

# B OARD OF STEDIES <br> N E W S O U T H W A LES 

## 2011 <br> HIGHER SCHOOL CERTIFICATE EXAMINATION

## Mathematics

## General Instructions

-Reading time - 5 minutes

- Working time - 3 hours
- Write using black or blue pen Black pen is preferred
- Board-approved calculators may be used
- A table of standard integrals is provided at the back of this paper
- All necessary working should be shown in every question

Total marks - 120

- Attempt Questions 1-10
- All questions are of equal value

Total marks - 120
Attempt Questions 1-10
All questions are of equal value
Answer each question in the appropriate writing booklet. Extra writing booklets are available.

Question 1 (12 marks) Use the Question 1 Writing Booklet.
(a) Evaluate $\sqrt[3]{\frac{651}{4 \pi}}$ correct to four significant figures.
(b) Simplify $\frac{n^{2}-25}{n-5}$.
(c) Solve $2^{2 x+1}=32$.
(d) Differentiate $\ln (5 x+2)$ with respect to $x$.
(e) Solve $2-3 x \leq 8$.
(f) Rationalise the denominator of $\frac{4}{\sqrt{5}-\sqrt{3}}$.

Give your answer in the simplest form.
(g) A batch of 800 items is examined. The probability that an item from this batch is defective is 0.02 .

How many items from this batch are defective?

Question 2 (12 marks) Use the Question 2 Writing Booklet.
(a) The quadratic equation $x^{2}-6 x+2=0$ has roots $\alpha$ and $\beta$.
(i) Find $\alpha+\beta$.
(ii) Find $\alpha \beta$.
(iii) Find $\frac{1}{\alpha}+\frac{1}{\beta}$.
(b) Find the exact values of $x$ such that $2 \sin x=-\sqrt{3}$, where $0 \leq x \leq 2 \pi$.
(c) Find the equation of the tangent to the curve $y=(2 x+1)^{4}$ at the point where $x=-1$.
(d) Find the derivative of $y=x^{2} e^{x}$ with respect to $x$.
(e) Find $\int \frac{1}{3 x^{2}} d x$.

Question 3 (12 marks) Use the Question 3 Writing Booklet.
(a) A skyscraper of 110 floors is to be built. The first floor to be built will cost $\$ 3$ million. The cost of building each subsequent floor will be $\$ 0.5$ million more than the floor immediately below.
(i) What will be the cost of building the 25th floor? the vertex.
(c) The diagram shows a line $\ell_{1}$, with equation $3 x+4 y-12=0$, which intersects the $y$-axis at $B$.

A second line $\ell_{2}$, with equation $4 x-3 y=0$, passes through the origin $O$ and intersects $\ell_{1}$ at $E$.

(i) Show that the coordinates of $B$ are $(0,3)$.
(ii) Show that $\ell_{1}$ is perpendicular to $\ell_{2}$.
(iii) Show that the perpendicular distance from $O$ to $\ell_{1}$ is $\frac{12}{5}$.
(iv) Using Pythagoras' theorem, or otherwise, find the length of the interval $B E$.
(v) Hence, or otherwise, find the area of $\triangle B O E$.

Question 4 (12 marks) Use the Question 4 Writing Booklet.
(a) Differentiate $\frac{x}{\sin x}$ with respect to $x$.

2

2 point $(-1,4)$.

What is the equation of the curve?
(d) (i) Differentiate $y=\sqrt{9-x^{2}}$ with respect to $x$.
(ii) Hence, or otherwise, find $\int \frac{6 x}{\sqrt{9-x^{2}}} d x$.

2
(e) The diagram shows the graphs $y=|x|-2$ and $y=4-x^{2}$.

Write down inequalities that together describe the shaded region.

Question 5 (12 marks) Use the Question 5 Writing Booklet.
(a) The number of members of a new social networking site doubles every day. On Day 1 there were 27 members and on Day 2 there were 54 members.
(i) How many members were there on Day 12? site earn in the first 12 days? Give your answer to the nearest dollar.
(b) Kim has three red shirts and two yellow shirts. On each of the three days, Monday, Tuesday and Wednesday, she selects one shirt at random to wear. Kim wears each shirt that she selects only once.
(i) What is the probability that Kim wears a red shirt on Monday?
(ii) What is the probability that Kim wears a shirt of the same colour on all three days?
(iii) What is the probability that Kim does not wear a shirt of the same colour on consecutive days?
(c) The table gives the speed $v$ of a jogger at time $t$ in minutes over a 20-minute period. The speed $v$ is measured in metres per minute, in intervals of 5 minutes.

| $t$ | 0 | 5 | 10 | 15 | 20 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $v$ | 173 | 81 | 127 | 195 | 168 |

The distance covered by the jogger over the 20-minute period is given by

$$
\int_{0}^{20} v d t
$$

Use Simpson's rule and the speed at each of the five time values to find the approximate distance the jogger covers in the 20-minute period.

Question 6 (12 marks) Use the Question 6 Writing Booklet.
(a) The diagram shows a regular pentagon $A B C D E$. Sides $E D$ and $B C$ are produced to meet at $P$.

Copy or trace the diagram into your writing booklet.
(i) Find the size of $\angle C D E$.
(ii) Hence, show that $\triangle E P C$ is isosceles.
(b) A point $P(x, y)$ moves so that the sum of the squares of its distance from each of the points $A(-1,0)$ and $B(3,0)$ is equal to 40 .

Show that the locus of $P(x, y)$ is a circle, and state its radius and centre.

## Question 6 continues on page 8

Question 6 (continued)
(c) The diagram shows the graph $y=2 \cos x$.

(i) State the coordinates of $P$.
(ii) Evaluate the integral $\int_{0}^{\frac{\pi}{2}} 2 \cos x d x$.
(iii) Indicate which area in the diagram, $A, B, C$ or $D$, is represented by the integral $\int_{\frac{3 \pi}{2}}^{2 \pi} 2 \cos x d x$.
(iv) Using parts (ii) and (iii), or otherwise, find the area of the region bounded by the curve $y=2 \cos x$ and the $x$-axis, between $x=0$ and $x=2 \pi$.
(v) Using the parts above, write down the value of $\int_{\frac{\pi}{2}}^{2 \pi} 2 \cos x d x$.

## End of Question 6

Question 7 (12 marks) Use the Question 7 Writing Booklet.
(a) Let $f(x)=x^{3}-3 x+2$.
(i) Find the coordinates of the stationary points of $y=f(x)$, and determine their nature.
(ii) Hence, sketch the graph $y=f(x)$ showing all stationary points and the $y$-intercept.
(b) The velocity of a particle moving along the $x$-axis is given by

$$
\dot{x}=8-8 e^{-2 t}
$$

where $t$ is the time in seconds and $x$ is the displacement in metres.
(i) Show that the particle is initially at rest.
(ii) Show that the acceleration of the particle is always positive.
(iii) Explain why the particle is moving in the positive direction for all $t>0$.
(iv) As $t \rightarrow \infty$, the velocity of the particle approaches a constant.

Find the value of this constant.
(v) Sketch the graph of the particle's velocity as a function of time.

Question 8 (12 marks) Use the Question 8 Writing Booklet.
(a) In the diagram, the shop at $S$ is 20 kilometres across the bay from the post office at $P$. The distance from the shop to the lighthouse at $L$ is 22 kilometres and $\angle S P L$ is $60^{\circ}$.

Let the distance $P L$ be $x$ kilometres.

(i) Use the cosine rule to show that $x^{2}-20 x-84=0$.
(ii) Hence, find the distance from the post office to the lighthouse. Give your answer correct to the nearest kilometre.
(b) The diagram shows the region enclosed by the parabola $y=x^{2}$, the $y$-axis and the line $y=h$, where $h>0$. This region is rotated about the $y$-axis to form a solid called a paraboloid. The point $C$ is the intersection of $y=x^{2}$ and $y=h$. The point $H$ has coordinates $(0, h)$.

(i) Find the exact volume of the paraboloid in terms of $h$.
(ii) A cylinder has radius $H C$ and height $h$.

What is the ratio of the volume of the paraboloid to the volume of the cylinder?

## Question 8 (continued)

(c) When Jules started working she began paying $\$ 100$ at the beginning of each month into a superannuation fund.

The contributions are compounded monthly at an interest rate of $6 \%$ per annum.
She intends to retire after having worked for 35 years.
(i) Let $\$ P$ be the final value of Jules's superannuation when she retires after 35 years (420 months).

Show that $\$ P=\$ 143183$ to the nearest dollar.
(ii) Fifteen years after she started working Jules read a magazine article about retirement, and realised that she would need $\$ 800000$ in her fund when she retires. At the time of reading the magazine article she had $\$ 29227$ in her fund. For the remaining 20 years she intends to work, she decides to pay a total of $\$ M$ into her fund at the beginning of each month. The contributions continue to attract the same interest rate of $6 \%$ per annum, compounded monthly.

At the end of $n$ months after starting the new contributions, the amount in the fund is $\$ A_{n}$.
(1) Show that $A_{2}=29227 \times 1.005^{2}+M\left(1.005+1.005^{2}\right)$.
(2) Find the value of $M$ so that Jules will have $\$ 800000$ in her fund after

- ${ }_{n}$
the remaining 20 years ( 240 months).

## End of Question 8

Question 9 (12 marks) Use the Question 9 Writing Booklet.
(a) The diagram shows $\triangle A D E$, where $B$ is the midpoint of $A D$ and $C$ is the midpoint of $A E$. The intervals $B E$ and $C D$ meet at $F$.

(i) Explain why $\triangle A B C$ is similar to $\triangle A D E$.
(b) A tap releases liquid $A$ into a tank at the rate of $\left(2+\frac{t^{2}}{t+1}\right)$ litres per minute, where $t$ is time in minutes. A second tap releases liquid $B$ into the same tank at the rate of $\left(1+\frac{1}{t+1}\right)$ litres per minute. The taps are opened at the same time and release the liquids into an empty tank.
(i) Show that the rate of flow of liquid $A$ is greater than the rate of flow of liquid $B$ by $t$ litres per minute.
(ii) The taps are closed after 4 minutes. By how many litres is the volume of liquid $A$ greater than the volume of liquid $B$ in the tank when the taps are closed?

Question 9 (continued)
(c) The graph $y=f(x)$ in the diagram has a stationary point when $x=1$, a point of inflexion when $x=3$, and a horizontal asymptote $y=-2$.

Sketch the graph $y=f^{\prime}(x)$, clearly indicating its features at $x=1$ and at $x=3$, and the shape of the graph as $x \rightarrow \infty$.
(d) (i) Rationalise the denominator in the expression

$$
\frac{1}{\sqrt{n}+\sqrt{n+1}}
$$

where $n$ is an integer and $n \geq 1$.
(ii) Using your result from part (i), or otherwise, find the value of the sum

$$
\frac{1}{\sqrt{1}+\sqrt{2}}+\frac{1}{\sqrt{2}+\sqrt{3}}+\frac{1}{\sqrt{3}+\sqrt{4}}+\cdots+\frac{1}{\sqrt{99}+\sqrt{100}}
$$

## End of Question 9

Question 10 (12 marks) Use the Question 10 Writing Booklet.
(a) The intensity $I$, measured in watt $/ \mathrm{m}^{2}$, of a sound is given by

$$
I=10^{-12} \times e^{0.1 L}
$$

where $L$ is the loudness of the sound in decibels.
(i) If the loudness of a sound at a concert is 110 decibels, find the intensity of the sound. Give your answer in scientific notation.
(ii) Ear damage occurs if the intensity of a sound is greater than 2 $8.1 \times 10^{-9} \mathrm{watt} / \mathrm{m}^{2}$.

What is the maximum loudness of a sound so that no ear damage occurs?
(iii) By how much will the loudness of a sound have increased if its intensity 2 has doubled?

Question 10 continues on page 15
(b) A farmer is fencing a paddock using $P$ metres of fencing. The paddock is to be in the shape of a sector of a circle with radius $r$ and sector angle $\theta$ in radians, as shown in the diagram.

(i) Show that the length of fencing required to fence the perimeter of the paddock is $P=r(\theta+2)$.
(ii) Show that the area of the sector is $A=\frac{1}{2} \operatorname{Pr}-r^{2}$.
(iii) Find the radius of the sector, in terms of $P$, that will maximise the area 2 of the paddock.
(iv) Find the angle $\theta$ that gives the maximum area of the paddock.
(v) Explain why it is only possible to construct a paddock in the shape of a 2 sector if $\frac{P}{2(\pi+1)}<r<\frac{P}{2}$.

## STANDARD INTEGRALS

$$
\begin{aligned}
& \int x^{n} d x \quad=\frac{1}{n+1} x^{n+1}, \quad n \neq-1 ; \quad x \neq 0, \text { if } n<0 \\
& \int \frac{1}{x} d x \quad=\ln x, \quad x>0 \\
& \int e^{a x} d x \quad=\frac{1}{a} e^{a x}, \quad a \neq 0 \\
& \int \cos a x d x \quad=\frac{1}{a} \sin a x, \quad a \neq 0 \\
& \int \sin a x d x \quad=-\frac{1}{a} \cos a x, \quad a \neq 0 \\
& \int \sec ^{2} a x d x \quad=\frac{1}{a} \tan a x, \quad a \neq 0 \\
& \int \sec a x \tan a x d x=\frac{1}{a} \sec a x, \quad a \neq 0 \\
& \int \frac{1}{a^{2}+x^{2}} d x \quad=\frac{1}{a} \tan ^{-1} \frac{x}{a}, \quad a \neq 0 \\
& \int \frac{1}{\sqrt{a^{2}-x^{2}}} d x=\sin ^{-1} \frac{x}{a}, \quad a>0, \quad-a<x<a \\
& \int \frac{1}{\sqrt{x^{2}-a^{2}}} d x=\ln \left(x+\sqrt{x^{2}-a^{2}}\right), \quad x>a>0 \\
& \int \frac{1}{\sqrt{x^{2}+a^{2}}} d x=\ln \left(x+\sqrt{x^{2}+a^{2}}\right)
\end{aligned}
$$

NOTE: $\ln x=\log _{e} x, \quad x>0$
