THE MAKING OF GLOBAL INTERNATIONAL RELATIONS

Origins and Evolution of IR
at its Centenary

Amitav Acharya and Barry Buzan

Acc. No : 40957

Call No : 327 ACH-A

This book presents a challenge to the discipline of international relations to rethink itself, in the light of both its own modern origins, and the two centuries of world history that have shaped it. By tracking the development of thinking about IR, and the practice of world politics, this book shows how they relate to each other across five time periods from nineteenth-century colonialism, through two world wars, the Cold War and decolonization, to twenty-first-century globalization. It gives equal weight to both the neglected voices and histories of the Global South, and the traditionally dominant perspectives of the West, showing how they have moved from nearly complete separation to the beginnings of significant integration. The authors argue that IR needs to continue this globalizing...

Saving the Indian Saver

All of us love to spend. But before we can do that, we have to have earned or saved some money. Only sovereigns don't have to: they can print money, or borrow; in our country, where they own banks, they can use our deposits to lend and splurge for goals that may not always be economic in nature. Many rulers have succumbed to the temptation, with dire results - inflation, debased currency, payments crises, bankrupt banks, economic stagnation, loss of public confidence. After centuries of ruinous experiences, some governments learnt, others haven't, to control themselves, create self-governing Central banks and let them manage money and regulate banks. Sometime in 2015, news of unsustainable bad debts in the Indian banking sector started to first trickle out, and...

Science has a reputation as the most logical and rational of human pastimes - but this has not always been the case. From the inventor Nikola Tesla, who fell in love with his favourite pigeon and tried to broadcast his own thoughts, to the wannabe chemist August Strindberg, who injected apples with drugs to see if they could get high, numerous scientists have conducted bizarre experiments down the centuries. Some of them were genuine geniuses; others were simply lone loons. History is littered with their wreckage, and this book tells the story of the very strangest. Proposing that science has become a kind of modern religion, and telling the tale of such noted pseudoscientific fads and fallacies as alchemy, spontaneous generation and the doomed quest to raise the dead, *Forgotten Science* is sure...

His confidence came from a wartime deal with Britain, embodied in the 'August Offer' of 1940. Gandhi's strength lay in ideological commitment which was, in the end, ravaged by the communal violence that engineered partition. The price of this epic confrontation, paid by the people, has stretched into generations. M.J.
