Editorial

The International journal of pharmacology and therapeutics focuses on two areas: on pharmacology and on therapeutics, with the following aim: 1) To contribute the pharmacological understanding of interactions between new chemicals and living systems; 2) To explain pharmacological phenomena, properties and processes of new chemicals in the body, and to contribute to understanding interactions of new chemicals with body tissues, which are undoubtedly needed for improving therapeutics.

Papers submitted should either to provide new pharmacological insight as a result of pharmacological research, or to identify possible therapeutic problems, or to get new ideas for pharmacology and treatment.

The International journal of pharmacology and therapeutics is a peer-reviewed online journal that publishes full-length papers. State-

of-the-art survey papers, including prospective discussion are particularly welcome in the International journal of pharmacology and therapeutics.

Why Submit

The International journal of pharmacology and therapeutics covers all aspects of interdisciplinary research, attracting high quality researches in the areas of pharmacology and toxicology. Therefore researchers are invited: 1) To submit their papers describing new findings in pharmacological and/or toxicological research and practice; 2) To give their opinion on the current state and future of pharmacological and toxicological research and practice; 3) To arouse the interest of pharmacological, toxicological, and pharmaceutical scientists in the new findings in therapy of some of the most devastating diseases; 4) To help to identify possible side effects of new pharmacological products.
