

## OMRON Focus™ Knee TENS (PM710-M/L), Drug-Free Pain Relief

---

The new OMRON Focus Knee TENS is a wearable, wireless TENS device that delivers drug-free TENS technology to alleviate chronic, acute\* and arthritic pain to the lower extremities of the knee.

- Easy to use, discreet and portable, Focus Knee TENS allows users to wear the device for treatment while performing everyday activities for easy on-the-go pain relief.
- Focus Knee TENS features a preset mode, specifically designed to address pain in this area, with 20 intensity levels for customizable drug-free pain relief. Its durable, flexible, self-adhesive pads can be reused up to 30 times.
- With user-friendly controls and wearable, wireless functionality, Focus Knee TENS is made easy for operation and simple treatment.
- TENS (transcutaneous electrical nerve stimulation) is a drug-free pain management therapy that works by sending stimulating pulses across the skin and nerve strands. Scientific theory suggests that this stimulation may help block pain signals, trigger the body to release endorphins, which act as natural painkillers, and improve blood circulation.
- Millions of Americans report living with pain, and recent statistics from the Gallup-Palmer College of Chiropractic Annual Study of Americans show that more than 78% of pain sufferers are seeking drug-free pain management options in wake of the opioid epidemic.

*\*Acute pain refers to sore or achy muscles due to strain from exercise or normal household and work activities.*
