factory test documentation that came with that segment of fiber from the manufacturer or 1 percent of the cable’s published production dB loss per km plus the maximum OTDR error level as noted by the manufacture of the OTDR (typically ± 2%). Each trace shall include the following data: (1) the trace itself with a launch transition not to exceed 6 dB; (2) measurement results – cursor, marker, distance between
cursor and marker, total loss between launch point and end of fiber, attenuation calculation in dB/km; (3) cable information – fiber ID (if not the filename), OTDR location, end of fiber location, operator ID, date shot, time shot; and (4) the set-up parameters; wavelength, pulse width, refractory index, range and horizontal scale.

The method of connectivity between the OTDR and the cable shall be a factory patch cord of a length equal to the “dead zone” of the OTDR or a factory “fiber box” of 100 meters minimum with no splices within the box. If a patch cord is utilized, the length of the patch cord shall be stored on a fiber storage bobbin with a minimum diameter of 10 cm. Each trace shall be printed (hard copy) and saved electronically for future reference. All saved traces shall be delivered to the Town in an electronically readable format and include such software as to read and print the data files.

No event shall exceed .30 dB. If any event is detected above this maximum level, the event point shall be replaced or repaired. The total dB loss of each trace, less events, shall not exceed the manufacture’s production specifications as follows: single mode maximum attenuation per km, 0.35 dB/km @ 1310 nm and 0.20 db/km @ 1550 nm.

**Fiber Maintenance and Repair**

For a monthly or annual fee, the vendor shall provide routine inspection and repair, except for cuts, of the fiber network. Cuts shall be repaired by the vendor, but shall be the financial responsibility of the party who caused the cut and/or other damage. In the event that the offending party is unable to be determined, the costs for the repair shall be equally shared by the vendor and the Town. Fiber moves due to pole relocations shall be included as part of this normal maintenance by the vendor.

The vendor shall provide a phone number, email address, web site, or other approved mechanism to accept requests for maintenance or repair on a 24/7 basis. Response to notifications of service outages or other emergency situations shall be within one hour of the notification being made. Repairs, if needed, shall be made with reasonable diligence, with the understanding that certain locations require a “mission critical” response. Those locations include the Justice Center, Moors Hill Radio Tower, Water Treatment Plant, Waste Water Treatment Plant, and the Fire Halls.

Notifications for any planned service interruption due to maintenance, repair, or other reasons shall be made to Smyrna Information Services at least two (2) business days prior to the interruption.

**Extra Cable**

Extra cable should be installed, both at splice points as well as throughout the network in order to facilitate repair and pole relocations. Any slack storage shall use “snow show” devices specifically made for fiber slack storage. A simple fiber loop shall not be used. With the exception of the removal of poles or the extreme relocation of poles, splicing of additional fiber should be avoided.
Additional Recurring Fees
Pole attachment and other recurring third-party fees shall be identified and listed as part of the proposal in the cost section.

Locate Services / Tennessee 811
The vendor shall participate in the Tennessee 811 service as a utility provider. The vendor is responsible for locating any underground fiber as part of a locate request made to Tennessee 811. Any fiber cut and/or damaged due to the inability to accurately locate the fiber shall be the responsibility of the vendor for repair.

Documentation
In addition to the documentation resulting from the fiber testing, “As Built” documentation shall be provided as PDF or other agreed upon format.

Vendor Details & References
Vendor shall provide documentation substantiating their ability to provide the initial construction as well as their ability to provide long-term maintenance of the fiber network. Vendor shall provide at least three (3) references from similar sized projects. Vendor’s financial stability is a portion of the evaluation criteria. As such, please submit documents substantiating the financial position and stability of the company.

Completion Time
Smyrna would like this project completed as soon as reasonably possible. Specifically, it should be completed prior to June 30, 2020. If that deadline cannot be met, vendor shall notify Smyrna no later than March 30, 2020.

Term
Under Ownership Option 1 (see “Ownership” paragraph for details), the monthly costs for Maintenance and Repair services shall remain fixed for a term of five (5) years. Either party shall be able to cancel the Maintenance and Repair services with a ninety (90) day notice to the other party without penalty.

Under Ownership Option 2 (see “Ownership” paragraph for details), the monthly costs for Maintenance and Repair services shall remain fixed for the term of the IRU.
