The doctoral program in Electrical and Computer Engineering is tailored to the individual background and interest of the student. There are several milestones to pass: admission to the Ph.D. program by the Graduate Committee; Ph.D. preliminary examination on the background and potential for success in the doctoral program; departmental teaching requirement which can be satisfied through service as a teaching assistant or equivalent; original research work; development of a research report and dissertation proposal; advancement to Ph.D. candidacy in the third year (second year for students who entered with a master's degree) through the Ph.D. qualifying examination conducted on behalf of the Irvine Division of the Academic Senate; completion of a significant research investigation; and completion and approval of a dissertation. A public Ph.D. dissertation defense is also required. During the Ph.D. study, four quarters of EECS 294 must be completed.

The Ph.D. preliminary examination is conducted twice a year, in the spring and fall quarters. Detailed requirements for each concentration are specified in the departmental Ph.D. preliminary examination policies, available from the EECS Graduate Admissions Office. The depth examination is conducted during each spring quarter. A student who already has an M.S. on enrollment must pass the Ph.D. preliminary examination within one complete academic year cycle after entering the Ph.D. program. A student who does not already have an M.S. on enrollment must pass the Ph.D. preliminary examination within two complete academic year cycles after entering the Ph.D. program. A student has only two chances to take and pass the Ph.D. preliminary examination. A student who fails the Ph.D. preliminary examination twice will be asked to withdraw from the program, or will be dismissed from the program, and may not be readmitted into the program.

The Ph.D. degree is granted upon the recommendation of the Doctoral Committee and the Dean of Graduate Studies. Part-time study toward the Ph.D. degree is not permitted. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

Graduate Specialization in Teaching

The graduate specialization in Teaching will allow Engineering Ph.D. students to receive practical training in pedagogy designed to enhance their knowledge and skill set for future teaching careers. Students will gain knowledge and background in college-level teaching and learning from a variety of sources, and experience in instructional practices. Students completing the specialization in Teaching must fulfill all of their Ph.D. requirements in addition to the specialization requirements. Upon fulfillment of the requirements, students will be provided with a certificate of completion. Upon receipt of the certificate of completion, the students can then append "Specialization in Teaching" to their curricula vitae. For details see <http://www.eng.uci.edu/grad/services/specialization>.

The graduate specialization in Teaching is available only for certain degree programs and concentrations:

- Ph.D. degree in Biomedical Engineering
- Ph.D. degree in Electrical and Computer Engineering

- Ph.D. degree in Engineering with a concentration in Materials and Manufacturing Technology

Faculty

Mohammad A. Al Faruque: System-level design, embedded systems, cyber-physical-systems, multi-core systems

Nicolaos G. Alexopoulos (*Emeritus*): High-frequency integrated circuit antennas, wireless communication, materials

Animashree Anandkumar: Statistical inference and learning of graphical models, scalable network algorithms

Ender Ayanoglu: Communication systems, communication theory, communication networks

Mark Bachman: Integrated microsystems, microfabrication technology, biomedical microdevices, sensor systems, human sensing, human-machine interface

Nader Bagherzadeh: Parallel processing, computer architecture, computer graphics, VLSI design

Neil J. Bershad (*Emeritus*): Communication and information theory, signal processing

Ozdal Boyraz: Silicon photonics and optical communications systems

Peter J. Burke: Nano-electronics, bio-nanotechnology

Filippo Capolino: Optics/electromagnetics in nanostructures and sensors; antennas/microwaves, RF and wireless systems

Pai H. Chou: Embedded systems, wireless sensor systems, medical devices, real-time systems, hardware/software co-synthesis

Rui J. P. de Figueiredo (*Emeritus*): Machine intelligence and neural and soft computing; applications to signal/image processing and biomedical engineering; applied mathematics

Franco De Flaviis: Microwave systems, wireless communications and electromagnetic circuit simulations

Brian Densky: Compiler programming, language software engineering and fault tolerance

Rainer Doemer: System-level design, embedded computer systems, design methodologies, specification and modeling languages

Ahmed Eltawil: Design of system and VLSI architectures for broadband wireless communication; implementations and architectures for digital processing

Leonard A. Ferrari (*Emeritus*): Machine vision, signal processing, computer graphics

Daniel D. Gajski: Embedded systems, software/hardware design, design methodologies and tools, science of design

Jean-Luc Gaudiot: Parallel processing, computer architecture, processor architecture

Michael M. Green: Analog/mixed-signal IC design, broadband circuit design, theory of nonlinear circuits

Glenn E. Healey: Machine vision, computer engineering, image processing, computer graphics, intelligent machines

Payam Heydari: Design and analysis of analog, RF, and mixed-signal integrated circuits; analysis of signal integrity and high-frequency effects of on-chip interconnects in high-speed VLSI circuits

Syed A. Jafar: Wireless communication and information theory

Hamid Jafarkhani: Communication theory, coding, wireless networks, multimedia networking

Stuart Kleinfelder: First integrated sensor/readout arrays for visual, IR, X-ray, and charged particles

Fadi J. Kurdahi: VLSI system design, design automation of digital systems

Tomas Lang (*Emeritus*): Numerical processors and multiprocessors, parallel computer systems

Chin C. Lee: Bonding technology, electronic packaging, acoustics, microwaves, semiconductor devices, thermal management

Henry P. Lee: Photonics, fiber-optics and compound semiconductors

Guann-Pyng Li: High-speed semiconductor technology, optoelectronic devices, integrated circuit fabrication and testing

Kwei-Jay Lin: Real-time systems, distributed systems, service-oriented computing

Athina Markopoulou: Networking—reliability and security, multimedia networking, and measurement and control, design and analysis of network protocols and algorithms, Internet reliability and security, multimedia streaming, network measurements and control

Phillip C-Y. Sheu: Database systems, interactive multimedia systems

Jack Sklansky (*Emeritus*): Digital radiology, pattern recognition, medical imaging, neural learning, computer engineering

Keyue M. Smedley: Power electronics and analog circuit design

Allen R. Stubberud (*Emeritus*): Control systems, digital signal processing, estimation and optimization

A. Lee Swindlehurst: Signal processing, estimation and detection theory, applications in wireless communications, geo-positioning, radar, sonar, biomedicine

Harry H. Tan (*Emeritus*): Communication and information theory, stochastic processes

Chen S. Tsai: Integrated and fiber optics, devices, and materials, integrated acoustooptics and magnetooptics, integrated microwave magnetics, Ultrasonic Atomization for Nanoparticles Synthesis, silicon photonics

Wei Kang (Kevin) Tsai (*Emeritus*): Data communication networks, control systems

H. Kumar Wickramasinghe: Nanoscale measurements and characterization, scanning probe microscopy, storage technology, nano-bio measurement technology

Affiliated Faculty

Lubomir Bic: Parallel processing, dataflow systems, database machines

Harut Barsamian: Computer systems, architecture and technology

Elaheh Bozorgzadeh: Design automation and synthesis for embedded systems, VLSI CAD, and reconfigurable computing

Zhongping Chen: Biomedical optics, optical coherence tomography, bioMEMS, biomedical devices

Hooman Darabi: Analog and RF integrated circuit design for wireless communication

Nikil D. Dutt: VLSI design automation tools, design methodologies, design languages, high-level synthesis

Magda S. El Zarki: Computer networking, telecommunications networks, wireless networking

Charles C. Fowlkes: Computer vision, machine learning, computational biology

Michael Franz: Compilers

Gultekin Gulsen: In vivo optical molecular imaging, multi-modality imaging, pre-clinical and clinical imaging systems

Ian Harris: Hardware/software covalidation, manufacturing test

Daniel Hirschberg: Analyses of algorithms, concrete complexity, data structures, models of computation

Scott Jordan: Pricing and differentiated services in the Internet, resource allocation in wireless networks, telecommunications policy

David P. Kirkby: Observational cosmology, data science, embedded systems

Aditi Majumder: Computer graphics

Gopi Meenakshisundaram: Geometry and topology for computer graphics, image-based rendering, object representation, surface reconstruction, collision detection, virtual reality, telepresence

Sabee Molloy: Physics of medical imaging

Orhan Nalcioğlu: Nuclear magnetic resonance imaging and spectroscopy, digital radiography, computed tomography, medical imaging

Zoran Nenadic: Adaptive biomedical signal processing, control algorithms for biomedical devices, brain-machine interfaces, modeling and analysis of biological neural networks

Alexandru Nicolau: Architecture, parallel computation, programming languages and compilers

Henry Samueli: Digital signal processing, communications systems engineering, CMOS integrated circuit design for applications in high-speed data transmission systems

Issac Scherson: Parallel computing architectures, massively parallel systems, parallel algorithms, interconnection networks, performance evaluation

Andrew A. Shapiro-Scharlotta: Electronic and optoelectronics

Frank G. Shi: Optoelectronic packaging and materials

Andrei M. Shkel: Design and advanced control of micro-electro-mechanical systems (MEMS)

William C. Tang: Micro- and nanotechnology for wireless communication and micro biomechanics

Xiangmin Xu: Local inhibitory cortical circuits

Homayoun Yousefi'zadeh: Communications networks

Affiliated faculty are from the Schools of Physical Sciences and Medicine, the Donald Bren School of Information and Computer Sciences, and The Henry Samueli School of Engineering.

Courses

EECS 1. Introduction to Electrical Engineering and Computer Engineering. 1 Unit.

Introduction to the fields of Electrical Engineering and Computer Engineering, including possible careers in both traditional and new emerging areas. Background on both the Electrical Engineering and the Computer Engineering majors, curriculum requirements, specializations, and faculty research interests.

(Design units: 1)

Restriction: Computer Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 10. Computational Methods in Electrical and Computer. 4 Units.

An introduction to computers and structured programming. Binary Data Representation. Hands-on experience with a high-level structured programming language. Introduction to algorithm efficiency. Applications of structured programming in solving engineering problems. Programming laboratory.

(Design units: 0)

Corequisite: MATH 2A.

Prerequisite: MATH 2A.

Overlaps with ENGR 10, ENGRMAE 10, EECS 12.

Restriction: School of Engineering majors have first consideration for enrollment.

EECS 12. Introduction to Programming. 4 Units.

An introduction to computers and programming. Python programming syntax/style, types. Numbers and sequences. Control flow. I/O and errors/exceptions. Function calling, parameter passing, formal arguments, return values. Variable scoping. Programming laboratory.

(Design units: 0)

Corequisite: MATH 2A.

Overlaps with ENGR 10, EECS 10, ENGRMAE 10.

Restriction: School of Engineering majors have first consideration for enrollment.

EECS 20. Computer Systems and Programming in C. 4 Units.

Introduction to computing systems. Data representation and operations. Simple logic design. Basic computer organization. Instruction set architecture and assembly language programming. Introduction to C functions, data structures, pointers. Programming laboratory.

(Design units: 1)

Prerequisite: EECS 12.

Restriction: Computer Engineering majors have first consideration for enrollment.

EECS 22. Advanced C Programming. 3 Units.

C language programming concepts. Control flow, function calls, recursion. Basic and composite data types, static and dynamic data structures. Program modules and compilation units. Preprocessor macros. C standard libraries.

(Design units: 1)

Prerequisite: EECS 20.

EECS 22L. Software Engineering Project in C Language. 3 Units.

Hands-on experience with the ANSI-C programming language. Medium-sized programming projects, team work. Software specification, documentation, implementation, testing. Definition of data structures and application programming interface. Creation of program modules, linking with external libraries. Rule-based compilation, version control.

(Design units: 3)

Prerequisite: EECS 22.

EECS 31. Introduction to Digital Systems. 4 Units.

Digital representation of information. Specification, analysis, design and optimization or combinational and sequential logic, register-transfer components and register-transfer systems with datapaths and controllers. Introduction to high-level and algorithmic state-machines and custom processors. Course may be offered online.

(Design units: 2)

Prerequisite: CSE 41 or I&C SCI 31 or EECS 10 or EECS 12 or ENGRMAE 10 or CSE 21 or I&C SCI 21 or I&C SCI H21.

Same as CSE 31.

Restriction: Computer Engineering, Computer Science and Engineering, Electrical Engineering majors have first consideration for enrollment.

EECS 31L. Introduction to Digital Logic Laboratory. 3 Units.

Introduction to common digital integrated circuits: gates, memory circuits, MSI components. Operating characteristics, specifications, applications. Design of simple combinational and sequential digital systems (arithmetic processors game-playing machines). Construction and debugging techniques using hardware description languages and CAD tools. Materials fee. Course may be offered online.

(Design units: 3)

Prerequisite: (EECS 31 or CSE 31) and (EECS 10 or EECS 12 or (CSE 22 or I&C SCI 22) or (CSE 42 or I&C SCI 32)).

Same as CSE 31L.

Restriction: Computer Engineering, Computer Science and Engineering, and Electrical Engineering majors have first consideration for enrollment.

EECS 40. Object-Oriented Systems and Programming. 4 Units.

Primitive types and expressions. The class and method definition. Information hiding and encapsulation. Objects and reference. Overloading. Constructors. Inheritance basics. Programming with inheritance. Dynamic binding and polymorphism. Exception handling. An overview of streams and file input/output. Programming laboratory.

(Design units: 2)

Prerequisite: EECS 20.

Restriction: Computer Engineering majors have first consideration for enrollment.

EECS 50. Discrete-Time Signals and Systems. 4 Units.

Analysis of discrete-time linear-time-invariant (DTLTI) systems in the time domain and using z-transforms. Introduction to techniques based on Discrete-Time, Discrete, and Fast Fourier Transforms. Examples of their application to digital signal processing and digital communications.

(Design units: 0)

Prerequisite: EECS 70A or CSE 70A.

Same as CSE 50.

Restriction: Computer Engineering, Computer Science and Engineering, and Electrical Engineering majors have first consideration for enrollment.

EECS 55. Engineering Probability. 4 Units.

Sets and set operations; nature of probability, sample spaces, fields of events, probability measures; conditional probability, independence, random variables, distribution functions, density functions, conditional distributions and densities; moments, characteristic functions, random sequences, independent and Markov sequences.

(Design units: 0)

Prerequisite: MATH 2D.

Restriction: Computer Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 70A. Network Analysis I. 4 Units.

Modeling and analysis of electrical networks. Basic network theorems. Sinusoidal steady state and transient analysis of RLC networks and the impedance concept.

(Design units: 1)

Corequisite: MATH 3D.

Prerequisite: PHYSICS 7D and (EECS 10 or EECS 12 or ENGRMAE 10 or CSE 41 or I&C SCI 31).

Same as CSE 70A.

Overlaps with ENGRMAE 60.

Restriction: Aerospace Engineering, Biomedical Engineering, Civil Engineering, Computer Engineering, Electrical Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

EECS 70B. Network Analysis II. 4 Units.

Laplace transforms, complex frequency, and the s-plane. Network functions and frequency response, including resonance. Bode plots. Two-port network characterization.

(Design units: 1)

Corequisite: EECS 70LB.

Prerequisite: (EECS 10 or ENGRCEE 10 or ENGRMAE 10) and EECS 70A.

Restriction: Computer Engineering, Electrical Engineering, and Materials Science Engineering majors have first consideration for enrollment.

EECS 70LA. Network Analysis I Laboratory. 1 Unit.

Laboratory to accompany EECS 70A.

Corequisite: EECS 70A.

Prerequisite: PHYSICS 7D and EECS 10.

EECS 70LB. Network Analysis II Laboratory. 1 Unit.

Laboratory to accompany EECS 70B.

(Design units: 1)

Corequisite: EECS 70B.

Prerequisite: (EECS 10 or ENGRCEE 10 or ENGRMAE 10) and EECS 70A.

Restriction: Computer Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 101. Introduction to Machine Vision. 3 Units.

The use of digital computers for the analysis of visual scenes; image formation and sensing, color, segmentation, shape estimation, motion, stereo, pattern classification, computer architectures, applications. Computer experiments are used to illustrate fundamental principles.

(Design units: 2)

Prerequisite: EECS 150 or EECS 50 or CSE 50.

Restriction: Electrical Engineering, Computer Engineering, and Computer Science and Engineering majors have first consideration for enrollment.

EECS 111. System Software. 4 Units.

Multiprogramming, interrupt, processes, kernel, parallelism, critical sections, deadlocks, communication, multiprocessing, multilevel memory management, binding, name management, file systems, protection, resource allocation, scheduling. Experience with concurrent programming, synchronization mechanisms, interprocess communication.

(Design units: 2)

Prerequisite: EECS 112 and (CSE 46 or I&C SCI 46 or EECS 114).

Overlaps with COMPSCI 143A.

Restriction: Computer Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 112. Organization of Digital Computers. 4 Units.

Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/out devices and interfaces. Microprogramming and microprocessors.

(Design units: 4)

Prerequisite: EECS 31L or CSE 31L.

Same as CSE 132.

Overlaps with COMPSCI 152.

Restriction: Computer Engineering, Computer Science and Engineering, and Electrical Engineering majors have first consideration for enrollment.

EECS 112L. Organization of Digital Computers Laboratory. 3 Units.

Specification and implementation of a processor-based system using a hardware description language such as VHDL. Hands-on experience with design tools including simulation, synthesis, and evaluation using testbenches.

(Design units: 3)

Prerequisite: EECS 112 or CSE 132.

Same as CSE 132L.

Restriction: Computer Engineering and Computer Science and Engineering majors have first consideration for enrollment.

EECS 113. Processor Hardware/Software Interfaces. 4 Units.

Hardware/software interfacing, including memory and bus interfaces, devices, I/O, and compiler code generation/instruction scheduling. Experience microcontroller programming and interfacing. Specific compiler code generation techniques cover including local variable and register allocations, instruction dependence and scheduling, and code optimization.

(Design units: 3)

Prerequisite: EECS 112 or CSE 132.

Restriction: Computer Engineering, Electrical Engineering, and Computer Science and Engineering majors have first consideration for enrollment.

EECS 114. Engineering Data Structures and Algorithms. 4 Units.

Introduces abstract behavior of classes data structures, alternative implementations, informal analysis of time and space efficiency. Also introduces classic algorithms and efficient algorithm design techniques (recursion, divide-and-conquer, branch-and-bound, dynamic programming).

(Design units: 2)

Prerequisite: EECS 40.

Restriction: Computer Engineering majors have first consideration for enrollment.

EECS 116. Introduction to Data Management. 4 Units.

Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming.

(Design units: 1)

Prerequisite: I&C SCI 23 or CSE 23 or I&C SCI H23 or I&C SCI 46 or CSE 46 or IN4MATX 45 or I&C SCI 33 or CSE 43 or EECS 114. I&C SCI 23 with a grade of C or better CSE 23 with a grade of C or better I&C SCI H23 with a grade of C or better I&C SCI 46 with a grade of C or better CSE 46 with a grade of C or better IN4MATX 45 with a grade of C or better I&C SCI 33 with a grade of C or better CSE 43 with a grade of C or better

Same as COMPSCI 122A.

Restriction: School of Information and Computer Sciences majors and Computer Engineering majors have first consideration for enrollment.

EECS 117. Parallel Computer Systems. 3 Units.

General introduction to parallel computing focusing on parallel algorithms and architectures. Parallel models: Flynn's taxonomy, dataflow models. Parallel architectures: systolic arrays, hypercube architecture, shared memory machines, dataflow machines, reconfigurable architectures. Parallel algorithms appropriate to each machine type area also discussed.

(Design units: 1)

Prerequisite: EECS 20 and EECS 112 or CSE 132.

Restriction: Computer Engineering and Computer Science and Engineering majors have first consideration for enrollment.

EECS 118. Introduction to Knowledge Management for Software and Engineering. 4 Units.

Introduction of basic concepts in knowledge engineering and software engineering. Knowledge representation and reasoning, search planning, software life cycle, requirements engineering, software design languages, declarative programming, testing, maintenance, and connections between knowledge engineering and software engineering.

(Design units: 2)

Prerequisite: EECS 40.

Restriction: Computer Engineering majors have first consideration for enrollment.

EECS 119. VLSI. 4 Units.

Design techniques for Very Large Scale Integrated (VLSI) systems and chips. Review CMOS and related process technologies; primitives such as logic gates and larger design blocks; layout; floor planning; design hierarchy, component interfaces; use of associated CAD tools for design.

(Design units: 4)

Prerequisite: (EECS 112 or CSE 132) and EECS 170B.

Overlaps with CSE 112, EECS 170D.

EECS 123. Introduction to Real-Time Distributed Programming. 4 Units.

Introduction to the techniques for programming applications involving timing-sensitive actions. Hands-on experiences with object-oriented programming styles. Timing requirements, timing specification, response times, deadlines, application programming interfaces to real-time operating systems and middleware, remote procedure call, and distributed objects.

(Design units: 2)

Prerequisite: (COMPSCI 143A or EECS 111) and EECS 112.

Restriction: Computer Engineering and Computer Science and Engineering majors have first consideration for enrollment.

EECS 129A. Computer Engineering Senior Design Project. 2 Units.

Conception, planning, implementation, programming, testing of an approved project. Options include: parallel processing, VLSI design, microprocessor-based design, among others.

(Design units: 2)

Grading Option: In progress only.

Restriction: Seniors only. Computer Engineering majors only.

EECS 129B. Computer Engineering Senior Design Project. 2 Units.

Conception, planning, implementation, programming, testing of an approved project. Options include: parallel processing, VLSI design, microprocessor-based design, among others.

(Design units: 2)

Prerequisite: EECS 129A.

Restriction: Seniors only. Computer Engineering majors only.

EECS 141A. Communication Systems I. 3 Units.

Introduction to analog communication systems including effects of noise. Modulation-demodulation for AM, DSB-SC, SSB, VSB, QAM, FM, PM, and PCM with application to radio, television, and telephony. Signal processing as applied to communication systems.

(Design units: 1)

Prerequisite: EECS 55 and EECS 150.

Restriction: Computer Engineering, Electrical Engineering, and Computer Science and Engineering majors have first consideration for enrollment.

EECS 141B. Communication Systems II. 3 Units.

Signal space analysis. Optimum receivers for digital communication. Maximum a posteriori and maximum likelihood detection. Matched filter and correlation receiver. PAM, QAM, PSK, FSK, and MSK and their performance. Introduction to equalization, synchronization, information theory, and error control codes.

(Design units: 1)

Prerequisite: EECS 141A.

Restriction: Computer Engineering, Electrical Engineering, and Computer Science and Engineering majors have first consideration for enrollment.

EECS 144. Antenna Design for Wireless Communication Links. 4 Units.

Analysis and synthesis of antennas and antenna arrays. Adaptive arrays and digital beam forming for advanced wireless links. Friis transmission formula. Wireless communication equations for cell-site and mobile antennas, interference, slow and fast fading in mobile communication.

Prerequisite: EECS 180A.

EECS 145. Electrical Engineering Analysis. 4 Units.

Vector calculus, complex functions and linear algebra with applications to electrical engineering problems.

(Design units: 0)

Prerequisite: MATH 3D.

Restriction: Computer Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 148. Computer Networks. 4 Units.

Computer network architectures, protocols, and applications. Internet congestion control, addressing, and routing. Local area networks. Multimedia networking.

(Design units: 2)

Prerequisite: EECS 55 or STATS 67.

Same as COMPSCI 132.

Restriction: Computer Engineering and Computer Science and Engineering majors have first consideration for enrollment.

EECS 150. Continuous-Time Signals and Systems. 4 Units.

Characteristics and properties of continuous-time (analog) signals and systems. Analysis of linear time-invariant continuous-time systems using differential equation convolutional models. Analysis of these systems using Laplace transforms, Fourier series, and Fourier transforms. Examples from applications to telecommunications. Formerly EECS 150A.

(Design units: 0)

Prerequisite: (EECS 70A or CSE 70A) and EECS 145.

Restriction: Computer Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 152A. Digital Signal Processing. 3 Units.

Nature of sampled data, sampling theorem, difference equations, data holds, z-transform, w-transform, digital filters, Butterworth and Chebychev filters, quantization effects.

(Design units: 2)

Prerequisite: EECS 50 or CSE 50.

Same as CSE 135A.

Restriction: Computer Engineering, Electrical Engineering, and Computer Science and Engineering majors have first consideration for enrollment.

EECS 152B. Digital Signal Processing Design and Laboratory. 3 Units.

Design and implementation of algorithms on a DSP processor and using computer simulation. Applications in signal and image processing, communications, radar, etc. Materials fee.

(Design units: 3)

Prerequisite: EECS 152A or CSE 135A.

Same as CSE 135B.

Restriction: Computer Engineering, Electrical Engineering, and Computer Science and Engineering majors have first consideration for enrollment.

EECS 160A. Introduction to Control Systems. 4 Units.

Modeling, stability, and specifications of feedback control systems. Root locus, Bode plots, Nyquist criteria, and state-space methods for dynamic analysis and design.

(Design units: 2)

Corequisite: EECS 160LA.

Prerequisite: (EECS 10 or ENGRMAE 10) and EECS 150 and EECS 170B and EECS 170LB.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 160B. Sampled-Data and Digital Control Systems. 3 Units.

Sampled-data and digital control systems. Sampling process and theory of digital signals; z-transform and modeling; stability; z-plane, frequency response, state-space techniques of digital control system synthesis.

(Design units: 2)

Prerequisite: EECS 31 and EECS 160A and EECS 160LA.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 160LA. Control Systems I Laboratory. 1 Unit.

Laboratory accompanying EECS 160A.

(Design units: 1)

Corequisite: EECS 160A.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 161. Electric Machines and Drives. 3 Units.

Magnetic circuits and transformers. Fundamentals of energy conversion. Application to synchronous, induction, commutator, and special purpose machines. Electric Drives.

(Design units: 2)

Corequisite: EECS 161L.

Prerequisite: EECS 70B.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 161L. Electric Machines and Drives Laboratory. 1 Unit.

Laboratory exercises supplementing the content of EECS 161.

(Design units: 0)

Corequisite: EECS 161.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 163. Power Systems. 4 Units.

Generation, transmission, and use of electrical energy. Fault calculation, protection, stability, and power flow.

(Design units: 1)

Corequisite: EECS 163L.

Prerequisite: EECS 70B.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 163L. Power Systems Laboratory. 1 Unit.

Experiments and field trips relevant to studies in power systems.

(Design units: 0)

Corequisite: EECS 163.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 166A. Industrial and Power Electronics. 4 Units.

Power switching devices, pulse width modulation (PWM) methods, switching converter topologies, control, and magnetics.

(Design units: 2)

Prerequisite: EECS 170C and EECS 160A.

Restriction: Electrical Engineering majors have first consideration for enrollment.

Concurrent with EECS 267A.

EECS 166B. Advanced Topics in Industrial and Power Electronics. 3 Units.

Practical design of switching converters, electromagnetic compatibility, thermal management, and/or control methods.

(Design units: 1)

Prerequisite: EECS 166A.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 170A. Electronics I. 4 Units.

The properties of semiconductors, electronic conduction in solids, the physics and operation principles of semiconductor devices such as diodes and transistors, transistor equivalent circuits, and transistor amplifiers.

(Design units: 1)

Corequisite: PHYSICS 7E.

Prerequisite: PHYSICS 7D and EECS 70A.

Restriction: Computer Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 170B. Electronics II. 4 Units.

Design and analysis of single-stage amplifiers, biasing circuits, inverters, logic gates, and memory elements based on CMOS transistors.

(Design units: 2)

Corequisite: EECS 170LB.

Prerequisite: EECS 70B and EECS 170A and EECS 170LA.

Restriction: Computer Engineering, Electrical Engineering, and Materials Science Engineering majors have first consideration for enrollment.

EECS 170C. Electronics III. 4 Units.

Principles of operation, design, and utilization of integrated circuit modules, including multi-stage amplifiers, operational amplifiers and logic circuits.

(Design units: 2)

Corequisite: EECS 170LC.

Prerequisite: EECS 170B and EECS 170LB.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 170D. Integrated Electronic Circuit Design. 4 Units.

Design and fabrication of modern digital integrated circuits. Fabrication of CMOS process, transistor-level design simulation, functional characteristics of basic digital integrated circuits, and different logic families including the static and dynamic logic, layout, and extraction of digital circuits.

(Design units: 4)

Prerequisite: EECS 170C and EECS 170LC.

Overlaps with EECS 119, CSE 112.

Restriction: Electrical Engineering and Computer Engineering majors have first consideration for enrollment.

EECS 170E. Analog and Communications IC Design. 4 Units.

Advanced topics in design of analog and communications integrated circuits. Topics include: implementation of passive components in integrated circuits; overview of frequency response of amplifiers, bandwidth estimation techniques, high-frequency amplifier design; design of radio-frequency oscillators.

(Design units: 3)

Prerequisite: EECS 170C.

EECS 170LA. Electronics I Laboratory. 1 Unit.

Laboratory accompanying EECS 170A to perform experiments on semiconductor material properties, semiconductor device physics and operation principles, and transistor amplifiers to improve experimental skills and to enhance the understanding of lecture materials.

(Design units: 1)

Corequisite: EECS 170A and PHYSICS 7E.

Prerequisite: PHYSICS 7D and EECS 70B.

Restriction: Computer Engineering, Electrical Engineering, and Materials Science Engineering majors have first consideration for enrollment.

EECS 170LB. Electronics II Laboratory. 1 Unit.

Laboratory accompanying EECS 170B.

(Design units: 1)

Corequisite: EECS 170B.

Prerequisite: EECS 170A and EECS 170LA.

Restriction: Computer Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 170LC. Electronics III Laboratory. 1 Unit.

Laboratory accompanying EECS 170C to provide hands-on training in design of digital/analog circuits/subsystems.

(Design units: 1)

Corequisite: EECS 170C.

Prerequisite: EECS 170B and EECS 170LB.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 174. Semiconductor Devices. 4 Units.

Metal-semiconductor junctions, diodes, bipolar junction transistors, MOS structures, MOSFETs, CMOS technology, LEDs, and laser diodes.

(Design units: 1)

Prerequisite: EECS 170A.

Restriction: Electrical Engineering and Materials Science Engineering majors have first consideration for enrollment.

EECS 176. Fundamentals of Solid-State Electronics and Materials. 4 Units.

Physical properties of semiconductors and the roles materials play in device operation. Topics include: crystal structure, phonon vibrations, energy band, transport phenomenon, optical properties and quantum confinement effect essential to the understanding of electronic, optoelectronic and nanodevices.

(Design units: 1)

Prerequisite: EECS 170A.

Restriction: Electrical Engineering and Materials Science Engineering majors have first consideration for enrollment.

EECS 179. Microelectromechanical Systems (MEMS). 4 Units.

Small-scale machines, small-scale phenomena, MEMS fabrication, MEMS CAD tools, MEMS devices and packaging, MEMS testing.

(Design units: 2)

Prerequisite: PHYSICS 51A.

Restriction: Biomedical Engineering and Electrical Engineering majors have first consideration for enrollment.

EECS 180A. Engineering Electromagnetics I. 4 Units.

Electrostatics, magnetostatics, and electromagnetic fields: solutions to problems in engineering applications; transmission lines, Maxwell's equations and phasors, plane wave propagation, reflection, and transmission. Formerly EECS 180.

(Design units: 1)

Corequisite: MATH 2D and MATH 3D.

Prerequisite: PHYSICS 7E and EECS 145.

Restriction: Biomedical Engineering, Electrical Engineering, and Materials Science Engineering majors have first consideration for enrollment.

EECS 180B. Engineering Electromagnetics II. 4 Units.

Time-varying electromagnetic fields, plane waves, polarization, guidance of waves like rectangular waveguides and microstrips, optical fibers resonant cavities, skin effects and losses, spherical waves, radiation and reception of waves, antenna basics. Formerly EECS 187.

(Design units: 1)

Prerequisite: EECS 180A.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 180C. Engineering Electromagnetics III. 4 Units.

Propagation in anisotropic media. Propagation in ferrites and non-reciprocal devices. Scattering and dispersion. Electromagnetic properties of materials. Scattering of small nanoparticles. Spherical waves. Cross section of large and small objects. Radar equation. Coherent and incoherent radiation.

(Design units: 0)

Prerequisite: EECS 180B.

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 182. Monolithic Microwave Integrated Circuit (MMIC) Analysis and Design. 4 Units.

Design of microwave amplifiers including low-noise amplifiers, multiple stage amplifiers, power amplifiers, and introduction to broadband amplifiers. The goal is to provide the basic knowledge for the design of microwave amplifiers ranging from wireless system to radar system.

(Design units: 3)

Prerequisite: EECS 180A.

EECS 188. Optical Electronics. 4 Units.

Photodiodes and optical detection, photometry and radiometry, geometric optics, lens theory, imaging system, EM wave propagation, optical waveguides and fibers, heterojunction structures, laser theory, semiconductor lasers, and optical transmission system.

(Design units: 1)

Restriction: Electrical Engineering majors have first consideration for enrollment.

EECS 189A. Electrical Engineering Senior Design Project I. 2 Units.

Design projects for seniors in the Electrical Engineering program. Each project is supervised by a faculty member.

(Design units: 2)

Prerequisite: EECS 150 and EECS 170C and EECS 180A.

Grading Option: In progress only.

Restriction: Electrical Engineering majors only.

EECS 189B. Electrical Engineering Senior Design Project II. 2 Units.

Design projects for seniors in the Electrical Engineering program. Each project is supervised by a faculty member.

(Design units: 2)

Prerequisite: EECS 189A.

Restriction: Electrical Engineering majors only.

EECS 195. Special Topics in Electrical and Computer Engineering. 1-4 Units.

Studies special topics in selected areas of Electrical and Computer Engineering. Topics addressed vary each quarter.

(Design units: 1-4)

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

EECS 198. Group Study. 1-4 Units.

Group study of selected topics in Electrical and Computer Engineering.

(Design units: 1-4)

Repeatability: May be repeated for credit unlimited times.

Restriction: Upper-division students only.

EECS 199. Individual Study. 1-4 Units.

For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking Individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Repeatability: May be taken for credit for 8 units.

EECS 199P. Individual Study. 1-4 Units.

For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

EECS H199. Individual Study for Honors Students. 1-5 Units.

Independent reading, research, or design under the direction of faculty in Electrical and Computer Engineering. Students taking individual study for design credit are to submit a written paper to the instructor and to the School of Engineering.

Repeatability: May be taken for credit 4 times.

Restriction: Campuswide Honors Program students only.

EECS 202A. Principles of Imaging. 4 Units.

Linear systems, probability and random processes, image processing, projecting imaging, tomographic imaging.

Prerequisite: PHYSICS 51B or PHYSICS 61B.

Same as PHYSICS 233A.

Restriction: Graduate students only.

Concurrent with PHYSICS 147A.

EECS 202B. Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging. 4 Units.

Ionizing radiation, planar and tomographic radiographic and nuclear imaging, magnetism, NMR, MRI imaging.

Prerequisite: EECS 202A.

Same as PHYSICS 233B.

Restriction: Graduate students only.

Concurrent with PHYSICS 147B.

EECS 202C. Techniques in Medical Imaging II: Ultrasound, Electrophysiological, Optical. 4 Units.

Sound and ultrasound, ultrasonic imaging, physiological electromagnetism, EEG, MEG, ECG, MCG, optical properties of tissues, fluorescence and bioluminescence, MR impedance imaging, MR spectroscopy, electron spin resonance and ESR imaging.

Prerequisite: EECS 202B.

Same as PHYSICS 233C.

Restriction: Graduate students only.

Concurrent with PHYSICS 147C.

EECS 203A. Digital Image Processing. 4 Units.

Pixel-level digital image representation and elementary operations; Fourier and other unitary transforms; compression, enhancement, filtering, and restoration; laboratory experience is provided.

Prerequisite: EECS 152A.

Restriction: Graduate students only.

EECS 210. Modeling and Rendering for Image Synthesis. 4 Units.

Provides the fundamental understanding of mathematical and physical models used in image synthesis applications: geometric models, physics of color image formation, polygon approximations, ray tracing, and radiosity.

EECS 211. Advanced System Software. 4 Units.

Study of operating systems including interprocess communication, scheduling, resource management, concurrency, reliability, validation, protection and security, and distributed computing support. System software design languages and modeling analysis.

Prerequisite: EECS 111 and EECS 112.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 213. Computer Architecture. 4 Units.

Problems in hardware, firmware (microprogram), and software. Computer architecture for resource sharing, real-time applications, parallelism, microprogramming, and fault tolerance. Various architectures based on cost/performance and current technology.

Prerequisite: EECS 112 and EECS 112L.

Restriction: Graduate students only.

EECS 215. Design and Analysis of Algorithms. 4 Units.

Computer algorithms from a practical standpoint. Algorithms for symbolic and numeric problems such as sorting, searching, graphs, and network flow. Analysis includes algorithm time and space complexity.

EECS 217. VLSI System Design. 4 Units.

Overview of integrated fabrication, circuit simulation, basic device physics, device layout, timing; MOS logic design; layout generation, module generation, techniques for very large scale integrated circuit design.

Prerequisite: EECS 112.

Restriction: Graduate students only.

EECS 218. Distributed Computer Systems. 4 Units.

Design and analysis techniques for decentralized computer architectures, communication protocols, and hardware-software interface. Performance and reliability considerations. Design tools.

Prerequisite: EECS 211 and EECS 213.

Same as NET SYS 261.

Restriction: Graduate students only.

EECS 219. Distributed Software Architecture and Design. 4 Units.

Practical issues for reducing the software complexity, lowering cost, and designing and implementing distributed software applications. Topics include the distributed object model distributed environment, platform-independent software agents and components, the middleware architecture for distributed real-time and secure services.

Prerequisite: EECS 211.

Restriction: Graduate students only.

EECS 220. Advanced Digital Signal Processing Architecture. 4 Units.

Study the latest DSP architectures for applications in communication (wired and wireless) and multimedia processing. Emphasis given to understanding the current design techniques and to evaluate the performance, power, and application domain of the latest DSP processors.

Prerequisite: EECS 213.

Restriction: Graduate students only.

EECS 221. Topics in Computer Engineering. 4 Units.

New research results in computer engineering.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 222. Embedded System Modeling. 4 Units.

Computational models for embedded systems. System-level specification and description languages. Concepts, requirements, examples. Embedded system models at different levels of abstraction. Modeling of test benches, design under test, IP components. Discrete event simulation, semantics, and algorithms. Formerly EECS 222A.

Restriction: Graduate students only.

EECS 223. Real-Time Computer Systems. 4 Units.

Time bases, clock synchronization, real-time communication protocols, specification of requirements, task scheduling. Validation of timelines, real-time configuration management.

Prerequisite: EECS 211 and EECS 213.

Restriction: Graduate students only.

EECS 224. Fault-Tolerant Computing. 4 Units.

Various aspects of fault-tolerant computing systems. Includes hardware and software failures, reliability, and mechanism to recover from failures.

Prerequisite: EECS 211.

Restriction: Graduate students only.

EECS 225. Embedded Systems Design. 4 Units.

Embedded systems design flow and methodology. Design space exploration. Co-design of hardware and software, embedded architecture and network exploration and synthesis. System software/hardware interface generation. Real-time constraints, specification-to-architecture mapping, design tools and methodologies. Formerly EECS 222B. Course may be offered online.

Restriction: Graduate students only.

EECS 226. Embedded System Software. 4 Units.

Embedded system software concepts, requirements, examples, for engineering applications such as multi-media and automotive. Software generation methodology. Algorithmic specification, design constraints. Embedded operating systems. Static, dynamic, real-time scheduling. Input/output, interrupt handling. Code generation, compilation, instruction set simulation. Formerly EECS 222C.

Restriction: Graduate students only.

EECS 227. Cyber-Physical System Design. 4 Units.

Model-based design of cyber-physical systems including, e.g., plant, sensing, control, actuation, embedded hardware/software, communication, real-time analysis, various levels of simulation (MILS, SILS, HILS), tools and methodologies for automatic synthesis, and application from various interdisciplinary domains.

(Design units: 0)

Restriction: Graduate students only.

EECS 230. Energy Efficiency. 4 Units.

Green energy sources for production, transmission, storage, and utilization of electricity, with a special focus on solar, wind, and nuclear energy production. Study of newly developed renewable sources of energy including capital cost, product cost, environmental issues, and technical feasibility.

EECS 240. Random Processes. 4 Units.

Extensions of probability theory to random variables varying with time. General properties of stochastic processes. Convergence. Estimation, including nonlinear and linear minimum mean square error and maximum likelihood. Spectral density and linear filters. Poisson processes and discrete-time Markov chains.

Prerequisite: EECS 55.

Restriction: Graduate students only.

EECS 241A. Digital Communications I. 4 Units.

Concepts and applications of digital communication systems. Baseband digital transmission of binary, multi-amplitude, and multidimensional signals. Introduction to and performance analysis of different modulation schemes.

EECS 241B. Digital Communications II. 4 Units.

Concepts and applications of equalization, multi-carrier modulation, spread spectrum and CDMA. Digital communications through fading memory channels.

Prerequisite: EECS 241A.

Restriction: Graduate students only.

EECS 242. Information Theory. 4 Units.

Fundamental capabilities and limitations of information sources and information transmission systems. Analytical framework for modeling and evaluating communication systems: entropy, mutual information asymptotic equipartition property, entropy rates of a stochastic process, data compression, channel capacity, differential entropy, the Gaussian channel.

Prerequisite: EECS 240.

EECS 243. Error Correcting Codes. 4 Units.

Different techniques for error correcting codes and analyzing their performance. Linear block codes; cyclic codes; convolutional codes. Minimum distance; optimal decoding; Viterbi decoding; bit error probability. Coding gain; trellis coded modulation.

Prerequisite: EECS 240.

Restriction: Graduate students only.

EECS 244. Wireless Communications. 4 Units.

Introduction to wireless communications systems. Wireless channel modeling. Single carriers, spread spectrum, and multi-carrier wireless modulation schemes. Diversity techniques. Multiple-access schemes. Transceiver design and system level tradeoffs. Brief overview of GSM, CDMA, (IS-95) and 2.5, 3G cellular schemes.

Prerequisite: EECS 241B.

Restriction: Graduate students only.

EECS 245. Space-Time Coding. 4 Units.

A fundamental study of: Capacity of MIMO Channels, space-time code design criteria, space-time block codes, space-time trellis codes, differential detection for multiple antennas, spatial multiplexing, BLAST.

Prerequisite: EECS 242.

Restriction: Graduate students only.

EECS 246. Network Coding: Theory and Applications. 4 Units.

Theoretical frameworks for network coding: linear, algebraic and random network coding; linear programming and combinatorial frameworks. Network code design. Benefits and costs. Practical network coding. Applications to wireless networks, content distribution, security, and other areas.

Prerequisite: EECS 248A or NET SYS 201 or COMPSCI 232.

Same as NET SYS 256.

Restriction: Graduate students only.

EECS 248A. Computer and Communication Networks. 4 Units.

Network architecture of the Internet, telephone networks, cable networks, and cell phone networks. Network performance models. Network performance models. Advanced concepts and implementations of flow and congestion control, addressing, internetworking, forwarding, routing, multiple access, streaming, and quality-of-service.

Prerequisite: EECS 148 or COMPSCI 132.

Same as COMPSCI 232, NET SYS 201.

Restriction: Graduate students only.

EECS 250. Digital Signal Processing I. 4 Units.

Fundamental principles of digital signal processing, sampling, decimation and interpolation, discrete Fourier transforms and FFT algorithms, transversal and recursive filters, discrete random processes, and finite-word effects in digital filters.

Prerequisite: EECS 152A.

Restriction: Graduate students only.

EECS 251A. Detection, Estimation, and Demodulation Theory. 4 Units.

Fundamentals of hypothesis testing and Bayes and Maximum Likelihood Estimation. ARMA and state variable models for random time series analysis. Wiener and Kalman filtering and prediction. Adaptive algorithms for identification and tracking of parameters of time-varying models.

Prerequisite: EECS 240.

EECS 251B. Detection, Estimation, and Demodulation Theory. 4 Units.

Fundamentals of hypothesis testing and Bayes and Maximum Likelihood Estimation. ARMA and state variable models for random time series analysis. Wiener and Kalman filtering and prediction. Adaptive algorithms for identification and tracking of parameters of time-varying models.

Prerequisite: EECS 240.

EECS 260A. Linear Systems I. 4 Units.

State-space representation of continuous-time and discrete-time linear systems. Controllability, observability, stability. Realization of rational transfer functions.

Prerequisite: EECS 160A.

Restriction: Graduate students only.

EECS 261A. Linear Optimization Methods. 4 Units.

Formulation, solution, and analysis of linear programming and linear network flow problems. Simplex methods, dual ascent methods, interior point algorithms and auction algorithms. Duality theory and sensitivity analysis. Shortest path, max-flow, assignment, and minimum cost flow problems.

Prerequisite: MATH 3A.

Restriction: Graduate students only.

EECS 267A. Industrial and Power Electronics. 4 Units.

Power switching devices, pulse width modulation (PWM) methods, switching converter topologies, control, and magnetics.

Prerequisite: EECS 160A and EECS 170C.

Restriction: Graduate students only.

Concurrent with EECS 166A.

EECS 267B. Topics in Industrial and Power Electronics. 4 Units.

Practical design of switching converters, electromagnetic compatibility, thermal management, and/or control methods.

Prerequisite: EECS 267A.

Restriction: Graduate students only.

EECS 270A. Advanced Analog Integrated Circuit Design I. 4 Units.

Basic transistor configurations; differential pairs; active load/current sources; supply/temperature-independent biasing; op-amp gain and output stages; amplifier frequency response and stability compensation; nonidealities in op-amps; noise and dynamic range in analog circuits.

Prerequisite: EECS 170C and EECS 170LC.

Restriction: Graduate students only.

EECS 270B. Advanced Analog Integrated Circuit Design II. 4 Units.

Advanced transistor modeling issues; discrete-time and continuous-time analog Integrated Circuit (IC) filters; phase-locked loops; design of ICs operating at radio frequencies; low-voltage/low-power design techniques; A/D and D/A converters; AGC circuits.

Prerequisite: EECS 270A.

Restriction: Graduate students only.

EECS 270C. Design of Integrated Circuits for Broadband Applications. 4 Units.

Topics include: broadband standards and protocols; high-frequency circuit design techniques; PLL theory and design; design of transceivers; electrical/optical interfaces.

Prerequisite: EECS 270A.

Restriction: Graduate students only.

EECS 270D. Radio-Frequency Integrated Circuit Design. 4 Units.

Topics include: RF component modeling; matching network design; transmission line theory/modeling; Smith chart and S-parameters; noise modeling of active and passive components; high-frequency amplifier design; low-noise amplifier (LNA) design; mixer design; RF power amplifier.

Prerequisite: EECS 270A.

Restriction: Graduate students only.

EECS 272. Topics in Electronic System Design. 4 Units.

New research results in electronic system design.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 273. Electronics Packaging. 4 Units.

Materials, processes, techniques, and principles in interconnect and packaging of electronic products after the device-containing semiconductor wafer is fabricated. The electronic, optical, thermal, mechanical, and reliability properties of the materials are evaluated in the context of modern electronics manufacturing processes.

Restriction: Graduate students only.

EECS 274. Biomedical Microdevices (MEMOS). 4 Units.

Construction of biomedical microdevices, lithographic patterning and etching of microdevices, sealing and connecting microdevices, molding of microdevices, testing of microdevices.

Prerequisite: EECS 179.

Restriction: Graduate students only.

EECS 275A. Very Large Scale Integration (VLSI) Project. 4 Units.

Students create VLSI design projects from conception through architecture, floor planning, detailed design, simulation, verification, and submission for project fabrication. Emphasis on practical experience in robust VLSI design techniques. (Successful students are expected to take EECS 275B.).

Prerequisite: EECS 119 or EECS 170D.

Restriction: Graduate students only.

EECS 275B. Very Large Scale Integration (VLSI) Project Testing. 4 Units.

Test and document student-created Complementary Metal Oxide Semiconductor (CMOS) Very Large Scale Integration (VLSI) projects designed in EECS 275A. Emphasis on practical laboratory experience in VLSI testing techniques.

Prerequisite: EECS 275A.

Restriction: Graduate students only.

EECS 277A. Advanced Semiconductor Devices I. 4 Units.

Advanced complementary metal-oxide-semiconductor field-effect transistors (CMOSFET), device scaling, device modeling and fabrication, equivalent circuits, and their applications for digital, analog, RF.

Prerequisite: EECS 174.

Restriction: Graduate students only.

EECS 277B. Advanced Semiconductor Devices II. 4 Units.

Metal-semiconductor field-effect transistors (MESFET), heterojunction bipolar transistors (HBT), microwave semiconductor devices, equivalent circuits, device modeling and fabrication, microwave amplifiers, transmitters, and receivers.

Prerequisite: EECS 174.

Restriction: Graduate students only.

EECS 277C. Nanotechnology. 4 Units.

Fabrication and characterization techniques of electrical circuit elements at the nanometer scale. Quantized conductance, semiconductor quantum dots, single electron transistors, molecular wires, carbon nanotubes, self-assembly of nano-circuit elements, quantum methods of information processing.

Prerequisite: EECS 170A and PHYSICS 51A.

Restriction: Graduate students only.

EECS 278. Micro-System Design. 4 Units.

Covers the fundamentals of the many disciplines needed for design of Micro-Electro-Mechanical Systems (MEMS): microfabrication technology, structural mechanics on micro-scale, electrostatics, circuit interface, control, computer-aided design, and system integration.

Same as ENGRMAE 247.

Restriction: Graduate students only.

EECS 279. Micro-Sensors and Actuators. 4 Units.

Introduction to the technology of Micro-Electro-Mechanical Systems (MEMS). Fundamental principles and applications of important microsensors, actuation principles on microscale. Introduction to the elements of signal processing; processing of materials for micro sensor/ actuator fabrication; smart sensors and microsensor/microactuator array devices.

Same as ENGRMAE 249.

Restriction: Graduate students only.

EECS 280A. Advanced Engineering Electromagnetics I. 4 Units.

Stationary electromagnetic fields, Maxwell's equations, circuits and transmission lines, plane waves, guided waves, and radiation.

Prerequisite: EECS 180A.

Restriction: Graduate students only.

EECS 280B. Advanced Engineering Electromagnetics II. 4 Units.

Two- and three-dimensional boundary value problems, dielectric waveguides and other special waveguides, microwave networks and antenna arrays, electromagnetic properties of materials, and electromagnetic optics.

Prerequisite: EECS 280A.

Restriction: Graduate students only.

EECS 282. Monolithic Microwave Integrated Circuit (MMIC) Analysis and Design II. 4 Units.

Design of microwave amplifiers using computer-aided design tools. Covers low-noise amplifiers, multiple stage amplifiers, broadband amplifiers, and power amplifiers. Hybrid circuit design techniques including filters and baluns. Theory and design rules for microwave oscillator design.

Prerequisite: EECS 180A and EECS 182.

Restriction: Graduate students only.

EECS 285A. Optical Communications. 4 Units.

Introduction to fiber optic communication systems, optical and electro-optic materials, and high-speed optical modulation and switching devices.

Prerequisite: EECS 180A.

EECS 285B. Lasers and Photonics. 4 Units.

Covers the fundamentals of lasers and applications, including Gaussian beam propagation, interaction of optical radiation with matters, and concepts of optical gain and feedback. Applications are drawn from diverse fields of optical communication, signal processing, and material diagnosis.

Prerequisite: Undergraduate course work in electromagnetic theory and atomic physics.

EECS 285C. Nano Imaging. 3 Units.

Theory and practice of modern nanoscale imaging techniques and applications. Traces the development of microscopy from ancient times to modern day techniques used for visualizing the nano-world from atoms to molecules including hands-on experience in the laboratory.

Restriction: Graduate students only.

EECS 292. Preparation for M.S. Comprehensive Examination. 1-8 Units.

Individual reading and preparation for the M.S. comprehensive examination.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 293. Preparation for Ph.D. Preliminary Examination. 1-8 Units.

Individual reading and preparation for the Ph.D. preliminary examination.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 294. Electrical Engineering and Computer Science Colloquium. 1 Unit.

Invited speakers discuss their latest research results in electrical engineering and computer science.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 295. Seminars in Engineering. 1-4 Units.

Scheduled each year by individual faculty in major field of interest.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 296. Master of Science Thesis Research. 1-16 Units.

Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. degree in Engineering.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 297. Doctor of Philosophy Dissertation Research. 1-16 Units.

Individual research or investigation conducted in preparing and completing the dissertation required for the Ph.D. degree in Engineering.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 298. Topics in Electrical Engineering and Computer Science. 4 Units.

Study of Electrical and Computer Engineering concepts.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 299. Individual Research. 1-16 Units.

Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Department of Mechanical and Aerospace Engineering

S4221 Engineering Gateway; (949) 824-8451, 5406

<http://mae.eng.uci.edu/>

Derek Dunn-Rankin, **Department Chair**

The Department of Mechanical and Aerospace Engineering offers two undergraduate B.S. degree programs: one in Mechanical Engineering and the other in Aerospace Engineering. M.S. and Ph.D. degree programs in Mechanical and Aerospace Engineering are also offered.

Mechanical engineers design, manufacture, and control machines ranging from robots to aircraft and spacecraft, design engines and power plants that drive these machines, analyze the environmental impact associated with power generation, and strive to promote environmental quality. To achieve their goals, mechanical engineers use mathematics, physics, and chemistry together with engineering science and technology in areas such as fluid mechanics, heat transfer, dynamics, controls, and atmospheric science. Mechanical Engineering students at UCI learn the problem-solving, modeling, and testing skills required to contribute to advances in modern technology.

Mechanical Engineering undergraduates complete required courses that provide engineering fundamentals and technical electives that allow students to study particular areas of interest. Specializations are available in Aerospace Engineering, Energy Systems and Environmental Engineering, Flow Physics and Propulsion Systems, and Design of Mechanical Systems. Independent research opportunities allow students to pursue other avenues for focusing their studies.

Aerospace Engineering deals with all aspects of aircraft and spacecraft design and operation, thus requiring the creative use of many different disciplines. Aerospace engineers work the forefront of technological advances and are leaders in scientific discoveries.

The undergraduate curriculum in Aerospace Engineering includes courses in subsonic and supersonic aerodynamics, propulsion, controls and performance, light-weight structures, spacecraft dynamics, and advanced materials. In the senior capstone course, students work in teams on the preliminary design of a commercial jet transport.

Career opportunities for Aerospace Engineering graduates are in the broad range of aerospace industries, including manufacturers of aircraft, spacecraft, engines, and aircraft/spacecraft components; makers of aircraft/spacecraft simulators; and government research laboratories.

- Aerospace Engineering
- Mechanical Engineering

Undergraduate Major in Aerospace Engineering

Program Educational Objectives: Graduates of the program will have the professional and scientific education that allows them to be successful as career engineers and in the most demanding graduate programs. Specifically, they will be able to (1) function in professional environments in industry, government, and academia applying and building upon engineering science knowledge, problem-solving skills, and communication skills; (2) function as members of teams and in leadership roles applying ethical standards including the AIAA code of ethics within and beyond traditional Aerospace Engineering disciplines; and (3) remain current with technology and contemporary scientific and societal issues, and consequently improve skills and knowledge through a lifelong process of learning. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Aerospace Engineering curriculum includes a core of mathematics, physics, and chemistry. Engineering courses in fundamental areas constitute much of the remaining curriculum. A few technical electives allow the undergraduate student to specialize somewhat or to pursue broader understanding. A senior capstone design experience culminates the curriculum.

Admissions

High School Students: See School admissions (p. 308) information.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), one course in general chemistry (with laboratory), and two additional approved courses for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

Requirements for the B.S. Degree in Aerospace Engineering

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements (p. 308).

Major Requirements

Mathematics and Basic Science Courses:

MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
MATH 2D	Multivariable Calculus
MATH 3A	Introduction to Linear Algebra
MATH 3D	Elementary Differential Equations
MATH 2E	Multivariable Calculus
CHEM 1A	General Chemistry
CHEM 1LE	Accelerated General Chemistry Lab
PHYSICS 7C	Classical Physics
PHYSICS 7LC	Classical Physics Laboratory

PHYSICS 7D- 7E	Classical Physics and Classical Physics
PHYSICS 7LD	Classical Physics Laboratory
PHYSICS 52A	Fundamentals of Experimental Physics
and select one of the following:	
BIO SCI 93	From DNA to Organisms
CHEM 1B	General Chemistry
EARTHSS 55	Earth's Atmosphere
PHYSICS 51A	Modern Physics
Engineering Topics Courses:	
Students must complete a minimum of 24 units of engineering design.	
Core Courses:	
ENGR 54	Principles of Materials Science and Engineering
ENGRMAE 10	Introduction to Engineering Computations
ENGRMAE 30	Statics
ENGRMAE 60	Electric Circuits
or EECS 70A	Network Analysis I
ENGRMAE 80	Dynamics
ENGRMAE 91	Introduction to Thermodynamics
ENGRMAE 106	Mechanical Systems Laboratory
ENGRMAE 108	Aerospace Laboratory
ENGRMAE 112	Propulsion
ENGRMAE 120	Heat and Mass Transfer
ENGRMAE 130A	Introduction to Fluid Mechanics
ENGRMAE 130B	Introduction to Viscous and Compressible Flows
ENGRMAE 135	Compressible Flow
ENGRMAE 136	Aerodynamics
ENGRMAE 146	Astronautics
ENGRMAE 150	Mechanics of Structures
ENGRMAE 150L	Mechanics of Structures Laboratory
ENGRMAE 157	Lightweight Structures
ENGRMAE 158	Aircraft Performance
ENGRMAE 159	Aircraft Design
ENGRMAE 170	Introduction to Control Systems
ENGRMAE 175	Dynamics and Control of Aerospace Vehicles

Technical Elective Courses:

Students select a minimum of 8 units of technical electives, incorporating at least 1 unit of design. Any upper-division course in the department not used for the degree may be used as a technical elective. With approval of the Undergraduate Advisor, students may choose from other departments' upper-division courses that have primarily technical content. Preapproved courses are listed on the MAE Web site: <http://mae.eng.uci.edu/undergraduate/TechElect.htm>.

Engineering Professional Topics Course:

ECON 20A	Basic Economics I
----------	-------------------

At most an aggregate total of 4 units of 199 or H199 courses may be used to satisfy degree requirements.

(The nominal Aerospace Engineering program will require 185 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

Design unit values are indicated at the end of each course description. The faculty advisors and the Undergraduate Student Affairs Office can provide necessary guidance for satisfying the design requirements. Selection of elective courses must be approved by the student's faculty advisor and the departmental undergraduate advisor.

The sample program of study chart shown is typical for the major in Aerospace Engineering. This program is based upon a set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their programs approved by their faculty advisor. Aerospace Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisor.

Undergraduate Major in Mechanical Engineering

Program Educational Objectives: Graduates of the program will have the professional and scientific education that allows them to be successful as career engineers and in the most demanding graduate programs. Specifically, they will be able to (1) function in professional environments in industry, government, and academia applying and building upon engineering science knowledge, problem-solving skills, and communication skills; (2) function as members of teams and in

leadership roles applying ethical standards including the ASME code of ethics within and beyond traditional Mechanical Engineering disciplines; and (3) remain current with technology and contemporary scientific and societal issues, and consequently improve skills and knowledge through a lifelong process of learning. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Mechanical Engineering curriculum includes a foundation of mathematics, physics, and chemistry. Engineering courses in fundamental areas constitute much of the remaining curriculum. A few technical electives allow the undergraduate student to specialize somewhat or to pursue broader understanding. A senior capstone design experience culminates the curriculum.

Admissions

High School Students: See School admissions (p. 308) information.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), one course in general chemistry (with laboratory), and two additional approved courses for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

Requirements for the B.S. Degree in Mechanical Engineering

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements (p. 308).

Major Requirements

Mathematics and Basic Science Courses:

MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
MATH 2D	Multivariable Calculus
MATH 3A	Introduction to Linear Algebra
MATH 3D	Elementary Differential Equations
MATH 2E	Multivariable Calculus
CHEM 1A	General Chemistry
CHEM 1LE	Accelerated General Chemistry Lab
PHYSICS 7C	Classical Physics
PHYSICS 7LC	Classical Physics Laboratory
PHYSICS 7D- 7E	Classical Physics and Classical Physics
PHYSICS 7LD	Classical Physics Laboratory
PHYSICS 52A	Fundamentals of Experimental Physics

and select one of the following:

BIO SCI 93	From DNA to Organisms
CHEM 1B	General Chemistry
EARTHSS 55	Earth's Atmosphere

PHYSICS 51A	Modern Physics
-------------	----------------

Engineering Topics Courses:

Students must complete a minimum of 24 units of engineering design.

Core Courses:

ENGR 54	Principles of Materials Science and Engineering
ENGRMAE 10	Introduction to Engineering Computations
ENGRMAE 30	Statics
ENGRMAE 52	Computer-Aided Design
ENGRMAE 60 or EECS 70A	Electric Circuits Network Analysis I
ENGRMAE 80	Dynamics
ENGRMAE 91	Introduction to Thermodynamics
ENGRMAE 106	Mechanical Systems Laboratory
ENGRMAE 107	Fluid Thermal Science Laboratory
ENGRMAE 112 or ENGRMAE 115	Propulsion Applied Engineering Thermodynamics
ENGRMAE 120	Heat and Mass Transfer
ENGRMAE 130A	Introduction to Fluid Mechanics
ENGRMAE 130B	Introduction to Viscous and Compressible Flows
ENGRMAE 145	Theory of Machines and Mechanisms
ENGRMAE 147	Vibrations
ENGRMAE 150	Mechanics of Structures
ENGRMAE 150L	Mechanics of Structures Laboratory
ENGRMAE 151	Mechanical Engineering Design
ENGRMAE 155 or ENGRMAE 156	Composite Materials and Structures Mechanical Behavior and Design Principles
or ENGRMAE 157	Lightweight Structures
ENGRMAE 170	Introduction to Control Systems
ENGRMAE 189	Senior Project - Special Topics (minimum of 3 units)

Technical Elective Courses:

Students select a minimum of 16 units of technical electives. Any upper-division course in the department not used for the degree may be used as a technical elective. At least 8 units of the technical electives must come from mechanical engineering oriented MAE courses. With approval of the Undergraduate Advisor, students may choose any remaining technical elective units from other departments' upper-division courses that have primarily technical content. Preapproved courses from other departments as well as the identified mechanical engineering oriented MAE courses are listed on the MAE Web site: <http://mae.eng.uci/undergraduate/TechElect.htm>.

Engineering Professional Topics Course:

ECON 20A	Basic Economics I
----------	-------------------

At most an aggregate total of 4 units of 199 or H199 courses may be used to satisfy degree requirements.

(The nominal Mechanical Engineering program will require 189 units of courses to satisfy all university and major requirements. Because each

student comes to UCI with a different level of preparation, the actual number of units will vary.)

Specialization in Aerospace Engineering:

Completion of a Senior Design Project in this area, and

select two of the following:

ENGRMAE 112	Propulsion
ENGRMAE 135	Compressible Flow
ENGRMAE 136	Aerodynamics
ENGRMAE 158	Aircraft Performance
ENGRMAE 159	Aircraft Design
ENGRMAE 175	Dynamics and Control of Aerospace Vehicles

Specialization in Energy Systems and Environmental Engineering:

Completion of a Senior Design Project in this area, and

select one of the following:

ENGRMAE 110	Combustion and Fuel Cell Systems
ENGRMAE 117	Solar and Renewable Energy Systems

and select one of the following:

ENGRMAE 164	Air Pollution and Control
ENGRCEE 162	Introduction to Environmental Chemistry
ENGRCEE 173	Watershed Modeling
CBEMS 110	Reaction Kinetics and Reactor Design

Specialization in Flow Physics and Propulsion Systems:

Completion of a Senior Design Project in this area, and

select two of the following:

ENGRMAE 110	Combustion and Fuel Cell Systems
ENGRMAE 112	Propulsion
ENGRMAE 113	Electric Propulsion
ENGRMAE 135	Compressible Flow

Specialization in Design of Mechanical Systems:

Completion of a Senior Design Project in this area, and

select two of the following:

ENGRMAE 152	Introduction to Computer-Aided Engineering
ENGRMAE 171	Digital Control Systems
ENGRMAE 172	Design of Computer-Controlled Robots
ENGRMAE 183	Computer-Aided Mechanism Design
ENGRMAE 188	Engineering Design in Industry

Design unit values are indicated at the end of each course description. The faculty advisors and the Student Affairs Office can provide necessary guidance for satisfying the design requirements. Selection of elective courses must be approved by the student's faculty advisor and the departmental undergraduate advisor.

Program of Study

The sample program of study chart shown is typical for the accredited major in Mechanical Engineering. Students should keep in mind that this program is based upon a rigid set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Therefore, the course sequence should not be changed except for the

most compelling reasons. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their programs approved by their faculty advisor. Mechanical Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

ENGRMAE 155 may be used instead of ENGRMAE 156 or ENGRMAE 157. Students can dual major in Mechanical Engineering and Aerospace Engineering by satisfying the degree requirements for both majors. Students who dual major in Mechanical Engineering and Materials Science Engineering should use CBEMS 164 as a Mechanical Engineering Core Course.

Graduate Study in Mechanical and Aerospace Engineering

The Mechanical and Aerospace Engineering faculty have special interest and expertise in four thrust areas: continuum mechanics; power, propulsion, and environment; micro/nanomechanics; and systems and design.

Continuum mechanics faculty study the physics of fluids, physics and chemistry of solids, and structural mechanics. Areas of emphasis in fluid mechanics include incompressible and compressible turbulent flows, multiphase flows, chemically reacting and other nonequilibrium flows, aeroacoustics, aerodynamics, and fluid-solid interaction. In the field of solid mechanics, research and course work emphasize theoretical and computational approaches which contribute to a basic understanding of and new insight into the properties and behavior of condensed matter. General areas of interest are large-strain and large-rotation inelastic

solids, constitutive modeling, and fracture mechanics. Computational algorithms center on boundary element methods and the new class of meshless methods. Studies in structural mechanics involve the analysis and synthesis of low-mass structures, smart structures, and engineered materials, with emphasis on stiffness, stability, toughness, damage tolerance, longevity, optimal life-cycle costs and self-adaptivity.

Research in power, propulsion, and environment encompasses aerospace propulsion, combustion and thermophysics, fuel cell technologies, and atmospheric physics and impacts. In aerospace propulsion, particular emphasis is placed in the areas of turbomachinery, spray combustion, combustion instability, innovative engine cycles, and compressible turbulent mixing. The topic of combustion and thermophysics addresses the fundamental fluid-dynamical, heat-transfer, and chemical mechanisms governing combustion in diverse settings. Fuel cell research encompasses the development of fuel-cell technology, hybrid engines, and thermionic devices. Activities cover the thermodynamics of energy systems, the controls associated with advanced energy systems, and systems analyses. The area of atmospheric physics and impacts deals with the modeling and controlling of chemical pollution, particle dispersion, and noise emission caused by energy-generation and propulsion devices. Research on atmospheric turbulence addresses the energy exchanges between the Earth's land and ocean surfaces and the overlying atmosphere.

Micro/nanomechanics encompasses the thrusts of miniaturization engineering, mechatronics, and biotechnology. Miniaturization engineering is relevant to the development of small-scale mechanical, chemical and biological systems for applications in biotechnology, automotive, robotic, and alternative energy applications. It involves the establishment of scaling laws, manufacturing methods, materials options and modeling from the atom to the macro system. Mechatronic design is the integrated and optimal design of a mechanical system and its embedded control system. Main focus research is the design, modeling, and characterization of Micro Electro Mechanical Systems (MEMS). Particular emphasis is placed on analysis and design of algorithmic methods and physical systems that realize sensor-based motion planning. The thematic area of biotechnology involves the understanding, modeling, and application of fundamental phenomena in mechanical engineering, electrical engineering, and chemistry towards the development of bio-sensors and actuators.

Systems and design research is conducted in the areas of dynamic systems optimization and control, biomechanical engineering, robotics and machine learning, and design engineering. Advanced concepts in dynamics, optimization and control are applied to the areas of biorobotics, flight trajectory design, guidance and navigation, learning systems, micro sensors and actuators, flexible structures, combustion, fuel cells, and fluid-optical interactions. Biomechanical engineering integrates physiology with engineering in order to develop innovative devices and algorithms for medical diagnosis and treatment. The focus of robotics and machine learning is the creation of machines with human-like intelligence capabilities for learning. Faculty in design engineering develop methodologies to address issues ranging from defining the size and shape of components needed for force and motion specifications, to characterizing performance in terms of design parameters, cost and complexity.

Aerospace engineering research efforts combine specialties from each of the four thrust areas toward the design, modeling, and operation of complex systems.

The Department offers the M.S. and Ph.D. degrees in Mechanical and Aerospace Engineering.

Master of Science Degree

Two plans are available to pursue study toward the M.S. degree: a thesis option and a comprehensive examination option. Opportunities are available for part-time study toward the M.S. degree. The Plan of Study for both options must be developed in consultation with a Faculty Advisor and approved by the Department Graduate Advisor.

Plan I: Thesis Option

The thesis option requires completion of eight graduate, technical and science courses; the completion of an original research project with a Faculty Advisor, the writing of the thesis describing it; and approval of the thesis by a thesis committee. This plan is available for those who wish to gain research experience or as preparation for study toward the doctoral degree. Students must complete 12 units of ENGRMAE 296, 3 units of , and four graduate courses from a restricted list in the selected major. Additionally, four of the eight required graduate courses must be from the MAE Department. With the approval of the graduate advisor, one non-core graduate course may be replaced by an upper-division undergraduate course in MAE; this course may not have been used to satisfy the undergraduate degree requirements.

NOTE: Students who enter prior to fall of 2008 should follow the course requirements outlined within the *Catalogue* of the year they entered. The change in number of units per course is not intended to change the course requirements for the degree or to have any impact in the number of courses students are taking. As such, students will need to continue to meet the same high standards and plan of study requirements as previously required. Students will work with their advisor to create a plan of study encompassing the equivalent topical requirements, as well as the equivalent number of courses to the previous 36 unit requirement (i.e., at least 8 graduate-level courses to meet the 24, 200–289 level unit requirement).

Plan II: Comprehensive Examination Option

The comprehensive examination option requires completion of eleven graduate, technical and science courses. Students must complete 3 units of ENGRMAE 298 and four graduate courses from a restricted list. Additionally, six of the eleven required graduate courses must be from the MAE Department. Up to two of the required courses may be replaced by an equivalent number of units of ENGRMAE 294, which includes execution and documentation of a research or design project under a faculty advisor. With the approval of the graduate advisor, one graduate course may be replaced by an upper-division undergraduate course in MAE; this course may not be used to satisfy both undergraduate and graduate degree requirements.

NOTE: Students who entered prior to fall of 2008 should follow the course requirements outlined within the *Catalogue* of the year they entered. The change in number of units per course is not intended to change the course requirements for the degree or to have any impact in the number of courses students are taking. As such, students will need to continue to meet the same high standards and plan of study requirements as previously required. Students will work with their advisor to create a plan of study encompassing the equivalent topical requirements, as well as the equivalent number of courses to the previous 36 unit requirement (i.e., at least 11 graduate-level courses to meet the 33, 200–289 level unit requirement).

Doctor of Philosophy Degree

The doctoral program in Mechanical and Aerospace Engineering is tailored to the individual needs and background of the student. The detailed program of study for each Ph.D. student is formulated in consultation with a faculty advisor who takes into consideration the objectives and preparation of the candidate.

Within this flexible framework the Department maintains specific guidelines that outline the milestones of a typical doctoral program. All doctoral students should consult the Departmental Ph.D. guidelines for program details, but there are several milestones to be passed: admission to the Ph.D. program by the faculty; completion of six non-research graduate, technical courses beyond M.S. degree requirements; passage of a preliminary examination or similar assessment of the student's background and potential for success in the doctoral program; course work; meeting departmental teaching requirements, which can be satisfied through service as a teaching assistant or equivalent; research preparation; formal advancement to candidacy in the third year (second year for students who entered with a master's degree) through a qualifying examination conducted on behalf of the Irvine division of the Academic Senate; development of a research proposal; completion of a significant research investigation, and completion and defense of an acceptable dissertation. There is no foreign language requirement. The degree is granted upon the recommendation of the Doctoral Committee and the Dean of Graduate Studies. Students enrolled in the Ph.D. program must take a full-time load (minimum of 12 units). The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

Before seeking admission, Ph.D. applicants are encouraged to communicate directly and in some detail with prospective faculty sponsors. The student's objectives and financial resources must coincide with a faculty sponsor's research interests and research support. Financial aid in the form of a teaching assistantship or fellowship may not cover the period of several years required to complete the program. During the balance of the period the student will be in close collaboration with the faculty research advisor.

Faculty

Satya N. Atluri: Continuum mechanics, computational mechanics, meshless methods, damage tolerance and structural integrity, computational nanoscience and technology

James E. Bobrow: Robotics, applied nonlinear control, optimization methods

Jacob Brouwer: High-temperature electrochemical dynamics, fuel cells, renewable and sustainable energy

Donald Dabdub: Mathematical modeling of urban and global air pollution, dynamics of atmospheric aerosols, secondary organic aerosols, impact of energy generation on air quality, chemical reactions at gas-liquid interfaces

Derek Dunn-Rankin: Combustion, optical particle sizing, particle aerodynamics, laser diagnostics and spectroscopy

Said E. Elghobashi: Direct numerical simulation of turbulent, chemically reacting and dispersed two-phase flows

Manuel Gamero-Castaño: Electric propulsion, electrospray, atomization, aerosol diagnostics

Faryar Jabbari: Robust and nonlinear control theory, adaptive parameter identification

John C. LaRue: Fluid mechanics, micro-electrical-mechanical systems (MEMS), turbulence, heat transfer, instrumentation

Feng Liu: Computational fluid dynamics and combustion, aerodynamics, aeroelasticity, propulsion, turbomachinery aerodynamics and aeromechanics

Marc J. Madou: Fundamental aspects of micro/nano-electro-mechanical systems (MEMS/NEMS), biosensors, nanofluidics, biomimetics

J. Michael McCarthy: Machine design and kinematic synthesis of spatial mechanisms and robots

Kenneth D. Mease: Flight guidance and control, nonlinear dynamical systems

Dimitri Papamoschou: Compressible mixing and turbulence, jet noise reduction, diagnostics for compressible flow, acoustics in moving media

Roger H. Rangel: Fluid dynamics and heat transfer of multiphase systems including spray combustion, atomization, and metal spray solidification; applied mathematics and computational methods

David J. Reinkensmeyer: Robotics, mechatronics, biomedical engineering, rehabilitation, biomechanics, neural control of movement

Timothy Rupert: Mechanical behavior, nanomaterials, structure-property relationships, microstructural stability, grain boundaries and interfaces, materials characterization

G. Scott Samuelsen (*Emeritus*): Energy, fuel cells, hydrogen economy, propulsion, combustion and environmental conflict; turbulent transport in complex flows, spray physics, NO_x and soot formation, laser diagnostics and experimental methods; application of engineering science to practical propulsion and stationary systems; environmental ethics

William E. Schmitendorf (*Emeritus*): Control theory and applications

Andrei M. Shkel: Design and advanced control of micro-electro-mechanical systems (MEMS); precision micro-sensors and actuators for telecommunication and information technologies; MEMS-based health monitoring systems, disposable diagnostic devices, prosthetic implants

Athanasios Sideris: Robust and optimal control theory and design, neural networks, learning systems and algorithms

William A. Sirignano: Combustion theory and computational methods, multiphase flows, high-speed turbulent reacting flows, flame spread, microgravity combustion, miniature combustors, fluid dynamics, applied mathematics

Lorenzo Valdevit: Multifunctional sandwich structures, thermal protection systems, morphing structures, active materials, MEMS, electronic packaging, cell mechanics

Benjamin F. Villac: Spaceflight dynamics, navigation and control, validated computational methods

Yun Wang: Fuel cells, computational modeling, thermo-fluidics, two-phase flows, electrochemistry, Computational Fluid Dynamics (CFD), turbulent combustion

Gregory Washington: Dynamic systems: modeling and control, design and control of mechanically actuated antennas, advanced control of machine tools, design and control of Hybrid Electric Vehicles, structural position and vibration control with smart materials

Affiliated Faculty

Joyce H. Keyak: Orthopaedic surgery

Arash Kheradvar: Cardiac mechanics, cardiovascular devices, cardiac imaging

Abraham Lee: Micro-electro-mechanical systems (MEMS), microfluidics, catheter-based microsurgical devices, microactuators for medical and optical applications, microfabrication processes, directed nanoscale self-assembly for biomolecular transducers

Robert H. Liebeck: Aircraft design

Vincent G. McDonell: Droplet transport; measurement, simulation, control, and analysis of liquid spray and gas fired combustion systems; alternative fuels

Lawrence J. Muzio: Thermodynamics, combustion and combustion in practical systems, air pollution formation and control, advanced diagnostics applied to practical combustion systems

William Randall Seeker: Energy systems, air pollution formation and control processes and technology, chemical; kinetics, combustion science, emissions monitoring, experimental combustion diagnostics

Edriss Titi: Partial differential equations, nonlinear analysis

Frederic Yui-Ming Wan: Applied mathematics

Affiliated faculty are from the Schools of Physical Sciences and Medicine and The Henry Samueli School of Engineering.

Courses

ENGRMAE 10. Introduction to Engineering Computations. 4 Units.

Introduction to the solution of engineering problems through the use of the computer. Elementary programming in FORTRAN and Matlab is taught. No previous knowledge of computer programming is assumed.

(Design units: 1)

Corequisite: MATH 2A.

Prerequisite: MATH 2A.

Overlaps with ENGR 10, EECS 10, EECS 12.

Restriction: School of Engineering majors have first consideration for enrollment.

ENGRMAE 30. Statics. 4 Units.

Addition and resolution of forces distributed forces, equivalent system of forces centroids, first moments, moments and products on inertia, equilibrium of rigid bodies, trusses, beams, cables.

(Design units: 0)

Corequisite: MATH 2D.

Prerequisite: MATH 2D and PHYSICS 7C.

Same as ENGRCEE 30, ENGR 30.

Restriction: School of Engineering majors have first consideration for enrollment.

ENGRMAE 52. Computer-Aided Design. 4 Units.

Develops skills for interpretation and presentation of mechanical design drawings and the use of CAD in engineering design. An integrated approach to drafting based on sketching, manual drawing, and three-dimensional CAD techniques is presented.

(Design units: 0.5)

Restriction: Mechanical Engineering and Materials Science Engineering majors have first consideration for enrollment.

ENGRMAE 57. Manufacturing Processes in Engineering. 2 Units.

With laboratory. Machines and processes of mechanical manufacturing. Safety and professional procedures emphasized. Use of measuring instruments, hand tools, lathe, mill, drill press, bandsaw, grinder, welding equipment.

(Design units: 0)

Grading Option: Pass/no pass only.

Restriction: School of Engineering majors have first consideration for enrollment.

ENGRMAE 60. Electric Circuits. 4 Units.

Design and analysis of analog circuits based on lumped circuit elements with emphasis on the use of operational amplifiers. Sinusoidal and transient response. Constructional and laboratory testing of analog circuits, and introduction to data acquisition. Materials fee.

(Design units: 2)

Corequisite: MATH 3D.

Prerequisite: PHYSICS 7D and PHYSICS 7LD.

Overlaps with EECS 70A, CSE 70A.

Restriction: Mechanical Engineering and Aerospace Engineering majors have first consideration for enrollment.

ENGRMAE 80. Dynamics. 4 Units.

Introduction to the kinetics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken.

(Design units: 0.5)

Prerequisite: MATH 2D and PHYSICS 7C.

Same as ENGRCEE 80, ENGR 80.

Restriction: School of Engineering majors have first consideration for enrollment.

ENGRMAE 91. Introduction to Thermodynamics. 4 Units.

Thermodynamic principles; open and closed systems representative of engineering problems. First and Second law of thermodynamics with applications to engineering systems and design.

(Design units: 0.5)

Prerequisite: PHYSICS 7C and MATH 2D.

Overlaps with CBEMS 45B.

Restriction: Aerospace Engineering, Civil Engineering, Environmental Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 106. Mechanical Systems Laboratory. 4 Units.

Experiments in linear systems, including op-amp circuits, vibrations, and control systems. Emphasis on demonstrating that mathematical models can be useful tools for the analysis and design of electro-mechanical systems. Materials fee.

(Design units: 2)

Prerequisite: ENGRMAE 60 or EECS 70A.

Restriction: Aerospace Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 107. Fluid Thermal Science Laboratory. 4 Units.

Fluid and thermal engineering laboratory. Experimental analysis of fluid flow, heat transfer, and thermodynamic systems. Probability, statistics, and uncertainty analysis. Report writing is emphasized and a design project is required. Materials fee.

(Design units: 1)

Corequisite: ENGRMAE 120.

Restriction: Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 108. Aerospace Laboratory. 4 Units.

Analytical and experimental investigation in aerodynamics, fluid dynamics, and heat transfer. Emphasis on study of flow over objects and lift and drag on airfoils. Introduction to basic diagnostic techniques. Report writing is emphasized. Design project is required. Materials fee.

(Design units: 2)

Prerequisite: ENGRMAE 130B.

Restriction: Aerospace Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 110. Combustion and Fuel Cell Systems. 4 Units.

Fundamentals of gaseous, liquid, and coal-fired combustion and fuel cell systems. Fuels, fuel-air mixing, aerodynamics, and combustion and fuel cell thermodynamics. Operating and design aspects of practical systems including engines, power generators, boilers, furnaces, and incinerators.

(Design units: 2)

Prerequisite: ENGRMAE 115.

Restriction: Chemical Engineering, Environmental Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 112. Propulsion. 4 Units.

Application of thermodynamics and fluid mechanics to basic flow processes and cycle performance in propulsion systems: gas turbines, ramjets, scramjets, and rockets.

(Design units: 1)

Prerequisite: ENGRMAE 130B.

Restriction: Aerospace Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 113. Electric Propulsion. 4 Units.

Space propulsion requirements and maneuvers, stressing those best suited to electric propulsion. An introduction to plasma physics. Electrothermal, electromagnetic and electrostatic accelerators, with emphasis in technologies (ion engines, Hall thrusters and colloidal thrusters) belonging to the latter family.

(Design units: 1)

Prerequisite: ENGRMAE 112.

Concurrent with ENGRMAE 213.

ENGRMAE 115. Applied Engineering Thermodynamics. 4 Units.

Application of thermodynamic principles to compressible and incompressible processes representative of practical engineering problems-power cycles, refrigeration cycles, multicomponent mixtures, air conditioning systems, combustion and compressible flow. Design of a thermodynamic process.

(Design units: 2)

Prerequisite: ENGRMAE 91.

Restriction: Chemical Engineering, Environmental Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 117. Solar and Renewable Energy Systems. 4 Units.

Basic principles, design, and operation of solar and other renewable energy systems including solar photo-voltaic, solar thermal, hydroelectric, wind, and biomass gasification and combustion. Includes power generation and storage, and renewable fuels for transportation and stationary power generation.

(Design units: 1)

Prerequisite: ENGRMAE 115.

Restriction: Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 118. Sustainable Energy Systems. 4 Units.

Basic principles, design, and operation of sustainable energy systems including wind, solar photo-voltaic and thermal, hydroelectric, geothermal, oceanic, biomass combustion, advanced coal, and next generation nuclear. Includes power generation, storage, and transmission for stationary power generation.

(Design units: 1)

Prerequisite: ENGRMAE 115.

Concurrent with ENGRMAE 218.

ENGRMAE 120. Heat and Mass Transfer. 4 Units.

Fundamentals of heat and mass transfer. Conduction, heat and mass transfer by convection in laminar and turbulent flows, radiation heat transfer, and combined modes of heat and mass transfer. Practical engineering applications.

(Design units: 0)

Prerequisite: MATH 2D and PHYSICS 7C and ENGRMAE 91 and ENGRMAE 130B. MATH 2D with a grade of C- or better. PHYSICS 7C with a grade of C- or better. ENGRMAE 91 with a grade of C- or better.

Overlaps with CBEMS 125B.

Restriction: Aerospace Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 130A. Introduction to Fluid Mechanics. 4 Units.

Fundamental concepts; fluid statics; fluid dynamics; Bernoulli's equation; control-volume analysis; basic flow equations of conservation of mass, momentum, and energy; differential analysis; potential flow; viscous incompressible flow.

(Design units: 0)

Prerequisite: PHYSICS 7C and MATH 2D and MATH 2E and ENGRMAE 30 and ENGRMAE 80. MATH 2D with a grade of C- or better. MATH 2E with a grade of C- or better. ENGRMAE 30 with a grade of C- or better. ENGRMAE 80 with a grade of C- or better.

Overlaps with CBEMS 125A, ENGRCEE 170.

Restriction: Aerospace Engineering, Civil Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 130B. Introduction to Viscous and Compressible Flows. 4 Units.

Introduction to the analysis of viscous flows including fully developed laminar and turbulent flow in a pipe, viscous flow over immersed bodies, evaluation of boundary layer characteristics, lift and drag, compressible flow in a duct and normal shock waves.

(Design units: 1)

Prerequisite: MATH 2D and PHYSICS 7C and ENGRMAE 91 and ENGRMAE 130A. MATH 2D with a grade of C- or better. PHYSICS 7C with a grade of C- or better. ENGRMAE 91 with a grade of C- or better.

Restriction: Aerospace Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 135. Compressible Flow. 4 Units.

Compressibility effects in fluid mechanics. One-dimensional flow with area variation, friction, heat transfer, and shocks. Design of gas supply systems. Two-dimensional flow with oblique shocks and isentropic waves. Supersonic airfoil theory and design, wind tunnel design. Basic diagnostics.

(Design units: 1)

Prerequisite: ENGRMAE 91 and ENGRMAE 130A and ENGRMAE 130B.

Restriction: Aerospace Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 136. Aerodynamics. 4 Units.

Analysis of flow over aircraft wings and airfoils, prediction of lift, moment and drag. Topics: fluid dynamics equations; flow similitude; viscous effects; vorticity, circulation, Kelvin's theorem, potential flow; superposition principle, Kutta-Joukowski theorem; thin airfoil theory; finite wing theory; compressibility.

(Design units: 1)

Prerequisite: ENGRMAE 130A and ENGRMAE 130B.

Restriction: Aerospace Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 140. Introduction to Engineering Analysis. 4 Units.

Analytical methods of engineering. Nonhomogeneous linear ordinary differential equations. Variable coefficient linear ordinary differential equations. Eigenfunction expansions. Laplace transforms. Introduction to Fourier transforms. Linear partial differential equations.

(Design units: 0)

Prerequisite: MATH 2E and MATH 3D.

Restriction: Aerospace Engineering, Civil Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 145. Theory of Machines and Mechanisms. 4 Units.

Presents the basic mathematical theory of machines. Focuses on the principles of cam design, gearing and gear train analysis, and the kinematic and dynamic analysis of linkages, together with an introduction to robotics.

(Design units: 2)

Prerequisite: ENGRMAE 52 and ENGRMAE 80 and MATH 3A.

Restriction: Mechanical Engineering and Materials Science Engineering majors have first consideration for enrollment.

ENGRMAE 146. Astronautics. 4 Units.

Motion in gravitational force fields, orbit transfers, rocketry, interplanetary trajectories, attitude dynamics and stabilization, navigation, reentry, the space environment.

(Design units: 1)

Prerequisite: ENGRMAE 80.

Restriction: Aerospace Engineering majors have first consideration for enrollment.

ENGRMAE 147. Vibrations. 4 Units.

Analysis of structural vibrations of mechanical systems. Modeling for lumped and distributed parameter systems. Topics: single and multi-degree of freedom systems, free and forced vibrations, Fourier series, convolution integral, mass/stiffness matrices, and normal modes with design project.

(Design units: 1)

Prerequisite: ENGRMAE 80 and MATH 2E.

Restriction: Materials Science Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 150. Mechanics of Structures. 4 Units.

Stresses and strains. Torsion. Bending. Beam deflection. Shear force and moment distributions in beams. Yielding and buckling of columns. Combined loading. Transformation of stresses and strain. Yielding criteria. Finite elements analysis of frames. Dynamic of two-bar truss.

(Design units: 2)

Prerequisite: (ENGRCEE 30 or ENGR 30 or ENGRMAE 30) and MATH 3A.

Same as ENGR 150.

Overlaps with ENGRCEE 150.

Restriction: Aerospace Engineering, Chemical Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 150L. Mechanics of Structures Laboratory. 1 Unit.

Experimental techniques for the measurement of mechanical properties of materials and structures. Methods for load, displacement, and strain measurements. Tension, bending, compression tests. Determination of strength, stiffness, toughness for metals, polymers, ceramics, and composites. Deformation of structures. Materials fee.

(Design units: 0)

Corequisite: ENGRMAE 150.

Prerequisite: ENGRMAE 30 or ENGR 30 or ENGRCEE 30.

Overlaps with ENGRCEE 150L.

Restriction: Aerospace Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 151. Mechanical Engineering Design. 4 Units.

A comprehensive group design project experience that involves identifying customer needs, idea generation, reverse engineering, preliminary design, standards, prototype development, testing, analysis, and redesign of a product involving fluid, thermal, and mechanical components. Introduces design for manufacturing and the environment.

(Design units: 3)

Prerequisite: ENGRMAE 120 and ENGRMAE 145 and ENGRMAE 170.

Restriction: Seniors only. Materials Science Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 152. Introduction to Computer-Aided Engineering. 4 Units.

Elements and principles of computer-aided engineering with modern hardware and software are presented with a design focus. Case studies are used to assist in finite-element method techniques. Not offered every year.

(Design units: 2)

Prerequisite: (ENGRMAE 150 or ENGR 150) and ENGRMAE 120.

Restriction: Materials Science Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 153. Advanced BIOMEMS Manufacturing Techniques. 4 Units.

Introduction to BIOMEMS. Advanced biotechnology/biomedicine equipment based on MEMS and NEMS. Fundamentals of MEMS/NEMS sensing techniques and the biological and physics principles involved and the preferred MEMS and NEMS manufacturing techniques.

(Design units: 0)

Concurrent with ENGRMAE 253.

ENGRMAE 155. Composite Materials and Structures. 4 Units.

Motivation for composite materials. Different classifications according to the nature of the matrix (PMC, MMC, CMC) and the reinforcement topology (fibers, whiskers, particulates). Mechanical properties. Failure mechanisms. Designing with composite materials. Advantages and limitations of homogenization techniques for numerical modeling.

(Design units: 0)

Prerequisite: ENGR 54 and (ENGRMAE 150 or ENGRCEE 150 or ENGR 150).

Restriction: Chemical Engineering, Civil Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

Concurrent with ENGRMAE 255.

ENGRMAE 156. Mechanical Behavior and Design Principles. 4 Units.

Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, yielding, necking, creep, and fracture of materials. Introduction to experimental techniques to characterize the properties of materials. Design parameters.

(Design units: 2)

Prerequisite: ENGR 54.

Same as CBEMS 155.

Restriction: Chemical Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 157. Lightweight Structures. 4 Units.

Fundamentals of torsion and bending. Analysis and design of thin-wall and composite beams. Stress analysis of aircraft components. Stiffness, strength, and buckling. Introduction to the Finite Element method and its application to plates and shells.

(Design units: 2)

Prerequisite: ENGR 150 or ENGRCEE 150 or ENGRMAE 150.

Restriction: Aerospace Engineering, Civil Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 158. Aircraft Performance. 4 Units.

Flight theory applied to subsonic propeller and jet aircraft. Nature of aerodynamic forces, drag and lift of wing and fuselage, high-lift devices, level-flight performance, climb and glide performance, range, endurance, take-off and landing distances, static and dynamic stability and control.

(Design units: 2)

Prerequisite: ENGRMAE 130A.

Restriction: Aerospace Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 159. Aircraft Design. 4 Units.

Preliminary design of subsonic general aviation and transport aircraft with emphasis on layout, aerodynamic design, propulsion, and performance. Estimation of total weight and weight distribution, design of wings, fuselage, and tail, selection and location of engines, prediction of overall performance.

(Design units: 4)

Prerequisite: ENGRMAE 112 and ENGRMAE 136 and ENGRMAE 158.

Restriction: Aerospace Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 164. Air Pollution and Control. 4 Units.

Sources, dispersion, and effects of air pollutants. Topics include emission factors, emission inventory, air pollution, meteorology, air chemistry, air quality modeling, impact assessment, source and ambient monitoring, regional control strategies.

(Design units: 2)

Prerequisite: ENGRMAE 91 and (ENGRMAE 130A or ENGRCEE 170).

Restriction: Chemical Engineering, Environmental Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 170. Introduction to Control Systems. 4 Units.

Feedback control systems. Modeling, stability, and systems specifications. Root locus, Nyquist, and Bode methods of analysis and design.

(Design units: 2)

Prerequisite: MATH 2D and PHYSICS 7C and ENGRMAE 80 and ENGRMAE 106. MATH 2D with a grade of C- or better. PHYSICS 7C with a grade of C- or better. ENGRMAE 80 with a grade of C- or better.

Restriction: Aerospace Engineering, Civil Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 171. Digital Control Systems. 4 Units.

Methods for analysis and design of discrete-time control systems. Z-transforms, difference equations, discrete Fourier transforms. Sampling theorem and applications. Z-plane stability, frequency response. Digital controller design. Introduction to digital filters.

(Design units: 2)

Prerequisite: ENGRMAE 170.

Restriction: Civil Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 172. Design of Computer-Controlled Robots. 4 Units.

Students design a small robotic device and program it to exhibit sentient behaviors. The basic aspects of mechatronic design are covered, including motor and sensor selection, control strategies, and microcomputer programming for the implementation of control paradigms.

(Design units: 3)

Corequisite: ENGRMAE 60.

Prerequisite: ENGRMAE 170.

Restriction: Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 175. Dynamics and Control of Aerospace Vehicles. 4 Units.

Equations of motion, linearization, stability derivatives, and longitudinal and lateral modes of motion. Handling qualities, sensors and actuators, and effects of various feedbacks on stability and performance. Stability augmentation. Autopilot design.

(Design units: 3)

Prerequisite: ENGRMAE 106.

Restriction: Aerospace Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 183. Computer-Aided Mechanism Design. 4 Units.

Focuses on design of planar, spherical, and spatial mechanisms using computer algebra and graphics. Topics include exact and approximate analytical design techniques. Students are required to use existing software (or develop new algorithms) to design various mechanisms for new applications.

(Design units: 4)

Prerequisite: MATH 3A.

Restriction: Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 185. Numerical Analysis in Mechanical Engineering. 4 Units.

Solution of mechanical-engineering equations by means of numerical methods. Errors in numerical analysis. Nonlinear equation and sets of equations. Numerical differentiation and integration. Ordinary differential equations. Boundary-value problems. Partial differential equations.

(Design units: 2)

Prerequisite: ENGRMAE 10 and MATH 3D and MATH 2E.

Overlaps with MATH 105A.

Restriction: Civil Engineering and Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 188. Engineering Design in Industry. 4 Units.

Principles of engineering design in the context of an industrial application. Local manufacturing firms define an engineering design project to be completed in 10 weeks. Projects include initial brainstorming to final design, with a formal presentation.

(Design units: 4)

Repeatability: May be taken for credit 3 times.

Restriction: Mechanical Engineering majors have first consideration for enrollment.

ENGRMAE 189. Senior Project - Special Topics. 1-4 Units.

Group or individual senior project of theoretical or applied nature involving design. Materials fee.

(Design units: 1-4)

Repeatability: May be taken for credit for 12 units as topics vary.

Restriction: Seniors only. Mechanical Engineering majors only.

ENGRMAE 195. Seminars in Engineering. 1-4 Units.

Seminars by individual faculty in major fields of interest. Materials fee.

(Design units: 1-4)

Repeatability: Unlimited as topics vary.

ENGRMAE 198. Group Study. 1-4 Units.

Group study of selected topics in Aerospace and Mechanical Engineering.

(Design units: 1-4)

Repeatability: May be repeated for credit unlimited times.

Restriction: Upper-division students only.

ENGRMAE 199. Individual Study. 1-4 Units.

For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Repeatability: May be taken for credit for 8 units.

ENGRMAE 199P. Individual Study. 1-4 Units.

For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 200A. Engineering Analysis I. 4 Units.

Linear algebra, including vector spaces, matrices, linear systems of equations, least squares, and the eigenvalue problem. Ordinary differential equations, including analytical and numerical solution methods, stability, and phase portraits.

Restriction: Graduate students only.

ENGRMAE 200B. Engineering Analysis II. 4 Units.

Review of ordinary differential equations, including Bessel and Legendre functions. Partial differential equations, including the diffusion equation, Laplace's equation, and the wave equation. Fourier series, Fourier and Laplace transforms and their applications.

Restriction: Graduate students only.

ENGRMAE 205. Perturbation Methods in Engineering. 4 Units.

Asymptotic Expansions of integrals. Regular and singular perturbations. Perturbation methods for ordinary and partial differential equations. Matched asymptotic expansions. Multiple-scale asymptotic expansion schemes. Not offered every year.

Prerequisite: ENGRMAE 200A and ENGRMAE 200B or knowledge of linear differential equations.

Restriction: Graduate students only.

ENGRMAE 206. Nonlinear Optimization Methods. 4 Units.

Numerical methods for constrained and unconstrained optimization. Necessary and sufficient conditions for optimality. Conjugate gradient, variable metric algorithms. Gradient projection, penalty functions, and Lagrange methods. Not offered every year.

Prerequisite: ENGRMAE 200A.

Restriction: Graduate students only.

ENGRMAE 207. Methods of Computer Modeling in Engineering and the Sciences. 4 Units.

Unified introduction to finite volume, finite element, field-boundary element, meshless, primal, dual, and mixed methods. Nonlinear problems posed by ordinary as well as partial differential equations. Computer implementations and comparisons of accuracy and convergence.

Restriction: Graduate students only.

ENGRMAE 210. Advanced Fundamentals of Combustion. 4 Units.

Premixed, nonpremixed, and heterogeneous reactions, with emphasis on kinetics, thermal ignition, turbulent flame propagation, detonations, explosions, flammability limits, diffusion flame, quenching, flame stabilization, and particle and spray combustion. Not offered every year.

Prerequisite: ENGRMAE 224 or ENGRMAE 230B.

Restriction: Graduate students only.

ENGRMAE 212. Engineering Electrochemistry: Fundamentals and Applications. 4 Units.

Introduction to engineering electrochemistry fundamentals and applications. Examine thermodynamics and transport principles in typical electrochemical systems. Electrochemical sensors, batteries, fuel cells, and supercapacitors. Manufacturing aspects will also be covered.

Prerequisite: ENGRMAE 91.

Restriction: Graduate students only.

ENGRMAE 213. Electric Propulsion. 4 Units.

Space propulsion requirements and maneuvers, stressing those best suited to electric propulsion. An introduction to plasma physics. Electrothermal, electromagnetic and electrostatic accelerators, with emphasis in technologies (ion engines, Hall thrusters and colloidal thrusters) belonging to the latter family.

Prerequisite: ENGRMAE 112.

Restriction: Graduate students only.

Concurrent with ENGRMAE 113.

ENGRMAE 214. Fuel Cell Fundamentals and Technology. 4 Units.

Fuel-cell systems design, operation, and materials. Electrochemistry and electrocatalysis, cell degradation, nature of fuel-cell electrodes and electrolytes, fuels, and fuel processing. Provides broad insight into fuel-cell science, technology, system design, and operation.

Prerequisite: ENGRMAE 110.

Restriction: Graduate students only.

ENGRMAE 215. Advanced Combustion Technology. 4 Units.

Pollutant formation and experimental methods. Formation of gaseous pollutants and soot; transformation and emission of fuel contaminants in gas, liquid, and solid fuel combustion; methods employed to measure velocity, turbulence intensity, temperature, composition, particle size; methods to visualize reacting flows.

Prerequisite: ENGRMAE 110 and ENGRMAE 200A and (ENGRMAE 230A or ENGRMAE 270A).

Restriction: Graduate students only.

ENGRMAE 216. Statistical Thermodynamics. 4 Units.

Statistics of independent particles, development of quantum mechanical description of atoms and molecules, application of quantum mechanics, evaluation of thermodynamics properties for solids, liquids, and gases, statistical mechanics of dependent particles (ensembles).

Prerequisite: ENGRMAE 91.

Restriction: Graduate students only.

ENGRMAE 217. Generalized Thermodynamics. 4 Units.

Generalized thermodynamics develops the laws of continuum thermodynamics from a set of plausible and intuitive postulates. The postulates are motivated qualitatively by a statistical description of matter and are justified by a posterior success for the resulting theory.

Prerequisite: ENGRMAE 91 or ENGRMAE 115.

Restriction: Graduate students only.

ENGRMAE 218. Sustainable Energy Systems. 4 Units.

Basic principles, design and operation of sustainable energy systems including wind, solar photo-voltaic and thermal, hydroelectric, geothermal, oceanic, biomass combustion, advanced coal and next generation nuclear. Includes power generation, storage, and transmission for stationary power generation.

Prerequisite: ENGRMAE 115.

Restriction: Graduate students only.

Concurrent with ENGRMAE 118.

ENGRMAE 220. Conduction Heat Transfer. 4 Units.

Steady state and transient conduction heat transfer in one- and multi-dimensional geometries. Analytical methods, exact and approximate. Numerical techniques are also included.

Prerequisite: ENGRMAE 120.

Restriction: Graduate students only.

ENGRMAE 221. Convective Heat and Mass Transfer. 4 Units.

Laminar and turbulent convective heat and mass transfer in external and internal flows. Forced and free convection. Exact and approximate solutions. Similarity solutions. Variable properties. Concentration boundary layer theory. Mass transfer conductance.

Prerequisite: ENGRMAE 230B.

Restriction: Graduate students only.

ENGRMAE 223A. Numerical Methods in Heat, Mass, and Momentum Transport (Laminar Flows) I. 4 Units.

Introduction to the discretization of various types of partial differential equations (parabolic, elliptic, hyperbolic). Finite-volume discretization for one- and two-dimensional flows. Use of a two-dimensional elliptic procedure to predict sample laminar flows.

Corequisite: ENGRMAE 230A.

Prerequisite: ENGRMAE 230A.

Restriction: Graduate students only.

ENGRMAE 223B. Numerical Methods in Heat, Mass, and Momentum II. 4 Units.

Introduction to turbulence. Reynolds-averaging of Navier-Stokes equations. Second-order closure of the average equations. Use of two-dimensional elliptic procedure to predict confined turbulent flows. Not offered every year.

Prerequisite: ENGRMAE 223A.

Restriction: Graduate students only.

ENGRMAE 224. Advanced Transport Phenomena. 4 Units.

Fundamentals of transport phenomena in fluid (gas and liquid), solid, and nano systems. Conservation equations, fundamentals of diffusion, ion transport, dispersion in turbulent/laminar flows, absorption, differential/staged distillation, transport in membranes, and nano/microscale transport phenomena. Not offered every year.

Prerequisite: ENGRMAE 120.

Restriction: Graduate students only.

ENGRMAE 226. Special Topics in Fluid and Thermal Sciences. 1-4 Units.

Special topics of current interest in fluid mechanics, heat and mass transfer, multiphase flows, or combustion. Emphasis could be placed on theory, computational methods, or experimental techniques.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

ENGRMAE 230A. Inviscid Incompressible Fluid Mechanics I. 4 Units.

Equations of motion. Vector notation. Flow kinematics. Potential flow and complex potential. Vorticity and circulation. Bernoulli's theorem. Crocco's theorem. Conformal, Joukowski, and Schwarz-Christoffel transformations.

Prerequisite: ENGRMAE 130A.

Restriction: Graduate students only.

ENGRMAE 230B. Viscous Incompressible Fluid Mechanics II. 4 Units.

Review of mass, momentum, energy equations. Stress tensor, constitutive relations. Laminar flows. Stokes and Oseen flows. Self-similarity. Boundary layer theory: thin-layer approximation, Falkner-Skan, Blasius solutions, integral methods. Jet, wake, cavity flows. Introduction to turbulence: instability, Reynolds averaging, mixing length.

Prerequisite: ENGRMAE 230A.

Restriction: Graduate students only.

ENGRMAE 230C. Compressible Fluid Dynamics. 4 Units.

One-dimensional unsteady flow; Riemann invariants, acoustics, shock tube. Two-dimensional flow: shock polars, linear theory, similarity rules, method of characteristics. Three dimensional flow: slender-body theory. Effects of viscosity and conductivity: laminar boundary layer, Crocco-Busemann relations.

Prerequisite: ENGRMAE 230A or ENGRMAE 230B.

Restriction: Graduate students only.

ENGRMAE 230D. Theoretical Foundations of Fluid Mechanics. 4 Units.

Well-posed problems and boundary, initial, and interface conditions; strong and weak solutions. Similarity, perturbation theory and limit behavior, bifurcations. Dispersive and nondispersive wave propagation, acoustics, ship waves, internal gravity waves, water waves. Vortices: mutual interactions and stability. Jets, wakes, cavities.

Prerequisite: ENGRMAE 230A and ENGRMAE 230B.

Restriction: Graduate students only.

ENGRMAE 231. Fundamentals of Turbulence. 4 Units.

Phenomenon of turbulence. Reynolds equations. Dynamics of turbulence. Free turbulent shear flows. Wall-bounded turbulent shear flows. Turbulent transport of scalar quantities. Spectral dynamics. Mathematical models of turbulence.

Prerequisite: ENGRMAE 230A and ENGRMAE 230B.

Restriction: Graduate students only.

ENGRMAE 233. Turbulent Free Shear Flows. 4 Units.

Practical and theoretical aspects of turbulent free shear flows. Instability, global scaling laws, mixing, and noise generation in incompressible and compressible shear layers, jets, and wakes. Kelvin-Helmholtz instability, near- and far-field growth rates, effect of compressibility, aeroacoustics of jets.

Prerequisite: ENGRMAE 200B and ENGRMAE 230A and ENGRMAE 230B.

Restriction: Graduate students only.

ENGRMAE 236. Nonequilibrium Gas Dynamics. 4 Units.

Molecular description of fluid flow. Boltzmann equation. Chapman-Enskog expansion for flows with translational nonequilibrium. Shock structure. Inviscid flows with chemical and vibrational nonequilibrium. Not offered every year.

Prerequisite: ENGRMAE 230C.

Restriction: Graduate students only.

ENGRMAE 237. Computational Fluid Dynamics. 4 Units.

Mathematical, physical, and computational fundamentals of computational fluid dynamics, numerical methods for solving the Euler and Navier-Stokes equations. Topics include: finite-difference and finite-volume discretization, time marching methods, von Neumann analysis, upwinding, flux splitting, TVD, and other high-resolution shock-capturing schemes.

Prerequisite: ENGRMAE 230C.

Restriction: Graduate students only.

ENGRMAE 238. Experimental Fluid Dynamics. 4 Units.

Concepts and techniques for measurement of fluid motion. Quantitative and qualitative flow visualization. Flow facilities, shadowgraph, schlieren, interferometer, thermal anemometer. Laser diagnostics, fluorescence, Rayleigh, Raman, Mie scattering. Laser-Doppler, particle-image, and image-correlation velocimetry. Three- and four-dimensional digital imaging.

Prerequisite: ENGRMAE 230A and ENGRMAE 230B.

Restriction: Graduate students only.

ENGRMAE 241. Dynamics. 4 Units.

Kinematics and dynamics of three-dimensional motions. Lagrange's equations, Newton-Euler equations. Applications include robot systems and spinning satellites.

Prerequisite: ENGRMAE 147.

Restriction: Graduate students only.

ENGRMAE 242. Robotics. 4 Units.

Spatial rigid-body transformations. Forward and inverse kinematics. Jacobian of serial and parallel chains. Screw coordinates and transformations. Rate and static analyses using screw theory. Singularity analysis. Trajectory generation. Not offered every year.

Restriction: Graduate students only.

ENGRMAE 243. Spaceflight Mechanics. 4 Units.

Accurate force modeling; spacecraft trajectory design problem; two-body dynamics; Lambert problem; orbit perturbations and maintenance; applications to Earth and Moon missions; gravity assists and three-body dynamics; applications to Moon, Mars, interplanetary missions; libration point missions and dynamical system theory methods.

Restriction: Graduate students only.

ENGRMAE 244. Theoretical Kinematics. 4 Units.

Spatial rigid body kinematics is presented with applications to robotics. Orthogonal Matrices, Rodrigues' formula, Quaternions, Plucker coordinates, screw theory, and dual numbers are studied using modern projective geometry and multi-linear algebra. Applications include trajectory planning, inverse kinematics, and workspace analysis.

Restriction: Graduate students only.

ENGRMAE 245. Spatial Mechanism Design. 4 Units.

Fundamental kinematic theory required for planar, spherical, and spatial mechanism design. The focus is on algebraic methods for the exact solution of constraint equations. Not offered every year.

Restriction: Graduate students only.

ENGRMAE 247. Micro-System Design. 4 Units.

Covers the fundamentals of the many disciplines needed for design of Micro-Electro-Mechanical Systems (MEMS): microfabrication technology, structural mechanics on micro-scale, electrostatics, circuit interface, control, computer-aided design, and system integration.

Same as EECS 278.

Restriction: Graduate students only.

ENGRMAE 249. Micro-Sensors and Actuators. 4 Units.

Introduction to the technology of Micro-Electro-Mechanical Systems (MEMS). Fundamental principles and applications of important microsensors, actuation principles on microscale. Introduction to the elements of signal processing; processing of materials for micro sensor/actuator fabrication; smart sensors and microsensor/microactuator array devices.

Same as EECS 279.

Restriction: Graduate students only.

ENGRMAE 250. Biorobotics. 4 Units.

Sensors, actuators, and neural circuits for biological movement control from an engineering perspective. Current approaches to robotic and mechatronic devices that support and enhance human movement in health and following neurologic injuries like stroke and spinal cord injury.

Restriction: Graduate students only.

ENGRMAE 252. Fundamentals of Microfabrication. 4 Units.

Introduces Engineering and Science students to the science of miniaturization. Different options to make very small machines (micro and nano size) are reviewed, materials choices are discussed, scaling laws are analyzed, and many practical applications are listed.

Restriction: Graduate students only.

ENGRMAE 253. Advanced BIOMEMS Manufacturing Techniques. 4 Units.

Introduction to BIOMEMS. Advanced biotechnology/biomedicine equipment based on MEMS and NEMS. Fundamentals of MEMS/NEMS sensing techniques and the biological and physics principles involved and the preferred MEMS and NEMS manufacturing techniques.

Restriction: Graduate students only.

Concurrent with ENGRMAE 153.

ENGRMAE 254. Mechanics of Solids and Structures. 4 Units.

Finite deformation kinematics; stress and strain measures; invariance in solid mechanics; objective rates; constitutive theory of elastic and inelastic solids; rate formulations; computational approaches; theories of plates and shells; applications to aerospace vehicles.

Restriction: Graduate students only.

ENGRMAE 255. Composite Materials and Structures. 4 Units.

Motivation for composite materials. Different classifications according to the nature of the matrix (PMC, MMC, CMC) and the reinforcement topology (fibers, whiskers, particulates). Mechanical properties. Failure mechanisms. Designing with composite materials. Advantages and limitations of homogenization techniques for numerical modeling.

Prerequisite: ENGR 54 and (ENGRMAE 150 or ENGRCEE 150 or ENGR 150).

Restriction: Graduate students only.

Concurrent with ENGRMAE 155.

ENGRMAE 258. Mechanical Behavior of Solids - Continuum Theories. 4 Units.

Presents a continuum, macroscopic view of deformation and failure of solids. Covers elasticity, plasticity, visco-elasticity, visco-plasticity, fracture and fatigue. Topics include discussions of physical behavior, mathematical formalism and measurement techniques.

Prerequisite: ENGRMAE 254.

Restriction: Graduate students only.

ENGRMAE 259. Mechanical Behavior of Solids - Atomistic Theories. 4 Units.

Presents atomistic mechanisms that control mechanical behavior of materials. Covers plasticity, dislocation theory, strengthening mechanisms, high-temperature diffusion and grain boundary sliding, shear localization, void formation, ductile rupture, brittle fracture and fatigue.

Restriction: Graduate students only.

ENGRMAE 260. Current Issues Related to Tropospheric and Stratospheric Processes. 4 Units.

Examination of current issues related to the atmosphere, including energy usage; toxicology; effects on humans, forests, plants, and ecosystems; particulate matter (PM10); combustion; modeling and meteorology; airborne toxic chemicals and risk assessment; application of science to development of public policies.

Prerequisite: ENGRMAE 164 or ENGRMAE 261 or CHEM 245 or EARTHSS 240.

Same as CHEM 241.

ENGRMAE 261. Air Quality Modeling. 4 Units.

Fundamental principles necessary to understand the dynamics of air pollutants. Derivation and description of mathematical techniques for the numerical solution of the atmospheric equation. Formulation and development of air quality models. Not offered every year.

Prerequisite: ENGRMAE 230A and ENGRMAE 230B and ENGRMAE 10.

Restriction: Graduate students only.

ENGRMAE 270A. Linear Systems I. 4 Units.

Input-output and state-space representations of continuous-time linear systems. State transition matrices, Controllability and observability. Irreducible realizations. State feedback and observer design.

Prerequisite: ENGRMAE 170 and EECS 160A.

Restriction: Graduate students only.

ENGRMAE 270B. Linear Systems II. 4 Units.

Advanced topics in linear systems: bases, linear operator representations, and Jordan forms. Review of dynamical systems, and stability. Time-varying systems, discrete-time representations, and multi-input/multi-output systems. Introduction to continuous and discrete time linear regulator (LQR) problems. Not offered every year.

Prerequisite: ENGRMAE 270A.

Restriction: Graduate students only.

ENGRMAE 272. Robust Control Theory. 4 Units.

Methods for control design of systems with uncertainty. Feedback stability and small gain theorem. Multivariable stability margins and multiplier theory. H-infinity-optimal control, linear matrix inequalities. Not offered every year.

Prerequisite: ENGRMAE 270A.

Restriction: Graduate students only.

ENGRMAE 273. Control of Robot Systems. 4 Units.

Dynamic analysis and control system design of open- and closed-chained mechanisms. Methods for real time control of nonlinear systems. Lyapunov Stability. Advanced motion planning algorithms. Not offered every year.

Prerequisite: ENGRMAE 270A and ENGRMAE 241.

Restriction: Graduate students only.

ENGRMAE 274. Optimal Control. 4 Units.

Principles and methods of optimal control. Topics include: objectives and issues in controlling nonlinear systems; linear variational and adjoint equations; optimality conditions via variational calculus, maximum principle, and dynamic programming; solution methods; applications to control of robots and aerospace vehicles.

Restriction: Graduate students only.

ENGRMAE 275. Nonlinear Feedback Systems. 4 Units.

Advanced tools for feedback control system analysis and synthesis. Norms, operators, Lp spaces, contraction mapping theorem, Lyapunov techniques along with their extensions. Circle criterion positivity and passivity. Applications to nonlinear control methods, such as sliding mode or adaptive techniques.

Prerequisite: ENGRMAE 270B.

Restriction: Graduate students only.

ENGRMAE 276. Geometric Nonlinear Control. 4 Units.

Using the mathematics of differential geometry, a number of the concepts and results of linear systems theory have been extended to nonlinear systems. Describes these extensions and illustrate their use in nonlinear system analysis and design. Not offered every year.

Prerequisite: ENGRMAE 200A and ENGRMAE 270A.

Restriction: Graduate students only.

ENGRMAE 277. Introduction To Neural Control Systems. 4 Units.

Basic models and learning rules of artificial neural networks: perceptrons, multilayer neural networks and backpropagation, support vector machines, radial basis functions networks, CMAC networks. Introduction to Regularization and Statistical learning theory. Neural networks in system identification and control.

Restriction: Graduate students only.

ENGRMAE 278. Estimation Techniques for Tracking and Navigation. 4 Units.

Fixed bearing navigation, least squares, uncertainty modeling, minimum variance and maximum likelihood, covariance analysis and filter efficiency, GPS, orbit determination, Gauss-Markov models, inertial navigation, Kalman filters, Fokker-Planck and Kushner equations, nonlinear-filters.

Prerequisite: ENGRMAE 200A and ENGRMAE 270A.

Restriction: Graduate students only.

ENGRMAE 279. Special Topics in Mechanical Systems. 4 Units.

Selected topics of current interest in mechanical systems. Topics include robotics, kinematics, control, dynamics, and geometric modeling.

Prerequisite: ENGRMAE 270A and ENGRMAE 241.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

ENGRMAE 284. Fundamentals of Experimental Design. 4 Units.

Fundamentals and principles of statistical experimental design and analysis. Emphasis addresses understanding and use of designed experiments, response surfaces, linear regression modeling, process optimization, and development of links between empirical and theoretical models. Not offered every year.

Restriction: Graduate students only.

ENGRMAE 294. Master of Science Thesis Project. 4 Units.

Tutorial in which masters-level students taking the comprehensive examination option undertake a masters-level research project.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

ENGRMAE 295. Special Topics in Mechanical and Aerospace Engineering. 1-4 Units.

Special topics by individual faculty in major fields of interest.

Repeatability: Unlimited as topics vary.

ENGRMAE 296. Master of Science Thesis Research. 1-16 Units.

Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 297. Doctor of Philosophy Dissertation Research. 1-16 Units.

Individual research or investigation conducted in the pursuit of preparing and completing the dissertation required for the Ph.D. in Engineering.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 298. Seminars in Mechanical and Aerospace Engineering. 1 Unit.

Presentation of advanced topics and reports of current research efforts in mechanical engineering. Required of all graduate students in mechanical engineering.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 299. Individual Research. 1-16 Units.

Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Restriction: Consent of instructor to enroll

School of Humanities

Georges Van Den Abbeele, **Dean**

143 Humanities Instructional Building
Undergraduate Counseling: (949) 824-5132
Graduate Counseling: (949) 824-4303
<http://www.humanities.uci.edu/>

Overview

The School of Humanities is internationally recognized for its outstanding programs in the main areas of humanities inquiry: literature, history, film, languages, the arts, and philosophy. With a faculty whose distinctions include two Pulitzer Prizes and numerous other national and international awards, the School offers 21 majors and 31 minors that include those in traditional disciplines, languages other than English, and interdisciplinary areas of study.

The core educational mission of the humanities is imparting to students tools of analysis that will allow them to understand, describe, and explain the world around them. A liberal arts education in the humanities prepares students to analyze various written and visual forms and to communicate effectively. Students in Humanities majors are expected to communicate their ideas in written and sometimes oral forms. All Humanities students are introduced to philosophy, history, visual culture, literature, and a language other than English. In many courses, a topic of study, such as English literature or the history of slavery, provides an opportunity for students to consider the challenges of a world that changes rapidly. In the words of a "Manifesto for the Humanities," prepared for the President of the University of California, it is humanities that provides "the ability to express oneself clearly and accurately; the skill of critical evaluation, both of ideas and actions; the courage to make choices based on shared values and priorities; the opportunity to conduct an intensive conversation with the traditions, present and past, that help make us who we are, and above all, who we will be; and as a result, the ability to understand and make sense of other people and their cultures." Humanistic inquiry equips students to enter the world as critically thinking citizens.

Because language is the humanist's essential tool and the traditional medium of historical record, philosophical speculation, and literary creation and criticism, the School of Humanities places special emphasis on language and training in composition. The campuswide Writing Program is housed in the School of Humanities, as are our distinguished programs in creative writing, literary journalism, and the Program in Academic English/English as a Second Language. The Humanities Core Course integrates the multi-disciplinary study of the humanities along with lower-division writing for majors who enter as freshmen.

The School of Humanities also offers programs in more than a dozen languages other than English. The serious study of language other than English is crucial to fostering critical thinking, objective self-reflection, and international awareness. The School established the International Center for Writing and Translation, which sponsors research programs that address the importance of conversations across languages and cultures. The School also created the Humanities Language Learning Program as a central clearinghouse for instruction of less commonly taught languages.

Interdisciplinary study is an essential feature of the Humanities Honors Program as well as many of the School's undergraduate degree programs. Undergraduate majors in Global Cultures and Religious Studies, as well as the Department of Asian American Studies, the Department of Women's

Studies, the Program in African American Studies, and the interdisciplinary program in Latin American Studies are also located in Humanities. With courses in the Social Sciences as well, these programs are excellent examples of how the Humanities reaches across boundaries of disciplinary knowledge.

Students majoring in the humanities are particularly well-prepared for careers in all fields that rely on analysis, judgment, and argument. Humanities students have moved into business, the law, education, politics, public policy, academia, and journalism. Employers in all sectors increasingly request college graduates who can write and think critically. Employers can provide a specific form of technical training, but the School of Humanities provides the thinking and writing skills that allow graduates to excel at a wide range of professions.

Degrees

African American Studies	B.A.
Art History	B.A.
Asian American Studies	B.A.
Chinese Studies	B.A.
Classics	B.A., M.A., Ph.D.
Comparative Literature	B.A., M.A., Ph.D.
Culture and Theory	M.A., Ph.D.
East Asian Cultures	B.A.
East Asian Languages and Literatures	M.A., Ph.D.
English	B.A., M.A., M.F.A., Ph.D.
European Studies	B.A.
Film and Media Studies	B.A.
French	B.A.
German	M.A., Ph.D.
German Studies	B.A.
Global Cultures	B.A.
History	B.A., M.A., Ph.D.
Japanese Language and Literature	B.A.
Korean Literature and Culture	B.A.
Literary Journalism	B.A.
Philosophy	B.A., M.A., Ph.D.
Religious Studies	B.A.
Spanish	B.A., M.A., Ph.D.
Visual Studies	M.A., Ph.D.
Women's Studies	B.A.

Honors at Graduation

Campus criteria for honors at graduation are described in the Division of Undergraduate Education section under Honors Recognition (p. 58). In addition to campus criteria, the School of Humanities uses cumulative GPA as the criterion for the awarding of Honors at Graduation. The official designation of Honors on the diploma and transcript will be based upon the candidate's cumulative GPA and total units completed at the end of the final quarter.

Humanities Collective

1309 Humanities Gateway; (949) 824-3638
hctr@uci.edu; <http://www.humanities.uci.edu/collective/>

Catherine Liu, **Director**

The primary mission of the UCI Humanities Collective is to support School of Humanities faculty and graduate student research. The Collective also seeks to connect that research to public life. Humanities scholarship creates connections between people, places, and times: it deepens our understanding of the world around us. By administering grants and organizing a wide range of public events, the Collective promotes individual and collaborative research across disciplines and research institutions. The Collective connects communities on campus and around the world. The Collective fosters dialogue and encourages reflection through a passionate commitment to communicative reason, critical thinking, and creative work. Part of the UCI Humanities Network, the UCI Humanities Collective promotes Humanities scholarship in a fast-changing world.

Humanities Instructional Resource Center and Computing Facility

The Humanities Instructional Resource Center (HIRC) and the Humanities Computing Facility (HCF) share space in Humanities Hall and provide comprehensive technology support for instruction, research, and faculty and staff development.

HIRC services and facilities include video and audio libraries and audiovisual equipment. HCF includes the computer labs, fee-based laser printing, support for wireless networking in the Humanities quad, and computing consultation. Both facilities provide technology-related research and development assistance for faculty, graduate, and undergraduate students. HCF houses two PC labs, one Macintosh lab, and one drop-in lab (with both Macs and PCs). The facility has more than 100 stations. HCF also provides a wide range of computer services (scanning, document conversion, workshops, and more).

Both HCF and HIRC labs provide a wide variety of instructional resources including, among others, multimedia applications and development stations, foreign language word processing, Web browsing (including support for non-Roman alphabets), and language learning materials. The labs are available to Humanities students, instructors, and staff for class instruction and drop-in purposes.

Additional information may be obtained from the HIRC Web site at <http://www.humanities.uci.edu/hirc>; or the HCF Computer Consulting Office, 4000 Humanities Gateway, (949) 824-7609; or the HIRC main offices, 269 Humanities Hall, (949) 824-6344.

Humanities Out There (H.O.T.) Program

200 Krieger Hall; (949) 824-6522

H.O.T. is an outreach program between UCI's School of Humanities and local schools. The program consists of a series of five-week workshops on selected topics in the humanities. Each workshop sends out a team of five or more undergraduates to a high school classroom, supervised by faculty and advanced graduate students in the humanities.

Requirements for undergraduates include attending at least five training sessions at UCI; attending at least five tutoring sessions at a local school; a number of electronic journal entries; and a three- to five-page paper with an academic focus. Undergraduates can earn two or four units of H.O.T. credit each quarter through HUMAN 195.

International Center for Writing and Translation

1349 Humanities Gateway; (949) 824-5133

<http://www.hnet.uci.edu/icwt>

Established in 2001, the International Center for Writing and Translation (ICWT) in the UCI School of Humanities fosters writing, translation, and criticism in multilingual and international contexts. It links existing faculty research interests in writing to general discussions about cultural issues relevant to the diverse, multiethnic, and multilingual student population at UCI and the population of California more generally. The Center is dedicated to highlighting and supporting literary works, other forms of writing, and oral traditions that span the globe. It sponsors readings, conferences, and academic presentations that are open to the public. For more information, contact the School of Humanities Dean's Office, (949) 824-5133.

Dr. Samuel M. Jordan Center for Persian Studies and Culture

1110 Humanities Gateway; (949) 824-1662

<http://www.humanities.uci.edu/persianstudies/>

Nasrin Rahimieh, **Director**

The Dr. Samuel M. Jordan Center for Persian Studies and Culture serves as an umbrella organization for various activities related to the study of Iran and the Persianate world conducted at the University of California, Irvine.

Courses, offered by the affiliated faculty, are the backbone of the Center's academic and pedagogical mission. These include courses on language, literature, history, music, and culture at undergraduate and graduate levels.

The academic courses are administered through different units. The Humanities Language Learning Program offers courses on Persian language. Courses in ancient, medieval, and modern Persian history are administered by the Department of History. Courses on modern Persian literature and the literature of Iranian diaspora are offered through the Department of Comparative Literature, and courses on Persian music are housed within the Department of Music.

Undergraduate Programs

- School Requirements
- Language Other Than English Placement and Progression

Humanities Undergraduate Study

143 Humanities Instructional Building; (949) 824-5132

<http://www.humanities.uci.edu/undergrad/>

Sharon Block, **Associate Dean**

The academic counselors in the Humanities Undergraduate Counseling Office, located in 143 Humanities Instructional Building, help all students in planning a program of study. Transfer students in particular need to consult an academic counselor to determine major requirements. Students who expect to pursue graduate study also should consult with appropriate faculty members to ensure proper preparation.

The academic counselors assist freshmen and sophomores who are interested in the humanities but who have not chosen a major in the

School. They are especially knowledgeable about University regulations, requirements in and outside the School, course content, options to major, and other matters that may present difficulties. For the first two years, students in Humanities are encouraged to explore the various disciplines represented in the School. During that time the academic counselors are prepared to help the undeclared student keep options to a major open, plan a coherent program of humanistic study, and reach an eventual decision about the major.

Generally each major stipulates a one-year course that is both an introduction to the discipline and a prerequisite to the major itself. Students who plan wisely will construct programs that include a good number of such courses.

NOTE: In many undergraduate courses in the School of Humanities, additional meetings between individual students and the instructor may be required. Many courses are composed of both lectures and *required* discussion sessions.

Undergraduate students in the School of Humanities participate in the affairs of the School in a number of ways: by serving on committees in various departments, by sitting with the faculty in its meetings, by participating as mentors for new Humanities majors, and by working as peer academic advisors in the Undergraduate Counseling Office.

Humanities Peer Mentor Program

The Humanities Peer Mentor Program is designed to address some of the academic, cultural, and social needs of freshmen in the School of Humanities. The program features two-tiered mentoring, with successful upper-division students mentoring small groups of new students, and the student mentors in turn working with faculty and staff. Another focus of the program is to encourage and assist student mentors to go on to graduate school.

Participants attend workshops on topics such as study skills, library research, time management, and careers, as well as take part in a variety of social events. They also keep journals in which they express their ideas and raise issues for their mentors. Call (949) 824-5132 for additional information.

Humanities Honors Program

143 Humanities Instructional Building; (949) 824-5132
Vinayak Chaturvedi, **Director**

The Honors Program of the School of Humanities is a two-year, upper-division program designed to challenge superior students from all fields by providing special opportunities for interdisciplinary work within an intellectually charged framework. Small seminars and the opportunity for independent research are some of the advantages offered by the program, which is open by invitation to Humanities students with excellent academic records.

Students in the program benefit from their involvement in the campus community of Humanities scholars. They enjoy a close relationship with the faculty and profit from intense interaction with their intellectual peers.

Humanities Honors students complete a two-part course of study. In their junior year, students take three quarters of an interdisciplinary Proseminar (HUMAN H120) organized about a single topic or problem, such as crime and punishment, the other, the development of religion in the West, the self, nature, or the American dream. The sequence is designed to compare and contrast modes of analysis and critical thinking in several disciplines in the Humanities, such as history, literary studies,

and philosophy. In a small seminar setting, students are encouraged to become reflective about their own chosen disciplines.

In their senior year, students take a sequence beginning in the fall with a Senior Honors Seminar (HUMAN H140), and continuing in the winter and spring with the Senior Honors Thesis (HUMAN H141) and the Senior Honors Colloquium (HUMAN H142), prepared as an independent research project under the direction of a faculty member on a topic chosen by the student. A prize is awarded for the year's outstanding thesis.

In both sequences the Honors students benefit from their close association with exceptional scholars and the challenge and support of their intellectual peers.

Students interested in learning how the Humanities Honors Program will fit into their regular courses of study are encouraged to contact the Senior Academic Counselor in Humanities; telephone (949) 824-5132.

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

Study Abroad Center

The Study Abroad Center, which includes the UC Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of the many worldwide opportunities that exist for study, work, internship, volunteering, and research. School of Humanities majors and minors can benefit from a broader perspective of their fields by studying for one year at a university in such countries as China, France, Germany, Italy, Japan, Russia, Spain, or the United Kingdom through UCEAP. Students can also augment their exposure to other cultures with programs sponsored through IOP. See <http://www.studyabroad.uci.edu> or an academic counselor for additional information.

Language Other than English Placement and Progression

The following policies apply to all UCI students taking language other than English courses.

Language Other Than English Progression. Within the beginning and intermediate language instructional sequences (1A-B-C and 2A-B-C, and for Latin and Greek, 1A-B-C and 100A or 100B), students must earn a grade of at least C (or Pass) in order to advance to the next level of instruction, unless an exception is permitted by the appropriate course director and the Associate Dean of Humanities for Undergraduate Study. A student may not take a lower-level course for credit once a more advanced level has been completed with a passing grade. Nor may a student be enrolled in more than one level of the same language at the same time (for example, a student may not enroll in language 2B and 2C concurrently).

Language Other Than English Placement. Placement tests are required for the following languages: Arabic, Chinese, Hebrew, Japanese, Korean, Persian, Spanish (for students with no previous college course work), and Vietnamese. Contact the UCI Academic Testing Center for information; telephone (949) 824-6207; e-mail: testoff@uci.edu; <http://www.testingoffice.uci.edu/>. Placement tests are recommended but not

required for French and German language courses. The purpose of placement testing is to ensure success in UCI language courses.

For languages other than English which are not listed above, students entering UCI with previous high school language training are placed as follows: in general, one year of high school work is equated with one quarter of UCI work. Thus, students with one, two, three, or four years of high school language other than English will normally enroll in 1B-, 1C-, 2A-, or 2B-level language courses, respectively.

Students should enroll in language courses as specified above. Students who opt to “go back” one quarter will earn credit (i.e., a student with three years of high school language other than English may opt to take 1C instead of 2A). If it has been five or more years since the last high school course, the student may begin at 1A for credit. Exceptions must have the approval of the appropriate course director and the Associate Dean of Humanities for Undergraduate Study. Transfer students will not receive credit for repeating at UCI language other than English courses for which they received credit upon matriculation to UCI even if they are placed by testing into the equivalent of a previously taken course.

Language Other Than English Advanced Placement Credit. Students cannot earn units or grade points at UCI in courses from which they have been exempted on the basis of Advanced Placement credit. However, since Advanced Placement awards a maximum of 8 units for scores of 4 and 5, students may elect to take 2C or the equivalent for credit.

Native Speakers of Languages Other Than English. A native speaker of a language other than English, is defined by the University as someone who attended the equivalent of secondary school in another country where the language of instruction was other than English. Students with prior background in a language other than English should consult the UCI Academic Testing Center to see if a placement test is available to demonstrate competence in that language. If an appropriate means of evaluating competence in a non-English language of instruction does not exist, satisfactory completion, with a C average or better, or equivalent, of one year of formal schooling at the 10th-grade level or higher in an institution where the language of instruction is not English will meet the School of Humanities Language Other Than English requirement equal to second-year language. Appropriate documentation and translation, when necessary, must be presented to substantiate that the course work was completed. For some majors offered by the School of Humanities, students may be exempted from taking third-year language study in that language. In this case, the student must *substitute* appropriate upper-division courses in the major to replace the number of exempted courses. For example, if a native speaker of French is exempted from FRENCH 100A and FRENCH 100B, that student must replace those two courses with two other upper-division French courses offered by the Department of European Languages and Studies.

Repeating Deficient Foreign Language Other Than English Grades. First- and second-year language other than English courses and third-year language other than English composition courses are sequential and each is prerequisite to the next. This is generally true also of fourth-year Chinese, Japanese, and Korean. Students wishing to repeat a deficient grade in one of these courses must repeat it *prior* to continuing on to the next level of the language. A student may not take a lower-level course for credit once a more advanced level has been completed with a passing grade.

Requirements for the Bachelor's Degree

All students must meet the University Requirements (p. 60).

School Requirements

1. Satisfactory completion of HUMAN 1A-HUMAN 1B-HUMAN 1C taken for letter grades in the freshman year.
Transfer students in all majors in the School of Humanities may substitute for the Humanities Core Course appropriate course work as described on the School of Humanities Web site at http://www.humanities.uci.edu/undergrad/current/school_req1.php.
No overlap is permitted between the Humanities Core Course substitution and a student's departmental/major requirements.
2. College-level course work equivalent to UCI's sixth quarter of study (2C level, or for Latin or Greek, two 103s or 104s) in a language other than English or equivalent competence. The final course must be taken for a letter grade and passed with a grade of C or better.

Unless otherwise specified, courses taken to satisfy major, minor, and school requirements must be a minimum of 4 units each. Unless otherwise specified, no more than one independent or directed group study course may be petitioned toward major or minor requirements.

Quarterly consultation with a faculty advisor is recommended.

Maximum Overlap Between Major Requirements: In fulfilling degree requirements for multiple majors, a maximum of two courses may overlap between any two majors.

Maximum Overlap Between Major and Minor Requirements: In fulfilling minor requirements, a maximum of two courses may overlap between a major and a minor. No course overlap is permitted between minors.

Normal Progress in the Major: School of Humanities majors are expected to take at least one course required for their major program each quarter as well as make progress toward the completion of the School's language other than English requirement.

School Residence Requirement: At least five upper-division courses required for each major must be completed successfully at UCI. Completion of a minor program is optional; however, for certification in a minor, at least four upper-division courses required for the minor must be completed successfully at UCI. See individual major and minor requirements for specific courses and how participation in the Education Abroad Program (EAP) can affect the residence requirement. Exceptions are considered on a case-by-case basis and decided in consultation between the appropriate department or faculty member and the Associate Dean of Humanities for Undergraduate Study.

Off-campus Internship Policy. In most cases, Humanities students are not allowed to earn credit for off-campus internships. However, if a department or program determines that the internship is academically appropriate and promotes the student's academic goals, the student may take the internship as Independent Study and credit will be given.

A maximum of four units total may be earned for internships; however, the units may not be counted toward the student's major requirements. (No credit is given for *paid* internships.) The sponsoring department or program and the instructor will in all cases require a substantial academic product, such as a paper, growing out of the internship.

A student who wishes to seek approval for an unpaid off-campus internship and earn course credit must file an Independent Study form

with the Humanities Undergraduate Study Office prior to beginning the internship.

Change of Major. Students who wish to change their major to one offered by the School of Humanities should contact the Humanities Undergraduate Counseling Office for information about change-of-major requirements, procedures, and policies. Information is also available at <http://www.changeofmajor.uci.edu>.

Graduate Programs

Humanities Graduate Study and Research

179 Humanities Instructional Building; (949) 824-4303
Glen Mimura, **Associate Dean**

The School of Humanities offers graduate degrees in a wide range of disciplines. Individual departments administer most of these, although there are two inter-departmental programs: Culture and Theory and Visual Studies (a joint program between the Departments of Art History and Film and Media Studies). The School's graduate programs are generally aimed at those pursuing a Ph.D. degree, with the Master's degree awarded en route. Exceptions include the Summer M.A. Program in the Department of English and the M.A. program in the Department of History. In addition, the Department of English administers the M.F.A. degree in English (Fiction/Poetry).

The School of Humanities houses four graduate emphases that may be pursued in conjunction with study toward a degree: Asian American Studies, Critical Theory, Feminist Studies, and Visual Studies. Several departments may also permit students to do part of their work for the Ph.D. in a related discipline.

A limited number of students are accepted annually to study for teaching credentials. This program is a cooperative effort between the School and the UCI Department of Education.

Graduate students participate in the affairs of the School of Humanities by serving as representatives on various departmental, schoolwide, and campuswide committees.

Courses

HUMAN 1A. Humanities Core Course. 8 Units.

Year-long sequence deals with problems of concern to the humanistic disciplines, including interdisciplinary perspectives on major themes in history, literature, and philosophy. Focuses on major texts from a range of cultural traditions. Integrated writing program counts for half the grade.

Prerequisite: Must satisfy the UC Entry Level Writing Requirement; students held for this requirement will earn an additional two units of workload credit and must take the course for a letter grade. **NOTE:** Course may be offered online.

Overlaps with HUMAN H1A, HUMAN 1AS/A.

Restriction: Lower-division students only.

(Ia, IV)

HUMAN 1AS/A. HUMAN CORE LEC S/A. 4 Units.

HUMAN CORE LEC S/A.

Restriction: Lower division only

HUMAN 1B. Humanities Core Course. 8 Units.

Year-long sequence deals with problems of concern to the humanistic disciplines, including interdisciplinary perspectives on major themes in history, literature, and philosophy. Focuses on major texts from a range of cultural traditions. Integrated writing program counts for half the grade. Course may be offered online.

Prerequisite: HUMAN 1A or HUMAN H1A or (HUMAN 1AS/A with a grade of C or better in the writing component). **NOTE:** Course may be offered online.

Overlaps with HUMAN H1B, HUMAN 1BS/A.

Restriction: Lower-division students only.

(Ia, IV)

HUMAN 1BS/A. HUMAN CORE LEC S/A. 4 Units.

HUMAN CORE LEC S/A.

Prerequisite: HUMAN 1AS/A

Restriction: Prerequisite required and Lower division only

HUMAN 1C. Humanities Core Course. 8 Units.

Year-long sequence deals with problems of concern to the humanistic disciplines, including interdisciplinary perspectives on major themes in history, literature, and philosophy. Focuses on major texts from a range of cultural traditions. Integrated writing program counts for half the grade. Course may be offered online.

Prerequisite: HUMAN 1B or HUMAN H1B or (HUMAN 1BS/A with a grade of C or better in the writing component). **NOTE:** Course may be offered online.

Overlaps with HUMAN 1CS/A, HUMAN H1C.

Restriction: Lower-division students only.

(Ia, IV, VII)

HUMAN H1A. Honors Humanities Core (Lecture). 4 Units.

Each year the course deals with problems of concern to the humanistic disciplines (history, literature, philosophy), emphasizing the careful reading of major texts that bear on these problems and developing the ability to think clearly and write well about the issues they raise. A writing program is integral to the course and counts for half the grade each quarter.

Restriction: Authorization required and Lower division only

(IV)

HUMAN H1B. Honors Humanities Core (Lecture). 4 Units.

Each year the course deals with problems of concern to the humanistic disciplines (history, literature, philosophy), emphasizing the careful reading of major texts that bear on these problems and developing the ability to think clearly and write well about the issues they raise. A writing program is integral to the course and counts for half the grade each quarter.

Prerequisite: HUMAN H1A

Restriction: Prerequisite required and Authorization required and Lower division only

(IV)**HUMAN H1C. Honors Humanities Core (Lecture). 4 Units.**

Each year the course deals with problems of concern to the humanistic disciplines (history, literature, philosophy), emphasizing the careful reading of major texts that bear on these problems and developing the ability to think clearly and write well about the issues they raise. A writing program is integral to the course and counts for half the grade each quarter.

Prerequisite: HUMAN H1B

Restriction: Prerequisite required and Authorization required and Lower division only

(IV)**HUMAN 7. Introduction to Humanities. 1 Unit.**

Introduces students to UCI School of Humanities majors through weekly speakers from departments and programs representing their field of study. Students will gain an understanding of UCI Humanities majors, fields of study, research and career opportunities.

Grading Option: Pass/no pass only.

Restriction: Lower division only.

HUMAN 10. Masterpieces of Literature. 4 Units.

Students closely read major works of world literature that are significant (1) in their own right, (2) for a specific literary tradition, and (3) because of their reception in other cultural contexts. Literature written in English and English translation.

Repeatability: Unlimited as topics vary.

(IV, VIII)**HUMAN 55. What is the Origin of Language?. 4 Units.**

Teaches symbol-based logic and universal grammar in human language as tools to investigate the origin of language. Does language originate with reason? Is language inherently universal or diverse? Does it begin as something literal or figurative?.

((III or IV) and Vb.)**HUMAN 100. Latin America and the Caribbean. 4 Units.**

Introduces students to Latin America and the Caribbean by focusing on the social, cultural, economic, and/or political issues and processes that have widely affected the region during various time periods.

Repeatability: Unlimited as topics vary.

HUMAN H120. Honors Proseminar . 4 Units.

Interdisciplinary Honors courses organized each year around a single topic problem designed to compare and contrast modes of analysis in history, literary studies, and philosophy.

Repeatability: May be taken for credit 3 times as topics vary.

Restriction: Humanities Honors Program students only.

HUMAN H140. Senior Honors Seminar. 4 Units.

Directed by Humanities Honors Thesis Advisor and required of students in Humanities Honors program and Humanities majors in Campuswide Honors Program. Designed to facilitate exchange of ideas and research strategies among students and begin process of writing senior honors thesis.

Restriction: Seniors only. Humanities Honors Program students only.

HUMAN H141. Senior Honors Thesis. 4 Units.

Directed independent research required of participants in the Humanities Honors Program and Humanities majors in the Campuswide Honors Program.

Prerequisite: HUMAN H140.

Restriction: Humanities Honors Program students only. Campuswide Honors Program students only.

HUMAN H142W. Senior Honors Colloquium. 4 Units.

Completion, presentation, and discussion of Senior Honors Theses.

Prerequisite: HUMAN H141.

Restriction: Humanities Honors Program students only. Campuswide Honors Program students only.

(Ib)**HUMAN 149. Rhetoric and Public Speech. 4 Units.**

A course in public speaking as rhetorical practice. Key concepts include situation, audience, public, argument, persuasion, style, and ethics. Includes analysis of significant speeches by public figures from a range of social positions, and practice in composing and delivering speeches.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

HUMAN 149W. Rhetoric and Public Speech. 4 Units.

A course in public speaking as rhetorical practice. Key concepts include situation, audience, public, argument, persuasion, style, and ethics. Includes analysis of significant speeches by public figures from a range of social positions, and practice in composing and delivering speeches.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(Ib)

HUMAN 183A. International Studies Forum. 2 Units.

A faculty-student forum featuring lecturers from a variety of institutions with discussion issues related to international studies.

Repeatability: May be taken for credit 4 times.

Same as SOC SCI 183A, SOCECOL 183A, INTL ST 183A.

Restriction: School of Humanities, School of Social Ecology, International Studies, and Social Science majors have first consideration for enrollment.

HUMAN 183B. Seminar in Mediation. 4 Units.

Student develop mediation skills and refine knowledge in the practice and theory of conflict resolution. Students who complete this course may serve as mediators in the Campus Mediation Program. Course is a prerequisite to completing Indep Study as an intern.

Same as SOC SCI 183B, INTL ST 183B, SOCECOL 183B.

Restriction: School of Humanities, School of Social Ecology, International Studies, and Social Science majors have first consideration for enrollment.

HUMAN 183C. Seminar in Conflict Resolution . 4 Units.

Designed for students pursuing the minor in Conflict Resolution and/or International Studies major. Provides a forum in which students will refine skills and theory in the study of cooperation and conflict, from local to global arenas. Students write research paper.

Same as SOCECOL 183C, SOC SCI 183C.

HUMAN 183CW. Seminar Conflict Resolution. 4 Units.

Designed for seniors who are pursuing the minor in Conflict Resolution and/or International Studies major. Provides a forum in which students will refine skills and theory in the study of cooperation and conflict, from local to global arenas. Students write.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Same as SOCECOL 183CW, SOC SCI 183CW.

(Ib)**HUMAN 195. Humanities Out There (H.O.T) Practicum. 02.0 Units.**

H.O.T. sponsors five-week workshops on topics in the humanities. Each workshop sends a team of undergraduates to a K-12 classroom to develop college skills for Santa Ana students. Requirements: five training sessions; five tutoring sessions; two electronic journals; short paper.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 8 times.

HUMAN 197. Individual Field Study. 1-4 Units.

Individually arranged field study.

Repeatability: May be repeated for credit unlimited times.

HUMAN 198. Directed Group Study. 1-4 Units.

Directed group study on special topics.

Grading Option: Pass/no pass only.

Repeatability: Unlimited as topics vary.

HUMAN 199. Directed Research. 1-4 Units.

Directed research for senior Humanities students.

Repeatability: Unlimited as topics vary.

Restriction: Seniors only.

HUMAN 200A. History and Theory. 4 Units.

Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. (200A and 200B required for History Ph.D. students; 200C optional.).

Same as HISTORY 200A.

HUMAN 200B. History and Theory. 4 Units.

Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. (200A and 200B required for History Ph.D. students; 200C optional.).

Same as HISTORY 200B.

HUMAN 200C. History and Theory . 4 Units.

Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. (200A and 200B required for History Ph.D. students; 200C optional.).

Repeatability: Unlimited as topics vary.

Same as HISTORY 200C.

HUMAN 220A. Studies in Literary Theory and Its History. 4 Units.

Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English, and American theorists.

Same as CRITISM 220A.

Restriction: Graduate students only.

HUMAN 220B. Studies in Literary Theory and Its History. 4 Units.

Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English, and American theorists.

Same as CRITISM 220B.

Restriction: Graduate students only.

HUMAN 260A. Critical Theory Workshop. 0 Units.

A year-long Critical Theory Workshop, conducted by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

HUMAN 260B. Critical Theory Workshop. 0 Units.

A year-long Critical Theory Workshop, conducted by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

HUMAN 260C. Critical Theory Workshop. 4 Units.

A year-long Critical Theory Workshop, conducted by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

HUMAN 270. Advanced Critical Theory. 4 Units.

Seminars on various topics in critical theory.

Prerequisite: Students should have taken introductory courses before enrolling in these seminars.

Repeatability: Unlimited as topics vary.

HUMAN 298. Group Study . 4 Units.

Group study with Humanities faculty.

Repeatability: Unlimited as topics vary.

HUMAN 398A. Foreign Language Teaching: Approaches and Methods. 2 Units.

Introduces approaches and methods of foreign language learning and teaching, and the theoretical models of second-language acquisition and teaching. Focus areas include lesson planning, teaching vocabulary, grammar, speaking, reading, writing, listening, culture, task-based teaching, uses of digital media.

Restriction: Graduate students only.

HUMAN 398B. Foreign Language Teaching: Approaches and Methods. 2 Units.

Introduces approaches and methods of foreign language learning and teaching, and the theoretical models of second-language acquisition and teaching. Focus areas include lesson planning, teaching vocabulary, grammar, speaking, reading, writing, listening, culture, task-based teaching, uses of digital media.

Restriction: Graduate students only.

HUMAN 399. University Teaching. 4 Units.

Limited to Teaching Associates in Humanities Core course.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Program in African American Studies

3000 Humanities Gateway; (949) 824-4523

<http://www.humanities.uci.edu/afam/>

Jared Sexton, **Director**

Undergraduate Program

African American Studies is an interdisciplinary program which offers undergraduate students an opportunity to study those societies and cultures established by the people of the African diaspora. The program's curriculum encourages students to investigate the African American experience from a variety of disciplinary perspectives and theoretical

approaches. Among the topics explored in the course offerings are the process of colonization and the forced migration of African people, the positionality of African people in the racialized symbolic and social orders of the western hemisphere, the rhetoric produced by and about African people, and the cultural and aesthetic values associated with "blackness" and "Africanness." The Program offers a B.A. degree program in African American Studies and a minor.

Career Opportunities

UCI graduates with a B.A. degree in African American Studies enhance their chances of success in the job market and in the highly competitive arena of graduate and professional school admissions, especially in the fields of medicine and other health professions, law, and business. Employers and admissions officers understand that many of their employees and graduates will one day work in communities with significant African American populations, and for this reason they give due consideration to applicants who have in-depth knowledge of African American culture.

Requirements for the B.A. Degree in African American Studies

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Requirements for the Major

A. African American Studies introductory series:

AFAM 40A	African American Studies I
AFAM 40B	African American Studies II
AFAM 40C	African American Studies III

B. Select three courses, with one from three of the following five rubrics:

Humanities (AFAM 110–119)
Gender/Sexuality (AFAM 120–129)
History (AFAM 130–139)
Fine Arts (AFAM 140–149)
Social Sciences (AFAM 150–159)

C. Select five additional upper-division electives from AFAM 110–159, 163.

D. Complete:	
AFAM 162W	The Black Protest Tradition

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor in African American Studies

A. African American Studies introductory series:

AFAM 40A	African American Studies I
AFAM 40B	African American Studies II
AFAM 40C	African American Studies III

B. Select three courses, with one from three of the following five rubrics:

Humanities (AFAM 110–119)
Gender/Sexuality (AFAM 120–129)
History (AFAM 130–139)
Fine Arts (AFAM 140–149)

Social Sciences (AFAM 150–159)

C. Select one additional upper-division elective from AFAM 110–159, 163.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Core Faculty

Nahum D. Chandler, Ph.D. University of Chicago, *Associate Professor of African American Studies* (modern intellectual history, history of the human sciences)

Bridget R. Cooks, Ph.D. University of Rochester, *Director of the Graduate Program in Visual Studies and Associate Professor of African American Studies and Art History* (African American art and culture, Black visual culture, museum criticism, film, feminist theory and postcolonial theory)

Douglas M. Haynes, Ph.D. University of California, Berkeley, *Associate Vice Provost for Equity and Diversity and Associate Professor of History* (social and cultural history of modern Britain, social history of modern medicine)

Ulysses Jenkins, Jr., M.F.A. Otis Parsons Art Institute, *Professor of Art* (film as a primary medium)

Victoria E. Johnson, Ph.D. University of Southern California, *Associate Professor of Film and Media Studies* (history and critical theory of U.S. television, popular film, and media; politics of geography, race, gender, and sexuality in popular culture; cultural studies)

Arlene R. Keizer, Ph.D. University of California, Berkeley, *Associate Professor of English* (African American literature and culture, Caribbean literature and culture, literary and critical theory, critical race and ethnic studies, feminist theory, cultural studies)

Rajagopalan Radhakrishnan, Ph.D. State University of New York, Binghamton, *UCI Chancellor's Professor of English and Comparative Literature* (critical theory, cultural studies, twentieth-century literature, diasporic and ethnic literatures and theories)

Jared Sexton, Ph.D. University of California, Berkeley, *Program Director and Associate Professor of African American Studies, and Associate Professor of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary cinema, coalition politics, critical theory)

Katherine Tate, Ph.D. University of Michigan, *Professor of Political Science* (American politics, African American politics, and public opinion)

Darryl Taylor, D.M.A. University of Michigan, *Associate Professor of Music* (vocal arts)

Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Professor of African American Studies and Drama* (film theory, Marxism, dramaturgy, black political theory)

Tiffany Willoughby-Herard, Ph.D. University of California, Santa Barbara, *Assistant Professor of African American Studies* (South Africa, race in foreign policy, race in social science, African diaspora, comparative racial politics, black radical political thought, third world feminisms, community and civic engagement)

Affiliated Faculty

Alex Borucki, Ph.D. Emory University, *Assistant Professor of History* (African diaspora, early modern Atlantic world, slave trade, colonial Latin America)

Sohail Daulatzai, Ph.D. University of Southern California, *Associate Professor of Film and Media Studies* (Black radicalism, Muslim studies, cultural studies, race, postcolonial theory, U.S. imperial culture, cinema, and hip-hop culture)

Sora Han, Ph.D. University of California, Santa Cruz, *Assistant Professor of Criminology, Law and Society* (law and popular culture, critical race theory, philosophies of punishment, feminism and psychoanalysis)

Jessica Millward, Ph.D. University of California, Los Angeles, *Assistant Professor of History* (U.S., African American gender and women)

Belinda Robnett-Olsen, Ph.D. University of Michigan, *Professor of Sociology* (social movements, race and ethnicity, gender, social change, African Americans)

Sheron Wray, M.A. Middlesex University, *Assistant Professor of Dance* (jazz, choreography and improvisation)

Courses

AFAM 40A. African American Studies I. 4 Units.

Discusses main contours of African American experience from the forced importation of Africans into the Americas in the late fifteenth century to the development of social movements in post-emancipation societies of the late nineteenth and twentieth centuries.

((III or IV) and VII.)

AFAM 40B. African American Studies II. 4 Units.

Introduction to the history of modern racial thinking in Western society and its relationship to the material contexts of racial oppression, with emphasis on its development in British colonies and U.S.

((III or IV) and VII.)

AFAM 40C. African American Studies III. 4 Units.

Introduction to theories of racial blackness in the modern world, with emphasis on developments in British colonies and U.S. Traces emergence of blackness as term of collective identity, social organization, and political mobilization.

((III or IV) and VII.)

AFAM 50. Introductory Topics in African American Studies. 4 Units.

Introduction to a broad range of topics in African American studies, exploring history, literature, art, culture, politics, and contemporary social issues. Topical organization of courses addresses issues that have been of importance historically and are reshaping the African diaspora today.

Repeatability: Unlimited as topics vary.

AFAM 111A. Modern African American Art. 4 Units.

Investigates the history of modern African American art; emphasis on the politics of representation. Examines art in a variety of media from material culture and textiles to painting and photography. Issues of migration, nationalism, gender, sexuality, and hybridity are discussed.

Same as ART HIS 164A.

AFAM 111B. Contemporary African American Art. 4 Units.

Investigates the history of contemporary African American art; emphasis on the politics of representation. Explores art in a variety of media: painting, sculpture, photography, installation, and new media. Cultural politics, appropriation, identity, gender, sexuality, hybridity and civil rights issues discussed.

Same as ART HIS 164B.

AFAM 112A. Early African American Literature. 4 Units.

Examines the earliest forms of black literary practices, including the jeremiad, the slave narrative, the pamphlet, poetry, the short story. How are these literary forms related to the historical experiences of enslavement and emancipation?

Repeatability: Unlimited as topics vary.

AFAM 112B. African American Literature 1900-Present. 4 Units.

Examines individual literary forms and/or authors, as well as movements such as the Harlem Renaissance and the Black Arts Movement. How does black literary practice represent the conditions of modern subjectivities and environments?

Repeatability: Unlimited as topics vary.

AFAM 113. African American Cinema and Media. 4 Units.

Explores the diversity of Black creative production and the historical, social, and economic forces that shaped their emergence. May include Black film, hip-hop culture, fine art, photography, and others.

Repeatability: Unlimited as topics vary.

AFAM 114. International Cultures. 4 Units.

Explores the various cultures of the African diaspora and their impacts on a global scale. Examines a diverse range of media, including music (reggae, hip-hop), literature, film, and others and the links between culture and social movements throughout the diaspora.

Repeatability: Unlimited as topics vary.

AFAM 115. Race and Visual Representation. 4 Units.

Examines film, documentary, fine art, photography, and other visual media to explore the multiple ways in which ideas about race are projected and woven through the visual landscape and the impacts this has on perpetuating social inequalities.

Repeatability: Unlimited as topics vary.

AFAM 116. African Literatures. 4 Units.

Examines literary figures, forms, and movements of African societies. How do these literatures represent indigenous cultural practices, the conditions of modernity, and the relations between both?

Repeatability: Unlimited as topics vary.

AFAM 117. Asian American and African American Relations. 4 Units.

Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression.

Same as HISTORY 152B, ASIANAM 167.

AFAM 118. Topics in African American Humanities. 4 Units.

Provides students with an opportunity to pursue advanced work in African American studies from one of more humanities approaches (literature, film and media studies, art history, and others).

Repeatability: Unlimited as topics vary.

AFAM 123. African American Queer Theory. 4 Units.

Explores intersections of African American studies, women's studies, gay and lesbian studies, and queer theory to challenge dominant views of race, gender, and sexuality. Considers historical and social scientific approaches to topic as well as arts and humanities.

AFAM 124. Race and Gender. 4 Units.

Examines the social construction of the categories of race and gender in international and national contexts of African American communities. Texts address the intersection of economic, social, and scientific theories of difference that formed each category in various historical contexts.

Repeatability: Unlimited as topics vary.

AFAM 125. African American Women in Art. 4 Units.

Examines depictions of and by African American women in art and popular culture through a variety of media including textiles, painting, sculpture, photography, and installation. Focuses on African American women's experiences, perspectives, and strategies for contemporary representation.

Same as ART HIS 164D.

AFAM 128. Topics in Gender/Sexuality. 4 Units.

Expressions of genders and sexualities across the spectrum of African American experience and creativity.

Repeatability: Unlimited as topics vary.

AFAM 134A. Caribbean History: Colonization to Emancipation. 4 Units.

Exploration of the history of the archipelago from pre-Columbian times to the end of slavery; examining the impact of European colonization, decimation of the indigenous populations, African slavery, resistance, and emancipation; the unity and diversity of experience in region.

Same as HISTORY 164A.

AFAM 134B. Caribbean History: Emancipation to Independence. 4 Units.

Post-emancipation and anti-colonial struggles ending with political independence for most of the region. Examines social, political, economic, cultural dimensions of post-emancipation period, including large-scale migration to Central America, the U.S., and Britain; the region's global cultural and political contribution.

Same as HISTORY 164B.

AFAM 137. History of the African Diaspora. 4 Units.

Examines the causes and consequences of the multiple diasporas of African peoples since the sixteenth century in the Atlantic world, especially the Americas and Europe.

Same as HISTORY 134E.

AFAM 138. Topics in African American History. 4 Units.

Studies in selected areas of African American history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as HISTORY 150.

AFAM 142. Topics in African American Drama. 4 Units.

Considers African American theatrical performance and production, including acting, design and production, dramaturgy, criticism and theory, and stagecraft.

Repeatability: Unlimited as topics vary.

AFAM 143. Topics in African American Music. 4 Units.

Examines African American musical forms and traditions, such as blues, jazz, and reggae, in performance and/or critical and theoretical contexts.

Repeatability: Unlimited as topics vary.

AFAM 144. Topics in Expressive Forms. 4 Units.

Examines various forms of aesthetic expression in the African diaspora, including dance, music, and the plastic arts, as well as artistic visions of black cyberspace, digital activism, film, video, and aesthetic conceptions of the future.

Repeatability: Unlimited as topics vary.

AFAM 145. African Americans and Photography. 4 Units.

Explores depictions of and by African Americans through photography. Examines the history of photography in relationship to African American culture through a variety of media from early daguerreotype processes to digital imagery.

Same as ART HIS 164E.

AFAM 148. Advanced Studio Topics. 4 Units.

Provides an intensive and specialized working environment for practice of a variety of fine arts as practiced in African American traditions: painting, drawing, sculpture, photography, video, music, digital arts, and performance.

Repeatability: Unlimited as topics vary.

AFAM 151. Comparative Minority Politics. 4 Units.

Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements.

Same as ASIANAM 132, CHC/LAT 147, POL SCI 124C.

AFAM 152. African American Politics. 4 Units.

Examines politics of African Americans in order to gain a broader perspective of the American political process. Major developments in African American politics (including the civil rights movement, Black presidential bids), continuing problem of racism, responsiveness of key governing institutions.

Same as POL SCI 124E.

AFAM 153. African American Psychology. 4 Units.

Historical overview of the development of black psychology and the African American frame of reference. Topics include personality development, psychological assessment, issues in education, black mental health, and the role of the African American psychologist in the community.

Same as PSYCH 174E.

AFAM 154. African American Social Formations. 4 Units.

Topics which promote critical investigation into the historical, political, and social formations associated with the Black Diaspora.

Repeatability: Unlimited as topics vary.

AFAM 155. Intercultural Studies. 4 Units.

Studies relationships between various cultural formations within the Black Diaspora and the exchange, amalgamations, and tensions between Black Diasporic formations and non-Black formations. Examines expressions of racialization as representation, adaption, and resistance.

Repeatability: Unlimited as topics vary.

AFAM 156. African Societies and Politics. 4 Units.

Examines the violent incorporation of Africa within European modernity. Places the discourse of Pan-Africanism, African Nationalisms, Negritude, African Marxism, and/or African Socialism in juxtaposition to the forces of capitalism, colonialism, and imperialism that restructure African history.

Repeatability: Unlimited as topics vary.

AFAM 157. Critical Race Theory. 4 Units.

Introduction to Critical Race Theory and key American cases on racial inequality. Using this literature, examines the possibilities and pitfalls of legal claims of race, gender, and sexuality discrimination in the age of colorblindness.

Same as CRM/LAW C178.

Restriction: Upper-division students only.

AFAM 158. Topics in African American Social Sciences. 4 Units.

Provides students with an opportunity to pursue advanced work in African American studies from one or more social science approaches (psychology, sociology, anthropology, economics, and others).

Repeatability: Unlimited as topics vary.

AFAM 162W. The Black Protest Tradition. 4 Units.

History and discourses of the black protest tradition. Traces emergence of black protest against racial slavery and white supremacy from the early colonial period to present and the complex elaboration of identity politics within black communities in the twentieth century.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only.

(Ib)

AFAM 163. Seminar in African American Studies. 4 Units.

Explores theoretical and methodological issues in Black Studies via concentrated work on a specific ensemble of questions. Emphasis is on generating student responses to the material covered through oral and written reports.

Repeatability: Unlimited as topics vary.

AFAM 198. Directed Group Study. 1-4 Units.

Special topics through directed reading. Paper required.

Repeatability: May be taken for credit for 24 units.

AFAM 199. Independent Study. 1-4 Units.

Investigation of special topics through directed reading. Paper required.

Repeatability: May be repeated for credit unlimited times.

AFAM 399. University Teaching. 4 Units.

Limited to teaching assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Department of Art History

2000 Humanities Gateway; (949) 824-6635
<http://www.humanities.uci.edu/arthistory/>
Bert Winther-Tamaki, **Department Chair**

Undergraduate Program

The Department of Art History offers a major and minor in Art History. Art History is the study of works of art and other visual artifacts from all regions of the world and all periods of history. Consequently, the undergraduate curriculum in Art History, with its global perspective, is one of the most diverse disciplines in the humanities. Through Art History students learn how to describe and interpret a range of objects including sculpture, painting, photography, architecture, and "new media" such as video and performance art. These skills, along with the program's intense focus on writing and verbal expression, prepare students to think critically and to express themselves clearly at a time when visual communication is becoming ever more important. Because works of art are always created within a larger cultural context, Art History courses are a good way to understand what other places or times were like. Students may explore, for example, ancient Greece, nineteenth-century Japan, or even the twenty-first century United States. Majors in Art History are thus welcome to take related courses in other fields of the humanities. Students are encouraged to pursue the study of language beyond the minimum requirements, and because of its international perspective, Art History

is a particularly good major for students interested in studying abroad. There are many study centers throughout the world associated with the University's Education Abroad Program. Special scholarships are available for the Pacific region program.

Careers for the Art History Major

Following their graduation, students with a B.A. in Art History have found employment in art galleries, auction houses, and museums, and they have entered graduate programs with a view to careers in university teaching, curatorial work, and art conservation. Moreover, with its strong emphasis on developing critical skills in writing, speaking, and analysis, Art History also provides an excellent preparation for many other careers. UCI graduates have pursued professional paths ranging from medicine and law, to business and education, to information technologies and architecture. As in the case of arts administration or intellectual property law, some of these professional pursuits have depended on and continue to make use of training in the arts.

Requirements for the B.A. Degree in Art History

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Departmental Requirements for the Major

A. Select three courses from the following:

ART HIS 40A	History of Western Art: Ancient
ART HIS 40B	History of Western Art: Medieval and Renaissance
ART HIS 40C	History of Western Art: Baroque and Modern
ART HIS 42A	History of Asian Art: Arts of India
ART HIS 42B	History of Asian Art: Arts of China
ART HIS 42C	History of Asian Art: Arts of Japan
ART HIS 42D	History of Asian Art: Arts of Islam

B. Eight upper-division Art History courses, with at least one course in each of the following geographical regions: ¹

Americas: Art History 140, 156, 163–167
Europe: Art History 100–140
Asia: Art History 150–163

and at least one course in each of the following five historical periods: ¹

Ancient:	
Art History 100–107	
ART HIS 151A	Ancient China
ART HIS 155A	Ancient India
Medieval:	
ART HIS 110	Studies in Medieval Art
ART HIS 111A	Later Roman and Byzantine Art: ca. 300-650
ART HIS 111B	Byzantine Art: 650-1450
ART HIS 112	Studies in Early Christian and Byzantine Art
ART HIS 114	Studies in Western Medieval Art
ART HIS 151A	Ancient China
ART HIS 155B	Medieval India

Early Modern:	
Art History 120–128	
ART HIS 134A	European Art: 1643-1789
ART HIS 151B	Later Imperial China
ART HIS 162A	Early Modern Japan
ART HIS 165A	American Art: 1620-1860
Modern:	
ART HIS 134B	European Art: 1789-1851
ART HIS 134C	European Art: 1851-1907
ART HIS 134D	European Art: 1907-1940
ART HIS 134E	Topics in Modern European Art
ART HIS 145A	Studies in Modern Architecture
ART HIS 151C	Modern China
ART HIS 155C	Modern India
ART HIS 156	Art and Globalization, Modern
ART HIS 162B	Modern Japan
ART HIS 164A	Modern African American Art
ART HIS 164E	African Americans and Photography
ART HIS 165B	American Art: 1860-1900
ART HIS 165C	American Art: 1900-1965
ART HIS 183A	Nineteenth-Century Photographic History
ART HIS 183B	Twentieth-Century Photographic History
ART HIS 183C	Selected Topics in Photographic History
Contemporary:	
ART HIS 140A	History of Contemporary Art
ART HIS 140B	Topics in Contemporary Art
ART HIS 145B	Studies in Architecture after 1945
ART HIS 162C	Contemporary Japan
ART HIS 163	Asian American Art, Contemporary
ART HIS 164B	Contemporary African American Art
ART HIS 164D	African American Women in Art
ART HIS 183B	Twentieth-Century Photographic History
ART HIS 183C	Selected Topics in Photographic History
C. Complete:	
ART HIS 190W	Practicum for Majors
D. Select one of the following options:	
1. Two quarters of	
ART HIS 198	Advanced Seminar: Topics in Art History
2. or one quarter of	
ART HIS 198	Advanced Seminar: Topics in Art History
and one additional upper-division course selected from the list in requirement B above.	

- ¹ NOTE: A course may apply as both one Geographical Region *and* one Historical Period, but no course may be used to satisfy more than one Geographical Region or more than one Historical Period.

Students should enroll in ART HIS 190W (for upper-division writing) as early as possible in their junior year, after successfully completing UCI's lower-division writing requirement. It is strongly recommended that students complete ART HIS 190W before taking ART HIS 198.

Residence Requirement for the Major: Five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor in Art History

A. Select three courses from the following:

ART HIS 40A	History of Western Art: Ancient
ART HIS 40B	History of Western Art: Medieval and Renaissance
ART HIS 40C	History of Western Art: Baroque and Modern
ART HIS 42A	History of Asian Art: Arts of India
ART HIS 42B	History of Asian Art: Arts of China
ART HIS 42C	History of Asian Art: Arts of Japan
ART HIS 42D	History of Asian Art: Arts of Islam

B. Select four upper-division Art History courses from 100–198, excluding 190W.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the department chair.

Graduate Study

In conjunction with the Department of Film and Media Studies, the Department of Art History offers a graduate program in Visual Studies. A program description and graduate courses may be found in the Program in Visual Studies (p. 560) section.

Faculty

George Bauer, Ph.D. Princeton University, *Professor Emeritus of Art History* (Renaissance and Baroque)

Linda Freeman Bauer, Ph.D. Institute of Fine Arts, New York University, *Professor Emerita of Art History* (Renaissance and Baroque)

Bridget R. Cooks, Ph.D. University of Rochester, *Director of the Graduate Program in Visual Studies and Associate Professor of African American Studies and Art History* (African American art and culture, Black visual culture, museum criticism, film, feminist theory and postcolonial theory)

Anna Gonosová, Ph.D. Harvard University, *Professor Emerita of Art History* (Byzantine and Medieval art)

James D. Herbert, Ph.D. Yale University, *Professor of Art History* (modern European art)

Judy C. Ho, Ph.D. Yale University, *Professor Emerita of Art History* (Chinese art, archaeology, common religion, Buddhist art)

Philip Leider, M.A. University of Nebraska, *Senior Lecturer with Security of Employment Emeritus, Art History*

Lyle Massey, Ph.D. University of California, Los Angeles, *Associate Professor of Art History* (Renaissance and early modern art)

Margaret M. Miles, Ph.D. Princeton University, *Professor of Art History and Classics* (Greek and Roman art, archaeology)

James Nisbet, Ph.D. Stanford University, *Assistant Professor of Art History* (modern and contemporary art)

Alka Patel, Ph.D. Harvard University, *Associate Professor of Art History* (Asian art, South Asian architecture)

Amy Powell, Ph.D. Harvard University, *Associate Professor of Art History* (Northern European art and visual culture, 1300–1700)

Sally A. Stein, Ph.D. Yale University, *Professor Emerita of Art History* (American art, history of photography, feminist theory)

Dickran Tashjian, Ph.D. Brown University, *Professor Emeritus of Art History* (American art and literature, American and European avant-garde, art and technology)

Cécile Whiting, Ph.D. Stanford University, *Professor of Art History* (American art and culture)

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Department Chair and Professor of Art History* (Modern Japanese art and visual culture, Asian American art, art and globalization)

Roberta Wue, Ph.D. Institute of Fine Arts, New York University, *Assistant Professor of Art History* (late imperial and modern Chinese art, photography and visual culture)

Courses

ART HIS 40A. History of Western Art: Ancient. 4 Units.

An overview of Prehistoric, Egyptian, Greek, and Roman art. Considers how and why the peoples of antiquity created art and architecture, as well as the significance of these works within their social, religious, and historical contexts.

(IV, VIII)

ART HIS 40B. History of Western Art: Medieval and Renaissance. 4 Units.

Focuses on the art of the Mediterranean area and Europe between ca. A.D. 350 and 1600. By means of movements and artists, examines the cultural identities of the Christian, Islamic, and Early Modern worlds.

(IV, VIII)

ART HIS 40C. History of Western Art: Baroque and Modern. 4 Units.

The visual arts from the seventeenth to the twentieth centuries. Explores the changing social purposes and meaning of painting, sculpture, and architecture in relation to historical events and to the artists who made them.

(IV, VIII)

ART HIS 42A. History of Asian Art: Arts of India. 4 Units.

Emphasizing Hindu, Buddhist, and Islamic art of greater India (Pakistan, Bangladesh, Sri Lanka) from proto-historic to modern times. Themes include art as a source of history, commercial and religious pan-Asian connections, nationalism, and modern versus historical identities.

(IV, VIII)

ART HIS 42B. History of Asian Art: Arts of China. 4 Units.

An introduction to the arts and visual culture of China from Neolithic to modern times. Themes includes the representation of power, death and the afterlife, popular culture and elite arts, landscape and women's painting, and concludes with contemporary China.

(IV, VIII)

ART HIS 42C. History of Asian Art: Arts of Japan. 4 Units.

Examines compelling images and objects of spirit and power created in Japan over many centuries. Themes include Buddhist icons, narrative illustration, popular prints, architecture, manga, and the avant-garde. Japanese interactions with Korean, Chinese, and European culture are emphasized.

(IV, VIII)

ART HIS 42D. History of Asian Art: Arts of Islam. 4 Units.

Examines past and present Islamic art, spanning 1,500 years and extending from the Americas through Indonesia. Themes include Islam as a globalizing force, the definition of "Islamic," and the competing roles of religion and politics in making art.

(IV, VIII)

ART HIS 100. Studies in Ancient Art . 4 Units.

Topics in Egyptian, Prehistoric, and Etruscan art of the Mediterranean area treated with specific reference to relevant cultural and historical settings. Specialized courses in Greek and Roman art are also taught.

Repeatability: Unlimited as topics vary.

ART HIS 103. Studies in Greek Art. 4 Units.

Topics in Greek art, architecture, and topography from the Prehistoric period through the end of the fourth century B.C.E.

Repeatability: Unlimited as topics vary.

ART HIS 107. Studies in Roman Art. 4 Units.

Topics in Hellenistic and Roman art and architecture; stresses historical and political background.

Repeatability: Unlimited as topics vary.

ART HIS 110. Studies in Medieval Art. 4 Units.

Specialized topics in Medieval art and architecture in Europe, the Mediterranean area, and the Near East between the fourth and fifteenth centuries. Examples: the Art of the Migration Period, Medieval City.

Repeatability: Unlimited as topics vary.

ART HIS 111A. Later Roman and Byzantine Art: ca. 300-650. 4 Units.

Studies in the development of the art and architecture of the Late Roman and Byzantine Empires between ca. 300 and 650.

ART HIS 111B. Byzantine Art: 650-1450. 4 Units.

Studies in the development of the art and architecture of the Byzantine Empire between ca. 650 and 1450.

ART HIS 112. Studies in Early Christian and Byzantine Art. 4 Units.

Selected topics on the development of the art and architecture of the Later Roman and Byzantine Empires between ca. 300 and 1453. Examples: Early Christian architecture, Byzantine painting.

Repeatability: Unlimited as topics vary.

ART HIS 114. Studies in Western Medieval Art. 4 Units.

Selected topics on the development of art and architecture in Western Europe between ca. 700 and 1400. Examples: Romanesque painting, Gothic architecture.

Repeatability: Unlimited as topics vary.

ART HIS 120. Studies in Renaissance and Baroque Art. 4 Units.

Selected topics on the art and architecture of Europe between the fifteenth and eighteenth centuries. Examples: Renaissance and Baroque prints, Bruegel to Rubens.

Repeatability: Unlimited as topics vary.

ART HIS 121. Studies in Southern Renaissance Art. 4 Units.

Selected topics determined by individual faculty members exploring historical developments and individual artists of the fifteenth and sixteenth centuries in Italy and Spain. Examples: Renaissance Venice, Age of Michelangelo.

Repeatability: Unlimited as topics vary.

ART HIS 123. Studies in Northern Renaissance Art. 4 Units.

Selected topics determined by individual faculty members exploring historical developments and individual artists of the fifteenth and sixteenth centuries in Northern Europe. Examples: Late Medieval art, painting from Van Eyck to Bosch.

Repeatability: Unlimited as topics vary.

ART HIS 125. Studies in Southern Baroque Art. 4 Units.

Selected topics determined by individual faculty members exploring historical developments and individual artists of the seventeenth and eighteenth centuries in Italy and Spain. Example: Rome in the seventeenth century.

Repeatability: Unlimited as topics vary.

ART HIS 128. Studies in Northern Baroque Art. 4 Units.

Selected topics determined by individual faculty members exploring historical developments and individual artists of the seventeenth and eighteenth centuries in Northern Europe. Example: the Age of Rembrandt.

Repeatability: Unlimited as topics vary.

ART HIS 134A. European Art: 1643-1789. 4 Units.

Studies in modern European art within the period 1643 to 1789. Works of art are studied as cultural, social, and political practices.

ART HIS 134B. European Art: 1789-1851. 4 Units.

Studies in modern European art within the period 1789 to 1851. Works of art are studied as cultural, social, and political practices.

ART HIS 134C. European Art: 1851-1907. 4 Units.

Studies in modern European art within the period 1851 to 1907. Works of art are studied as cultural, social, and political practices.

ART HIS 134D. European Art: 1907-1940. 4 Units.

Studies in modern European art within the period 1907 to 1940. Works of art are studied as cultural, social, and political practices.

ART HIS 134E. Topics in Modern European Art. 4 Units.

Selected topics within the period 1643 to 1940.

Repeatability: Unlimited as topics vary.

ART HIS 140A. History of Contemporary Art. 4 Units.

Selected topics exploring historical developments of contemporary art from 1945 to the present. Examples: American Art 1945-1989, European Art 1945-1989, Art After 1989. Works of art are studied as cultural, social, and political practices.

Repeatability: Unlimited as topics vary.

ART HIS 140B. Topics in Contemporary Art. 4 Units.

Selected topics exploring artistic movements, artists, and/or issues in contemporary art from 1945 to the present. Examples: Junk Art, Countercultures, Art and Politics Now. Works of art are studied as cultural, social, and political practices.

Repeatability: Unlimited as topics vary.

ART HIS 145A. Studies in Modern Architecture. 4 Units.

Architecture and related design practices from the late eighteenth century through 1945 are studied in relation to social, aesthetic, technological, and political questions.

Repeatability: Unlimited as topics vary.

ART HIS 145B. Studies in Architecture after 1945. 4 Units.

Architecture and related design practices from 1945 through present are studied in relation to social, aesthetic, technological, and political questions.

Repeatability: Unlimited as topics vary.

ART HIS 145C. Topics in the History of Modern and Contemporary Architecture. 4 Units.

Varying topics from the late eighteenth century to the present. Architecture and related design practices are studied in relation to social, aesthetic, technological, and political questions.

Repeatability: Unlimited as topics vary.

ART HIS 150. Studies in Asian Art. 4 Units.

Topics include visual studies in China, Japan, Korea and India.

Repeatability: Unlimited as topics vary.

ART HIS 151A. Ancient China. 4 Units.

Examines the early history of Chinese art, focusing on the development and uses of art and material culture to express political, social, and religious beliefs, particularly in art made for the court, tomb, and temple.

ART HIS 151B. Later Imperial China. 4 Units.

Investigates the uses, subjects, styles, and social contexts of art made in the later Imperial dynasties, whether court art, religious art, women's painting, scholar painting, or art for the market.

ART HIS 151C. Modern China. 4 Units.

Examines the evolution and media of Chinese art and visual culture in the context of modern China's sweeping historical, social, and political changes.

ART HIS 155A. Ancient India. 4 Units.

Examines the visual history of the region defined as "India" today, but necessarily encompassing modern Bangladesh and Pakistan. Culminates with the supposed Golden Age of the Gupta empire and its far-reaching legacies.

ART HIS 155B. Medieval India. 4 Units.

Begins with the Gupta Period's aesthetic legacies in South Asia's architecture, sculpture, and painting. Explores the dispersal of Islam throughout South Asia, including the Muslim communities of southern India.

ART HIS 155C. Modern India. 4 Units.

Examines the imperial patronage of the Mughal emperors, covering their territorial holdings extending from Afghanistan through western Bangladesh. Continues with the "aftermath" of the Mughal empire and the rise of British commercialism and colonialism.

ART HIS 155D. Topics in the Art and Architecture of India. 4 Units.

Studies in selected areas of Art and Architecture of India. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

ART HIS 156. Art and Globalization, Modern. 4 Units.

Study of modern art as a cause and expression of increasing contacts between cultures. Focusing on regions in Asia and the Americas, adoption of European oil painting, indigenous art movements, and national capital architecture are explored.

ART HIS 162A. Early Modern Japan. 4 Units.

Focuses on the Edo Period (1615-1868), an enormously productive time in the early modern development of Japanese art in woodblock prints, painting, and crafts. Topics include the image of the beautiful woman, kabuki actor prints, and intoxicated ink painting.

ART HIS 162B. Modern Japan. 4 Units.

Explores artistic developments during the tumultuous modernization of Japan from 1868-1945, with a focus on painting, commercial art, and architecture. Topics include arts of the Japanese Empire, neo-traditional arts, responses to European modernism, and war propaganda.

ART HIS 162C. Contemporary Japan. 4 Units.

Study of various media of Japanese art from the time of war defeat in 1945 until the present. Topics include artists' responses to the nuclear bomb, the aesthetics of the "economic miracle," avant-garde groups, manga, and innovations in architecture.

ART HIS 163. Asian American Art, Contemporary. 4 Units.

Study of the Asian American experience in contemporary art and visual culture. Art by Asian Americans of diverse backgrounds as well as the history of visualization of Asian identities in American art/visual culture.

ART HIS 164A. Modern African American Art. 4 Units.

Investigates the history of modern African American art; emphasis on the politics of representation. Examines art in a variety of media from material culture and textiles to painting and photography. Issues of migration, nationalism, gender, sexuality, and hybridity are discussed.

Same as AFAM 111A.

ART HIS 164B. Contemporary African American Art. 4 Units.

Investigates the history of contemporary African American art; emphasis on the politics of representation. Explores art in a variety of media: painting, sculpture, photography, installation, and new media. Cultural politics, appropriation, identity, gender, sexuality, hybridity and civil rights issues discussed.

Same as AFAM 111B.

ART HIS 164C. Topics in African American Art. 4 Units.

Studies in selected areas of African American Art. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

ART HIS 164D. African American Women in Art. 4 Units.

Examines depictions of and by African American women in art and popular culture through a variety of media including textiles, painting, sculpture, photography, and installation. Focuses on African American women's experiences, perspectives, and strategies for contemporary representation.

Same as AFAM 125.

ART HIS 164E. African Americans and Photography. 4 Units.

Explores depictions of and by African Americans through photography. Examines the history of photography in relationship to African American culture through a variety of media from early daguerreotype processes to digital imagery.

Same as AFAM 145.

ART HIS 165A. American Art: 1620-1860. 4 Units.

Studies in American art and culture from 1620 to 1860. Works of art are studied in their cultural, social, and political contexts.

ART HIS 165B. American Art: 1860-1900. 4 Units.

Studies in American art and culture from 1860 to 1900. Works of art are studied in their cultural, social, and political contexts.

ART HIS 165C. American Art: 1900-1965. 4 Units.

Studies in American art and culture from 1900 to 1965. Works of art are studied in their cultural, social, and political contexts.

ART HIS 165D. Topics in American Art. 4 Units.

Varying topics within the period 1620 to 1970. Works of art are studied in their cultural, social, and political contexts.

Repeatability: Unlimited as topics vary.

ART HIS 167. Latin American Art History. 4 Units.

Historical periods vary with each offering and may range from pre-Columbian societies, through the colonial era, to developments in modern and contemporary art.

Repeatability: Unlimited as topics vary.

ART HIS 175. Studies in Native and Tribal Art. 4 Units.

Varying topics on the art and culture of native and tribal societies. For example, North American Indians.

Repeatability: Unlimited as topics vary.

ART HIS 180. Topics in the Criticism of Art. 4 Units.

Selected topics discussed on the theoretical and/or practical dimensions of art historical criticism.

Repeatability: Unlimited as topics vary.

ART HIS 181. Topics in Museum Studies. 4 Units.

Addresses the historical and contemporary function of the museum as an instructional device. The function of exhibitions in the public sphere, and the roles of curators, educators, and the public are analyzed.

Repeatability: Unlimited as topics vary.

ART HIS 183A. Nineteenth-Century Photographic History. 4 Units.

Varying topics within the history of photography in the nineteenth century. Photographic practice studied in relation to art history, cultural history, and social history.

Repeatability: Unlimited as topics vary.

ART HIS 183B. Twentieth-Century Photographic History. 4 Units.

Varying topics within the history of photography in the twentieth century. Photographic practice studied in relation to art history, cultural history, and social history.

Repeatability: Unlimited as topics vary.

ART HIS 183C. Selected Topics in Photographic History. 4 Units.

Varying topics within the history of photography from the early nineteenth century to the present. Photographic practice studied in relation to art history, cultural history, and social history. Examples: documentary; pictorialism and art photography; photomontage, photographic books.

Repeatability: Unlimited as topics vary.

ART HIS 185. Topics in Visual Studies. 4 Units.

Interdisciplinary topics on the cultural analysis of visual artifacts and practices.

Repeatability: Unlimited as topics vary.

ART HIS 190W. Practicum for Majors. 4 Units.

Theory and practice of art history with emphasis on formal and social models of analyzing and writing about art.

Prerequisite: Satisfactory completion of the Lower-division Writing requirement.

Restriction: Art History majors only. Upper-division students only.

(Ib)

ART HIS 198. Advanced Seminar: Topics in Art History. 4 Units.

Discussion and report-oriented seminar with emphasis on reading, writing, and thinking about problems in art history. Topics vary according to the faculty/instructor. Examples: Gothic Cathedral, Portraiture East and West.

Prerequisite: Recommended: ART HIS 190W.

Repeatability: Unlimited as topics vary.

Restriction: Art History majors have first consideration for enrollment. Upper-division students only.

ART HIS 199. Independent Study in Art History. 1-4 Units.

Supervised, but independent reading or research on art historical topics.

Repeatability: May be taken for credit 4 times.

Restriction: Art History majors only.

ART HIS 399. University Teaching. 4 Units.

Limited to teaching assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Department of Asian American Studies

3000 Humanities Gateway; (949) 824-4523

<http://www.humanities.uci.edu/aas/>

James Kyung-Jin Lee, **Chair**

The Department of Asian American Studies examines the historical and contemporary experiences of Asians in the United States and in a global context. The curriculum seeks to provide an analysis of the cultural, political, and economical organization of Asian American communities. Students are invited to participate and partake in broadening their understanding of multicultural perspectives within U.S. society. The Department offers a B.A. degree program in Asian American Studies, a minor, and a graduate emphasis.

The Department also contributes to the Culture and Theory Ph.D. program, which uses the strengths of interdisciplinary programs and departments, particularly African American Studies, Chicano/Latino Studies, Asian American Studies, Critical Theory, and Women's Studies. This degree uses a problem-oriented rather than a disciplinary approach to issues of race, gender, and sexuality in relation to diasporas, transnational, and postcolonial contexts, all of which are broadly based in the humanities, social sciences, and arts.

Scholarship Opportunities. The Ching-Suei Su Endowed Memorial Scholarship is awarded annually to sophomores or juniors who are majoring in Asian American Studies, East Asian Languages and Literatures, or Linguistics (with an emphasis on an East Asian language) and who demonstrate academic excellence and campus or community service.

Undergraduate Program

Career Opportunities

Many career opportunities exist for students who graduate with a B.A. degree in Asian American Studies, such as service with national and international organizations which seek knowledge of American multicultural society in general, and of Asian American peoples and cultures in particular; positions as area specialists with state and federal government agencies; careers in the private sector with corporations or private organizations which have a significant portion of their activities in the U.S. and the Pacific Rim; and positions of service and leadership within Asian American communities. Students may also continue their education and pursue professional or graduate degrees.

Requirements for the B.A. Degree in Asian American Studies

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Department Requirements for the Major

A. Three introductory Asian American Studies core courses:

ASIANAM 50 or ASIANAM 51	Asian American Histories The U.S. and Asia
and	
ASIANAM 52 or ASIANAM 53	Asian American Communities Asian Americans and Comparative Race Relations
and	
ASIANAM 54 or ASIANAM 55	Asian American Stories Asian Americans and the Media

B. Complete:

ASIANAM 100W	Research Methodologies for Asian American Studies
--------------	--

C. Select one course from each of the following areas:

Humanities/Arts: Asian American Studies 110–129
Social Science/Social Ecology: Asian American Studies 130–149
Asian American Sub-groups: Asian American Studies 151–160
Ethnic/Race/Gender Relations: Asian American Studies 161–170

D. Select four additional upper-division elective Asian American Studies courses. Students may request, by petition, one lower-division course to count as an elective. This course must be primarily focused on issues relevant to Asian American Studies.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor in Asian American Studies

A. Three introductory Asian American Studies core courses:

ASIANAM 50 or ASIANAM 51	Asian American Histories The U.S. and Asia
and	
ASIANAM 52 or ASIANAM 53	Asian American Communities Asian Americans and Comparative Race Relations
and	
ASIANAM 54 or ASIANAM 55	Asian American Stories Asian Americans and the Media

B. Four upper-division courses selected from Asian American Studies 100W–169, 199.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the Department.

Graduate Emphasis in Asian American Studies

The Department of Asian American Studies offers a graduate emphasis in Asian American Studies, which is available in conjunction with selected departmental graduate programs. Students in the graduate emphasis complete a minimum of four courses, including ASIANAM 200A and ASIANAM 200B (offered every other year), and two electives, one of which is selected from the student's own department or area of interest, and the other from a discipline outside that department or area.

Subject to the requirements of participating academic units, Ph.D. students in the emphasis should have at least one Asian American Studies core faculty member on their qualifying examination and dissertation committees. With the approval of the Asian American Studies Graduate Committee, affiliated faculty members can sit in place of the core faculty. (There are no requirements concerning qualifying examinations or theses for master's students.)

Applicants to the emphasis must be admitted to a participating UCI graduate program. For complete information about application policies and procedures, as well as the requirements of the emphasis, see one of the Asian American Studies faculty members.

Core Faculty

Christine B. Balance, Ph.D. New York University, *Assistant Professor of Asian American Studies* (Filipino American studies, performance studies, Asian American popular culture, and queer/feminist theory)

Dorothy Fujita-Rony, Ph.D. Yale University, *Associate Professor of Asian American Studies* (U.S. history, Asian American studies)

Claire Jean Kim, Ph.D. Yale University, *Associate Professor of Asian American Studies and Political Science* (racial and ethnic politics, protest and social movements, immigration, intersectionality)

James Kyung-Jin Lee, Ph.D. University of California, Los Angeles, *Director of the Graduate Program in Culture and Theory, Department Chair and Associate Professor of Asian American Studies, and Associate Professor of English* (Asian American literature, urban studies, modern social movements, U.S. political economy, religious studies, illness and disability studies)

John M. Liu, Ph.D. University of California, Los Angeles, *Senior Lecturer with Security of Employment Emeritus, Asian American Studies* (race/ethnic/minority relations; economy and society)

Linda Trinh Võ, Ph.D. University of California, San Diego, *Associate Professor of Asian American Studies* (race and ethnic relations, immigrants and refugees, gender relations, and community and urban studies)

Affiliated Faculty

Kei Akagi, B.A. International Christian University, *UCI Chancellor's Professor of Music*

Yong Chen, Ph.D. Cornell University, *Associate Professor of History* (Asian American history)

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English*

Kyung Hyun Kim, Ph.D. University of Southern California, *Professor of East Asian Languages and Literatures*

Jennifer Lee, Ph.D. Columbia University, *Professor of Sociology*

Stephen Lee, J.D. University of California, Berkeley, *Assistant Professor of Law*

Daphne Pi-Wei Lei, Ph.D. Tufts University, *Professor of Drama*

Simon Leung, B.A. University of California, Los Angeles, *Professor of Art*

Sanjoy Mazumdar, Ph.D. Massachusetts Institute of Technology, *Professor of Planning, Policy, and Design and Social Ecology*

Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Dean of Graduate Study and Research and Associate Professor of Film and Media Studies*

Yong Soon Min, M.F.A. University of California, Berkeley, *Professor of Art*

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Department Chair and Professor of Art History*

Courses

ASIANAM 50. Asian American Histories. 4 Units.

Examines and compares diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Formerly ASIANAM 60A.

Same as SOC SCI 78A, HISTORY 15C.

((III or IV) and VII.)

ASIANAM 51. The U.S. and Asia. 4 Units.

Explores the historical and contemporary transnational linkages between the U.S. and regions in Asia and their resultant flows of people, goods, and ideas. Attention given to the role of militarism and processes of globalization, and the histories of cultural contact/conflict.

((III or IV) and VIII.)

ASIANAM 52. Asian American Communities. 4 Units.

Examines the renewal of Asian immigration following World War II. Explores contemporary Asian American populations and communities in the U.S., and the impact of contemporary Asian immigration on the U.S. political economy and social order.

Same as SOC SCI 78B.

(III, VII)

ASIANAM 53. Asian Americans and Comparative Race Relations. 4 Units.

Analyzes the Asian American experience in comparative perspective, which includes comparisons of different ethnic and racial groups, and across gender and class. Possible topics include labor, economy, politics, migration, nation, popular culture, gender, family, sexuality, and multiraciality.

Same as SOC SCI 78C.

(III, VII)

ASIANAM 54. Asian American Stories. 4 Units.

Examines stories from Asian American communities through literary texts and other media. Selected themes may include the following: dislocation/relocation, finding/inventing a usable past, poetics/politics in language, identities/ethnicities.

(IV, VII)

ASIANAM 55. Asian Americans and the Media. 4 Units.

Investigates popular representations of and cultural productions by Asian Pacific Americans and Asians in the Americas from the late-nineteenth century to the present. Cultural media may include political cartoons, film/television, popular music, visual art, blogs/Web sites, and performance.

(IV, VII)

ASIANAM 100W. Research Methodologies for Asian American Studies. 4 Units.

Explores various research methodologies for Asian American Studies combining theoretical knowledge with field research. Goals: conduct field research about immigrants and refugees from Asia. Topics vary: migration and labor, assimilation and cultural preservation, cultural expressions in the diaspora.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(Ib)

ASIANAM 110. Asian American Writers. 4 Units.

Literary analysis of Asian American writers' representations of issues of identity, class, history among others. Variety of literary forms—novel, poem, drama, essay—included in a study of a variety of Asian American ethnic groups.

Repeatability: Unlimited as topics vary.

ASIANAM 111. Asian American History. 4 Units.

Introduction to important themes in the history of people of Asian ancestry in the United States from the nineteenth century to the present.

Repeatability: Unlimited as topics vary.

ASIANAM 112. Asian American Art History. 4 Units.

Investigation of Asian American experience expressed by art and visual culture throughout the twentieth century. Art by Asian Americans of diverse backgrounds as well as the history of cultural visualization of Asian identities in American art/visual culture.

Repeatability: Unlimited as topics vary.

ASIANAM 114. Asian American Film and Video. 4 Units.

Topics include histories of Asian American film and video, including documentaries, experimental, short subjects, feature-length independent film, and other forms of cinematic expression. Explores issues of identity (national, racial, gendered, among others).

Repeatability: Unlimited as topics vary.

ASIANAM 115. Asian American Media and Arts. 4 Units.

Includes the study of Asian American history and society through the analysis of a variety of media forms such as painting, music, cinema, video, and other artistic representations.

Repeatability: Unlimited as topics vary.

ASIANAM 116. Asian Americans and Popular Culture. 4 Units.

Focuses on Asian Americans' relationship to popular culture as both producers and consumers. Topics include consumer cultures and subcultures, cyberspace and public space, popular music, indie comics and other print media.

Repeatability: Unlimited as topics vary.

ASIANAM 117. Sexuality in Asian and Asian American Film and Video. 4 Units.

Analyzes sexuality and gender roles in specific social, historical, and political contexts represented in selected Asian and Asian American films and videos, in terms of feminine/masculine constructions, the body, family roles.

ASIANAM 118. Asian American Performance and Writing. 4 Units.

Intensive performing workshop producing work inspired by community, personal experience, international issues. Focuses on new ways of understanding ethnicity, class, and gender issues through performance.

ASIANAM 131. Asian American Politics. 4 Units.

Provides various overviews of politics within Asian American communities. May compare with African American and/or Latino politics.

Repeatability: Unlimited as topics vary.

ASIANAM 132. Comparative Minority Politics. 4 Units.

Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements.

Same as AFAM 151, CHC/LAT 147, POL SCI 124C.

ASIANAM 134. Asian American Community Public Health. 4 Units.

Focuses on major issues and concepts of community health and their application to public health programs for Asian American populations. Analyzes individual, institutional, community, and policy factors that influence a person's health status within a larger environmental context.

Same as PUBHLTH 134.

ASIANAM 135. Special Topics in Asian American Social Sciences and Social Ecology. 4 Units.

Explores a broad range of issues in Asian American social sciences and social ecology.

Repeatability: Unlimited as topics vary.

ASIANAM 137. Asian American Labor. 4 Units.

Explores history of Asian Americans and work from the nineteenth century to the present. Areas of study include migration, colonialism, family, social organization, and work culture.

Same as HISTORY 152A.

ASIANAM 138. Race and Urban Space. 4 Units.

Examines how ethnic and racial processes shape and structure interactions in urban settings, such as schools, housing, employment, and public spaces, with attention to the international impact of globalization and postcolonial forces.

ASIANAM 139. Asian Americans and Education. 4 Units.

Introduces students to the major issues facing Asian Americans in K-16 education and schooling experiences through scientific, historical, and interdisciplinary approaches, in both mainstream and minority education.

ASIANAM 141. Asian American Psychology. 4 Units.

Examines the social and psychological concerns of Asian Americans; e.g., coping with racial prejudice, maintaining bicultural identities, dealing with cross-cultural conflicts in interracial relationships, and trying to reconcile generational differences between immigrant parents and their American-born children.

Same as PSYCH 174A.

ASIANAM 142. Muslim Identities in North America. 4 Units.

Explores multiple identities of Muslims in North America, including indigenous Muslims and immigrants of many national origins. Explores religious, political, cultural, ethnic, class differences among American Muslims, turning to Islamic institutions or events near UCI to conduct fieldwork projects.

Same as ANTHRO 125Z.

ASIANAM 143. Religious Traditions of Asian Americans. 4 Units.

Studies the religious traditions of Asian Americans, focusing on the transplantation of religious institutions, establishment of sacred spaces, celebration of religious holidays, socialization of children, as well as birth, marriage, gender relations, death, family.

Same as SOCIOL 136.

ASIANAM 144. The Politics of Protest. 4 Units.

Examines the Civil Rights, Black Power, and women's movements in relationship to the Asian American movement. Uses social movement theories to illuminate the cases, and the cases to critique and revise the theories.

Same as POL SCI 124A.

(VII)**ASIANAM 150. Special Topics in Asian American Studies. 4 Units.**

Analyzes a variety of themes in Asian American Studies—identity, history, culture—from various interdisciplinary perspectives in humanities, arts, social sciences.

Repeatability: Unlimited as topics vary.

ASIANAM 151. Asian American Ethnic Groups. 4 Units.

Topics include study of the history, culture, and social formations of diverse Asian American subgroups such as Pacific Islanders, Hmong, Thai, Indonesian, Indian subcontinental, among others.

Repeatability: Unlimited as topics vary.

ASIANAM 151C. The Korean American Experience. 4 Units.

Explores the factors that have distinctly shaped the Korean American experience, including patterns of racial domination, the profile of immigrant flow, immigrant roles in the urban political economy, politics in Korea, and the role of the church.

Same as SOC SCI 178C.

ASIANAM 151D. The Vietnamese American Experience. 4 Units.

Studies the resettlement of Vietnamese in the United States following their exodus from Southeast Asia. Topics discussed include the Vietnam War, the 1975 evacuation, boat and land refugees, the shaping of Vietnamese communities, and Vietnamese American literature.

Same as SOC SCI 178D.

ASIANAM 151E. The Japanese American Experience. 4 Units.

Studies the settlement of Japanese in Hawaii and the continental United States since the late nineteenth century. Topics covered include sugar plantations, development of rural Japanese America, World War II internment, post-War community development, and persistence of Japanese American identity.

Same as SOC SCI 178E.

ASIANAM 151F. South Asian American Experience. 4 Units.

Examines and compares the experiences of South Asian immigrants in the U.S. over time. Looks at the economic, political, and social positions of the immigrants, with special emphasis on religious changes and the changes in the second and later generations.

Same as SOC SCI 178F.

Restriction: Asian American Studies and Social Policy and Public Service majors have first consideration for enrollment.

ASIANAM 151J. Chinese American Experience. 4 Units.

Analyzes the experiences of Chinese in the United States. Immigration, Chinese exclusion, racial and gender identity. Historical overview and contemporary issues covered.

Same as SOC SCI 178J.

ASIANAM 151K. Filipina/Filipino American Experience. 4 Units.

Explores the experience of Filipina/Filipino Americans from the era of Spanish colonization of the Philippines to present-day community formations in the United States, with special emphasis on the twentieth century. Topics include colonialism, nation, migration, gender, and culture.

Same as SOC SCI 178K.

ASIANAM 161. Ethnic and Racial Communities. 4 Units.

Examines various theoretical analyses of race and ethnicity, particularly as they apply to Asian Americans. Also explores the relationship of Asian Americans to other racialized minorities in the U.S.

Same as SOC SCI 175B.

ASIANAM 162. Asian American Women. 4 Units.

Examines the representations and experiences of Asian American women from diverse perspectives. Explores the commonalities and differences among various groups of Asian American women, with particular focus on history, culture, values, and family roles.

Same as SOC SCI 177B.

ASIANAM 163. Asian American Women's Film. 4 Units.

Explores the significance of film and video made by Asian American women in relation to race, representation, and social change. These film and video makers use media to raise complex issues of class, politics, and race interacting with gender.

Repeatability: Unlimited as topics vary.

ASIANAM 164. Special Topics in Ethnicity, Gender, and Race. 4 Units.

Topics include analysis and comparison of various themes related to ethnicity, gender, and race within Asian American communities.

Repeatability: Unlimited as topics vary.

ASIANAM 166. Asian Americans and Race Relations. 4 Units.

Analyzes Asian American race relations and racialized interconnections, as well as Asian Americans in racial hierarchy. Topics include racial categorization, citizenship, immigration, equity.

ASIANAM 167. Asian American and African American Relations. 4 Units.

Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression.

Same as AFAM 117, HISTORY 152B.

ASIANAM 168. Politics of Animal Rights. 4 Units.

Examines animal rights/welfare movement's efforts to transform moral, practical, and legal standing of nonhuman animals in contemporary U.S. Explores intersection of racism, sexism, and speciesism informed by theories of race and ethnicity, including Asian American Studies.

Same as POL SCI 126F.

Restriction: Political Science majors and Asian American Studies majors have first consideration for enrollment.

ASIANAM 171A. Comparative International Migration. 4 Units.

Examines the migration patterns to the three largest nations that receive immigrants (i.e., permanent settlers): Australia, Canada, and the United States.

Same as SOCIOL 175D, INTL ST 117B.

ASIANAM 199. Independent Study. 1-4 Units.

Directed reading and research in consultation with a faculty member. Substantial written work required.

Repeatability: May be repeated for credit unlimited times.

ASIANAM 200A. Theory and Methods in Asian American Studies. 4 Units.

Introduction to the intersection of the social sciences, humanities, and other fields that constitute the theory and methodology of Asian American Studies. Focuses on the interventions and contestations within Asian American Studies that have transformed the discipline in recent years.

Restriction: Graduate students only.

ASIANAM 200B. Contemporary Issues in Asian American Studies. 4 Units.

Examines the interrelations between history, theory, and race in the aftermath of the twentieth-century decolonial movements, offering an account of race through postcolonial and postnationalist approaches in comparative contexts. Considers the interventions made by transnational feminist and racialized queer critiques.

Restriction: Graduate students only.

ASIANAM 201. Graduate Topics in Asian American Studies. 4 Units.

Seminars on various topics in Asian American Studies.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

ASIANAM 202. Immigration and Globalization. 4 Units.

Examines immigration to three leading immigrant-receiving nations: the United States, Canada, and Australia, as both cause and consequence of globalization. Specific attention to Asian migration, as well as assimilation and its relationship to multiculturalism.

Same as SOCIOL 266.

Restriction: Graduate students only.

ASIANAM 250. Advanced Topics in Asian American Studies. 4 Units.

Seminar covering various areas of research within Asian American Studies as an interdisciplinary field. Recommended for advanced graduate students.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

ASIANAM 290. Directed Research. 4-12 Units.

Directed graduate study/research in Asian American Studies.

Repeatability: May be taken for credit for 24 units.

Restriction: Graduate students only.

ASIANAM 291. Directed Reading. 4 Units.

Readings focused on specialized topics in consultation with, and with the consent of, a faculty member.

Repeatability: May be taken for credit for 12 units.

Restriction: Graduate students only.

ASIANAM 399. University Teaching. 4 Units.

Limited to teaching assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Emphasis in Asian American Studies graduate students only.

Department of Classics

400 Murray Krieger Hall; (949) 824-6735

<http://www.humanities.uci.edu/classics/>

Andrew Zissos, **Department Chair**

Undergraduate Program

The Department of Classics aims to provide the undergraduate student with a working knowledge of the origins and heritage of Greco-Roman civilization. The Department is committed to a twofold purpose: (1) disseminating interest in and knowledge of Classical Civilization through the teaching of Greek and Latin language and literature; and (2) helping students, through courses in Classical literature, history, civilization, mythology, and religion taught through English translations, to appreciate the achievements of Greek and Roman culture and their pervasive influence on our own civilization.

The Department offers a major in Classics with three possible emphases. Students may choose an emphasis in Greek and Latin Language and Literature, Latin Language and Literature, or Classical Civilization. Students are encouraged to consult with the Classics faculty regarding the appropriate choice of major and design of their programs.

For the emphasis in Greek and Latin Language and Literature, study of the Classics must be based on competence in both Greek and Latin. This emphasis is designed to provide the student with language competence as rapidly as possible, so that by the end of first-year Greek or Latin the student has already been introduced to some of the major Classical authors in the original language. From then on, courses are devoted to reading and interpreting the literature of ancient Greece and Rome. In addition to their training in the languages, students increase their knowledge of the literature, history, and thought of the ancient world through the close study of some of its finest writers.

The Latin Language and Literature emphasis is designed for those students who want to focus on Rome and the Latin language as their area of study. By the end of first-year Latin, students will be reading and analyzing some of the most influential works in Latin literature. In addition to gaining an expertise in Latin, students also devote a portion of their study to an examination of the history and culture of ancient Rome by taking upper-division Classical Civilization courses with Rome as their focus and/or additional Latin courses. Courses from other departments in the School of Humanities with a focus on later historical periods heavily influenced by Roman culture (such as the medieval period) may be used to satisfy some of the degree requirements, with prior approval of the Department of Classics.

The emphasis in Classical Civilization is designed for students who do not plan to concentrate on the Classical languages or pursue graduate study in the Classics, yet wish to obtain an undergraduate degree based on a sound knowledge of the Classical world. This major requires one year of study (or its equivalent) of either Greek or Latin and courses

taught in English translation concerning such topics as Classical literature, civilization, history, archaeology, art, drama, and philosophy.

Students entering UCI with previous Greek or Latin training may be given advanced standing. Usually, one year of high school work is equated with one quarter of UCI work. Thus, students with one, two, three, or four years of high school Latin (or Greek) will enroll in Latin (or Greek) 1B, 1C, and 100A or 100B, respectively. Placement may vary, depending on the extent of the student's preparation. Students with transfer credit for Greek and/or Latin may *not* repeat those courses for credit. Students with high school training in the Classical languages are encouraged to consult with the Classics faculty before enrolling in Classics courses.

The Department adheres to the policy of giving its students an opportunity to participate in the departmental decision-making process. Student representatives, elected from and by the undergraduate majors, participate in all open departmental meetings. Representatives are responsible for maintaining close liaison with their constituency, for representing the students' interest in curriculum and personnel matters, and for the evaluation of both the academic program and the academic staff.

Inquiries regarding language placement, prerequisites, planning a program of study, or other matters related to the Department's offerings should be directed to the Office of the Chair, 400 Murray Krieger Hall, telephone (949) 824-6735.

Requirements for the B.A. Degree in Classics

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

All students are subject to the Language Other Than English Placement and Progression policies.

Departmental Requirements for the Major

The B.A. program in Classics is devoted to the study of languages, literature, and culture of ancient Greece and Rome. Students select one of three emphases: (1) Greek and Latin Language and Literature; (2) Latin Language and Literature; or (3) Classical Civilization.

Emphasis in Greek and Latin Language and Literature

A. Choose either Greek Focus or Latin Focus:

1. Greek Focus:

CLASSIC 36A- 36B- 36C	The Formation of Ancient Greek Society: Early Greece and The Formation of Ancient Greek Society: Late Archaic and Classical Greece and The Formation of Ancient Greek Society: Fourth-Century and Hellenistic Greece
-----------------------	--

and select six upper-division courses in Greek 100–104, 120

and select three upper-division courses in Latin 100–104

or

2. Latin Focus:

CLASSIC 37A- 37B- 37C	The Formation of Ancient Roman Society: Origins to Roman Republic and The Formation of Ancient Roman Society: Roman Empire and The Formation of Ancient Roman Society: The Fall of Rome
-----------------------	---

and select six upper-division courses in Latin 100–104

and select three upper-division courses in Greek 100–104

B. One additional upper-division course in Greek or Latin. One upper-division Classics class (CLASSIC 140, CLASSIC 150, CLASSIC 160, CLASSIC 170, CLASSIC 176) may be substituted for the upper-division Greek or Latin course with prior approval of the departmental undergraduate advisor.

C. Senior Capstone Requirement:

Classic 192A–Classic 192B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of Classics 192A. Six units of Classics 198, Classics 199, or Greek 199 may be substituted for Classics 192A–B with prior approval of the departmental undergraduate advisor.

Emphasis in Latin Language and Literature

A. Complete:

CLASSIC 37A- 37B- 37C	The Formation of Ancient Roman Society: Origins to Roman Republic and The Formation of Ancient Roman Society: Roman Empire and The Formation of Ancient Roman Society: The Fall of Rome
-----------------------	---

B. Select six upper-division courses in Latin 100–104.

C. Select four upper-division courses from the following:

LATIN 103	Seminar in Latin Prose
LATIN 104	Seminar in Latin Poetry
CLASSIC 140	Classics and History: The Ancient World
CLASSIC 150	Classical Mythology
CLASSIC 160	Topics in Classical Literature in English Translation
CLASSIC 170	Topics in Classical Civilization
CLASSIC 176	International Studies and the Classics

Courses taken in another UCI department may be substituted with prior approval of the departmental undergraduate advisor; three of these courses must be Roman in topic (the fourth course may have a Greek topic).

D. Senior Capstone Requirement:

Classic 192A–Classic 192B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of Classics 192A. Six units of Classics 198, Classics 199, Latin 198, or Latin 199 may be substituted for Classics 192A–B with prior approval of the departmental undergraduate advisor.

Emphasis in Classical Civilization

A. Select one of the following:

LATIN 1A- 1B- 1C	Fundamentals of Latin and Fundamentals of Latin and Fundamentals of Latin
GREEK 1A- 1B- 1C	Fundamentals of Greek and Fundamentals of Greek and Fundamentals of Greek

or equivalent

and select one of the following:

CLASSIC 36A- 36B- 36C	The Formation of Ancient Greek Society: Early Greece and The Formation of Ancient Greek Society: Late Archaic and Classical Greece and The Formation of Ancient Greek Society: Fourth-Century and Hellenistic Greece
CLASSIC 37A- 37B- 37C	The Formation of Ancient Roman Society: Origins to Roman Republic and The Formation of Ancient Roman Society: Roman Empire and The Formation of Ancient Roman Society: The Fall of Rome
CLASSIC 45A- 45B- 45C	Classical Mythology: The Gods and Classical Mythology: The Heroes and Classical Mythology: Ancient and Modern Perspectives of Classical Mythology

B. Select five upper-division Classics courses.

C. Select two additional upper-division Classics courses. These courses may be in related fields such as Classical history, Classical philosophy, or Classical art and if so, may be taken in another UCI department with prior approval of the departmental undergraduate advisor.

D. Senior Capstone Requirement:

Classic 192A–Classic 192B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of Classics 192A. Six units of Classics 198 or Classics 199 may be substituted for Classics 192A–B with prior approval of the departmental undergraduate advisor.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Planning a Program of Study

The Department believes in close consultation with students on academic advising and program planning. Students planning to major in Classics or minor in Greek, Latin, or Classical Civilization are strongly urged to consult with the departmental faculty at the earliest moment to learn about the various programs.

Study Abroad

The Department of Classics encourages students to take advantage of educational opportunities abroad while making progress toward their UCI degree. Classics majors and minors can benefit from a broader perspective of the field by studying for periods ranging from one quarter to one year at any number of universities all over the world through the UC Education Abroad Program. Students can also augment their exposure to Greek, Latin, and Classical civilizations by studying for a summer or during the academic year in Greece or Italy at programs sponsored by other academic institutions through the International Opportunities Program. To determine how study abroad can fit into a Classics major, visit UCI's Study Abroad Center Web site, especially the "Study Abroad in Your Major" section at <http://www.cie.uci.edu/academics/academicplanning.html>. See

the Department of Classics Undergraduate Program Director for additional information.

Career Opportunities

The study of the ancient world is a valuable possession for modern life. The discipline of Classics is an important part of a well-rounded education. Greek and Latin language and literature, history and philosophy, mythology and religion make an excellent basis for exploring all periods of Western culture down to the present day. Classics is an interdisciplinary study, exploring human culture by a variety of methods from a variety of points of view. For this reason, the student who chooses to major in Classics may find many professional opportunities open.

Graduate and professional schools in medicine, law, management, and other fields welcome students with training in Classics. So do many business corporations. Business, industry, and technology are well acquainted with the value of an education in Classics. They are aware that students with a strong background in a respected and challenging major such as Classics are disciplined thinkers who can express themselves in clear, coherent, and cogent language, capabilities that are considered valuable in future physicians, lawyers, and managers.

There are also specific vocational opportunities open to the graduate in Classics. A major in this field may lead to a career in high school teaching, or (after appropriate further study) in college or university teaching. It is also an excellent preparation for advanced study in other academic disciplines such as archaeology, history, comparative literature, philosophy, and linguistics, as well as for theological studies and for work in a wide range of the humanities and social sciences.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on résumé preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Departmental Requirements for the Minors

The Department offers minors in Greek, Latin, Classical Civilization, and Archaeology.

Greek

GREEK 1A- 1B- 1C	Fundamentals of Greek and Fundamentals of Greek and Fundamentals of Greek
------------------	---

Select six upper-division courses in Greek 100–104. Greek 120 may be substituted for one course at the 100 level.

Latin

LATIN 1A- 1B- 1C	Fundamentals of Latin and Fundamentals of Latin and Fundamentals of Latin
------------------	---

Select six upper-division courses in Latin 100–104.

Classical Civilization

Select one of the following:

CLASSIC 36A- 36B- 36C	The Formation of Ancient Greek Society: Early Greece and The Formation of Ancient Greek Society: Late Archaic and Classical Greece and The Formation of Ancient Greek Society: Fourth-Century and Hellenistic Greece
CLASSIC 37A- 37B- 37C	The Formation of Ancient Roman Society: Origins to Roman Republic and The Formation of Ancient Roman Society: Roman Empire and The Formation of Ancient Roman Society: The Fall of Rome
CLASSIC 45A- 45B- 45C	Classical Mythology: The Gods and Classical Mythology: The Heroes and Classical Mythology: Ancient and Modern Perspectives of Classical Mythology
Select five upper-division Classics courses, one of which may be in a related field such as history, art history, or philosophy.	

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Minor in Archaeology

The interdisciplinary minor in Archaeology introduces students to modern archaeological theory and practice. Students are exposed to different approaches and theoretical frameworks used in the reconstruction of cultures based on their material remains and examine the use of such approaches and frameworks in a comparative context that emphasizes one geographic area. Students also become familiar with the importance of understanding the historical, geographic, and environmental contexts in which a particular material culture develops and transforms. The minor helps to prepare students for advanced training in art history, the archaeology of specific geographical regions, cultural resource management, museum studies, and historical preservation. It emphasizes classical and historical archaeology of the last 5,000 years of human history.

Requirements for the Minor in Archaeology

Completion of seven courses (28 units). Only one course from requirements D–F may be lower division. Courses that are listed in the Catalogue as “topics vary” must be approved by the Department of Classics undergraduate advisor.

A. Complete:

ANTHRO 2C	Introduction to Archaeology
-----------	-----------------------------

B. Select one lower-division survey course on the pre-modern world from the following:

ANTHRO 41A	Global Cultures and Society
ART HIS 40A	History of Western Art: Ancient
ART HIS 42A	History of Asian Art: Arts of India
HISTORY 21A	World: Innovations

C. Select one upper-division social theory course from the following:

ANTHRO 125B	Ecological Anthropology
ANTHRO 136B	History of Anthropological Theory

HISTORY 102B	Topics in Environmental History
D. Select one course on the social study of scientific inquiry from the following:	
ANTHRO 128A	Introduction to Science Studies
HISTORY 60	The Making of Modern Science
WOMN ST 50A	Gender and Feminism in Everyday Life
WOMN ST 50B	Gender and Power
WOMN ST 60A	Gender and Science
E. Geographic specialty:	
Select two courses focusing on one particular area from the requirement F list.	
F. Geographic subspecialty:	
Select one course on an area outside the student's geographic specialty from the following:	
Africa and Asia:	
ART HIS 150	Studies in Asian Art
ART HIS 151A	Ancient China
ART HIS 175	Studies in Native and Tribal Art
HISTORY 130A	Jewish History, Ancient to Early Modern Times
HISTORY 131A	History of Zoroastrianism (or HISTORY 131B, 131C, 131D, 131E)
HISTORY 134A	Africa: Societies and Cultures
HISTORY 170D	Premodern East Asia
Greece and Rome:	
ART HIS 100	Studies in Ancient Art
ART HIS 103	Studies in Greek Art
ART HIS 107	Studies in Roman Art
CLASSIC 36A	The Formation of Ancient Greek Society: Early Greece
CLASSIC 36B	The Formation of Ancient Greek Society: Late Archaic and Classical Greece
CLASSIC 36C	The Formation of Ancient Greek Society: Fourth-Century and Hellenistic Greece
CLASSIC 37A	The Formation of Ancient Roman Society: Origins to Roman Republic
CLASSIC 37B	The Formation of Ancient Roman Society: Roman Empire
CLASSIC 37C	The Formation of Ancient Roman Society: The Fall of Rome
CLASSIC 140	Classics and History: The Ancient World
CLASSIC 170 Topics in Classical Civilization	
HISTORY 105B	Later Roman Empire
Americas:	
ANTHRO 141A	Ancient Civilization of Mexico and the Southwest
ANTHRO 149	Special Topics in Archaeology
ANTHRO 162A	Peoples and Cultures of Latin America
ANTHRO 162B	Indian North America
ART HIS 164A	Modern African American Art

ART HIS 175	Studies in Native and Tribal Art
HISTORY 151A	Chicana/Chicano History: Pre-Colonial to 1900
HISTORY 161A	Indian and Colonial Societies in Mexico

Residence Requirement for the Minor

Four upper-division courses required for the minor must be completed successfully at UCI. Two of the Four may be taken through the UC Education Abroad Program provided course content is approved in advance by the Humanities Undergraduate Study Office.

The University of California Tri-Campus Graduate Program in Classics

UC Irvine, UC Riverside, and UC San Diego

Michele Salzman, **Chair, Joint Executive Committee**

Faculty

Luci Berkowitz, Ph.D. Ohio State University, *Professor Emerita of Classics*, UCI (Greek literary history, computer application to literature)

Cynthia L. Claxton, Ph.D. University of Washington, *Lecturer in Classics with Security of Employment, Undergraduate Program Director, and Humanities Language Learning Director*, UCI (Greek prose, historiography)

Anthony Edwards, Ph.D. Cornell University, *Professor of Classics and Comparative Literature*, UCSD (epic, Greek comedy, critical theory)

Richard I. Frank, Ph.D. University of California, Berkeley, *Professor Emeritus of History and Classics*, UCI (Roman history, Latin elegy and satire, classical tradition)

Zina Giannopoulou, Ph.D. University of Illinois, *Associate Professor of Classics*, UCI (literary theory and Platonic hermeneutics, Classical and Hellenistic philosophy, Greek tragedy and epic)

David Glidden, Ph.D. Princeton University, *Professor of Philosophy*, UCR (Greek and Roman philosophy)

Anna Gonosová, Ph.D. Harvard University, *Professor Emerita of Art History*, UCI (Byzantine and Medieval art)

Denver Graninger, Ph.D. Cornell University, *Assistant Professor of History*, UCR (social and political implications of Greek religion)

Monte Johnson, Ph.D. University of Toronto, *Associate Professor of Philosophy*, UCSD (ancient philosophy)

Dayna Kalleres, Ph.D. Brown University, *Assistant Professor of Literature and the Study of Religion*, UCSD (early to late antique Christian literature and culture)

Andromache Karanika, Ph.D. Princeton University, *Associate Professor of Classics*, UCI (Greek epic poetry, Greek lyric, folklore)

Marianne McDonald, Ph.D. University of California, Irvine, *Professor of Theatre and Classics*, UCSD (Greek and Roman theatre, ancient drama in modern plays, film, and opera)

Margaret M. Miles, Ph.D. Princeton University, *Professor of Art History and Classics*, UCI (Greek and Roman art and archaeology, ancient Sicily, Greek religion)

Jozef Müller, Ph.D. Princeton University, *Professor of Philosophy*, UCR (Aristotle, Plato, Hellenistic Philosophy, and Neoplatonism)

Sheldon Nodelman, Ph.D. Yale University, *Associate Professor of Visual Arts*, UCSD (Classical art and architecture, Roman portraiture, critical theory)

Maria C. Pantelia, Ph.D. Ohio State University, *Professor of Classics and Director, Thesaurus Linguae Graecae®*, UCI (Greek epic, Hellenistic poetry, digital technologies in the humanities)

James I. Porter, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature and Graduate Advisor*, UCI (philosophy, literary and cultural criticism and aesthetics, history of the classical disciplines, reception of Homer)

Lisa Raphals, Ph.D. University of Chicago, *Professor of Chinese/Comparative Literature*, UCR (comparative philosophy, religion, history of science, and gender, with other interests in poetics and science fiction and media studies)

Wendy Raschke, Ph.D. State University of New York, Buffalo, *Lecturer in Classics*, UCR (Roman satire, Greek art and archaeology)

Michele Salzman, Ph.D. Bryn Mawr College, *Chair, Joint Executive Committee, UC Tri-Campus Graduate Program in Classics and Professor of History*, UCR (Late antiquity; Roman history and literature, religion, women's studies)

Gerasimos Santas, Ph.D. Cornell University, *Professor Emeritus of Philosophy*, UCI (ancient philosophy, history of philosophy, ethics)

Thomas F. Scanlon, Ph.D. Ohio State University, *Professor of Classics*, UCR (Greek and Roman historiography, ancient athletics)

Patrick Sinclair, Ph.D. Northwestern University, *Professor Emeritus of Classics*, UCI (Roman historiography, rhetoric)

Dana F. Sutton, Ph.D. University of Wisconsin, *Professor Emeritus of Classics*, UCI (Greek and Latin drama, Greek poetry, Anglo-Latin literature)

Edward Watts, Ph.D. Yale University, *Professor of History*, UCSD (intellectual and religious history of the Early Byzantine Empire)

Nicholas White, Ph.D. Harvard University, *Professor Emeritus of Philosophy and Classics*, UCI (ancient philosophy, ethics, epistemology/metaphysics)

Andrew Zissos, Ph.D. Princeton University, *Department Chair and Associate Professor of Classics*, UCI (Latin epic, medieval Latin, Roman culture)

The UC Tri-Campus Graduate Program in Classics is a joint venture that combines faculty in Classics and related disciplines from the three southernmost University of California campuses—UC Irvine, UC Riverside, and UC San Diego.

Students accepted into the program may enroll at any of the three campuses, but normally apply for admission through UCI, which is the main location for instruction and administration. Applications are reviewed

by an admissions committee composed of faculty members from all three campuses.

The goal of the program is to provide a graduate education that unites the main currents of modern literary, cultural, and social theory with the traditional skills and methodologies of classical philology. Candidates for degrees are expected to exhibit facility in Greek and Latin, competence in research, including theoretical approaches to texts and objects, digital skills for research and teaching, and experience in teaching. These goals are realized through the four core courses (CLASSIC 200A, CLASSIC 200B, CLASSIC 200C and CLASSIC 201) and seminars (CLASSIC 220).

All entering students are admitted into the Ph.D. program. With the exception of those granted advanced standing because they hold the M.A. degree in Classics from another institution, entering students may be awarded an M.A. along the way.

Master of Arts in Classics

The requirements for the M.A. degree are two years (six quarters) of course work, followed by a comprehensive examination or completion of a Master's thesis. A reading knowledge of either German, French, Italian, or an equivalent language, demonstrated by examination or appropriate course work, is also required. M.A. students must successfully complete a minimum of 12 approved, seminar-level courses. The normal course load is three 200-level courses each quarter distributed as follows: nine quarters of CLASSIC 220; three quarters of CLASSIC 200A, CLASSIC 200B, CLASSIC 200C, and CLASSIC 201; a fourth quarter may be substituted for a CLASSIC 220. Up to one quarter of CLASSIC 290 for research and writing of the Master's thesis may be substituted for a CLASSIC 220. If remedial work is required in Greek or Latin, with the Graduate Advisor's approval, one enhanced upper-division Greek or Latin course (enrolled as a CLASSIC 280) may be substituted for a CLASSIC 220. With the Graduate Advisor's approval, M.A. students may substitute one external graduate seminar in a relevant area outside of Classics (at any of the three participating campuses) for a CLASSIC 220. At the end of a student's M.A. studies, a positive vote of the program faculty is necessary for continuation in the Ph.D. program. The expected time for completion of the M.A. degree is two years.

Doctor of Philosophy in Classics

The requirements for the Ph.D. degree are three years (nine quarters) of course work. Minimum course requirements are four quarters of CLASSIC 200A, CLASSIC 200B, CLASSIC 200C, and CLASSIC 201; 12 quarters of CLASSIC 220; two external graduate seminars, from departments or programs outside of Classics. These may be taken from the offerings of any of the three campuses. Students may take up to two quarters of enhanced upper-division Greek or Latin courses (enrolled as 280s) in place of CLASSIC 220s with permission of the Graduate Advisor if remedial work is required in Greek or Latin. Where appropriate, in the third year of course work, a second CLASSIC 200A, CLASSIC 200B, or CLASSIC 200C, may be substituted for a CLASSIC 220. CLASSIC 280, Independent Study (supervised research), may be substituted for CLASSIC 220s *only* with the permission of the Graduate Advisor. Up to 12 equivalent graduate-level courses completed elsewhere may be substituted for Tri-Campus Program courses with approval of the Joint Executive Committee. CLASSIC 280 may be used, normally in the fourth year, to provide time to work on the Greek and Latin reading lists and to prepare for Qualifying Examinations, but these courses do not count toward the required 18 courses. Students are encouraged to take courses and seminars in relevant areas outside the program at any of the three campuses. At this stage, and during the fourth year of study, students are expected to have read extensively in the primary texts, in literary history

and theory, and in ancient history. In addition, experience in supervised teaching and/or research activity is normally required. In order to qualify as a candidate for the Ph.D. and enter the dissertation stage, a student must pass a set of five written qualifying examinations, including Greek translation and Latin translation; Greek history and Roman history; history of Greek and Roman literature. Once these examinations have been passed, a student must submit a substantial dissertation prospectus, comparable to a research paper in scope and detail, and pass an oral examination administered by the candidacy committee. Ph.D. students must also demonstrate reading proficiency in one modern research language (normally German and French or Italian) by the end of their second year either through appropriate course work or by examination. Proficiency in a second modern research language is expected by the end of the third year. The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is eight years.

The facilities, course offerings, programs, and individual faculty mentorship of all three campuses are available to students in the UC Tri-Campus Graduate Program in Classics. In addition, program resources are enhanced through a cooperative teaching arrangement among the Tri-Campus Program and the Classics graduate program at UC Los Angeles, UC Santa Barbara, and the University of Southern California.

Thesaurus Linguae Graecae®

The Thesaurus Linguae Graecae® (TLG®) is a research center at UCI. TLG® has created a digital library of Greek literature, a unique resource for research in Greek literary and linguistic studies. Although administratively separate, TLG® is closely affiliated with the Department of Classics. Information is available in the Office of Research (p. 101) section of this *Catalogue*.

Faculty

Luci Berkowitz, Ph.D. Ohio State University, *Professor Emerita of Classics* (Greek literary history, computer applications to literature)

Cynthia L. Claxton, Ph.D. University of Washington, *Lecturer in Classics with Security of Employment, Undergraduate Program Director, and Humanities Language Learning Program Director* (Greek prose, historiography)

Richard I. Frank, Ph.D. University of California, Berkeley, *Professor Emeritus of History and Classics* (Roman history, Classical tradition)

Zina Giannopoulou, Ph.D. University of Illinois, *Associate Professor of Classics* (literary theory and Platonic hermeneutics, Classical and Hellenistic philosophy, Greek tragedy and epic)

Andromache Karanika, Ph.D. Princeton University, *Associate Professor of Classics* (Greek epic poetry, Greek lyric, folklore)

Margaret M. Miles, Ph.D. Princeton University, *Professor of Art History and Classics* (Greek and Roman art, archaeology)

Maria C. Pantelia, Ph.D. Ohio State University, *Professor of Classics and Director, Thesaurus Linguae Graecae®* (Greek epic, Hellenistic poetry, digital technologies in the humanities)

James I. Porter, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature and Graduate Advisor* (philosophy,

literary and cultural criticism and aesthetics, history of the classical disciplines, reception of Homer)

Patrick Sinclair, Ph.D. Northwestern University, *Professor Emeritus of Classics* (rhetoric, Latin prose, lexicography)

Dana F. Sutton, Ph.D. University of Wisconsin, *Professor Emeritus of Classics* (Greek and Latin drama, Greek poetry, Anglo-Latin literature)

Nicholas White, Ph.D. Harvard University, *Professor Emeritus of Philosophy and Classics* (Greek philosophy, ethics, epistemology)

Andrew Zissos, Ph.D. Princeton University, *Department Chair and Associate Professor of Classics* (Latin epic, medieval Latin, Roman culture)

Classics Courses

CLASSIC 5. Building English Vocabulary through Greek and Latin Roots. 4 Units.

Formation and use of English words from Greek and Latin derivatives. Particularly useful for first-year students who wish to augment their vocabulary systematically.

CLASSIC 10. Scientific and Specialized Terminology. 4 Units.

A study of English terms derived from Greek and Latin and important to contemporary medicine, science, and other professions, with emphasis on development of word-building skills. No prior knowledge of Greek or Latin required.

CLASSIC 36A. The Formation of Ancient Greek Society: Early Greece. 4 Units.

A survey of ancient Greek civilization from its origins in the Bronze Age to the mid-Archaic period. Examines political and social history, as well as literature, art, religion, and archaeological remains.

Same as HISTORY 36A.

(IV)

CLASSIC 36B. The Formation of Ancient Greek Society: Late Archaic and Classical Greece. 4 Units.

A survey of ancient Greek civilization from the Late Archaic period to the Classical period. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion.

Same as HISTORY 36B.

(IV)

CLASSIC 36C. The Formation of Ancient Greek Society: Fourth-Century and Hellenistic Greece. 4 Units.

A survey of ancient Greek civilization from the fourth century BCE through to the Hellenistic period. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion.

Same as HISTORY 36C.

(IV)

CLASSIC 37A. The Formation of Ancient Roman Society: Origins to Roman Republic. 4 Units.

A survey of the development of Roman civilization from its eighth century BCE beginnings to the civil wars of the first century BCE. Examines political and social history, as well as literature, art, architecture, and religion.

Same as HISTORY 37A.

(IV)

CLASSIC 37B. The Formation of Ancient Roman Society: Roman Empire. 4 Units.

A survey of Roman civilization from Augustus's consolidation of power following the civil wars of the first century BCE to the crisis of the third century CE. Includes social history, literature, art, architecture, and religion.

Same as HISTORY 37B.

(IV)

CLASSIC 37C. The Formation of Ancient Roman Society: The Fall of Rome. 4 Units.

A survey of Roman civilization from the crisis of the third century CE to the so-called "fall of Rome" in 476 CE. Examines political and social history, as well as literature, art, architecture, and religion.

Same as HISTORY 37C.

(IV)

CLASSIC 45A. Classical Mythology: The Gods. 4 Units.

An overview of the main myths of the gods of the ancient Greeks and Romans and their influence in contemporary and later literature and art. Includes readings from both ancient and modern sources. Course may be offered online.

(IV)

CLASSIC 45B. Classical Mythology: The Heroes. 4 Units.

An overview of the main myths of the heroes of the ancient Greeks and Romans and their influence in contemporary and later literature and art. Includes readings from both ancient and modern sources.

(IV)

CLASSIC 45C. Classical Mythology: Ancient and Modern Perspectives of Classical Mythology. 4 Units.

Detailed examination of key Greek and Roman myths, their interpretations, and the influence they have exerted on literature, art, and popular culture in subsequent periods.

(IV)

CLASSIC 99. Special Studies in Classics. 1-4 Units.

Lower-division level independent research with Classics faculty.

Repeatability: May be repeated for credit unlimited times.

CLASSIC 140. Classics and History: The Ancient World. 4 Units.

Selected topics in society and culture of the Graeco-Roman world. Readings in translation.

Repeatability: Unlimited as topics vary.

CLASSIC 150. Classical Mythology. 4 Units.

Selected myths and legends as used in Classical literature, and their modern interpretations.

CLASSIC 151. The Olympians. 4 Units.

Examination of the origins and development of the Greek Olympian divinities with emphasis upon those who became central figures in pre-Christian religious cults.

CLASSIC 160. Topics in Classical Literature in English Translation. 4 Units.

Studies in selected areas of Classical literature. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

CLASSIC 160W. Topics in Classical Literature in English Translation. 4 Units.

Studies in selected areas of Classical literature. Topics addressed vary each quarter.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

(Ib)

CLASSIC 170. Topics in Classical Civilization. 4 Units.

Studies in selected areas of Classical civilization. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

CLASSIC 176. International Studies and the Classics. 4 Units.

Develops a broader understanding of the formation of different cultures and countries of Classical times and their impact on the modern world.

Repeatability: Unlimited as topics vary.

CLASSIC 192A. Senior Capstone. 2-4 Units.

Under the guidance of a faculty mentor, majors design and execute a senior project. This project may be a research paper, dramatic production, school curriculum, etc. All projects must be approved by the faculty mentor.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Grading Option: In progress only.

CLASSIC 192B. Senior Capstone. 2-4 Units.

Under the guidance of a faculty mentor, majors design and execute a senior project. This project may be a research paper, dramatic production, school curriculum, etc. All projects must be approved by the faculty mentor.

Prerequisite: CLASSIC 192A. Satisfactory completion of the Lower-Division Writing requirement.

CLASSIC 198. Directed Group Study. 4 Units.

Special topics in Classical studies through directed reading and research.

Repeatability: May be repeated for credit unlimited times.

CLASSIC 199. Independent Study in Classics. 1-4 Units.

Independent research with Classics faculty.

Repeatability: May be repeated for credit unlimited times.

CLASSIC 200A. Contemporary Literary Theory and the Classics. 4 Units.

An introduction to contemporary literary theory focusing on important critical approaches; topics vary from year to year.

Repeatability: Unlimited as topics vary.

CLASSIC 200B. Diachronic Perspectives on Classical Antiquity. 4 Units.

Examines ways in which Classical texts and ideas have been received and appropriated for the diverse purposes of ancient and subsequent cultures.

Repeatability: Unlimited as topics vary.

CLASSIC 200C. Greece and Rome in Their Contemporary Cultural Contexts. 4 Units.

An introduction to the methods and perspectives of social scientific theory which can be used to study the material and social dimensions of the ancient cultures of Greece and Rome.

Repeatability: Unlimited as topics vary.

CLASSIC 201. Research and Pedagogical Tools for Classicists. 4 Units.

Covers various technical skills essential for successful research and pedagogy in Classics, including use of digital resources (e.g., bibliographical databases). Introduction to important disciplinary subfields, such as textual criticism and epigraphy. Selection of topics will be at instructor's discretion.

CLASSIC 205. CONCURRENT READING. 2 Units.

Special Instance.

Repeatability: May be repeated for credit unlimited times.

Restriction: Grad students only

CLASSIC 220. Classics Graduate Seminar. 4 Units.

Subject matter variable; mainly but not exclusively major literary topics.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

CLASSIC 280. Independent Study. 4-12 Units.

Supervised independent research. Subject varies.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate only.

CLASSIC 290. Research in Classics. 4-12 Units.

Research under Classics faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

CLASSIC 299. Dissertation Research. 4-12 Units.

Dissertation research with Classics faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

CLASSIC 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Greek Courses

GREEK 1A. Fundamentals of Greek. 5 Units.

Elements of Classical Greek grammar, syntax, and vocabulary.

Overlaps with GREEK S1AB.

Restriction: GREEK 1A and GREEK S1AB may not be taken for full credit.

GREEK 1B. Fundamentals of Greek. 5 Units.

Elements of Classical Greek grammar, syntax, and vocabulary.

Prerequisite: GREEK 1A. GREEK 1A with a grade of C or better.

Overlaps with GREEK S1AB, GREEK S1BC.

Restriction: GREEK 1B and GREEK S1AB and GREEK S1BC may not be taken for full credit.

GREEK 1C. Fundamentals of Greek. 5 Units.

Introduction to reading texts.

Prerequisite: GREEK 1B. GREEK 1B with a grade of C or better.

Overlaps with GREEK S1BC.

Restriction: GREEK 1C and GREEK S1BC may not be taken for full credit.

(VI)

GREEK S1AB. Fundamentals of Greek. 7.5 Units.

First half of first- year Greek in an intensified form.

Overlaps with GREEK 1A, GREEK 1B.

Restriction: GREEK S1AB and GREEK 1A and GREEK 1B may not be taken for full credit.

GREEK S1BC. Fundamentals of Greek. 7.5 Units.

Second half of first- year Greek in an intensified form.

Prerequisite: GREEK S1AB or GREEK 1B. GREEK S1AB with a grade of C or better. GREEK 1B with a grade of C or better.

Overlaps with GREEK 1C, GREEK 1B.

Restriction: GREEK S1BC and GREEK 1B and GREEK 1C may not be taken for full credit.

(VI)

GREEK 99. Special Studies in Greek. 1-4 Units.

Lower-division level independent research with Greek faculty.

Repeatability: May be repeated for credit unlimited times.

GREEK 100A. Readings in Greek Prose. 4 Units.

Selected readings of Greek prose authors with particular emphasis paid to the fundamentals of Greek prose style, together with grammar review. Possible authors include Xenophon, Herodotus, and Plato.

Prerequisite: GREEK 1C or GREEK S1BC. GREEK 1C with a grade of C or better. GREEK S1BC with a grade of C or better.

GREEK 100B. Readings in Greek Poetry. 4 Units.

Selected readings from Greek poetry with particular emphasis paid to the peculiarities and difficulties of reading Greek poetry, together with an introduction to metrics. Possible authors include Homer and Euripides.

Prerequisite: GREEK 1C or GREEK S1BC. GREEK 1C with a grade of C or better. GREEK S1BC with a grade of C or better.

GREEK 103. Seminar in Greek Prose. 4 Units.

Specialized and focused study of a particular Greek prose author or topic.

Prerequisite: GREEK 100A.

Repeatability: Unlimited as topics vary.

GREEK 104. Seminar in Greek Poetry. 4 Units.

Specialized and focused study of a particular topic or author of Greek poetry.

Prerequisite: GREEK 100B.

Repeatability: Unlimited as topics vary.

GREEK 120. Reading of Selected Portions of the New Testament. 4 Units.

Studies in selected areas of the New Testament. Topics addressed vary each quarter.

Prerequisite: Greek 1C or Greek S1BC.

Repeatability: Unlimited as topics vary.

GREEK 198. Directed Group Study. 4 Units.

Special topics in Greek culture and civilization through directed reading and research.

Repeatability: May be repeated for credit unlimited times.

GREEK 199. Independent Studies in Greek. 1-4 Units.

Independent research with Greek faculty.

Repeatability: May be repeated for credit unlimited times.

Latin Courses

LATIN 1A. Fundamentals of Latin. 5 Units.

Elements of Latin grammar, syntax, and vocabulary.

Overlaps with LATIN S1AB.

Restriction: LATIN 1A and LATIN S1AB may not be taken for full credit.

LATIN 1B. Fundamentals of Latin. 5 Units.

Elements of Latin grammar, syntax, and vocabulary.

Prerequisite: LATIN 1A. LATIN 1A with a grade of C or better.

Overlaps with LATIN S1AB, LATIN S1BC.

Restriction: LATIN 1B and LATIN S1AB and LATIN S1BC may not be taken for full credit.

LATIN 1C. Fundamentals of Latin. 5 Units.

Introduction to reading texts, including study of the poetry of Catullus and selected readings.

Prerequisite: LATIN 1B. LATIN 1B with a grade of C or better.

Overlaps with LATIN S1BC.

Restriction: LATIN 1C and LATIN S1BC may not be taken for full credit.

(VI)**LATIN S1AB. Fundamentals of Latin. 7.5 Units.**

First half of first-year Latin in an intensified form.

Overlaps with LATIN 1A, LATIN 1B.

Restriction: LATIN S1AB and LATIN 1A and LATIN 1B may not be taken for full credit.

LATIN S1BC. Fundamentals of Latin . 7.5 Units.

Second half of first-year Latin in an intensified form.

Prerequisite: LATIN S1AB or LATIN 1B. LATIN S1AB with a grade of C or better. LATIN 1B with a grade of C or better.

Overlaps with LATIN 1B, LATIN 1C.

Restriction: LATIN S1BC and LATIN 1B and LATIN 1C may not be taken for full credit.

(VI)**LATIN 99. Special Studies in Latin. 1-4 Units.**

Lower-division level independent research with Latin faculty.

Repeatability: May be repeated for credit unlimited times.

LATIN 100A. Readings in Latin Prose. 4 Units.

Selected readings of Latin prose authors with particular emphasis paid to the fundamentals of Latin prose style, together with grammar review. Possible authors include Cicero, Caesar, and others.

Prerequisite: LATIN 1C or LATIN S1BC. LATIN 1C with a grade of C or better. LATIN S1BC with a grade of C or better.

LATIN 100B. Readings in Latin Poetry. 4 Units.

Selected readings from Latin poetry with particular emphasis paid to the peculiarities and difficulties of reading Latin poetry, together with an introduction to metrics. Possible authors include Vergil and Ovid.

Prerequisite: LATIN 1C or LATIN S1BC. LATIN 1C with a grade of C or better. LATIN S1BC with a grade of C or better.

LATIN 103. Seminar in Latin Prose. 4 Units.

Specialized and focused study of a particular Latin prose author or topic.

Prerequisite: LATIN 100A.

Repeatability: Unlimited as topics vary.

LATIN 104. Seminar in Latin Poetry. 4 Units.

Specialized and focused study of a particular topic or author in Latin poetry.

Prerequisite: LATIN 100B.

Repeatability: Unlimited as topics vary.

LATIN 198. Directed Group Study. 1-4 Units.

Special topics in Roman culture and civilization through directed reading and research.

Repeatability: May be repeated for credit unlimited times.

LATIN 199. Independent Studies in Latin. 1-4 Units.

Independent research with Latin faculty.

Repeatability: May be repeated for credit unlimited times.

Department of Comparative Literature

243 Humanities Instructional Building; (949) 824-6406

E-mail: complit@uci.edu

<http://www.humanities.uci.edu/complit/>

Susan C. Jarratt, **Department Chair**

Undergraduate Program

Comparative Literature is the study of the world through its literatures and cultures. Critical theory and translation provide frameworks for making moves: across languages, media, geographic borders, and political visions. In the Department of Comparative Literature, graduate and undergraduate students immerse themselves in national and regional literatures—of Asia, Africa, Latin America, North America, and Europe—while simultaneously placing those cultural practices within dynamic global exchanges, both historical and contemporary. Through courses, conferences, collaborative projects, and digital media, Comparative Literature at UCI advances critical cosmopolitanism—a kind of worldliness cultivated by creative engagements with power, peoples, and their symbolic practices. From novel to poetry, drama to film, monuments to political protest, comics to audio, urban space to visual culture—Comparative Literature introduces students to global cultures in the widest sense, and to the theoretical lenses essential for putting them in perspective. Writing, speaking, visualizing, blogging, social networking: through multiple media Comparative Literature students at every level interpret and engage with other academics and publics outside the academy. Together, students of Comparative Literature strive for a continually evolving practice of critical awareness and political action: a global literacy and citizenship through which to face the challenges of life and work in the twenty-first century.

The Department of Comparative Literature offers a major with three emphases: Comparative Literature and Critical Theory, Cultural Studies, and World Literature. It also offers a minor. The Department seeks to foster and maintain a lively community that includes undergraduates, graduates, and faculty, and to that end holds a variety of meetings and

activities so that majors can get to know one another and other members of the Department.

Careers for the Comparative Literature Major

Courses in Comparative Literature train students to read critically, to think and write analytically in a variety of genres and media, to learn languages, and to do independent research, always in a global context. This course of study helps qualify majors for careers in education, international relations, law, government, technology, communications and media, nonprofit organizations, and publishing. In recent years graduates from the Department of Comparative Literature have won Fulbrights, gone on to law school, nursing school, and master's programs in social work or psychology, and found jobs in public relations firms, done editorial work, and conducted clinical research in pharmaceutical firms. The Comparative Literature major is also excellent preparation for an academic career. Graduates have gone on to Ph.D. programs at Michigan, Cambridge, Harvard, Princeton, UCLA, UC Berkeley, and other schools. Many also teach English, world literature, and modern foreign languages at the high-school level.

Requirements for the B.A. Degree in Comparative Literature

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Department Requirements for the Major

Students must fulfill the following requirements for the major:

A. Complete:

COM LIT 60A	World Literature
COM LIT 60B	Reading with Theory
COM LIT 60C	Cultural Studies

B. Complete:

COM LIT 190W	Advanced Seminar in Comparative Literature and Theory (capstone seminar)
--------------	--

C. Select two additional upper-division Comparative Literature courses or other upper-division courses offered in the School of Humanities.

D. Completion of one of the three emphases:

1. Emphasis in Comparative Literature and Critical Theory

(a) Select five upper-division courses in Comparative Literature.

(b) Competence in a foreign language sufficient for reading and understanding literature and culture in that language may be demonstrated through course work in one of the following ways:

(1) Select two upper-division courses in a foreign literature or culture in which texts are read in the original, or

(2) Select one upper-division course in a foreign literature or culture in which texts are read in the original, plus one upper-division course in a literature or culture in translation, or

(3) Students of Chinese, Japanese, Korean, and Vietnamese take three years of language training plus one approved upper-division course in a foreign literature or culture in which texts are read in the original language or in translation, or

(4) Students who study Greek and Latin fulfill the entire requirement by successfully completing two years of college-level language training.

An Independent Study course may substitute for any part (i.e., either a language or literature course) of the foreign language requirement upon petition to the undergraduate studies director in Comparative Literature.

2. Emphasis in Cultural Studies

(a) Select five upper-division courses in Comparative Literature (three of which must be from the following list):

COM LIT 105	Comparative Multiculturalism
COM LIT 130	Gender, Sexuality, Race, Class
COM LIT 132	Discourse, Ideologies, and Politics
COM LIT 141	Popular Culture
COM LIT 142	The Metropolis and Other Cultural Geographies
COM LIT 143	Literature, Arts, and Media
COM LIT 144	Literature, History, and Society

(b) and complete:

COM LIT 140	Critical Cultural Studies
-------------	---------------------------

3. Emphasis in World Literature

Select six upper-division courses in Comparative Literature (three of which must be from the following list):

COM LIT 100A	Nations, Regions, and Beyond
COM LIT 105	Comparative Multiculturalism
COM LIT 107	Colonialisms and Postcolonialisms
COM LIT 108	Diasporic Literatures and Cultures
COM LIT 123	Literatures in Dialogue
COM LIT 150	Literature in Translation ¹

¹ COM LIT 150 may be replaced with other approved foreign literature-in-translation courses offered in the Humanities.

Residence Requirement for the Comparative Literature Major: COM LIT 190W and four additional upper-division courses in Comparative Literature or other upper-division courses offered in the School of Humanities must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved by the appropriate program advisor or chair.

Departmental Requirements for the Comparative Literature Minor

A. Complete:

COM LIT 60A	World Literature
COM LIT 60B	Reading with Theory
COM LIT 60C	Cultural Studies

B. Select three upper-division courses in Comparative Literature.

C. Select one additional upper-division course in Comparative Literature or another upper-division course offered in the School of Humanities.

Residence Requirement for the Comparative Literature Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved by the appropriate program advisor or chair.

Planning a Program of Study

The Department offers close consultation for academic planning. All students should plan courses of study with faculty advisors. Students who wish to pursue double majors, special programs, or study abroad are urged to seek advising as early as possible.

Graduate Program

Comparative Literature faculty at UCI Irvine are particularly well equipped to guide students in Critical Theory, Cultural Studies, Rhetorical Studies, Postcolonial Theory, Critical Race Theory, Theory of the Novel, Gender and Queer Theory, and Political Theory; the faculty also have expertise in African literature, Persian literature, Irish literature, Caribbean literature, Indigenous literatures, East Asian film, Latin American literature and film, Digital Culture, and Sound Studies, and offer seminars that deal with some of the major figures and issues in contemporary theoretical debates, including Deleuze, Foucault, Gramsci, Derrida, as well as object relations theory/psychoanalysis, theories of sovereignty, state formation, and subaltern studies, and the study of the everyday. The M.A. degree is considered to be a step toward the Ph.D.; only students intending to complete the doctorate are admitted to the program. Applicants must hold a B.A. or equivalent degree and should normally have majored in Comparative Literature, English, or a foreign literature. Majors in other disciplines (e.g., philosophy, history, visual studies, women's studies, ethnic studies) will be considered, provided that a sufficient background in literary and cultural studies and in at least one foreign language is demonstrated.

The Department offers a track in (1) Comparative Literature with an emphasis in a literary tradition, (2) Comparative Literature with an emphasis in Translation Studies, and (3) Comparative Literature with an emphasis in Critical Theory. (See the departmental graduate student handbook for a description of these emphases.) Graduate students in Comparative Literature may also complete an emphasis in Chinese Language and Literature, Classics, East Asian Cultural Studies, French, German, Japanese Language and Literature, or Spanish. Emphases in Asian American Studies, Critical Theory, Feminist Studies, and Visual Studies are available through the School of Humanities. Within these emphases, students enroll in sequences of courses that highlight individual interests and expertise. In consultation with advisors, students may also develop individualized curricula that cut across these and other offerings in the Department and School.

A minor field specialization is recommended. This optional component promotes engagement with a field or methodology outside the student's specialization. It may be of a national, historical, disciplinary, or methodological nature, with the student of western postmodern literary theory and forms engaging in a focused study of ancient Greek or Roman philosophy and culture, for example, or the student of East Asian languages and diasporic literatures may work in anthropology or ethnography. This optional component of the student's program may be fulfilled through course work, independent studies, or a Qualifying Examination topic.

Graduate students in Comparative Literature must demonstrate a command of two foreign languages consistent with their particular focus of study within the program. Competence in two foreign languages is required for the Ph.D. and is verified through examination, a longer translation project, and/or course work.

The Department recognizes that most of its graduate students intend to become teachers, and believes that graduate departments should be training college teachers as well as scholars—indeed, that teaching and scholarship complement one another. Thus candidates for the Ph.D. are expected to acquire experience in teaching, and all Ph.D. candidates gain supervised training as part of the seminar work required for the degree.

Several substantial fellowships are available to graduate students.

The Schaeffer Fellowship provides \$20,000 plus fees for up to two years to Ph.D. students in Comparative Literature for whom translation will be a crucial element of their dissertation work. Scholars translating literary or historical texts or archival materials not previously reliably available in English as part of their dissertation research are eligible. Multiple fellowships per year may be awarded. Students interested in the Schaeffer Fellowship should contact the Department prior to applying to the Ph.D. program.

The Murray Krieger Fellowship in Literary Theory is intended for an outstanding entering graduate student pursuing the Ph.D. in Comparative Literature or English who demonstrates a primary interest in theory as theory relates to literary texts.

A range of other fellowships is also available to students in the Department.

Master of Arts in Comparative Literature

Entering students are assigned a faculty advisor who usually serves as the chair of the student's M.A. examination committee (which consists of at least two other members of the faculty). Nine courses and an examination are required to complete the degree. The normal academic load for both M.A. and Ph.D. candidates is three courses a quarter; teaching assistants take two courses in addition to earning credit for University teaching. Only in exceptional circumstances will students be permitted to undertake programs of less than six full courses during the academic year.

The M.A. examination is normally taken during the quarter in which the student completes course work. For the examination, the candidate submits an M.A. paper and a statement of purpose outlining past and future course work and preliminary plans for the Ph.D. qualifying examination. The M.A. examination consists of a discussion of the student's paper and the statement of purpose. In practice, it resembles an extended advising session, but with particularly close attention to the student's paper.

Doctor of Philosophy in Comparative Literature

The doctoral program in Comparative Literature prepares the student for a professional career in the research and teaching of comparative literary and cultural studies. Some students also choose to enter professions (e.g., specialized research, nonprofit organizations, international cultural exchange) in which the specialized work in a specific field indicated by an advanced degree is highly desirable.

Normally, students who have not done graduate work at another university must complete at least 18 courses. Upon completion of the course work, the student takes a qualifying examination on four areas formulated by the student in consultation with the four faculty members who make up the examination committee. The four areas are to cover a major field, a secondary field, a special topic, and theory. All four areas are to be related to each other and to work toward the dissertation. The examination is part written, part oral, according to a formula decided by the student and the committee. The examination as a whole should reflect the student's ability to work in at least two languages.

After passing the qualifying examination, the student forms a dissertation committee of three faculty members, formulates a dissertation topic in consultation with them, and submits a prospectus for the dissertation along with a preliminary bibliography. Study toward the Ph.D. culminates in the dissertation. The normative time for advancement to candidacy is four

years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is nine years.

Core Faculty

Ackbar Abbas, M. Phil. University of Hong Kong, *Professor of Comparative Literature and of Film and Media Studies* (Hong Kong culture and postcolonialism, visual culture, architecture and cinema, cultural theory, globalization)

Eyal Amiran, Ph.D. University of Virginia, *Associate Professor of Comparative Literature and of Film and Media Studies* (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

Etienne Balibar, Ph.D., Katholieke Universiteit Nijmegen, *Professor Emeritus of French and Comparative Literature* (political philosophy, critical theory, epistemology of the social sciences, ethics)

Alexander Gelley, Ph.D. Yale University, *Professor Emeritus of Comparative Literature* (eighteenth- and nineteenth-century European novel, critical theory)

David Theo Goldberg, Ph.D. City University of New York Graduate School and Center, *Director of the UC Humanities Research Institute and Professor of Anthropology, Comparative Literature, and Criminology, Law and Society* (race, racism, race and the law, political theory, South Africa, digital humanities)

Susan C. Jarratt, Ph.D. University of Texas at Austin, *Department Chair and Professor of Comparative Literature, and Professor of Education* (histories and theories of rhetoric, ancient Greek rhetoric, and writing studies)

Adriana M. Johnson, Ph.D. Duke University, *Associate Professor of Comparative Literature* (Latin American literature, nineteenth- and twentieth-century Latin America, cultural and postcolonial studies)

Steven Mailloux, Ph.D. University of Southern California, *Professor Emeritus of English* (rhetoric, critical theory, American literature, law and literature)

J. Hillis Miller, Ph.D. Harvard University, *UCI Distinguished Research Professor Emeritus of Comparative Literature and English* (Victorian literature, critical theory)

Jane O. Newman, Ph.D. Princeton University, *Professor of Comparative Literature and English* (comparative Renaissance and early modern literature and culture [English, French, German, Italian, neo-Latin], Mediterranean Renaissance studies, Baroque, afterlives of antiquity, Walter Benjamin, Erich Auerbach, and pre-modern lessons for the modern and post-modern)

Ngugi wa Thiong'o, *UCI Distinguished Professor of Comparative Literature and English* (African and Caribbean literatures, theater and film, performance studies, cultural and political theory)

Margot Norris, Ph.D. State University of New York, Buffalo, *UCI Chancellor's Professor Emerita of English and Comparative Literature* (modern Irish, British, American and continental modernism; literature and war)

Nasrin Rahimieh, Ph.D. University of Alberta, *Director of the Dr. Samuel M. Jordan Center for Persian Studies and Culture, Professor of Comparative Literature, and Maseeh Chair in Persian Studies and Culture*

(Persian literature and culture, diaspora studies, film and media, religious studies)

John Carlos Rowe, Ph.D. State University of New York, Buffalo, *Professor Emeritus of Comparative Literature* (American literature, modern literature, critical theory)

Annette Schlichter, Ph.D. Humboldt University of Berlin, *Associate Professor of Comparative Literature* (feminist theory and criticism, queer theory, critiques of heterosexuality, contemporary American literature, gender and literature, voice studies)

Beryl Schlossman, Doctorate, University of Paris 7; Ph.D. The Johns Hopkins University, *Professor of Comparative Literature*

Gabriele Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature and English* (modern literature, critical theory, psychoanalysis)

Rei Terada, Ph.D. Boston University, *Professor of Comparative Literature* (theory, poststructuralism, nineteenth- and twentieth-century poetry)

Georges Van Den Abbeele, Ph.D. Cornell University, *Dean of the School of Humanities and Professor of Comparative Literature and English*

Participating Faculty

Luis F. Avilés, Ph.D. Brown University, *Associate Professor of Spanish* (Golden Age literature and critical theory)

Ellen S. Burt, Ph.D. Yale University, *Professor of English and Comparative Literature* (nineteenth-century French literature; critical theory)

James Fujii, Ph.D. University of Chicago, *Associate Professor of Japanese and Comparative Literature* (literature and theory of East Asia)

Hu Ying, Ph.D. Princeton University, *Associate Professor of Chinese* (narrative literature, translation theory, feminist theory)

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English* (feminist epistemologies and theories, cultural studies, ethnic studies)

Ketu H. Katrak, Ph.D. Bryn Mawr College, *Professor of Drama, Comparative Literature, and English* (Asian American literature, postcolonial literature)

Arlene R. Keizer, Ph.D. University of California, Berkeley, *Associate Professor of English* (African American and Caribbean literature and culture, critical race and ethnic studies, feminist theory)

Rodrigo Lazo, Ph.D., University of Maryland, *Associate Professor of English* (hemispheric American studies; nineteenth century; Latino studies and the Americas; Cuba; immigrant literature)

Catherine Liu, Ph.D. City University of New York Graduate School and Center, *Director of the Humanities Collective and Professor of Film and Media Studies and of Comparative Literature* (critical theory, visual and literary culture, psychoanalysis, narrative theory and melodrama in film and literature, New Waves, cultural revolutions)

Julia Reinhard Lupton, Ph.D. Yale University, *Professor of English, Comparative Literature, and Education* (Renaissance literature, literature and psychology)

Carrie J. Noland, Ph.D. Harvard University, *Professor of French* (twentieth-century poetry and poetics, avant-garde movements in art and literature, critical theory, performance studies)

Laura O'Connor, Ph.D. Columbia University, *Associate Professor of English and Comparative Literature* (Irish literature, twentieth-century poetry, Anglo-American modernism)

Kavita Philip, Ph.D. Cornell University, *Associate Professor of History* (science and technology studies, South Asian studies, political ecology, critical studies of race, gender, colonialism, new media, and globalization)

James I. Porter, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature* (Greek, Latin, comparative literature)

Rajagopalan Radhakrishnan, Ph.D. State University of New York, Binghamton, *UCI Chancellor's Professor of English and Comparative Literature* (critical theory, poststructuralism, postcoloniality, globalization, nationalisms, diasporas)

Martin Schwab, Ph.D. University of Bielefeld, *Professor Emeritus of Philosophy* (philosophy and aesthetics)

John H. Smith, Ph.D. Princeton University, *Professor of German and Comparative Literature* (nineteenth-century German philosophy and literature)

James Steintrager, Ph.D. Columbia University, *Professor of English and Comparative Literature* (comparative literature, eighteenth-century French, German, and English literature and aesthetics)

Jennifer Terry, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies and Comparative Literature* (cultural studies, social theory; science and technology studies, historical formations of gender and sexuality; critical approaches to modernity; American studies in transnational perspective)

Courses

COM LIT 8. Travels in Comparative Literature. 4 Units.

Readings in English and in English translation on such topics as love, war, cities, travel writing, politics, fantasy and science fiction, violence.

Repeatability: Unlimited as topics vary.

(IV)

COM LIT 9. Introduction to Multiculturalism. 4 Units.

Various themes and forms of literary and cultural production within a multicultural framework, including African American, Asian American, Chicano/Latino, and Native American literatures and cultures.

Repeatability: Unlimited as topics vary.

(IV, VII)

COM LIT 10. Topics in World Literature. 4 Units.

Introduction to texts from across the globe and from different historical periods. Readings in English and English translation.

Repeatability: Unlimited as topics vary.

(IV, VIII)

COM LIT 40A. Development of Drama. 4 Units.

The development of Western Drama, concentrating on the drama's intellectual, social, and artistic foundations. About 10 plays and supplementary critical material are read each quarter. Greek Drama through Shakespeare.

Same as DRAMA 40A.

Restriction: Drama and Music Theatre majors have first consideration for enrollment.

(IV, VIII)

COM LIT 40B. Development of Drama. 4 Units.

The development of Western Drama, concentrating on the drama's intellectual, social, and artistic foundations. About 10 plays and supplementary critical material are read each quarter. Restoration Drama through Ibsen.

Same as DRAMA 40B.

Restriction: Drama and Music Theatre majors have first consideration for enrollment.

(IV, VIII)

COM LIT 40C. Development of Drama. 4 Units.

The development of Western Drama, concentrating on the drama's intellectual, social, and artistic foundations. About 10 plays and supplementary material are read each quarter. Contemporary Drama. Post Naturalistic theatre.

Same as DRAMA 40C.

Restriction: Drama and Music Theatre majors have first consideration for enrollment.

(IV, VIII)

COM LIT 60A. World Literature. 4 Units.

An introduction to the comparative study of literatures and cultures in a global context. Studies literary texts and other media across the borders of various cultures, historical periods, and traditions. All texts are read in English translation.

(IV, VIII)

COM LIT 60B. Reading with Theory. 4 Units.

Introduction to theory and methods of literary and cultural criticism in a global context. Students read theoretical approaches to literature, culture, and ideas. Marx and Freud, e.g., may be studied alongside readings in narrative poetry, film, song lyrics, novel.

(IV, VIII)

COM LIT 60C. Cultural Studies. 4 Units.

Introduces students to a variety of cultural practices (literature, blogs, films, radio, comics) from across the globe. Focuses on the ways that context, genre, and medium (e.g., written, visual, oral) affect how these practices are produced, circulated, and received.

(IV, VIII)

COM LIT 100A. Nations, Regions, and Beyond. 4 Units.

Intensive study of national and regional cultural and literary traditions from across the globe, among them the literary and cultural production of the Middle East, Africa, Europe, the Americas, and Asia.

Repeatability: Unlimited as topics vary.

COM LIT 102. Comparative Studies in Literature and Theory. 4 Units.

In-depth discussion of special topics.

Repeatability: Unlimited as topics vary.

COM LIT 102W. Comparative Studies in Literature and Theory. 4 Units.

In-depth discussion of special topics.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

(Ib)

COM LIT 105. Comparative Multiculturalism. 4 Units.

Treats the literatures and cultures of one or more minority groups in California and the United States, including African Americans, Asian Americans, Chicano/Latinos, and Native Americans, and their relations to other national literatures.

Repeatability: Unlimited as topics vary.

COM LIT 107. Colonialisms and Postcolonialisms. 4 Units.

Explores topics such as colonialism and race, decolonization, pre- and postcoloniality, globalization, and the cultural dynamics of colonization and subjectivity.

Repeatability: Unlimited as topics vary.

COM LIT 108. Diasporic Literatures and Cultures. 4 Units.

Literatures, cultures, and histories of diasporic groups, e.g., literature of the Persian diaspora; cinema of the African diaspora.

Repeatability: Unlimited as topics vary.

COM LIT 120. Philosophy, Culture, and Literature. 4 Units.

Discusses contemporary and historical philosophical questions and figures--for example, existentialism or debates about artificial intelligence--in interaction with culture and literature.

Repeatability: Unlimited as topics vary.

COM LIT 121. Narrative, Pattern, and Text. 4 Units.

Explores textual patterns, structures, and effects. May include topics such as novel, hypertext, genre, reader responses, intertextuality.

Repeatability: Unlimited as topics vary.

COM LIT 122. Rhetorical Approaches to Literature. 4 Units.

Studies the art and politics of rhetoric and persuasion in connection with cultural works from various times and places, for example, classical political speeches, Internet journalism.

Repeatability: Unlimited as topics vary.

COM LIT 123. Literatures in Dialogue. 4 Units.

Studies how texts interact across time and space in a global context. Uses concepts of influence, imitation, and parody, to ask, for example, how the Homeric epics can help us understand Caribbean novels and U.S. movies such as *Troy*.

Repeatability: Unlimited as topics vary.

COM LIT 130. Gender, Sexuality, Race, Class. 4 Units.

Discusses the roles of differences such as race, class, gender, and sexuality in society, culture, and literature across the globe, covering topics such as theoretical and literary representations of queer sexuality, gender performance, critical race theory.

Repeatability: Unlimited as topics vary.

COM LIT 131. Psychoanalysis and Culture. 4 Units.

Discusses major psychoanalytic writings of Freud and others in connection with questions of culture.

Repeatability: Unlimited as topics vary.

COM LIT 132. Discourse, Ideologies, and Politics. 4 Units.

Compares ideologies and systems, e.g., nationalism and fundamentalism, as they affect literature and culture in a global context.

Repeatability: Unlimited as topics vary.

COM LIT 140. Critical Cultural Studies. 4 Units.

Introduces a variety of ways of understanding cultural phenomena in relation to different power structures. These cultural phenomena may include comics, film, literature, sports, music, festivals, telling stories, or eating out.

Repeatability: Unlimited as topics vary.

COM LIT 141. Popular Culture . 4 Units.

Critical analyses of popular culture such as comics, oral narratives, films, TV, music, in an international framework.

Repeatability: Unlimited as topics vary.

COM LIT 142. The Metropolis and Other Cultural Geographies. 4 Units.

Examines the relationship between space and culture; cultural production in the city, suburb, and/or countryside; spaces in texts and artifacts (film, literature, comics, photographs) in a global context.

Repeatability: Unlimited as topics vary.

COM LIT 143. Literature, Arts, and Media. 4 Units.

Explores literature and other arts and media in a global context. May include film and electronic media, fine arts, oral cultures, architecture, in an international framework.

Repeatability: Unlimited as topics vary.

COM LIT 144. Literature, History, and Society. 4 Units.

Explores the relationship between literary texts and their historical and social contexts in an international framework. Courses may address, for example, literary and cultural expressions in social revolutions or the way literary texts talk back to medicine, religion, and anthropology.

Repeatability: Unlimited as topics vary.

COM LIT 150. Literature in Translation. 4 Units.

The study of literary works in one or more genres in English translation. May be a comparative study of works from several different original languages or a concentration on works from a single cultural/linguistic tradition.

Repeatability: Unlimited as topics vary.

COM LIT 160. World Cinema . 4 Units.

Comparative analysis of contemporary film in languages other than English.

Repeatability: May be taken for credit 2 times as topics vary.

COM LIT 190W. Advanced Seminar in Comparative Literature and Theory. 4 Units.

Capstone seminar for the Comparative Literature major. Deepens understanding of the field through investigation of a special topic and a substantial research and writing project.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Comparative Literature majors have first consideration for enrollment.

(Ib)

COM LIT 198. Special Topics. 1-4 Units.

Directed group study of selected topics.

Repeatability: May be repeated for credit unlimited times.

COM LIT 199. Independent Study in Comparative Literature. 1-4 Units.

To be taken only when the materials to be studied lie outside the normal run of departmental offerings.

Repeatability: May be repeated for credit unlimited times.

COM LIT 200A. History of Comparative Literature and Introduction to Methods and Theories of CL. 4 Units.

Seminar designed to introduce graduate students in Comparative Literature to the discipline of Comparative Literature. Issues and theories of comparative literary and cultural study are covered. Strongly recommended for first and second year students before the M.A. exam and review.

Restriction: Graduate students only.

COM LIT 200B. Theories of Translation. 4 Units.

The reproduction, translation, and transfer of literary and cultural, ideological and political, and symbolic codes and texts have long been the object of study in Comparative Literature. Addresses the diverse ways in which expressive systems interact and intersect.

Repeatability: Unlimited as topics vary.

COM LIT 200C. Theories of Globalization, Inter-Nationalism, and Postcolonialism. 4 Units.

Addresses both theories and the complex history of literary and cultural expression in a national, trans-, inter-, and post-national, global frame. Topics may include: globalism and nationhood, theories of citizenship and political subjecthood, postcolonial literature and theory.

Repeatability: Unlimited as topics vary.

COM LIT 200D. Cultural Rhetoric and Rhetorical Theory. 4 Units.

Surveys contemporary theories of cultural rhetoric and the cultural rhetoric of contemporary theory, and interrogates the intersection of rhetoric, critical theory, and cultural studies. Both historical and contemporary theories of rhetoric and cultural rhetorics are studied.

Repeatability: Unlimited as topics vary.

COM LIT 210. Comparative Studies . 4 Units.

Studies in selected areas of Comparative Literature. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

COM LIT 220. Translation Workshop. 2-4 Units.

Trains students in the methodologies and practice of translation. Students focus on the translating process in a series of case studies and individual projects.

Repeatability: May be taken for credit for 8 units.

COM LIT 290. Reading and Conference. 4-12 Units.

Studies in selected areas. Topics addressed vary each quarter.

Repeatability: May be repeated for credit unlimited times.

COM LIT 291. Guided Reading Course. 4 Units.

Studies in selected areas. Topics addressed vary each quarter.

Repeatability: May be repeated for credit unlimited times.

COM LIT 299. Dissertation Research. 4-12 Units.

A units-only course for students in the dissertation phase.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

COM LIT 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Graduate Program in Culture and Theory

3331 Humanities Gateway; (949) 824-8716
<http://www.humanities.uci.edu/cultureandtheory/>
 James Kyung-Jin Lee, **Director**

The Ph.D. program in Culture and Theory provides a strong theoretical and critical approach to race, gender, and sexuality studies. It is the Ph.D. graduate program that is constituted of the interdisciplinary units in African American Studies, Asian American Studies, Chicano/Latino Studies, and Women's Studies, and works integrally with the Critical Theory Emphasis. Interdisciplinary in nature and buttressed by the established strengths in critical theory at UCI, the program uses a problem-oriented approach to issues of race, gender, and sexuality in diasporic, transnational, and postcolonial contexts, as they are engaged broadly in the humanities, social sciences, and arts.

The Ph.D. program in Culture and Theory is designed to take full advantage of the combined expertise of the nationally and internationally prominent faculty at UCI whose work exemplifies the best in contemporary, critical, interdisciplinary studies in the humanities, social sciences, and the arts.

Admission

The Ph.D. program in Culture and Theory accepts applications for the 2013–14 academic year. For more information about admissions, visit <http://www.humanities.uci.edu/cultureandtheory/program/index.php> or contact the Program Administrator at cultureandtheory@uci.edu, or James Kyung-Jin Lee, Program Director, at jk1@uci.edu. The deadline for submitting applications is December 15, 2013.

Applicants must have earned a bachelor's, master's, or equivalent degree in any discipline in the humanities, arts, or social sciences.

Applicants submit official transcripts, statement of purpose, personal history (U.S. citizens and permanent residents only), three letters of recommendation, aptitude scores from the Graduate Record Examination, and a sample of written work. In addition, an interview may be required. Incoming students are admitted for fall quarter only.

To be admitted formally into the doctoral program, students must satisfactorily pass an evaluation at the end of their first year of study; this includes students who entered with an M.A. from another institution.

NOTE: Ph.D. students will receive the M.A. degree after the satisfactory completion of specified requirements, as a step toward the Ph.D. Those students who complete the M.A., but whose committees assess their work as not meeting the standard for the Ph.D., will receive a terminal M.A. degree. Students who enter the program with an M.A. from another institution may receive full or partial credit for the M.A., depending on the assessment of the Executive Committee at the time the student is admitted or on the assessment of the student's faculty advisor and committee during the student's first year. Students who receive full credit for the M.A. will be exempt from writing the master's paper. The procedure for formally requesting course credit is detailed in the Program Handbook.

Requirements

1. CLT&THY 200A, CLT&THY 200B, CLT&THY 200C. Basic to the curriculum, this three-quarter core sequence provides a solid foundation in critical and cultural theories, their philosophical genealogies and institutional histories, and interdisciplinary methodologies. The core sequence also provides the space for an intellectual coherence and cohort building for Culture and Theory graduate students who will be taking most of their other courses in supporting departments and programs.
2. Seven additional theoretical courses drawn from sets of offerings in the core supporting interdisciplinary units, the Critical Theory Emphasis, and other course offerings by core and affiliated faculty,

which may include HUMAN 260A-HUMAN 260B-HUMAN 260C and HUMAN 270. One of these courses must be focused on research methods. Working closely with a faculty advisor and committee, students set up a coherent course of study related to one or more of the areas explored in the core courses. Typically the seven courses will revolve around a set of theoretical problems, e.g., feminist theory and practice, critical race studies, sexualities, postcolonialism, transnational circuits, globalization, theorizing the political, philosophical debates on ethics, the intersections of visibility and textuality, to name a few.

The theoretical problem courses are centered on the philosophical and theoretical approaches that form the basis of much work in critical, cultural, and social theory regarding race, gender, and sexuality studies.

3. Six courses on a focused area of study. This might include concentrations within and across a department, within the Critical Theory emphasis, or in one of the core supporting interdisciplinary units. In the latter case, students will take the dedicated core courses of a Graduate Emphasis. Students could also choose to work on a coherent area of focused study devised with their advisor. The courses in a focused area of study address a particular field in which various forms of critical theory have been applied, as well as a focus on groups, nations, and regions: examples include globalization, racism and the welfare state, diasporas of particular kinds, human rights, anti-colonial resistance movements in particular regions, Muslim women and questions of the veil, the Harlem Renaissance, Asian American feminism, modernity and race.
4. CLT&THY 280. In this independent study course taken during their second year, students expand and develop a seminar paper into the master's paper, with the guidance of their faculty advisor.
5. Students must TA in a Humanities or Social Sciences department or program for a minimum of three quarters. They are also required to take the teaching seminar and workshops associated with the course in which they teach.
6. CLT&THY 290. Students take this two-unit research and prospectus seminar in their third and fourth years to enable systematic progress toward their dissertation.
7. Additionally, students are expected to participate regularly in the Culture and Theory Colloquium, a series of events comprised of lectures, conferences, and performances sponsored by the program and allied units, particularly in the social sciences and the arts. Each year, the Colloquium will also include academic workshops (e.g., faculty and student works-in-progress, as well as on grant writing and on framing the dissertation project) and professionalization workshops (e.g., preparation for conferences and, later, for the job market). In addition to exposure to diverse ideas and development of practical techniques, participation in the Colloquium is intended to strengthen relations among students, and between students and faculty who are otherwise stretched across several units and schools.

Master's Paper and M.A. Degree: During their second year, students work with their faculty advisor to expand and develop a seminar paper into a master's paper. A master's paper expands a seminar paper to a version that is of near-publishable quality. Upon completion of the paper, the faculty advisor and two other core faculty members will participate in an assessment of student's work to date.

Ph.D. students will receive the M.A. degree after the satisfactory completion of the three core courses, seven theoretical problem courses, six courses on a focused area of study, and the master's paper. Those

students who complete the M.A. requirements, but whose committees assess their work as not meeting the standards for the Ph.D., will receive a terminal M.A. degree.

Qualifying Examination: Students work with a committee comprised of four faculty members, including one outside member, to draw up reading lists and head notes on four topics, as well as a dissertation prospectus. Three of these topics should relate to the major areas of study outlined in the 200A, B, C core course sequence, and one should relate to the student's area of disciplinary or focused study. The examination itself will be comprised of a written and oral exam. A student shall advance to candidacy upon successful passing of the Qualifying Exam and fulfillment of the language requirement, normally by the end of the third year. For a more detailed explanation of the Qualifying Exam, the timeline for its preparation, and composition of its committee, consult the Program Handbook.

Language Requirement: By the time they qualify for candidacy, students must demonstrate through course work or examination the ability to do research in one ancient or modern language (other than English).

Dissertation: The dissertation topic should be drawn from a focused area of study, chosen in consultation with the dissertation advisor and other committee members. Students will draw up their dissertation committee, which must consist of at least three members, at least two of whom must be drawn from the core faculty in the program whose interests match the topic chosen for the thesis. Dissertations must be approved by the student's dissertation committee and submitted to the executive committee.

Time to Degree: The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is eight years.

Core Faculty

Jonathan Alexander, Ph.D. Louisiana State University, *Campus Writing Director and Professor of English and Education* (writing studies, sexuality studies, queer theory, new media studies)

Christine Bacareza Balance, Ph.D. New York University, *Assistant Professor of Asian American Studies* (performance studies, critical race and ethnic studies, Filipino American studies, queer theory, and popular culture)

Tom Boellstorff, Ph.D. Stanford University, *Professor of Anthropology* (virtual worlds, sexuality, postcoloniality, HIV/AIDS, mass media and popular culture, language and culture, Indonesia, Southeast Asia)

Nahum D. Chandler, Ph.D. University of Chicago, *Associate Professor of African American Studies* (modern intellectual history, history of the human sciences)

Bridget R. Cooks, Ph.D. University of Rochester, *Director of the Graduate Program in Visual Studies and Associate Professor of African American Studies and Art History* (African American art and culture, Black visual culture, museum criticism, film, feminist theory and postcolonial theory)

Sohail Daulatzai, Ph.D. University of Southern California, *Associate Professor of Film and Media Studies* (Black racialism and internationalism, Muslim studies, critical race studies, U.S. imperial culture, and cultural history)

Dorothy Fujita-Rony, Ph.D. Yale University, *Associate Professor of Asian American Studies* (U.S. history, Asian American studies)

David Theo Goldberg, Ph.D. City University of New York Graduate School and Center, *Director of the UC Humanities Research Institute and Professor of Comparative Literature, Anthropology, and of Criminology, Law and Society* (race, racism, race and the law, political and critical theory, South Africa, digital humanities/learning and technology, higher education)

Sora Han, Ph.D. University of California, Santa Cruz, *Assistant Professor of Criminology, Law and Society* (law and popular culture, critical race theory, philosophies of punishment, feminism and psychoanalysis)

Douglas M. Haynes, Ph.D. University of California, Berkeley, *Associate Vice Provost for Equity and Diversity and Associate Professor of History* (social and cultural history of modern Britain, social history of modern medicine)

Winston A. James, Ph.D. London School of Economics and Political Science, *Professor of History* (Caribbean, African American, and African diaspora)

Victoria E. Johnson, Ph.D. University of Southern California, *Associate Professor of Film and Media Studies* (critical/cultural history of U.S. TV and film, critical race theory, sound and music in film/TV, branding and identity)

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English* (feminist epistemologies and theories, cultural studies, ethnic studies)

Arlene R. Keizer, Ph.D. University of California, Berkeley, *Associate Professor of English* (African American and Caribbean literature, critical race and ethnic studies, feminist and psychoanalytic theory, cultural studies)

James Kyung-Jin Lee, Ph.D. University of California, Los Angeles, *Director of the Graduate Program in Culture and Theory, Department Chair and Associate Professor of Asian American Studies, and Associate Professor of English* (Asian American literature and culture, contemporary U.S. literature, race and ethnic studies, urban studies, religious studies)

Mark A. LeVine, Ph.D. New York University, *Professor of History* (modern Middle Eastern history, Islamic studies, histories of empire and globalization)

Lilith Mahmud, Ph.D. Harvard University, *Assistant Professor of Women's Studies* (elites; race and nationalism; cultural capital; secrecy and conspiracy; feminist ethnography; and critical studies of Europe)

Steven Mailloux, Ph.D. University of Southern California, *Professor Emeritus of English* (rhetoric, critical theory, American literature, law and literature)

Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Dean of Graduate Study and Research and Associate Professor of Film and Media Studies* (minority, diasporic, and third cinemas; media, nationalism, and globalization; race, sexuality and popular culture)

Yong Soon Min, M.F.A. University of California, Berkeley, *Professor of Art* (intermedia, migration, cultural studies)

Michael J. Montoya, Ph.D. Stanford University, *UCI Chancellor's Fellow and Associate Professor of Anthropology, Chicano/Latino Studies, and Public Health* (social inequality and health; race and ethnicity; social and

cultural studies of science, technology, and medicine; the participation of ethnic populations in biomedical research; the U.S./Mexican border, critical bioethics)

Kevin Olson, Ph.D. Northwestern University, *Associate Professor of Political Science* (contemporary European political theory, cultural politics, politics of diversity, popular sovereignty, citizenship, nineteenth- and twentieth-century political theory)

Rachel O'Toole, Ph.D. University of North Carolina at Chapel Hill, *Associate Professor of History* (Colonial Latin America, African Diaspora, colonialisms, race, racism, indigenous histories, Atlantic worlds)

Rajagopalan Radhakrishnan, Ph.D. State University of New York, Binghamton, *UCI Chancellor's Professor of English and Comparative Literature* (critical theory, postcoloniality, nationalisms and diasporas, poststructuralism, postmodernism, democracy and minority discourse, cultural studies, globalization and transnationalism)

Vicki L. Ruiz, Ph.D. Stanford University, *Professor of History and Chicano/Latino Studies* (Chicana/Latina history, U.S. labor, immigration, and gender)

Connie Samaras, M.F.A. Eastern Michigan University, *Professor of Art* (photography, contemporary visual art, gender studies, culture and technology)

Jeanne Scheper, Ph.D. University of California, Santa Barbara, *Assistant Professor of Women's Studies* (feminist performance studies and visual culture, cultural studies, theories of race, gender and sexuality, trans-Atlantic modernism)

Gabriele Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature and English* (modern literature, critical theory, psychoanalysis, comparative literature)

Jared Sexton, Ph.D. University of California, Berkeley, *Program Director and Associate Professor of African American Studies and Associate Professor of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Katherine Tate, Ph.D. University of Michigan, *Professor of Political Science* (American politics, African American politics, and public opinion)

Jennifer Terry, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies and Comparative Literature* (cultural studies, social theory; science and technology studies, formations of gender and sexuality; critical approaches to modernity; American studies in transnational perspective, processes of militarization)

Keith L. Topper, Ph.D. University of California, Los Angeles, *Department Chair and Associate Professor of Political Science* (political theory, critical theory, poststructuralism, theories of power, language and politics, theory and politics of interpretation, politics of culture, philosophy of the social sciences)

Roxanne Varzi, Ph.D. Columbia University, *Associate Professor of Anthropology* (Islam, visual anthropology, anthropology of war, media, youth culture, religion and public space; Iran)

Linda Trinh Võ, Ph.D. University of California, San Diego, *Associate Professor of Asian American Studies* (race and ethnic relations, immigrants and refugees, gender relations, and community and urban studies)

Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Professor of African American Studies and Drama* (film theory, Marxism, dramaturgy, black political theory)

Tiffany Willoughby-Herard, Ph.D. University of California, Santa Barbara, *Assistant Professor of African American Studies* (South Africa, poor whites, race in foreign policy, diaspora, comparative racial politics, third world feminisms, feminist pedagogy, black political thought)

Mei Zhan, Ph.D. Stanford University, *Associate Professor of Anthropology* (medical anthropology, cultural and social studies of science, globalization, transnationalism, gender; China and United States)

Affiliated Faculty

Ackbar Abbas, *Professor of Comparative Literature and of Film and Media Studies*

Luis F. Avilés, *Associate Professor of Spanish*

Catherine Benamou, *Associate Professor of Film and Media Studies*

Victoria Bernal, *Associate Professor of Anthropology*

Sharon B. Block, *Associate Dean of Humanities Undergraduate Study and Associate Professor of History*

Vinayak Chaturvedi, *Associate Professor of History*

Susan Bibler Coutin, *Associate Dean of the Graduate Division and Professor of Criminology, Law and Society and of Anthropology*

Julia Elyachar, *Assistant Professor of Anthropology*

Raúl Fernández, *Director of the UC-Cuba Academic Initiative and Professor Emeritus of Chicano/Latino Studies and Social Sciences*

Gilbert Gonzalez, *Professor Emeritus of Chicano/Latino Studies*

James D. Herbert, *Professor of Art History*

Susan Jarratt, *Department Chair and Professor of Comparative Literature and Professor of Education*

Claire Jean Kim, *Associate Professor of Asian American Studies and Political Science*

Felicidad "Bliss" Cua Lim, *Associate Professor of Film and Media Studies*

William M. Maurer, *Dean of the School of Social Sciences and Professor of Anthropology and Law*

Jessica Millward, *Assistant Professor of History*

Gonzalo Navajas, *Professor of Spanish*

Jane O. Newman, *Professor of Comparative Literature and English*

Kristin Peterson, *Assistant Professor of Anthropology*

Nasrin Rahimieh, *Director of the Dr. Samuel M. Jordan Center for Persian Studies and Culture, Professor of Comparative Literature, and Maseeh Chair in Persian Studies and Culture*

Belinda Robnett-Olsen, *Associate Professor of Sociology*

Fatimah Tobing Rony, *Associate Professor of Film and Media Studies*

Annette Schlichter, *Associate Professor of Comparative Literature*

Ulrike Strasser, *Director of European Studies and Associate Professor of History*

Heidi Tinsman, *Associate Professor of History*

Rudolfo D. Torres, *Professor of Planning, Policy, and Design*

Courses

CLT&THY 200A. Identity and Difference. 4 Units.

Introduction to scholarship on social movements, institutions, and theories relating to the rise of identities based on race, gender, ethnicity, class, and sexuality.

CLT&THY 200B. Power and Resistance. 4 Units.

Focusing on questions of power and resistance, examines theorists, mostly from the middle twentieth century to the twenty-first century, whose work has led to the study of revolutions and resistance movements and their centrality in cultural theory.

CLT&THY 200C. Movement and Displacement. 4 Units.

Focusing on epistemologies of contemporary cultural theory, probes the genealogies of ideas of movement and settlement. Examines ways in which epistemologies of movement and displacement produce texts and contexts of knowledge formation.

CLT&THY 280. Independent Study. 4 Units.

Limited to students who have not yet received the M.A. degree.

Repeatability: May be repeated for credit unlimited times.

CLT&THY 289. Topics in Culture and Theory. 4 Units.

Seminars on various topics in Culture and Theory.

Repeatability: Unlimited as topics vary.

CLT&THY 290. Research and Prospectus Seminar. 2 Units.

Bi-weekly seminar required for third- and/or fourth-year students. Students make presentations of dissertation prospectus for discussion. All graduate students welcome to attend and participate. Meant especially for students preparing for formal presentation of prospectus.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

CLT&THY 298. Directed Reading. 4-12 Units.

Directed readings on a specific topic agreed upon by students and their instructors. Limited to students who have completed their M.A. degree and are preparing for their qualifying exam.

Prerequisite: Completion of the M.A. degree.

Repeatability: May be repeated for credit unlimited times.

CLT&THY 299. Dissertation Research. 4-12 Units.

Dissertation research in Culture and Theory.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Department of East Asian Languages and Literatures

443 Humanities Instructional Building; (949) 824-2227

<http://www.humanities.uci.edu/eastasian/>

Michael A. Fuller, **Department Chair**

Contemporary East Asian societies are vibrant and complex, and they are heirs to rich cultural traditions that continue to inform the present. The four majors offered by the Department of East Asian Languages and Literatures provide students the opportunity to explore these societies and cultures in all their diversity, and to pursue their study of East Asia across national and regional boundaries. The Department houses both undergraduate and graduate (Ph.D.) programs.

Undergraduate Program

The Department offers four undergraduate majors: the B.A. degree program in East Asian Cultures; the B.A. degree program in Chinese Studies (with two emphases: Chinese Language and Literature, and Chinese Culture and Society); the B.A. degree program in Japanese Language and Literature; and the B.A. degree program in Korean Literature and Culture. In addition, minors are offered in Chinese Language and Literature, Japanese Language and Literature, and Korean Literature and Culture.

Major in East Asian Cultures. The curriculum for the major in East Asian Cultures focuses on the regional dynamics of cultural and social transformations in East Asia. Students benefit from an multidisciplinary approach to the study of intra-regional relationships between East Asian countries in order to situate them in their broader global contexts. By integrating the study of East Asia with theoretical issues that shape the study of world culture in general, students gain the dual perspectives derived from examining East Asian cultures on their own terms and from recognizing the affinities these civilizations share, and the conflicts they encounter in their interactions with the rest of the world.

Major in Chinese Studies. The major in Chinese Studies offers two emphases: Chinese Language and Literature, and Chinese Culture and Society. The Language and Literature emphasis enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of China by studying its language, literature, film, religion, and other cultural accomplishments in depth. The Culture and Society emphasis stresses a multidisciplinary examination of modern Chinese culture and society that includes the perspectives of both the humanities and the social sciences. The major emphasizes the complementarity of these approaches in understanding the complexity of the forces that have shaped contemporary China.

Major in Japanese Language and Literature. The curriculum for Japanese Language and Literature enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of Japan by studying its language, literature, film, religion, and other cultural accomplishments in depth.

Major in Korean Literature and Culture. The curriculum for Korean Literature and Culture enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of Korea by studying its language, literature, film, religion, and other cultural accomplishments in depth.

Planning a Program of Study

The student should plan a coherent program that both fulfills the requirements of the major and covers the student's areas of interest in allied fields outside East Asian Languages and Literatures.

Students who plan to enroll in a language course in Chinese, Japanese, Korean, or Vietnamese will be placed on the basis of a written test and oral interview in the respective language, regardless of their language background or proficiency, unless they have taken previous course work in the same language at UCI. (The number of years of high school-level study is taken into account only as a reference.) The written test is typically administered through the Testing Office; the oral interview, by the appropriate faculty, who will evaluate students' oral/aural abilities in the target language and consider results from the written placement test and any prior exposure to the language to determine their proper placement level. In the case of some languages, students in the first-year levels will be placed in either heritage classes (for students who have had exposure to the language in question through family ties) or non-heritage classes (for students with no exposure).

The faculty encourages students who are serious about improving their East Asian language ability in reading, writing, and speaking to take advantage of opportunities to immerse themselves in the relevant language by studying abroad through the University's Education Abroad Program (UCEAP) or through the International Opportunities Program (IOP). Students can gain substantially from first-hand experience of the culture they have studied academically while still making progress toward their UCI degree. Programs are available for one quarter, one semester, or one year. More information is available from academic counselors or at <http://www.studyabroad.uci.edu>.

Careers for the Major

Studies in the East Asian programs will give students the preparation needed to pursue a career involving these important Pacific Rim nations. In an era in which the United States is seeking to come to grips with the challenges and opportunities presented by this vital area of the world, the training in language, literature, and culture offered by the departmental majors will serve students well in a variety of endeavors, such as international business, law, government service, journalism, teaching, and other careers involved with public affairs.

Focused undergraduate study in the language and literary and cultural traditions of an East Asian country is also a valuable preparation for those students intent upon pursuing graduate study in any field of East Asian language or culture.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Requirements for the B.A. Degree

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

All students are subject to the Language Other Than English Placement and Progression policies.

Departmental Requirements for the Majors in East Asian Cultures, Chinese Studies, Japanese Language and Literature, and Korean Literature and Culture (four separate majors)

East Asian Cultures

A. Complete one of the following:

CHINESE 2C	Intermediate Mandarin Chinese
CHINESE 2DC	Intermediate Mandarin Chinese - Dialect Background Track
CHINESE 2MC	Intermediate Mandarin Chinese - Mandarin Background Track

JAPANESE 2C	Intermediate Japanese
-------------	-----------------------

KOREAN 2C	Intermediate Korean
-----------	---------------------

KOREAN 2KC	Intermediate Korean for Students with a Previous Background in Korean
------------	---

B. Select two quarters of:

E ASIAN 155	Cultural Studies in East Asia (with different topics)
-------------	---

C. Complete:

E ASIAN 190	Junior-Senior Colloquium
-------------	--------------------------

D. Select nine additional upper-division courses in the areas of East Asian literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, at least three of which must pertain to a country other than the one of language specialization. Up to four of these courses (or more by petition) may be taken outside the Department, with the approval of the undergraduate advisor.

Chinese Studies

Emphasis in Chinese Language and Literature

A. Complete:

CHINESE 3C	Advanced Mandarin Chinese (or equivalent)
------------	---

B. Complete:

CHINESE 100A- 100B- 100C	Classical Chinese and Classical Chinese and Classical Chinese
--------------------------	---

C. Complete:

CHINESE 101A- 101B- 101C	Fourth-Year Mandarin Chinese and Fourth-Year Mandarin Chinese and Fourth-Year Mandarin Chinese
--------------------------	--

D. Complete:

E ASIAN 190	Junior-Senior Colloquium
-------------	--------------------------

E. Select one upper-division course dealing with the literature or culture of another East Asian country.

F. Select four additional courses in Chinese literature, history, art history, linguistics, comparative literature, film and media, religion, gender studies, or philosophy, of which one may be a lower-division East Asian course offered by the Department.

Chinese Studies

Emphasis in Chinese Culture and Society**A. Complete one of the following:**

CHINESE 2C	Intermediate Mandarin Chinese
CHINESE 2DC	Intermediate Mandarin Chinese - Dialect Background Track
CHINESE 2MC	Intermediate Mandarin Chinese - Mandarin Background Track
or equivalent.	

B. Complete:

HISTORY 171D- 171E	Chinese History to 1800 and Chinese History: 1800-1949
--------------------	---

C. Complete:

E ASIAN 190	Junior-Senior Colloquium
-------------	--------------------------

D. Select three upper-division courses on China offered by the Department.**E. Select two approved upper-division courses dealing with the literature, religion, culture, history, or society of another East Asian country.****F. Select two approved upper-division courses in the School of Social Sciences dealing with China.****G. Select two additional courses in Chinese language, literature, history, art history, linguistics, comparative literature, film and media, religion, gender studies, or philosophy, of which one may be a lower-division East Asian course offered by the Department. (Courses from the School of Social Sciences may be substituted with departmental approval by petition.)****Japanese Language and Literature****A. Complete:**

JAPANESE 3C	Advanced Japanese (or equivalent)
-------------	-----------------------------------

B. Complete:

E ASIAN 190	Junior-Senior Colloquium
-------------	--------------------------

C. Select one of the following:

Two upper-division courses dealing with premodern Japanese literature or culture, or	
JAPANESE 100A- 100B	Classical Japanese and Classical Japanese

D. Select one of the following:

One upper-division course dealing with modern Japanese literature and culture	
JAPANESE 101A	Fourth Year Japanese
JAPANESE 101B	Fourth Year Japanese
JAPANESE 101C	Fourth Year Japanese

E. Select one upper-division course dealing with the literature or culture of another East Asian country.**F. Select six additional courses in Japanese literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, of which one may be a lower-division East Asian course offered by the Department.****Korean Literature and Culture****A. Complete:**

KOREAN 3C	Advanced Korean (or equivalent)
-----------	---------------------------------

B. Complete:

E ASIAN 130	Korean Society and Culture
E ASIAN 140	Topics in Korean Literature and Society
E ASIAN 190	Junior-Senior Colloquium

C. Select five courses in Korean literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, of which one may be a lower-division East Asian course offered by the Department.**D. Select three upper-division courses dealing with the literature or culture of another East Asian country.**

Residence Requirement for the Majors: At least five upper-division courses required for the major must be completed successfully at UCI. Students are encouraged, however, to complete up to a year of their language study in approved programs of study abroad.

Requirements for the Minors

Three separate minors: Chinese Language and Literature, Japanese Language and Literature, and Korean Literature and Culture.

Chinese Language and Literature**Select a three-quarter sequence from the following:**

CHINESE 3A- 3B- 3C	Advanced Mandarin Chinese and Advanced Mandarin Chinese and Advanced Mandarin Chinese
CHINESE 100A- 100B- 100C	Classical Chinese and Classical Chinese and Classical Chinese
CHINESE 101A- 101B- 101C	Fourth-Year Mandarin Chinese and Fourth-Year Mandarin Chinese and Fourth-Year Mandarin Chinese

and select four courses from the East Asian Languages and Literatures offerings on Chinese topics and/or the upper-division courses in Chinese.

Japanese Language and Literature**Select one sequence from the following:**

JAPANESE 3A- 3B- 3C	Advanced Japanese and Advanced Japanese and Advanced Japanese
JAPANESE 100A- 100B	Classical Japanese and Classical Japanese
JAPANESE 101A- 101B- 101C	Fourth Year Japanese and Fourth Year Japanese and Fourth Year Japanese

and select four courses (or five courses, if the 100A-B sequence has been chosen) from the East Asian Languages and Literatures offerings on Japanese topics and/or the upper-division courses in Japanese.

Korean Literature and Culture**Select a three-quarter sequence from the following:**

KOREAN 2A- 2B- 2C	Intermediate Korean and Intermediate Korean and Intermediate Korean
KOREAN 2KA- 2KB- 2KC	Intermediate Korean for Students with a Previous Background in Korean and Intermediate Korean for Students with a Previous Background in Korean and Intermediate Korean for Students with a Previous Background in Korean

or equivalent.

Complete:

E ASIAN 130	Korean Society and Culture
E ASIAN 140	Topics in Korean Literature and Society

and select one course dealing with Korean visual culture (examples: Korean cinema, visual art)

and select four upper-division courses selected from the East Asian Languages and Literatures offerings on Korean topics.

Residence Requirement for the Minors: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Program

The Department offers a Ph.D. degree program in East Asian Languages and Literatures, with concentrations in Chinese, Japanese, and East Asian Cultural Studies. The M.A. degree may be awarded to Ph.D. students in progress toward the doctoral degree.

The graduate program emphasizes rigorous training in language and textual analysis, with equal attention given to the historical, social, and cultural dimensions of literary study. In addition to more traditional vocabularies of criticism and theory, the curriculum encourages exploration of recent challenges to established conceptual and methodological frameworks. The program builds on the foundation of a faculty whose research interests engage major issues in Chinese, Japanese, and Korean literature and culture, while developing connections with the larger community of scholarship at UCI.

Because the graduate program is designed to prepare students for both college-level teaching and advanced research, each student will be required to serve, under direct faculty supervision, as a teaching assistant in an appropriate undergraduate course offered through the Department. As noted below, one quarter's worth of this teaching may be counted as part of the required course work toward completion of the degree.

Assuming that a student is enrolled full-time and enters the program with no major deficiencies in background or training, the normative time needed to complete the Ph.D. degree is seven years from matriculation. The maximum time permitted is eight years. For students admitted with an M.A. degree or its equivalent from another institution, certain course requirements may be waived upon the approval of a faculty advisory committee, with a consequent reduction in normative time for completion of the Ph.D.

The following graduate emphases are available: Asian American (see the Asian American Studies section); Critical Theory (see the Humanities Special Programs section); Feminist Studies (see the Women's Studies section); Visual Studies (see the Visual Studies section); and Comparative Literature (see below, following the Ph.D. program requirements).

Master of Arts in East Asian Languages and Literatures

Students are not admitted to an M.A.-only degree program but may be granted an M.A. in recognition of progress toward the Ph.D., normally after six quarters of course work and submission of two approved seminar papers, which will serve as the M.A. examination.

Doctor of Philosophy in East Asian Languages and Literatures

Requirements for Admission

In addition to meeting the general requirements for admission to graduate study at UCI, specified by the Graduate Division, all students must present the following for review by an admissions committee composed of members of the faculty in East Asian Languages and Literatures: records of prior scholastic performance, including all college transcripts; three letters of recommendation; samples of written work; and aptitude scores from the Graduate Record Examination. Although the Department does not require entering students to have received an undergraduate degree comparable to its own, it recommends as much preparation in an East Asian language as possible. It also welcomes applications from students whose language training may not be as extensive but who have shown promise in the study of related disciplines. The study of appropriate European languages is encouraged as well.

General Requirements

Upon admission to the program, the student is assigned a graduate advisor, in consultation with whom an advisory committee consisting of two additional faculty members is constituted. The student and committee plan a program of study consisting of 15 graduate courses.

Before advancement to candidacy (normally after three years of graduate study), the student must have (1) completed required course work as detailed below; (2) prepared one paper of publishable quality; (3) completed language requirements as listed below; (4) prepared five research reports on current scholarly articles to be decided upon in consultation with the faculty advisor; and (5) passed the qualifying examinations on four topics to be selected in consultation with the faculty advisory committee no more than two quarters before the examinations are to be taken. At least one of the topics should be related directly to the student's projected area of specialization in dissertation research.

Students who complete the qualifying examinations successfully are advanced to candidacy for the Ph.D. degree. The normative time for advancement to candidacy is four years. They then write their doctoral dissertation on a topic developed in consultation with the faculty advisory committee. Some period of study abroad, for enhancement of language proficiency and/or dissertation research, is strongly encouraged.

Concentration in Chinese

Course Work

Select three courses from Chinese 201-204.

Select either:

CHINESE 211A- 211B	Studies in Traditional Chinese Narrative and Prose and Studies in Traditional Chinese Narrative and Prose
--------------------	---

or

CHINESE 212A- 212B	Studies in Traditional Chinese Poetry and Studies in Traditional Chinese Poetry
--------------------	---

CHINESE 213A- 213B	Studies in Modern Chinese Literature and Studies in Modern Chinese Literature
--------------------	---

CHINESE 214**Studies in Chinese Literature and Cultural Theory**

and select seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on a relevant topic in literary or cultural theory. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Language Requirements. Before advancement to candidacy, all students must have completed four years of modern Chinese, two years of classical Chinese, and three years of modern Japanese, and have demonstrated reading proficiency in another appropriate language. Much of this work may, of course, have been completed prior to admission. In addition, the requirement for a second year of classical Chinese may be fulfilled by taking three reading courses in classical literature.

Concentration in Japanese

Course Work

Select three courses from Japanese 201-205.

Select either:

JAPANESE 211A- 211B	Studies in Traditional Japanese Prose and Studies in Traditional Japanese Prose
---------------------	---

or

JAPANESE 212A- 212B	Studies in Traditional Japanese Poetry or Drama and Studies in Traditional Japanese Poetry or Drama
---------------------	---

JAPANESE 213A- 213B	Studies in Modern Japanese Literature and Studies in Modern Japanese Literature
---------------------	---

JAPANESE 214	Studies in Japanese Literary and Cultural Theory
--------------	--

and select seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on relevant topics in literary or cultural theory. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Language Requirements. Before advancement to candidacy, all students must have completed four years of modern Japanese and one year of classical Japanese, and have demonstrated reading proficiency in another appropriate language. In addition, students emphasizing classical Japanese are required to take one year of classical Chinese. Much of this work may, of course, have been completed prior to admission.

Concentration in East Asian Cultural Studies

Course Work

Select four Theory and Cultural Studies graduate courses

Select four graduate courses in Chinese, Japanese, or Korean

and select seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on relevant topics. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Other Requirements. Before advancement to candidacy, all students must have completed examinations in four areas as determined upon consultation with faculty advisors. These areas will vary according to the interests of the student; examples might be Colonial and Postcolonial Theories; Modernity and East Asia; Critique of Asian Studies as a field; Gender, Class and East Asia; Visual Culture and Japan; and Theorizing Minority Status in East Asia. All students must have completed four years of Chinese, Japanese, or Korean, or the equivalent. Three years or the equivalent in a second East Asian language is recommended. Much of this work may, of course, have been completed prior to admission.

Graduate Emphasis in Comparative Literature

A student must submit an application for the emphasis to the Graduate Advisor in East Asian Languages and Literatures, and the Department tracks the student's progress and fulfillment of requirements. Upon graduation, students receive a letter from the Graduate Advisor certifying completion of the emphasis.

Course Work

Select at least five graduate courses in the Department of Comparative Literature: ¹

One of the five courses should be:

CRITISM 220A	Studies in Literary Theory and Its History
COM LIT 200A	History of Comparative Literature and Introduction to Methods and Theories of CL (or COM LIT 200B or COM LIT 200C)

At least three of the courses should have a Comparative Literature (CL) designation.

One of the courses could be:

HUMAN 270	Advanced Critical Theory
-----------	--------------------------

¹ Three of which may be counted toward the seven electives required for the Ph.D. in East Asian Languages and Literatures.

Qualifying Examination and Dissertation. One topic on the Ph.D. Qualifying Examination should be on a Comparative Literature topic and should be prepared with a professor from the Comparative Literature program who will serve as a member of the student's examination committee. The student should be able to demonstrate some expertise in comparative critical methodologies as well as knowledge of a literature and tradition other than those in East Asian. One member of the student's dissertation committee will normally be from the Comparative Literature program.

Faculty

Chungmoo Choi, Ph.D. Indiana University, *Associate Professor of Korean Culture* (modern Korea, postcolonial and colonial discourse, popular culture, anthropology)

Edward Fowler, Ph.D. University of California, Berkeley, *Professor of Japanese* (modern Japanese literature, cultural studies, film)

James Fujii, Ph.D. University of Chicago, *Associate Professor of Japanese and Comparative Literature* (modern Japanese literature; critical theory and cultural studies)

Michael A. Fuller, Ph.D. Yale University, *Department Chair of East Asian Languages and Literatures and Professor of Chinese* (Chinese poetry and poetics, the cultural and intellectual contexts for poetry, aesthetic theory, linguistic issues in classical Chinese)

Hu Ying, Ph.D. Princeton University, *Associate Professor of Chinese* (narrative literature, translation theory, feminist theory)

Martin W. Huang, Ph.D. Washington University, *Professor of Chinese* (narrative theories and traditional Chinese fiction)

Kyung Hyun Kim, Ph.D. University of Southern California, *Professor of Korean Culture and of Film and Media Studies* (East Asian cinema, modern Korea, cultural theory)

Susan B. Klein, Ph.D. Cornell University, *Associate Professor of Japanese* (premodern and modern theater and dance, Japanese religions, feminist critical theory)

Bert Scruggs, Ph.D. University of Pennsylvania, *Assistant Professor of Chinese* (modern Sinophone fiction and film, postcoloniality, translation, and cultural studies)

Serk Bae Suh, Ph.D. University of California, Los Angeles, *Associate Professor of East Asian Languages and Literatures* (modern Korean and Japanese literature; cultural studies; modern Korean and Japanese intellectual history; colonial and postcolonial studies with emphasis on Japanese colonialism in Korea from 1905 to 1945 and the Korean minority in Japan)

Affiliated Faculty

Ackbar Abbas, M. Phil. University of Hong Kong, *Professor of Comparative Literature and of Film and Media Studies* (globalization, Hong Kong and Chinese culture, postcoloniality, critical theory)

Qitao Guo, Ph.D. University of California, Berkeley, *Associate Professor of History* (Late Imperial China, social and cultural history)

Anne Walthall, Ph.D. University of Chicago, *Co-Director of the Minor in Asian Studies, Director of the Center for Asian Studies, and Professor of History* (early modern and modern Japan)

Jeffrey Wasserstrom, Ph.D. University of California, Berkeley, *UCI Chancellor's Professor of History* (modern China, student movements and comparative revolutions)

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Professor of Art History* (Modern Japanese art, Asian American art, art and nationalism)

Chinese Courses

CHINESE 1A. Fundamental Mandarin Chinese. 5 Units.

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with no previous experience in any dialect of Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: Placement into CHINESE 1A.

Overlaps with CHINESE S1AB, CHINESE 1MA, CHINESE 1DA.

Restriction: CHINESE 1A and CHINESE 1DA and CHINESE 1MA and CHINESE S1AB may not be taken for full credit.

CHINESE 1B. Fundamental Mandarin Chinese. 5 Units.

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with no previous experience in any dialect of Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1A or placement into CHINESE 1B. CHINESE 1A with a grade of C or better.

Overlaps with CHINESE S1AB, CHINESE S1BC, CHINESE 1MB, CHINESE 1DB.

Restriction: CHINESE 1B and CHINESE 1DB and CHINESE 1MB and CHINESE S1AB and CHINESE S1BC may not be taken for full credit.

CHINESE 1C. Fundamental Mandarin Chinese. 5 Units.

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with no previous experience in any dialect of Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1B or CHINESE S1AB or placement in CHINESE 1C. CHINESE 1B with a grade of C or better. CHINESE S1AB with a grade of C or better.

Overlaps with CHINESE 1DC, CHINESE 1MC, CHINESE S1BC.

Restriction: CHINESE 1C and CHINESE 1DC and CHINESE 1MC and CHINESE S1BC may not be taken for full credit.

(VI)

CHINESE 1DA. Fundamentals of Mandarin Chinese - Dialect Background Track. 5 Units.

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in a Chinese dialect other than Mandarin. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: Placement into CHINESE 1DA.

Overlaps with CHINESE 1A, CHINESE S1AB, CHINESE 1MA.

Restriction: CHINESE 1DA and CHINESE 1MA and CHINESE 1A and CHINESE S1AB may not be taken for full credit.

CHINESE 1DB. Fundamentals of Mandarin Chinese - Dialect Background Track. 5 Units.

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in a Chinese dialect other than Mandarin. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1DA or placement into CHINESE 1DB. CHINESE 1DA with a grade of C or better.

Overlaps with CHINESE 1B, CHINESE S1AB, CHINESE S1BC, CHINESE 1MB.

Restriction: CHINESE 1DB and CHINESE 1MB and CHINESE 1B and CHINESE S1AB and CHINESE S1BC may not be taken for full credit.

CHINESE 1DC. Fundamentals of Mandarin Chinese - Dialect Background Track. 5 Units.

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in a Chinese dialect other than Mandarin. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1DB or placement into CHINESE 1DC. CHINESE 1DB with a grade of C or better.

Overlaps with CHINESE S1BC, CHINESE 1MC, CHINESE 1C.

Restriction: CHINESE 1DC and CHINESE 1MC and CHINESE 1C and CHINESE S1BC may not be taken for full credit.

(VI)**CHINESE 1MA. Fundamentals of Mandarin Chinese - Mandarin Background Track. 5 Units.**

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in Mandarin Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: Placement into CHINESE 1MA.

Overlaps with CHINESE 1DA, CHINESE 1A, CHINESE S1AB.

Restriction: CHINESE 1MA and CHINESE 1DA and CHINESE 1A and CHINESE S1AB may not be taken for full credit.

CHINESE 1MB. Fundamentals of Mandarin Chinese - Mandarin Background Track. 5 Units.

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in Mandarin Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1MA or placement into CHINESE 1MB. CHINESE 1MA with a grade of C or better.

Overlaps with CHINESE 1B, CHINESE 1DB, CHINESE S1AB, CHINESE S1BC.

Restriction: CHINESE 1MB and CHINESE 1DB and CHINESE 1B and CHINESE S1AB and CHINESE S1BC may not be taken for full credit.

CHINESE 1MC. Fundamentals of Mandarin Chinese - Mandarin Background Track. 5 Units.

Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in Mandarin Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1MB or placement into CHINESE 1MC. CHINESE 1MB with a grade of C or better.

Overlaps with CHINESE 1C, CHINESE 1DC, CHINESE S1BC.

Restriction: CHINESE 1MC and CHINESE 1DC and CHINESE 1C and CHINESE S1BC may not be taken for full credit.

(VI)**CHINESE S1AB. Fundamentals of Mandarin Chinese. 7.5 Units.**

First half of first-year Mandarin Chinese in an intensive setting using natural approach with emphasis on listening, speaking, reading, and writing.

Prerequisite: Placement into CHINESE 1A or CHINESE 1B or CHINESE 1MA or CHINESE 1MB or CHINESE 1DA or CHINESE 1DB.

Overlaps with CHINESE 1A, CHINESE 1B, CHINESE 1MA, CHINESE 1DA, CHINESE 1DB, CHINESE 1MB.

Restriction: CHINESE S1AB and CHINESE 1A and CHINESE 1B and CHINESE 1DA and CHINESE 1DB and CHINESE 1MA and CHINESE 1MB may not be taken for full credit.

CHINESE S1BC. Fundamentals of Mandarin Chinese. 7.5 Units.

Second half of first-year Mandarin Chinese in an intensive setting using natural approach with emphasis on listening, speaking, reading, and writing.

Prerequisite: CHINESE S1AB or CHINESE 1B or CHINESE 1DB or CHINESE 1MB or placement into CHINESE 1C or CHINESE 1DC or CHINESE 1MC. CHINESE S1AB with a grade of C or better. CHINESE 1B with a grade of C or better. CHINESE 1DB with a grade of C or better. CHINESE 1MB with a grade of C or better.

Overlaps with CHINESE 1C, CHINESE 1B, CHINESE 1DB, CHINESE 1DC, CHINESE 1MB, CHINESE 1MC.

Restriction: CHINESE S1BC, CHINESE 1B, CHINESE 1C, CHINESE 1DB or CHINESE 1DC, CHINESE 1MB or CHINESE 1MC and may not be taken for full credit.

(VI)**CHINESE 2A. Intermediate Mandarin Chinese. 5 Units.**

Both authentic and pedagogically-prepared materials are used to further develop students' ability to communicate in culturally, socially, and linguistically appropriate manners. Taught in Chinese using Pinyin romanization system and both traditional and simplified forms of Chinese.

Prerequisite: CHINESE 1C or CHINESE S1BC or placement into CHINESE 2A. CHINESE 1C with a grade of C or better. CHINESE S1BC with a grade of C or better.

Overlaps with CHINESE 2DA, CHINESE 2MA.

Restriction: CHINESE 2A and CHINESE 2DA and CHINESE 2MA may not be taken for full credit.

(VIII)**CHINESE 2B. Intermediate Mandarin Chinese. 5 Units.**

Both authentic and pedagogically-prepared materials are used to further develop students' ability to communicate in culturally, socially, and linguistically appropriate manners. Taught in Chinese using Pinyin romanization system and both traditional and simplified forms of Chinese.

Prerequisite: CHINESE 2A or placement into CHINESE 2B. CHINESE 2A with a grade of C or better.

Overlaps with CHINESE 2DB, CHINESE 2MB.

Restriction: CHINESE 2B and CHINESE 2DB and CHINESE 2MB may not be taken for full credit.

(VIII)**CHINESE 2C. Intermediate Mandarin Chinese. 5 Units.**

Both authentic and pedagogically-prepared materials are used to further develop students' ability to communicate in culturally, socially, and linguistically appropriate manners. Taught in Chinese using Pinyin romanization system and both traditional and simplified forms of Chinese.

Prerequisite: CHINESE 2B or placement into CHINESE 2C. CHINESE 2B with a grade of C or better.

Overlaps with CHINESE 2DC, CHINESE 2MC.

Restriction: CHINESE 2C and CHINESE 2DC and CHINESE 2MC may not be taken for full credit.

(VIII)**CHINESE 2DA. Intermediate Mandarin Chinese - Dialect Background Track. 5 Units.**

Authentic and pedagogically prepared materials used to further develop communication in culturally, socially, and linguistically appropriate manners for students with experience in a dialect other than Mandarin. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1DC or CHINESE S1BC or placement into CHINESE 2DA. CHINESE 1DC with a grade of C or better. CHINESE S1BC with a grade of C or better.

Overlaps with CHINESE 2A, CHINESE 2MA.

Restriction: CHINESE 2DA and CHINESE 2MA and CHINESE 2A may not be taken for full credit.

(VIII)**CHINESE 2DB. Intermediate Mandarin Chinese - Dialect Background Track. 5 Units.**

Authentic and pedagogically prepared materials used to further develop communication in culturally, socially, and linguistically appropriate manners for students with experience in a dialect other than Mandarin. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 2DA or placement into CHINESE 2DB. CHINESE 2DA with a grade of C or better.

Overlaps with CHINESE 2B, CHINESE 2MB.

Restriction: CHINESE 2DB and CHINESE 2MB and CHINESE 2B may not be taken for full credit.

(VIII)

CHINESE 2DC. Intermediate Mandarin Chinese - Dialect Background Track . 5 Units.

Authentic and pedagogically prepared materials used to further develop communication in culturally, socially, and linguistically appropriate manners for students with experience in a dialect other than Mandarin. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 2DB or placement into CHINESE 2DC. CHINESE 2DB with a grade of C or better.

Overlaps with CHINESE 2MC, CHINESE 2C.

Restriction: CHINESE 2DC and CHINESE 2MC and CHINESE 2C may not be taken for full credit.

(VIII)

CHINESE 2MA. Intermediate Mandarin Chinese - Mandarin Background Track. 5 Units.

Authentic and pedagogically prepared materials are used to further develop communication in culturally, socially, and linguistically appropriate manners for students with initial experience in Mandarin Chinese. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1MC or CHINESE S1BC or placement into CHINESE 2MA. CHINESE 1MC with a grade of C or better. CHINESE S1BC with a grade of C or better.

Overlaps with CHINESE 2A, CHINESE 2DA.

Restriction: CHINESE 2MA and CHINESE 2DA and CHINESE 2A may not be taken for full credit.

(VIII)

CHINESE 2MB. Intermediate Mandarin Chinese - Mandarin Background Track . 5 Units.

Authentic and pedagogically prepared materials are used to further develop communication in culturally, socially, and linguistically appropriate manners for students with initial experience in Mandarin Chinese. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 2MA or placement into CHINESE 2MB. CHINESE 2MA with a grade of C or better.

Overlaps with CHINESE 2B, CHINESE 2DB.

Restriction: CHINESE 2MB and CHINESE 2DB and CHINESE 2B may not be taken for full credit.

(VIII)

CHINESE 2MC. Intermediate Mandarin Chinese - Mandarin Background Track . 5 Units.

Authentic and pedagogically prepared materials are used to further develop communication in culturally, socially, and linguistically appropriate manners for students with initial experience in Mandarin Chinese. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 2MB or placement into CHINESE 2MC. CHINESE 2MB with a grade of C or better.

Overlaps with CHINESE 2C, CHINESE 2DC.

Restriction: CHINESE 2MC and CHINESE 2DC and CHINESE 2C may not be taken for full credit.

(VIII)

CHINESE 3A. Advanced Mandarin Chinese. 4 Units.

A continuation of CHINESE 2A-2B-2C emphasizing conceptualization, self-expression and academic skills in Chinese. Authentic texts from modern Chinese prose and newspapers are used. Taught in Mandarin Chinese using both traditional and simplified forms of Chinese characters.

Prerequisite: CHINESE 2C or CHINESE 2DC or CHINESE 2MC or placement into CHINESE 3A. CHINESE 2C with a grade of C better. CHINESE 2DC with a grade of C better. CHINESE 2MC with a grade of C better.

(VIII)

CHINESE 3B. Advanced Mandarin Chinese. 4 Units.

A continuation of Chinese 2A-B-C emphasizing conceptualization, self-expression, and academic skills in Chinese. Authentic texts from modern Chinese prose and newspapers are used. Taught in Mandarin Chinese using both traditional and simplified forms of Chinese characters.

Prerequisite: CHINESE 3A. CHINESE 3A with a grade of C or better.

(VIII)

CHINESE 3C. Advanced Mandarin Chinese. 4 Units.

A continuation of Chinese 2A-B-C emphasizing conceptualization, self-expression, and academic skills in Chinese. Authentic texts from modern Chinese prose and newspapers are used. Taught in Mandarin Chinese using both traditional and simplified forms of Chinese characters.

Prerequisite: CHINESE 3B. CHINESE 3B with a grade of C or better.

(VIII)

CHINESE 100A. Classical Chinese. 4 Units.

Introduction to classical Chinese grammar and vocabulary with emphasis on reading basic texts.

Prerequisite: CHINESE 3C or JAPANESE 3C or KOREAN 3C.

CHINESE 100B. Classical Chinese. 4 Units.

Introduction to classical Chinese grammar and vocabulary with emphasis on reading basic texts.

Prerequisite: CHINESE 3C or JAPANESE 3C or KOREAN 3C.

CHINESE 100C. Classical Chinese. 4 Units.

Introduction to classical Chinese grammar and vocabulary with emphasis on reading basic texts.

Prerequisite: CHINESE 3C or JAPANESE 3C or KOREAN 3C.

CHINESE 101A. Fourth-Year Mandarin Chinese. 4 Units.

Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of specific literary texts.

Prerequisite: CHINESE 3C.

CHINESE 101B. Fourth-Year Mandarin Chinese. 4 Units.

Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of specific literary texts.

Prerequisite: CHINESE 3C.

CHINESE 101C. Fourth-Year Mandarin Chinese. 4 Units.

Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of specific literary texts.

Prerequisite: CHINESE 3C.

CHINESE 115. Chinese Literature: Advanced Texts. 4 Units.

Designed for students with near-fluency in reading Chinese. Readings may include both literary and philosophical work by important writers, but the emphasis is on literary texts and writings that interpret those texts.

Prerequisite: CHINESE 101A or CHINESE 101B or CHINESE 101C.

Repeatability: Unlimited as topics vary.

CHINESE 199. Independent Study. 1-4 Units.

Investigation of special topics through directed reading in Chinese. Paper required.

Repeatability: May be taken for credit for 12 units.

CHINESE 201. Readings in Traditional Chinese Narrative and Prose. 4 Units.

Close reading of selected premodern prose texts such as historical narratives, novels, short stories, and essays.

Prerequisite: Chinese 101C.

Repeatability: Unlimited as topics vary.

CHINESE 202. Readings in Traditional Chinese Poetry. 4 Units.

Close readings of selected premodern poetic texts.

Prerequisite: CHINESE 100C.

Repeatability: Unlimited as topics vary.

CHINESE 203. Readings in Modern Chinese Literature. 4 Units.

Close readings of selected modern literary texts.

Prerequisite: Chinese 101C.

Repeatability: Unlimited as topics vary.

CHINESE 204. Readings in Chinese Literary and Cultural Theory. 4 Units.

Close readings of selected texts in premodern criticism and theory.

Prerequisite: CHINESE 100C.

Repeatability: Unlimited as topics vary.

CHINESE 211A. Studies in Traditional Chinese Narrative and Prose. 4 Units.

Two-quarter seminar in traditional Chinese narrative and prose, with topics varying from year to year.

Prerequisite: CHINESE 100C.

Repeatability: Unlimited as topics vary.

CHINESE 211B. Studies in Traditional Chinese Narrative and Prose. 4 Units.

Two-quarter seminar in traditional Chinese narrative and prose, with topics varying from year to year.

Prerequisite: CHINESE 211A.

Repeatability: Unlimited as topics vary.

CHINESE 212A. Studies in Traditional Chinese Poetry. 4 Units.

Two-quarter seminar in traditional Chinese poetry, with topics varying from year to year.

Prerequisite: Chinese 100C.

Repeatability: Unlimited as topics vary.

CHINESE 212B. Studies in Traditional Chinese Poetry. 4 Units.

Two-quarter seminar in traditional Chinese poetry, with topics varying from year to year.

Prerequisite: CHINESE 212A.

Repeatability: Unlimited as topics vary.

CHINESE 213A. Studies in Modern Chinese Literature. 4 Units.

Two-quarter seminar in modern Chinese literature, with topics varying from year to year. Research paper required.

Prerequisite: CHINESE 100C.

Repeatability: Unlimited as topics vary.

CHINESE 213B. Studies in Modern Chinese Literature. 4 Units.

Two-quarter seminar in modern Chinese literature, with topics varying from year to year. Research paper required.

Prerequisite: CHINESE 213A.

Repeatability: Unlimited as topics vary.

CHINESE 214. Studies in Chinese Literature and Cultural Theory. 4 Units.

Seminar in Chinese literature and cultural theory, with topics varying from year to year. Research paper required.

Prerequisite: CHINESE 100C or CHINESE 101C.

Repeatability: Unlimited as topics vary.

CHINESE 230. Topics in Chinese Literature and Culture. 4 Units.

Seminar in Chinese literature and culture, with topics varying from year to year. Research paper required.

Prerequisite: Chinese 101.

Repeatability: Unlimited as topics vary.

CHINESE 290. Independent Study. 4 Units.

Directed research on topic determined in consultation with faculty member. A term paper or project is required.

Repeatability: May be repeated for credit unlimited times.

CHINESE 299. Dissertation Research. 4-12 Units.

Dissertation research with Chinese faculty.

Prerequisite: Advancement to Ph.D. candidacy.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

East Asian Languages and Literatures Courses

E ASIAN 10. Introductory Topics in Chinese Literature and Society. 4 Units.

Introductory studies in Chinese texts in their social and cultural context(s). Conducted in English.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 11. Introductory Topics in Japanese Literature and Society. 4 Units.

Introductory studies in Japanese texts in their social and cultural context(s). Conducted in English.

Repeatability: May be taken for credit 3 times as topics vary.

(IV, VIII)

E ASIAN 20. Asian Religions . 4 Units.

An introduction to Asian religions (Hinduism, Buddhism, Confucianism, Taoism, Shamanism) including both elite doctrinal aspects and forms of more popular religiosity.

Repeatability: May be taken for credit 3 times as topics vary.

(VIII)

E ASIAN 25. Introductory Topics in East Asian Philosophy. 4 Units.

Selected introductory topics in the philosophies of East Asia, e.g., Yoga, Buddhism, Vedanta, Confucianism, Taoism, and Shinto.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 40. Topics in East Asian Popular Culture. 4 Units.

Selected topics in the popular cultural traditions of East Asia designed to introduce students both to problems in situating culture in a specific time and place and to contemporary theories of popular culture and their application to East Asian contexts.

Repeatability: Unlimited as topics vary.

(IV, VIII)

E ASIAN 55. Introduction to East Asian Cultures . 4 Units.

Interdisciplinary courses organized each year around a broad theme designed to introduce students to the cultures of East Asia. Topical organization of courses addresses issues that have been of importance historically and are reshaping East Asia today.

Repeatability: May be taken for credit 3 times as topics vary.

(IV, VIII)

E ASIAN 110. Topics in Chinese Literature and Society. 4 Units.

Studies in Chinese texts in their social and cultural context(s). Conducted in English.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 116. Topics in East Asian Religions. 4 Units.

Selected topics in the religions of East Asia, e.g., Buddhism, Daoism, Shintô, Christianity, popular religions.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 117. Topics in East Asian Philosophy. 4 Units.

Selected topics in the philosophies of East Asia, e.g., Yoga, Buddhism, Vedanta, Confucianism, Taoism, and Shinto.

Repeatability: Unlimited as topics vary.

E ASIAN 120. Topics in Japanese Literature and Society. 4 Units.

Studies in Japanese texts in their social and cultural context(s). Conducted in English.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 125. Topics in East Asian Applied Linguistics. 4 Units.

In-depth examination of selected topics in applied linguistics, with a particular emphasis on language acquisition and language pedagogy.

Repeatability: May be taken for credit 3 times as topics vary.

Concurrent with E ASIAN 225.

E ASIAN 130. Korean Society and Culture. 4 Units.

Introductory background to the social and cultural forces that affect the lives of the Koreans, including those in the United States. Considers traditional values and contemporary issues within a historical framework.

E ASIAN 140. Topics in Korean Literature and Society. 4 Units.

Studies in Korean texts in their social and cultural context(s). Conducted in English.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 150. Topics in East Asian Literature in Translation. 4 Units.

East Asian literary works in translation. Taught in English.

Repeatability: Unlimited as topics vary.

E ASIAN 155. Cultural Studies in East Asia. 4 Units.

Interdisciplinary and theoretical introduction to issues in cultural studies that are pertinent to the study of East Asia. All readings in English.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 160. East Asian Cinema. 4 Units.

Study of East Asian cinema from historical, theoretical, and comparative perspectives. Taught in English.

Repeatability: Unlimited as topics vary.

E ASIAN 170. Gender in East Asia . 4 Units.

Explores the construction of gender in East Asian cultures and literatures. Pays close attention to the specificity of historical, cultural, and literary contexts of East Asia as it investigates various theoretical and critical perspectives on gender and sexuality.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 190. Junior-Senior Colloquium. 4 Units.

Specialized courses dealing with primary sources; required reports and papers. Each colloquium reflects the instructor's intellectual interest and is conducted as a discussion group. Limited to 15 students.

Repeatability: May be taken for credit 3 times as topics vary.

Restriction: Upper-division students only. East Asian Cultures, Chinese Studies, Japanese Language and Literature, Korean Literature and Culture majors only.

E ASIAN 192W. Junior-Senior Seminar. 4 Units.

Analysis of a literary or cultural topic or problem through research and writing of two short and one long original research paper for a total of 4,000 words minimum. Seminar follows East Asian 190; related to the colloquium's subject.

Prerequisite: E ASIAN 190. Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 198. Directed Group Study. 1-4 Units.

Directed group study on special topics.

Repeatability: May be repeated for credit unlimited times.

E ASIAN 199. Independent Study. 1-4 Units.

Investigation of special topics through directed reading in translation. Paper required.

Repeatability: May be taken for credit for 12 units.

E ASIAN 216. Topics in East Asian Religions . 4 Units.

Selected topics in the religions of East Asia, e.g., Buddhism, Daoism, Shintō, Islam, shamanism.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 220. Topics in East Asian Cultural Studies. 4 Units.

Seminar, with topics varying from year to year. Research paper required.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

E ASIAN 225. Topics in East Asian Applied Linguistics. 4 Units.

In-depth examination of selected topics in applied linguistics, with a particular emphasis on language acquisition and language pedagogy.

Corequisite: E ASIAN 125.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 260. Topics in East Asian Cinema. 4 Units.

An examination of the possibilities of East Asian cinematic narrative. Possible topics: cinematic history; cinema in popular culture; comparisons with literary texts; major auteurs. Emphasis on technical as well as on thematic aspects. Includes readings in film theory.

Prerequisite: E ASIAN 160.

Repeatability: Unlimited as topics vary.

E ASIAN 290. Independent Study. 2-4 Units.

Directed research on topic determined in consultation with faculty member. A term paper or project is required.

Repeatability: May be repeated for credit unlimited times.

E ASIAN 299. Dissertation Research. 4-12 Units.

Dissertation research for students who are advanced to doctoral candidacy.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Advancement to Ph.D. candidacy.

E ASIAN 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Japanese Courses

JAPANESE 1A. Fundamental Japanese. 5 Units.

Students develop listening, speaking, reading, and writing abilities in Japanese for meaningful communication. Content deals with daily life, society, and culture in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the hiragana and katakana orthography.

Prerequisite: Placement into JAPANESE 1A.

Overlaps with JAPANESE S1AB.

Restriction: JAPANESE 1A and JAPANESE S1AB may not be taken for full credit.

JAPANESE 1B. Fundamental Japanese. 5 Units.

Students develop listening, speaking, reading, and writing abilities in Japanese for meaningful communication. Content deals with daily life, society, and culture in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the hiragana and katakana orthography.

Prerequisite: JAPANESE 1A or JAPANESE S1AB or placement into JAPANESE 1B. JAPANESE 1A with a grade of C or better. JAPANESE S1AB with a grade of C or better.

Overlaps with JAPANESE S1AB, JAPANESE S1BC.

Restriction: JAPANESE 1B and JAPANESE S1AB and JAPANESE S1BC may not be taken for full credit.

JAPANESE 1C. Fundamental Japanese. 5 Units.

Students develop listening, speaking, reading, and writing abilities in Japanese for meaningful communication. Content deals with daily life, society, and culture in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the hiragana and katakana orthography.

Prerequisite: JAPANESE 1B or JAPANESE S1AB or placement into JAPANESE 1C. JAPANESE 1B with a grade of C or better. JAPANESE S1AB with a grade of C or better.

Overlaps with JAPANESE S1BC.

Restriction: JAPANESE 1C and JAPANESE S1BC may not be taken for full credit.

(VI)

JAPANESE S1AB. Fundamentals of Japanese. 7.5 Units.

First half of first-year Japanese in an intensified form.

Prerequisite: Placement into JAPANESE 1A.

Overlaps with JAPANESE 1A, JAPANESE 1B.

Restriction: JAPANESE S1AB and JAPANESE 1A and JAPANESE 1B may not be taken for full credit.

JAPANESE S1BC. Fundamentals of Japanese. 7.5 Units.

Second half of first-year Japanese in an intensified form.

Prerequisite: JAPANESE S1AB or JAPANESE 1B or placement into JAPANESE 1C. JAPANESE S1AB with a grade of C or better. JAPANESE 1B with a grade of C or better.

Overlaps with JAPANESE 1C, JAPANESE 1B.

Restriction: JAPANESE S1BC and JAPANESE 1B and JAPANESE 1C may not be taken for full credit.

(VI)

JAPANESE 2A. Intermediate Japanese. 5 Units.

Japanese listening, speaking, reading, and writing abilities developed for meaningful communication. Content deals with daily life, society, and culture, including social issues in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the 180 characters learned in 1A-B-C.

Prerequisite: JAPANESE 1C or JAPANESE S1BC or placement into JAPANESE 2A. JAPANESE 1C with a grade of C or better. JAPANESE S1BC with a grade of C or better.

Overlaps with JAPANESE S2AB.

Restriction: JAPANESE 2A and JAPANESE S2AB may not be taken for full credit.

(VIII)

JAPANESE 2B. Intermediate Japanese. 5 Units.

Japanese listening, speaking, reading, and writing abilities developed for meaningful communication. Content deals with daily life, society, and culture, including social issues in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the 180 characters learned in 1A-B-C.

Prerequisite: JAPANESE 2A or placement into JAPANESE 2B. JAPANESE 2A with a grade of C or better.

Overlaps with JAPANESE S2AB.

Restriction: JAPANESE 2B and JAPANESE S2AB and JAPANESE S2BC may not be taken for full credit.

(VIII)

JAPANESE 2C. Intermediate Japanese. 5 Units.

Japanese listening, speaking, reading, and writing abilities developed for meaningful communication. Content deals with daily life, society, and culture, including social issues in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the 180 characters learned in 1A-B-C.

Prerequisite: JAPANESE 2B or JAPANESE S2AB or placement into JAPANESE 2C. JAPANESE 2B with a grade of C or better. JAPANESE S2AB with a grade of C or better.

Overlaps with JAPANESE S2BC.

Restriction: JAPANESE 2C and JAPANESE S2BC may not be taken for full credit.

(VIII)

JAPANESE S2AB. Intermediate Japanese. 7.5 Units.

First half of second-year Japanese in an intensified form.

Prerequisite: JAPANESE 1C or JAPANESE S1BC or placement in JAPANESE 2A. JAPANESE 1C with a grade of C or better. JAPANESE S1BC with a grade of C or better.

Overlaps with JAPANESE 2A, JAPANESE 2B.

Restriction: JAPANESE S2AB and JAPANESE 2A and JAPANESE 2B may not be taken for full credit.

(VIII)

JAPANESE S2BC. Intermediate Japanese. 7.5 Units.

Second half of second-year Japanese in an intensified form.

Prerequisite: JAPANESE S2AB or JAPANESE 2B or placement into JAPANESE 2C. JAPANESE S2AB with a grade of C or better. JAPANESE 2B with a grade of C or better.

Overlaps with JAPANESE 2C, JAPANESE 2B.

Restriction: JAPANESE S2BC and JAPANESE 2B and JAPANESE 2C may not be taken for full credit.

(VIII)

JAPANESE 3A. Advanced Japanese. 4 Units.

Students are taught to conceptualize in Japanese as they learn to understand, read, write, and speak. Authentic Japanese texts are used. Approximately 360 kanji (Chinese characters) in addition to the 270 characters learned in 1A-B-C and 2A-B-C are introduced.

Prerequisite: JAPANESE 2C or JAPANESE S2BC or placement into JAPANESE 3A. JAPANESE 2C with a grade of C or better. JAPANESE S2BC with a grade of C or better.

(VIII)

JAPANESE 3B. Advanced Japanese. 4 Units.

Students are taught to conceptualize in Japanese as they learn to understand, read, write, and speak. Authentic Japanese texts are used. Approximately 360 kanji (Chinese characters) in addition to the 270 characters learned in 1A-B-C and 2A-B-C are introduced.

Prerequisite: JAPANESE 3A or placement into JAPANESE 3B. JAPANESE 3A with a grade of C or better.

(VIII)

JAPANESE 3C. Advanced Japanese. 4 Units.

Students are taught to conceptualize in Japanese as they learn to understand, read, write, and speak. Authentic Japanese texts are used. Approximately 360 kanji (Chinese characters) in addition to the 270 characters learned in first and second year are introduced.

Prerequisite: JAPANESE 3B or placement into JAPANESE 3C. JAPANESE 3B with a grade of C or better.

Restriction: Japanese majors have first consideration for enrollment.

(VIII)

JAPANESE 100A. Classical Japanese. 4 Units.

Introduction to classical Japanese grammar and vocabulary with emphasis on reading and analysis of basic texts.

Prerequisite: JAPANESE 3C. JAPANESE 3C with a grade of C or better.

JAPANESE 100B. Classical Japanese. 4 Units.

Introduction to classical Japanese grammar and vocabulary with emphasis on reading and analysis of basic texts.

Prerequisite: JAPANESE 100A. JAPANESE 100A with a grade of C or better.

JAPANESE 101A. Fourth Year Japanese. 4 Units.

Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of texts.

Prerequisite: JAPANESE 3C.

JAPANESE 101B. Fourth Year Japanese. 4 Units.

Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of texts.

Prerequisite: JAPANESE 3C.

JAPANESE 101C. Fourth Year Japanese. 4 Units.

Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of texts.

Prerequisite: JAPANESE 3C.

JAPANESE 115. Japanese Literature: Advanced Texts. 4 Units.

Designed for students with near-fluency in reading Japanese. Texts include both fiction and nonfiction by important writers, and may be supplemented and contextualized where needed by literary criticism and cultural-studies texts in English.

Prerequisite: JAPANESE 101A or JAPANESE 101B or JAPANESE 101C.

Repeatability: Unlimited as topics vary.

JAPANESE 180. Topics in Japanese Literature. 4 Units.

Special topics through directed reading in Japanese. Paper required.

Repeatability: May be taken for credit 3 times as topics vary.

JAPANESE 199. Independent Study. 1-4 Units.

Investigation of special topics through directed reading in Japanese. Paper required.

Repeatability: May be taken for credit for 12 units.

JAPANESE 201. Readings in Traditional Japanese Prose. 4 Units.

Close reading of selected premodern prose texts, including tales, journals, travel journals, essays.

Prerequisite: JAPANESE 100B.

Repeatability: Unlimited as topics vary.

JAPANESE 202. Readings in Traditional Japanese Poetry or Drama. 4 Units.

Close reading of selected premodern poetic or dramatic texts.

Prerequisite: JAPANESE 100B.

Repeatability: Unlimited as topics vary.

JAPANESE 203. Readings in Modern Japanese Literature. 4 Units.

Texts include both fiction and nonfiction by important writers, and may be supplemented where needed by literary criticism and cultural-studies texts in English.

Prerequisite: Japanese 101C.

Repeatability: Unlimited as topics vary.

JAPANESE 204. Readings in Traditional Japanese Literary and Cultural Theory. 4 Units.

Close reading of selected texts involving literary criticism and/or aesthetics.

Prerequisite: JAPANESE 100B.

Repeatability: Unlimited as topics vary.

JAPANESE 205. Readings in Japanese Religion. 4 Units.

Close readings of selected Japanese religious texts.

Prerequisite: JAPANESE 101C.

Repeatability: Unlimited as topics vary.

JAPANESE 211A. Studies in Traditional Japanese Prose. 4 Units.

Studies in selected areas of traditional Japanese prose. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANESE 100B.

Repeatability: Unlimited as topics vary.

JAPANESE 211B. Studies in Traditional Japanese Prose. 4 Units.

Studies in selected areas of traditional Japanese prose. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANESE 100B and JAPANESE 211A.

Repeatability: Unlimited as topics vary.

JAPANESE 212A. Studies in Traditional Japanese Poetry or Drama. 4 Units.

Studies in selected areas of traditional Japanese poetry or drama. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANESE 100B.

Repeatability: Unlimited as topics vary.

JAPANESE 212B. Studies in Traditional Japanese Poetry or Drama. 4 Units.

Studies in selected areas of traditional Japanese poetry or drama. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANESE 212A.

Repeatability: Unlimited as topics vary.

JAPANESE 213A. Studies in Modern Japanese Literature. 4 Units.

A two-quarter, in-depth look at a major author and/or issue in modern Japanese literature. Seminar format. The first quarter is devoted to reading of the requisite texts; the second quarter, to the writing of a research paper.

Prerequisite: JAPANESE 203.

Repeatability: Unlimited as topics vary.

JAPANESE 213B. Studies in Modern Japanese Literature. 4 Units.

A two-quarter, in-depth look at a major author and/or issue in modern Japanese literature. Seminar format. The first quarter is devoted to reading of the requisite texts; the second quarter, to the writing of a research paper.

Prerequisite: JAPANESE 203 and JAPANESE 213A.

Repeatability: May be repeated for credit unlimited times.

JAPANESE 214. Studies in Japanese Literary and Cultural Theory. 4 Units.

Studies in selected areas of Japanese literary and cultural theory. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

JAPANESE 215. Studies in Japanese Religion. 4 Units.

Studies in selected areas of Japanese religion. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANESE 101C.

Repeatability: Unlimited as topics vary.

JAPANESE 230. Topics in Japanese Literature and Culture. 4 Units.

A topical study that addresses important issues in Japanese literature and culture. May focus on a specific writer or writers, or on a specific issue or set of related issues.

Prerequisite: JAPANESE 203.

Repeatability: Unlimited as topics vary.

JAPANESE 290. Independent Study. 4 Units.

Directed research on topic determined in consultation with faculty member. A term paper or project is required.

Repeatability: May be repeated for credit unlimited times.

JAPANESE 299. Dissertation Research. 4-12 Units.

For Students who have been admitted to doctoral candidacy.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Advancement to Ph.D. candidacy.

Korean Courses

KOREAN 1A. Fundamental Korean. 5 Units.

Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with no previous background in Korean. Conducted in both English and Korean.

Prerequisite: Placement into KOREAN 1A.

Overlaps with KOREAN 1KA, KOREAN S1AB.

Restriction: KOREAN 1A and KOREAN 1KA and KOREAN S1AB may not be taken for full credit.

KOREAN 1B. Fundamental Korean. 5 Units.

Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with no previous background in Korean. Conducted in both English and Korean.

Prerequisite: KOREAN 1A or placement into KOREAN 1B. KOREAN 1A with a grade of C or better.

Overlaps with KOREAN S1BC, KOREAN 1KB, KOREAN S1AB.

Restriction: KOREAN 1B and KOREAN 1KB and KOREAN S1AB and KOREAN S1BC may not be taken for full credit.

KOREAN 1C. Fundamental Korean. 5 Units.

Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with no previous background in Korean. Conducted in both English and Korean.

Prerequisite: KOREAN 1B or KOREAN S1AB or placement into KOREAN 1C. KOREAN 1B with a grade of C or better. KOREAN S1AB with a grade of C or better.

Overlaps with KOREAN 1KC, KOREAN S1BC.

Restriction: KOREAN 1C and KOREAN 1KC and KOREAN S1BC may not be taken for full credit.

(VI)**KOREAN 1KA. Fundamental Korean for Students with a Previous Background in Korean. 5 Units.**

Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with a previous background in Korean. Conducted in both English and Korean.

Prerequisite: Placement into KOREAN 1KA.

Overlaps with KOREAN 1A, KOREAN S1AB.

Restriction: KOREAN 1KA and KOREAN 1A and KOREAN S1AB may not be taken for full credit.

KOREAN 1KB. Fundamental Korean for Students with a Previous Background in Korean . 5 Units.

Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with a previous background in Korean. Conducted in both English and Korean.

Prerequisite: KOREAN 1KA or placement into KOREAN 1KB. KOREAN 1KA with a grade of C or better.

Overlaps with KOREAN 1B, KOREAN S1AB, KOREAN S1BC.

Restriction: KOREAN 1KB and KOREAN 1B and KOREAN S1AB and KOREAN S1BC may not be taken for full credit.

KOREAN 1KC. Fundamental Korean for Students with a Previous Background in Korean. 5 Units.

Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with a previous background in Korean. Conducted in both English and Korean.

Prerequisite: KOREAN 1KB or placement into KOREAN 1KC. KOREAN 1KB with a grade of C or better.

Overlaps with KOREAN 1C, KOREAN S1BC.

Restriction: KOREAN 1KC and KOREAN 1C and KOREAN S1BC may not be taken for full credit.

(VI)**KOREAN S1AB. Fundamentals of Korean. 7.5 Units.**

First half of first-year Korean in an intensified form.

Prerequisite: Placement into KOREAN 1A or KOREAN 1KA or KOREAN 1B or KOREAN 1KB.

Overlaps with KOREAN 1A, KOREAN 1B, KOREAN 1KA, KOREAN 1KB.

Restriction: KOREAN S1AB and KOREAN 1A and KOREAN 1KA and KOREAN 1B and KOREAN 1KB may not be taken for full credit.

KOREAN S1BC. Fundamentals of Korean. 7.5 Units.

Second half of first-year Korean in an intensified form.

Prerequisite: KOREAN S1AB or KOREAN 1B or KOREAN 1KB or placement into KOREAN 1C or KOREAN 1KC. KOREAN S1AB with a grade of C or better. KOREAN 1B with a grade of C or better. KOREAN 1KB with a grade of C or better.

Overlaps with KOREAN 1C, KOREAN 1KB, KOREAN 1KC, KOREAN 1B.

Restriction: KOREAN S1BC and KOREAN 1B and KOREAN 1KB and KOREAN 1C and KOREAN 1KC may not be taken for full credit.

(VI)**KOREAN 2A. Intermediate Korean. 5 Units.**

Designed to develop writing and reading skills as well as communicative skills in authentic situations for students without previous initial background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 1C or KOREAN S1BC or placement into KOREAN 2A. KOREAN 1C with a grade of C or better. KOREAN S1BC with a grade of C or better.

Overlaps with KOREAN 2KA, KOREAN S2AB.

Restriction: KOREAN 2A and KOREAN 2KA and KOREAN S2AB may not be taken for full credit.

(VIII)**KOREAN 2B. Intermediate Korean. 5 Units.**

Designed to develop writing and reading skills as well as communicative skills in authentic situations for students without previous initial background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 2A or placement into KOREAN 2B . KOREAN 2A with a grade of C or better.

Overlaps with KOREAN 2KB, KOREAN S2AB, KOREAN S2BC.

Restriction: KOREAN 2B and KOREAN 2KB and KOREAN S2AB and KOREAN S2BC may not be taken for full credit.

(VIII)

KOREAN 2C. Intermediate Korean. 5 Units.

Designed to develop writing and reading skills as well as communicative skills in authentic situations for students without previous initial background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 2B or placement into KOREAN 2C. KOREAN 2B with a grade of C or better.

Overlaps with KOREAN 2KC, KOREAN S2AB, KOREAN S2BC.

Restriction: KOREAN 2C and KOREAN 2KC and KOREAN S2BC may not be taken for full credit.

(VIII)

KOREAN 2KA. Intermediate Korean for Students with a Previous Background in Korean . 5 Units.

Designed to develop writing and reading skills as well as communicative skills in authentic situations for students with previous background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 1KC or KOREAN S1BC or placement into KOREAN 2KA. KOREAN 1KC with a grade of C or better. KOREAN S1BC with a grade of C or better.

Overlaps with KOREAN 2A, KOREAN S2AB.

Restriction: KOREAN 2KA and KOREAN 2A and KOREAN S2AB may not be taken for full credit.

(VIII)

KOREAN 2KB. Intermediate Korean for Students with a Previous Background in Korean . 5 Units.

Designed to develop writing and reading skills as well as communicative skills in authentic situations for students with previous background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 2KA or placement into KOREAN 2KB. KOREAN 2KA with a grade of C or better.

Overlaps with KOREAN 2B, KOREAN S2BC, KOREAN S2AB.

Restriction: KOREAN 2KB and KOREAN 2B and KOREAN S2AB and KOREAN S2BC may not be taken for full credit.

(VIII)

KOREAN 2KC. Intermediate Korean for Students with a Previous Background in Korean. 5 Units.

Designed to develop writing and reading skills as well as communicative skills in authentic situations for students with previous background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 2KB or placement into KOREAN 2KC. KOREAN 2KB with a grade of C or better.

Overlaps with KOREAN 2C, KOREAN S2BC.

Restriction: KOREAN 2KC and KOREAN 2C and KOREAN S2BC may not be taken for full credit.

(VIII)

KOREAN S2AB. Intensive Intermediate Korean. 7.5 Units.

First half of second-year Korean in an intensive form. Specifically designed for students with no previous initial background in Korean.

Prerequisite: KOREAN 1C or KOREAN S1BC. KOREAN 1C with a grade of C or better. KOREAN S1BC with a grade of C or better.

Overlaps with KOREAN 2A, KOREAN 2B, KOREAN 2KA, KOREAN 2KB.

Restriction: KOREAN S2AB and KOREAN 2A and KOREAN 2KA and KOREAN 2B and KOREAN 2KB may not be taken for full credit.

(VIII)

KOREAN S2BC. Intensive Intermediate Korean. 7.5 Units.

Second half of second-year Korean in an intensive form. Specifically designed for students with no previous initial background in Korean.

Prerequisite: KOREAN 2B or KOREAN S2AB. KOREAN 2B with a grade of C or better. KOREAN S2AB with a grade of C or better.

Overlaps with KOREAN 2C, KOREAN 2B, KOREAN 2KB, KOREAN 2KC.

Restriction: KOREAN S2BC and KOREAN 2B and KOREAN 2KB and KOREAN 2C and KOREAN 2KC may not be taken for full credit.

(VIII)

KOREAN 3A. Advanced Korean. 4 Units.

Focuses on developing advanced reading/writing and translation skills with additional instruction in Chinese characters.

Prerequisite: KOREAN 2C or KOREAN 2KC or KOREAN S2BC or placement in KOREAN 3A. KOREAN 2C with a grade of C or better. KOREAN 2KC with a grade of C or better. KOREAN S2BC with a grade of C or better.

(VIII)

KOREAN 3B. Advanced Korean. 4 Units.

Focuses on developing advanced reading, writing, and translation skills.

Prerequisite: KOREAN 3A or placement into KOREAN 3B. KOREAN 3A with a grade of C or better.

(VIII)

KOREAN 3C. Advanced Korean. 4 Units.
Focuses on developing advanced reading, writing, and translation skills.

Prerequisite: KOREAN 3B or placement into KOREAN 3C. KOREAN 3B with a grade of C or better.

(VIII)

KOREAN 101A. Fourth Year Korean. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of modern texts.

Prerequisite: KOREAN 3C.

KOREAN 101B. Fourth Year Korean. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of modern texts.

Prerequisite: KOREAN 3C.

KOREAN 101C. Fourth Year Korean. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of modern texts.

Prerequisite: KOREAN 3C.

KOREAN 115. Korean Literature: Advanced Texts. 4 Units.
Designed for students with near-fluency in reading Korean. Readings include modern Korean literary works (poetry, prose, and drama) by important writers. Emphasis is on the interpretation of the texts and writings that interpret those texts in the original language.

Prerequisite: KOREAN 101A or KOREAN 101B or KOREAN 101C.

Repeatability: Unlimited as topics vary.

KOREAN 180. Topics in Korean Literature. 4 Units.
Special topics through directed readings in Korean. Paper required.

Repeatability: May be taken for credit 3 times.

KOREAN 199. Independent Study. 1-4 Units.
Investigation of special topics through directed reading in Korean. Paper required.

Repeatability: May be taken for credit for 12 units.

Department of English

435 Humanities Instructional Building; (949) 824-6712
<http://www.humanities.uci.edu/english/>
Julia Reinhard Lupton, **Interim Department Chair**

Faculty in the Department of English include literary theorists and literary historians, rhetoricians, fiction writers, and poets. Students in the Department thus have the opportunity to explore a variety of models for literary analysis while examining the nature and value of literature. English majors learn to interpret written works with the tools of rhetorical and culture analysis; they become familiar with English and American literary history, as well as non-Anglo-American literatures in English; and they are introduced to the history of criticism and theory. At the same time, they learn to do research using both traditional and electronic resources,

and they gain practice at producing effective professional writing, whether critical, journalistic, fictional, or poetic.

Undergraduate Program

All of the Department's areas of study emphasize a variety of critical approaches in the reading and criticism of literature. Two majors, as well as an emphasis in Creative Writing, are offered.

English. This major seeks to introduce students to the entire range of literatures written in English, from British and American to African, Asian, and Australasian literatures. The major emphasizes the differences among historical periods and various genres, and encourages exploration of a broad range of literary theories. It also offers students the opportunity to do significant work in Creative Writing.

Creative Writing This emphasis within the English major provides a setting in which students write original work and subject it to critique in peer workshops led by instructors who are themselves writers. The disciplines of close reading and practical criticism are taken up in the lecture classes.

Literary Journalism. This major was created to meet the needs of a growing number of students who wish to read, study, and write nonfiction prose that has transcended the limits of daily journalism. This is prose that has evolved into a distinct branch of literature, prose that adopts the aims and techniques of the finest fiction. The program provides majors with a solid foundation in nonfiction writing and an equally solid background in areas such as literary history, which together will help make students more informed writers.

Literary Journalism majors take three intensive writing seminars, and are expected to develop a portfolio of work by graduation which they can present as evidence of their skill for purposes of employment or future education. At the same time, majors are asked to take a comprehensive look at the theory, history, and context of literary journalism. Among other forms, they study and write narratives, memoirs, profiles, histories, and personal essays, in subject areas as varied as science, politics, justice, travel, sports, food, and popular culture.

While it differs from an applied journalism major that focuses primarily on newspaper writing, the major in Literary Journalism is excellent preparation for students planning to enter graduate programs in journalism, as well as for those interested in the many careers requiring sophisticated writing and communication skills.

Requirements for the B.A. Degree

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Departmental Requirements for the English Major

A. Complete the following:

ENGLISH 28A	The Poetic Imagination
or ENGLISH 28D	The Craft of Poetry
ENGLISH 28B	Comic and Tragic Vision
ENGLISH 28C	Realism and Romance
or ENGLISH 28E	The Craft of Fiction

B. Complete the following:

ENGLISH 100	History of Literary Theory and Criticism from the Classics to the Present
-------------	---

ENGLISH 101W	Undergraduate Seminar: Topics in Literary Theory and Criticism
C. Complete the following:	
ENGLISH 102A	Topics in Medieval and Renaissance Literature
ENGLISH 102B	Topics in Restoration and Eighteenth-Century Literature
ENGLISH 102C	Topics in Romantic and Nineteenth-Century Literature
ENGLISH 102D	Topics in Twentieth-Century Literature
ENGLISH 105	Multicultural Topics in Literatures in English
ENGLISH 106	Advanced Seminar: Topics in English Literature

D. Select at least three more Departmental (English, Literary Journalism, Writing) courses numbered 102 or above, excluding ENGLISH 150, WRITING 139W, and WRITING 179W. An upper-division foreign literature-in-translation course may be substituted for one of the three courses.¹

E. Completion of one of the following:

- Two years of work in a single acceptable modern foreign language (through 2C) or equivalent, plus either one course in a foreign literature in which texts are read in the original language or two upper-division courses in foreign literatures in translation; or¹

2. Select one of the following:

GREEK 1A- 1B- 1C	Fundamentals of Greek and Fundamentals of Greek and Fundamentals of Greek
LATIN 1A- 1B- 1C	Fundamentals of Latin and Fundamentals of Latin and Fundamentals of Latin

and select either 100A and two 103s, or 100B and two 104S; or

3. Select one of the following:

CHINESE 3C	Advanced Mandarin Chinese
KOREAN 3C	Advanced Korean
JAPANESE 3C	Advanced Japanese
VIETNAMESE 3C	Advanced Vietnamese

NOTE: If a student is exempted from 3C based on examination or equivalent, a course in which texts are read in Chinese, Korean, Japanese, or Vietnamese is required.

¹ Foreign literature-in-translation courses are offered in Classics, Comparative Literature, East Asian Languages and Literatures, French and Italian, German, and Spanish and Portuguese. COM LIT 150, COM LIT 160, E ASIAN 160, FLM&MDA 160, FRENCH 160, GERMAN 160, JAPANESE 180, KOREAN 180, and SPANISH 160 when appropriate, also qualify as foreign language literature-in-translation courses.

Emphasis in Creative Writing

ENGLISH 100	History of Literary Theory and Criticism from the Classics to the Present
WRITING 101W	Undergraduate Seminar: Applications in Literary Theory and Criticism for Creative Writing

Completion of a portfolio

Specific course work (below) in either Poetry or Fiction:

Poetry	
ENGLISH 28D	The Craft of Poetry
WRITING 30	The Art of Writing: Poetry
WRITING 90	Intermediate Poetry Writing
Students may additionally take Writing 111 after submitting work in advance.	
Fiction	
ENGLISH 28E	The Craft of Fiction
WRITING 31	The Art of Writing: Prose Fiction
WRITING 91	Intermediate Fiction Writing
Students may additionally take Writing 110 after submitting work in advance.	

A further, optional course may be taken as a tutorial:

WRITING 115	Conference in Writing
-------------	-----------------------

¹ NOTE: WRITING 101W may be substituted for ENGLISH 101W in the major requirement.

Residence Requirement for the English Major: ENGLISH 100, ENGLISH 101W, two ENGLISH 102s, and ENGLISH 106 must be completed successfully at UCI.

Departmental Requirements for the Literary Journalism Major

A. Complete:

LIT JRN 20	Introduction to Literary Journalism
LIT JRN 21	Reporting for Literary Journalism
LIT JRN 100	Advanced Reporting

B. Select one course from the English 28 series, and¹

ENGLISH 105	Multicultural Topics in Literatures in English
-------------	--

C. Complete:

LIT JRN 101A	Studies in the History, Theory, and Ethics of Literary Journalism
LIT JRN 101BW	Literary Journalism Core Writing Seminar (three times, on various topics)

D. Select at least three more Departmental courses numbered 102 or above (excluding English 150, Writing 139, or Writing 179), for one of which may be substituted an upper-division foreign literature-in-translation course offered in the School of Humanities (that is, requisite courses in Classics, Comparative Literature, East Asian Languages and Literatures, French and Italian, German, Spanish and Portuguese).

E. Two upper-division History courses in a single regional or thematic focus area (excluding History 104).

¹ Students can substitute COM LIT 60A or COM LIT 60C for any one English 28 course.

Residence Requirement for the Literary Journalism Major: LIT JRN 20, LIT JRN 21, LIT JRN 100, LIT JRN 101A, and three LIT JRN 101BW courses must be completed successfully at UCI.

Planning a Program of Study

Students should plan coherent programs of study with their faculty advisors, including undergraduate seminars, workshops and seminars in writing (for students choosing a Literary Journalism major or Creative Writing emphasis), and courses in allied areas outside the Department. It is possible to combine a cluster of courses in literature with other majors in the sciences and social sciences, and to use an English or Literary Journalism major as preprofessional training in government, law, or medicine. Students who wish advice in planning such programs should consult both the Department and people in their prospective professional areas.

A student who intends to continue with graduate work is urged to study a second foreign language before graduation.

Students are also encouraged to take advantage of the opportunity to study abroad through the UC Education Abroad Program. See <http://www.studyabroad.uci.edu> or an academic counselor for additional information.

Careers for the English or Literary Journalism Major

The study of literature helps students express their ideas clearly, do independent research, and think analytically and imaginatively. These capabilities will help qualify majors for careers in education, law, technical writing, communications, journalism, public relations, business, marketing, and management. Departmental advisors encourage their students to investigate various career options before completing their undergraduate educations.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Departmental Requirements for the English Minor

- A. Select three of the following:
- | | |
|-------------|-------------------------|
| ENGLISH 28A | The Poetic Imagination |
| ENGLISH 28B | Comic and Tragic Vision |
| ENGLISH 28C | Realism and Romance |
| ENGLISH 28D | The Craft of Poetry |
| ENGLISH 28E | The Craft of Fiction |
- B. Select at least five Departmental (English, Literary Journalism, Writing) courses numbered 102 or higher (excluding WRITING 139W), although two courses from the following may be substituted:
- | | |
|--------------|---|
| ENGLISH 100 | History of Literary Theory and Criticism from the Classics to the Present |
| ENGLISH 101W | Undergraduate Seminar: Topics in Literary Theory and Criticism |
| WRITING 101W | Undergraduate Seminar: Applications in Literary Theory and Criticism for Creative Writing |

Residence Requirement for the English Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing

course content is approved in advance by the department undergraduate chair.

Departmental Requirements for the Literary Journalism Minor

- A. Complete:
- | | |
|------------|-------------------------------------|
| LIT JRN 20 | Introduction to Literary Journalism |
| LIT JRN 21 | Reporting for Literary Journalism |
- B. Select one course from the English 28 series. ¹
- C. Complete:
- | | |
|--------------|---|
| LIT JRN 100 | Advanced Reporting |
| LIT JRN 101A | Studies in the History, Theory, and Ethics of Literary Journalism |
- D. Complete:
- | | |
|-------------|---|
| LIT JRN 103 | Lectures on Topics in Literary Journalism (three times, on various topics.) |
|-------------|---|

¹ Students can substitute COM LIT 60A or COM LIT 60C for any one English 28 course.

Residence Requirement for the Literary Journalism Minor: LIT JRN 20, LIT JRN 21, LIT JRN 100, and LIT JRN 101A must be completed successfully at UCI. By petition, two of the three LIT JRN 103 courses may be taken through the UC Education Abroad Program, providing course content is approved in advance by the Literary Journalism program.

Graduate Program

The Department's three principal undergraduate offerings—English and American Literature, the English major with a Creative Writing emphasis, and Literary Journalism—are reflected in the graduate programs, which at this level, may also involve collaboration with the Department of Comparative Literature: M.A. and Ph.D. in

English, M.F.A. in English (fiction/poetry), and an emphasis in Creative Nonfiction within the Ph.D. degree in English. The faculty is particularly equipped to guide students with special interests in criticism and theory, an area which candidates for the Ph.D. in English may stress by adding the Schoolwide Critical Theory emphasis. Applicants for graduate degrees in English must submit scores for the Graduate Record Examination (GRE). Ordinarily students are not admitted to the English program unless they plan to continue, and are qualified to continue, to the degree of Ph.D. Students are admitted to the M.F.A. program chiefly on the basis of submitted creative work.

Specific requirements for the graduate degrees will be established by consultation between members of the faculty and the candidate. First-year graduate students or candidates for the Master of Fine Arts in English (fiction/poetry) plan a program with an assigned advisor; candidates for the Ph.D. plan with an advisor and three-person committee. At the time of the M.A. examination, the Graduate Committee evaluates the student's graduate career up to that point and offers advice about future prospects. Candidates for literary degrees are also encouraged to study philosophy, history, foreign languages and literatures, and the fine arts.

Only in exceptional circumstances will students be permitted to undertake programs of less than six full courses during the academic year. The normal expectation is enrollment in three courses each quarter; Teaching Assistants take two courses in addition to earning credit for University

Teaching. Students who are not teaching should be able to complete course work in two years. The Ph.D. qualifying examination should be taken within a couple of quarters after courses are finished. The normative time for completion of the Ph.D. in English is seven years.

The Murray Krieger Fellowship in Literary Theory is intended for an outstanding entering graduate student who is pursuing the Ph.D. in English or Comparative Literature and who demonstrates a primary interest in theory as theory relates to literary texts. A range of other fellowships is also available to students in the Department.

Emphasis in Creative Nonfiction

Students admitted to the emphasis in Creative Nonfiction must meet all course, language, and examination requirements for the Ph.D. in English. Their course work must include: (1) three writing workshops in nonfiction; (2) three courses in nonfictional literature or rhetoric; and (2) if needed for the projected dissertation, one course outside the Department.

Students must also conduct a dissertation defense.

School Emphases

Schoolwide graduate emphases are available in Asian American Studies, Critical Theory, and Feminist Studies. Refer to the appropriate sections of the *Catalogue* for information.

English

Master of Arts in English

Each candidate for the M.A. will be assigned to a graduate advisor who will supervise the student's program. The M.A. plan of study includes: (1) the completion of course work, as advised, for three quarters or the equivalent; (2) demonstrated proficiency in reading a designated foreign language, modern or classical; and (3) the submission of materials (including a statement about work accomplished and plans for future study, and a sample essay) to the Graduate Committee, who will review and assess the student's progress, recommend whether further study toward the Ph.D. is advisable, and, if so, give advice about areas for further study.

The Department of English sponsors a Summer M.A. Program in English designed for teachers and returning students. The M.A. degree in English is awarded to candidates who complete 32 units of graduate course work through two consecutive summers in the program and submit an acceptable Master's essay. Applicants from outside the State of California may apply for the program.

Master of Fine Arts in English

The Master of Fine Arts (M.F.A.) is a degree in fiction writing or poetry. The M.F.A. degree is normally conferred upon the completion of a three-year residence. Each quarter the candidate will be enrolled in either the poetry or fiction section of the Graduate Writers' Workshop, which will constitute two-thirds of a course load, the other course to be selected in consultation with the student's advisor. It is expected that M.F.A. candidates will complete at least one supervised teaching seminar.

In addition to course work, the candidate is required to present as a thesis an acceptable book-length manuscript of poetry or short stories or a novel. The normative time for completion of the M.F.A. is three years, and the maximum time permitted is four years.

Doctor of Philosophy in English

The program for the Ph.D. in English requires about two years of full-time enrollment in regular courses beyond the B.A.; proficiency in the reading of one acceptable foreign language, modern or classical; satisfactory performance on designated examinations; and the dissertation.

The languages acceptable depends upon the nature of the student's program as determined by the student's advisors. Reading competence in this language must be established in the first year of residence. Competence in the language required for the Ph.D. is verified through examination.

Upon completion of course work the student is examined in three areas: (1) a primary field; (2) a secondary field; and (3) theory and/or criticism.

Upon satisfactorily completing this Qualifying Examination, the student is admitted to candidacy for the degree. As soon after completion of the Qualifying Examination as is practical, the student presents a dissertation prospectus for the approval of the doctoral committee. The dissertation itself must also be approved by the committee, which may or may not require an oral examination on it. All work for the Ph.D. degree must be in courses limited to graduate students. The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is nine years.

Faculty

Jonathan Alexander, Ph.D. Louisiana State University, *Campus Writing Coordinator and Professor of English and Education* (writing studies, composition/rhetoric, new media studies, sexuality studies)

Elizabeth Allen, Ph.D. University of Michigan, *Associate Professor of English* (medieval literature and culture)

Etienne Balibar, Ph.D., Katholieke Universiteit Nijmegen, *Professor Emeritus of French and Comparative Literature* (political philosophy, critical theory, epistemology of the social sciences, ethics)

Stephen A. Barney, Ph.D. Harvard University, *Professor Emeritus of English* (medieval literature and culture, allegory)

Jami Bartlett, Ph.D. University of California, Berkeley, *Assistant Professor of English* (narrative theory, the novel, literature and philosophy)

Carol Burke, Ph.D. University of Maryland, *Professor of English* (folklore, cultural studies, creative nonfiction)

Ellen S. Burt, Ph.D. Yale University, *Professor of English and Comparative Literature* (eighteenth-century French literature and nineteenth-century poetry)

James L. Calderwood, Ph.D. University of Washington, *Professor Emeritus of English* (drama, Shakespeare)

Ronald F. Carlson, M.A. University of Utah, *Director of Fiction, Programs in Writing, and Professor of English and Creative Writing* (fiction writing, the short story, twentieth-century American literature)

Jerome Christensen, Ph.D. Cornell University, *Professor of English* (British Romanticism, film studies)

Michael P. Clark, Ph.D. University of California, Irvine, *Vice Provost for Academic Planning and Professor of English* (Colonial American literature, critical theory)

Miles Corwin, M.A. University of Missouri School of Journalism, *Professor of English* (immersion journalism, covering the criminal justice system and law enforcement, true crime, inner city education, affirmative action)

Rebecca Davis, Ph.D. University of Notre Dame, *Assistant Professor of English* (Old and Middle English literature, Piers Plowman, medieval religious culture, women's writing, medieval philosophy, representations of nature and animals in literature)

Robert Folkenflik, Ph.D. Cornell University, *Edward A. Dickson Professor Emeritus of English* (eighteenth-century, novel, biography, and autobiography)

Linda Georgianna, Ph.D. Columbia University, *Professor Emerita of English* (medieval literature and culture)

Amy Gerstler, M.F.A. Bennington College, *Professor of English and Creative Writing* (poetry, nonfiction and journalism)

Richard Godden, Ph.D. University of Kent, *Professor of English* (twentieth-century American literature, literature of the American South, the relation between economic and literary forms)

Daniel M. Gross, Ph.D. University of California, Berkeley, *Director of Composition and Associate Professor of English* (history and theory of rhetoric, early modern literature and culture, Heidegger and rhetoric)

Martin Harries, Ph.D. Yale University, *Professor of English* (modern drama, critical theory, Shakespeare)

Erika Hayasaki, B.A. University of Illinois, Urbana-Champaign, *Assistant Professor of English* (literary journalism, narrative nonfiction, immersion journalism, youth culture, crime, poverty, education, urban affairs, death)

Rebeca Helfer, Ph.D. Columbia University, *Associate Professor of English* (early modern literature and culture, Spenser, rhetoric)

Andrea K. Henderson, Ph.D. University of Pennsylvania, *Professor of English* (nineteenth-century literature; literature and visual arts; literature and science)

John Hollowell, Ph.D. University of Michigan, *Senior Lecturer with Security of Employment Emeritus* (rhetorical theory, teaching of composition, American literature)

Oren Izenberg, Ph.D. The Johns Hopkins University, *Assistant Professor of English* (modern and contemporary Anglophone poetry and poetics)

Virginia Jackson, Ph.D. Princeton University, *Associate Professor of English and Chair in Rhetoric and Communication* (poetics, nineteenth- and twentieth-century American poetry, rhetoric)

Laura H.Y. Kang, Ph.D. University California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English* (feminist epistemologies and theories, cultural studies, ethnic studies)

Ketu H. Katrak, Ph.D. Bryn Mawr College, *Professor of Drama, Comparative Literature, and English* (Asian American literature, postcolonial literature)

Arlene R. Keizer, Ph.D. University of California, Berkeley, *Associate Professor of English* (African American and Caribbean literature and culture, critical race and ethnic studies, feminist theory)

Peter Krapp, Ph.D. University of California, Santa Barbara, *Department Chair and Professor of Film and Media Studies, and Professor of English*

and Informatics (digital culture and media history, secret communications and cultural memory, history and theory of gadgets, games and simulations)

Michelle Latiolais, M.F.A. University of California, Irvine, *Professor of English and Creative Writing* (creative writing, fiction)

Rodrigo Lazo, Ph.D. University of Maryland, *Associate Professor of English* (Latino studies, American ethnic and minority literature, Cuba and Cuban American studies)

James Kyung-Jin Lee, Ph.D. University of California, Los Angeles, *Director of the Graduate Program in Culture and Theory, Department Chair and Associate Professor of Asian American Studies, and Associate Professor of English* (Asian American literature, urban studies, modern social movements, U.S. political economy)

Jayne E. Lewis, Ph.D. Princeton University, *Professor of English* (Restoration and eighteenth-century British literature)

Catherine Liu, Ph.D. The City University of New York, *Director of the Humanities Center and Professor of Film and Media Studies* (intellectual history of cultural studies, academic conflict, psychoanalysis, populism, critical theory)

Julia Reinhard Lupton, Ph.D. Yale University, *Interim Department Chair and Professor of English, and Professor of Comparative Literature and Education* (Shakespeare, Renaissance literature, religious studies, critical theory, design writing)

Juliet Flower MacCannell, Ph.D. Cornell University, *Professor Emerita of English* (eighteenth-century French literature, modern semiotics, comparative literature)

Steven Mailloux, Ph.D. University of Southern California, *Professor Emeritus of English* (rhetoric, critical theory, American literature, law and literature)

James McMichael, Ph.D. Stanford University, *Professor Emeritus of English and Creative Writing* (contemporary poetry, poetry writing, prosody, Joyce)

Jack Miles, Ph.D. Harvard University, *UCI Distinguished Professor of English* (Biblical studies; religion and literature; religion and science; religion and international relations, especially in the Middle East)

J. Hillis Miller, Ph.D. Harvard University, *UCI Distinguished Research Professor Emeritus of English and Comparative Literature* (Victorian literature, critical theory)

Jane O. Newman, Ph.D. Princeton University, *Professor of Comparative Literature and English* (sixteenth- and seventeenth-century German literature, contemporary theory and criticism, feminism)

Robert Newsom, Ph.D. Columbia University, *Professor Emeritus of English* (Victorian literature, theory of fictions)

Ngugi wa Thiong'o, *UCI Distinguished Professor of English and Comparative Literature* (African and Caribbean literatures, theater and film, performance studies, cultural and political theory)

Margot Norris, Ph.D. State University of New York, Buffalo, *UCI Chancellor's Professor Emerita of English and Comparative Literature* (modern Irish, British, American and continental modernism; literature and war)

Laura O'Connor, Ph.D. Columbia University, *Associate Professor of English and Comparative Literature* (British and American modernism, Irish literary studies, postcolonial theory, poetics)

Robert L. Peters, Ph.D. University of Wisconsin, *Professor Emeritus of English* (Victorian literature, contemporary poetry)

Bradley Queen, Ph.D. Boston University, *Lecturer with Potential Security of Employment* (rhetoric and composition, legal studies)

Rajagopalan Radhakrishnan, Ph.D. State University of New York, Binghamton, *UCI Chancellor's Professor of English and Comparative Literature* (postcolonial literature and theory, critical theory, poststructuralism, democracy and minority discourse, nationalisms and diasporas, globalization, feminisms, transnationalism: race, gender, ethnicity)

Barbara L. Reed, Ph.D. Indiana University, *Senior Lecturer with Security of Employment Emerita, English* (American literature, children's literature)

Hugh Roberts, Ph.D. McGill University, *Associate Professor of English* (Romantic literature, eighteenth-century literature, Victorian poetry, literary theory, New Zealand literature)

Michael Ryan, Ph.D. University of Iowa, *Director of Poetry, Programs in Writing, and Professor of English and Creative Writing* (American literature, creative writing, poetry, poetics)

Edgar T. Schell, Ph.D. University of California, Berkeley, *Professor Emeritus of English* (medieval and Renaissance literature)

Gabrielle Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature and English* (modern literature, critical theory, psychoanalysis)

Barry Siegel, M.S. Columbia University Graduate School of Journalism, *Director of Literary Journalism and Professor of English* (literary journalism and creative nonfiction)

Victoria Silver, Ph.D. University of California, Los Angeles, *Director of the Summer M.A. Program and Associate Professor of English* (early modern literature, history and theory of rhetoric, philosophy and literature, religious studies)

James Steintrager, Ph.D. Columbia University, *Professor of English and Comparative Literature* (comparative literature, eighteenth-century French, German, and English literature and aesthetics)

Michael Szalay, Ph.D. The Johns Hopkins University, *Professor of English* (twentieth-century American literature, film and media studies, corporate culture)

Brook Thomas, Ph.D. University of California, Santa Barbara, *UCI Chancellor's Professor of English* (American literature, literature and law)

Harold Toliver, Ph.D. University of Washington, *Professor Emeritus of English* (Renaissance and seventeenth-century literature, theory of genre)

Christopher Tomlins, Ph.D. The Johns Hopkins University, *UCI Chancellor's Professor of Law* (law and humanities, law and society, legal history)

Irene Tucker, Ph.D. University of California, Berkeley, *Associate Professor of English* (Victorian literature, history and theory of the novel, history of medicine and technology, Hebrew literature, literature and philosophy)

Georges Van Den Abbeele, Ph.D. Cornell University, *Dean of the School of Humanities and Professor of Comparative Literature and English*

Ann J. Van Sant, Ph.D. University of California, Berkeley, *Associate Professor of English* (seventeenth- and eighteenth-century literature, eighteenth-century novel, women and fiction, satire)

Andrzej Warminski, Ph.D. Yale University, *Professor of English* (Romanticism, critical theory)

Henry Weinstein, J.D. University of California, Berkeley, *Senior Lecturer with Security of Employment, Law and English* (media law, literary journalism)

Amy Wilentz, B.A. Harvard College, *Professor of English* (literary journalism, creative nonfiction, developing nations' journalism, opinion writing)

Geoffrey Wolff, Novelist and Biographer, *Professor Emeritus of English and Creative Writing* (creative writing, fiction, biography)

Criticism Courses

CRITISM 220A. Studies in Literary Theory and Its History. 4 Units.

Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English, and American theorists.

Same as HUMAN 220A.

Restriction: Graduate students only.

CRITISM 220B. Studies in Literary Theory and Its History. 4 Units.

Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English, and American theorists.

Same as HUMAN 220B.

Restriction: Graduate students only.

CRITISM 240. Advanced Theory Seminar. 4 Units.

Studies in selected areas of Criticism Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

English Courses

ENGLISH 10. Topics in English and American Literature. 4 Units.

Explores the diversity of human expression manifested in selected works of literature. By engaging with substantial literary texts, students will think critically about how meaning is created and how experience is interpreted in literary language.

Repeatability: May be taken for credit 3 times as topics vary.

(IV)

ENGLISH 28A. The Poetic Imagination. 4 Units.

Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(IV)

ENGLISH 28B. Comic and Tragic Vision. 4 Units.

Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(IV)

ENGLISH 28C. Realism and Romance. 4 Units.

Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(IV)

ENGLISH 28D. The Craft of Poetry. 4 Units.

Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers. Requires creative writing.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(IV)

ENGLISH 28E. The Craft of Fiction. 4 Units.

Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers. Requires creative writing.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(IV)

ENGLISH 100. History of Literary Theory and Criticism from the Classics to the Present. 4 Units.

A series of lectures and discussions beginning with a focus on ancient critics and literary theorists, and pursuing the issues they raise from medieval times to modernity. To be taken by English majors in the junior year.

Prerequisite: (Three courses in ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E) or (LIT JRN 20 and LIT JRN 21 and (ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E)).

ENGLISH 101W. Undergraduate Seminar: Topics in Literary Theory and Criticism. 4 Units.

Each instructor defines a theoretical, critical, or conceptual topic (e.g., theme, approach, genre) and explores it through an emphasis on literary texts. To be taken as early as possible in the junior year.

Prerequisite: (Three courses in ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E) or (LIT JRN 20 and LIT JRN 21 and (ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E)). Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only. English majors have first consideration for enrollment.

(Ib)

ENGLISH 102A. Topics in Medieval and Renaissance Literature. 4 Units.

Studies of works representative of Medieval and Renaissance literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre.

Prerequisite: (Three courses in ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E) or (LIT JRN 20 and LIT JRN 21 and (ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E)).

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only. English majors have first consideration for enrollment.

ENGLISH 102B. Topics in Restoration and Eighteenth-Century Literature . 4 Units.

Studies of works representative of Restoration and eighteenth-century literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre.

Prerequisite: (Three courses in ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E) or (LIT JRN 20 and LIT JRN 21 and (ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E)).

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only. English majors have first consideration for enrollment.

ENGLISH 102C. Topics in Romantic and Nineteenth-Century Literature. 4 Units.

Studies of works representative of Romantic and nineteenth-century literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre.

Prerequisite: (Three courses in ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E) or (LIT JRN 20 and LIT JRN 21 and (ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E)).

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only. English majors have first consideration for enrollment.

ENGLISH 102D. Topics in Twentieth-Century Literature. 4 Units.

Studies of works representative of twentieth-century literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre.

Prerequisite: (Three courses in ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E) or (LIT JRN 20 and LIT JRN 21 and (ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E)).

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only. English majors have first consideration for enrollment.

ENGLISH 103. Topics in Literature, Theory, and Criticism. 4 Units.

A series of lectures on and discussions of announced topics in literary criticism, theory, history, genres, modes, major authors.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Recommended: Upper-division students only.

ENGLISH 105. Multicultural Topics in Literatures in English. 4 Units.

Focuses on ethnic or minority literatures, or treats issues related to race and cultural identity.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Recommended: Upper-division students only.

ENGLISH 106. Advanced Seminar: Topics in English Literature . 4 Units.

Capstone course. Required for English majors. Limited to 25 students. Focuses on a topic within the area of literatures in English. Provides intensive work on a single topic in the field of English in a discussion setting.

Prerequisite: ENGLISH 101W or WRITING 101W and two upper-division ENGLISH courses.

Repeatability: Unlimited as topics vary.

Restriction: English majors have first consideration for enrollment. Seniors only.

ENGLISH 150. Topics in Literature for Nonmajors . 4 Units.

Major texts in English, American, and Comparative Literature explored for basic humanistic issues and themes, on announced topics. Primarily for upper-division students, but not requiring previous training in literature.

Repeatability: Unlimited as topics vary.

Restriction: Recommended: Upper-division students only.

ENGLISH 160. English Language Cinema. 4 Units.

Focuses on any one of the different cinematic traditions in the English-speaking world, from a historical theoretical, or comparative perspective.

Repeatability: May be taken for credit 2 times as topics vary.

ENGLISH 198. Special Topics. 4 Units.

Directed group study of selected topics as arranged by instructor.

Repeatability: May be repeated for credit unlimited times.

ENGLISH 199. Independent Study. 1-4 Units.

To be taken only when the materials to be studied lie outside the normal run of departmental offerings, and when the student will have no formal chance to pursue the subject. Research paper required.

Repeatability: May be repeated for credit unlimited times.

ENGLISH 210. Studies in Literary History. 4 Units.

Studies in selected areas of literary history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

ENGLISH 215. Prospectus Workshop. 2 Units.

Workshop for the writing of the graduate student prospectus for those who have completed their qualifying examinations. Topics covered and assignments completed culminate in a presentation of a draft of the prospectus in class. Biweekly discussions.

ENGLISH 225. Studies in Literary Genres. 4 Units.

Studies in selected areas of literary genres. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

ENGLISH 230. Studies in Major Writers. 4 Units.

Studies in selected areas of major writers. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

ENGLISH 255. Graduate Workshop in Academic Publishing. 4 Units.

Reading and critique of student-authored essays with the goal of producing a publishable essay. Instructor leads discussion, meets with students individually, and provides an introduction to appropriate venues for publication and the process of submission, peer review, and revision.

Grading Option: Satisfactory/unsatisfactory only.

ENGLISH 290. Reading and Conference. 4-12 Units.

Studies in selected areas. Topics addressed vary each quarter.

Repeatability: May be repeated for credit unlimited times.

ENGLISH 291. Guided Reading Course. 4 Units.

Studies in selected areas. Topics addressed vary each quarter.

ENGLISH 299. Dissertation Research. 4-12 Units.

A units-only course for students in the dissertation phase.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

ENGLISH 398. Rhetoric/Teaching of Composition. 4 Units.

Readings, lectures, and internship designed to prepare graduate students to teach composition. Formal instruction in rhetoric and practical work in teaching methods and grading.

ENGLISH 399. University Teaching. 4 Units.

A units-only course for students appointed as teaching assistants or associates.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Literary Journalism Courses

LIT JRN 20. Introduction to Literary Journalism. 4 Units.

Reading of selected texts to explore the ways in which literary journalism and related nonfiction modes formulate experience. Students complete a range of writing projects.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Literary Journalism majors have first consideration for enrollment.

(IV)**LIT JRN 21. Reporting for Literary Journalism. 4 Units.**

Instruction and hands-on training in how to interview, report, research, and collect the types of information needed to write literary journalism.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Literary Journalism majors have first consideration for enrollment.

LIT JRN 100. Advanced Reporting. 4 Units.

Practical engagement with advanced reporting techniques of Literary Journalism, emphasizing the importance of thorough and effective research in the production of high-quality journalistic writing. Prepares students to make good decisions about where and how to publish their writing.

Prerequisite: LIT JRN 21.

LIT JRN 101A. Studies in the History, Theory, and Ethics of Literary Journalism. 4 Units.

Required of upper-division majors in Literary Journalism. Lectures and discussion on topics that explore the historical and theoretical dimensions of literary journalism, with particular emphasis on the evolution of ethics in the field.

Prerequisite: LIT JRN 21 and LIT JRN 20 and (ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E or COM LIT 60A or COM LIT 60B or COM LIT 60C).

LIT JRN 101BW. Literary Journalism Core Writing Seminar. 4 Units.

Limited to 20 students. Writing seminars in announced specialized genres that students will both study and practice. Examples: "The Memoir"; "Review Writing"; "The Editorial"; "Writing Biography"; "The Profile"; "Political Writing."

Prerequisite: LIT JRN 101A. Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: May be taken for credit 3 times as topics vary.

Restriction: Upper-division students only. Students may enroll in a maximum of one LIT JRN 101BW course per quarter.

(Ib)**LIT JRN 103. Lectures on Topics in Literary Journalism. 4 Units.**

A series of lectures on, and discussions of, announced topics in literary journalism and the literature of fact. Examples: "Writing the Palate"; "Early Modern Women in the Public Sphere"; "Victorian Cultural Critics"; "Writing about War."

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Recommended: Upper-division students only.

LIT JRN 198. Special Topics. 4 Units.

Directed group study of selected topics.

Repeatability: Unlimited as topics vary.

LIT JRN 199. Reading and Conference. 1-4 Units.

To be taken only when the materials to be studied lie outside the normal run of departmental offerings, or when students have obtained internships at local publications.

Repeatability: May be repeated for credit unlimited times.

Writing Courses

WRITING 30. The Art of Writing: Poetry. 4 Units.

Beginners' workshop in the writing of poetry, evaluation of student manuscripts, and parallel readings.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Repeatability: May be taken for credit 2 times.

(Ia)

WRITING 31. The Art of Writing: Prose Fiction. 4 Units.

Beginners' workshop in fiction writing, evaluation of student manuscripts, and parallel readings.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Repeatability: May be taken for credit 2 times.

(Ia)

WRITING 37. Intensive Writing. 6 Units.

Offers instruction in the process of writing, rhetorical principles, and sentence-level mechanics. Provides guided practice in writing. Readings selected from current fiction and nonfiction; writing assignments require analysis of readings and demonstration of rhetorical principles.

Prerequisite: Students must have taken the Analytical Writing Placement Examination.

Overlaps with WRITING 39A, WRITING 39B.

Restriction: Enrollment open only to recommended students.

(Ia)

WRITING 39A. Introduction to Writing and Rhetoric. 4 Units.

Deals with the writing of expository essays, principles of rhetoric, paragraph development, and the fundamentals of sentence-level mechanics. Frequent papers, some exercises. Course may be offered online.

Prerequisite: Students must have taken the UC Analytical Writing Placement Examination with placement in Writing 39A.

Overlaps with WRITING 37, WRITING 39A.

WRITING 39B. Critical Reading and Rhetoric. 4 Units.

Guided practice in the critical reading and written analysis of both popular and academic prose. Readings selected from literary, academic, journalistic, and fictional genres; writing topics require rhetorical analysis of readings and demonstration of rhetorical principles in student writing. Course may be offered online.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Overlaps with WRITING 37.

(Ia)

WRITING 39C. Argument and Research. 4 Units.

Guided writing practice in argumentation, logic, and inquiry. Readings are selected from current nonfiction and from materials students select from the University Library. Research strategies emphasized. Course may be offered online.

Prerequisite: WRITING 37 or WRITING 39B.

(Ia)

WRITING 90. Intermediate Poetry Writing. 4 Units.

Intermediate workshop in the writing of poetry, evaluation of student manuscripts, and parallel readings.

Prerequisite: WRITING 30.

Repeatability: May be taken for credit 2 times.

WRITING 91. Intermediate Fiction Writing. 4 Units.

Intermediate workshop in the writing of fiction, evaluation of student manuscripts, and parallel readings.

Prerequisite: WRITING 31.

Repeatability: May be taken for credit 2 times.

WRITING 101W. Undergraduate Seminar: Applications in Literary Theory and Criticism for Creative Writing. 4 Units.

Substitute for ENGLISH 101 for Creative Writing emphasis students.

Prerequisite: ENGLISH 100 or LIT JRN 100. Satisfactory completion of the lower-division writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: English majors and Literary Journalism majors only.

(Ib)

WRITING 110. Short Story Writing. 4 Units.

Three-hour workshop in short fiction; discussion of student writing and of relevant literary texts.

Repeatability: May be taken for credit 2 times.

WRITING 111. Poetry Writing. 4 Units.

Three-hour advanced poetry writing workshop; discussion of student writing and of relevant literary texts.

Repeatability: May be taken for credit 2 times.

WRITING 113. Novel Writing. 4 Units.

Three-hour advanced workshop in fiction writing; discussion of student writing and of relevant literary texts.

WRITING 115. Conference in Writing. 4 Units.

Primarily for writing emphasis seniors.

Repeatability: May be taken for credit 2 times.

WRITING 139W. Advanced Expository Writing. 4 Units.

Study of rhetorical techniques; practice in writing clear and effective prose. Several essays of varying lengths, totaling at least 4,000 words. May not be counted toward the upper-division requirements for majors or minors.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only.

(Ib)

WRITING 179W. Advanced Composition for Teachers. 4-4 Units.

Principles of formal composition and problems of teaching. Selecting handbooks and ancillary reading, marking papers, making assignments, and conducting workshops and tutorials.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Same as EDUC 179W.

Restriction: Upper-division students only.

(Ib)

WRITING 197. Writing Internship . 2-4 Units.

Internships focused on writing. In consultation with a faculty advisor, students create a course from response essays, research essays, and assessment project data. Internships may include editing and publication projects, supervised teaching and tutoring assignments, community literacy projects.

Prerequisite: Satisfactory completion of the lower-division writing requirement.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

WRITING 250A. Graduate Writers' Workshop (Fiction). 4 Units.

Graduate fiction workshop open to students enrolled in the MFA program in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

WRITING 250B. Graduate Writers' Workshop (Fiction). 4 Units.

Graduate fiction workshop open to students enrolled in the MFA program in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

WRITING 250C. Graduate Writers' Workshop (Poetry). 8 Units.

Graduate poetry workshop open to students enrolled in the MFA Programs in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: School of Humanities graduate students only.

WRITING 251A. Writing in Conference (Fiction). 4 Units.

Graduate fiction workshop open to students enrolled in the MFA program in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

WRITING 251B. Writing in Conference (Fiction). 4 Units.

Graduate fiction workshop open to students enrolled in the MFA program in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

WRITING 251C. Writing in Conference (Poetry). 8 Units.

Graduate poetry workshop open to students enrolled in the MFA Programs in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

WRITING 252. Graduate Workshop in Nonfiction. 4 Units.

Reading and critique of student manuscripts in creative nonfiction. The instructor leads discussions and meets with students on an individual basis.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

Department of European Languages and Studies

243 Humanities Instructional Building; (949) 824-6406

<http://www.humanities.uci.edu/els/>

Gail K. Hart, **Department Chair**

The Department of European Languages and Studies provides undergraduates with the opportunity to study Europe in its geographical, linguistic, historical, literary, artistic, and cultural diversity. The literatures, histories, and cultures of European nation-states have always been closely interconnected, even before the individual regions became nation-states. It is nearly impossible to study any era—the Early Modern period, the Renaissance, the Enlightenment, the Romantic period, or the Modern period—without taking into account the influence of one European nation

on other European nations. Almost all significant European literary and artistic movements have been cross-cultural and transnational. The current configuration of Europe—the European Union—is merely the most recent socio-political and economic realization of the intense cross-pollination of ideas and institutions that defines—and has always defined—the continent. Immigration and the displacement of populations throughout the continent are constants of European history and have long inflected literary and artistic production in ways scholars continually explore.

The Department offers majors in European Studies, French, and German Studies; minors in European Studies, French, German Studies, Italian Studies, and Russian Studies; as well as a graduate program (M.A., Ph.D.) in German. The Department also offers language training in French, German, Italian, and Russian with emphasis on the communicative and interpretive aspects of language learning. University language study is the critical investigation of a foreign linguistic system and the cultures defined by it. It is also an investigation of one's own native language(s): it is nearly impossible for us to scrutinize and analyze something we know as intimately as our native language and yet this is the order by which we formulate our thoughts and the order which may sometimes formulate our thoughts for us. The "foreignness" of a foreign language allows us to objectify an entire linguistic system, to observe its structure and its usage, and then to make comparisons with our own linguistic situation. This kind of knowledge of one's own languages is the foundation of critical reflection on texts of any nature—historical, philosophical, literary, political, legal, journalistic, and others. Thus serious study of a language other than English is absolutely crucial to a university education. The Department teaches its language courses with this principle in mind and seeks to provide its students with a framework for critical linguistic and cultural learning.

Career Opportunities

European Studies

A degree in European Studies prepares its graduates to enter advanced degree programs in international business, history, law, and political science. The strong academic skills and professional orientation acquired by European Studies majors are necessary to pursue successful careers in such fields as international banking, law, journalism, management, public relations, publishing, and government service. Humanities graduates in general learn to express ideas clearly, do independent research, and think analytically and imaginatively—the required tools for success beyond the undergraduate career.

French

The great majority of students who major in European Studies pursue careers in business and commerce, where they can take advantage not only of their proficiency in French language but also of their knowledge of French literature and culture. Students also go on to law school, to medical school, and to careers in the diplomatic service and education. The multidisciplinary approach to the study of literature teaches students to think critically and develops analytical skills that can be applied to a wide range of problems. It also helps students develop the interpretive and writing skills necessary to express their own ideas clearly and persuasively. Whether they enter business or professions such as law, education, or government, French majors acquire the intellectual and communicative skills requisite for success.

German Studies

The ability to speak and write German can open up opportunities in communications, foreign trade and banking, transportation, government,

science and technology, tourism, library services, and teaching. Because German plays an important role in modern technology, employers in international law, business, the foreign service, the airline industry, journalism, professional translating, and all levels of education increasingly seek students with a knowledge of German. German is excellent preparation for professional schools. It can be combined successfully with work in the natural sciences, business and management, and the computer sciences, and it is invaluable for advanced work in the humanities and the arts.

Graduates of the German program have begun careers in international law, business, the foreign service, the airline industry, journalism, and all levels of education, including university teaching.

UCI Career Center

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. For additional information, see the Career Center (p.) section.

Undergraduate Program in European Studies

The European Studies program focuses on the study of Europe from the vantage points of several disciplines in the humanities and social sciences. Because Europe is both a geographical place and an idea that changes throughout history, it has had different meanings at different times and in different places. The study of Europe thus requires an open, pluralistic, and interdisciplinary curriculum that takes a critical approach to the idea (or ideas) of Europe.

The program provides a multidisciplinary view of Europe as a whole and of its historical, political, and cultural formation and global implications. It also provides a focus on a specific area of European experience that cuts across traditional disciplinary and national boundaries. Participation in the UC Education Abroad Program in a European country is strongly recommended for all European Studies majors.

Requirements for the B.A. Degree in European Studies

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Requirements for the Major

Completion of two years of language (through the 2C level or equivalent) in French, German, classical Greek, Italian, Latin, Portuguese, Russian, or Spanish.

Fourteen courses, of which five may be lower-division:

A. Complete:

HISTORY 70B	Problems in History: Europe
-------------	-----------------------------

B. Complete:

EURO ST 101A- 101B	European Studies Core I - Early Europe (Pre-1789) and EUROPEAN STUDIES CORE II: MODERN EUROPE (1789-PRESENT)
--------------------	--

C. Six courses from an approved emphasis list (see sample below), four of which must be upper-division.

D. Four multidisciplinary electives: two courses in European History or Political Science or Social Science outside the student's emphasis, and two courses in European Literature or Arts outside the student's emphasis.¹

E. Complete:

EURO ST 190W	Senior Seminar in European Studies
--------------	------------------------------------

¹ For the student with a focus on modern Europe, at least one of these courses must be on a pre-1789 topic; for the student with an emphasis in Medieval or Early Modern Europe, one of these courses must be on a post-1789 topic.

NOTE: One course from either the approved emphasis list or the elective category must be from the Encounters with the Non-European World emphasis.

NOTE: Courses are sometimes approved in more than one emphasis. Any course that appears on the approved list for a student's emphasis cannot be used as a course outside the emphasis even if it also appears on other lists.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Emphases and Approved Courses: The following emphases are available in the major in European Studies:

- British Studies
- Early Modern Europe (1450–1789)
- Encounters with the Non-European World
- French Studies
- German Studies
- Italian Studies
- Medieval Studies
- Modern Europe (1789–present)
- Russian Studies
- Spanish/Portuguese Studies
- The Mediterranean World: Past and Present

The list of approved courses is extensive and varies from quarter to quarter, depending upon course scheduling. For complete up-to-date information about approved courses, students are advised to consult the European Languages and Studies Web site at <http://www.humanities.uci.edu/els>.

Requirements for the Minor

A. Complete:

HISTORY 70B	Problems in History: Europe
-------------	-----------------------------

B. Complete:

EURO ST 101A- 101B	European Studies Core I - Early Europe (Pre-1789) and EUROPEAN STUDIES CORE II: MODERN EUROPE (1789-PRESENT)
--------------------	--

C. Three courses selected from a single emphasis.

D. Four electives: two courses in European History or Political Science or Social Science outside the student's emphasis, and two courses in European Literature or Arts outside the student's emphasis, approved by petition to the European Studies Committee.¹

¹ For the student with a focus on modern Europe, at least one of these courses must be on a pre-1789 topic; for the student with an emphasis in Medieval or Early Modern Europe, one of these courses must be on a post-1789 topic.

NOTE: Courses are sometimes approved in more than one emphasis. Any course that appears on the approved list for a student's emphasis cannot be used as a course outside the emphasis even if it also appears on other lists.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department Undergraduate Director.

Undergraduate Program in French

The undergraduate major in French offers a broad humanistic course of study designed for students in the liberal arts. The orientation of the program is multidisciplinary, where the study of literature is linked to critical, cultural, and historical concerns. Courses reflect the faculty's interest in the related disciplines of history, philosophy, anthropology, women's studies, cultural studies, and comparative literature, and express its conviction that the study of French literature and culture is enriched by pursuing its relations with other disciplines, fields, and cultures.

Lower-division language courses encourage students to participate in the creative process of language, to think in French as they learn to understand, speak, read, and write. These courses are taught entirely in French; the Language Laboratory is used to complement classroom activity.

At the intermediate lower-division level, texts of contemporary literary and social interest provide the focus for advanced conversation, reading, and composition. After the second year, advanced courses in conversation and writing enable students to attain a greater degree of proficiency, preparing them for further study in the upper-division program. In the advanced courses, the student learns to analyze and interpret different types of creative literature and is introduced to various critical concepts and vocabularies. In recent years, courses have been offered in literature and the Enlightenment, the Surrealist imagination, French cinema, autobiography, Francophone literature, literature by women, and literature, war, and memory. The content of courses changes yearly according to the interests of both faculty and students. In the junior or senior year, students have the opportunity, in the context of the capstone seminar (FRENCH 185), to pursue a single project in depth, leading to a final research paper.

The program strongly encourages its students to take advantage of the study-abroad programs in French-speaking countries to improve their language skills and gain invaluable cultural experience in a foreign university setting. The program recommends the UC Education Abroad Program which runs programs of differing lengths in France (Lyon, Bordeaux, and Paris). Credit for courses taken through study-abroad programs is available. Students are advised to discuss their course of

study with the Undergraduate Director before their departure and to arrange to bring home proof of their work.

Language placement examinations are not required, although an optional placement examination is available. Students will be placed in French language courses according to their years of previous study. See Language Other Than English Placement and Progression.

Transfer students who have had a previous course (or courses) in French from another college or university who want to enroll in any French 1A through 2C course at UCI must take a copy of their transcript to their academic counseling office in order to receive authorization to enroll in the appropriate course.

Requirements for the B.A. Degree in French

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Departmental Requirements for the Major

A. Complete:

FRENCH 100A	Advanced Grammar and Composition
FRENCH 100B	Essay Writing
FRENCH 101A	Introduction to Nineteenth-Century French Literature
FRENCH 101B	Introduction to Eighteenth-Century French Literature
FRENCH 101C	Introduction to Twentieth-Century French Literature
FRENCH 185	Junior/Senior Seminar in French Literature and Culture

B. Six additional upper-division French courses.

Students may take up to three French courses taught in English.

Residence Requirement for the Major: FRENCH 185 and four upper-division courses (excluding FRENCH 100A, FRENCH 100B, FRENCH 101A, FRENCH 101B, FRENCH 101C) must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved by the Humanities Office of Undergraduate Study and the Director of the undergraduate program in French.

Requirement for the French Minor

A. Complete:

FRENCH 100A	Advanced Grammar and Composition
FRENCH 100B	Essay Writing

B. Five French courses, four of which must be upper-division; four of these must be taught in French. Prerequisite: FRENCH 2C or equivalent.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department Undergraduate Director.

Planning a Program of Study

Students should consult with the faculty to plan a coherent program of courses to fulfill the major requirements. Students also should consult

with faculty members concerning career plans in areas such as teaching, industry, journalism, law, and civil service.

Courses

Click on the "Courses" tab at the top of this page and scroll down to "French Courses."

Undergraduate and Graduate Programs in German Studies

The German Studies programs emphasize the humanistic endeavor of understanding and evaluating culture. Courses are focused on language, literature, and film in context, that is within the historical, social, linguistic, intellectual, and political circumstances of their production and continuing reception. Courses on German, Austrian, and Swiss literature, film, and culture offer a variety of critical perspectives from historical, social, or politically engaged readings to feminist analysis and cultural studies perspectives. Topics range from authors, periods, and genres to the history of German-language literature and film, theory and criticism, European cultural relations, and cultural artifacts in a globalized social and political context.

The German Studies major can be combined as a double major with any other UCI course of study, and the minor may be taken in tandem with any UCI major.

Courses in the program are taught in German to the extent compatible with the aim of the course. In the lower-division language courses students develop skills in speaking, listening, reading, and writing through an engaging, collaborative, task-based curriculum. The courses place a great deal of emphasis on meaningful cultural literacy in German, employing a diverse range of authentic texts and materials from the beginning. During the second year (intermediate), students benefit from a curriculum based on authentic literary and cultural content (theatre, media) and simulation of "real world" situations. These courses have the additional goal of contributing to students' education in the humanities and developing their skills in critical thinking.

After completion of the intermediate level, students enroll in the GERMAN 101–GERMAN 105 series, which emphasizes advanced reading, writing, and speaking skills while providing an introduction to a variety of German topics and texts in literature, culture, film, linguistics, and business. Courses in this series are taken in preparation for GERMAN 115, GERMAN 117, GERMAN 118, GERMAN 119, GERMAN 120, GERMAN 130, which provide advanced instruction in periods ranging historically from the Reformation to the present and cover a variety of topics and approaches. A further series of courses (GERMAN 140, GERMAN 150, GERMAN 160, GERMAN 170) is taught in English for both German Studies students and those who do not speak the language, and covers topics in German, Austrian, and Swiss literature and culture, literary theory, linguistics, and criticism as well as German-language cinema.

Students are encouraged to participate in work- and study-abroad programs in German-speaking countries. The Department recommends the UC Education Abroad Program (EAP) in Berlin where students may enroll at any of the city universities (Free University, Humboldt University, Berlin Technical University) and take courses at others as desirable. UCEAP students complete an advanced language program before enrolling in university courses.

German placement tests are recommended for students who have successfully completed foreign language classes in high school or

elsewhere. To obtain information about the German placement test, contact the UCI Academic Testing Office at (949) 824-6207. Students with college-level course work should present their transcript to their academic counseling office, for assistance in determining which UCI course to take.

Requirements for the B.A. Degree in German Studies

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Departmental Requirements for the Major

A. Select six of the following:

GERMAN 101	Introduction to German Literature and Culture
GERMAN 102	German Culture and Society
GERMAN 103	German Film
GERMAN 104	Introduction to Germanic Linguistics
GERMAN 105	German for Business and Economics
GERMAN 115	Advanced German for Business and Economics
GERMAN 117	Topics in German Literature and Culture 750-1750
GERMAN 118	Studies in the Age of Goethe
GERMAN 119	Studies in Nineteenth-Century German Literature and Culture
GERMAN 120	Studies in Twentieth Century German Literature and Culture
GERMAN 130	Topics in German Literature and Culture

B. Select three of the following: ^{1,2}

GERMAN 140	Topics in Literary Theory and Criticism
GERMAN 150	German Literature and Culture in Translation
GERMAN 160	German Cinema
GERMAN 170	Topics in German Linguistics

C. Select three of the following (as approved by the advisor for the major): ²

GERMAN 140	Topics in Literary Theory and Criticism
GERMAN 150	German Literature and Culture in Translation
GERMAN 160	German Cinema
GERMAN 170	Topics in German Linguistics
LINGUIS 3	Introduction to Linguistics
Comparative Literature	
German history	
German philosophy	
German political science	

¹ One of which can be taken in satisfaction of the upper-division writing requirement.

² GERMAN 140, GERMAN 150, GERMAN 160, GERMAN 170 are variable topics courses and may be repeated for credit as topics vary.

Residence Requirements for the Major: At least six of the upper-division courses required for the major must be completed successfully at UCI. Other courses may be taken through the UC Education Abroad Program, provided that course content is approved in advance by the Undergraduate Director and the Humanities Office of Undergraduate Study.

Education Abroad Option: Up to a maximum of six upper-division courses taken during study abroad may be counted toward the major requirement. All such courses must be approved by the Undergraduate Director and students are advised to consult with the Undergraduate Director both before and after their stay abroad. Course approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the foreign host university, and (2) approval by the Undergraduate Director and the Humanities Office of Undergraduate Study. In planning their undergraduate career, all students should keep in mind the Residence Requirement (see above).

Departmental Requirements for the Minor

A. Select four of the following:

GERMAN 101	Introduction to German Literature and Culture
GERMAN 102	German Culture and Society
GERMAN 103	German Film
GERMAN 104	Introduction to Germanic Linguistics
GERMAN 105	German for Business and Economics
GERMAN 115	Advanced German for Business and Economics
GERMAN 117	Topics in German Literature and Culture 750-1750
GERMAN 118	Studies in the Age of Goethe
GERMAN 119	Studies in Nineteenth-Century German Literature and Culture
GERMAN 120	Studies in Twentieth Century German Literature and Culture
GERMAN 130	Topics in German Literature and Culture

B. Select three of the following:

GERMAN 101	Introduction to German Literature and Culture
GERMAN 102	German Culture and Society
GERMAN 103	German Film
GERMAN 104	Introduction to Germanic Linguistics
GERMAN 105	German for Business and Economics
GERMAN 115	Advanced German for Business and Economics
GERMAN 117	Topics in German Literature and Culture 750-1750
GERMAN 118	Studies in the Age of Goethe
GERMAN 119	Studies in Nineteenth-Century German Literature and Culture
GERMAN 120	Studies in Twentieth Century German Literature and Culture

GERMAN 130	Topics in German Literature and Culture
GERMAN 140	Topics in Literary Theory and Criticism
GERMAN 150	German Literature and Culture in Translation
GERMAN 160	German Cinema
GERMAN 170	Topics in German Linguistics

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided that course content is approved in advance by the German Undergraduate Director and the Humanities Office of Undergraduate Study.

Courses

Click on the "Courses" tab at the top of this page and scroll down to "German Courses."

Graduate Program

In its graduate courses the Department stresses theoretical understanding of the nature of literature and culture. Seminars focus on German literary and cultural development after 1700. An emphasis in Critical Theory is available to graduate students in all departments of the School of Humanities. In addition, graduate students in German may choose to complete an emphasis in Comparative Literature, Feminist Studies, or Visual Studies.

The graduate program in German is essentially a Ph.D. program; however, the faculty will consider admitting students who plan to pursue a terminal M.A. The M.A. requires a minimum of one year in academic residence, passing of the comprehensive examination, and must be completed in no more than two years of full-time graduate study. For those in the Ph.D. program, the faculty will decide after completion of the M.A., at the latest, whether to permit the student to continue in the Ph.D. program or recommend discontinuation. In those cases where the student enters the UCI graduate program in German with an M.A. from another institution, the faculty will evaluate the student's progress during the first year of study before deciding to recommend continuation or discontinuation.

For students who enter with normal academic preparation and pursue a full-time program of study, the normative time to degree for the Ph.D. is six years or less.

Master of Arts in German

Before entering the program, a candidate is expected to have the equivalent of the UCI undergraduate German Studies major. Students with a bachelor's degree in another subject may be considered for admission. Normally their course of study will have to be extended in order to make up for the deficiency. However, each case is considered individually by the faculty. The minimum course requirement for the M.A. degree is nine courses, eight of which must be taken from offerings of the German graduate program. Reading knowledge of a foreign language other than German also is required for the M.A. degree. Whenever possible, a candidate is urged to complete this requirement before entering the program. Further requirements follow.

Students entering with a B.A. must complete their requirements for the M.A. by the end of the second year of study (six quarters) at the latest.

The Preparation of a Reading List. All candidates should prepare as early as possible a list of works read in the field of German literature, both primary texts and critical works. This list should preferably be augmented by critical texts and by works from other literatures which, in the candidate's opinion, relate to the German works on the list. Since it should ultimately contain representative selections from various eras of German literature and some works of criticism, a tentative list must be discussed with the graduate advisor before the end of the fall quarter of the year in which the candidate expects to receive the M.A. Candidates should indicate on the list a number of works with which they are especially familiar. In its final form (including works read during the course of study both in and out of class) the list will be submitted together with the master's essay two weeks before the oral examination. It is the student's responsibility to keep the reading list current.

M.A. Comprehensive Examination (consists of two parts):

1. **The Master's Essay.** The purpose of the written part of the M.A. comprehensive examination is to show the candidate's methodological progress in interpreting German literature and film. It consists of an essay in which a text is elucidated and related to (a) pertinent works by the same author, (b) its social and historical context, and (c) other works of German or other literatures with which the candidate is familiar. The level of the discussion will normally be enhanced by the candidate's knowledge of the relevant secondary literature. The topic of the essay should be tentatively formulated and reported to the graduate advisor before the end of the second quarter of the student's residence.
2. **The Oral Examination.** During the oral examination the following items will be discussed: (a) the essay, and (b) the reading list. The discussion based on the reading list will focus on works which the student knows well, but may broaden into other areas.

One Year of Residence.

Doctor of Philosophy in German

The program requires a minimum of 22 approved courses from students entering with a bachelor's degree. These may include courses in philosophy, history, comparative literature, and others suitable for the individual student's program of study. The student also will participate in each of the German Program's colloquia. The student will augment the reading list and keep it current during the whole course of study. At least two years of residence are required.

Students entering with the master's degree will be advised individually as to remaining course requirements.

Since the majority of German Ph.D. candidates choose careers that involve teaching, the faculty recognizes its obligation to offer them preparatory experience. Therefore, all candidates for the German Ph.D. are required to teach under the supervision of a faculty member at least one course in each of three quarters (for which they will receive credit as GERMAN 399). Three of these courses may be counted toward the 22 courses required for the Ph.D.

Faculty Mentors. Each graduate student will be assigned a faculty mentor to consult at least once each quarter about progress, the program, academic questions, or any other issues pertaining to the student's graduate career. A student may change mentors for any reason (indeed, without giving a reason) at any time after meeting with either the graduate advisor or chair.

First-Year Review. Students ending their first year of study at UCI must undergo a more comprehensive review procedure. This applies to students entering with either a B.A. or an M.A. After the review, students will be apprised of the faculty's evaluation and advised on a future course of study or recommended for discontinuation of the program.

Annual Review. All students will undergo an annual review by the faculty of the program. Each spring the faculty will meet to discuss students' progress in the program. Annual review and evaluation of student performance and progress assure both the student and the faculty that each student is meeting the academic standards, teaching standards (for teaching assistants and associates, readers, and "ABD" lecturers), and professional standards of conduct expected of graduate students in the program. The review process provides an opportunity to assess and make recommendations regarding any deficiencies in student performance and progress. The following factors will be considered in determining graduate student performance and progress: grade point average, time to degree, foreign language requirement, and teaching performance.

Grade Point Average. All graduate students in German, including those in both the master's program and the doctoral program, are expected to maintain a 3.3 GPA. A GPA below 3.3 in any quarter falls below the academic standard expected by the program. Pursuant to the terms of appointment, a student whose GPA falls below 3.3 in any given quarter and whose cumulative GPA is not 3.3 by the end of the academic year may be ineligible for funding, and faculty may recommend the student be disqualified from the program.

Foreign Language Requirements. Students must demonstrate reading knowledge of two languages or extensive competence in one language other than German and English. Choice of language(s) depends on the student's area of specialization. Students are expected to demonstrate satisfactory progress. Progress is normally demonstrated by passing language examinations administered by a member of the faculty versed in the language, or by registering for and passing language courses equivalent to the intermediate level (as approved by the graduate advisor). Full-time students must demonstrate near-native speaking abilities in German and English. Students with significant deficiencies in language competency that will adversely affect their academic progress normally will not be admitted to doctoral candidacy. Students in the doctoral program will meet language requirements on a schedule established by their doctoral committees, but in all cases the requirements must be met prior to taking the Ph.D. qualifying examination. If these requirements are not met in a timely manner, faculty may recommend disqualification from the program.

Qualifying Examination. In order to advance to candidacy, the student must take and pass a qualifying examination. At least two months prior to the planned date of the exam, students must submit a comprehensive reading list, prepared in consultation with their committee chair, to the examination committee. The committee may make recommendations to the list. On the basis of that list, students must design four courses. One course should be designed as an Introduction to German Literature and Culture. The other three courses, drafted in consultation with the student's committee chair, are graduate seminars and must ensure breadth and depth of coverage of German literature and culture. They may be organized around topics, genres, authors, or periods. At least one of these courses must comprise the student's intended area of dissertation research. The four courses must be clearly distinct and have minimal overlap. These courses must include reading lists of required and optional texts, main secondary literature, a written justification/course description, and a basic syllabus (for a 13-week semester course). No more than one course may be a modification of a seminar taken in the program. These

courses must be submitted to the committee members at least two weeks prior to an oral examination date. The oral exam will be a three-hour exploration of the reading list, focusing on the courses. Upon successful completion of the qualifying examination, the candidate will have advanced to Ph.D. candidacy.

Dissertation Prospectus. Students must submit a dissertation prospectus to their advisor and, following approval by the advisor, circulate it to the entire committee. There will be a two-hour oral defense of the prospectus before the committee. It is expected that the prospectus be submitted two quarters after completion of the qualifying examination or within one year at the latest.

Dissertation Chapter Review. Students must submit a substantial piece of writing (approximately 45 pages) from their dissertation ordinarily in the form of a chapter and a comprehensive bibliography. In consultation with their dissertation committee chair, they schedule a date and time for the oral review with the committee, which lasts approximately two-three hours. Prior to the oral review the student will make a public presentation, open to the UCI community and guests, in the form of a lecture with questions and answers.

Doctoral Colloquium. Students who have advanced to candidacy and are in residence must attend a colloquium for doctoral candidates. The colloquium will be held at least two times per quarter. Students will be expected to present sections of their prospectus or dissertation.

Dissertation Defense. The oral defense of the dissertation focuses on the adequacy of the student's research and thesis.

Two Years of Residence.

Normative Time to Degree and Expected Programs of Study

For students entering with a B.A.:

- Year 1: Course work;
- Year 2: Course work; M.A. completed;
- Year 3: Course work; Qualifying Examination (latest, fall of year four); advance to candidacy;
- Year 4: Dissertation prospectus and defense;
- Year 5: Dissertation chapter review and public presentation;
- Year 6: Completion of dissertation; defense.

For students entering with an M.A.:

- Year 1: Course work;
- Year 2: Course work; Qualifying Examination (latest, fall of year three); advance to candidacy;
- Year 3: Dissertation prospectus and defense;
- Year 4: Dissertation chapter review and public presentation;
- Year 5: Completion of dissertation; defense.

Undergraduate Minor in Italian Studies

The minor in Italian Studies is an interdisciplinary curriculum that allows students to go beyond second-year Italian and engage in various aspects of Italian culture by taking courses in Italian literature and other courses related to Italian history and culture in the Departments of Art History, Comparative Literature, English, Film and Media Studies, History, and Philosophy.

Requirements for the Italian Studies Minor

ITALIAN 1A- 1B- 1C	Fundamentals of Italian and Fundamentals of Italian and Fundamentals of Italian
--------------------	---

ITALIAN 2A- 2B- 2C	Intermediate Italian and Intermediate Italian and Intermediate Italian
--------------------	--

Seven courses selected from the following two lists, when topics are appropriate. At least five of the seven courses must be from list A. Also in list A, no more than two courses may be taken from any one department, with the exception of Italian courses.

A.

ART HIS 120	Studies in Renaissance and Baroque Art
ART HIS 121	Studies in Southern Renaissance Art
ART HIS 125	Studies in Southern Baroque Art
FLM&MDA 160	National/Regional Cinemas and Media
ITALIAN 13	Italian Conversation
ITALIAN 101A	Introduction to Italian Literature
ITALIAN 101B	Introduction to Italian Literature
ITALIAN 150	Topics in Italian Literature and Culture
PHILOS 132	Topics in Political and Social Philosophy

B.

ART HIS 107	Studies in Roman Art
ART HIS 198	Advanced Seminar: Topics in Art History
CLASSIC 140	Classics and History: The Ancient World
CLASSIC 150	Classical Mythology
CLASSICS 170	Topics in Classical Civilization
HISTORY 105B	Later Roman Empire
HISTORY 110C	Europe in the Later Middle Ages
HISTORY 112D	Topics in Early Modern Europe

Residence Requirement for the Minor: At least four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken at an Italian university through the UC Education Abroad Program, provided they are approved in advance by the Director of the minor.

The Department strongly encourages its students to take advantage of the study-abroad programs in Italy to improve their language skills and gain invaluable cultural experience in a foreign university setting. The Department recommends the UC Education Abroad Program in Italy.

Credit for courses taken through study-abroad programs is available. Students are advised to discuss their course of study with the Undergraduate Director before their departure and to arrange to bring home proof of their work.

Courses

Click on the "Courses" tab at the top of this page and scroll down to "Italian Courses."

Undergraduate Minor in Russian Studies

Spanning both Europe and Asia, Russia is one of the world's dominant political entities. Its rich cultural traditions have enhanced world literature, theatre, art, and dance. As the world's first socialist state, it became a major political rival of the United States after the Second World War. In the past decade, Russians have abandoned their socialist system and are now in the process of making a rocky transition to capitalism. Although Russia lost sizeable amounts of territory in this transition, the Russian language now serves as the *lingua franca* throughout many areas formerly controlled by the Soviet Union.

While the demand for specialists in various sectors of government has eased, relationships between our countries at other levels of society are growing more active and business opportunities are exciting and rewarding. Other areas in which the need for Russian language competence is evident right now include trade, environmental protection, social services, law, medicine, and technology.

All students in Russian language courses are encouraged to take part in the UC Education Abroad Program and spend a portion of their junior or senior year studying in Russia. See <http://www.studyabroad.uci.edu> for additional information.

The Russian Studies minor is a multidisciplinary curriculum combining the Humanities and Social Sciences. It is designed to introduce students to the rich history and culture of Russia and provide them with the intellectual and linguistic tools necessary for sustained engagement with this area of the world.

Requirements for the Russian Studies Minor

A. Complete:

RUSSIAN 2C	Intermediate Russian (or equivalent)
------------	--------------------------------------

B. Complete:

RUSSIAN 50	Russian Culture (three different topics)
------------	--

C. Select sixteen units of upper-division courses from the following:

RUSSIAN 140	Topics in Russian Literary Theory
RUSSIAN 150	Topics in Russian Literature
RUSSIAN 190	Russian Language Through Film
HISTORY 124A	Imperial Russia: 1689-1905
HISTORY 124B	Twentieth-Century Russia
HISTORY 190	Colloquium (when topics are related to Russia)
POL SCI 154F/ANTHRO 164P	Peoples and Cultures of Post-Soviet Eurasia
POL SCI 159	Special Topics in Comparative Politics (when topics are related to Russia)

A maximum of four units may be chosen from the following courses devoted in part to Russian themes: HISTORY 114, HISTORY 126A, HISTORY 126B, HISTORY 158A, POL SCI 142D, POL SCI 142E, POL SCI 142F, and SOCECOL E113 (same as INTL ST 121).

Students may petition other relevant courses.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Courses

Click on the "Courses" tab at the top of this page and scroll down to "Russian Courses."

Core Faculty

Anke S. Biendarra, Ph.D. University of Washington, *Associate Professor of German* (twentieth- and twenty-first-century German literature, culture, and film, cultural studies)

David Carroll, Ph.D. The Johns Hopkins University, *Professor Emeritus of French* (critical theory and twentieth-century French literature)

James T. Chiampi, Ph.D. Yale University, *Professor of Italian* (Dante and Italian Renaissance)

Kai Evers, Ph.D. Duke University, *Associate Professor of German* (twentieth-century German literature and film, modernism and Holocaust literature, theories of violence and catastrophic imagination)

Herschel Farbman, Ph.D. Yale University, *Assistant Professor of French* (modernism; critical theory)

Suzanne Gearhart, Ph.D. The Johns Hopkins University, *Professor Emerita of French* (seventeenth- and eighteenth-century French literature, philosophy and literature)

Michael A. Green, Ph.D. University of California, Los Angeles, *Professor Emeritus of Russian* (eighteenth-century Russian theatre and literary theory, Pushkin, Chekhov, Kuzmin, Russian Symbolist theater, cabaret theatre, Russian literature and theater of the 1920s)

Elizabeth Guthrie, Ph.D. University of Illinois, *Senior Lecturer with Security of Employment Emerita, French* (second-language acquisition and teaching)

Franca Hamber, *Lecturer, Italian Language Program*

Gail K. Hart, Ph.D. University of Virginia, *Department Chair of European Languages and Studies, and Professor of German* (eighteenth- and early-nineteenth-century German drama and fiction, Schiller, history of punishment)

Judd D. Hubert, Ph.D. Columbia University, *Professor Emeritus of French* (seventeenth- and nineteenth-century French literature)

Ruth Klüger, Ph.D. University of California, Berkeley, *Professor Emerita of German* (Kleist, nineteenth-century literature, Stifter, Holocaust literature)

Alice M. Laborde, Ph.D. University of California, Los Angeles, *Professor Emerita of French* (eighteenth-century French literature)

Meredith Lee, Ph.D. Yale University, *Professor Emerita of German* (lyric poetry, eighteenth-century literature, Goethe, music and literature)

Herbert Lehnert, Ph.D. University of Kiel, *Research Professor of German* (Thomas Mann)

Glenn S. Levine, Ph.D. University of Texas, Austin, *Professor of German and German Language Program Director* (applied linguistics, foreign language pedagogy, German-Jewish culture and history, Yiddish language and culture, European culinary history)

William J. Lillyman, Ph.D. Stanford University, *Research Professor of German* (Romanticism, Goethe, Tieck)

Maryse Mijalski, M.A. University of California, Irvine, *Academic Coordinator and Lecturer, French Language Program*

Lora Mjolsness, Ph.D. University of Southern California, *Lecturer in Russian* (nineteenth- and twentieth-century and contemporary children's literature; Soviet and Russian animation; Russian folklore)

Ève C. Morisi, Ph.D. Princeton University and Paris IV-Sorbonne, *Assistant Professor of French* (nineteenth- and twentieth-century French poetry and prose, relationships between poetics, ethics and politics, modern representations of dominance, violence, alienation and suffering; Hugo, Baudelaire, and Camus studies)

Carrie J. Noland, Ph.D. Harvard University, *Professor of French* (twentieth-century poetry and poetics, avant-garde movements in art and literature, critical theory, performance studies)

David T. Pan, Ph.D. Columbia University, *Professor of German* (eighteenth-, nineteenth-, and early twentieth-century German literature and intellectual history)

Addresses historical and cultural events, issues, and texts (art, literature, music, political theory) from the pre-1789 period in more than one European country.

Repeatability: Unlimited as topics vary.

EURO ST 103. Topics in Modern European History and Culture: Post-1789. 4 Units.

Addresses historical and cultural events, issues, and texts (art, literature, music, political theory) from 1789 to present in more than one European country.

Repeatability: Unlimited as topics vary.

EURO ST 190W. Senior Seminar in European Studies. 4 Units.

Capstone research seminar. Students engage in rigorous, in-depth, interdisciplinary exploration of specific topics, periods, or themes, investigating and analyzing the intersection of material and discursive culture in different historical periods and geographical locations.

Restriction: Satisfactory completion of the Lower-Division Writing requirement.

(Ib)**EURO ST 199. Independent Study. 1-4 Units.**

Directed reading and research in consultation with a faculty advisor. Substantial written work required.

Repeatability: May be repeated for credit unlimited times.

Restriction: Upper-division students only.

French Courses**FRENCH 1A. Fundamentals of French. 5 Units.**

Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French and meet daily. Language laboratory attendance is required.

Overlaps with FRENCH S1AB.

Restriction: FRENCH 1A and FRENCH S1AB may not be taken for full credit.

FRENCH 1B. Fundamentals of French. 5 Units.

Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French and meet daily. Language Laboratory attendance is required.

Prerequisite: FRENCH 1A. FRENCH 1A with a grade of C or better.

Overlaps with FRENCH S1AB, FRENCH S1BC.

Restriction: FRENCH 1B and FRENCH S1AB and FRENCH S1BC may not be taken for full credit

FRENCH 1C. Fundamentals of French. 5 Units.

Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French and meet daily. Language Laboratory attendance is required.

Prerequisite: FRENCH 1B or FRENCH S1AB. FRENCH 1B with a grade of C or better. FRENCH S1AB with a grade of C or better.

Overlaps with FRENCH S1BC.

Restriction: FRENCH 1C and FRENCH S1BC may not be taken for full credit.

(VI)**FRENCH S1. Fundamentals of French. 7.5 Units.**

First-year French in an intensified form.

Overlaps with FRENCH 1A, FRENCH 1B, FRENCH 1C.

FRENCH S1AB. Fundamentals of French. 7.5 Units.

First half of first-year French in an intensified form. Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French.

Overlaps with FRENCH 1A, FRENCH 1B.

Restriction: FRENCH S1AB and FRENCH 1A and FRENCH 1B may not be taken for full credit.

FRENCH S1BC. Fundamentals of French. 7.5 Units.

First half of first-year French in an intensified form. Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French.

Prerequisite: FRENCH S1AB or FRENCH 1B. FRENCH S1AB with a grade of C or better. FRENCH 1B with a grade of C or better.

Overlaps with FRENCH 1B, FRENCH 1C.

Restriction: FRENCH S1BC and FRENCH 1B and FRENCH 1C may not be taken for full credit.

(VI)

FRENCH 2A. Intermediate French. 4 Units.

Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French.

Prerequisite: FRENCH 1C or FRENCH S1BC or placement into FRENCH 2A. FRENCH 1C with a grade of C or better. FRENCH S1BC with a grade of C or better.

Overlaps with FRENCH S2AB.

Restriction: FRENCH 2A and FRENCH S2AB may not be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)

FRENCH 2B. Intermediate French. 4 Units.

Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French.

Prerequisite: FRENCH 2A. FRENCH 2A with a grade of C or better.

Overlaps with FRENCH S2AB, FRENCH S2BC.

Restriction: FRENCH 2B and FRENCH S2AB and FRENCH S2BC may not be taken for full credit. School of Humanities majors and International Studies majors have first consideration for enrollment.

(VIII)

FRENCH 2C. Intermediate French. 4 Units.

Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French.

Prerequisite: FRENCH 2B or FRENCH S2AB. FRENCH 2B with a grade of C or better. FRENCH S2AB with a grade of C or better.

Overlaps with FRENCH S2BC.

Restriction: FRENCH 2C and FRENCH S2BC may not be taken for full credit. School of Humanities majors and International Studies majors have first consideration for enrollment.

(VIII)

FRENCH S2AB. Intermediate French. 6 Units.

First half of second-year French in an intensified form. Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French. Prior high school or college French recommended.

Overlaps with FRENCH 2A, FRENCH 2B.

Restriction: FRENCH S2AB and FRENCH 2A and FRENCH 2B may not be taken for full credit.

(VIII)

FRENCH S2BC. Intermediate French. 6 Units.

Second half of second-year French in an intensified form. Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French. Prior high school or college French recommended.

Prerequisite: FRENCH S2AB or FRENCH 2B. FRENCH S2AB with a grade of C or better. FRENCH 2B with a grade of C or better.

Overlaps with FRENCH 2C, FRENCH 2B.

Restriction: FRENCH S2BC and FRENCH 2B and FRENCH 2C may not be taken for full credit.

(VIII)

FRENCH 13. Conversation. 4 Units.

Helps students increase their fluency and enrich their vocabulary. Taught in French.

Prerequisite: Prerequisite or Corequisite: FRENCH 2C or FRENCH S2BC.

FRENCH 50. French Culture and the Modern World. 4 Units.

Introductory course for non-majors. Focuses on France's role in the modern world and its cultural connections to Asia, the Middle East, Africa, Europe, and the Americas. Taught in English.

Repeatability: May be taken for credit 3 times as topics vary.

(IV, VIII)

FRENCH 97. Fundamentals of French (with Emphasis on Reading). 4 Units.

Designed primarily for students interested in acquiring a solid reading knowledge of French, and to facilitate the understanding and translating of French texts dealing with a variety of disciplines.

Restriction: Non-French majors only.

FRENCH 100A. Advanced Grammar and Composition. 4 Units.

Systematic review of grammar with written compositions on various topics. Students study and practice forms of descriptive and imitative writing, techniques of translation, and textual analysis including explication de texte of prose and poetry passages.

Prerequisite: FRENCH 2C or FRENCH S2BC.

FRENCH 100B. Essay Writing. 4 Units.

Trains students to write about literature in French, and introduces them to critical approaches and strategies for utilizing library resources, organizing arguments, and developing a coherent essay. Topics for weekly compositions drawn from texts of literary, historical, and social interest.

Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended: FRENCH 100A.

FRENCH 101A. Introduction to Nineteenth-Century French Literature. 4 Units.

Fiction, nonfiction, drama, and poetry of the nineteenth-century studied in relationship to a specific literary or historical problem.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 100A and FRENCH 100B.

FRENCH 101B. Introduction to Eighteenth-Century French Literature. 4 Units.

Literature and philosophy of the eighteenth century studied in relationship to a specific literary or historical problem.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 100A and FRENCH 100B.

FRENCH 101C. Introduction to Twentieth-Century French Literature. 4 Units.

Literatures of the French-speaking world studied in relationship to a specific literary or historical problem.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 100A and FRENCH 100B.

FRENCH 110. Problems in French Culture. 4 Units.

Examines a controversial or critical issue in French culture of different ages through a variety of genres and media.

Prerequisite: Prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 116. Sixteenth-Century French Literature. 4 Units.

Examines the diverse literature of the Renaissance and the Age of Exploration.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 117. Seventeenth-Century French Literature. 4 Units.

Examines the age of drama and other vibrant forms in French literature of the period.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 118. Eighteenth-Century French Literature. 4 Units.

Examines the literature and philosophy of the Enlightenment, the Ancient Régime, Classicism, and/or Revolution.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 119. Nineteenth-Century French Literature. 4 Units.

Focuses on the literature of an era that experienced many modernist transformations.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 120. Twentieth-Century French and Francophone Literature. 4 Units.

A study of modern and contemporary literature and culture.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 125. African Literature of French Expression. 4 Units.

Introduction to the principal African and Caribbean works written in French. Offers opportunity to study literature and culture in French in a non-European context. Lectures and papers in French.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 127. Francophone Literature and Culture. 4 Units.

Literature and cultures of the francophone world.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 139W. Literature and Society. 4 Units.

In English. Readings of masterpieces of French literature in their social, political, and historical contexts. Requires at least 4,000 words of assigned composition based on French works. Several essays required.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only. French majors have first consideration for enrollment.

(Ib)

FRENCH 140. Studies in French Literary Genre. 4 Units.

Examines the development and transformation of a single genre, such as the poem or the novel.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 150. Topics in French Literature and Culture. 4 Units.

Study of a theme, movement, or problem crucial to understanding French Literature and Culture.

Repeatability: Unlimited as topics vary.

FRENCH 160. French Cinema. 4 Units.

Study of a period, movement, or theme in French or Francophone cinema.

Repeatability: May be taken for credit 2 times as topics vary.

FRENCH 170. History and Literature. 4 Units.

Examines the dialogue between historical events and literary texts.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 171. Politics and Literature. 4 Units.

Examines the role played by politics and ethics in French literature, film, and culture.

Repeatability: Unlimited as topics vary.

FRENCH 180. Junior/Senior Seminar in Theory and Criticism. 4 Units.

Advanced study of theoretical and critical texts.

Prerequisite: Recommended as prerequisite or corequisite: FRENCH 101A or FRENCH 101B or FRENCH 101C.

Repeatability: May be taken for credit 1 times as topics vary.

FRENCH 185. Junior/Senior Seminar in French Literature and Culture. 4 Units.

Required intensive writing course for French majors to explore in depth selected topic in French literature and culture. Students complete major independent research project on topic studied, making use of literary and critical materials in their capstone essay. In French.

Prerequisite: Four upper-division courses beyond FRENCH 100A, FRENCH 100B; one of these courses may be taken concurrently with FRENCH 185.

FRENCH 199. Special Studies in French. 1-4 Units.

A project proposal is prepared by the student and approved by the faculty member who directs the project. Procedure must be completed by the end of the first week of classes.

Repeatability: Unlimited as topics vary.

Restriction: Repeatability: once for M.A. candidates; twice for Ph.D. candidates.

FRENCH 216. Studies in Renaissance Literature. 4 Units.

Advanced study of a topic in the Renaissance period.

Repeatability: Unlimited as topics vary.

FRENCH 217. Studies in Seventeenth-Century Literature. 4 Units.

Advanced study of a topic in the 17th century.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 218. Studies in Eighteenth-Century Literature. 4 Units.

Advanced study of a topic in the 18th century.

Repeatability: Unlimited as topics vary.

FRENCH 219. Studies in Nineteenth-Century Literature. 4 Units.

Advanced study of a topic in the 19th century.

Repeatability: Unlimited as topics vary.

FRENCH 220. Studies in Twentieth-Century Literature. 4 Units.

Advanced study of a topic in the 20th and 21st century.

Repeatability: May be taken for credit 9 times as topics vary.

Restriction: Graduate students only.

FRENCH 225. Francophone Literature and Culture. 4 Units.

Studies in different francophone literatures and cultures (of Canada, the Caribbean, West and North Africa, and Southeast Asia).

Repeatability: Unlimited as topics vary.

FRENCH 231. Studies in Fiction . 4 Units.

Examines the art of fiction.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 232. Studies in Nonfictional Prose. 4 Units.

Examines non-fictional genres such as the essay and the memoir.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 233. Studies in Poetry and Poetics. 4 Units.

Examines the genre of poetry and theories of poetry.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 240. Studies on a Major Writer. 4 Units.

Focused study of one author.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 250. Studies in Theory and Criticism. 4 Units.

Advanced study of a topic in theory and/or criticism.

Repeatability: Unlimited as topics vary.

FRENCH 254. History and Literature. 4 Units.

Advanced study of literary works in their historical context.

Repeatability: Unlimited as topics vary.

FRENCH 272. Cultural Studies . 4 Units.

Examines the theoretical paradigm of cultural studies.

Repeatability: Unlimited as topics vary.

FRENCH 280. Directed Study in French Literature. 4 Units.

For graduate students taking the Master's examination the same quarter.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

FRENCH 290. Research in French Language and Literature. 4 Units.

A project proposal is prepared by the student and approved by the faculty member who directs the project. Procedure must be completed by the end of the first week of classes. Limit: Once for M.A. candidates; twice for Ph.D. candidates.

Repeatability: May be taken for credit 2 times.

Restriction: Graduate students only. French major only.

FRENCH 299. Dissertation Research. 4-12 Units.

For graduate students writing a dissertation with a faculty member in French.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Humanities majors only.

FRENCH 399. University Teaching. 4 Units.

For graduate students completing a course on foreign language pedagogy.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Humanities majors only.

German Courses

GERMAN 1A. Fundamentals of German. 5 Units.

Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and beginning study of German. With a learner-centered approach, the courses help students develop speaking, listening, reading, writing, and cultural skills and knowledge.

Overlaps with GERMAN S1AB.

Restriction: GERMAN 1A and GERMAN S1AB may not be taken for full credit.

GERMAN 1B. Fundamentals of German. 5 Units.

Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and beginning study of German. With a learner-centered approach, the courses help students develop speaking, listening, reading, writing, and cultural skills and knowledge.

Prerequisite: GERMAN 1A or one to two years of high school German. GERMAN 1A with a grade of C or better.

Overlaps with GERMAN S1AB, GERMAN S1BC.

Restriction: GERMAN 1B and GERMAN S1AB and GERMAN S1BC may not be taken for full credit.

GERMAN 1C. Fundamentals of German. 5 Units.

Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and beginning study of German. With a learner-centered approach, the courses help students develop speaking, listening, reading, writing, and cultural skills and knowledge.

Prerequisite: GERMAN 1B or GERMAN S1AB or two to three years of high school German. GERMAN 1B with a grade of C or better. GERMAN S1AB with a grade of C or better.

Overlaps with GERMAN S1AB.

Restriction: GERMAN 1C and GERMAN S1BC may not be taken for full credit.

(VI)**GERMAN S1AB. Fundamentals of German. 7.5 Units.**

First half of first-year German in a time-intensive form. Development of meaningful communicative skills for the purposes of interaction with German speakers and beginning study of German. Learner-centered approach develops speaking, listening, reading, writing, and cultural skills and knowledge.

Overlaps with GERMAN 1A, GERMAN 1B.

Restriction: GERMAN S1AB and GERMAN 1A and GERMAN 1B may not be taken for full credit.

GERMAN S1BC. Fundamentals of German. 7.5 Units.

Second half of first-year German in a time-intensive form. Development of meaningful communicative skills for the purposes of interaction with German speakers and beginning study of German. Learner-centered approach develops speaking, listening, reading, writing, and cultural skills and knowledge.

Prerequisite: GERMAN 1B or GERMAN S1AB. GERMAN 1B with a grade of C or better. GERMAN S1AB with a grade of C or better.

Overlaps with GERMAN 1B, GERMAN 1C.

Restriction: GERMAN S1BC and GERMAN 1B and GERMAN 1C may not be taken for full credit.

(VI)**GERMAN 2A. Intermediate German. 4 Units.**

Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. With a learner-centered approach, helps students develop reading, writing, speaking, listening, grammatical, and cultural skills and knowledge. First-year grammar is reviewed and expanded.

Prerequisite: GERMAN 1C or GERMAN S1BC, three or four years of high school German. GERMAN 1C with a grade of C or better. GERMAN S1BC with a grade of C or better.

Overlaps with GERMAN S2BC.

Restriction: School of Humanities majors and International Studies majors have first consideration for enrollment. GERMAN 2A and GERMAN S2AB may not be taken for full credit.

(VIII)

GERMAN 2B. Intermediate German. 4 Units.

Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. With a learner-centered approach, helps students develop reading, writing, speaking, listening, grammatical, and cultural skills and knowledge. First-year grammar is reviewed and expanded.

Prerequisite: GERMAN 2A. GERMAN 2A with a grade of C or better.

Overlaps with GERMAN S2AB, GERMAN S2BC.

Restriction: School of Humanities majors and International Studies majors have first consideration for enrollment. GERMAN 2B and GERMAN S2AB and GERMAN S2BC may not be taken for full credit.

(VIII)

GERMAN 2C. Intermediate German. 4 Units.

Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. With a learner-centered approach, helps students develop reading, writing, speaking, listening, grammatical, and cultural skills and knowledge. First-year grammar is reviewed and expanded.

Prerequisite: GERMAN 2B or GERMAN S2AB. GERMAN 2B with a grade of C or better. GERMAN S2AB with a grade of C or better.

Overlaps with GERMAN S2BC.

Restriction: School of Humanities majors and International Studies majors have first consideration for enrollment. GERMAN 2C and GERMAN S2BC may not be taken for full credit.

(VIII)

GERMAN S2AB. Intermediate German. 6 Units.

First half of second-year German in a time-intensive form. Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. Learner-centered approach develops reading, writing, speaking, listening, grammatical, and cultural skills and knowledge.

Prerequisite: GERMAN 1C or GERMAN S1BC.

Overlaps with GERMAN 2A, GERMAN 2B.

Restriction: GERMAN S2AB and GERMAN 2A and GERMAN 2B may not be taken for full credit.

(VIII)

GERMAN S2BC. Intermediate German. 6 Units.

Second half of second-year German in a time-intensive form. Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. Learner-centered approach develops reading, writing, speaking, listening, grammatical, and cultural skills and knowledge.

Prerequisite: GERMAN 2B or GERMAN S2AB. GERMAN 2B with a grade of C or better. GERMAN S2AB with a grade of C or better.

Overlaps with GERMAN 2B, GERMAN 2C.

Restriction: GERMAN S2BC and GERMAN 2B and GERMAN 2C may not be taken for full credit.

(VIII)

GERMAN 50. Science, Society, and Mind. 4 Units.

Historical, philosophical, and literary reflections by German writers on the rise of the modern sciences. In English. Designed primarily for nonmajors.

Repeatability: May be taken for credit 3 times as topics vary.

(IV, VIII)

GERMAN 53. Advanced Conversation. 2 Units.

Includes reading of political and cultural material. Conducted in German.

Prerequisite: Prerequisite or corequisite: GERMAN 2C.

Repeatability: May be repeated for credit unlimited times.

GERMAN 97. Fundamentals of German (with Emphasis on Reading). 4 Units.

Primarily for students interested in acquiring a solid reading knowledge of German. Facilitates comprehension and translation of texts in various disciplines. Does not serve as prerequisite for any higher-level German courses or fulfill any undergraduate foreign language requirement.

Repeatability: May be taken for credit 3 times.

Restriction: Non-German majors only.

GERMAN 101. Introduction to German Literature and Culture. 4 Units.

Sample interpretations of texts in their cultural and historical contexts. Introduction to critical language in German.

Prerequisite: GERMAN 2C. GERMAN 2C with a grade of C or better.

Repeatability: Unlimited as topics vary.

GERMAN 102. German Culture and Society. 4 Units.

Interdisciplinary introduction to German culture from the perspective of its aesthetic, social, and political aspects. Methodological problems arising from an analysis of culture in its historical context.

Prerequisite: GERMAN 2C. GERMAN 2C with a grade of C or better.

Repeatability: Unlimited as topics vary.

GERMAN 103. German Film. 4 Units.

Introduction to the history and interpretation of German film within its cultural and social contexts. Enhances German grammar knowledge and vocabulary and develops sophisticated speaking, writing, and reading skills.

Prerequisite: GERMAN 2C. GERMAN 2C with a grade of C or better.

Repeatability: Unlimited as topics vary.

GERMAN 104. Introduction to Germanic Linguistics. 4 Units.

Introduces German or other Germanic-language linguistic, sociolinguistic, or ethnography-of-communication topics. Taught in German.

Prerequisite: GERMAN 2C. GERMAN 2C with a grade of C or better.

Repeatability: Unlimited as topics vary.

GERMAN 105. German for Business and Economics. 4 Units.

Explores the structure of the German economy and business practices while developing verbal and written skills important for professional life in Germany. Taught in German.

Prerequisite: GERMAN 2C. GERMAN 2C with a grade of C or better.

GERMAN 115. Advanced German for Business and Economics. 4 Units.

Explores the structure of the German economy and business practices while developing advanced verbal and written skills important for professional life in Germany. Taught in German.

Prerequisite: GERMAN 105.

Repeatability: Unlimited as topics vary.

GERMAN 117. Topics in German Literature and Culture 750-1750. 4 Units.

Specific course content determined by individual faculty members. Example: Luther and the European Renaissance.

Prerequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104.

Repeatability: Unlimited as topics vary.

GERMAN 118. Studies in the Age of Goethe. 4 Units.

Individual authors such as Lessing, Goethe, Schiller, Kleist, and Hölderlin, or the drama of the "angry young men" of the German 1770s.

Prerequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104.

Repeatability: Unlimited as topics vary.

GERMAN 119. Studies in Nineteenth-Century German Literature and Culture. 4 Units.

Individual authors such as Büchner, Grillparzer, Keller, and Nietzsche, or broader social-literary phenomena.

Prerequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104.

Repeatability: Unlimited as topics vary.

GERMAN 120. Studies in Twentieth Century German Literature and Culture. 4 Units.

Individual authors such as Thomas Mann, Brecht, and Kafka, or topics addressing questions of genre and/or social-literary problems.

Prerequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104.

Repeatability: Unlimited as topics vary.

GERMAN 130. Topics in German Literature and Culture. 4 Units.

Literary and cultural topics not fully contained within the periods listed above, such as "German Comedy" and "Turn-of-the-Century Vienna."

Prerequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104.

Repeatability: Unlimited as topics vary.

GERMAN 140. Topics in Literary Theory and Criticism. 4 Units.

In English. Theoretical dimensions of literary criticism and the German philosophical tradition. Topics have included Marxism, Freudian thought, German Idealist aesthetics, Historicism, twentieth-century hermeneutics, Frankfurt School, and Rezeptionsaesthetik.

Repeatability: Unlimited as topics vary.

GERMAN 140W. Topics in Literary Theory and Criticism. 4 Units.

In English. Theoretical dimensions of literary criticism and the German philosophical tradition. Topics have included Marxism, Freudian thought, German Idealist aesthetics, Historicism, twentieth-century hermeneutics, Frankfurt School, and Rezeptionsaesthetik.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

(Ib)

GERMAN 150. German Literature and Culture in Translation. 4 Units.

In English. Major works in Germanic literature and culture in context.

Repeatability: Unlimited as topics vary.

GERMAN 150W. German Literature and Culture in Translation. 4 Units.

In English. Major works in Germanic literature and culture in context.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

(Ib)

GERMAN 160. German Cinema. 0 Units.

Historical, theoretical, and comparative perspectives on German cinema.

Repeatability: Unlimited as topics vary.

GERMAN 160W. German Cinema. 4 Units.

Historical, theoretical, and comparative perspectives on German cinema.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

(Ib)

GERMAN 170. Topics in German Linguistics. 4 Units.

Explores linguistic, sociolinguistic, or ethnography-of-communication topics of German or other Germanic languages (Swedish, Icelandic, Yiddish, and others). Taught in English.

Repeatability: Unlimited as topics vary.

GERMAN 170W. Topics in German Linguistics. 4 Units.

Explores linguistic, sociolinguistic, or ethnography-of-communication topics of German or other Germanic languages (Swedish, Icelandic, Yiddish, and others). Taught in English.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

(Ib)

GERMAN 199. Independent Study. 1-4 Units.

Independent research with German faculty.

Repeatability: May be repeated for credit unlimited times.

GERMAN 200. Literary Criticism . 4 Units.

Topics in literary criticism.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

GERMAN 210. Literary Theory . 4 Units.

Topics in literary theory.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

GERMAN 220. Selected Topics in German Linguistics . 4 Units.

Topics in German linguistics.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

GERMAN 230. Literary and Cultural History. 4 Units.

Topics in literary and cultural history.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

GERMAN 290. Independent Study. 4 Units.

Counted toward course requirements for the M.A. or Ph.D. A term paper or project is required.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Humanities majors only.

GERMAN 298. Independent Directed Reading. 4-12 Units.

For students preparing for doctoral examination.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

GERMAN 299. Dissertation Research. 4-12 Units.

For students who have been admitted to doctoral candidacy.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Humanities majors only.

GERMAN 398A. The Teaching of German. 2 Units.

Required of all Teaching Assistants in the German Department. Also open to present and prospective teachers of German who are not Teaching Assistants.

Restriction: Graduate students only. School of Humanities majors only.

GERMAN 398B. The Teaching of German. 2 Units.

Required of all Teaching Assistants in the German Department. Also open to present and prospective teachers of German who are not Teaching Assistants.

Prerequisite: GERMAN 398A.

Restriction: Graduate students only. School of Humanities majors only.

GERMAN 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Italian Courses

ITALIAN 1A. Fundamentals of Italian. 5 Units.

Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily.

Overlaps with ITALIAN S1AB.

Restriction: Italian 1A and Italian S1AB may not both be taken for full credit.

ITALIAN 1B. Fundamentals of Italian. 5 Units.

Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily.

Prerequisite: ITALIAN 1A or Placement Exam into ITALIAN 1B. ITALIAN 1A with grade of C or better.

Overlaps with ITALIAN S1AB, ITALIAN S1BC.

Restriction: ITALIAN 1B and ITALIAN S1AB and ITALIAN S1BC may not be taken for full credit.

(VI)**ITALIAN 1C. Fundamentals of Italian. 5 Units.**

Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily.

Prerequisite: ITALIAN 1B or ITALIAN S1AB or Placement Exam into 1C. ITALIAN 1B with a grade of C or better. ITALIAN S1AB with a grade of C or better.

Overlaps with ITALIAN S1BC.

Restriction: ITALIAN 1C and ITALIAN S1BC may not both be taken for full credit.

(VI)**ITALIAN S1AB. Italian Fundamentals. 7.5 Units.**

First-year Italian in an intensified form. Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily three hours for five weeks each session.

Overlaps with ITALIAN 1A, ITALIAN 1B.

Restriction: ITALIAN S1AB and ITALIAN 1A and ITALIAN 1B may not be taken for full credit.

ITALIAN S1BC. Italian Fundamentals. 7.5 Units.

First-year Italian in an intensified form. Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily three hours for five weeks each session.

Prerequisite: ITALIAN S1AB or ITALIAN 1B. ITALIAN S1AB with a grade of C or better. ITALIAN 1B with a grade of C or better.

Overlaps with ITALIAN 1B, ITALIAN 1C.

Restriction: ITALIAN S1BC and ITALIAN 1B and ITALIAN 1C may not be taken for full credit.

(VI)**ITALIAN 2A. Intermediate Italian. 4 Units.**

Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in Italian.

Prerequisite: ITALIAN 1C or ITALIAN S1BC or Placement Exam into 2A. ITALIAN 1C with grade of C or better. ITALIAN S1BC with grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**ITALIAN 2B. Intermediate Italian. 4 Units.**

Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in Italian.

Prerequisite: ITALIAN 2A or Placement Exam into 2B. ITALIAN 2A with a grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**ITALIAN 2C. Intermediate Italian. 4 Units.**

Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in Italian.

Prerequisite: ITALIAN 2B or Placement Exam into 2C. ITALIAN 2B with grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**ITALIAN 13. Italian Conversation. 4 Units.**

Helps students increase fluency and comprehension of spoken Italian. Includes an introduction to Italian culture. Taught in Italian.

Corequisite: ITALIAN 2C.

Prerequisite: ITALIAN 2C. ITALIAN 2C may be taken as a prerequisite or a corequisite.

ITALIAN 99. Special Studies in Italian. 4 Units.

Both student and instructor arrive at the theme of the course and the critical approach to be followed in consultation. Intended to offer courses in Italian otherwise unavailable.

Repeatability: May be repeated for credit unlimited times.

ITALIAN 101A. Introduction to Italian Literature. 4 Units.

Introduction to all of the genres of a narrowly defined period in relationship to a specific literary problem. In Italian.

Prerequisite: ITALIAN 2C. ITALIAN 13 recommended.

ITALIAN 101B. Introduction to Italian Literature. 4 Units.

Introduction to all of the genres of a narrowly defined period in relationship to a specific literary problem. In Italian.

Prerequisite: ITALIAN 2C. ITALIAN 13 recommended.

ITALIAN 150. Topics in Italian Literature and Culture. 4 Units.

Taught in English.

Repeatability: Unlimited as topics vary.

ITALIAN 199. Tutorial in Italian Literature and Culture. 4 Units.

The student must submit a written description of the proposed course to the instructor and the Chair prior to the beginning of the course.

Repeatability: Unlimited as topics vary.

Russian Courses

RUSSIAN 1A. Fundamentals of Russian. 5 Units.

Focuses on reading, comprehension, basic composition, and conversation skills, and gives the student an initial exposure to the Russian cultural scene.

Prerequisite: Placement into RUSSIAN 1A.

RUSSIAN 1B. Fundamentals of Russian. 5 Units.

Focuses on reading, comprehension, basic composition, and conversation skills, and gives the student an initial exposure to the Russian cultural scene.

Prerequisite: RUSSIAN 1A or placement into RUSSIAN 1B. RUSSIAN 1A with a grade of C or better.

RUSSIAN 1C. Fundamentals of Russian. 5 Units.

Focuses on reading, comprehension, basic composition, and conversation skills, and gives the student an initial exposure to the Russian cultural scene.

Prerequisite: RUSSIAN 1B or placement into RUSSIAN 1C. RUSSIAN 1B with a grade of C or better.

(VI)

RUSSIAN 2A. Intermediate Russian. 4 Units.

Students read simple passages from contemporary Russian literary texts and newspapers. Development of oral skills and exposure to Russian culture continue.

Prerequisite: RUSSIAN 1C or placement in RUSSIAN 2A. RUSSIAN 1C with a grade of C or better.

Restriction: School of Humanities majors and International Studies majors have first consideration for enrollment.

(VIII)

RUSSIAN 2B. Intermediate Russian. 4 Units.

Students read simple passages from contemporary Russian literary texts and newspapers. Development of oral skills and exposure to Russian culture continue.

Prerequisite: RUSSIAN 2A or placement into RUSSIAN 2B. RUSSIAN 2A with a grade of C or better.

Restriction: School of Humanities majors and International Studies majors have first consideration for enrollment.

(VIII)

RUSSIAN 2C. Intermediate Russian. 4 Units.

Students read simple passages from contemporary Russian literary texts and newspapers. Development of oral skills and exposure to Russian culture continue.

Prerequisite: RUSSIAN 2B or placement into RUSSIAN 2C. RUSSIAN 2B with a grade of C or better.

Restriction: School of Humanities majors and International Studies majors have first consideration for enrollment.

(VIII)

RUSSIAN 50. Russian Culture . 4 Units.

Study of varied topics in Russian culture, area studies, and society, both in the present and in historical perspective.

Repeatability: May be taken for credit 4 times as topics vary.

(IV, VIII)

RUSSIAN 99. Special Studies Russian. 1-5 Units.

Special studies under faculty supervision.

Repeatability: May be taken for credit 2 times.

RUSSIAN 140. Topics in Russian Literary Theory. 4 Units.

Examines the work of individual theorists and schools of literary theory in the nineteenth and twentieth centuries.

Repeatability: Unlimited as topics vary.

RUSSIAN 150. Topics in Russian Literature. 4 Units.

Examines major themes in Russian literature, film, and other media from the eighteenth to twenty-first centuries. Taught in English.

Repeatability: Unlimited as topics vary.

RUSSIAN 190. Russian Language Through Film. 4 Units.

Uses Russian films of the late twentieth century to enhance students' language skills and deepen their cultural knowledge. Work involves intensive conversation, reading and listening comprehension, and the acquisition of written skills and grammatical accuracy. Conducted primarily in Russian.

Prerequisite: RUSSIAN 2C.

Repeatability: Unlimited as topics vary.

RUSSIAN 198. Directed Group Study. 4 Units.

Group independent study under direct faculty supervision.

Repeatability: May be taken for credit 2 times.

RUSSIAN 199. Independent Study. 1-4 Units.

Independent study under direct faculty supervision.

Repeatability: May be taken for credit 2 times.

Department of Film and Media Studies

2000 Humanities Gateway; (949) 824-3532

<http://www.humanities.uci.edu/filmstudies/>

Peter Krapp, **Department Chair**

Undergraduate Program

We live in a world in which we are surrounded by electronic media in the form of images and sounds. Whether printed on roadside billboards, downloaded to our phones, or broadcast into our homes via television, media greatly influence our sense of who we are and how we live. Yet so much of our exposure to the sights and sounds of film, TV, video, advertising, and other technologies is taken for granted. Those sights and sounds are so pervasive, and in many cases so enjoyable, that we rarely pause to consider how we engage and interact with them. An undergraduate education in Film and Media Studies provides students with the opportunity to explore the appeal and operation of these social, historic, institutional, and textual entities we call cinema, television, and digital technologies, and to interrogate the inter-relationships of visual media and sound and music as forms of media.

The course work for the B.A. degree program in Film and Media Studies trains students to read and understand the audio-visual languages of modern media and new technologies and to analyze images from socioeconomic, political, aesthetic, and historical perspectives. Learning these critical viewing skills involves learning new ways of seeing. The Film and Media Studies curriculum is systematic and comprehensive; upper-division courses have between 20 and 70 students and are typically taught by regular faculty. There are more than 300 Film and Media Studies majors enrolled at UCI.

The Department of Film and Media Studies familiarizes students with the history, theory, and art of cinema, broadcast media, digital media, and other media. Courses focus on a range of topics, including directors, period styles, genres, national cinemas, the history and criticism of radio, television, sound theory and popular music, and developments in new media and digital technologies. Additional courses offer students hands-on experience in video production and screenwriting. The program provides its majors with a thorough understanding of the modern media's roles in contemporary society. Regular course offerings are complemented by film and video screenings and series. Film and Media Studies, in cooperation with other units at UCI, regularly invites scholars, digital artists, directors, producers, and screenwriters to campus to share their work and perspectives with students.

Film and Media Studies at UCI is unique in its concentration on the history, theory, and criticism of cinema, television, popular music and sound, and new technologies. The faculty has published books and articles on these topics and others including fantastic cinema, avant-garde directors, ethnographic film, media and intellectual property, sound in film and media, hip-hop and cinema, television history, and theory of new technologies.

In order to cover the extra costs generated by the purchase and rental of media demanded by the specialized Film and Media Studies curriculum, the School of Humanities charges a laboratory fee to all students taking Film and Media Studies courses.

Eligible Film and Media Studies students can complete professional internships in the fields of film, television, or digital media production, distribution, writing, and related areas for elective course credit.

Through the University's Education Abroad Program (UCEAP), eligible Film and Media Studies students have the opportunity to study abroad and earn credit toward their degree during the school year. Information about UCEAP is available through the Film and Media Studies Office and the Study Abroad Center (<http://www.studyabroad.uci.edu>).

Career Opportunities

A degree in Film and Media Studies will provide students with a variety of opportunities leading to a career choice or to further education at the graduate or professional level. Graduates from the program have gone on to a host of different careers. Some have pursued graduate work in critical studies and/or production at leading institutions such as the University of California, Los Angeles, Columbia University, New York University, University of Texas at Austin, and University of Southern California. Many are now at work in various sectors of the entertainment industry as feature film editors, executives in film and video distribution companies, network television producers, and independent filmmakers.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Requirements for the B.A. Degree in Film and Media Studies

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Departmental Requirements for the Major

A. Complete the following:

FLM&MDA 85A	Introduction to Film and Visual Analysis
FLM&MDA 85B	Broadcast Media History and Analysis
FLM&MDA 85C	New Media and Digital Technologies
FLM&MDA 101A	History of Film: The Silent Era I
FLM&MDA 101B	History of Film: The Sound Era I
FLM&MDA 101C	History of Film: The Sound Era II
FLM&MDA 139W	Writing on Film and Media

B. Complete either:

FLM&MDA 110	Film and Media Theory
or FLM&MDA 111	Film and Media Theory and Practice

C. Complete either:

FLM&MDA 117A or FLM&MDA 120A	Introduction to Screenwriting Basic Production
---------------------------------	---

D. Select four of the following:

FLM&MDA 112	Genre Study
FLM&MDA 113	Narrative/Image
FLM&MDA 114	Film, Media, and the Arts
FLM&MDA 115	Authorship
FLM&MDA 117B	Intermediate Screenwriting ¹
FLM&MDA 117C	Screenwriting Workshop ¹
FLM&MDA 120B	Intermediate Production ¹
FLM&MDA 120C	Production Workshop ¹
FLM&MDA 130	Multicultural Topics in the Media
FLM&MDA 143	Critical Theory of Television
FLM&MDA 144	Studies in New Media
FLM&MDA 145	Popular Culture and Media
FLM&MDA 146	Sound Studies

FLM&MDA 150	Audiences and Reception
FLM&MDA 151	Documentary and Experimental Film and Media
FLM&MDA 160	National/Regional Cinemas and Media
FLM&MDA 161	Global/Transnational Cinemas and Media
FLM&MDA 162	U.S. Cinema
FLM&MDA 185	Television and New Media
FLM&MDA 190	Special Topics in Film and Modern Media
FLM&MDA 191	Special Topics in Critical Practice

- ¹ Only two of the courses marked may be applied toward this requirement.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

A. Complete:

FLM&MDA 85A	Introduction to Film and Visual Analysis
-------------	--

B. Select three of the following:

FLM&MDA 85B	Broadcast Media History and Analysis
FLM&MDA 85C	New Media and Digital Technologies
FLM&MDA 101A	History of Film: The Silent Era I
FLM&MDA 101B	History of Film: The Sound Era I
FLM&MDA 101C	History of Film: The Sound Era II

C. Select three of the following:

FLM&MDA 110	Film and Media Theory
FLM&MDA 111	Film and Media Theory and Practice
FLM&MDA 112	Genre Study
FLM&MDA 113	Narrative/Image
FLM&MDA 114	Film, Media, and the Arts
FLM&MDA 115	Authorship
FLM&MDA 130	Multicultural Topics in the Media
FLM&MDA 143	Critical Theory of Television
FLM&MDA 144	Studies in New Media
FLM&MDA 145	Popular Culture and Media
FLM&MDA 146	Sound Studies
FLM&MDA 150	Audiences and Reception
FLM&MDA 151	Documentary and Experimental Film and Media
FLM&MDA 160	National/Regional Cinemas and Media
FLM&MDA 161	Global/Transnational Cinemas and Media
FLM&MDA 162	U.S. Cinema
FLM&MDA 185	Television and New Media
FLM&MDA 190	Special Topics in Film and Modern Media
FLM&MDA 191	Special Topics in Critical Practice

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Study

In conjunction with the Department of Art History, the Department of Film and Media Studies offers a graduate program in Visual Studies. A description may be found in the Program in Visual Studies (p. 560) section.

Core Faculty

Ackbar Abbas, M. Phil. University of Hong Kong, *Professor of Comparative Literature and of Film and Media Studies* (Hong Kong culture and postcolonialism, visual culture, architecture and cinema, cultural theory, globalization)

Eyal Amiran, Ph.D. University of Virginia, *Associate Professor of Comparative Literature and of Film and Media Studies* (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

Catherine Benamou, Ph.D. New York University, *Associate Professor of Film and Media Studies* (Hispanophone and Lusophone cinema and television, transnational media flows and ethnic spectatorship, Orson Welles and post-war maverick cinema, transculturation, cinematic memory and cultures of preservation)

Sohail Daulatzai, Ph.D. University of Southern California, *Associate Professor of Film and Media Studies* (Black radicalism, Muslim studies, cultural studies, race, postcolonial theory, U.S. imperial culture, cinema, and hip-hop culture)

Edward Dimendberg, Ph.D. University of California, Santa Cruz, *Professor of Film and Media Studies* (film and literature, history of the book, scholarly communication)

Kristen Hatch, Ph.D. University of California, Los Angeles, *Assistant Professor of Film and Media Studies* (American film history, film genres, stardom, histories of gender and sexuality, childhood studies, and reception studies)

Lucas Hilderbrand, Ph.D. New York University, *Associate Professor of Film and Media Studies* (cultural and media studies, queer studies, histories of technology, documentary, audio, intellectual property)

Victoria E. Johnson, Ph.D. University of Southern California, *Associate Professor of Film and Media Studies* (history and critical theory of U.S. television, popular film, and media; politics of geography, race, gender, and sexuality in popular culture; cultural studies)

Kyung Hyun Kim, Ph.D. University of Southern California, *Professor of East Asian Languages and Literatures and of Film and Media Studies* (East Asian cinema, modern Korea, critical theory)

Peter Krapp, Ph.D. University of California, Santa Barbara, *Department Chair and Professor of Film and Media Studies, and Professor of English and Informatics* (digital culture, media theory, cultural memory, history, and theory of artificial worlds)

Felicidad “Bliss” Cua Lim, Ph.D. New York University, *Associate Professor of Film and Media Studies* (Philippine and Hong Kong cinema; cinema and temporality; postcolonial and feminist film theory; fantastic cinema and transnational horror; taste cultures)

Catherine Liu, Ph.D. City University of New York Graduate School and Center, *Director of the Humanities Collective and Professor of Film and Media Studies and of Comparative Literature* (Hou Hsiao-Hsien, labor history and theory, U.S. intellectual history and educational/cultural/media policy, culture wars, Frankfurt School, historiography and psychoanalysis, surveillance, spaces of private life, Cold War culture, neoliberalism, science fiction studies, political economy and aesthetic education)

Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Dean of Graduate Study and Research and Associate Professor of Film and Media Studies* (minority, diasporic, and third cinemas; popular culture and social movements; media, race, and sexuality)

Allison Perlman, Ph.D. University of Texas at Austin, *Assistant Professor of Film and Media Studies and of History* (history of broadcasting, American social movements, media law and policy, media activism, popular memory)

Fatimah Tobing Rony, Ph.D. Yale University, *Associate Professor of Film and Media Studies* (transnational cinema, documentary and ethnographic film, postcolonial studies, feminist film theory, film history and theory, film production)

Jared Sexton, Ph.D. University of California, Berkeley, *Program Director and Associate Professor of African American Studies, and Associate Professor of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Roxanne Varzi, Ph.D. Columbia University, *Associate Professor of Anthropology and of Film and Media Studies* (visual anthropology, Iran, popular culture, war, media and religion)

Affiliated Faculty

Kai Evers, Ph.D. Duke University, *Associate Professor of German* (twentieth-century German literature and film, modernism and Holocaust literature)

Adriana M. Johnson, Ph.D. Duke University, *Associate Professor of Comparative Literature* (Latin American literature and film, subaltern studies, postcolonial studies, politics and culture)

Georges Van Den Abbeele, Ph.D. Cornell University, *Dean of the School of Humanities and Professor of Comparative Literature and English*

Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Professor of African American Studies and Drama* (film theory, Marxism, dramaturgy, black political theory)

Courses

FLM&MDA 85A. Introduction to Film and Visual Analysis. 4 Units.

Introduces the language and techniques of visual and film analysis. Teaches students to analyze the moving image, emphasizing the ways framing, camera movement, sound, and editing produce meaning, reproduce historical ideologies, foster or disrupt narrative, and cue spectators.

(IV)

FLM&MDA 85B. Broadcast Media History and Analysis. 4 Units.

History of broadcast media from the radio era to the present day, including social, political, institutional, and audience analysis as well as methods of visual and aural analysis of these media.

(IV)

FLM&MDA 85C. New Media and Digital Technologies. 4 Units.

The study of digital media, computer-mediated communication, and Internet cultures, from historical and theoretical perspectives.

(IV)

FLM&MDA 101A. History of Film: The Silent Era I. 4 Units.

An investigation of the technological, economic, social, and aesthetic determinants of the cinema in its first 30 years. The formal strategies and historical importance of films by Méliès, the Lumières, Porter, Griffith, Murnau, Lang, Eisenstein, Pudovkin, and others.

Prerequisite: FLM&MDA 85A.

FLM&MDA 101B. History of Film: The Sound Era I. 4 Units.

Explores the formal strategies and socio-historical dynamics of films made between 1930 and 1960, concentrating on representative cinemas and works by Lang, Riefenstahl, Renoir, Welles, De Sica, Ophüls, Kurosawa, and others.

Prerequisite: FLM&MDA 85A.

FLM&MDA 101C. History of Film: The Sound Era II. 4 Units.

Studies narrative strategies and formal possibilities in films made since 1960, framing aesthetic questions in political, social, and economic terms, using selected features from Western and non-Western countries.

Prerequisite: FLM&MDA 85A.

FLM&MDA 110. Film and Media Theory. 4 Units.

Survey of major directions in film and media theory. Various theories of mass culture, realism, auteurism, semiotics, feminism, cultural studies, and theories of other media, with an emphasis on developing the student's ability to analyze and articulate a theoretical argument.

Prerequisite: FLM&MDA 85A and FLM&MDA 85B and FLM&MDA 85C and FLM&MDA 101A and FLM&MDA 101B and FLM&MDA 101C and FLM&MDA 139W. Satisfactory completion of the Upper-Division Writing requirement.

FLM&MDA 111. Film and Media Theory and Practice. 4 Units.

Seminar focusing on issues in film and media production and editing. Reading and exercises to understand aspects of film and media production (montage, sound, film movement, directing, and mise en scène), and how ideology works in tandem with style.

Prerequisite: FLM&MDA 101C and FLM&MDA 120A and FLM&MDA 139W. Satisfactory completion of the Upper-Division Writing requirement.

FLM&MDA 112. Genre Study . 4 Units.

Critical approaches to the serial productions we call "genre" films such as westerns, weepies, musicals, horror films, and others; television genres, such as sitcoms, drama, comedy, news, docudrama, police; Internet categories, such as chat-rooms, listservs, Web pages.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 113. Narrative/Image . 4 Units.

What relations do sound, image, and story assume in film, television, video, and Internet narratives? In what ways do these media interact with and borrow from each other and traditional story-telling media? How have the new media explored non-narrative strategies?.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 114. Film, Media, and the Arts. 4 Units.

A synthetic entity, film draws on both established and popular arts. Looks at visual media's exchanges with "high" and "low" culture, exploring its relation to areas such as photography, music, painting, and architecture.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 115. Authorship . 4 Units.

Theoretical and analytical discussions of visual media authorship, focusing on case studies of directors, producers, scriptwriters, and film, video, and digital artists.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 117A. Introduction to Screenwriting. 4 Units.

Introduction to the technique and format of the screenplay, with a particular focus on its three act structural elements: coverage, treatment, and 60 beat outline.

Prerequisite: FLM&MDA 85A.

FLM&MDA 117B. Intermediate Screenwriting. 4 Units.

Exercises in the development of screenplays, with emphasis on formal and structural considerations of character development. Students work with the hero structure and other character development methodologies, such as method acting.

Prerequisite: FLM&MDA 117A.

FLM&MDA 117C. Screenwriting Workshop. 4 Units.

Continuation and intensification of work initiated in 117B. Students complete a full-length screenplay. Concentrates on both practical and technical concerns, addressing pragmatic and aesthetic questions in intensive small-group discussions.

Prerequisite: FLM&MDA 117B.

FLM&MDA 120A. Basic Production. 4 Units.

Introduction to the basic apparatus of video/film production. The elementary essentials of production, including the use of camera and lenses, lighting, editing, and sound.

Prerequisite: FLM&MDA 85A.

FLM&MDA 120B. Intermediate Production. 4 Units.

Students work on individual and group projects, utilizing skills and insights introduced in Film and Media Studies 120A.

Prerequisite: FLM&MDA 120A.

FLM&MDA 120C. Production Workshop. 4 Units.

As film and video are collaborative media, students form production groups and ultimately produce final 10-15 minute film/video projects.

Prerequisite: FLM&MDA 120B.

FLM&MDA 130. Multicultural Topics in the Media. 4 Units.

Investigation of media representations of gender, race, and sexuality in the United States. Topics include media images of and by one or more minority groups in the United States, including African Americans, Asian Americans, Chicano/Latinos, Native Americans, gays and lesbians.

Repeatability: Unlimited as topics vary.

FLM&MDA 139W. Writing on Film and Media. 4 Units.

Practical exercises in film, TV, and other media criticism as a form of cultural analysis. Requires at least 4,000 words of assigned composition.

Prerequisite: FLM&MDA 85A and FLM&MDA 101A. Satisfactory completion of the Lower-Division Writing requirement.

(Ib)**FLM&MDA 143. Critical Theory of Television. 4 Units.**

Introduction to critical, theoretical, scholarly understandings and analyses of television, which offer in-depth analyses of television programming, audience reception practices, and industry strategies of address.

Prerequisite: FLM&MDA 85A and FLM&MDA 85B.

FLM&MDA 144. Studies in New Media. 4 Units.

Advanced analysis of the technologies, texts, theories, and cultures of computers, videogames, networks, or platforms.

Prerequisite: FLM&MDA 85A and FLM&MDA 85B and FLM&MDA 85C.

Repeatability: Unlimited as topics vary.

FLM&MDA 145. Popular Culture and Media. 4 Units.

Considers the forms, ideologies, consumption, and marketing of popular entertainment and technologies. May focus on cultural studies methods, transnational approaches, and synergy between media.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 146. Sound Studies. 4 Units.

Focuses on the production, theories, and meanings of sound recordings, music, and/or audio technologies. Topics may include the cultures of popular music and audio devices, music television, and theories of film sound.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 150. Audiences and Reception. 4 Units.

Explores the dynamics of address, interpretation, and appropriation between film and media texts and their viewers. Topics may include reception studies, fandom, audience-defined modes of production, demographics, spectatorial pleasure, and historical approaches to audiences.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 151. Documentary and Experimental Film and Media. 4 Units.

Examines nonfiction and/or experimental cinemas and media, such as documentary, the historical avant-garde, video art, and activist media. Students consider the specific aesthetics and ideologies of forms distinct from narrative feature films.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 160. National/Regional Cinemas and Media. 4 Units.

National schools, period styles, or cultural movements beyond U.S. cinema, as defined by national borders or by geographic regions, such as Latin America. May be approached from a comparative perspective.

Repeatability: Unlimited as topics vary.

FLM&MDA 161. Global/Transnational Cinemas and Media. 4 Units.

Analyzes the multinational production, circulation, and reception of film and media texts beyond singular national borders or specific geographic regions. Topics may include transnational co-productions, exports, and diasporic reception.

Repeatability: Unlimited as topics vary.

FLM&MDA 162. U.S. Cinema . 4 Units.

Explores the modes of production and distribution, aesthetics, and contexts that have shaped cinema in the United States. Topics may include Classical Hollywood, American Independent Cinema, or periods such as 1970s Cinema.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 185. Television and New Media. 4 Units.

Advanced seminar focusing on special topics in television and new media. Past examples have included courses on Media Marketing and Brand Identity; Television and Sound; Game Theory; and other issues related to popular culture, broadcast media, and new media technologies.

Prerequisite: FLM&MDA 85A and FLM&MDA 85B and FLM&MDA 85C.

Repeatability: Unlimited as topics vary.

FLM&MDA 190. Special Topics in Film and Modern Media. 4 Units.

Special issues concerned with film and media history, theory, and criticism.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 191. Special Topics in Critical Practice. 4 Units.

Integrates critical analysis, historical, and theoretical methods with creative projects to illuminate film and media production and industries. May include courses in adaptation, writing television, media activism, writing the short film, performance studies, and movie title sequences.

Prerequisite: FLM&MDA 85A.

Repeatability: Unlimited as topics vary.

FLM&MDA 197. Professional Internship. 2-4 Units.

Professional internship in the broadcast, film, video, or Internet industries designed to provide students with closely supervised professional experience to enhance their understanding of media from industrial, historical, and critical perspectives. Journal and final report required.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit for 4 units.

Restriction: Upper-division students only.

FLM&MDA 198. Creative Project. 2-4 Units.

Creative project in screenwriting, filmmaking, videomaking, or Web or Internet design intended to provide advanced production and creative writing training beyond the Film and Media Studies 117A-B-C or 120A-B-C series. Final project required.

Prerequisite: (FLM&MDA 85A and FLM&MDA 117A and FLM&MDA 117B and FLM&MDA 117C) or (FLM&MDA 120A and FLM&MDA 120B and FLM&MDA 120C). Recommended: FLM&MDA 101A.

Repeatability: May be taken for credit 2 times as topics vary.

Restriction: Upper-division students only.

FLM&MDA 199. Directed Research. 4 Units.

Directed reading and research under supervision of a faculty member in topic areas not covered by regular course offerings. Final research paper required.

Restriction: Upper-division students only.

FLM&MDA 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Undergraduate Program in Global Cultures

152 Humanities Instructional Building; (949) 824-9290
http://www.humanities.uci.edu/global_cultures/
 Armin Schwegler, **Director**

Undergraduate Program

Global Cultures is an innovative undergraduate major (and minor) in the School of Humanities with an exciting mission: to explore the problems and processes of globalization from a humanistic perspective. The major provides students with twenty-first-century analytical skills and knowledge that is critical to understanding the complexities of the diverse world in which we live. In the process, Global Cultures equips students with the knowledge and tools that lead to successful careers in a wide range of professions and fields.

Global Cultures faculty offer high-quality lectures and, in advanced courses, interactive small group seminars. The major favors a multidisciplinary approach that draws on multiple departments and programs, housed in both the Humanities (including Art History, English, Film and Media Studies, History, Philosophy, Religious Studies, Spanish and Portuguese, and many more) and the Social Sciences (Anthropology, Chicano/Latino Studies, Political Science, Sociology, among others).

Up-to-date examples of the highly diverse courses taught in the major may be found at http://www.humanities.uci.edu/global_cultures/. The curricular offerings of Global Cultures are extraordinarily broad. With this intellectually stimulating learning environment, the major attracts students from a wide range of backgrounds. Global Cultures faculty provide these students with a critical understanding and a strong foundation for practice in a variety of occupations, both domestic and international.

The major requires a total of 14 courses. Six of these courses are specific, and eight are electives (see below). Students are encouraged to augment their foreign language competence beyond the School minimum. Participation in the UC Education Abroad Program is strongly recommended for all Global Cultures majors.

Students majoring or minoring in Global Cultures must choose a primary emphasis (six courses) and a secondary emphasis (two courses) from the list below. Each emphasis essentially consists of a geographic focus. Students may also design their own emphasis in consultation with a program advisor and with the approval of the Global Cultures Committee. All emphases are chosen in consultation with a faculty advisor and/or the approval of the Global Cultures Committee. Examples of how current students are combining their primary and secondary emphases are available at http://www.humanities.uci.edu/global_cultures/.

Emphases

Hispanic, U.S. Latino/Latina, and Luso-Brazilian Cultures: Examines the historical, political, and cultural formations of regions where Spanish and Portuguese are spoken, including Spain, Portugal, Spanish- and Portuguese-speaking countries in the Western Hemisphere, and the Latino/Latina population in the United States.

Africa (Nation, Culture) and Its Diaspora: Examines Africa as a diverse geographical and political expression, including its historical, political, and cultural formation locally, regionally, and globally.

Asia (Nation, Culture) and Its Diaspora: Examines Asia as a diverse geographical and political expression, including its historical and cultural formation locally, regionally, and globally.

Europe and Its Former Colonies: Examines Europe and its former colonies as a diverse geographical and political expression, including its historical and cultural formation locally, regionally, and globally.

Atlantic Rim: Explores the movement of people and cultures in relationship to the historical and contemporary experience of societies that are adjacent to the Atlantic Ocean, including, among others, west Africa, the Americas, the Caribbean, and western and northern Europe, as well as the British archipelago.

Pacific Rim: Explores the movement of people and cultures in relationship to the historical and contemporary experience of societies that are adjacent to the Pacific Ocean, including, among others, India, China, Japan, Korea, Vietnam, the United States, Central and South America, and Malaysia.

Inter-Area Studies: Includes comparative studies of the geographical regions outlined in the above six emphases, for instance, the analysis of Africans in Asia, or the cultural, historical, and political connections between the Atlantic and the Pacific Rim.

Students may also design their own emphasis by combining two or more regional emphases in a non-traditional fashion. For instance, a student may wish to study what is known as "Creole" (oral) literatures, found in multiple locations in Africa, Asia, and the Americas.

Study Abroad Option

Students are encouraged to study abroad, and may be able to satisfy a significant portion of their major requirements abroad. For maximum number of courses allowed and other pertinent details, see http://www.humanities.uci.edu/global_cultures/.

All courses taken abroad must be approved. Course approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the foreign host university, and (2) submission of a UCI Humanities Petition form (available online, and to be completed after student's return to UCI) to the Undergraduate Director of the Program in Global Cultures, and to the Office of Undergraduate Study. Students are advised to consult with the Office of Humanities Undergraduate Study (HIB 143) and the Global Cultures Director both before and after their stay abroad. NOTE: See also the residence requirement below.

Career Opportunities

The major prepares students particularly well for careers in all fields in which analysis, judgment, argument, and a wide (global) rather than narrow perspective are important. The Global Cultures major equips students with a knowledge that is critical to understanding the complexities of the diverse world in which we live.

The following careers are especially well suited for Global Cultures majors: business (national as well as international), law, management, education (primary and secondary teaching), politics, public policy, academia, print media, television, foreign service, tourism, travel industry, and graduate studies in a wide variety of fields (business, law, education, public policy, and others).

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career

library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Requirements for the B.A. Degree in Global Cultures

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Requirements for the Major

A. Complete:

HISTORY 21A	World: Innovations
HISTORY 21B	World: Empires and Revolutions
HISTORY 21C	World: Wars and Rights

B. Complete:

GLBLCLT 103A	Global Cultures I
GLBLCLT 103B	Global Cultures II

C. Complete:

GLBLCLT 191	Global Cultures Senior Seminar
-------------	--------------------------------

D. Select seven upper-division courses from an approved list. ¹

E. Select one additional upper- or lower-division course from an approved list. ²

¹ Five of the courses must focus on one emphasis and two on a second emphasis chosen from the approved course lists at http://www.humanities.uci.edu/global_cultures. Quarterly consultation with a faculty advisor is also required.

² The selected course must focus on the primary or secondary emphasis chosen from the approved course lists at http://www.humanities.uci.edu/global_cultures/.

Students are encouraged to augment their language other than English competence beyond the School minimum. Participation in the UC Education Abroad Program is strongly recommended for all Global Cultures majors.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI. By petition, two of the five may be taken through the UC Education Abroad Program, provided that course content is approved—usually in advance—by the Director of the Global Cultures Program.

Requirements for the Minor

A. Select two of the following:

HISTORY 21A	World: Innovations
HISTORY 21B	World: Empires and Revolutions
HISTORY 21C	World: Wars and Rights

B. Complete:

GLBLCLT 103A	Global Cultures I
GLBLCLT 103B	Global Cultures II

C. Select three upper-division courses from one emphasis.

D. Select one upper-division course from a second emphasis.

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program,

providing course content is approved in advance by the appropriate department chair.

Emphases and Approved Courses: The lists of approved courses are extensive and vary from quarter to quarter, depending upon course scheduling. For complete up-to-date information, consult http://www.humanities.uci.edu/global_cultures.

Core Faculty

Sharon B. Block, *Department of History*

James Fujii, *Departments of East Asian Languages and Literatures and of Comparative Literature*

David Theo Goldberg, *Departments of Comparative Literature and of Criminology, Law and Society*

Douglas M. Haynes, *Department of History*

Laura H. Y. Kang, *Departments of Women's Studies and Comparative Literature*

Ketu H. Katrak, *Departments of Drama, Comparative Literature, and English*

Rodrigo Lazo, *Department of English*

Keith L. Nelson, *Department of History*

Jane O. Newman, *Departments of Comparative Literature and English*

Rachel O'Toole, *Department of History*

Brook Thomas, *Department of English*

Armin Schwegler, *Department of Spanish and Portuguese*

Jacobo Sefamí, *Department of Spanish and Portuguese*

Bert Winther-Tamaki, *Department of Art History*

Courses

GLBLCLT 103A. Global Cultures I . 4 Units.

Introduction to the processes by which economies, cultural practices, national entities, groups, individuals, and personal identities have undergone globalization. General background and methodological tools for understanding problems and processes of globalization.

Repeatability: Unlimited as topics vary.

GLBLCLT 103B. Global Cultures II . 4 Units.

Introduction to the processes by which economies, cultural practices, national entities, groups, individuals, and personal identities have undergone globalization. Explores how globalization has manifested itself in specific topics, periods, or societies.

Repeatability: Unlimited as topics vary.

GLBLCLT 105. Language Origins: Evolution, Genetics, and the Brain. 4 Units.

Examines how human language(s) may have originated. Studies pertinent techniques (reconstruction) and addresses related questions, including Is our language faculty inborn (i.e., genetically encoded)? Can brain imaging and population genetics research help to unlock this mystery of human evolution?.

Same as HISTORY 135G, ANTHRO 152A, LINGUIS 175.

GLBLCLT 191. Global Cultures Senior Seminar. 4 Units.

Students explore a topic(s) concerning processes and/or problems of globalization from an interdisciplinary perspective and build on their critical and analytical skills when investigating cultural and other phenomena that cut across national borders. Research assignments, class presentations, final seminar paper.

Prerequisite: GBLCLT 103A and GBLCLT 103B.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

GLBLCLT 199. Independent Study. 1-4 Units.

Directed reading and research in consultation with a faculty advisor. Substantial written work required.

Repeatability: May be repeated for credit unlimited times.

Department of History

200 Murray Krieger Hall; (949) 824-6521

<http://www.humanities.uci.edu/history/>

Emily S. Rosenberg, **Department Chair**

Undergraduate Program

The undergraduate program in History is designed to develop critical intelligence and to foster an awareness of ourselves and our world through the study of the past. The Department presents a variety of approaches to history, and each emphasizes basic disciplinary skills: weighing evidence, constructing logical arguments, and exploring the role of theory in historical analysis and human action.

The Department offers a number of lower-division courses open to nonmajors as well as majors, most of which fulfill part of the UCI general education requirement. The Department requires all majors to take an introductory course in three of six regional histories—United States history, European history, Latin American history, Transregional history, Asian history, or Middle East and African history. These courses are also open to nonmajors.

Students who are interested in the study of history but are majoring in other disciplines may minor in History. The minor incorporates elements of the Department's program for majors but allows students enough flexibility to pursue programs in other departments and schools.

Upper-division courses range from the examination of individual nation-states (e.g., Chinese history), to studies of the relations among nation-states (e.g., Emergence of the Modern Middle East), to historical analyses of political, socio-economic, and cultural factors (e.g., Women in the United States). Students are also provided the opportunity for small-group learning experiences in a series of colloquia in social history, political history, international history, intellectual history, social thought, and comparative history. The colloquia are conducted as discussion

groups and involve close reading and analysis of secondary texts. The research seminar is a one-quarter seminar in primary materials that culminates in the writing of a research paper. In addition, students have the option of pursuing a full-scale research project with a faculty advisor after completing the research seminar.

The faculty strongly encourages History majors and minors to take advantage of the University's study abroad programs and to experience a different culture for a quarter or longer while making progress toward their UCI degree. Moreover, students who are interested in the history of a particular country or region should seriously consider participation in University of California programs within that country or area. UCI's Study Abroad Center, which includes both the University's Education Abroad Program (UCEAP) and the International Opportunities Program (IOP), assists students in taking advantage of the many worldwide opportunities. See <http://www.studyabroad.uci.edu> or an academic counselor for additional information.

Careers for the History Major

The training and discipline derived from historical studies provide a valuable experience for all educated persons seeking to understand themselves and their world. Many students who complete undergraduate degrees in the Department of History go on to graduate school in a variety of fields, including history, law, business, international relations, and teacher education. Students interested in teaching history at the intermediate and high school levels should consult with the Department of History, the School of Humanities Undergraduate Counseling Office, or the Department of Education.

The study of history is valuable preparation for many other careers as well. The strong academic and professional orientation acquired by History majors is necessary to pursue successful careers in such diverse fields as advertising, banking, journalism, management, public relations, publishing, and government service.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Requirements for the B.A. Degree in History

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Departmental Requirements for the Major

Thirteen courses are required:

A. Select three of the following (chosen from three different regions):

HISTORY 70A	Problems in History: Asia
HISTORY 70B	Problems in History: Europe
HISTORY 70C	Problems in History: United States
HISTORY 70D	Problems in History: Latin America
HISTORY 70E	Problems in History: Middle East and Africa
HISTORY 70F	Problems in History: Transregional History

B. Three upper-division History courses with a regional or thematic focus decided upon in consultation with a faculty advisor, at least one of which is devoted to the period prior to 1800.

C. Two additional upper-division History courses outside the regional or thematic focus area.

D. Complete the following:

HISTORY 100W	Writing About History
HISTORY 190	Colloquium ¹

E. Three additional lower- or upper-division History courses.

¹ Students have the option of pursuing a full-scale research project in HISTORY 192 in consultation with a faculty advisor. HISTORY 192 can only be taken after completing HISTORY 190.

Residence Requirement for the Major: One course from the History 70 series, HISTORY 100W, HISTORY 190, and three upper-division History courses must be completed successfully at UCI. By petition, two of the six may be taken through the UC Education Abroad Program, provided that course content is approved in advance by the Chair of the History Undergraduate Program Committee.

Departmental Requirements for the Minor

Seven courses are required:

A. Select one of the following:

(1) A year-long survey in world history:

HISTORY 21A- 21B- 21C	World: Innovations and World: Empires and Revolutions and World: Wars and Rights
-----------------------	--

or

(2) United States History

HISTORY 40A- 40B- 40C	Colonial America: New Worlds and Nineteenth-Century U.S.: Crisis and Expansion and Modern America: Culture and Power
-----------------------	--

or

(3) Select three of the following chosen from three different regions:

HISTORY 70A	Problems in History: Asia
HISTORY 70B	Problems in History: Europe
HISTORY 70C	Problems in History: United States
HISTORY 70D	Problems in History: Latin America
HISTORY 70E	Problems in History: Middle East and Africa
HISTORY 70F	Problems in History: Transregional History

B. Select four upper-division History courses.

Residence Requirement for the Minor: Students who select the History 70 series must complete at least one 70 series course at UCI. At least four upper-division History courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the Chair of the History Undergraduate Program Committee.

Graduate Program

The M.A. and Ph.D. degree programs in History are designed to provide students with both advanced historical skills and a rigorous grounding in historical theory. This combination of theoretical study with training in historical method reflects the Department's conviction that scholars

should be encouraged to deal with significant questions about the past and to approach these questions in a methodologically sophisticated way. This approach requires that the student develop the critical abilities necessary to deal with primary sources, secondary syntheses, and the interrelationship of history and theory. Candidates for a Ph.D. in History are expected to gain teaching experience as an integral part of their graduate training. Ordinarily this is accomplished through service as a teaching assistant.

Basic to the curriculum is the Department's course in History and Theory which explores a variety of theoretical issues and methodological concerns that have sparked lively debate among historians in the past decades and remain of urgent concern to twenty-first century historical writing: the relationship between materialist approaches and cultural analysis; subjectivity, gender, sexuality and emotion; religion as a category of historical analysis; "the archive" and archival practice; nationalism and postcolonial epistemologies. Course readings comprise a mix of texts straddling the divide between purely theoretical and historically embedded analyses.

The colloquium, a reading course that examines a field's historiography, enriches the student's knowledge of the main areas of historical research and develops critical reading skills. A colloquium series is offered annually in U.S. history, East Asian history, and World history; biennially (depending on demand) in modern European history, early modern European history, Latin American history, South and Southeast Asian history, Middle Eastern and North African history, and ancient history; and occasionally in medieval history. A student may prepare a dissertation in any of these fields.

In addition to the History and Theory sequence and the major field colloquia, students also take a proseminar/research seminar sequence during their first year. The proseminar provides an orientation to the literature on a broad historical subject, and the associated seminar offers guidance in research and writing on problems within this broad area. Students awarded M.A. degrees at other institutions before entering the graduate program at UCI may be exempted from this requirement, subject to evaluation of their M.A. theses.

During the second year of study, Ph.D. students normally take a colloquium series in their second field (although they may also take this series during their first year if desired). They also take a two-quarter research seminar where they have an opportunity to work on problems of their own choosing; students who entered the program with an M.A. degree must also take this seminar. In addition, independent reading and research courses are provided for advanced, specialized study in tutorial form.

Competence in History and Theory is demonstrated by satisfactory completion of HISTORY 200A and HISTORY 200B. HISTORY 200C may be taken as an elective. The immediate objective for the doctoral student is to develop two fields of competence in addition to History and Theory. Competence in the two fields is demonstrated by the satisfactory completion of three courses in each of these areas. A comprehensive oral examination on the student's major field follows fulfillment of all degree requirements. However, those students who elect a second field administered by another program or department (e.g., Critical Theory, Asian American Studies, Feminist Studies) must complete requirements, which sometimes include a written examination, for that field.

The subsequent objective, to write a distinctive dissertation, is of crucial importance. To assist in accomplishing both objectives, the Department offers intensive consultation with the faculty as well as a lively intellectual

atmosphere. Students have long shared in the decision-making processes of the Department, which engages the entire historical community at UCI in the collective pursuit of excellence. Students profit also from a vigorous visiting speakers program that brings scholars from other campuses and other nations to meet and interact with UCI students and faculty.

Requirements for Admission. Although it is desirable that an applicant have the equivalent of an undergraduate major in History, the Department also considers students who have previously specialized in other subject areas and who show promise of sustained and self-disciplined work in history. Typically, a minimum undergraduate grade point average of 3.3 (B+) is required for admission, with evidence of better work in history. In addition, all applicants are asked to submit three letters of recommendation and scores from the Graduate Record Examination. An example of written work in history from undergraduate courses is also required. A departmental interview may also be required. Students are accepted for admission for fall quarter only, and the deadline for application for fall admission is January 2. The application deadline to be considered for fellowships is December 15.

Master of Arts in History

Program of Study. Each candidate for the M.A. will choose a graduate advisor who will supervise the student's program. Nine courses are required for the degree: three in a colloquium series, a proseminar and related first-year research seminar, a secondary emphasis of two related courses (HISTORY 200A and HISTORY 200B, or other), and two electives that support preparation for the M.A. exam or thesis. Students who decide to pursue the Ph.D. after completion of the M.A. program need to consider Ph.D. course requirements when selecting courses.

Time Limits. The M.A. requires a minimum of one year in academic residence and can be completed during that term if full-time study is undertaken. However, it is expected that many M.A. students are employed and need to enroll on a part-time basis. Therefore, students are allowed up to three years of graduate study to complete the degree.

Plan I: Thesis. The master's thesis represents a revision of the first-year research paper, equivalent to a scholarly article of 40–50 typescript pages, under the supervision of a professor in the student's major field and reviewed and approved by a three-member thesis committee, at least two of which must be History faculty members.

Plan II: Comprehensive Examination. At the end of the final quarter the M.A. candidate must pass a comprehensive written or oral examination administered by three faculty members covering the student's major field (e.g., America, Early Modern Europe) and focused upon material assigned in the three-quarter colloquium series.

Language Requirement. Students in the M.A. program whose major field requires use of foreign language sources demonstrate competence in a foreign language in the process of writing the first-year research paper and thesis. Other M.A. students do not have to meet a foreign language or alternative skills requirement.

Doctor of Philosophy in History

Ph.D. students are advised to begin their graduate work at UCI, since those who have taken the M.A. elsewhere will be expected to enroll in the same courses that are required of all incoming students, with the exception of the First-Year Research Seminar. Subject to evaluation of their M.A. theses, these students will be exempted from this requirement. In the second and third years, the greater experience of those who

enter with an M.A. may work to their advantage in speeding them to the qualifying examination.

First-Year Review. To be admitted formally into the doctoral program, students must satisfactorily pass a departmental evaluation at the end of their first year of study; this includes students who entered with an M.A. from another institution.

Emphasis in Creative Nonfiction. In addition to meeting admission requirements, applicants must submit an additional writing sample that demonstrates aptitude for the program. During their program of study, students take three of the writing workshops or their equivalents that are offered through the International Center for Writing and Translation. They also write a dissertation that meets traditional intellectual standards for academic rigor and is accessible to an audience beyond the academy.

Emphasis in the History of Gender and Sexuality. To complete this emphasis, students take three courses emphasizing feminist studies and/or queer theory in three different fields. At least two of these courses must be taken in the History Department; the third course may be either a History Department course or one of the three core graduate seminars offered through the Department of Women's Studies.

Program of Study. The Department requires doctoral students to prepare themselves in three different areas:

1. History and Theory.
2. The first field (such as Modern Europe), which is designed as a teaching field as well as the focus of the student's dissertation.
3. The second field (such as American History or Critical Theory), which is designed as a second teaching field.

The courses required in this preparation include the History and Theory sequence, colloquium series in both fields, First-Year Proseminar/Research Seminar sequence, and the Second-Year Research Seminar. The normal academic load is three courses per quarter. However, students may be eligible for approved part-time status, which allows them to take a lighter course load at reduced fees for a maximum of two academic years.

Every doctoral student will be assisted by a departmental advisor in the student's general area of study who will be responsible for approving defined fields, guiding the student to consultant faculty, and supervising the examination.

Ph.D. students can be awarded an M.A. after fulfilling requirements for residence and one language and successfully completing 36 units, including 28 in required courses. They also take a two-hour oral examination with an advisor.

Language Requirements. All students, except as specified below, must demonstrate a reading knowledge of two foreign languages prior to taking the Ph.D. candidacy qualifying examination. Competency in a language may be established either by passing a departmental examination (proctored in the department office) or through extensive language use in one of the research seminars. The specific languages that may be used to satisfy this requirement depend on the students' first fields, subject to their advisors' approval.

Students may substitute for one of their language requirements a sequence of two graduate courses in an allied discipline or relevant methodology (e.g., critical theory, political theory, cultural anthropology, Asian American studies, feminist theory, art history, linguistics, statistics, quantitative methods), at the discretion of their major field advisors.

Students choosing this option are normally expected to write a substantial paper and must demonstrate that the allied discipline or methodology used to fulfill the requirement is of value to historical inquiry. The course(s) taken to satisfy a language requirement may not count toward fulfilling the requirement for the second field.

Qualifying Examination and Dissertation. In preparation for the oral Qualifying Examination, the student will present to the Ph.D. Candidacy Committee a portfolio of three papers totaling at least 45 pages on subjects related to the major field (but not from required colloquia courses). Successful completion of this examination results in the student's advancement to Ph.D. candidacy. The normative time for advancement to candidacy is three years. Within one academic quarter of the oral examination, new candidates must meet in a colloquy with their Doctoral Committee to present their dissertation proposal. Once the Doctoral Committee approves the proposal, the student begins intensive work on the dissertation. The research and writing involved in this effort may require from one to four years. At the end of this period an oral defense of the dissertation, focusing on the adequacy of the student's research and thesis, is normally held.

For students who enter with normal academic preparation and pursue a full-time program of study, the normative time to degree for the Ph.D. is seven years. The maximum time permitted is nine years.

Faculty

Marc Baer, Ph.D. University of Chicago, *Professor of History* (Ottoman and Islamic history, Middle East history, Jewish history, and history of religion)

Emily Baum, Ph.D. Jewish Theological Seminary, *Assistant Adjunct Professor of History*

Sharon B. Block, Ph.D. Princeton University, *Associate Dean of Humanities Undergraduate Study and Associate Professor of History* (Colonial North America, sexuality, and race)

Alex Borucki, Ph.D. Emory University, *Assistant Professor of History*, (African diaspora, early modern Atlantic world, slave trade, colonial Latin America)

Carolyn P. Boyd, Ph.D. University of Washington, *Professor Emerita of History* (Europe, Spain)

Dickson D. Bruce, Jr., Ph.D. University of Pennsylvania, *Professor Emeritus of History* (American culture, African American history)

Vinayak Chaturvedi, Ph.D. University of Cambridge, *Director of the Humanities Honors Program and Associate Professor of History* (South Asia, social and intellectual history)

Yong Chen, Ph.D. Cornell University, *Associate Professor of History* (Asian American history)

Touraj Daryaee, Ph.D. University of California, Los Angeles, *Associate Director, Dr. Samuel M. Jordan Center for Persian Studies and Culture, Professor of History, and Howard Baskerville Professor in the History of Iran and the Persianate World* (ancient and medieval Iranian history, Iranian languages and literature, Zoroastrianism)

Alice Fahs, Ph.D. New York University, *Professor of History* (U.S. intellectual/cultural history)

Sarah Farmer, Ph.D. University of California, Berkeley, *Associate Professor of History* (twentieth-century European cultural and social)

Richard I. Frank, Ph.D. University of California, Berkeley, *Professor Emeritus of History and Classics* (Roman empire, Classics)

James B. Given, Ph.D. Stanford University, *Professor Emeritus of History* (medieval Europe)

Qitao Guo, Ph.D. University of California, Berkeley, *Associate Professor of History* (Late Imperial China, social and cultural)

Douglas M. Haynes, Ph.D. University of California, Berkeley, *Associate Vice Provost for Equity and Diversity and Associate Professor of History* (social and cultural history of modern Britain, social history of modern medicine)

Lamar M. Hill, Ph.D. University of London, *Professor Emeritus of History* (Tudor-Stuart Britain)

Karl G. Hufbauer, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (social history of science)

David Igler, Ph.D. University of California, Berkeley, *Associate Professor of History* (U.S. environmental, American West, Pacific)

Jon S. Jacobson, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (European international)

Winston James, Ph.D. London School of Economics and Political Science, University of London, *Professor of History* (Caribbean, African American, and African diaspora)

Michael P. Johnson, Ph.D. Stanford University, *Professor Emeritus of History* (American social and political)

Matthias Lehmann, Ph.D. Freie Universität Berlin, *Director of the Interdisciplinary Minor in Jewish Studies, Associate Professor of History, and Teller Family Chair in Jewish History* (early modern and modern Jewish history, Sephardic studies)

Mark A. LeVine, Ph.D. New York University, *Professor of History* (modern Middle Eastern history, Islamic studies, histories of empire and globalization)

Lynn Mally, Ph.D. University of California, Berkeley, *Professor Emerita of History* (modern Russian and Soviet)

Nancy A. McLoughlin, Ph.D. University of California, Santa Barbara, *Assistant Professor of History* (medieval Europe)

Jessica Millward, Ph.D. University of California, Los Angeles, *Assistant Professor of History* (U.S., African American gender and women)

Laura Mitchell, Ph.D. University of California, Los Angeles, *Associate Professor of History* (sub-saharan Africa, colonial southern Africa, environmental history, world history)

Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History* (modern Germany, European women)

Keith L. Nelson, Ph.D. University of California, Berkeley, *Professor Emeritus of History, Research Professor, and Director of the Program in Religious Studies* (American foreign relations)

Spencer C. Olin, Ph.D. Claremont Graduate University, *Professor Emeritus of History* (American social and political)

Rachel O'Toole, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of History* (Colonial Latin America; African diaspora)

Allison Perlman, Ph.D. University of Texas at Austin, *Assistant Professor of History and of Film and Media Studies* (history of broadcasting, American social movements, media law and policy, media activism, popular memory, American popular culture)

Kavita Philip, Ph.D. Cornell University, *Associate Professor of History* (nineteenth- and twentieth-century South Asian history of science and technology, environmental history and political ecology, information and society)

Renee Raphael, Ph.D. Princeton University, *Assistant Professor of History* (history of ideas, early modern history, history and philosophy of science)

Ana Rosas, Ph.D. University of Southern California, *Assistant Professor of History and Chicano/Latino Studies* (Chicana/Chicano history; comparative immigration and ethnic history; gender studies; oral history)

Jaime E. Rodríguez, Ph.D. University of Texas, *Professor Emeritus of History* (Latin America, Mexico, independence of Spanish America, and Hispanic political culture)

Emily S. Rosenberg, Ph.D. State University of New York, Stony Brook, *Department Chair and Professor of History* (U.S. transnational history, U.S. and the world, gender and international relations)

Vicki L. Ruiz, Ph.D. Stanford University, *Professor of History and Chicano/Latino Studies* (women, Chicano/Chicana labor, U.S. immigration, U.S. West)

Sharon V. Salinger, Ph.D. University of California, Los Angeles, *Dean of the Division of Undergraduate Education and Professor of History*

Patricia Seed, Ph.D. University of Wisconsin, Madison, *Professor of History* (world history, cartography)

Ulrike Strasser, Ph.D. University of Minnesota, *Associate Professor of History* (early modern continental Europe, gender history, world history, history and theory)

Timothy Tackett, Ph.D. Stanford University, *Professor Emeritus of History* (Old Regime Europe, French Revolution)

Heidi Tinsman, Ph.D. Yale University, *Associate Professor of History* (Latin America, world)

Steven C. Topik, Ph.D. University of Texas, *Professor of History* (Latin America, world)

Anne Walthall, Ph.D. University of Chicago, *Co-Director of the Minor in Asian Studies, Director of the Center for Asian Studies, and Professor of History* (early modern and modern Japan)

Jeffrey N. Wasserstrom, Ph.D. University of California, Berkeley, *UCI Chancellor's Professor of History* (modern China, urban, world, gender)

Jonathan M. Wiener, Ph.D. Harvard University, *Professor of History* (recent American, theory and history)

Affiliated Faculty

Edwin Amenta, Ph.D. University of Chicago, *Professor of Sociology*

Simon A. Cole, Ph.D. Cornell University, *Associate Professor of Criminology, Law and Society*

Catherine Fisk, J.D. University of California, Berkeley; LL.M. University of Wisconsin at Madison, *UCI Chancellor's Professor of Law* (labor and employment law, legal profession, employee intellectual property, civil rights)

Dorothy Fujita-Rony, Ph.D. Yale University, *Associate Professor of Asian American Studies* (U.S. history, Asian American studies)

Christopher Tomlins, Ph.D. Johns Hopkins University, *UCI Chancellor's Professor of Law* (American legal history, law and society, and law and humanities)

Courses

HISTORY 12. Introductory Topics in History . 4 Units.

Introduces methods and premises of historical study. Topics include introductions to cultural, political, economic, social, and religious history.

Repeatability: Unlimited as topics vary.

(IV)

HISTORY 15A. Native American History. 4 Units.

Introduction to multiple topics: indigenous religious beliefs and sociopolitical organization, stereotypic "images," intermarriage, the fur trade, Native leaders, warfare, and contemporary issues.

(IV, VII)

HISTORY 15C. Asian American Histories. 4 Units.

Examines and compares diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Formerly ASIANAM 60A.

Same as SOC SCI 78A, ASIANAM 50.

((III or IV) and VII.)

HISTORY 16A. World Religions I. 4 Units.

An introduction to the history, doctrine, culture, and writing of the three "religions of Abraham": Judaism, Christianity, and Islam.

Same as REL STD 5A.

(IV, VIII)

HISTORY 16B. World Religions II. 4 Units.

An introduction to various religious traditions in selected areas of the world—including India and South Asia, East Asia, Africa, and the Americas.

Same as REL STD 5B.

(IV, VIII)

HISTORY 16C. Inter-Religious Dialogue. 4 Units.

Lectures and discussion on controversial topics in religion: sexual morality; religious violence; science; treatment of women and girls; religious truth, American Constitutional matters; secularization; the future of religion, and other topics.

Same as REL STD 5C.

(IV, VIII)

HISTORY 18A. Introduction to Jewish Cultures. 4 Units.

Introduction to the diversity of Jewish cultures from ancient to modern times. Surveys the Jewish experience in various societies and civilizations: ancient Mediterranean, Middle East and North Africa, Europe, and the Americas.

(IV, VIII)

HISTORY 21A. World: Innovations. 4 Units.

Treats major themes of world historical development through the mid-seventeenth century, focusing on the Eurasian world, but with secondary emphasis on Africa and the Americas.

(IV, VIII)

HISTORY 21B. World: Empires and Revolutions. 4 Units.

Examines three major transformations that made the world of 1870 dramatically different from that of 1650: e.g., the scientific revolution, industrialization, and the formation of modern states and nations.

(IV, VIII)

HISTORY 21C. World: Wars and Rights. 4 Units.

Considers several major currents of modern history: technological change and its social effects; changes in gender relations; totalitarianism; peasant revolutions and the crisis of colonization; international migration; and ecological problems.

(IV, VIII)

HISTORY 36A. The Formation of Ancient Greek Society: Early Greece. 4 Units.

A survey of ancient Greek civilization from its origins in the Bronze Age to the mid-Archaic period. Examines political and social history, as well as literature, art, religion, and archaeological remains.

Same as CLASSIC 36A.

(IV)

HISTORY 36B. The Formation of Ancient Greek Society: Late Archaic and Classical Greece. 4 Units.

A survey of ancient Greek civilization from the Late Archaic period to the Classical period. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion.

Same as CLASSIC 36B.

(IV)

HISTORY 36C. The Formation of Ancient Greek Society: Fourth-Century and Hellenistic Greece. 4 Units.

A survey of ancient Greek civilization from the fourth century BCE through to the Hellenistic period. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion.

Same as CLASSIC 36C.

(IV)

HISTORY 37A. The Formation of Ancient Roman Society: Origins to Roman Republic. 4 Units.

A survey of the development of Roman civilization from its eighth century BCE beginnings to the civil wars of the first century BCE. Examines political and social history, as well as literature, art, architecture, and religion.

Same as CLASSIC 37A.

(IV)

HISTORY 37B. The Formation of Ancient Roman Society: Roman Empire. 4 Units.

A survey of Roman civilization from Augustus's consolidation of power following the civil wars of the first century BCE to the crisis of the third century CE. Includes social history, literature, art, architecture, and religion.

Same as CLASSIC 37B.

(IV)

HISTORY 37C. The Formation of Ancient Roman Society: The Fall of Rome. 4 Units.

A survey of Roman civilization from the crisis of the third century CE to the so-called "fall of Rome" in 476 CE. Examines political and social history, as well as literature, art, architecture, and religion.

Same as CLASSIC 37C.

(IV)

HISTORY 40A. Colonial America: New Worlds. 4 Units.

Important themes in the social, economic, political, and cultural development in North America that transformed part of the geographical space into the U.S. Topics include Native Americans, European colonization, African enslavement, borderlands, gender, economic stratification, the American Revolution, the Constitution.

(IV)

HISTORY 40B. Nineteenth-Century U.S.: Crisis and Expansion. 4 Units.

Explores the transformation of American society, economy, and politics during the nineteenth century. Topics include industrial revolution, slavery, antislavery, women's rights, reform movements, Civil War and Reconstruction, immigration and ethnicity, and cultural and social transformation.

(IV)

HISTORY 40C. Modern America: Culture and Power. 4 Units.

Important themes in U.S. history in the twentieth and early twenty-first centuries. Topics include corporate capitalism, empire, immigration, race, gender, consumer society, World Wars, Progressiveness, New Deal, Great Society, civil rights, women's movements, Vietnam War, conservative politics, and economic stratification.

(IV)

HISTORY 50. Crises and Revolutions. 4 Units.

Study of turning points in world history, illustrating themes and methods of historical analysis.

Repeatability: May be taken for credit 3 times as topics vary.

(IV, VIII)

HISTORY 60. The Making of Modern Science. 4 Units.

Surveys the history of science and mathematics since the Scientific Revolution, examining central developments both chronologically and thematically, as well as investigating their significance for contemporary philosophical debates about the role and status of current scientific theories.

Same as LPS 60.

(IV)

HISTORY 70A. Problems in History: Asia. 4 Units.

An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of Asia, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 70B. Problems in History: Europe. 4 Units.

An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of Europe, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 70C. Problems in History: United States. 4 Units.

An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of the United States, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV)

HISTORY 70D. Problems in History: Latin America. 4 Units.

An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of Latin America, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 70E. Problems in History: Middle East and Africa. 4 Units.

An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of the Middle East and Africa, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 70F. Problems in History: Transregional History. 4 Units.

An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of transregional history, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 100W. Writing About History. 4 Units.

Specialized courses focusing on history writing and research skills. Each class reflects the instructor's intellectual interests and is conducted as a discussion group. Limited to 18 students. Several short writing assignments and one longer project meeting the upper-division writing requirement.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: History majors only.

(Ib)

HISTORY 102B. Topics in Environmental History. 4 Units.

Explores the many historical interfaces between climate change, modes of production, and culture. Topics include the environmental history of warfare, imperialism, and famine in the nineteenth century and the history of environmental thought.

Repeatability: Unlimited as topics vary.

HISTORY 103. Topics in International Conflicts. 4 Units.

A study of international conflicts from military, social, economic perspectives with a focus on the preparation for and conduct of war and the consequences. Formerly History 100A.

Repeatability: Unlimited as topics vary.

HISTORY 104. Topics in History and Journalism. 4 Units.

A series of lectures on, and discussions of, announced topics in history and journalism and the literature of facts. Examples: "Early Modern Women in the Public Sphere," "Victorian Cultural Critics," and "Writing about War."

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Recommended: Upper-division students only.

HISTORY 105B. Later Roman Empire. 4 Units.

Creation of a bureaucratic empire; rule by gentry and officers; official culture and rise of Christianity; social conflict and political disintegration.

HISTORY 110A. Europe in the Early Middle Ages. 4 Units.

Survey of Europe between 300 A.D. and 900 A.D. Topics include the breakup of the Roman Empire, barbarian invasions, spread of Christianity, rise of Islam, the Carolingian Empire, and the Vikings.

HISTORY 110B. Europe in the Central Middle Ages. 4 Units.

Survey of European history from ca. 900 to ca. 1300. Topics discussed include the growth of the economy, feudalism, the crusades, the rise of towns, the development of the church, popular heresy, and the rise of large-scale polities.

HISTORY 110C. Europe in the Later Middle Ages. 4 Units.

Survey of European history from ca. 1300 to ca. 1500. Topics include the Black Death, the crisis of the economy, the Hundred Years' War, peasant and urban uprisings, and the Great Schism.

HISTORY 110D. Topics in Medieval Europe. 4 Units.

Studies of the topics in Medieval Europe.

Repeatability: Unlimited as topics vary.

HISTORY 112D. Topics in Early Modern Europe. 4 Units.

Theme-based approach to the main social, political, and cultural developments in Europe between the fifteenth and eighteenth centuries. Topics included Renaissance humanism, Reformation and Counter-Reformation, scientific revolution, court culture and nation building, interactions with non-European peoples, cities and commerce.

Repeatability: Unlimited as topics vary.

HISTORY 114. Topics in Modern European History. 4 Units.

Course content changes with instructor. Topics include the Inquisition; science and religion in modern Europe; sex and society in modern Europe; French revolutions; culture in interwar Europe; the Holocaust; the fall of communism in Eastern Europe.

Repeatability: Unlimited as topics vary.

HISTORY 115C. Europe: Twentieth Century. 4 Units.

World War I and its impact on the modern world; rise of an international Communist movement; regimes created by Mussolini, Hitler, Stalin; World War II; the killing of Europe's Jews; Cold War and collapse of communism.

HISTORY 116A. England in the Early Middle Ages. 4 Units.

Survey of English history from ca. 400 to ca. 1200. Topics include the Anglo-Saxons, the Viking settlement, the Norman Conquest, the Angevin Empire, and the development of royal, legal, and administrative mechanisms.

HISTORY 116B. Later Medieval England. 4 Units.

Survey of English history between ca. 1200 and ca. 1500. Topics include the Magna Carta, the Barons' War, the Welsh and Scottish wars, the development of Parliament, the Hundred Years' War, and the War of the Roses.

HISTORY 118A. Modern Britain: 1700 to 1850. 4 Units.

Examines the major developments in British politics, socioeconomic structure, and culture from 1700-1850. The development of the British nation-state and the fashioning of a national identity. Explores basic questions about British national identity.

HISTORY 118B. Modern Britain: 1850 to 1930. 4 Units.

Examines the social, economic, and political history of Britain from 1850-1930. Post-industrialism, urbanization, population and economic change, increased political participation by working classes and women, consolidation of the empire and the breakup of the United Kingdom.

HISTORY 118C. Modern Britain: 1930 to Present. 4 Units.

Explores Britain from the Second World War to resignation of Margaret Thatcher. Examines Britain's devolution from world power to member of the European Community; transition from a manufacturing to service-based economy; changing demographic and racial composition in light of decolonization.

HISTORY 120B. The French Revolution: 1774-1815. 4 Units.

Emphasis on social, economic, and cultural history of the French Revolution.

HISTORY 120C. France in the Nineteenth Century. 4 Units.

Emphasis on social, economic, and cultural history of France in the Nineteenth Century.

HISTORY 120D. France in the Twentieth Century: 1914 to Present. 4 Units.

Emphasis on social, economic, and cultural history of France from 1914 to present.

HISTORY 120E. History of Paris. 4 Units.

The development of Paris from the beginnings through the present, with emphasis on the last three centuries. The city is examined from the political, social, ecological, and architectural points of view as well as through the perspective of urban planning.

HISTORY 122B. Hitler and the Germans. 4 Units.

Focuses on Hitler's rise to power and Nazi society. Examines Germany's defeat in World War I; the political and cultural experimentation of the 1920s; the causes of Hitler's success; and life in Germany under the Nazis.

HISTORY 123D. Topics in Spanish History. 4 Units.

Topics include Spain in the nineteenth century, the Spanish Civil War, and dictatorship and democracy in modern Spain.

Repeatability: Unlimited as topics vary.

HISTORY 124A. Imperial Russia: 1689-1905. 4 Units.

Political and social developments in Russia from 1689-1905.

HISTORY 124B. Twentieth-Century Russia. 4 Units.

Political and social developments in Twentieth-Century Russia.

HISTORY 126A. The Era of World War I: 1900-1939. 4 Units.

The era of World War I and its political, social and economic history.

HISTORY 126B. The Era of World War II: 1933-45. 4 Units.

The era of World War II and its political, social and economic history.

HISTORY 128A. Women and Gender in Early Modern Europe: 1400-1700. 4 Units.

Explores what it meant to be a woman in early modern Europe. Examines women's lives in early modern Europe while developing skills of historical interpretation. Topics include: notions of masculinity and femininity; "proto-feminism"; marriage and sexuality; female piety and witchcraft.

HISTORY 128C. Topics in the History of Women in Europe. 4 Units.
Studies in selected areas of history of European women. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 130A. Jewish History, Ancient to Early Modern Times. 4 Units.

The history of the Jewish people from their origins in the ancient world to the 1700s. Social, religious, and intellectual life of Jewish communities in the Middle East, North Africa, and Europe.

HISTORY 130B. Modern Jewish History. 4 Units.

History of the Jews in Europe, the Middle East, North Africa, and the United States from the early-eighteenth century to recent times. Emancipation, assimilation, religious reform, antisemitism, Zionism, socialism, the Holocaust, and modern Israel are the major themes.

HISTORY 130C. Topics in the Jewish History. 4 Units.

Studies in selected areas of Jewish history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 131A. History of Zoroastrianism. 4 Units.

Reviews major trends in the history of Zoroastrianism.

Same as REL STD 131A.

HISTORY 131B. Ancient Persia. 4 Units.

Survey of the history of Persia in antiquity.

HISTORY 131C. Medieval Persia. 4 Units.

A survey of Persian history in the context of Late Antique and Medieval Islamic history.

HISTORY 131D. Modern Iran. 4 Units.

The history of Iran from the end of the Safavid Empire in the eighteenth century to the present.

HISTORY 131E. Topics in Iranian History. 4 Units.

Topics include the cultural, political, intellectual, social, and/or economic histories of Iran.

Repeatability: Unlimited as topics vary.

HISTORY 132A. Israel and Palestine. 4 Units.

Origins of Zionism in the nineteenth century, Arab-Jewish conflicts in Palestine, emergence of Palestinian nationalism, formation of the Israeli nation after 1948, and the development of the Palestinian movement. Focus on Palestinian and Israeli society and culture. Formerly History 132.

HISTORY 132B. The Emergence of the Modern Middle East. 4 Units.

Offers a survey of the history of the Middle East from the nineteenth century to the present time. Formerly History 133A.

HISTORY 132G. Topics in Islamic History. 4 Units.

The evolution of Islam as a religion within the social, political, and economic histories of various Muslim societies throughout its 14 centuries. Introduces major concepts, practices, and texts of Islam, and key historical events associated with them. Formerly History 131.

Repeatability: Unlimited as topics vary.

HISTORY 132H. Topics in Middle Eastern History. 4 Units.

Topics include the cultural, political, intellectual, social, and/or economic histories of one or many regions of the Middle East.

Repeatability: Unlimited as topics vary.

HISTORY 134A. Africa: Societies and Cultures. 4 Units.

Introduction to the variety of cultures, political organizations, social structures, and artistic expressions created by Africans over a broad time span. Indigenous development of African societies in distinct regions of the continent. Issues, themes, processes for understanding history of Africa.

HISTORY 134B. Modern Africa. 4 Units.

Explores the last 200 years of history in Africa, from the end of the Atlantic slave trade through colonization to independence.

HISTORY 134C. Topics in the History of Africa. 4 Units.

Studies in selected areas of African history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 134D. Topics in South African History. 4 Units.

Introduction to important historical events and processes in Southern Africa. Focuses on particular themes and explores how those themes change over time. Topics include: changing ideas about race, the development of class structures, identity formation, the role of gender.

Repeatability: Unlimited as topics vary.

HISTORY 134E. History of the African Diaspora. 4 Units.

Examines the causes and consequences of the multiple diasporas of African peoples since the sixteenth century in the Atlantic world, especially the Americas and Europe.

Same as AFAM 137.

HISTORY 135B. Navigation. 4 Units.

Explores the basics of oceanography, the evolution of ships and sailing in the ancient Mediterranean world, the North Atlantic, Polynesia, the South China Sea, the Arab Indian Ocean, the global oceanic world, and the discovery of celestial and terrestrial navigation.

HISTORY 135D. History of Cartography. 4 Units.

Examines how technology has assisted in creating visual representations of place, space, and time beginning in ancient Babylonia to the present day.

HISTORY 135E. Topics in the History of Science and Technology. 4 Units.

Studies in selected areas of science and technological history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 135G. Language Origins: Evolution, Genetics, and the Brain. 4 Units.

Examines how human language(s) may have originated. Studies pertinent techniques (reconstruction) and addresses related questions, including Is our language faculty inborn (i.e., genetically encoded)? Can brain imaging and population genetics research help to unlock this mystery of human evolution?

Same as GLBLCLT 105, ANTHRO 152A, LINGUIS 175.

HISTORY 136D. Topics in the History of Medicine and Health Care. 4 Units.

Studies in selected areas of Medicine and Health Care history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 136E. History of Epidemics and Infectious Disease. 4 Units.

Examines how epidemics tax political, economic, and spiritual resources and challenge prevailing medical theories and practices. Looks at how society has responded to epidemics and disease throughout history, beginning in antiquity and ending in the present.

HISTORY 140A. Early America: 1492-1740. 4 Units.

Examines the history of the land that became the first 13 states of the United States, from early attempts at exploration and discovery to the economic growth and demographic heterogeneity that marked the white settlements of the early 1700s.

HISTORY 140B. Revolutionary America: 1740-1790. 4 Units.

An exploration of why 13 continental colonies, whose commercial and cultural connections with Britain far exceed their interaction with one another, resisted imperial reform after 1763 to the point of war in 1775 and independence the following year.

HISTORY 140F. The United States in the 1890s. 4 Units.

A social, cultural, political history of U.S. in 1890s. Topics: racial politics of Jim Crow; Spanish-American War and conquest of the Philippines; "New Women" and gendering of modern culture; rise of cities, urban reform, labor resistance to new capitalist order.

HISTORY 142A. California in Modern America. 4 Units.

California as a case study of national trends and as a unique setting: its specific problems and culture. Major themes include: colonization, immigration, race relations, agricultural development, industrialization, urbanization, working class movements, social conflict, and political reform.

HISTORY 142B. Topics in American Social and Economic History. 4 Units.

Studies in selected areas of American social and economic history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 144G. Topics in American Cultural and Intellectual History. 4 Units.

Studies in selected areas of American cultural and intellectual history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 146D. Sex in the U.S. to 1860. 4 Units.

Perspectives on sexual behavior in colonial and U.S. history to c. 1860. Mainstream and non-mainstream sexual practices, beliefs, identities. Asks why various ideas of sexual behavior developed and how they related to religious, racial, ethnic, political, cultural belief systems.

HISTORY 146E. Gender in Nineteenth-Century America. 4 Units.

A social and cultural history of women's lives in nineteenth-century America, examining how racial, sexual, class identities were constructed by women themselves and by their surrounding culture. Topics include slavery, anti-slavery movement, domesticity, experience of the Civil War.

HISTORY 146H. Topics in Women and Gender Relations in the United States. 4 Units.

Studies in selected areas of women and gender relations in the United States. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 148B. Topics in Multicultural U.S. History. 4 Units.

Examines the variety of cultural expressions through which the people who came to inhabit the United States historically signify their collective identities.

Repeatability: Unlimited as topics vary.

HISTORY 150. Topics in African American History. 4 Units.

Studies in selected areas of African American history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as AFAM 138.

HISTORY 151A. Chicana/Chicano History: Pre-Colonial to 1900. 4 Units.

Examines social history of the southwest region from antiquity to 1900. Discusses major questions, theory and research methods pertinent to Chicanas/Chicanos. Themes include: indigenous empires, conquest, colonialism, social stratification, ideology, marriage, sexuality, industrial capitalism, accommodation and resistance.

Same as CHC/LAT 132A.

HISTORY 151B. Chicana/Chicano History: Twentieth Century. 4 Units.

Examines social history of the Southwest with emphasis on Mexican-origin people. Discusses major questions, theory and research methods pertinent to Chicana/Chicano history. Themes explored include: immigration, xenophobia, class struggle, leadership, generational cohorts, unionization, education, barrioization, ethnicity, patriarchy, sexuality.

Same as CHC/LAT 132B.

HISTORY 151C. Latinas in the Twentieth Century U.S.. 4 Units.

Latinas in the U.S. from 1900 to present, offering a diversity of their cultures, regional histories, sexualities, generations, and classes.

Same as CHC/LAT 135.

HISTORY 152. Topics in Asian-American History. 4 Units.

Introduction to important themes in the history of people of Asian ancestry in the United States from the nineteenth century to the present.

Repeatability: Unlimited as topics vary.

HISTORY 152A. Asian American Labor. 4 Units.

Explores history of Asian Americans and work from the nineteenth century to the present. Areas of study include migration, colonialism, family, social organization, and work culture.

Same as ASIANAM 137.

HISTORY 152B. Asian American and African American Relations. 4 Units.

Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression.

Same as AFAM 117, ASIANAM 167.

HISTORY 153. American Legal History. 4 Units.

Introduction to American legal case materials, to legal categories and ways of thinking, and to selected topics in U.S. legal history. Does not offer a chronological survey of the development of law in the United States.

HISTORY 158A. U.S. as a Global Power. 4 Units.

Examines post-World War II cultural, economic, and strategic patterns that have shaped U.S. relations with the world. Presents diverse perspectives on issues such as nationalism, anticommunism, secrecy and covert action, economic influences, the media's role, and race, gender, and class-related.

HISTORY 161A. Indian and Colonial Societies in Mexico. 4 Units.

Examines the history of Colonial Mexico from prehistoric times to the eighteenth century. Focuses on the social, economic, and political evolution of the new Mexican society which resulted from the "meeting" of two cultures.

HISTORY 161C. Twentieth-Century Mexico. 4 Units.

Examines the history of contemporary Mexico beginning with the Mexican Revolution and concluding with the present administration. Social, economic, and political effects of the Revolution; formation of a "one-party democracy"; economic transformation of the nation; the present crisis.

Same as CHC/LAT 133B.

HISTORY 162. Topics in Brazilian History. 4 Units.

Studies in selected areas of Brazilian history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 163. The World of Coffee . 4 Units.

History of consumption and production of coffee over the centuries, and coffee's cultural, economic, social, political consequences. Coffee's social life as a drug, symbol of hospitality, religious rite, sociability and bourgeois lifestyle, commodity, source of livelihoods, imperial revenues, corporate profits.

Same as INTL ST 111B.

HISTORY 164A. Caribbean History: Colonization to Emancipation. 4 Units.

Exploration of the history of the archipelago from pre-Columbian times to the end of slavery; examining the impact of European colonization, decimation of the indigenous populations, African slavery, resistance, and emancipation; the unity and diversity of experience in region.

Same as AFAM 134A.

HISTORY 164B. Caribbean History: Emancipation to Independence. 4 Units.

Post-emancipation and anti-colonial struggles ending with political independence for most of the region. Examines social, political, economic, cultural dimensions of post-emancipation period, including large-scale migration to Central America, the U.S., and Britain; the region's global cultural and political contribution.

Same as AFAM 134B.

HISTORY 165. Race and Empire in Colonial Latin America . 4 Units.

Explores native Latin Americans' and free Africans' incorporation and defiance of Iberian colonization through their gender positions. Focus: religious adaptations, resistance movements, legal systems, and emergence of multicultural communities to explain how race and gender shaped European empires.

Same as WOMN ST 176, ANTHRO 162C.

HISTORY 166. U.S. Intervention in Latin America. 4 Units.

Explores political, economic, social, and cultural ties that bind Latin America to the United States. Focuses on U.S. intervention and Latin American response from early nineteenth century to present day. Case studies include Mexico, Guatemala, Cuba, Chile, and Central America.

Same as INTL ST 177D, SOC SCI 123A, CHC/LAT 150.

HISTORY 166A. Gender, Race, and Nation in Latin America. 4 Units.

Addresses the importance of gender and race to nation-making in Latin America during the 19th and 20th centuries (1810-1945). Considers how hierarchies between men and women shaped ideas about family, the state, and modernity.

Same as INTL ST 177H, WOMN ST 172.

HISTORY 166B. Revolution and Reaction in Cold War Latin America. 4 Units.

Explores Latin American experiences of revolutionary change and military dictatorship during the Cold War (1945-1990). Pays particular attention to the lives of women, peasants, workers, and the urban middle classes. Case studies include Guatemala, Cuba, Chile, Argentina, Nicaragua, and Mexico.

Same as INTL ST 177G.

HISTORY 166C. Cuban Society and Revolution. 4 Units.

Explores the causes, development, and legacy of the 1959 Revolution. Themes include economic dependency, democracy, race, gender, culture, and the always volatile relations between Cuba and the United States.

Same as SOC SCI 173P, POL SCI 153G, INTL ST 177E.

HISTORY 169. Topics in Latin American History. 4 Units.

Studies in selected areas of Latin American history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 170D. Premodern East Asia. 4 Units.

Introduction to histories of China, Korea, and Japan from the earliest states to about 1600. Topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family values.

HISTORY 170E. East Asia: 1600-1895. 4 Units.

Introduction to China, Korea, and Japan from about 1600 to 1895. Establishment of Qing Chinese, late Choson Korean, and Tokugawa Japanese sociopolitical orders and their characteristics, plus major cultural developments. Responses to Western impact and the rise of Meiji Japan.

HISTORY 170F. East Asia Since 1895. 4 Units.

Introduction to the turbulent modern histories of China, Korea, and Japan since 1895. An overarching concern is to understand the evolution of modern East Asia and its place for humankind's future.

HISTORY 170G. Topics in the History of Asia. 4 Units.

Topics include the cultural, political, economic, social, intellectual, and religious history of Asia.

Repeatability: Unlimited as topics vary.

HISTORY 171D. Chinese History to 1800. 4 Units.

A survey of the history of China to 1800.

HISTORY 171E. Chinese History: 1800-1949. 4 Units.

An examination of Chinese society and thought from the late-eighteenth century to the 1949 revolution. Focuses on the role of intellectuals; popular culture; women in Chinese society; developments in commerce and urban life; rebellion; foreign imperialism.

HISTORY 171G. Topics in the History of China. 4 Units.

Topics include the cultural, political, economic, social, intellectual, and religious history of China.

Repeatability: Unlimited as topics vary.

HISTORY 172D. Age of the Samurai. 4 Units.

Topics include the simultaneous elaboration of a civilian aristocratic tradition and the military ethos, the conflict between martial and economic values in the context of an expanding economy, and the development of Japan's indigenous religions, art, and literature.

HISTORY 172E. Imperial Japan. 4 Units.

Topics in the rise of modern Japan include the relationship between centralization and imperialism, democracy and fascism, industrialization and feminism in the context of the complex and competing forces that shaped Japan's experience in the modern world.

HISTORY 172F. Postwar Japan. 4 Units.

From the ashes of defeat to economic superpower, from poverty to material consumerism, from the ethic of diligence and fortitude to hedonism. Addresses what these changes have meant for ordinary people, as well as government policy and Japan's international position.

HISTORY 172G. Topics in the History of Japan. 4 Units.

Topics include the cultural, political, economic, social, intellectual and religious history of Japan.

Repeatability: Unlimited as topics vary.

HISTORY 173D. Korean History to 1800. 4 Units.

A general survey of the history of Korea to 1800. Focuses on internal sociopolitical development, major cultural trends, and foreign relations. Students are introduced to various interpretive approaches in the historiography.

HISTORY 173E. Korean History: 1800-1945. 4 Units.

An examination of Korean society and culture in tumultuous transition, focusing on some new challenges for the Choson Dynasty and its abortive reform effort, external imperialist pressures, and the Japanese colonial rule.

HISTORY 173F. Korean History Since 1945. 4 Units.

Topics include the national liberation, origins of conflict between two rival regimes, South Korea's emergence as a major player in the international political economy, some salient characteristics of the North Korean Marxist state, triumph of democracy, and prospect for reunification.

HISTORY 173G. Topics in the History of Korea. 4 Units.

Topics include the cultural, political, economic, social, intellectual, and religious history of Korea.

Repeatability: Unlimited as topics vary.

HISTORY 174G. Topics in the History of South Asia. 4 Units.

Topics include the cultural, political, economic, social, intellectual, and religious history of South Asia.

Repeatability: Unlimited as topics vary.

HISTORY 175G. Topics in the History of Southeast Asia. 4 Units.

Topics include the cultural, political, economic, social, intellectual, and religious history of Southeast Asia.

Repeatability: Unlimited as topics vary.

HISTORY 180. Special Studies in Social History. 4 Units.

Studies in selected areas of social history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 181. Special Studies in Economic History. 4 Units.

Studies in selected areas of economic history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 182. Special Studies in Intellectual-Cultural History. 4 Units.

Studies in selected areas of intellectual-cultural history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 183. Special Studies in International History. 4 Units.

Studies in selected areas of international history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 184. Special Studies in Comparative History. 4 Units.

Studies in selected areas of comparative history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 185. Special Studies in Social Theory. 4 Units.

Studies in selected areas of social theory. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 190. Colloquium . 4 Units.

Specialized courses dealing primarily with close reading and analysis of primary and secondary works; required reports and papers. Each colloquium reflects the instructor's intellectual interests and is conducted as a discussion group. Limited to 18 students.

Prerequisite: HISTORY 100W.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only. History majors only.

HISTORY 192. Research Seminar. 4 Units.

Specialized courses that require analysis of a historical problem through research in primary sources and the preparation of an original research paper.

Prerequisite: HISTORY 190 and HISTORY 100

Repeatability: May be repeated for credit unlimited times.

Restriction: Prerequisite required and Upper division only and Majors only

HISTORY 192W. Research Seminar. 4 Units.

Specialized courses that require analysis of a historical problem through research in primary sources and the preparation of an original research paper.

Prerequisite: HISTORY 100W and HISTORY 190.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only. History majors only.

HISTORY 198. Directed Group Study. 4 Units.

Special topics through directed reading. Paper required.

Repeatability: Unlimited as topics vary.

HISTORY 199. Independent Reading. 1-4 Units.

Investigation of special topics through directed reading. Paper required.

Repeatability: May be repeated for credit unlimited times.

HISTORY 200A. History and Theory. 4 Units.

Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. (200A and 200B required for History Ph.D. students; 200C optional.).

Same as HUMAN 200A.

HISTORY 200B. History and Theory. 4 Units.

Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. (200A and 200B required for History Ph.D. students; 200C optional.).

Same as HUMAN 200B.

HISTORY 200C. History and Theory . 4 Units.

Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. (200A and 200B required for History Ph.D. students; 200C optional.).

Repeatability: Unlimited as topics vary.

Same as HUMAN 200C.

HISTORY 202. Proseminar. 4 Units.

Topical courses devoted to the literature of a broad historical subject, e.g., the absolutist state, the French Revolution, comparative industrialization, women's history.

Repeatability: Unlimited as topics vary.

Restriction: History graduate students only.

HISTORY 203. First-Year Research Seminar. 4 Units.

Devoted to research and writing on questions connected with proseminar topics. Normally required of all entering graduate students. Includes review of the current state of the literature and practical experience in conducting research and writing a research paper.

Prerequisite: HISTORY 202.

Repeatability: May be taken for credit 1 times as topics vary.

HISTORY 204A. Second-Year Research Seminar. 4 Units.

Two-quarter sequence required of all Ph.D. students. Taken during the second year of the Ph.D. program; not required for M.A. students. Includes review of current state of the literature and practical experience in conducting research and writing a research paper.

Restriction: History graduate students only.

HISTORY 204B. Second-Year Research Seminar. 4 Units.

Two-quarter sequence required of all Ph.D. students. Taken during the second year of the Ph.D. program; not required for M.A. students. Includes review of current state of the literature and practical experience in conducting research and writing a research paper.

Prerequisite: HISTORY 204A.

Restriction: History graduate students only.

HISTORY 220A. The Literature and Interpretations of Early Modern Europe: Society and Economy. 4 Units.

Studies in selected areas of society and economy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 220B. The Literature and Interpretations of Early Modern Europe: Political History. 4 Units.

Studies in selected areas of political history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 220C. The Literature and Interpretations of Early Modern Europe: Intellectual & Cultural History. 4 Units.

Studies in selected areas of intellectual and cultural history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 230A. The Literature and Interpretations of Modern European History: Europe, 1789-1848. 4 Units.

Studies in selected areas of Europe, 1789-1848. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 230B. The Literature and Interpretations of Modern European History: Europe, 1850-1914. 4 Units.

Studies in selected areas of Europe, 1850-1914. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 230C. The Literature and Interpretations of Modern European History: Europe, 1914-1989. 4 Units.

Studies in selected areas of Europe, 1914-1989. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 240A. The Literature and Interpretations of World History: Approaches to World History. 4 Units.

Overview of major directions of inquiry in world history and their implications for teaching and research. Topics will include cultural, sociological, economic, and political frameworks.

Repeatability: Unlimited as topics vary.

Restriction: History graduate students only.

HISTORY 240B. The Literature and Interpretations of World History: Topics in World History. 4 Units.

Selected historical issues and periods viewed from a global perspective. Examples include: environmental history, media studies, political economy. May be repeated two times for graduate credit other than fulfillment of field requirement.

Repeatability: Unlimited as topics vary.

Restriction: History graduate students only.

HISTORY 240C. The Literature and Interpretations of World History: Advanced Research in World History. 4 Units.

Studies in selected areas of advanced research in world history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Restriction: History graduate students only.

HISTORY 250A. The Literature and Interpretations of Latin American History: Colonial Period. 4 Units.

Studies in selected areas of the Colonial Period. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 250B. The Literature and Interpretations of Latin American History: Nineteenth Century. 4 Units.

Studies in selected areas of nineteenth century. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 250C. The Literature and Interpretations of Latin American History: Twentieth Century. 4 Units.

Studies in selected areas of twentieth century. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 260A. The Literature and Interpretations of American History: Seventeenth & Eighteenth Centuries. 4 Units.

Studies in selected areas of seventeenth and eighteenth centuries. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 260B. The Literature and Interpretations of American History: Nineteenth Century. 4 Units.

Studies in selected areas of the nineteenth century. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 260C. The Literature and Interpretations of American History: Twentieth Century. 4 Units.

Studies in selected areas of the twentieth century. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 273. Research Methods in Chinese History. 4 Units.

Introduces major tools for research in Qing and twentieth-century Chinese history as well as an introduction to research tools for earlier periods.

HISTORY 274A. Seminar in Chinese History: 1100-1750. 4 Units.

The development of Chinese society and culture from 1100-1750. May be used to fulfill the First-Year Research requirement.

Repeatability: Unlimited as topics vary.

HISTORY 274B. Seminar in Chinese History: 1600-1937. 4 Units.

The development of Chinese society and culture from 1600-1937. May be used to fulfill the First-Year Research requirement.

Repeatability: Unlimited as topics vary.

HISTORY 274C. Seminar in Chinese History: 1850-Present. 4 Units.

The development of Chinese society and culture from 1850 to the present. May be used to fulfill the First-Year Research requirement.

Repeatability: Unlimited as topics vary.

HISTORY 275A. Approaches to Islam in the Middle East/Maghrib. 4 Units.

Examines methodologies and approaches to the study of Muslim culture and history in the Middle East and North Africa in medieval and modern times.

Restriction: History graduate students only.

HISTORY 275B. Ottoman and Modern Middle East. 4 Units.

Explores historiographic questions pertaining to the Middle East under Ottoman domination, the encounter with colonialism and modernity, and transitions in the post-colonial period.

Restriction: History graduate students only.

HISTORY 275C. The Maghrib Since 1500. 4 Units.

Focus on the societies and cultures of the region corresponding to today's Libya, Tunisia, Algeria, and Morocco during the Ottoman regencies, Sharifian Morocco, colonial occupation, and post-independence periods.

Restriction: History graduate students only.

HISTORY 280A. China. 4 Units.

Studies in literatures and interpretations of Chinese history.

HISTORY 280B. Japan. 4 Units.

Studies in literatures and interpretations of Japanese history.

HISTORY 280C. Korea. 4 Units.

Studies in literatures and interpretations of Korean history.

HISTORY 290. Special Topics . 4 Units.

Lectures, readings, and discussion on subjects more limited in scope than those included in the year-long colloquium series.

Repeatability: Unlimited as topics vary.

HISTORY 291. Directed Reading. 4-12 Units.

Reading courses focused on specialized topics.

Repeatability: May be repeated for credit unlimited times.

Restriction: History graduate students only.

HISTORY 295. Special Methods. 4 Units.

Development of particular research skills.

HISTORY 298. Experimental Group Study. 4 Units.

Open to four or more students.

Repeatability: May be repeated for credit unlimited times.

HISTORY 299. Dissertation Research. 4-12 Units.

Specifically designed for students researching and writing their dissertations.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Advancement to Ph.D. candidacy.

HISTORY 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Special Programs

This section includes a variety of special programs that are available through the School of Humanities. Click on the tabs above for information about each program.

Minor in Humanities and Law

85 Humanities Instructional Building; (949) 824-6525

<http://www.humanities.uci.edu/humlaw/>

Jeffrey Helmreich, **Director**

Participating Faculty

Jeffrey Barrett, *Department of Logic and Philosophy of Science*

Ermanno Bencivenga, *Department of Philosophy*

Yong Chen, *Department of History*

James B. Given, *Department of History*

Gail K. Hart, *Department of European Languages and Studies*

Jeffrey Helmreich, *Department of Philosophy*

Bonnie Kent, *Department of Philosophy*

Alejandro Morales, *Departments of Chicano/Latino Studies and Spanish*

Victoria Silver, *Department of English*

Preston Kyle Stanford, *Department of Logic and Philosophy of Science*

Brook Thomas, *Department of English*

The minor in Humanities and Law is comprised of courses in the School of Humanities that UCI graduates have found to be useful in developing skills and knowledge that prepare them for law-related careers. One set of courses develops skills in critical reading, writing, and analysis that are necessary in dealing with legal issues. Another set presents theoretical and analytical perspectives on ethical, political, and social issues relevant to the law. A final set focuses on specific legal issues from a humanistic perspective. Lower-division requirements primarily develop foundational skills in the first set, whereas upper-division requirements build on these skills by addressing the concerns from the other sets. The minor does not include how-to courses on particular legal practices.

Requirements for the Minor

A. Complete:

PHILOS 29	Critical Reasoning
-----------	--------------------

B. Select one of the following groups of four courses:

HUMAN 1A- 1B- 1C	Humanities Core Course and Humanities Core Course and Humanities Core Course (or the Humanities Core Alternative)
------------------	---

and either:

PHILOS 4	Introduction to Ethics (if not used for the Humanities Core Alternative)
or PHILOS 5	Contemporary Moral Problems

or PHILOS 9	Feminist Moral and Political Philosophy
or	
PHILOS 1	Introduction to Philosophy
PHILOS 4	Introduction to Ethics
PHILOS 5	Contemporary Moral Problems
or PHILOS 9	Feminist Moral and Political Philosophy
plus select one of the following:	
PHILOS 10	History of Ancient Philosophy
PHILOS 11	History of Medieval Philosophy
PHILOS 12	History of Modern Philosophy
PHILOS 13	History of Contemporary Philosophy
PHILOS 9	Feminist Moral and Political Philosophy (if not taken above)

C. Six courses from among a list of quarterly approved courses, at least one each from philosophy, history, and literature or classics.¹

¹ Consult the Humanities and Law Web site (<http://www.humanities.uci.edu/humlaw>) for currently approved courses.

Students considering a career in law are strongly encouraged to take advantage of other law-related courses offered across the campus and of extracurricular activities such as the Pre-Law Society.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Interdisciplinary Minor in Asian Studies

<http://www.humanities.uci.edu/asianstudies/>

5285 Social Science Plaza B; (949) 824-7521
Dorothy J. Solinger, **Co-Director**

259 Murray F. Krieger Hall; (949) 824-6521
Anne Walthall, **Co-Director**

Participating Faculty

Victoria A. Beard, *Department of Planning, Policy, and Design*

Tom Boellstorff, *Department of Anthropology*

Vinayak Chaturvedi, *Department of History*

Chuansheng Chen, *Department of Psychology and Social Behavior and School of Education*

Chungmoo Choi, *Department of East Asian Languages and Literatures*

Edward Fowler, *Department of East Asian Languages and Literatures*

James Fujii, *Departments of East Asian Languages and Literatures and of Comparative Literature*

Michael A. Fuller, *Department of East Asian Languages and Literatures*

Qitao Guo, *Department of History*

Hu Ying, *Department of East Asian Languages and Literatures*

Martin W. Huang, *Department of East Asian Languages and Literatures*

Kyung Hyun Kim, *Departments of East Asian Languages and Literatures and of Film and Media Studies*

Susan B. Klein, *Department of East Asian Languages and Literatures*

Karen Leonard, *Department of Anthropology*

Alka Patel, *Department of Art History*

Kavita Philip, *Department of History*

Kamal Sadiq, *Department of Political Science*

Dorothy J. Solinger, *Department of Political Science*

Yang Su, *Department of Sociology*

Serk Bae Suh, *Department of East Asian Languages and Literatures*

Robert Uriu, *Department of Political Science*

Anne Walthall, *Department of History*

Jeffrey Wasserstrom, *Department of History*

Wang Feng, *Department of Sociology*

Bert Winther-Tamaki, *Department of Art History*

Roberta Wue, *Department of Art History*

Mei Zhan, *Department of Anthropology*

The countries and cultures of Asia are significant participants in the world community. They present compellingly different models for social organization, historical development, and cultural commitments. The many countries of this large and complex region provide challenges and opportunities whether one plans to be a scholar, a business person, or a diplomat. The minor in Asian Studies draws upon the expertise of faculty throughout UCI to create opportunities for students to explore Asian topics in a variety of fields, to develop advanced language skills, and to acquire a broader perspective as they apply the disciplinary training of their major field to effective and informed studies of Asian subjects. The minor is open to all UCI students.

Requirements for the Minor

Students choose one country and language of specialization. At the present the Asian Studies minor focuses on China, Japan, or Korea.

Requirements for the minor are met by taking eight courses (of which no more than four may be lower-division) as specified below.

A. Select one of the following:¹

HISTORY 170D	Premodern East Asia
HISTORY 170E	East Asia: 1600-1895
HISTORY 170F	East Asia Since 1895

B. Three quarters of course work in one Asian language of specialization beyond the first-year level. Approved courses are:

1. Second-, third-, or fourth-year language:²

CHINESE 2A- 2B- 2C	Intermediate Mandarin Chinese and Intermediate Mandarin Chinese and Intermediate Mandarin Chinese
CHINESE 2DA- 2DB- 2DC	Intermediate Mandarin Chinese - Dialect Background Track and Intermediate Mandarin Chinese - Dialect Background Track and Intermediate Mandarin Chinese - Dialect Background Track
CHINESE 2MA- 2MB- 2MC	Intermediate Mandarin Chinese - Mandarin Background Track and Intermediate Mandarin Chinese - Mandarin Background Track and Intermediate Mandarin Chinese - Mandarin Background Track
CHINESE 3A- 3B- 3C	Advanced Mandarin Chinese and Advanced Mandarin Chinese and Advanced Mandarin Chinese
CHINESE 101A- 101B- 101C	Fourth-Year Mandarin Chinese and Fourth-Year Mandarin Chinese and Fourth-Year Mandarin Chinese
JAPANESE 2A- 2B- 2C	Intermediate Japanese and Intermediate Japanese and Intermediate Japanese
JAPANESE 3A- 3B- 3C	Advanced Japanese and Advanced Japanese and Advanced Japanese
JAPANESE 101A- 101B- 101C	Fourth Year Japanese and Fourth Year Japanese and Fourth Year Japanese
KOREAN 2A- 2B- 2C	Intermediate Korean and Intermediate Korean and Intermediate Korean
KOREAN 2KA- 2KB- 2KC	Intermediate Korean for Students with a Previous Background in Korean and Intermediate Korean for Students with a Previous Background in Korean and Intermediate Korean for Students with a Previous Background in Korean
KOREAN 3A- 3B- 3C	Advanced Korean and Advanced Korean and Advanced Korean
KOREAN 101A- 101B- 101C	Fourth Year Korean and Fourth Year Korean and Fourth Year Korean
Other sequences in Asian languages as available.	
2. Either Classical Chinese or Classical Japanese:	
CHINESE 100A- 100B- 100C	Classical Chinese and Classical Chinese and Classical Chinese
JAPANESE 100A- 100B	Classical Japanese and Classical Japanese (plus a third quarter of Japanese language study)
3. Literature courses taught in the original language: ³	
CHINESE 115	Chinese Literature: Advanced Texts

JAPANESE 115 Japanese Literature: Advanced Texts

KOREAN 115 Korean Literature: Advanced Texts
Or graduate seminars

C. Four additional courses selected from an approved list. ⁴

1. At least two of these courses must be taken in one (or more) department(s) other than the student's major department.
2. The courses must cover at least two different Asian countries, one of which is the country of language specialization.
3. No more than two of the courses may be lower-division (and only one may be lower-division if any combination of second- or third-year East Asian language is used for the language required above).

- 1 Students may petition to substitute other History courses that focus on Asia.
- 2 These courses require placement examinations given by the Department of East Asian Languages and Literatures. Students who, for example, place out of CHINESE 2B would then take CHINESE 2C, CHINESE 3A-CHINESE 3B to meet the requirement.
- 3 These courses have a prerequisite of completion of the fourth-year language sequence or its equivalent.
- 4 Available in the Asian Studies Office in 443 Humanities Instructional Building and online at <http://www.humanities.uci.edu/asianstudies/>.

NOTE: A maximum overlap of two courses is permitted between this minor and a student's major.

Residence Requirement for the Minor: Four upper-division (or graduate) courses must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Interdisciplinary Minor in Jewish Studies

200 Murray F. Krieger Hall; (949) 824-6521
<http://www.humanities.uci.edu/jewishstudies/>
Matthias Lehmann, **Director**

Participating Faculty

Marc Baer, Ph.D. University of Chicago, *Professor of History* (history of religion, Ottoman and Islamic history, Middle-East history, ethnicity and identity, gender, Jews of the Ottoman Empire)

Erwin Chemerinsky, J.D. Harvard Law School, *Dean of the School of Law and UCI Distinguished Professor of Law and Political Science* (Constitutional law, federal practice, civil rights and civil liberties, appellate litigation)

James T. Chiampi, Ph.D. Yale University, *Professor of Italian* (Italian Renaissance literature, Dante, Italian-Jewish literature)

Kai Evers, Ph.D. Duke University, *Associate Professor of German* (twentieth-century literature, film, and theory, Holocaust)

Sarah Farmer, Ph.D. University of California, Berkeley, *Associate Professor of History* (Modern French history, twentieth-century Europe, political and cultural history, World War II and Holocaust in France)

Alexander Gelley, Ph.D. Yale University, *Professor Emeritus of Comparative Literature* (eighteenth- and nineteenth-century European novel, critical theory, German Jewish literature and culture)

James B. Given, Ph.D. Stanford University, *Professor of History* (Medieval Europe, social and political history, heresy, Inquisition, medieval anti-semitism)

David Theo Goldberg, Ph.D. City University of New York, *Director of the UC Humanities Research Institute and Professor of Comparative Literature and of Criminology, Law, and Society* (South Africa, race and racism, social and political theory, legal studies, Jewish identity)

Sara Goodman, Ph.D. Georgetown University, *Assistant Professor of Political Science* (citizenship, immigration, integration, Western Europe, ethnicity)

Emily Katz, Ph.D. Jewish Theological Seminary, *Assistant Adjunct Professor of History* (American Jewish history and culture; America and Israel; visual and material culture; religion and media)

Matthias Lehmann, Ph.D. Freie Universität Berlin, *Director of the Interdisciplinary Minor in Jewish Studies, Associate Professor of History, and Teller Family Chair in Jewish History* (early modern Jewish history; Sephardic studies; religious history; Jewish nationalism)

Glenn S. Levine, Ph.D. University of Texas, Austin, *Professor of German and German Language Program Director* (applied linguistics, theoretical linguistics, foreign language pedagogy, German-Jewish literature, Yiddish language and literature)

Mark A. LeVine, Ph.D. New York University, *Professor of History* (Middle East history, cultures and religions of the modern Middle East, Palestine and Israel)

Julia Reinhard Lupton, Ph.D. Yale University, *Professor of English, Comparative Literature, and Education* (Shakespeare, Renaissance literature, religious studies, public sphere, Renaissance literature and the Jews)

Seymour Menton, Ph.D. New York University, *Research Professor of Spanish and Portuguese* (Latin American novel and short story, Hebrew language, Jews and Latin American literature)

Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History* (modern Germany, European women, Holocaust in post-World War II Germany)

Kristen R. Monroe, Ph.D. University of Chicago, *Director of the Interdisciplinary Center for the Scientific Study of Ethics and Morality and Professor of Political Science* (political theory, political psychology, political economy, rationality, altruism, genocide)

Maria C. Pantelia, Ph.D. Ohio State University, *Professor of Classics and Director, Thesaurus Linguae Graecae®* (Greek epic, Hellenistic poetry, digital technologies in the humanities, ancient Judaic literature)

James I. Porter, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature* (philosophy, literary and cultural criticism and aesthetics, history of the classical disciplines, reception of Homer, Jewish thought and anti-Semitism)

Patricia Seed, Ph.D. University of Wisconsin, Madison, *Professor of History* (modern dance, the history of cartography, Iberian Jewish science)

Jacobo Sefamí, Ph.D. University of Texas at Austin, *Professor of Spanish* (modern and contemporary Latin American poetry, Mexican literature, Spanish American literature, Latin American Jewish literature)

Irene Tucker, Ph.D. University of California, Berkeley, *Associate Professor of English* (Victorian literature, history and theory of the novel, history of medicine and technology, Hebrew literature, literature and philosophy)

The minor in Jewish Studies is an interdisciplinary program which introduces students to the many facets of Jewish cultures through the study of the history, philosophy, art, literature, languages, and social and political institutions of Jews from ancient to modern times. The minor provides students with grounding in areas of fundamental importance to the Humanities and Social Sciences, supporting and enriching the students' majors. The minor may be taken in tandem with any major and prepares students for graduate programs in Jewish Studies. The interdisciplinary approach of Jewish studies exposes students to a wide range of disciplines, and like other established liberal arts fields, provides a foundation for pursuing a range of careers.

Requirements for the Minor

A. Complete:

HISTORY 18A	Introduction to Jewish Cultures
-------------	---------------------------------

B. Select at least four upper-division courses from the approved list on the Jewish Studies Web site.¹

C. Select three additional courses from the approved list on the Jewish Studies Web site, and which may include:

HEBREW 1A- 1B- 1C	Fundamentals of Hebrew and Fundamentals of Hebrew and Fundamentals of Hebrew
HEBREW 2A- 2B- 2C	Intermediate Hebrew and Intermediate Hebrew and Intermediate Hebrew
REL STD 5A	World Religions I

¹ Students should consult the Jewish Studies Web site at <http://www.humanities.uci.edu/jewishstudies/>. With the approval of the Director, other relevant courses may satisfy the requirements for the minor.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Interdisciplinary Minor in Latin American Studies

322 Humanities Hall; (949) 824-6901
<http://www.humanities.uci.edu/latinamericanstudies/>

Faculty

Ana María Amar Sánchez, *Department of Spanish and Portuguese*

Stanley Bailey, *Department of Sociology*

Frank D. Bean, *Departments of Sociology and Economics*

Catherine Benamou, *Department of Film and Media Studies*

Alex Borucki, *Department of History*

Susan K. Brown, *Department of Sociology*

Belinda Campos, *Department of Chicano/Latino Studies*

Leo Chávez, *Department of Anthropology*

Louis Desipio, *Departments of Chicano/Latino Studies and Political Science*

Cynthia Feliciano, *Departments of Chicano/Latino Studies and Sociology and School of Education*

Raúl Fernández, *Department of Chicano/Latino Studies*

Robert Garfias, *Department of Anthropology*

Ivette N. Hernández-Torres, *Department of Spanish and Portuguese*

Winston James, *Department of History*

Adriana M. Johnson, *Department of Comparative Literature*

Diana Kapiszewski, *Department of Political Science*

Rodrigo Lazo, *Department of English*

Horacio Legrás, *Department of Spanish and Portuguese*

Viviane Mahieux, *Department of Spanish and Portuguese*

William M. Maurer, *Department of Anthropology and School of Law*

Michael J. Montoya, *Departments of Anthropology and Chicano/Latino Studies and Program in Public Health*

Alejandro Morales, *Departments of Chicano/Latino Studies and of Spanish and Portuguese*

Rachel O'Toole, *Department of History*

Jaime E. Rodríguez, *Department of History*

Ana Elizabeth Rosas, *Departments of History and Chicano/Latino Studies*

Vicki L. Ruiz, *Departments of History and Chicano/Latino Studies*

Rubén Rumbaut, *Department of Sociology and School of Education*

Nancy Lee Ruyter, *Department of Dance*

Armin Schwegler, *Department of Spanish and Portuguese*

Patricia Seed, *Department of History*

Jacobo Sefamí, *Department of Spanish and Portuguese*

Caesar D. Sereseres, *Department of Political Science*

Etel Solingen, *Department of Political Science*

Luis Suárez-Villa, *Department of Planning, Policy, and Design*

Heidi Tinsman, *Department of History*

Steven C. Topik, *Department of History*

Luis P. Villarreal, *Department of Molecular Biology and Biochemistry*

Douglas R. White, *Department of Anthropology*

Latin America is a complex cultural and historical region created by Spanish and Portuguese colonization in the New World and which encompasses territories and peoples from the southernmost tip of South America to the Caribbean Islands and the United States. As an area born out of a series of conquests, migrations, contacts, and conflicts, it is transcultural, multi-lingual, and multi-ethnic. It has been a vital part of the formation of the modern world even as it has continued to function as a source for the expression of economic, political, and cultural alternatives to dominant Western formations. The minor provides deeper knowledge and expertise in this region for students interested in a variety of careers. It complements the disciplinary training of a students' major field by asking that students engage with Latin America through a variety of disciplines and by working with faculty across different schools at UCI.

Requirements for the Minor

Requirements for the minor are met by taking eight courses (of which no more than three may be lower-division) as specified below. No more than four courses may be taken in any one single department.

A. Complete one of the following core courses:

SPANISH 50	Latin America, U.S. Latino, and Iberian Cultures
HISTORY 70D	Problems in History: Latin America
HUMAN 100	Latin America and the Caribbean

B. One course from each of the following three categories—History, Culture, and Social Sciences—selected from the approved list on the Latin American Studies Web site.¹

C. Four additional courses selected from the approved list.¹

¹ The approved list is available at <http://www.humanities.uci.edu/latinamericanstudies/>.

With the approval of the director, other relevant courses also may satisfy the requirements for the minor.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Additional Interdisciplinary Minors

Information about the following two minors is available in the School of Social Sciences (p. 882) section of the *Catalogue*.

The **minor in Conflict Resolution** provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels.

The **minor in Chicano/Latino Studies** is designed to provide an awareness, knowledge, and appreciation of the language, history, culture, literature, sociology, anthropology, politics, social ecology, health, medicine, and creative (art, dance, film, drama, music) accomplishments in the Chicano/Latino communities.

Information about the following minors is available in the Interdisciplinary Studies (p. 622) section of the *Catalogue*.

The **minor in Civic and Community Engagement** seeks to provide students with the knowledge, skills, attitudes, and values to engage as citizens and active community members in the twenty-first century. The minor is distinguished both by *what* students learn, and by *how* they learn it.

The **minor in Global Sustainability** trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet.

The **minor in the History and Philosophy of Science** explores how science is actually done and how it has influenced history, and is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences.

The **minor in Native American Studies** focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis.

Academic English/English as a Second Language Program

335 Humanities Instructional Building; (949) 824-2227
<http://www.humanities.uci.edu/esl/>

Robin Scarcella, Ph.D. University of Southern California, *Director of the Academic English/English as a Second Language Program and Professor of Academic English and English as a Second Language and of Education* (linguistics, language development emphasis)

Academic English 20A-B-C-D through 29 are for students who have been admitted to UCI and whose scores on the Academic English placement test indicate the need for additional work in Academic English/English as a second language. Students may receive up to 12 baccalaureate credits for AE/ESL course work. Students may receive workload credit for courses taken beyond this 12-unit limit but will not receive additional credits applicable to the bachelor's degree.

Courses

AC ENG 20A. Academic Writing. 5 Units.

Grammar, sentence structure, paragraph and essay organization of formal written English. Course may be offered online.

Prerequisite: Placement into AC ENG 20A.

Grading Option: Pass/no pass only.

AC ENG 20B. Academic Writing. 5 Units.

Grammar, sentence structure, paragraph and essay organization of formal written English. Course may be offered online.

Prerequisite: AC ENG 20A or placement into AC ENG 20B.

Grading Option: Pass/no pass only.

AC ENG 20C. Essentials of Academic Writing. 5 Units.

Grammar, sentence structure, paragraph and essay organization of formal written English. Course may be offered online.

Prerequisite: AC ENG 20B or placement into AC ENG 20C.

Grading Option: Pass/no pass only.

AC ENG 20D. Academic Writing. 5 Units.

Grammar, sentence structure, paragraph and essay organization of formal written English. Course may be offered online.

Prerequisite: AC ENG 20C.

Grading Option: Pass/no pass only.

AC ENG 22A. Academic English Reading and Vocabulary. 2 Units.

Intensive reading exercises with occasional practice in extensive reading, focusing on comprehension, development of vocabulary, syntax, rhetorical features, reading strategies, and study skills.

Prerequisite: Placement into AC ENG 22A.

Grading Option: Pass/no pass only.

AC ENG 22B. ESL Reading and Vocabulary. 2 Units.

Extensive reading and discussion with emphasis on journal articles, textbook chapters, notetaking, and the interpretation of charts, diagrams, tables, and figures.

Grading Option: Pass/no pass only.

AC ENG 23A. ESL Pronunciation I. 2 Units.

Designed for international graduate students. Provides an emphasis on pronunciation. Development of listening and speaking skills in five fundamental areas: pronunciation, intonation, word stress, listening comprehension, and informal campus communication. Presentations of personal experiences and reports on graphs.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

AC ENG 23B. ESL Conversation II. 2 Units.

Designed for international graduate students. Provides an emphasis on conversational fluency. Further development of listening and speaking skills: review of English sounds, sentence stress, and rhythm. Oral reports, debates, and reports on graphs and surveys.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

AC ENG 23C. ESL Advanced Communication III. 2 Units.

Designed for international graduate students with advanced communication skills. Further development of listening and speaking skills: review of minimal pairs, consonant blends, intonation, stress and rhythm. Oral presentations emphasized utilizing graphs, syllabi, academic terms, and video presentations on academic work.

Prerequisite: AC ENG 23A or AC ENG 23B.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

AC ENG 24. ESL International TA Workshop. 2 Units.

Designed for advanced-level international students preparing to be teaching assistants. Provides extensive practice in oral and written communication skills associated with teaching introductory-level college courses and participating in academic presentations and discussions. Review and analysis of language problems.

Prerequisite: AC ENG 23A or AC ENG 23B or AC ENG 23C.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

AC ENG 28. Grammar. 2-4 Units.

A full review of English grammar covering the following areas: grammar terms, verb tenses, verb forms, conditionals, passive and word forms, punctuation, sentence structure. The concepts are applied in targeted sentence and paragraph writing practice.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

AC ENG 29. Special Topics in ESL. 2-4 Units.

Directed and individualized work in English as a second language not covered in the AC ENG 20, 21, 22 sequence. Course may be offered online.

Grading Option: Pass/no pass only.

Repeatability: Unlimited as topics vary.

AC ENG 139W. Advanced Academic Writing Across the Curriculum. 4 Units.

Designed for transfer students who speak English as a second language. Focuses on developing academic reading and writing skills including essay content, organization, vocabulary, and grammar. Academic content also covered.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(Ib)

Humanities Language Learning Program

<http://www.humanities.uci.edu/hllp/>
Cynthia L. Claxton, **Director**

The learning of languages other than English is a crucial component of humanistic inquiry and essential to fostering global literacy in students and to internationalizing the University of California, Irvine. The mission of the Humanities Language Learning Program (HLLP) is to support the learning and teaching of languages other than English on the UC Irvine campus, provide instruction in languages not associated with undergraduate or graduate degree programs, foster intellectual and pedagogical connections between the fields of applied linguistics and the humanities, and provide local and national leadership in raising the profile and prominence of language learning as part of a university education in a rapidly changing, globally interconnected world.

The following languages are offered through the HLLP: Arabic, Persian, Hebrew, and Vietnamese. Students who would like to enroll in a HLLP language class should complete a language background

questionnaire. This questionnaire is available on the HLLP Web site (http://www.humanities.uci.edu/hllp/lod/placement_table.php) (http://www.humanities.uci.edu/hllp/lod/placement_table.php) and should be submitted online. Students with previous exposure to Arabic, Hebrew, Persian, or Vietnamese may also need to take a placement test. These tests are administered by the UCI Academic Testing Center. Information about the testing schedule and test registration may be found on the Testing Center's Web site (<http://www.testingcenter.uci.edu/>). Send any questions about placement to HLLP Director Cynthia Claxton (cynthia.claxton@uci.edu).

See **Language Other Than English Placement and Progression**.

Arabic Courses

ARABIC 1A. Fundamentals of Arabic. 5 Units.

Designed for students with little or no exposure to Arabic. Using real world texts, provides a firm foundation in the orthography, grammar, syntax, and vocabulary of Modern Standard Arabic. Introduces students to Arab world cultures. Course may be offered online.

Prerequisite: Placement into ARABIC 1A.

Overlaps with ARABIC S1AB.

Restriction: ARABIC 1A and ARABIC S1AB may not be taken for full credit.

ARABIC 1B. Fundamentals of Arabic. 5 Units.

Designed for students with little or no exposure to Arabic. Using real world texts, provides a firm foundation in the orthography, grammar, syntax, and vocabulary of Modern Standard Arabic. Introduces students to Arab world cultures. Course may be offered online.

Prerequisite: ARABIC 1A or placement into ARABIC 1B. ARABIC 1A with a grade of C or better.

Overlaps with ARABIC S1AB, ARABIC S1BC.

Restriction: ARABIC 1B and ARABIC S1AB and ARABIC S1BC may not be taken for full credit.

ARABIC 1C. Fundamentals of Arabic. 5 Units.

Designed for students with little or no exposure to Arabic. Using real world texts, provides a firm foundation in the orthography, grammar, syntax, and vocabulary of Modern Standard Arabic. Introduces students to Arab world cultures.

Prerequisite: ARABIC 1B or ARABIC S1AB or placement into ARABIC 1C. ARABIC 1B with a grade of C or better. ARABIC S1AB with a grade of C or better.

Overlaps with ARABIC S1BC.

Restriction: ARABIC 1C and ARABIC S1BC may not be taken for full credit.

(VI)

ARABIC S1AB. Introductory Arabic. 7.5 Units.

First half of first-year Arabic. Designed for students with little or no exposure to Arabic. Provides students with firm foundation in orthography, grammar, syntax, and vocabulary of written and spoken Modern Standard Arabic. Course may be offered online.

Prerequisite: Placement in ARABIC 1A or ARABIC S1AB.

Overlaps with ARABIC 1A, ARABIC 1B.

Restriction: ARABIC S1AB and ARABIC 1A and ARABIC 1B may not be taken for full credit.

ARABIC S1BC. Introductory Arabic. 7.5 Units.

Second half of first-year Arabic. Continuation of S1AB, or for students with limited exposure to Arabic. Provide firm foundation in orthography, grammar, syntax, and vocabulary of written and spoken Modern Standard Arabic. Course may be offered online.

Prerequisite: ARABIC 1B or ARABIC S1AB or placement into ARABIC 1B or ARABIC 1C. ARABIC 1B with a grade of C or better. ARABIC S1AB with a grade of C or better.

Overlaps with ARABIC 1B, ARABIC 1C.

Restriction: ARABIC S1BC and ARABIC 1B and ARABIC 1C may not be taken for full credit.

(VI)**ARABIC 2A. Intermediate Arabic Language and Culture. 4 Units.**

Designed for students to advance with their Arabic language skills to intermediate level. Students learn the standard Arabic writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: ARABIC 1C or ARABIC S1BC or placement into ARABIC 2A. ARABIC 1C with a grade of C or better. ARABIC S1BC with a grade of C or better.

Overlaps with ARABIC S2AB.

Restriction: ARABIC 2A and ARABIC S2AB may not both be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**ARABIC 2B. Intermediate Arabic Language and Culture. 4 Units.**

Designed for students to advance with their Arabic language skills to intermediate level. Students learn the standard Arabic writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: ARABIC 2A or placement into ARABIC 2B. ARABIC 2A with a grade of C or better.

Overlaps with ARABIC S2AB, ARABIC S2BC.

Restriction: ARABIC 2B and ARABIC S2AB and ARABIC S2BC may not be taken for full credit.

(VIII)**ARABIC 2C. Intermediate Arabic Language and Culture. 4 Units.**

Designed for students to advance with their Arabic language skills to intermediate level. Students learn the standard Arabic writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: ARABIC 2B or ARABIC S2AB or placement into ARABIC 2C. ARABIC 2B with a grade of C or better. ARABIC S2AB with a grade of C or better.

Overlaps with ARABIC S2BC.

Restriction: ARABIC 2C and ARABIC S2BC may not both be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**ARABIC S2AB. Intermediate Arabic Language and Culture. 6 Units.**

First half of second-year Arabic in a time-intensive form.

Prerequisite: ARABIC 1C or Arabic S1BC. ARABIC 1C with a grade of C or better. ARABIC S1BC with a grade of C or better.

Overlaps with ARABIC 2A, ARABIC 2B.

Restriction: ARABIC S2AB and ARABIC 2A and ARABIC 2B may not be taken for full credit.

(VIII)**ARABIC S2BC. Intermediate Arabic Language and Culture. 6 Units.**

Second half of second-year Arabic in a time-intensive form.

Prerequisite: ARABIC 1B or ARABIC S2AB. ARABIC 1B with a grade of B or better. ARABIC S2AB with a grade of C or better.

Overlaps with ARABIC 2B, ARABIC 2C.

Restriction: ARABIC S2BC and ARABIC 2B and ARABIC 2C may not be taken for full credit.

(VIII)**ARABIC 150. Modern Arabic Literature in Translation. 4 Units.**

In English. Major works in Arabic literature and culture in context.

Repeatability: Unlimited as topics vary.

ARABIC 199. Independent Study. 4 Units.

Research paper required.

Repeatability: May be repeated for credit unlimited times.

Hebrew Courses**HEBREW 1A. Fundamentals of Hebrew. 5 Units.**

Designed for students with little or no exposure to Hebrew. Introduction to modern Israeli Hebrew. Students learn the writing system and basics of grammar via latest pedagogical materials and real-world texts. Topics in Jewish culture and Biblical Hebrew are included.

Prerequisite: Placement into HEBREW 1A.

HEBREW 1B. Fundamentals of Hebrew. 5 Units.

Designed for students with little or no exposure to Hebrew. Introduction to modern Israeli Hebrew. Students learn the writing system and basics of grammar via latest pedagogical materials and real-world texts. Topics in Jewish culture and Biblical Hebrew are included.

Prerequisite: HEBREW 1A or placement into HEBREW 1B. HEBREW 1A with a grade of C or better.

HEBREW 1C. Fundamentals of Hebrew. 5 Units.

Designed for students with little or no exposure to Hebrew. Introduction to modern Israeli Hebrew. Students learn the writing system and basics of grammar via latest pedagogical materials and real-world texts. Topics in Jewish culture and Biblical Hebrew are included.

Prerequisite: HEBREW 1B or placement into HEBREW 1C. HEBREW 1B with a grade of C or better.

(VI)**HEBREW 2A. Intermediate Hebrew. 4 Units.**

Designed for students to advance their Hebrew language skills from introductory to intermediate level. Emphasizes development of meaningful communicative skills and critical study of Hebrew culture. These courses help students develop reading, writing, speaking, listening, grammatical, and cultural skills.

Prerequisite: HEBREW 1C. HEBREW 1C with a grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**HEBREW 2B. Intermediate Hebrew. 4 Units.**

Designed for students to advance their Hebrew language skills from introductory to intermediate level. Emphasizes development of meaningful communicative skills and critical study of Hebrew culture. These courses help students develop reading, writing, speaking, listening, grammatical, and cultural skills.

Prerequisite: HEBREW 2A. HEBREW 2A with a grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**HEBREW 2C. Intermediate Hebrew. 4 Units.**

Designed for students to advance their Hebrew language skills from introductory to intermediate level. Emphasizes development of meaningful communicative skills and critical study of Hebrew culture. These courses help students develop reading, writing, speaking, listening, grammatical, and cultural skills.

Prerequisite: HEBREW 2B. HEBREW 2B with a grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**HEBREW 199. Independent Study. 4 Units.**

Research paper required.

Repeatability: May be repeated for credit unlimited times.

Persian Courses**PERSIAN 1A. Fundamentals in Persian. 5 Units.**

Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills and fosters college-level literacy in Persian culture.

Prerequisite: Placement into PERSIAN 1A.

Overlaps with PERSIAN S1AB.

Restriction: PERSIAN 1A and PERSIAN S1AB may not be taken for full credit.

PERSIAN 1B. Fundamentals in Persian. 5 Units.

Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills and fosters college-level literacy in Persian culture.

Prerequisite: PERSIAN 1A or placement into PERSIAN 1B. PERSIAN 1A with a grade of C or better.

Overlaps with PERSIAN S1AB, PERSIAN S1BC.

Restriction: PERSIAN 1B and PERSIAN S1AB and PERSIAN S1BC may not be taken for full credit.

PERSIAN 1C. Fundamentals in Persian. 5 Units.

Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills and fosters college-level literacy in Persian culture.

Prerequisite: PERSIAN 1B or PERSIAN S1AB or placement in PERSIAN 1C. PERSIAN 1B with a grade of C or better. PERSIAN S1AB with a grade of C or better.

Overlaps with PERSIAN S1BC.

Restriction: PERSIAN 1C and PERSIAN S1BC may not be taken for full credit.

(VI)**PERSIAN S1AB. Fundamentals of Persian. 7.5 Units.**

First half of first-year Persian. Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills. Fosters college-level literacy in Persian culture.

Prerequisite: Placement into PERSIAN S1AB.

Overlaps with PERSIAN 1A, PERSIAN 1B.

Restriction: PERSIAN S1AB and PERSIAN 1A and PERSIAN 1B may not be taken for full credit.

(VI)

PERSIAN S1BC. Fundamentals of Persian. 7.5 Units.

Second half of first-year Persian. Continuation of S1AB, or for students with limited exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills. Fosters college-level literacy in Persian culture.

Prerequisite: PERSIAN S1AB or PERSIAN 1B or placement into PERSIAN S1BC. PERSIAN S1AB with a grade of C or better. PERSIAN 1B with a grade of C or better.

Overlaps with PERSIAN 1B, PERSIAN 1C.

Restriction: PERSIAN S1BC and PERSIAN 1B and PERSIAN 1C may not be taken for full credit.

(VI)

PERSIAN 2A. Intermediate Persian. 4 Units.

Designed for students to advance their Persian language skills from introductory to intermediate level. Students learn the standard Persian writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: PERSIAN 1C or PERSIAN S1BC or placement into PERSIAN 2A. PERSIAN 1C with a grade of C or better. PERSIAN S1BC with a grade of C or better.

Overlaps with PERSIAN S2AB.

Restriction: PERSIAN 2A and PERSIAN S2AB may not be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)

PERSIAN 2B. Intermediate Persian. 4 Units.

Designed for students to advance their Persian language skills from introductory to intermediate level. Students learn the standard Persian writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: PERSIAN 2A or placement into PERSIAN 2B. PERSIAN 2A with a grade of C or better.

Overlaps with PERSIAN S2AB, PERSIAN S2BC.

Restriction: PERSIAN 2B and PERSIAN S2AB and PERSIAN S2BC may not be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)

PERSIAN 2C. Intermediate Persian. 4 Units.

Designed for students to advance their Persian language skills from introductory to intermediate level. Students learn the standard Persian writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: PERSIAN 2B or PERSIAN S2AB or placement in PERSIAN 2C. PERSIAN 2B with a grade of C or better. PERSIAN S2AB with a grade of C or better.

Overlaps with PERSIAN S2BC.

Restriction: PERSIAN 2C and PERSIAN S2BC may not both be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)

PERSIAN S2AB. Intermediate Persian Language and Culture. 6 Units.

First half of second-year Persian in a time-intensive form. Students learn the modern Persian writing system and grammar. Facilitates intermediate-level reading, writing and speaking skills. Fosters college level literacy in Persian culture.

Prerequisite: PERSIAN 1C or PERSIAN S1BC or placement into PERSIAN 2A. PERSIAN 1C with a grade of C or better. PERSIAN S1BC with a grade of C or better.

Overlaps with PERSIAN 2A, PERSIAN 2B.

Restriction: PERSIAN S2AB and PERSIAN 2A and PERSIAN 2B may not be taken for full credit.

(VIII)

PERSIAN S2BC. Intermediate Persian Language and Culture. 6 Units.

Second half of second-year Persian in a time-intensive form. Students learn the modern Persian writing system and grammar. Facilitates intermediate-level reading, writing and speaking skills. Fosters college level literacy in Persian culture.

Prerequisite: PERSIAN S2AB or PERSIAN 2B or placement into PERSIAN 2C. PERSIAN S2AB with a grade of C or better. PERSIAN 2B with a grade of C or better.

Overlaps with PERSIAN 2B, PERSIAN 2C.

Restriction: PERSIAN S2BC and PERSIAN 2B and PERSIAN 2C may not be taken for full credit.

(VIII)

PERSIAN 3A. Advanced Persian. 4 Units.

Students improve Persian language skills and grammatical knowledge. Explores tenth- to twentieth-century Persian poetry and prose (e.g., Rudaki, Ferdowsi, Bahar, Nima Yushij).

Prerequisite: PERSIAN 2C or PERSIAN S2BC. PERSIAN 2C with a grade of C or better. PERSIAN S2BC with a grade of C or better.

(VIII)

PERSIAN 3B. Advanced Persian. 4 Units.

Students improve their Persian language skills and grammatical knowledge. Explores tenth- to twentieth-century Persian poetry and prose (e.g., Rudaki, Ferdowsi, Bahar, Nima Yushij).

Prerequisite: PERSIAN 3A. PERSIAN 3A with a grade of C or better.

(VIII)

PERSIAN 50. Persian Culture. 4 Units.

Study of varied topics in Persian culture, area studies, and society, both in the present and in historical perspective. Topics are not normally repeated for a two-year period.

Repeatability: Unlimited as topics vary.

(IV, VIII)

Vietnamese Courses

VIETMSE 1A. Fundamentals of Vietnamese. 5 Units.

Designed for students with little or no exposure to Vietnamese. Natural approach with emphasis on four fundamental skills of listening, speaking, reading, and writing. Conducted in Vietnamese.

Prerequisite: Placement into VIETMSE 1A.

Overlaps with VIETMSE S1AB.

Restriction: VIETMSE 1A and VIETMSE S1AB may not be taken for full credit.

VIETMSE 1B. Fundamentals of Vietnamese. 5 Units.

Designed for students with little or no exposure to Vietnamese. Natural approach with emphasis on four fundamental skills of listening, speaking, reading, and writing. Conducted in Vietnamese.

Prerequisite: VIETMSE 1A or placement in VIETMSE 1B. VIETMSE 1A with a grade of C or better.

Overlaps with VIETMSE S1AB, VIETMSE S1BC.

Restriction: VIETMSE 1B and VIETMSE S1AB and VIETMSE S1BC may not be taken for full credit.

VIETMSE 1C. Fundamentals of Vietnamese. 5 Units.

Designed for students with little or no exposure to Vietnamese. Natural approach with emphasis on four fundamental skills of listening, speaking, reading, and writing. Conducted in Vietnamese.

Prerequisite: VIETMSE 1B or VIETMSE S1AB or placement in VIETMSE 1C. VIETMSE 1B with a grade of C or better. VIETMSE S1AB with a grade of C or better.

Overlaps with VIETMSE S1BC.

Restriction: VIETMSE 1C and VIETMSE S1BC may not both be taken for credit.

(VI)

VIETMSE S1AB. Fundamentals. 7.5 Units.

First half of first-year Vietnamese. Designed for students with little or no exposure to Vietnamese. Emphasis is on mastery of the basic language skills of understanding, speaking, reading, and writing.

Overlaps with VIETMSE 1A, VIETMSE 1B.

Restriction: VIETMSE S1AB and VIETMSE 1A and VIETMSE 1B may not be taken for full credit.

VIETMSE S1BC. Fundamentals. 7.5 Units.

Second half of first-year Vietnamese. Designed for students with little or no exposure to Vietnamese. Emphasis is on mastery of the basic language skills of understanding, speaking, reading, and writing.

Prerequisite: VIETMSE S1AB or VIETMSE 1B or placement into VIETMSE 1B or VIETMSE 1C. VIETMSE 1B with a grade of C or better. VIETMSE S1AB with a grade of C or better.

Restriction: VIETMSE S1BC and VIETMSE 1B and VIETMSE 1C may not be taken for full credit.

(VI)

VIETMSE 2A. Intermediate Vietnamese. 4 Units.

Designed for students to advance their Vietnamese language skills from introductory to intermediate level. Designed to develop writing and reading skills and communicative skills in authentic situations. Students are introduced to aspects of Vietnamese culture relating to lesson topics.

Prerequisite: VIETMSE 1C or VIETMSE S1BC or placement into VIETMSE 2A. VIETMSE 1C with a grade of C or better. VIETMSE S1BC with a grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)

VIETMSE 2B. Intermediate Vietnamese. 4 Units.

Designed for students to advance their Vietnamese language skills from introductory to intermediate level. Designed to develop writing and reading skills and communicative skills in authentic situations. Students are introduced to aspects of Vietnamese culture relating to lesson topics.

Prerequisite: VIETMSE 2A or placement into VIETMSE 2B. VIETMSE 2A with a grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)

VIETMSE 2C. Intermediate Vietnamese. 4 Units.

Designed for students to advance their Vietnamese language skills from introductory to intermediate level. Designed to develop writing and reading skills and communicative skills in authentic situations. Students are introduced to aspects of Vietnamese culture relating to lesson topics.

Prerequisite: VIETMSE 2B or placement into VIETMSE 2C. VIETMSE 2B with a grade of C or better.

Restriction: School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)

VIETMSE 3A. Advanced Vietnamese. 4 Units.

Focuses on the development of effective speaking, reading, and writing with an emphasis on correct syntax and appropriate word usage in spoken language.

Prerequisite: VIETMSE 2C.

(VIII)

VIETMSE 3B. Advanced Vietnamese. 4 Units.

Focuses on the development of effective speaking, reading, and writing with an emphasis on correct syntax and appropriate word usage in spoken language.

Prerequisite: VIETMSE 3A.

(VIII)

VIETMSE 3C. Advanced Vietnamese. 4 Units.

Focuses on the development of effective speaking, reading, and writing with an emphasis on correct syntax and appropriate word usage in spoken language.

Prerequisite: VIETMSE 3B.

(VIII)

VIETMSE 115. Vietnamese Literature: Advanced Texts. 4 Units.

A reading course for students with near-fluency in reading Vietnamese. Readings may include both literary and more broadly culturally significant works by important writers, but emphasis is literary texts and writings that interpret those texts.

Prerequisite: VIETMSE 3C.

Repeatability: May be taken for credit 3 times as topics vary.

VIETMSE 143. Linguistic Structure of Vietnamese. 4 Units.

Detailed analysis of essential grammatical aspects of Vietnamese. Comparison with other languages. Course not designed to teach Vietnamese per se but to study the language from the perspective of theoretical linguistics.

Prerequisite: LINGUIS 3.

VIETMSE 150. Vietnamese Literature and Culture in Translation. 4 Units.

Major works in Vietnamese literature and culture in context.

Repeatability: Unlimited as topics vary.

Emphasis in Critical Theory

179 Humanities Instructional Building; (949) 824-6720
<http://www.hnet.uci.edu/cte/>

An emphasis in Critical Theory, under the supervision of the Committee on Critical Theory, is available for doctoral students in all departments at UCI upon approval of the student's faculty advisor or associate dean in accordance with departmental policy. Ph.D. students may, with Committee approval, complete the emphasis in addition to the degree requirements of their graduate program. Although there is no change in the existing Ph.D. program requirements or procedures, if the student wishes to have a letter (signed by the Dean and by the Director of Critical Theory) testifying that the student has satisfactorily added this theoretical dimension to the graduate program, then additional requirements must be met. Critical

theory at UCI is understood in the broad sense as the study of the shared assumptions, problems, and commitments of the various discourses in the humanities. The faculty regards critical theory not as an adjunct to the study of one of the traditional humanistic disciplines but as a necessary context for the study of any humanistic discipline.

Admission to the emphasis may be granted by the Critical Theory Committee in response to the student's petition. The petition normally is submitted by the middle of the second year of graduate study, after completion of one Humanities 270 seminar, and upon the recommendation of the Workshop's instructor or a faculty representative of the student's department.

Requirements: (1) a three-quarter Critical Theory Workshop, conducted preferably by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class. No term papers are required, and the course is graded Satisfactory/Unsatisfactory only. Students receive credit for this course only in the spring quarter. For the first two quarters, the course is 0 units with IP grading; (2) three HUMAN 270 courses offered under the supervision of the Committee. At least three such courses will be offered each quarter; (3) participation in two mini-seminars (six–eight hours) offered by visiting scholars (and sponsored by the Committee) on the visiting scholar's ongoing research; and (4) a dissertation that reflects the students' preparation in critical theory; alternatively, a research paper written under the guidance of one or more of the Emphasis faculty and submitted to the Director.

Participating Faculty

Ackbar Abbas, *Departments of Comparative Literature and of Film and Media Studies*

Luis F. Avilés, *Department of Spanish and Portuguese*

Etienne Balibar (*Emeritus*), *Department of Comparative Literature*

Stephen Barker, *Department of Drama*

Ermanno Bencivenga, *Department of Philosophy*

Thomas Boellstorff, *Department of Anthropology*

Ellen S. Burt, *Departments of English and Comparative Literature*

Juli Carson, *Department of Art*

Vinayak Chaturvedi, *Department of History*

Chungmoo Choi, *Department of East Asian Languages and Literatures*

David Theo Goldberg, *Departments of Comparative Literature and of Criminology, Law and Society*

Daniel M. Gross, *Department of English*

Laura H. Y. Kang, *Departments of Women's Studies, Comparative Literature, and English*

Arlene R. Keizer, *Department of English*

Kyung Hyun Kim, *Departments of East Asian Languages and Literatures and of Film and Media Studies*

Horacio Legrás, *Department of Spanish and Portuguese*

Felicidad "Bliss" Cua Lim, *Department of Film and Media Studies*

Julia Reinhard Lupton, *Departments of English, Comparative Literature, and Education*

Steven J. Mailloux (*Emeritus*), *Department of English*

William M. Maurer, *Department of Anthropology*

J. Hillis Miller (*Emeritus*), *Departments of Comparative Literature and English*

Yong Soon Min, *Department of Art*

Carrie J. Noland, *Department of European Languages and Studies*

Department of Philosophy

85 Humanities Instructional Building; (949) 824-6525

<http://www.humanities.uci.edu/philosophy/>

Sven Bernecker, **Department Chair**

Philosophy addresses itself to questions that arise insistently in every area of human experience and in every discipline within the university. Each discipline inevitably poses problems concerning the nature of the standards appropriate to it and the place of its subject matter within the total framework of human knowledge. If we are to understand science or

art or literature, or such human practices as religion and moral thought, we are bound to address ourselves to philosophical issues relating to their nature, the uses of reason appropriate to them, and the contributions they make to our understanding and appreciation of ourselves and the world in which we live.

Careers for the Philosophy Major

The study of argument and the precision and clarity of thought and writing required of Philosophy majors are excellent preparation for a variety of careers. Many undergraduates trained in Philosophy go on to professional schools in medicine, business, or law. The analytical skills developed in Philosophy courses are especially useful in legal education; indeed, many UCI Philosophy graduates have been successful at top law schools. Former Philosophy students have also used their skills to advantage in careers in government, business, teaching, law enforcement, and computer programming. Many Philosophy majors also continue their education at the graduate level, either in philosophy or a related discipline.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Undergraduate Program

Instruction in philosophy relies essentially upon discussion in which students are active participants. Wherever possible, therefore, classes are limited in size in order to permit sustained interchanges between students and instructor.

Some of the courses offered are of general interest to all students. Others are designed to explore issues that arise in selected and special disciplines such as art or science. The undergraduate advisor should be consulted for advice about courses best suited to the specialized needs of particular students.

The program of course offerings is also designed for those Philosophy majors whose intention may be either to enter some professional school upon graduation (e.g., law) or to engage in graduate work in philosophy.

The faculty encourages Philosophy majors and minors to seriously consider expanding their perspective through an experience of study abroad. The Study Abroad Center, which includes the University's Education Abroad Program (UCEAP) and the International Opportunities Program (IOP), assists students in taking advantage of many worldwide opportunities for study and research. Specifically, those interested in analytic philosophy could consider the EAP programs in the United Kingdom, Canada, Sweden, Australia, and New Zealand, and those interested in Continental philosophy could consider the EAP programs in France, Germany, and Italy. See the Study Abroad Center section of the *Catalogue* or an academic counselor for additional information.

Requirements for the B.A. Degree in Philosophy

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Departmental Requirements for the Major

A. Select one of the following:

PHILOS 1

Introduction to Philosophy

PHILOS 4	Introduction to Ethics
PHILOS 5	Contemporary Moral Problems
B. Select one of the following:	
PHILOS 30	Introduction to Symbolic Logic
PHILOS 104	Introduction to Logic
C. Select two of the following:	
PHILOS 10	History of Ancient Philosophy
PHILOS 11	History of Medieval Philosophy
PHILOS 12	History of Modern Philosophy
PHILOS 13	History of Contemporary Philosophy
D. Complete:	
PHILOS 101	Introduction to Metaphysics
PHILOS 102	Introduction to the Theory of Knowledge
PHILOS 103	Introduction to Moral Philosophy
E. Select five of the following: ¹	
PHILOS 100W	Writing Philosophy
PHILOS 105–199	

¹ Students planning to pursue graduate school are strongly advised to take PHILOS 105A and PHILOS 105B.

Residence Requirement: At least five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor in Philosophy

A. Select three of the following:

PHILOS 1	Introduction to Philosophy
PHILOS 4	Introduction to Ethics
PHILOS 5	Contemporary Moral Problems
PHILOS 10	History of Ancient Philosophy
PHILOS 11	History of Medieval Philosophy
PHILOS 12	History of Modern Philosophy
PHILOS 13	History of Contemporary Philosophy
PHILOS 22	Introduction to Law and Society
PHILOS 23	Introduction to Problems of Self and Mind
PHILOS 30	Introduction to Symbolic Logic

B. Complete four additional upper-division courses selected from PHILOS 100W–199. (PHILOS 199 may be taken for four units only.)

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Program

The Ph.D. program in Philosophy is jointly and cooperatively administered by the Department of Philosophy in the School of Humanities and the Department of Logic and Philosophy of Science (LPS) in the School of Social Sciences. The graduate program has two distinct tracks—the Philosophy track and the LPS track—both of which begin from a common core of shared requirements in history of philosophy, logic, ethics, and

metaphysics/epistemology. Students are advised to apply to the track whose faculty, areas of specialization, and curriculum most closely correspond to their interests. The Philosophy track is described here. See the Department of Logic and Philosophy of Science for a description of the LPS track.

UCI's Philosophy Department is committed to providing students a well-rounded graduate education, including central areas of contemporary philosophy and a solid foundation in the history of philosophy. While many of our students choose to specialize in the history of Philosophy or the Continental tradition, areas in which the Department enjoys international recognition, students with other areas of specialization are welcome and well represented. Those with interests in mathematics, the natural sciences, or the social sciences are encouraged to take courses in Logic and Philosophy of Science and to include LPS faculty members on their dissertation committees. The cooperative two-track program provides students the benefits of faculty expertise in a host of areas.

Every year the Philosophy Department invites distinguished philosophers from other universities to present their work to faculty and graduate students. Participation in this colloquium series, though not mandatory, contributes significantly to graduate education. Colloquia sponsored by Logic and Philosophy of Science might also be of interest to Philosophy track students.

Every new graduate student is assigned a faculty member whose purpose is to oversee the student's progress through the major requirements for the advanced degree. The student consults with this faculty member each quarter about progress and any administrative or academic difficulties. Each student's overall record is evaluated by the Philosophy Department each year, customarily during the first two weeks of April. When the student has satisfied the residency requirement and the distribution, tools of research, and portfolio requirements, the Candidacy Committee supervises the qualifying examination and the development of a dissertation project, and the subsequent writing of the dissertation itself. The Chair of this committee is the principal person with whom the graduate student will consult on the dissertation.

Master of Arts in Philosophy

There is no list of courses required for the M.A. degree. The M.A. program in Philosophy takes one year at a minimum. The student may elect to follow either of the following routes to the degree: write a thesis on a subject to be chosen in consultation with an advisor and defend the thesis in an oral examination, or satisfy the logic and portfolio requirements for the Philosophy track. Refer to the Graduate Division section for information on the minimum number of courses required for the M.A. degree.

Advancement to candidacy for the M.A. degree is not automatic, but requires formal application to the Dean of the Graduate Division via the Philosophy Department Office. Application must be made with the recommendation of the Philosophy Department and must take place before the beginning of the quarter in which the student expects to receive the degree.

Doctor of Philosophy in Philosophy

There is no set number of courses required for the Philosophy track, so that work can be tailored to the individual student's needs and interests. However, as a prerequisite for the Ph.D. degree, every student is required to have some experience in teaching.

Normative time to degree in the Philosophy track is seven years for the normally qualified student. Time to advancement to candidacy is four years. Time in candidacy is three years. Maximum time to degree permitted is nine years. A master's degree is not a prerequisite for the Ph.D. The following items are requirements for the Ph.D. degree.

First-Year Seminar. An examination of some standard works in the history of philosophy, value theory, metaphysics, or epistemology required of all first-year Philosophy graduate students in the School of Humanities.

Distribution Requirements. Students are required to take a range of courses designed to expose them to the various historical periods and fields of philosophy. When course offerings are announced, students are notified about which courses can be used to satisfy which requirements. In some cases, the requirement satisfied will ultimately depend on the content of the student's term paper(s).

The Distribution Requirements are:

1. **History.** To satisfy this requirement, students must receive a grade of B or better in at least four courses covering at least three of the following areas: Ancient, Medieval, Modern Empiricism, Modern Rationalism, Kant, Nineteenth Century, and Twentieth Century.
2. **Field.** To satisfy this requirement, students must receive a grade of B or better in two courses in value theory, one course in logic, and two courses in metaphysics/epistemology, broadly construed.

These requirements must be completed by the end of the seventh quarter in residence.

Tools of Research. This requirement allows students to pursue the tool which they and their advisors deem most useful for their area of concentration, either a language other than English or some course of study outside philosophy. To satisfy this requirement, a student must pass an examination in a single appropriate language other than English or receive a grade of B or better in each of three appropriate graduate-level courses in a discipline other than philosophy.

The two-hour foreign language examination (administered by the Philosophy Department) requires students to translate, with the aid of a dictionary, passages from one or two philosophical authors. For the second option, courses of study outside philosophy will be approved (by the Philosophy Department Director of Graduate Studies) when they bear on a student's area of philosophical concentration. Though the courses must be in a discipline other than philosophy, they may in fact be taught in the Philosophy Department or the LPS Program (e.g., a course in mathematical logic taught by an LPS faculty member).

This requirement must be completed by the end of the twelfth quarter in residence.

The Portfolio. A portfolio of at least two papers is an extended writing sample designed to demonstrate a student's ability (a) to understand, analyze, and evaluate positions and arguments in the philosophical literature, and (b) to formulate and defend an original philosophical thesis. These virtues must be displayed at a level of sophistication that indicates the student's ability to write a Ph.D. dissertation.

The portfolio must be submitted to the Graduate Coordinator at the end of the fifth week of the student's sixth quarter in residence. Portfolios will be evaluated by the entire faculty of the Philosophy Department. (Philosophy track students may request that relevant LPS faculty also be present at the evaluation meeting.)

Prospectus Examination. In preparation for the prospectus examination, students choose a dissertation advisor and a dissertation committee. They consult with their thesis advisor and other appropriate faculty to prepare a reading list on their area of concentration and a brief dissertation proposal with a comprehensive bibliography. The exam is an oral exam and must be completed by the end of the ninth quarter in residence. The prospectus exam is to determine whether the dissertation project is viable and promises results that will fulfill standards expected for a dissertation in the profession.

Candidacy Examination. In preparation for the candidacy examination, students prepare at least a draft chapter of their dissertation, an outline of the organization of the work, and update their prospectus and bibliography in consultation with their dissertation advisor and their dissertation committee. Students apply for candidacy by filing appropriate forms, including a list (devised in consultation with their advisor) of appropriate members for their Candidacy Committee; one of these, the External Examiner, must come from outside the Department of Philosophy. The Committee is then appointed by the Philosophy Department, on behalf of the Dean of the Graduate Division and the Graduate Council, to administer the oral candidacy examination on the prospectus and draft chapter(s) to determine whether or not the student will be approved to continue work on the dissertation.

The Candidacy Examination must be completed by the end of the twelfth quarter in residence. The Philosophy Department Chair, on behalf of the Dean of the Graduate Division and the Graduate Council, then appoints a Doctoral Committee (typically taken from the Candidacy Committee and naturally including the dissertation advisor) to supervise the writing of the dissertation.

Dissertation Defense. Students must defend their dissertation during an oral examination administered by their Doctoral Committee.

Program in Law and Graduate Studies (J.D./Ph.D.). Highly qualified students interested in combining the study of Law with graduate qualifications in Philosophy are invited to undertake concurrent degree study under the auspices of UC Irvine's Program in Law and Graduate Studies (PLGS). Students in this program pursue a coordinated curriculum, leading to a J.D. degree from the School of Law in conjunction with a Ph.D. degree in Philosophy. Students must be admitted to both programs separately in order to pursue the concurrent Program in Law and Graduate Studies. Students admitted to the Program in Law and Graduate Studies have to complete all of the requirements of each degree. The normative time for completion of the Program in Law and Graduate Studies is eight years for the J.D./Ph.D. combination. Additional information is available from PLGS Director's office, (949) 824-4158, or by e-mail to plgs@law.uci.edu. A full description of the program, with links to all relevant application information, can be found at <http://www.law.uci.edu/plgs>.

The Salzburg Exchange Program

The Department of Philosophy and the Department of Logic and Philosophy of Science jointly administer an Exchange Program with the University of Salzburg. The program has two parts. The Scholarly Exchange provides opportunities for faculty and graduate students in Philosophy and LPS to visit Salzburg and for faculty and graduate students from Salzburg to visit one or the other of the UCI units. The Program also sponsors joint conferences, held alternately in Irvine and in Salzburg; these are co-sponsored by Salzburg and the UCI Interdisciplinary Program in the History and Philosophy of Science.

To be eligible for the Salzburg Exchange, a graduate student must have advanced to candidacy. The selected student spends one semester in Salzburg, usually teaching one course in the general area of the thesis topic. An upper-division course may be taught in English, but lower-division courses must be taught in German. (Some previous visitors have learned serviceable German by attending a Goethe institute during the preceding summer.) Typically, a Salzburg visitor will receive a Salzburg Fellowship intended to cover travel expenses, and a stipend; those who teach while in Salzburg will also receive a salary intended to cover living expenses (including health and dental insurance).

Application should be made to the Philosophy Department's Salzburg Exchange Director by November 1 and should include a curriculum vita and syllabi for possible courses to be taught. The Director and/or the Philosophy Department Graduate Coordinator should be consulted for further information.

Optional Emphasis in Critical Theory

The School of Humanities offers an emphasis in Critical Theory that can be appended to the Philosophy track. A student interested in the emphasis begins by taking the three-quarter Critical Theory Workshop. With the recommendation of a workshop instructor or a Critical Theory faculty member in the Philosophy Department, the student may then apply to the Critical Theory Committee for admission to the emphasis. Emphasis students must complete the following requirements in addition to the usual Philosophy track requirements.

The Critical Theory Workshop. Students must successfully complete the three-quarter Critical Theory Workshop. This sequence is conceived as a reading group, normally conducted by a team of instructors, and developed with the input of all participants. Significant texts are discussed and analyzed in class; no term papers are required. (Students receive 0 units and In-progress grades for the fall and winter quarters; passing students receive 4 units and a Satisfactory grade for the spring quarter.

Advanced Critical Theory Requirement. Students must receive a grade of B or better in three HUMAN 270 courses offered under the supervision of the Critical Theory Committee. At least three such courses will be offered each year. With the approval of the Philosophy Department, these courses can be used to satisfy the tools of research requirement.

Mini-Seminar Requirement. Students must participate in two committee-sponsored mini-seminars (six–eight hours each) offered by visiting scholars on their ongoing research.

Research Paper Requirement. Students must complete a research paper under the guidance of a three-member committee, selected in consultation with the Director; at least one member must be from outside of the Philosophy Department. This paper may (but need not) be part of the portfolio or dissertation.

Upon completion of the emphasis requirements, a letter certifying that fact, signed by the Dean of Humanities and the Director of the Critical Theory Emphasis, will be added to the student's dossier.

Optional Emphasis in Feminist Studies

A graduate emphasis in Feminist Studies also is available. Refer to the Women's Studies (p. 565) section of the *Catalogue* for information.

Faculty

Ermanno Bencivenga, Ph.D. University of Toronto, *Professor of Philosophy* (logic, history of philosophy, philosophy of language)

Sven Bernecker, Ph.D. Stanford University, *Department Chair and Professor of Philosophy* (epistemology, philosophy of mind, Kant and German Idealism)

M. Oreste Fiocco, Ph.D. University of California, Santa Barbara, *Assistant Professor of Philosophy* (metaphysics, epistemology, philosophy of language, ethics)

Margaret Gilbert, D. Phil. Oxford University, *Professor of Philosophy and Abraham I. Melden Chair in Moral Philosophy* (moral and political philosophy, philosophy of social science, social ontology, and collective intentionality)

Sean Greenberg, Ph.D. Harvard University, *Assistant Professor of Philosophy* (history of Early modern philosophy)

Jeffrey Helmreich, Ph.D. University of California, Los Angeles, *Assistant Professor of Philosophy and Director of the Minor in Humanities and Law* (ethics, legal philosophy, and moral psychology)

Aaron James, Ph.D. Harvard University, *Associate Professor of Philosophy* (ethics, political philosophy)

S. Nicholas Jolley, Ph.D. Cambridge University, *Professor Emeritus of Philosophy* (early modern philosophy, political philosophy)

Bonnie Kent, Ph.D. Columbia University, *Professor of Philosophy* (ethics, medieval philosophy)

J. Karel Lambert, Ph.D. Michigan State University, *Professor Emeritus of Philosophy* (logic, philosophy of science, metaphysics)

Alan Nelson, Ph.D. University of Illinois at Chicago, *Professor Emeritus of Philosophy* (history of philosophy, philosophy of science)

Casey Perin, Ph.D. University of California, Berkeley, *Associate Professor of Philosophy* (ancient philosophy, epistemology, seventeenth- and eighteenth-century philosophy)

Gerasimos Santas, Ph.D. Cornell University, *Professor Emeritus of Philosophy* (ancient philosophy, history of philosophy, ethics)

Martin Schwab, Ph.D. University of Bielefeld, *Professor Emeritus of Philosophy* (nineteenth- and twentieth-century continental philosophy)

David W. Smith, Ph.D. Stanford University, *Professor of Philosophy* (phenomenology, Husserl, ontology, philosophy of mind)

Nicholas White, Ph.D. Harvard University, *Professor Emeritus of Philosophy and Classics* (Greek philosophy, ethics, epistemology)

Peter Woodruff, Ph.D. University of Pittsburgh, *Professor Emeritus of Philosophy* (philosophy of logic, metaphysics)

Affiliated Faculty

Francisco J. Ayala, Ph.D. Columbia University, *University Professor and Donald Bren Professor of Biological Sciences*

Matthew D. Foreman, Ph.D. University of California, Berkeley, *Professor of Mathematics and of Logic and Philosophy of Science*

Donald Hoffman, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences*

Kristen R. Monroe, Ph.D. University of Chicago, *Professor of Political Science*

Terence Parsons, Ph.D. Stanford University, *Professor of Philosophy, UCLA* (philosophy of language, Medieval philosophy)

Roger N. Walsh, M.B.B.S., Ph.D. University of Queensland, *Professor of Psychiatry and Human Behavior*

Courses

PHILOS 1. Introduction to Philosophy. 4 Units.

A selection of philosophical problems, concepts, and methods, e.g., free will and cause and substance, personal identity, the nature of philosophy itself.

(IV)

PHILOS 4. Introduction to Ethics. 4 Units.

Selected topics from the history of ethics, e.g., the nature of the good life and the moral justification of conduct.

(IV)

PHILOS 5. Contemporary Moral Problems. 4 Units.

Selected moral issues of current interest, e.g., abortion, sexual morality, euthanasia, capital punishment, reverse discrimination, civil disobedience, or violence.

(IV)

PHILOS 6. Philosophy and Psychoanalysis. 4 Units.

An analysis of Freudian psychoanalytic theory and therapy, and its significance for such classical philosophical problems such as the mind-body problem, self-identity and self-deception, psyche and consciousness, innatism, and the origins of moral behavior.

(IV)

PHILOS 7. Introduction to Existentialism. 4 Units.

An analysis of themes in phenomenology and existentialism and their philosophical origins, e.g., consciousness, self and other, freedom and individuality.

(IV)

PHILOS 9. Feminist Moral and Political Philosophy. 4 Units.

Selected topics in moral and political philosophy analyzed from feminist perspectives, e.g., gender-based differences in moral attitudes and virtues, hidden in traditional accounts of political obligation, and feminism and sexual orientation.

Prerequisite: Recommended: PHILOS 4.

(IV)

PHILOS 10. History of Ancient Philosophy. 4 Units.

Examination of the central philosophical themes developed by the pre-Socratics, Socrates, Plato, Aristotle, the Stoics, the Epicureans, and the Skeptics.

(IV)

PHILOS 11. History of Medieval Philosophy. 4 Units.

A study of some of the major theological and philosophical texts from the Medieval period.

Prerequisite: Recommended: PHILOS 10.

(IV)

PHILOS 12. History of Modern Philosophy. 4 Units.

A study of major developments in western philosophy from Descartes to Kant with readings from Descartes, Leibniz, Locke, Berkeley, Hume, and Kant.

Prerequisite: Recommended: PHILOS 10 or PHILOS 11.

(IV)

PHILOS 13. History of Contemporary Philosophy. 4 Units.

A study of recent philosophical developments in Anglo-American and Continental philosophy with readings from such figures as Russell, Moore, Wittgenstein, Quine, Heidegger, and Sartre.

Prerequisite: Recommended: PHILOS 12.

(IV)

PHILOS 22. Introduction to Law and Society. 4 Units.

What constitutes a legal system? What does it mean for a society to have a system as a part of the social fabric. Examines the social status of law and its use as a tool for fashioning society.

(III)

PHILOS 23. Introduction to Problems of Self and Mind. 4 Units.

Study of basic problems in metaphysics: What am I? A mind, a soul, a body? A social being? A bioorganism? Am I the same person today, yesterday, and tomorrow? Is there a story of my life that captures my essence?.

(IV)

PHILOS 29. Critical Reasoning. 4 Units.

Introduction to analysis and reasoning. The concepts of argument, premise, and conclusion, validity and invalidity, consistency and inconsistency. Identifying and assessing premises and inferences. Deductive versus inductive reasoning, and introduction to the probability calculus. Evaluating definitions. Informal fallacies.

Same as LPS 29.

(Vb)

PHILOS 30. Introduction to Symbolic Logic. 4 Units.

An introduction to the symbolism and methods of the logic of statements, including evaluation of arguments by truth tables, the techniques of natural deduction and semantic tableaux.

Same as LPS 30.

(Vb)

PHILOS 31. Introduction to Inductive Logic. 4 Units.

Philosophical questions concerning the foundations of scientific inference, e.g., the traditional problem of induction, the Goodman paradox, the concept of cause, Mill's method of inductive reasoning, probability calculus, different interpretations of probability, and their interaction in inductive reasoning.

Prerequisite: PHILOS 29 or PHILOS 30 or PHILOS 104.

Same as LPS 31.

(Va)

PHILOS 40. Special Topics in Philosophy. 4 Units.

Lectures on selected topics at the lower-division level.

Repeatability: Unlimited as topics vary.

PHILOS 100W. Writing Philosophy. 4 Units.

Discussion of those aspects of writing of special importance in philosophy, e.g., philosophical terminology, techniques for evaluating arguments, philosophical definitions and theories. At least 4,000 words of assigned composition based on philosophical readings.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Same as LPS 100W.

Restriction: Upper-division students only.

(Ib)

PHILOS 101. Introduction to Metaphysics. 4 Units.

A study of one or more of the problems of "first philosophy," e.g., substance, free will, causation, abstract entities, identity.

PHILOS 102. Introduction to the Theory of Knowledge. 4 Units.

A study of one or more of the basic issues in epistemology, e.g., the role of perception in the acquisition of knowledge, the nature of evidence, the distinction between belief and knowledge, and the nature of truth and certainty.

Same as LPS 102.

PHILOS 103. Introduction to Moral Philosophy. 4 Units.

A study of one or more of the problems of contemporary moral philosophy, e.g., the nature of justice, liberalism versus conservatism, happiness and its relation to virtue and right conduct, the objectivity of moral standards.

PHILOS 104. Introduction to Logic. 4 Units.

Introduction to sentence logic, including truth tables and natural deduction; and to predicate logic, including semantics and natural deduction.

Same as LPS 104.

PHILOS 105A. Elementary Set Theory. 4 Units.

An introduction to the basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers.

Prerequisite: LPS 104 or MATH 6B or one upper-division course in MATH.

Same as LPS 105A.

Overlaps with MATH 151.

PHILOS 105B. Metalogic. 4 Units.

Introduction to formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Löwenheim-Skolem theorems.

Prerequisite: PHILOS 105A.

Same as LPS 105B.

Overlaps with MATH 150.

PHILOS 105C. Undecidability and Incompleteness. 4 Units.

Introduction to the formal theory of effective processes, including recursive functions, Turing machines, Church's thesis, and proofs of Gödel's incompleteness theorem for arithmetic, and Church's undecidability theorem for first-order logic.

Prerequisite: PHILOS 105B.

Same as LPS 105C.

Overlaps with MATH 152.

PHILOS 106. Topics in Logic. 4 Units.

Selected topics in mathematical or philosophical logic.

Prerequisite: LPS 105B or PHILOS 105B.

Repeatability: Unlimited as topics vary.

Same as LPS 106.

PHILOS 108. Topics in Induction, Probability, and Decision Theory. 4 Units.

Selected topics in induction, probability, and decision theory.

Repeatability: Unlimited as topics vary.

Same as LPS 108.

PHILOS 110. Topics in Ancient Philosophy. 4 Units.

Selected topics from the writings of Plato and Aristotle, e.g., Aristotle's criticisms of Plato's metaphysics, ethics, or politics.

Repeatability: May be taken for credit 2 times as topics vary.

PHILOS 111. Topics in Medieval Philosophy. 4 Units.

Studies of some of the major issues of concern to Medieval philosophers, e.g., universals, the nature and existence of God, faith, and reason.

Repeatability: May be taken for credit 2 times as topics vary.

PHILOS 112. Topics in Renaissance Philosophy. 4 Units.

Studies of such authors as Bruno and Montaigne.

Repeatability: May be taken for credit 2 times as topics vary.

PHILOS 113. Topics in Modern Philosophy. 4 Units.

Focuses on the works of central philosophical figures of modern Philosophy (e.g., Descartes, Leibniz, Hobbes, Locke, Hume, Kant) or on the treatment of one or more central philosophical problems by a number of these figures.

Repeatability: Unlimited as topics vary.

Same as LPS 113.

PHILOS 114. Topics in Nineteenth-Century Philosophy. 4 Units.

Studies of some of the major figures after Kant (e.g., Hegel, Nietzsche, Marx, Kierkegaard), especially in German idealism and social thought.

Repeatability: Unlimited as topics vary.

PHILOS 115. Topics in History of Analytic Philosophy. 4 Units.

Review of central theories or figures in the history of analytic philosophy. Emphasis on writings of Frege, Russell, Schlick, Carnap, and Quine. Topics include the nature of meaning and truth, the synthetic/analytic distinction, and scientific knowledge.

Repeatability: Unlimited as topics vary.

Same as LPS 115.

PHILOS 116. Topics in Continental Philosophy. 4 Units.

Studies of some of the major figures (e.g., Husserl), movements (e.g., phenomenology, existentialism) in early twentieth-century continental European thought.

Repeatability: Unlimited as topics vary.

PHILOS 120. Topics in Metaphysics. 4 Units.

Examines central philosophical questions concerning our own fundamental nature and that of the world around us (e.g., causation and necessity, determination, free will, personal identity, the mind-body problem).

Repeatability: Unlimited as topics vary.

Same as LPS 120.

PHILOS 121. Topics in the Theory of Knowledge. 4 Units.

One or more topics in the theory of knowledge, e.g., the nature of rational justification, of perceptual knowledge, of a priori knowledge.

Repeatability: Unlimited as topics vary.

Same as LPS 121.

PHILOS 122. Topics in Philosophy of Mind. 4 Units.

Selected topics involving the concept of mind, e.g., the relation between mind and body, the self, personal identity, consciousness, the unconscious.

Repeatability: Unlimited as topics vary.

PHILOS 123. Topics in Philosophy of Religion. 4 Units.

Critical examination of concepts involved in the theological literature, e.g., the nature and existence of God, miracles, the problem of evil, divine command theories in ethics.

Repeatability: Unlimited as topics vary.

PHILOS 130. Topics in Moral Philosophy. 4 Units.

Selected topics in ethics.

Repeatability: Unlimited as topics vary.

PHILOS 131A. Applied Ethics. 4 Units.

Topics may include capital punishment, world hunger, obligations to future generations, environmental ethics, animal rights, economic justice, sexual morality, affirmative action, racism and sexism, or legalization of drugs.

PHILOS 131C. Medical Ethics. 4 Units.

Analysis of moral issues concerning health care. Topics may include: just allocation of scarce medical resources, the doctor/patient relationship, genetic engineering, surrogate motherhood, abortion, euthanasia, or social policy concerning AIDS.

PHILOS 132. Topics in Political and Social Philosophy. 4 Units.

Selected topics in social and political philosophy, e.g., the functions of government, the justification of political authority, the nature of democracy, the varieties of liberty, and social justice. Readings from classical and contemporary sources.

Repeatability: Unlimited as topics vary.

PHILOS 133. Topics in Philosophy of Law. 4 Units.

Selected topics concerning legal systems and the concept of law, e.g., the nature and purpose of law, the nature of authority, the relationship between law and morality, law and political-economic systems.

Repeatability: Unlimited as topics vary.

PHILOS 140. Topics in Philosophy of Science. 4 Units.

Selected topics in contemporary philosophy of science, e.g., the status of theoretical entities, the confirmation of theories, the nature of scientific explanation.

Repeatability: Unlimited as topics vary.

Same as LPS 140.

PHILOS 141A. Topics in Philosophy of Physics. 4 Units.

Selected topics in the philosophy of physics, e.g., the interpretation of quantum mechanics, the nature of spacetime, the problem of quantum field theories.

Repeatability: Unlimited as topics vary.

Same as LPS 141A.

PHILOS 141B. Geometry and Spacetime. 4 Units.

An examination of the foundations of the special theory of relativity, with emphasis on the geometry of Minkowski spacetime, and its relation to both Euclidean and non-Euclidean (hyperbolic) plane geometries.

Prerequisite: MATH 2D and (MATH 3A or MATH 6G).

Same as LPS 141B.

PHILOS 141C. Philosophy of Quantum Mechanics. 4 Units.

An examination of the standard von Neumann-Dirac formulation of quantum mechanics. The quantum measurement problem is discussed along with several proposed solutions, including GRW, many-worlds, man-minds, and Bohm's theory.

Same as LPS 141C.

PHILOS 141D. Probability and Determinism. 4 Units.

An examination of a cluster of interrelated issues concerning probability, determinism, logic, and the foundations of quantum mechanics.

Prerequisite: MATH 2D and (MATH 3A or MATH 6G).

Same as LPS 141D.

PHILOS 142W. Writing/Philosophy of Biology. 4 Units.

Philosophy of biology, e.g., scientific method in biology, the structure of evolutionary theory, teleology, ethics, and evolution. Course work includes one 4,000-word and four 1,000-word papers.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Same as LPS 142W, BIO SCI E142W.

Restriction: Juniors only.

(Ib)

PHILOS 143. Topics in Philosophy of Psychology. 4 Units.

Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience.

Repeatability: Unlimited as topics vary.

Same as LPS 143, PSYCH 123P.

Restriction: Psychology and Philosophy majors have first consideration for enrollment.

PHILOS 144. Topics in Philosophy of Social Science. 4 Units.

Selected topics in the philosophy of the social sciences, e.g., is their goal to understand behavior or to predict and control it?; are they normative and the natural sciences not?; do they incorporate philosophical doctrines about language and mind?.

Repeatability: Unlimited as topics vary.

Same as SOC SCI 136.

PHILOS 145. Topics in Philosophy of Language. 4 Units.

Selected topics in the philosophy of language, e.g., the nature of meaning, mechanisms of reference, speech acts.

Repeatability: Unlimited as topics vary.

Same as LPS 145, LINGUIS 141.

PHILOS 146. Topics in Philosophy of Logic. 4 Units.

Selected topics in the philosophy of logic, e.g., the nature of logical truth and our knowledge of it, the status of propositions, definite descriptions, and existential presuppositions.

Repeatability: Unlimited as topics vary.

Same as LPS 146.

PHILOS 147. Topics in Philosophy of Mathematics. 4 Units.

Selected historical and contemporary topics in the philosophy of mathematics, e.g., mathematical truth and ontology, mathematical knowledge, the nature and role of proof, the workings of mathematics in application.

Repeatability: Unlimited as topics vary.

Same as LPS 147.

PHILOS 150. Phenomenology. 4 Units.

A study of the foundations of phenomenology in Husserl and its background in Bolzano, Frege, Brentano, Meinong, Kant, and Descartes.

PHILOS 151. Existentialism. 4 Units.

A study of such central existentialist thinkers as Heidegger and Sartre.

Prerequisite: Recommended: PHILOS 7 or PHILOS 150.

PHILOS 152. Topics in Feminism. 4 Units.

A study of selected topics in feminist theory and/or gender studies.

Repeatability: Unlimited as topics vary.

PHILOS 190. Special Topics in Philosophy. 4 Units.

Lectures on selected topics to be given by regular faculty and visiting faculty.

Repeatability: Unlimited as topics vary.

PHILOS 199. Directed Special Studies. 2-4 Units.

Independent study on a research topic supervised by a faculty member.

Repeatability: May be repeated for credit unlimited times.

PHILOS 200. Special Topics in Philosophy. 4 Units.

Seminars on selected topics to be given by regular faculty and visiting faculty.

Repeatability: Unlimited as topics vary.

PHILOS 201. First-Year Seminar. 4 Units.

An examination of some standard works in the history of philosophy, value theory, metaphysics, or epistemology; required of all first-year Philosophy graduate students in the School of Humanities.

Repeatability: May be taken for credit 2 times.

Restriction: Philosophy graduate students and Logic & Philosophy of Science graduate students only.

PHILOS 205A. Set Theory. 4 Units.

The basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers.

Same as LPS 205A.

PHILOS 205B. Metalogic. 4 Units.

Formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Loewenheim-Skolem theorems.

Prerequisite: PHILOS 205A or LPS 205A.

Same as LPS 205B.

PHILOS 205C. Undecidability and Incompleteness. 4 Units.

Formal theory of effective processes, including recursive function, Turing machines, Church's thesis, and proofs of Goedel's incompleteness theorem for arithmetics, and Church's undecidability for first-order logic.

Prerequisite: PHILOS 205B or LPS 205B.

Same as LPS 205C.

PHILOS 206. Topics in Logic . 4 Units.

Studies in selected areas of logic. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 206.

PHILOS 210. Topics in Ancient Philosophy. 4 Units.

Studies in selected areas of ancient philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 211. Topics in Medieval Philosophy. 4 Units.

Studies in selected areas of medieval philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 212. Topics in Renaissance Philosophy. 4 Units.

Studies in selected areas of renaissance philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 213. Topics in Modern Philosophy. 4 Units.

Studies in selected areas of modern philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 213.

PHILOS 214. Topics in Nineteenth-Century Philosophy. 4 Units.

Studies in selected areas of nineteenth-century philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 215. Topics in Analytic Philosophy. 4 Units.

Studies in selected areas of analytic philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 215.

PHILOS 216. Topics in Continental Philosophy. 4 Units.

Studies in selected areas of continental philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 218. Topics in Contemporary Philosophy. 4 Units.

Studies in selected areas of contemporary philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 220. Topics in Metaphysics. 4 Units.

Studies in selected areas of metaphysics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 220.

PHILOS 221. Topics in Epistemology. 4 Units.

Studies in selected areas of epistemology. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 221.

PHILOS 222. Topics in Mind and Action. 4 Units.

Studies in selected areas of mind and action. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 230. Topics in Ethics . 4 Units.

Studies in selected areas of ethics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 232. Topics in Political and Social Philosophy. 4 Units.

Studies in selected areas of political and social philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 232.

PHILOS 234. Topics in Aesthetics . 4 Units.

Studies in selected areas of aesthetics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 240. Topics in Philosophy of Science. 4 Units.

Studies in selected areas of philosophy of science. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 240.

PHILOS 241. Topics in Philosophy of Physics. 4 Units.

Studies in selected areas of philosophy of physics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 241.

PHILOS 243. Topics in Philosophy of Psychology. 4 Units.

Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience.

Repeatability: Unlimited as topics vary.

Same as LPS 243, PSYCH 231P.

PHILOS 244. Topics in Philosophy of Social Science. 4 Units.

Studies in selected areas of philosophy and social science. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 244.

PHILOS 245. Topics in Philosophy of Language. 4 Units.

Studies in selected areas of philosophy of language. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 245.

PHILOS 246. Topics in Philosophy of Logic. 4 Units.

Studies in selected areas of philosophy of logic. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 246.

PHILOS 247. Topics in Philosophy of Mathematics. 4 Units.

Studies in selected areas of philosophy of mathematics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 247.

PHILOS 250. Topics in Existentialism and Phenomenology. 4 Units.

Studies in selected areas of existentialism and phenomenology. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 298. Independent Study. 4-12 Units.

Independent research with Philosophy faculty.

Repeatability: May be repeated for credit unlimited times.

PHILOS 299. Directed Research. 4-12 Units.

Directed research with Philosophy faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: School of Humanities graduate students only.

PHILOS 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Repeatability: May be repeated for credit unlimited times.

Restriction: School of Humanities graduate students only.

Undergraduate Program in Religious Studies

152 Humanities Instructional Building; (949) 824-9290
http://www.humanities.uci.edu/religious_studies/

Undergraduate Program

Religious Studies includes an interdisciplinary major and minor that focus on the comparative understanding of the various ways different

peoples, across space and through time, have developed their religious ideas, values, systems, beliefs, rituals, and traditions in response to fundamental questions of human existence. The curriculum seeks to provide a wide-ranging academic understanding and knowledge of the religious experience in society through study in the Schools of Humanities, Social Sciences, and Social Ecology, and the Claire Trevor School of the Arts. As an interdisciplinary academic discipline, the study of religion offers a rigorous, systematic, and dispassionate intellectual inquiry into various aspects of religious systems, their practitioners and outlooks, and their goals and expressions. It employs a wide variety of approaches and methods in order to understand the role of religion in both human experience and thought.

Students in the Religious Studies major complete an emphasis in either Judaism/Christianity/Islam or in World Religious Traditions.

Careers for the Religious Studies Major

Majoring in Religious Studies is an excellent preparation for living in a multicultural society and for a variety of careers in counseling, teaching, commerce, writing, government, the arts, and professional religious leadership. The major's emphasis on broad understanding, critical thinking skills, and clear written expression provides an effective springboard for graduate study in the humanities and social science or professional schools in medicine, law, or business.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Requirements for the B.A. Degree in Religious Studies

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Requirements for the Major

A. Complete:

REL STD 5A	World Religions I
REL STD 5B	World Religions II
REL STD 5C	Inter-Religious Dialogue
REL STD 110	Thinking about Religion: Theories and Methodologies

B. Select six upper-division electives, two in each of the following categories: ¹

1. Judaism/Christianity/Islam
2. World Religious Traditions
3. Thematic Approaches to Religion

C. Completion of an emphasis in either Judaism/Christianity/Islam or in World Religious Traditions: select two additional upper-division courses from either category 1 or 2 above.

¹ Selected from the approved lists published on the Religious Studies Web site (http://www.humanities.uci.edu/religious_studies/). For examples of approved courses, see below. One relevant lower-division course may be substituted for an upper-division course, with prior approval.

Studying Abroad: Students are encouraged to study abroad and may be able to satisfy a significant portion of their requirements abroad. Courses

taken abroad must be approved by the Director of Religious Studies in order to be applied toward major requirements.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor

REL STD 5A	World Religions I
REL STD 5B	World Religions II
REL STD 5C	Inter-Religious Dialogue
REL STD 110	Thinking about Religion: Theories and Methodologies

Four upper-division electives selected from the three categories under B above, including at least one course from both categories 1 and 2. Two of the four courses must be outside of the student's major. One relevant lower-division course may be substituted for an upper-division course, with prior approval.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved by the Director of the Religious Studies program.

Categories and Approved Courses: The following list includes examples of courses that have been approved in the past for each category. The complete list varies from quarter to quarter, depending upon course scheduling. For complete up-to-date information on approved courses, consult the Religious Studies Web site at http://www.humanities.uci.edu/religious_studies.

1. Judaism/Christianity/Islam: Sample Courses:

REL STD 130	Jewish, Islamic, and Middle Eastern Religious Traditions
REL STD 140	Early Western Religious Traditions
REL STD 141	Recent Western Religious Traditions
ANTHRO 125Z	Muslim Identities in North America
ART HIS 112	Studies in Early Christian and Byzantine Art
ART HIS 114	Studies in Western Medieval Art
ENGLISH 102A	Topics in Medieval and Renaissance Literature
ENGLISH 103	Topics in Literature, Theory, and Criticism
HISTORY 110A	Europe in the Early Middle Ages
HISTORY 130A	Jewish History, Ancient to Early Modern Times
HISTORY 130B	Modern Jewish History
HISTORY 130C	Topics in the Jewish History
HISTORY 131A	History of Zoroastrianism
HISTORY 132A	Israel and Palestine
INTL ST 179	Regional Topics in International Studies
PHILOS 11	History of Medieval Philosophy
PHILOS 111	Topics in Medieval Philosophy
PHILOS 123	Topics in Philosophy of Religion
SPANISH 116	Medieval Spanish Literature and Culture

2. World Religious Traditions: Sample Courses:

REL STD 91	Aspects of Asian Religions
REL STD 120	Asian Religious Traditions
ANTHRO 135I	Modern South Asian Religions
ART HIS 175	Studies in Native and Tribal Art
ASIANAM 150	Special Topics in Asian American Studies
CLASSIC 45A	Classical Mythology: The Gods
CLASSIC 151	The Olympians
E ASIAN 20	Asian Religions
E ASIAN 116	Topics in East Asian Religions
E ASIAN 117	Topics in East Asian Philosophy
SOCIOL 136	Religious Traditions of Asian Americans

3. Thematic Approaches to Religion: Sample Courses:

REL STD 100	Topics in the Study of Religion
REL STD 103	Topics in the Philosophy of Religion
REL STD 106	Topics in Gender and Religion
REL STD 170	Comparative Studies in Religion
ANTHRO 134E	Caring vs. Curing
ANTHRO 135A	Religion and Social Order
COM LIT 132	Discourse, Ideologies, and Politics
ENGLISH 106	Advanced Seminar: Topics in English Literature
HISTORY 135B	Navigation
HISTORY 180	Special Studies in Social History
PHILOS 123	Topics in Philosophy of Religion
POL SCI 149	Special Topics in International Relations
SOC SCI 170P	Philosophies and World Religions
SOCIOL 56	Society and Religion
WOMN ST 60C	Gender and Religion

Core Faculty

Elizabeth Allen, *Department of English*

Marc Baer, *Department of History*

Carol Burke, *Department of English*

James T. Chiampi, *Department of European Languages and Studies*

Susan Bibler Coutin, *Departments of Criminology, Law and Society and Anthropology*

Touraj Daryaee, *Department of History*

Rebecca Davis, *Department of English*

James B. Given, *Department of History*

Qitao Guo, *Department of History*

Lamar M. Hill, *Department of History*

Bonnie Kent, *Department of Philosophy*

Susan B. Klein, *Department of East Asian Languages and Literatures*

James Kyung-Jin Lee, *Departments of Asian American Studies and English*

Roger N. Walsh, *Department of Psychiatry and Human Behavior*

Courses

REL STD 5A. World Religions I. 4 Units.

An introduction to the history, doctrine, culture, and writing of the three "religions of Abraham": Judaism, Christianity, and Islam.

Same as HISTORY 16A.

(IV, VIII)

REL STD 5B. World Religions II. 4 Units.

An introduction to various religious traditions in selected areas of the world—including India and South Asia, East Asia, Africa, and the Americas.

Same as HISTORY 16B.

(IV, VIII)

REL STD 5C. Inter-Religious Dialogue. 4 Units.

Lectures and discussion on controversial topics in religion: sexual morality; religious violence; science; treatment of women and girls; religious truth, American Constitutional matters; secularization; the future of religion, and other topics.

Same as HISTORY 16C.

(IV, VIII)

REL STD 17. An Economic Approach to Religion. 4 Units.

Introduction to how basic economic concepts such as demand, supply, consumption, production, competition, free-riding, innovation, regulation, and rent-seeking can be applied to understand observed religious behavior.

Same as ECON 17.

(III)

REL STD 21. Philosophy and Religion. 4 Units.

Examines the intersection of religion and philosophy from a standpoint that does not presuppose previous academic study of either. Both Western and Eastern traditions and perspectives may be explored.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 56. Society and Religion. 4 Units.

A critical and personal examination of the varieties of religious and spiritual experience human beings are undergoing in contemporary society. The role of conscious understanding and unconscious conditioning regarding religion and spirituality.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 60. Gender and Religion. 4 Units.

A presentation in selected issues in the study of gender and religion.

Repeatability: May be taken for credit 3 times as topics vary.

(III, VIII)**REL STD 90. Aspects of Religion. 4 Units.**

A presentation of selected issues in the study of religion.

Repeatability: May be taken for credit 3 times as topics vary.

(IV)**REL STD 91. Aspects of Asian Religions. 4 Units.**

A survey course of a specific Asian religious tradition such as Hinduism, Buddhism, Taoism, Confucianism, or Shinto in its manifestation in Asia or in its transmission to the Americas.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 100. Topics in the Study of Religion. 4 Units.

The intersection of religious belief and practices with selected subjects of continuing interest.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 103. Topics in the Philosophy of Religion. 4 Units.

Critical examination of philosophical concepts in religious scripture and theology, e.g., the nature and existence of God, miracles, the problem of evil, divine command theories in ethics. May include both Eastern and Western religious traditions.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 106. Topics in Gender and Religion. 4 Units.

Critical examination of how religious beliefs and practices have shaped (and been shaped by) attitudes toward gender and sexuality in modern and/or premodern society.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 110. Thinking about Religion: Theories and Methodologies. 4 Units.

A survey and investigation of the major thinkers, theories, and methodologies in the study of religions. Designed to develop the student's ability to analyze and articulate theoretical arguments; includes a paper on relevant Religious Studies topics.

Prerequisite: REL STD 5A and REL STD 5B and REL STD 5C.

Restriction: Religious Studies Majors only.

REL STD 112B. Science and Religion II. 4 Units.

The development of genomics, stem-cell research, robotics, nanotechnology, neuropharmacology raises difficult religious and philosophical questions. Examines interdisciplinary approaches that cut across institutional boundaries, cultural borders, religious traditions. Focuses on relationship between religion and cognitive/affective/social neuroscience. Course may be offered online.

Same as SOC SCI 130B, PSYCH 172S, LPS 140B.

REL STD 115. Religion and World Politics. 4 Units.

Examines the relationship between religion and world politics historically and today, focusing on connections with peace/war, democracy, human rights, secularism(s), and globalization. Covers major debates, scholarship, concepts, and theories through class exercises, exams, and essays.

Prerequisite: POL SCI 41A or INTL ST 11 or INTL ST 12 or REL STD 5A or REL STD 5B or REL STD 5C.

Same as POL SCI 146B, INTL ST 151B.

REL STD 120. Asian Religious Traditions. 4 Units.

Studies involving (but not limited to) Hinduism, Buddhism, Confucianism, Taoism, Shinto and Shamanism, including both elite and doctrinal aspects and forms of more popular religiosity.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 130. Jewish, Islamic, and Middle Eastern Religious Traditions. 4 Units.

Character and evolution of Egyptian, Jewish, Zoroastrian, Muslim, and other religious communities of the region from their formative periods to the present era.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 131A. History of Zoroastrianism. 4 Units.

Reviews major trends in the history of Zoroastrianism.

Same as HISTORY 131A.

REL STD 140. Early Western Religious Traditions. 4 Units.

Religious perspectives of the Mediterranean and European regions from the earliest times to approximately 1500 C.E.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 141. Recent Western Religious Traditions. 4 Units.

Studies related to Catholic, Protestant, and Orthodox Christianity as well as alternative belief systems in Europe of the early modern and modern eras.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 150. Religion in the Americas. 4 Units.

Religious belief and social context in North and South America from the earliest human societies to the present.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 160. Diaspora Religions. 4 Units.

Examination of what happens to belief and practice as religious communities are scattered geographically.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 170. Comparative Studies in Religion. 4 Units.

Systematic comparisons of different religious and quasi-religious traditions, their beliefs and practices.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 190. Senior Colloquium. 4 Units.

Reading and group discussion of selected texts under the direction of an instructor. Paper required.

Repeatability: May be taken for credit 3 times as topics vary.

Restriction: A minimum of two students must enroll.

REL STD 199. Independent Study. 1-4 Units.

Directed reading and research in consultation with a faculty member. Substantial written work required.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

Department of Spanish and Portuguese

322 Humanities Hall; (949) 824-6901

<http://www.humanities.uci.edu/spanishandportuguese/>

Horacio Legrás, **Department Chair**

The Department of Spanish and Portuguese offers programs of study leading to the B.A. degree in Spanish with emphases in Literature and Culture, Spanish for Future Teachers, and Cinema: Spain, Latin America, and U.S. Latino; and the M.A. and Ph.D. degrees in Spanish with specializations in Spanish, Latin American, and Chicano/Latino Literatures and Cultures. The Department also offers undergraduate and graduate minors in Portuguese.

While members of the faculty are recognized nationally and internationally for their research, creative writing, and contributions to the academic profession, one of the Department's highest priorities is to maintain teaching excellence. The Department's goal is to provide students with a level-specific, solid education in the diverse fields of study that are offered. Many of the undergraduate and graduate courses reflect the faculty's interest in bringing together historical, critical-theoretical, and interdisciplinary perspectives in the study of literature and other cultural artifacts such as film. At the graduate level, students are encouraged to take courses in other UCI programs such as, for example, Women's Studies, the Critical Theory Emphasis, Comparative Literature, and Film and Media Studies.

Undergraduate Program

Beginning Spanish Language Courses

The beginning and intermediate Spanish language curriculum consists of six courses: SPANISH 1A-SPANISH 1B-SPANISH 1C and SPANISH 2A-SPANISH 2B-SPANISH 2C. This series is designed to teach students the four fundamental linguistic skills: speaking, understanding, reading, and writing Spanish. Using the Communicative Approach, these foundation courses have the objective to provide foreign language skills that facilitate successful transitioning into more advanced Spanish. At the same time, these beginning Spanish classes are an excellent portal for study abroad, be that in Spain or in Latin America. For an overview of relevant Education Abroad study sites, visit <http://www.cie.uci.edu/>.

All students must adhere to the placement policies listed hereafter.

Students with prior knowledge of Spanish may need to take the Spanish placement test.

Spanish Placement

To enroll in SPANISH 1A or any Spanish course through the 3A/3B level:

Students *without* previous background in Spanish must take a copy of their high school transcript to their academic counseling office to activate their eligibility to enroll in SPANISH 1A or SPANISH 1AB.

Students *with* previous high school background in Spanish wanting to enroll in any SPANISH 1A through SPANISH 3A/SPANISH 3B course at UCI for the first time must take the placement test. Eligibility to enroll in any SPANISH 1A through SPANISH 3A/SPANISH 3B course at UCI will be based on the result of that placement test.

Students *with* a previous course (or courses) in Spanish from another college or university who want to enroll in any SPANISH 1A through SPANISH 3A/SPANISH 3B course at UCI must take a copy of their college transcripts to the Humanities Undergraduate Counseling Office in order to receive authorization to enroll in the next course.

Students who graduated from a high school in a Spanish-speaking country, or who graduated from a Spanish Academy, must take a copy of their transcripts to Claudia G. Pineda (cpinedam@uci.edu), Language Curriculum Director, Humanities Hall 322, to determine where they should be placed.

Students who have already met the UCI language other than English general education or breadth requirement with SAT Subject Test scores, International Baccalaureate (IB) scores, or Advanced Placement (AP) examination and plan to enroll in a Spanish course at UCI are still required to take the Spanish placement test. Students cannot earn units or grade points at UCI in courses from which they have been exempted on the basis of IB or AP credit, even if the placement test result recommends enrollment in such a level.

Students currently enrolled in any SPANISH 1A through SPANISH 2B course at UCI will be eligible to enroll for the next course within the series without having to take the placement test, provided they receive a C or better.

To enroll in SPANISH 3A, SPANISH 3B, or beyond: An active prerequisite check system is in place for SPANISH 3A and SPANISH 3B. In order to enroll in SPANISH 3A or SPANISH 3B a student must have passed SPANISH 2C or received a score in the range of 91–99 on the Spanish placement test. Students who score 100 or above on the Spanish

placement test may proceed to upper-division Spanish courses upon the recommendation of the Language Curriculum Director, Claudia G. Pineda (cpinedam@uci.edu), Humanities Hall 322.

Placement testing is offered throughout the academic year (summer included). For details about registering for a placement test, contact the Academic Testing Center
3040 Anteater Instruction and Research Building
(949) 824-6207
e-mail: testoff@uci.edu
<http://www.testingcenter.uci.edu>

Placement test results are valid for one calendar year.

Bachelor's Degree in Spanish

The B.A. program in Spanish is devoted to the study of the languages and cultures of Spanish-speaking countries.

Students select one of three emphases:

1. Literature and Culture;
2. Spanish for Future Teachers; or
3. Cinema: Spain, Latin America, and U.S. Latino.

Each of these emphases strives to teach students to speak Spanish with fluency, and to carry out academic work in this language. NOTE: An emphasis may be chosen upon declaring the Spanish major, or at a later stage. The major, however, goes far beyond mere language learning, as it is designed to offer a broad humanistic education. The courses explore the literatures and cultures of Spain and Latin America from their first manifestations to the present. The faculty approach this rich cultural legacy from an interdisciplinary perspective that puts Latin American and Spanish texts in dialogue with other fields of knowledge such as anthropology, linguistics, history, women's studies, and studies on globalization, among others. The program also offers courses in Spanish and Latin American film, as well as in visual culture. Unless stated otherwise, courses in the three emphases are taught in Spanish.

By the end of the first year, students attain mastery of the basic structure of the language and ability to converse on everyday topics, as well as to read and write at an elementary level. In the second year, emphasis is put on gradually raising the level of the student's ability to read and write. Two third-year courses (SPANISH 3A and SPANISH 3B) stress composition and grammar. Furthermore, a course in phonetics (SPANISH 113A) aims to perfect pronunciation and presents historical and dialect variants of Spanish. SPANISH 107 (Advanced Spanish Grammar) helps students solidify fine points of grammar. In addition to giving students a sense of literary history, the introductory courses in literature (SPANISH 101A, SPANISH 101B), also to be taken in the third year, introduce students to elements of literary research and writing. The courses in Hispanic culture (SPANISH 110A, SPANISH 110B, SPANISH 110C) combine a panoramic overview with a close look at a specific country or topic, and require a final research project. Upper-division literature and film courses offer a more detailed analysis of specific texts and require a final research paper.

The faculty encourages students who are serious about improving their Spanish language ability in reading, writing, and speaking to take advantage of opportunities to immerse themselves in the Spanish language by studying in Argentina, Chile, Mexico, Spain, or other Spanish-speaking countries through various study abroad programs administered through UCI's Study Abroad Center. Programs are available for the summer, one quarter, one semester, or one year. This allows students to complete a significant portion of their bachelor's degree requirements

in Spain or Latin America (for details, see Residence Requirements below). While abroad, students are given the opportunity to improve their Spanish in a natural context, and to enjoy exposure to other cultures. Once back at UCI, students who have studied abroad typically use this newly gained knowledge to excel in advanced upper-division courses, and to successfully enter graduate school programs or the career path of their choice. See the Study Abroad Center section of the *Catalogue* or an academic counselor for additional information.

Double Major: Students in the B.A. program often double major. Double majoring in Spanish and a second department provides the best of both worlds: the requirements for the Spanish major give students the linguistic and humanistic skills that will qualify them for diverse career paths, while the second degree provides students with the additional expertise they are seeking. Together, these bachelor's degrees will reward students with a distinctively competitive edge. A double major is especially useful for pre-med, pre-law, and other students (future teachers included) who want an extensive education in the natural or social sciences and a strong liberal arts program as well.

Requirements for the B.A. Degree in Spanish

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

All students must meet the Language Other Than English Placement and Progression policies.

Departmental Requirements for the Major

SPANISH 1A or the equivalent is a prerequisite to SPANISH 1B or SPANISH 1C. SPANISH 2A and SPANISH 2B are the prerequisites for most of the upper-division courses. SPANISH 2C can be taken concurrently with SPANISH 1A, though it is recommended that students take these two courses in sequence.

Students must choose one of the following emphases:

1. Emphasis in Literature and Culture

A. Complete:

SPANISH 3A	Grammar and Composition
SPANISH 3B	Composition and Grammar
SPANISH 101A	Introduction to Iberian Literature and Culture
SPANISH 101B	Introductory Studies to Latin America Literature and Culture
SPANISH 107 or SPANISH 113A	Advanced Spanish Grammar Spanish Phonetics
SPANISH 119	Textual Analysis and Interpretation
SPANISH 190	Colloquium

B. Six additional upper-division Spanish courses (taken in the Department of Spanish and Portuguese), of which at least four must be in literature and culture.

2. Emphasis in Spanish for Future Teachers ¹

A. Complete:

SPANISH 3A	Grammar and Composition
SPANISH 3B	Composition and Grammar
SPANISH 15	Advanced Spanish Conversation
SPANISH 101A	Introduction to Iberian Literature and Culture
SPANISH 101B	Introductory Studies to Latin America Literature and Culture

SPANISH 107	Advanced Spanish Grammar
SPANISH 113A	Spanish Phonetics
SPANISH 113B	Introduction to Spanish Linguistics
SPANISH 119	Textual Analysis and Interpretation

B. Three upper-division Spanish courses.

3. Emphasis in Cinema: Spain, Latin America, and U.S. Latino

A. Complete:

SPANISH 3A	Grammar and Composition
SPANISH 3B	Composition and Grammar
SPANISH 101A	Introduction to Iberian Literature and Culture
SPANISH 101B	Introductory Studies to Latin America Literature and Culture
SPANISH 107 or SPANISH 113A	Advanced Spanish Grammar Spanish Phonetics
SPANISH 119	Textual Analysis and Interpretation
SPANISH 190	Colloquium

B. Complete:

FLM&MDA 85A	Introduction to Film and Visual Analysis
-------------	--

C. Five upper-division electives:

1. Four must be in film:

(a) One film course may come from any department

(b) Three film courses must be taken in the Department of Spanish and Portuguese

2. One literature course taught in Spanish, from the Department of Spanish and Portuguese

- ¹ Students who wish to pursue a career in teaching are encouraged to complete the minor in Educational Studies in tandem with the emphasis. The following courses are recommended in fulfillment of the minor in Educational Studies: EDUC 108, EDUC 124, EDUC 128, EDUC 131, EDUC 173, EDUC 349; EDUC 160 and EDUC 160L, or two quarters of HUMAN 195.

Residence Requirement for the Major (all emphases): At least five upper-division courses required for the major must be completed successfully at UCI. By petition, two of the five may be taken through the UC Education Abroad Program, providing course content is approved by the Humanities Office of Undergraduate Study and the Undergraduate Director of the Department of Spanish and Portuguese. See also the Study Abroad Option information below.

Study Abroad Option

Students are encouraged to study abroad, possibly satisfying a significant portion of their major requirements abroad. For the maximum number of courses allowed and other pertinent details, see the Spanish Undergraduate Web site at <http://www.humanities.uci.edu/spanishandportuguese/program/undergrad.php>.

All courses taken abroad must be approved. Approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the host university, and (2) submission of a UCI Humanities Petition form (available online, and to be completed after the student's return to UCI) to the Undergraduate Director of the Department of Spanish and Portuguese, and to the Humanities Office of Undergraduate Study (HIB 143). Students are advised to consult with the Undergraduate Director and the Humanities Office of

Undergraduate Study, both before and after their stay abroad. See also the Residence Requirement above.

Career Opportunities

With over 400 million speakers, Spanish is the third most widely spoken language in the world, which explains in part why Spanish has such a growing global reach and rapidly increasing national and international appeal—in business, education, the media, sports, as well as elsewhere. Knowledge of the Spanish language and cultures has thus become highly marketable in many professions (nursing, the entertainment and/or travel industry, tourism, among others).

The Spanish B.A. degree prepares students to have ready access to careers that require advanced knowledge of the Spanish language and the multiple cultures associated with it. At the same time, competitive students in the program obtain a solid preparation for graduate school. The students' graduate career paths vary widely and include literary and/or cultural studies, teaching, nursing, law/ business, nonprofit organizations, medicine, sociology, and other specialties.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. For additional information, visit these two sites: <http://www.career.uci.edu> and <http://www.humanities.uci.edu/spanish/career.htm>.

Requirements for the Spanish Minor

All students are subject to the Language Other Than English Placement and Progression policies.

SPANISH 3A	Grammar and Composition
SPANISH 3B	Composition and Grammar

Five upper-division departmental Spanish courses, one of which may be taught in English (excluding SPAN 150).

NOTE: SPANISH 2C (or equivalent) is a prerequisite to Spanish minor requirements.

Residence Requirement for the Spanish Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department or committee chair.

Departmental Requirements for the Portuguese Minor

All students are subject to the Language Other Than English Placement and Progression policies.

PORTUG 120A	Introduction to Portuguese and Brazilian Literature
PORTUG 120B	Introduction to Portuguese and Brazilian Literature
PORTUG 120C	Introduction to Portuguese and Brazilian Literature

Four courses with different topics:

PORTUG 121	Topics in Luso-Brazilian Literature
------------	-------------------------------------

NOTE: PORTUG 2C (or equivalent) is a prerequisite for PORTUG 120A, 120B, 120C.

Residence Requirement for the Portuguese Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Program

All graduate courses in the Department are taught in either Spanish or Portuguese, unless otherwise indicated in the course description.

Master of Arts in Spanish

The Master of Arts degree in Spanish is a two-year program of study designed to expose the beginning graduate student to all periods of peninsular, Latin American, and Chicano/Latino literature and culture. The degree is awarded upon the successful completion of course work and written and oral comprehensive examinations. A minimum of eight graduate seminars must be completed in the Department of Spanish and Portuguese with a letter grade. Students are required to take one course in Theory (SPANISH 239A or SPANISH 239B). Master's candidates must complete a minimum of three quarters of course work in the Department; the maximum time to complete the master's program is two years. The M.A. exam must be taken no later than the sixth quarter of graduate study. Students entering with a bachelor's degree must satisfy the requirements for a master's degree before they proceed toward a Ph.D. This includes the master's level examinations and course work. Normally only students intending to work toward the Ph.D. are admitted to the graduate program.

Doctor of Philosophy in Spanish

The Department of Spanish and Portuguese offers a Ph.D. degree in Spanish with a specialization in Spanish, Spanish-American, or Chicano/Latino literatures and cultures. The program integrates period and genre studies with work in literary and critical theory, linguistics, sociohistorical studies, and cultural studies. The Department seeks to professionalize its Ph.D. candidates not as narrow specialists but rather as scholars and critics acquainted with a range of fields that relate to and enhance their discipline. Graduate emphases in Comparative Literature, Critical Theory, and Women's Studies are available; other areas of study (for example, film, history) may be designed with approval from the student's Ph.D. guidance committee. The Department has been traditionally committed to excellence in teaching, both in its own practice and in the formation of its graduates.

Language Requirements

An additional foreign language (with proficiency equivalent to the 2C level) is required; this requirement may be satisfied by examination or course work. The selection of a foreign language must be approved by the student's guidance committee and is based on the specific research interests and field of study of the candidate.

Course Requirements

A minimum of 16 courses beyond the B.A. or eight beyond the M.A. are required. One course in linguistics (diachronic or synchronic), and one graduate course in Luso-Brazilian literature and culture are required at the Ph.D. level. Note that these requirements may include course work completed in the master's program; the remaining elective courses are selected with the approval of the student's guidance committee to

prepare for the doctoral examination and the dissertation. Students are encouraged to take more than the minimum number of required courses.

Continuing students and students who transfer into the doctoral program from elsewhere must take a minimum of eight graduate courses at UCI, of which six must be in the Department of Spanish and Portuguese. With regard to students who enter the Ph.D. program with their master's degree from another institution, the Ph.D. guidance committee will determine the number of courses that will be accepted.

A student may pursue the Ph.D. with an emphasis in Comparative Literature by taking a minimum of five courses in the Comparative Literature program.

Time to Degree

The normative time for completion of the Ph.D. is seven years; four years to candidacy, three years in candidacy. The maximum time permitted is eight years.

Teaching

The Department recognizes its responsibility to train all Ph.D. candidates as teachers and requires that all doctoral students with no prior teaching experience complete a minimum of three quarters of language teaching (SPANISH 399). Moreover, all doctoral students are encouraged to complete a teaching practicum by co-teaching an upper-division course with a professor and enrolling in SPANISH 292, which is graded Satisfactory/Unsatisfactory only.

Qualifying Examination

Upon completion of course work, the Ph.D. student advances to candidacy by passing the written and oral qualifying examinations by unanimous decision. The qualifying examination requires the student to develop two topics in close consultation with the examination committee. One topic must present a critical problem from a historical perspective, while the other may focus on a more specific area within the student's major field of interest. Students are encouraged to incorporate theoretical and interdisciplinary components into the formulation of their topics. A two-hour oral examination that includes discussion of the written examinations is also required. The normative time for advancement to candidacy is four years.

Dissertation

A dissertation topic is chosen by the candidate in consultation with the dissertation director and committee, and normally falls within the major field covered by the qualifying examinations. The candidate presents a study plan to the dissertation committee, which approves the proposal and a preliminary research outline. The student submits drafts of chapters to the dissertation director who corrects and approves the drafts and circulates them to other committee members for commentary.

Faculty

Ana María Amar Sánchez, Ph.D. Universidad de Buenos Aires, *Professor of Spanish* (Latin American literature, mass culture studies and critical theory)

Luis F. Avilés, Ph.D. Brown University, *Associate Professor of Spanish* (Golden Age literature and critical theory)

Anne J. Cruz, Ph.D. Stanford University, *Professor Emerita of Spanish* (Golden Age Spanish and comparative literature)

Lucía Guerra-Cunningham, Ph.D. University of Kansas, *Professor Emerita of Spanish* (Latin American literature, literary theory, and women's studies)

Ivette N. Hernández-Torres, Ph.D. Brown University, *Associate Professor of Spanish* (colonial literature and Caribbean literature)

Horacio Legrás, Ph.D. Duke University, *Department Chair and Associate Professor of Spanish* (Latin American literature and culture)

Viviane Mahieux, Ph.D. Harvard University, *Assistant Professor of Spanish* (modern and contemporary Latin American literature, with a particular focus on Mexico)

Seymour Menton, Ph.D. New York University, *Research Professor of Spanish and Portuguese* (Latin American novel and short story)

Santiago Morales-Rivera, Ph.D. Harvard University, *Assistant Professor of Spanish* (contemporary Spanish intellectual history, literature and culture)

Gonzalo Navajas, Ph.D. University of California, Los Angeles, *Professor of Spanish* (eighteenth- through twentieth-century Spanish literature; film and visual arts; aesthetics and contemporary cultures)

Héctor Orjuela, Ph.D. University of Kansas, *Professor Emeritus of Spanish* (Latin American literature, poetry and essay)

Julian Palley, Ph.D. University of New Mexico, *Professor Emeritus of Spanish* (modern Spanish literature)

Armin Schwegler, Ph.D. University of California, Berkeley, *Director of Global Cultures and Professor of Spanish* (history of Spanish, dialectology, historical linguistics, typology, Creoles)

Jacobo Sefamí, Ph.D. University of Texas at Austin, *Professor of Spanish* (Latin American literature, contemporary poetry)

Dayle Seidenspinner-Núñez, Ph.D. Stanford University, *Professor Emerita of Spanish* (medieval Spanish and comparative literature)

Juan Villegas, Ph.D. Universidad de Chile, *Research Professor of Spanish* (literary theory, modern Spanish literature, Latin American theatre and poetry)

Zidia Webb, M.A. Michigan State University, *Lecturer with Security of Employment Emerita, Spanish and Portuguese*

Affiliated Faculty

Adriana M. Johnson, Ph.D. Duke University, *Associate Professor of Comparative Literature* (Latin American literature, nineteenth- and twentieth-century Latin America, cultural and postcolonial studies)

Alejandro Morales, Ph.D. Rutgers University, *Professor of Chicano/Latino Studies and Spanish* (Latin American and Chicano literature, film studies, creative writing)

Spanish Course Enrollment Authorization and Course Equivalencies

Enrollment Authorization: See the Language Other Than English Placement (p. 418) information for specific Spanish placement information, click on the "Major" tab above. Students with prior college course(s) must take a copy of their college transcripts to the Humanities Undergraduate Counseling Office for enrollment authorization.

NOTE: Spanish 1A, S1AB, and 1AB are open only to students who have no prior knowledge of Spanish. Students must take a copy of their high school transcript to their academic counseling office to activate their eligibility to enroll in Spanish 1A, S1AB, or 1AB. Equivalent sequences/ courses may not be repeated for credit.

Lower-Division Course Equivalencies: A chart showing the lower-division Spanish course equivalencies is available on the Department of Spanish and Portuguese (<http://www.humanities.uci.edu/spanishandportuguese>) Web site.

Portuguese Courses

PORTUG 1A. Fundamentals of Portuguese. 4 Units.

Basic grammar, conversation, and composition with an initial exposure to the varied cultures of the Portuguese-speaking world.

PORTUG 1B. Fundamentals of Portuguese. 4 Units.

Basic grammar, conversation, and composition with an initial exposure to the varied cultures of the Portuguese-speaking world.

Prerequisite: PORTUG 1A. PORTUG 1A with a grade of C or better.

PORTUG 1C. Fundamentals of Portuguese. 4 Units.

Basic grammar, conversation, and composition with an initial exposure to the varied cultures of the Portuguese-speaking world.

Prerequisite: PORTUG 1B. PORTUG 1B with a grade of C or better.

(VI)

PORTUG 2A. Intermediate Portuguese. 4 Units.

Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar and review.

Prerequisite: PORTUG 1C. PORTUG 1C with a grade of C or better.

(VIII)

PORTUG 2B. Intermediate Portuguese. 4 Units.

Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar and review.

Prerequisite: PORTUG 2A. PORTUG 2A with a grade of C or better.

(VIII)

PORTUG 2C. Intermediate Portuguese. 4 Units.

Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar and review.

Prerequisite: PORTUG 2B. PORTUG 2B with a grade of C or better.

(VIII)

PORTUG 120A. Introduction to Portuguese and Brazilian Literature. 4 Units.

General introduction to selected authors and works in relation to literary currents and to specific historical and cultural contexts. Taught in Portuguese.

Prerequisite: PORTUG 2C. PORTUG 2C with a grade of C or better.

PORTUG 120B. Introduction to Portuguese and Brazilian Literature. 4 Units.

General introduction to selected authors and works in relation to literary currents and to specific historical and cultural contexts. Taught in Portuguese.

Prerequisite: PORTUG 2C. PORTUG 2C with a grade of C or better.

PORTUG 120C. Introduction to Portuguese and Brazilian Literature. 4 Units.

General introduction to selected authors and works in relation to literary currents and to specific historical and cultural contexts. Taught in Portuguese.

Prerequisite: PORTUG 2C. PORTUG 2C with a grade of C or better.

PORTUG 121. Topics in Luso-Brazilian Literature. 4 Units.

In English. Contextualized study of a major author, current, or genre in Brazilian, Portuguese, and/or Lusophone African literature. Examples: Gender, Race, and Sexualities in Postcolonial Lusophone Literatures; Women and Writing in Brazil and Portugal; The Short Story.

Repeatability: Unlimited as topics vary.

PORTUG 190. Individual Study. 4 Units.

Individual study with Portuguese faculty.

PORTUG 243. Studies in Luso-Brazilian Literature and Culture. 4 Units.

Critical analysis of selected literary works from Portugal and/or Brazil. Contextualizes the works within their historical and literary specificity, and discusses pertinent theoretical issues raised by them. Taught in Portuguese.

Prerequisite: Reading knowledge of Portuguese.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

PORTUG 290. Individual Study. 4 Units.

Individual study.

Restriction: Graduate students only.

Spanish Courses

SPANISH 1A. Fundamentals of Spanish. 5 Units.

Communicative approach with emphasis on conversational skills: the students and their environment, their experiences, and their opinions about issues. Reading and writing skills also introduced.

Prerequisite: Placement into SPANISH 1A.

Overlaps with SPANISH 1AB, SPANISH S1AB.

Restriction: SPANISH 1A and SPANISH 1AB and SPANISH S1AB may not be taken for full credit.

SPANISH 1AB. Fundamentals Intensive Spanish. 10 Units.

An intensive, proficiency-oriented, and task-based approach, designed to develop basic oral communicative abilities in Spanish. Reading and writing skills, along with an introduction to Hispanic cultures.

Prerequisite: Placement into SPANISH 1A.

Overlaps with SPANISH 1A, SPANISH 1B, SPANISH S1AB.

Restriction: SPANISH 1AB and SPANISH 1A and SPANISH 1B and SPANISH S1AB may not be taken for full credit.

SPANISH 1B. Fundamentals of Spanish. 5 Units.

Communicative approach with emphasis on conversational skills: the students and their environment, their experiences, and their opinions about issues. Reading and writing skills also introduced.

Prerequisite: SPANISH 1A or placement into SPANISH 1B. SPANISH 1A with a grade of C or better.

Overlaps with SPANISH 1AB, SPANISH S1AB.

Restriction: SPANISH 1B and SPANISH 1AB and SPANISH S1AB may not be taken for full credit.

SPANISH 1C. Fundamentals of Spanish. 5 Units.

Communicative approach with emphasis on conversational skills: the students and their environment, their experiences, and their opinions about issues. Reading and writing skills also introduced.

Prerequisite: SPANISH 1AB or SPANISH 1B or SPANISH S1AB or placement into SPANISH 1C. SPANISH 1AB with a grade of C or better. SPANISH 1B with a grade of C or better. SPANISH S1AB with a grade of B or better.

Overlaps with SPANISH S1BC.

Restriction: SPANISH 1C and SPANISH S1BC may not be taken for full credit.

(VI)**SPANISH S1AB. Fundamentals of Spanish. 7.5 Units.**

First half of first-year Spanish in an intensified form. Communicative approach with emphasis on conversational skills.

Prerequisite: Placement into SPANISH 1A.

Overlaps with SPANISH 1A, SPANISH 1B, SPANISH 1AB.

Restriction: SPANISH S1AB and SPANISH 1A and SPANISH 1B and SPANISH 1AB may not be taken for full credit.

SPANISH S1BC. Fundamentals of Spanish. 7.5 Units.

Second half of first-year Spanish in an intensified form. Communicative approach with emphasis on conversational skills.

Prerequisite: SPANISH S1AB or SPANISH 1B or placement into SPANISH 1B or SPANISH 1C. SPANISH S1AB with a grade of C or better. SPANISH 1B with a grade of C or better.

Overlaps with SPANISH 1B, SPANISH 1C, SPANISH 1AB.

Restriction: SPANISH S1BC and SPANISH 1B and SPANISH 1C and SPANISH 1AB may not be taken for full credit.

(VI)

SPANISH 2. Accelerated Intermediate Spanish. 12 Units.

An accelerated course that covers the second year of Spanish in one quarter. The course replicates the conditions of immersion programs and is designed for highly motivated students.

Prerequisite: SPANISH 1C or SPANISH S1BC or placement into SPANISH 2. SPANISH 1C with a grade of B or better. SPANISH S1BC with a grade of B or better.

Overlaps with SPANISH S2AB, SPANISH S2BC, SPANISH 2A, SPANISH 2AB, SPANISH 2B, SPANISH 2C.

Restriction: SPANISH 2 and SPANISH S2AB and SPANISH S2BC and SPANISH 2AB and SPANISH 2B and SPANISH 2C may not be taken for full credit. Approval of Spanish Undergraduate Director required. Open to sophomores, juniors, and seniors only. Course will be confirmed or cancelled at the end of the second week of the enrollment window period, depending on enrollment.

(VIII)**SPANISH 2A. Intermediate Spanish. 4 Units.**

Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 1C or SPANISH S1BC or placement into SPANISH 2A. SPANISH 1C with a grade of C or better. SPANISH S1BC with a grade of C or better.

Overlaps with SPANISH 2AB, SPANISH S2AB, SPANISH 2.

Restriction: SPANISH 2A and SPANISH S2AB and SPANISH 2 may not be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**SPANISH 2AB. Intermediate Intensive Spanish. 8 Units.**

Intensive intermediate course designed to improve student's abilities in reading, writing, speaking, and comprehension, including a thorough introduction to Hispanic cultures. Throughout the course the grammatical component of the language is gradually reviewed and tested.

Prerequisite: SPANISH 1C or SPANISH S1BC or placement into SPANISH 2A. SPANISH 1C with a grade of C or better. SPANISH S1BC with a grade of C or better.

Overlaps with SPANISH 2A, SPANISH 2B, SPANISH S2AB, SPANISH 2.

Restriction: SPANISH 2AB and SPANISH 2A and SPANISH 2B and SPANISH S2AB and SPANISH 2 may not be taken for full credit.

(VIII)**SPANISH 2B. Intermediate Spanish. 4 Units.**

Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 2A or SPANISH 2BZ or SPANISH 2MD or placement into SPANISH 2B. SPANISH 2A with a grade of C or better. SPANISH 2BZ with a grade of C or better. SPANISH 2MD with a grade of C or better.

Overlaps with SPANISH 2AB, SPANISH S2AB, SPANISH 2.

Restriction: SPANISH 2B and SPANISH 2AB and SPANISH S2AB and SPANISH 2 may not be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**SPANISH 2BZ. Spanish for Business Professionals. 4 Units.**

Primary designed for those who need to understand Spanish correspondence and business functions. Helps to improve the communication skills for interacting with Spanish-speaking clients. 2BZ is a stand-alone course, independent of the Spanish 2A-B-C series.

Prerequisite: SPANISH 1C or placement into SPANISH 2A. SPANISH 1C with a grade of C or better.

Overlaps with SPANISH 2A, SPANISH 2MD.

Restriction: SPANISH 2BZ and SPANISH 2A and SPANISH 2MD may not be taken for full credit.

(VIII)**SPANISH 2C. Intermediate Spanish. 4 Units.**

Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 2AB or SPANISH 2B or SPANISH S2AB or placement into SPANISH 2C. SPANISH 2AB with a grade of B or better. SPANISH 2B with a grade of B or better. SPANISH S2AB with a grade of B or better.

Overlaps with SPANISH S2BC, SPANISH 2.

Restriction: SPANISH 2C and SPANISH S2BC and SPANISH 2 may not be taken for full credit. School of Humanities and International Studies majors have first consideration for enrollment.

(VIII)**SPANISH 2MD. Spanish for Medical Professionals. 4 Units.**

Emphasis on medical terminology. Grammatical structures and vocabulary needed to interview and converse with Spanish-speaking patients. 2MD is a stand-alone course, independent of the Spanish 2A-B-C series.

Prerequisite: SPANISH 1C or placement into SPANISH 2A. SPANISH 1C with a grade of C or better.

Overlaps with SPANISH 2A, SPANISH 2BZ.

Restriction: SPANISH 2MD and SPANISH 2A and SPANISH 2BZ may not be taken for full credit.

(VIII)

SPANISH S2AB. Intermediate Spanish. 6 Units.

First half of second-year Spanish in an intensified form. Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 1C or SPANISH S1BC or placement into SPANISH 2A. SPANISH 1C with a grade of C or better. SPANISH S1BC with a grade of C or better.

Overlaps with SPANISH 2A, SPANISH 2B, SPANISH 2AB, SPANISH 2.

Restriction: SPANISH S2AB and SPANISH 2A and SPANISH 2B and SPANISH 2AB and SPANISH 2 may not be taken for full credit.

(VIII)

SPANISH S2BC. Intermediate Spanish. 6 Units.

Second half of second-year Spanish in an intensified form. Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 2B or SPANISH S2AB or placement into SPANISH 2B or SPANISH 2C. SPANISH 2B with a grade of C or better. SPANISH S2AB with a grade of C or better.

Overlaps with SPANISH 2B, SPANISH 2C, SPANISH 2AB, SPANISH 2.

Restriction: SPANISH S2BC and SPANISH 2B and SPANISH 2C and SPANISH 2AB and SPANISH 2 may not be taken for full credit.

(VIII)

SPANISH 3A. Grammar and Composition. 4 Units.

Focuses on intermediate to advanced grammar and composition in an orderly fashion. Emphasis is placed on key elements of grammar, to constitute about 70 percent of the course, and composition writing, to constitute about 30 percent of the workload.

Corequisite: May take SPANISH 3A and SPANISH 3B at the same time.

Prerequisite: SPANISH 2 or SPANISH 2C or SPANISH S2BC.

(VIII)

SPANISH 3B. Composition and Grammar. 4 Units.

Focuses on intermediate to advanced grammar and composition in an orderly fashion. Emphasis is placed on key elements of grammar, to constitute about 30 percent of the course, and composition writing, to constitute about 70 percent of the workload.

Corequisite: May take SPANISH 3A and SPANISH 3B at the same time.

Prerequisite: SPANISH 2 or SPANISH 2C or SPANISH S2BC.

(VIII)

SPANISH 15. Advanced Spanish Conversation. 4 Units.

Designed to improve the fluency of non-native speakers of Spanish. Concentrates on the expansion of vocabulary, as well as listening and speaking skills. Not open to native or semi-native speakers of Spanish.

Prerequisite: SPANISH 2 or Spanish 2C or Spanish 2BC. SPANISH 2 with a grade of C or better. SPANISH 2C with grade of C or better. SPANISH 2BC with a grade of C or better.

SPANISH 44. Hispanic Literatures for Nonmajors. 4 Units.

Focuses on major Spanish and Latin American literary texts within a historical and theoretical perspective. Taught in English with literary texts read in the original language.

Prerequisite: SPANISH 2 or SPANISH 2C or SPANISH S2BC.

Restriction: Non-Spanish majors only.

(VIII)

SPANISH 50. Latin America, U.S. Latino, and Iberian Cultures. 4 Units.

Introduction (for non-majors) to the culture of the Spanish- and Portuguese-speaking worlds (Europe, Latin America, U.S., Africa). May focus on any time period. Taught in English.

Repeatability: May be taken for credit 3 times as topics vary.

(IV, VIII)

SPANISH 97. Fundamentals of Spanish (with Emphasis on Reading). 4 Units.

Designed for students interested in acquiring a solid reading knowledge of Spanish, and to facilitate the understanding and translating of Spanish texts covering a variety of disciplines. Does not fulfill any undergraduate foreign language requirement. Taught in English.

Prerequisite: Does not serve as prerequisite for any higher-level Spanish courses.

Restriction: Non-Spanish majors only.

SPANISH 101A. Introduction to Iberian Literature and Culture. 4 Units.

Introduction to the major authors and movements of Iberian literature and culture from the Middle Ages to the present.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 101B. Introductory Studies to Latin America Literature and Culture. 4 Units.

A historical overview of Latin American literature and culture mainly focused on canonical texts. Among topics: colonialism and postcolonialism, the nation, indigenismo, gender, literary movements. Also introduces literary analysis, research methods and cultural critique.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 104. Writing in Spanish. 4 Units.

Focuses on the use of writing as a medium to encourage critical thinking and the practical analysis of literary texts as well as the study of historical and social issues in the Spanish-speaking world.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 105. Spanish Communication. 4 Units.

Designed to help students develop Spanish oral skills by exposing them to different verbal Spanish language registers. Special emphasis placed on abilities essential to professional or academic careers. Intended for Spanish majors as an important component of their overall education.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 107. Advanced Spanish Grammar. 4 Units.

Designed for students who have demonstrated a substantial level of proficiency in their studies of the Spanish language. Takes thorough approach to advanced grammatical problems, in order to assist students in their mastery of the elements of the Spanish language.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 110A. Peninsular Literature and Cultures. 4 Units.

Topics in Peninsular literature and culture.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 110B. Latin American Literature and Cultures. 4 Units.

Topics in Latin American literature and culture.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 110C. U.S. Latino Literature and Cultures. 4 Units.

Focuses on aspects of literature, art, cultural production, and history of the multifaceted Latino cultures that have developed within the United States. Focuses on one group, such as Caribbean Americans, Chicanos, Central Americans, or a comparative perspective of several groups.

Same as CHC/LAT 134.

SPANISH 113A. Spanish Phonetics. 4 Units.

Introduction to fundamental notions of Spanish phonetics. Particular attention paid to problems of pronunciation that arise in native and non-native speakers of Spanish due to interference between Spanish and English. Phonology (the system that underlies phonetics) and Spanish dialectology included.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 113B. Introduction to Spanish Linguistics. 4 Units.

Application of basic notions of linguistics to Spanish, Spanish phonology, morphology, syntax, and semantics. Special attention to the application of linguistics to the teaching of Spanish.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 116. Medieval Spanish Literature and Culture. 4 Units.

Medieval literature in Spain from ninth century to 1500. Works of lyric and epic poetry, prose fiction, and nonfiction. Substantial historical and cultural background explored.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 119. Textual Analysis and Interpretation. 4 Units.

Focus on analysis and interpretation of literary texts. Emphasis on narrative, poetry, theater/performance, and visual media. Introduces students to major currents in theoretical thought, such as cultural studies, postmodernism, and others. Oral presentations and short essays required. Taught in Spanish.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 121. Golden Age Literature and Culture. 4 Units.

Golden Age Literature in Spain including the Renaissance and Baroque periods. Works of poetry, narrative, and theater. Historical and cultural background.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: May be taken for credit 3 times as topics vary.

SPANISH 122. Eighteenth- and Nineteenth-Century Spanish Literature and Culture. 4 Units.

The main literary and ideological trends in eighteenth and nineteenth-century Spain, including the enlightenment, romanticism, realism, and naturalism.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: May be taken for credit 3 times as topics vary.

SPANISH 123. Twentieth- and Twenty-First-Century Spanish Literature and Culture. 4 Units.

Twentieth-century Spanish authors. Works of poetry, narrative, or theater. Historical context of the period and principles of literary theory.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: May be taken for credit 3 times as topics vary.

SPANISH 130A. Latin American Colonial Literature and Culture. 4 Units.

Latin American Colonial Literature and Culture.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 130B. Latin American Literature and Culture of the Nineteenth Century. 4 Units.

Latin American literature and culture of the nineteenth century.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 130C. Latin American Literature and Culture of the Twentieth Century. 4 Units.

Latin American literature and culture of the twentieth century.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 140. Chicano Literature and Culture. 4 Units.

Studies in selected areas of Chicano/Latino Studies. Topics addressed vary each quarter. Taught in English.

Repeatability: May be taken for credit 4 times as topics vary.

Same as CHC/LAT 110.

SPANISH 150. Literature in Translation. 4 Units.

Study of texts by modern and contemporary Peninsular, Latin American, and/or U.S. Latino writers in translation. Taught in English. Not applicable toward Spanish major or minor requirements.

Repeatability: Unlimited as topics vary.

SPANISH 151. Introduction to Translation. 4 Units.

Introduction to basic techniques of Spanish-English written translation. The skills needed for translation are developed through the analysis of pertinent aspects of language structure, such as syntax, vocabulary, and style.

Prerequisite: SPANISH 3A and SPANISH 3B.

SPANISH 160. Topics in Luso-Hispanic Film Studies. 4 Units.

Study of Peninsular, Latin-American, and/or U.S. Latino film. Taught in English or Spanish.

Prerequisite: SPANISH 3A and SPANISH 3B when course is taught in Spanish.

Repeatability: Unlimited as topics vary.

SPANISH 185. Selected Topics in Peninsular Literature and Culture. 4 Units.

Selection of representative topics in Spanish and/or Portuguese literature and culture.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 186. Selected Topics in Latin American Literature and Culture. 4 Units.

Selection of representative topics in the history of Latin American Literature and Culture.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 187. Selected Topics in Spanish Linguistics. 4 Units.

Major topics in Spanish linguistics.

Prerequisite: SPANISH 3A and SPANISH 3B.

Repeatability: Unlimited as topics vary.

SPANISH 190. Colloquium. 4 Units.

Specialized, discussion-based course dealing primarily with a research topic that reflects the instructor's current intellectual interests. Required oral presentation(s) and final research paper. Limited to 15 students.

Prerequisite: SPANISH 107 or SPANISH 113A.

Restriction: Upper-division Spanish majors only.

SPANISH 199. Independent Study. 1-4 Units.

Research paper required.

Repeatability: May be repeated for credit unlimited times.

SPANISH 201. History of the Spanish Language. 4 Units.

Diachronic survey of phonological changes from Latin to Old Spanish to Modern Spanish. Focuses in Castilian including Romance languages and other peninsula dialects for comparative purposes. Morphological changes.

SPANISH 204. Spanish in Contact. 4 Units.

Sociohistorical and linguistic overview of Spanish in contact with Basque, Catalan, English, German, American Indian, and African languages in Spain, Latin America, and the United States. Examines theories about language contact, and linguistic changes in Spanish phonology and grammar.

SPANISH 205. Spanish Dialectology. 4 Units.

Phonological, morphological, and syntactic variations in Spanish as spoken in the Hispanic world, from synchronic and diachronic points of view. The study of Spanish as spoken in the United States.

SPANISH 212. Topics in Medieval Iberia. 4 Units.

Topics in medieval Spanish literature.

Repeatability: Unlimited as topics vary.

SPANISH 214. Topics in Golden Age Literature and Culture. 4 Units.

Topics in Golden Age literature and culture.

Repeatability: Unlimited as topics vary.

SPANISH 218. Topics in Enlightenment and Romanticism. 4 Units.

Topics in Enlightenment and Romanticism.

Repeatability: Unlimited as topics vary.

SPANISH 219. Topics in Nineteenth Century. 4 Units.

Topics in nineteenth-century Spanish literature and culture.

Repeatability: Unlimited as topics vary.

SPANISH 220. Topics in Twentieth Century. 4 Units.

Topics in twentieth-century Spanish literature and culture.

Repeatability: Unlimited as topics vary.

SPANISH 221. Topics in Iberian Studies. 4 Units.

Cross-cultural connections and interactions between different ethnicities in the Iberian Peninsula.

Repeatability: Unlimited as topics vary.

SPANISH 231. Topics in Colonial Latin America. 4 Units.

Topics in Colonial Latin America.

Repeatability: Unlimited as topics vary.

SPANISH 232. Topics in Nineteenth-Century Latin America. 4 Units.

Topics in nineteenth-century Latin America.

Repeatability: Unlimited as topics vary.

SPANISH 233. Topics in Twentieth-Century Latin America. 4 Units.

Topics in twentieth-century Latin America.

Repeatability: Unlimited as topics vary.

SPANISH 234. Topics in Latin America. 4 Units.

Topics in Latin America.

Repeatability: Unlimited as topics vary.

SPANISH 235. Topics in Trans-Oceanic Studies. 4 Units.

Focuses on meaningful connections between different geographical and cultural areas.

Repeatability: Unlimited as topics vary.

SPANISH 239A. Topics in Literary Theory I. 4 Units.

Traces the development of Western literary critical principles from Aristotle to the twentieth century through selected readings of key figures in intellectual history (Aristotle, St. Augustine, Descartes, Kant, Hegel, Marx, Nietzsche, William James, Freud).

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

SPANISH 239B. Topics in Literary Theory II. 4 Units.

Study of major critical movements of the twentieth century, from Modernism's varied trends to those of the Postmodern/Postcolonial period. Emphasis on the development of prior critical discourses as well as revisionary theories.

Prerequisite: SPANISH 239A.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

SPANISH 239C. Special Topics in Theory. 4 Units.

Focus on issues related to critical theory, theory of literature, cultural criticism and visual arts as they pertain specifically to Latin America, Spain, Portugal, and Brazil. Topics vary. Examples: Latin American cultural studies; theory, film, and media in post-war Spain.

Repeatability: Unlimited as topics vary.

SPANISH 245. Topics in Luso-Hispanic Film. 4 Units.

Topics in Luso-Hispanic Film.

Repeatability: Unlimited as topics vary.

SPANISH 251. Topics in Chicano Literature and Culture. 4 Units.

Topics in Chicano Literature and Culture.

Repeatability: Unlimited as topics vary.

SPANISH 252. Topics in U.S. Latino Literature and Culture. 4 Units.

Topics in U.S. Latino Literature and Culture.

Repeatability: Unlimited as topics vary.

SPANISH 260. Seminar in Spanish . 4 Units.

Topics in Spanish.

Repeatability: Unlimited as topics vary.

SPANISH 270. Creative Writing Workshop in Spanish/English. 4 Units.

Discussion of theory and practice of creative writing. Focus on critical analysis of participant's work in progress. Texts may be written in Spanish and/or English and may be written in poetry or prose format.

Repeatability: Unlimited as topics vary.

SPANISH 290. Individual Study. 4 Units.

Individual Study.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

SPANISH 291. Directed Reading. 4 Units.

Directed Reading in Spanish.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

SPANISH 292. Teaching Practicum. 4 Units.

Teaching Practicum.

Grading Option: Satisfactory/unsatisfactory only.

SPANISH 299. Dissertation Research. 4-12 Units.

Dissertation Research.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Humanities majors only.

SPANISH 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Graduate Program in Visual Studies

2000 Humanities Gateway; (949) 824-1124
<http://www.humanities.uci.edu/visualstudies/>
 Bridget R. Cooks, **Director**

The graduate program in Visual Studies, administered jointly by the faculties of the Department of Art History and the Department of Film and Media Studies, offers students the opportunity to pursue a doctorate in the cultural analysis of visual artifacts and experiences. Visual Studies synthesizes methodological insights from both component disciplines in order to examine the social practices of visual representation and visibility itself. The program leads to a Ph.D. degree in Visual Studies. While the program (in certain instances) grants an M.A. to students en route to their Ph.D., it admits only those students intending to complete their doctorate at UCI.

In addition, an emphasis in Visual Studies, described later in this section, is available to Ph.D. and M.F.A. students in all departments at UCI.

Admission

The program is open to students applying with either a bachelor's or a master's degree, and applicants must meet the general requirements for admission to graduate study at UCI. A recent sample of academic writing—such as a representative undergraduate paper, or the master's thesis or a major research paper written at the master's level—should be submitted with the application packet.

The deadline for application is December 15, and the program accepts applicants for admission for the fall quarter only. Additional information is available from the Director of the Visual Studies program.

Language Requirements

All students are required to demonstrate a reading knowledge of at least one foreign language and are strongly encouraged to develop competence in a second. Students consult with the Director and/or their principal advisor(s) to determine the appropriate language on which the student will be tested, based on their interests and program of study. Advisors, moreover, may require the demonstration of reading knowledge in additional languages according to the scholarly demands of the student's specific field. All language requirements must be satisfied before students are awarded a master's degree or, if they enter with an M.A., before they are advanced to candidacy for the Ph.D. degree.

Course Requirements

Beyond the core series (VIS STD 290A-VIS STD 290B-VIS STD 290C), students are required to complete an additional 11 courses for a total of 14 courses. Out of this total, at least 10 courses (including the core series and VIS STD 297) must be within the program in Visual Studies, and at least two courses are to be from outside the Visual Studies discipline. In order to establish a level of expertise in one conventionally defined discipline, students must take (among their 10 courses noted above), at least three courses that have a strong component of art history or at least three courses that have a strong component of film studies.

Students admitted with an M.A. in a related field may petition the Visual Studies Graduate Committee to have some of their course requirements waived and advance early; such petitions will be considered in close consultation with the primary advisor and on a case-by-case basis (though all students must take the core sequence). Under normal circumstances, up to two courses may be waived. A maximum of four courses may be waived, in which case no more than two waived courses may count as required Visual Studies courses. The petitioned courses must be reviewed and approved first by the Visual Studies Graduate Committee and thereafter by the Graduate Division. Students wishing to waive course work must petition by the end of the fall quarter of their first year in the program. While students may accrue units for University Teaching (ART HIS 399 or FLM&MDA 399), Reading for the Preliminary Examination (VIS STD 298A), and Prospectus Research (VIS STD 298B) these do not count toward the required number of courses.

Master's Paper and M.A. Degree

In the winter quarter of their second year, students admitted without an M.A. in a related field will enroll in VIS STD 296 for the purpose of expanding and developing a seminar paper into a Master's paper under the supervision of a faculty advisor. The Master's paper is an essay of near-publication quality, approximately 30 pages in length. In addition to the advisor, two additional readers from the Visual Studies faculty will assess the Master's paper and the student's overall academic performance. The committee will assess whether or not the student has satisfied all requirements for the M.A. Those students who have satisfied the M.A. requirements, but whose committees assess their work as not meeting the standards for Ph.D. study, will receive a terminal M.A. degree.

Preliminary Examination

By the end of the first year, a student must reach an agreement with one of the program's core faculty members to serve as principal advisor. The student will work with the principal advisor to plan completion of his or her program requirements and to select the faculty who will supervise

examination fields. The examination committee will be constituted as follows: the principal advisor, who will supervise one examination field; two additional faculty members supervising examination fields, at least one of whom must be a member of the Visual Studies faculty; a fourth member from the Visual Studies faculty who will not supervise an examination field but will participate in the oral examination; and a designated "outside" member who must be a member of the UCI faculty but cannot hold either a primary or joint appointment in Visual Studies, Art History, or Film and Media Studies. Except in extraordinary circumstances (to be adjudicated by the program's Graduate Committee), students are required to include at least one member from Art History and one from Film and Media Studies among the three faculty members supervising the examination fields.

The student and principal advisor define three fields to be examined by the faculty. The fields should combine historical breadth and some variety in media. Over the course of the following two quarters, students normally enroll in eight to twelve units per quarter of Reading for the Preliminary Examination (VIS STD 298A) during which time they prepare reading lists in close consultation with their principal advisor and field supervisors, and complete the reading of those lists. The examination takes place near the end of those two quarters of study, normatively at the end of the academic year. Submission and approval of the M.A. paper is a prerequisite for enrolling in VIS STD 298A (Reading for the Preliminary Examination) for students entering the Visual Studies Program without an M.A. Normally, the M.A. paper submission should be completed by spring quarter of the second year.

The first part of the examination consists of a written component, in which the student is called upon to respond to questions posed in the three examination fields. The student's written responses are circulated to all committee members. An oral examination follows, normally within two weeks, and consists of questions prompted both by the student's reading lists and by the written examinations. Based on the student's written and oral performance, the committee will determine whether the student has successfully passed the examination. If the committee is not satisfied with the student's performance, it may also decide to reexamine the student on one or more fields after a specific interval. Except in extraordinary circumstances, no student will be given more than two chances to pass any given section of the examination.

When students have completed their exam readings, they enroll in four to twelve units per quarter of Prospectus Research (VIS STD 298B). In the winter quarter after students take their exams, they are required to take VIS STD 297, a writing practicum in which they draft a prospectus that defines the scope, approach, and rationale for a proposed dissertation and begin research on the dissertation. Advancement to candidacy for the Ph.D. degree is contingent upon successful completion of this course, subsequent approval of the prospectus by the dissertation committee, and satisfaction of all language requirements. The dissertation committee meets with the student in the spring quarter following successful completion of VIS STD 297 to review the prospectus and the progress of the student, and determines whether to recommend advancement at that time. The normative time for advancement to candidacy is four years. Once students have advanced, they may enroll in Dissertation Research (VIS STD 299).

Dissertation

The student and the principal advisor consult to determine the composition of a doctoral committee of three members including the principal advisor, which then must unanimously approve the prospectus before the student proceeds with the dissertation. The doctoral committee, on the basis of the candidate's past academic performance and proposed dissertation topic,

may require additional course work or other forms of preparation for the dissertation. The doctoral committee, under the direction of the principal advisor, supervises the student's research program and ultimately approves the dissertation. The normative time for completion of the Ph.D. program is seven years, and the maximum permitted is eight years.

Graduate Emphasis in Visual Studies

In addition to the doctoral program in Visual Studies described above, the Program in Visual Studies also offers an emphasis in Visual Studies available to Ph.D. and M.F.A. students in all departments at UCI. Satisfactory completion of the emphasis is certified by the Director of Visual Studies and is noted in the student's dossier.

Admission to the Program

Students must first be admitted to, or currently enrolled in, a Ph.D. or M.F.A. program at UCI. Applicants must submit to the Director of Visual Studies a summary of prior undergraduate and graduate course work related to Visual Studies, institutions attended, and major(s), together with a brief statement of purpose, including career objectives, areas of interest and research, record of research, teaching, professional accomplishments, and/or creative work. Lack of prior course work does not preclude admission, so long as a compelling statement of research interests, congruent with the emphasis, makes the case. Admission to the emphasis is on a rolling basis. The Director tracks students' progress toward fulfillment of the emphasis requirements and meets with students to advise them on a program of study, as required.

Emphasis Requirements

Minimum course work for the graduate emphasis in Visual Studies consists of four courses: VIS STD 290C and three additional elective Visual Studies seminars.

For doctoral students, the qualifying examination and dissertation topic should incorporate Visual Studies as a central concern. One area of the Ph.D. qualifying examination should be on a Visual Studies topic, and one member of the candidate's qualifying examination committee and dissertation committee is normally a member of the Visual Studies faculty. There are no requirements concerning qualifying examinations or theses for M.F.A. students.

Faculty

Ackbar Abbas, M. Phil. University of Hong Kong, *Professor of Comparative Literature and of Film and Media Studies* (globalization, Hong Kong and Chinese culture, postcoloniality, critical theory)

Eyal Amiran, Ph.D. University of Virginia, *Associate Professor of Comparative Literature and of Film and Media Studies* (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

George Bauer, Ph.D. Princeton University, *Professor Emeritus of Art History* (Renaissance and Baroque)

Linda Freeman Bauer, Ph.D. Institute of Fine Arts, New York University, *Professor Emerita of Art History* (Renaissance and Baroque)

Catherine L. Benamou, Ph.D. New York University, *Associate Professor of Film and Media Studies* (Hispanophone and Lusophone cinema and television, transnational media flows and ethnic spectatorship, Orson

Welles and post-war maverick cinema, transculturation, cinematic memory and cultures of preservation)

Bridget R. Cooks, Ph.D. University of Rochester, *Director of the Graduate Program in Visual Studies and Associate Professor of African American Studies and Art History* (African American art and culture, Black visual culture, museum criticism, film, feminist theory and postcolonial theory)

Sohail Daulatzai, Ph.D. University of Southern California, *Associate Professor of Film and Media Studies* (Black radicalism, Muslim studies, cultural studies, race, postcolonial theory, U.S. imperial culture, cinema and hip-hop culture)

Edward Dimendberg, Ph.D. University of California, Santa Cruz, *Professor of Film and Media Studies* (film and literature, history of the book, scholarly communication)

Anna Gonosová, Ph.D. Harvard University, *Professor Emerita of Art History* (Byzantine and Medieval art and architecture)

Kristen Hatch, Ph.D. University of California, Los Angeles, *Assistant Professor of Film and Media Studies* (American film history, film genres, stardom, histories of gender and sexuality, childhood studies, and reception studies)

James D. Herbert, Ph.D. Yale University, *Professor of Art History* (Modern European art)

Lucas Hilderbrand, Ph.D. New York University, *Associate Professor of Film and Media Studies* (cultural and media studies, queer studies, histories of technology, documentary, audio, intellectual property)

Judy C. Ho, Ph.D. Yale University, *Professor Emerita of Art History* (Chinese art, archaeology, common religion, Buddhist art)

Victoria E. Johnson, Ph.D. University of Southern California, *Associate Professor of Film and Media Studies* (history and critical theory of U.S. television, popular film, and media; politics of geography, race, gender, and sexuality in popular culture; cultural studies)

Kyung Hyun Kim, Ph.D. University of Southern California, *Professor of East Asian Languages and Literatures and of Film and Media Studies* (East Asian cinema, modern Korea, critical theory)

Peter Krapp, Ph.D. University of California, Santa Barbara, *Department Chair and Professor of Film and Media Studies* (digital culture, media history, cultural memory, history and theory of artificial worlds)

Felicidad "Bliss" Cua Lim, Ph.D. New York University, *Associate Professor of Film and Media Studies* (Philippine cinema; temporality; postcolonial studies; feminist film theory; fantastic cinema; politics of genre; taste cultures)

Catherine Liu, Ph.D. City University of New York Graduate School and Center, *Director of the Humanities Collective and Professor of Film and Media Studies and of Comparative Literature* (Hou Hsiao-Hsien, labor history and theory, U.S. intellectual history and educational/cultural/media policy, culture wars, Frankfurt School, historiography and psychoanalysis, spaces of private life, Cold War culture, neoliberalism, science fiction studies, political economy and aesthetic education)

Lyle Massey, Ph.D. University of California, Los Angeles, *Associate Professor of Art History* (Renaissance and early modern art)

Margaret M. Miles, Ph.D. Princeton University, *Professor of Art History and Classics* (Greek and Roman art, archaeology)

Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Dean of Graduate Study and Research and Associate Professor of Film and Media Studies* (minority, diasporic, and third cinemas; popular culture and social movements; media, race, and sexuality)

James Nisbet, Ph.D. Stanford University, *Assistant Professor of Art History* (modern and contemporary art)

Alka Patel, Ph.D. Harvard University, *Associate Professor of Art History* (Asian art, South Asian architecture)

Allison Perlman, Ph.D. University of Texas at Austin, *Assistant Professor of Film and Media Studies and of History* (history of broadcasting, American social movements, media law and policy, media activism, popular memory)

Amy Powell, Ph.D. Harvard University, *Associate Professor of Art History* (Northern European art and visual culture, 1300–1700)

Fatimah Tobing Rony, Ph.D. Yale University, *Associate Professor of Film and Media Studies* (documentary and ethnographic film, race and representation, postcolonial studies, film history and theory, film production)

Jared Sexton, Ph.D. University of California, Berkeley, *Program Director and Associate Professor of African American Studies and Associate Professor of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Sally A. Stein, Ph.D. Yale University, *Professor Emerita of Art History* (American art, photography and mass media, feminist theory)

Dickran Tashjian, Ph.D. Brown University, *Professor Emeritus of Art History* (American art and literature, American and European avant-garde, art and technology)

Roxanne Varzi, Ph.D. Columbia University, *Associate Professor of Anthropology and of Film and Media Studies* (visual anthropology, Iran, popular culture, war, media and religion)

Cécile Whiting, Ph.D. Stanford University, *Professor of Art History* (American art and culture)

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Department Chair and Professor of Art History* (Modern Japanese art, Asian American art, art and nationalism)

Roberta Wue, Ph.D. Institute of Fine Arts, New York University, *Assistant Professor of Art History* (late imperial and modern Chinese art, photography and visual culture)

Affiliated Faculty

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English* (feminist epistemologies and theories, cultural studies, ethnic studies)

Julia Reinhard Lupton, Ph.D. Yale University, *Professor of English, Comparative Literature, and Education* (Renaissance literature, literature and psychology)

William M. Maurer, Ph.D. Stanford University, *Dean of the School of Social Sciences and Professor of Anthropology and Law* (anthropology of law, globalization, transnationalism, citizenship and nationalism, finance capital, identity, Caribbean)

Jennifer Terry, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies and Comparative Literature* (cultural studies, social theory; science and technology studies, historical formations of gender and sexuality; critical approaches to modernity; American studies in transnational perspective)

Jonathan M. Wiener, Ph.D. Harvard University, *Professor of History* (recent American history, theory and history)

Courses

VIS STD 290A. Art History: Theories and Methods. 4 Units.

Examines canonical texts and explores current directions in Art History.

VIS STD 290B. Film & Media Studies: Theories and Methods. 4 Units.

Examines canonical texts and explores current directions in Film and Media Studies.

VIS STD 290C. Visual Studies: Theories and Methods. 4 Units.

Examines canonical texts and explores current directions in Visual Studies.

VIS STD 294. Getty Consortium Seminar. 4 Units.

Special graduate seminar offered at the Getty Research Institute in Los Angeles, involving faculty and graduate students from the five graduate programs in Art History or Visual Studies located in southern California (UCI, UCLA, UCR, UCSB, and USC).

Repeatability: Unlimited as topics vary.

VIS STD 295. Graduate Seminar in Visual Studies. 4 Units.

Studies in selected areas of Visual Studies. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

VIS STD 296. Directed Reading. 4 Units.

Directed reading on a specific topic agreed upon by student and instructor.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

VIS STD 297. Writing Practicum. 4 Units.

Offered winter quarter each year and taught in a workshop format. Assists students with the preparation and revision of the dissertation prospectus so that they may advance to candidacy.

Prerequisite: VIS STD 290A and VIS STD 290B and VIS STD 290C.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

VIS STD 298A. Reading for the Preliminary Examination. 4-12 Units.
Directed reading in preparation for the preliminary examination. Formerly Visual Studies 298.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

VIS STD 298B. Prospectus Research. 4-12 Units.
Research and writing of the dissertation prospectus.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

VIS STD 299. Dissertation Research. 4-12 Units.
Research and writing of the dissertation.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Department of Women's Studies

243 Humanities Instructional Building; (949) 824-6406
<http://www.humanities.uci.edu/womensstudies/>

UCI's Department of Women's Studies is dedicated to the study of women, gender, and sexuality in their complex articulation with race, ethnicity, class, religion, and nationality. The Department's goal is to foster critical and creative analysis of the various disciplinary perspectives—historical, political, economic, representational, technological, and scientific—that have constituted women, gender, and sexuality as objects of study. By emphasizing a rigorous interdisciplinary perspective in their teaching and research, the Women's Studies faculty seek to produce new knowledge about the social meanings of gender, race, class, and sexuality, and to equip students with a range of analytical and methodological skills.

The field of women's studies has developed at a phenomenal rate from a handful of student-initiated courses in the early 1970s to more than 600 programs in colleges and universities across the United States offering degrees at the B.A., M.A., and Ph.D. levels. UCI's Department of Women's Studies was founded as a program in 1975 and has grown significantly since that time. The Department offers a B.A. degree in Women's Studies, a minor in Women's Studies, a minor in Queer Studies, and a graduate emphasis in Feminist Studies.

Women's Studies provides a unique intellectual community for undergraduate and graduate students, where faculty and students share a commitment to interactive teaching and learning. Students work closely with faculty to plan a coherent program of study and to anticipate work toward advanced degrees and a wide variety of career options.

Career Opportunities

A degree in Women's Studies prepares students for the expanding opportunities available in graduate programs and in numerous careers in both the public and private sectors. As more women work, business and corporations find the need for increased knowledge about women, and the growth of women's organizations and agencies—at the local,

national, and global levels—is creating new opportunities for graduates with specializations in Women's Studies. Graduates bring unique skills and knowledge to the professions of law, medicine, social work, education, counseling, and to government service, all of which increasingly require expertise on issues concerning women and gender. Students of Women's Studies develop critical and analytical skills which prove valuable in the full range of life choices.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques.

Undergraduate Program

Requirements for the B.A. Degree in Women's Studies

All students must meet the University Requirements (p. 60).

All students must meet the School Requirements.

Departmental Requirements for the Major

A. Three introductory core courses:

WOMN ST 50A	Gender and Feminism in Everyday Life
-------------	--------------------------------------

and select two of the following:

WOMN ST 50B	Gender and Power
WOMN ST 50C	Gender and Popular Culture
WOMN ST 60A	Gender and Science
WOMN ST 60B	Gender and Law
WOMN ST 60C	Gender and Religion

B. Three advanced core courses—select one from each of the 100, 110, and 120 series:

WOMN ST 100A	Knowledge and Social Change
WOMN ST 100B	Feminist Theory
WOMN ST 100C	Feminist Cultural Studies
WOMN ST 110A	Gender, State, and Nation
WOMN ST 110B	Money, Sex, and Power
WOMN ST 110C	Producing Gender Transnationally
WOMN ST 120A	Modern Pleasures
WOMN ST 120B	Image Problems
WOMN ST 120C	Practices of Embodiment

C. Three advanced elective core courses selected from WOMN ST 139–168

D. Two additional advanced elective courses selected from WOMN ST 170–190 ¹

E. Complete:

WOMN ST 197	Senior Seminar in Women's Studies
-------------	-----------------------------------

¹ Students may request, by petition, one lower-division course to count in this category. This course should be primarily centered on the study of women, gender, and/or feminism.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor in Women's Studies

A. Three introductory core courses selected from:

WOMN ST 50A	Gender and Feminism in Everyday Life
WOMN ST 50B	Gender and Power
WOMN ST 50C	Gender and Popular Culture
WOMN ST 60A	Gender and Science
WOMN ST 60B	Gender and Law
WOMN ST 60C	Gender and Religion

B. Two advanced core courses selected from WOMN ST 100–168

C. Two advanced elective courses selected from WOMN ST 170–190

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Minor in Queer Studies

The Women's Studies Department offers a minor in Queer Studies. Taking as a point of departure that sexuality is a complex historical and cultural phenomenon, Queer Studies examines this complexity, drawing upon methods from anthropology, art, art history, biology, history, literature, philosophy, psychology, and sociology. Interdisciplinary insights from area studies, cultural studies, critical legal studies, ethnic studies, gender studies, religious studies, science and technology studies, visual studies, and women's studies also enrich this area of study.

Requirements for the Minor in Queer Studies

A. Three introductory core courses:

WOMN ST 20	Queer Studies
and select two of the following:	
WOMN ST 50A	Gender and Feminism in Everyday Life
WOMN ST 50B	Gender and Power
WOMN ST 50C	Gender and Popular Culture
WOMN ST 60A	Gender and Science
WOMN ST 60B	Gender and Law
WOMN ST 60C	Gender and Religion

B. Two advanced core courses:

WOMN ST 157A	Topics in Queer Studies
WOMN ST 157B	Queer Lives and Knowledge

C. Two advanced courses selected from the following:

ANTHRO 129	Special Topics: Social and Economic Anthropology (when topics address issues of sexuality and gender)
ANTHRO 139	Special Topics in Cultural and Psychological Anthropology (when topics address issues of sexuality and HIV/AIDS)
DRAMA 103	Lectures in Dramatic Literature (when topics cover the representation of gays and lesbians in drama)

ENGLISH 105

Multicultural Topics in Literatures in English (when topics cover issues of gays and lesbians in literature)

FLM&MDA 112

Genre Study (when topics address issues of sexuality in representation and theory)

FLM&MDA 190

Special Topics in Film and Modern Media (when topics address issues of sexuality in representation and theory)

HISTORY 146D

Sex in the U.S. to 1860

HISTORY 146E

Gender in Nineteenth-Century America

HISTORY 169

Topics in Latin American History (when topics address gender and sexuality in Latin America)

SPANISH 185

Selected Topics in Peninsular Literature and Culture (when topics cover issues of sexuality in peninsular Spain and/or Portugal)

SPANISH 186

Selected Topics in Latin American Literature and Culture (when topics cover issues on sexuality in Latin American literature and culture)

WOMN ST 100–190 (excluding 157A and 157B)

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Graduate Emphasis in Feminist Studies

The Department of Women's Studies offers an emphasis in Feminist Studies, which is available to all graduate students at UCI. Satisfactory completion of the emphasis is certified by the Graduate Director of Women's Studies.

Admission to the Program

Admission occurs in spring and fall quarter. Following successful completion of either WOMN ST 200A or WOMN ST 200B, students are to apply by the third week of the subsequent quarter for admission to the emphasis. For complete information about application policies and procedures, refer to <http://www.humanities.uci.edu/WomensStudies/> graduate or contact the Graduate Director.

Emphasis Requirements

Minimum course work for the graduate emphasis in Feminist Studies consists of four courses: two core courses, WOMN ST 200A-WOMN ST 200B, a coherent sequence normally taken in consecutive quarters; and any two courses selected from the list of courses in Feminist Studies approved by the Graduate Director, as long as one of these is a graduate course in the student's own department or area of interest. In keeping with the interdisciplinary focus of this emphasis, it is highly recommended that the other be a course from a discipline outside that department or area. The course requirements for Ph.D., M.A., and M.F.A. candidates are the same.

For doctoral students, the qualifying examination and dissertation topic should incorporate Feminist Studies in a meaningful way. One member of the candidate's qualifying examination committee and of the candidate's dissertation committee is normally a member of the Women's Studies and affiliate faculty. There are no requirements concerning qualifying examinations or theses for M.A. or M.F.A. students.

Requirements for Completion

The completion of the emphasis will be noted by the Graduate Director upon

1. receipt and verification of completion of four graduate courses related to Feminist Studies and
2. a sample of work related to Feminist Studies, e.g., a substantial paper (10-page minimum), video, or other creative work.

NOTE: The dissertation may be accepted in fulfillment of the second requirement when Feminist Studies is incorporated in a substantive way.

Core Faculty

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English* (feminist epistemologies and theories, cultural studies, ethnic studies)

Lilith Mahmud, Ph.D. Harvard University, *Assistant Professor of Women's Studies and Anthropology* (gender, nationalism, elites, race citizenship, secrecy, transparency, knowledge production, secret societies, power, the anthropology of Europe)

Jeanne Scheper, Ph.D. University of California, Santa Barbara, *Assistant Professor of Women's Studies* (trans-Atlantic modernism, performance studies, feminist visual culture, critical studies of race, gender, and sexuality)

Jennifer Terry, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies and Comparative Literature* (cultural studies, social theory; science and technology studies, historical formations of gender and sexuality; critical approaches to modernity; American studies in transnational perspective)

Affiliated Faculty

Numerous faculty members are affiliated with the Department of Women's Studies. For a current list of Women's Studies affiliates, see <http://www.humanities.uci.edu/womensstudies/people/affiliated.php>. Various faculty members are also affiliated with the Queer Studies minor in the Department of Women's Studies. For a current list of Queer Studies affiliates, see http://www.humanities.uci.edu/womensstudies/people/queer_studies.php.

Courses

WOMN ST 20. Queer Studies. 4 Units.

Study of sexuality from the perspective of lesbian, gay, queer, transgender scholarship spanning humanities, social sciences, arts.

(IV, VII)

WOMN ST 50A. Gender and Feminism in Everyday Life. 4 Units.

What is gender? Why does studying it matter? Explores how feminism has understood not only gender as a category of social analysis, but how gender structures personal identities, family, citizenship, work and leisure, social policy, sexuality, and language.

(IV, VII)

WOMN ST 50B. Gender and Power. 4 Units.

From workplace to home to schools to prisons, how are societal institutions and politics "gendered"? Examines power and inequalities around gender, race, class, and sexuality in national and transnational contexts.

(IV, VII)

WOMN ST 50C. Gender and Popular Culture. 4 Units.

An investigation of gender, race, and sexuality in film, TV, video, music, and advertising, with attention to the ways that popular culture shapes understandings of technology, national identities, leisure and work, historical memory, international communication, and multicultural representation.

(IV, VII)

WOMN ST 60A. Gender and Science. 4 Units.

Examines science from a variety of feminist viewpoints in order to explore how science influences everyday life. Special attention is given to the ways science shapes our understanding of gender, race, and sexuality.

(III)

WOMN ST 60B. Gender and Law. 4 Units.

Introduction to the relationship between gender, race, sexuality, and the law. Critical thinking about how law defines citizenship, political representation, and democracy, focusing on the history of legal reform undertaken in the name of women as a social group.

(III)

WOMN ST 60C. Gender and Religion. 4 Units.

Introduces the topic of religion in a feminist context by performing cross-cultural exploration of gender, authority, and faith in various traditions. Study includes (but is not limited to) writings of contemporary Jewish, Christian, and Muslim feminists.

(III, VIII)

WOMN ST 70. Special Topics in Gender. 4 Units.

Topics cover issues which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 100A. Knowledge and Social Change. 4 Units.

Explores alternative ways that feminist scholars frame research questions, conduct research or creative activity. Examines challenges that feminist scholarship poses to the academy and the challenges the academy poses to feminist scholars.

WOMN ST 100B. Feminist Theory. 4 Units.

Introduction to historical traditions in theory and various conceptual frameworks informing Women's Studies' scholarship. Concepts include (but are not limited to) identity, representation, and political economy.

WOMN ST 100C. Feminist Cultural Studies. 4 Units.

Investigation of the theories and methods that inform the feminist study of culture. Focuses on the interpretation of the visual arts and literature created by, and predominately for, women.

WOMN ST 110A. Gender, State, and Nation. 4 Units.

Examination of gender and sexuality in relation to the production of identities created through participation in state and nation. Examines complexity of relationship between feminism and nationalism, feminism and the state.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

WOMN ST 110B. Money, Sex, and Power. 4 Units.

Examination of gender and sexuality in relation to the emergence of the modern world, modernity, and capitalism; commodification, circulation, and transnational exchanges relating to race, gender, class, sexuality, religion, and nationality.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

WOMN ST 110C. Producing Gender Transnationally. 4 Units.

Examination of how ideas and formations of gender cross national and international boundaries; encounters between feminist and sexual identity movements; how terms such as "sex" and "gender" change meanings according to time and place.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

WOMN ST 120A. Modern Pleasures. 4 Units.

Examination of the theory and history of pleasure within academic disciplines as well as in social and cultural processes and networks.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

WOMN ST 120B. Image Problems. 4 Units.

Examination of scholarly approaches to gender stereotypes and politics of representation as they present possibilities for critical analysis and produce problems and limitations; how powerful ideas of gender intersect with other forms of social differentiation such as race and class.

WOMN ST 120C. Practices of Embodiment. 4 Units.

Explores how science, medicine, and law have shaped the understanding of differentiated bodies; examines shifting norms and ideals about producing, shaping, adorning, and dressing gendered bodies across diverse historical, cultural, social, economic, and spatial contexts.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

WOMN ST 139. Topics in Gender Studies. 4 Units.

Various topics in gender studies. Encompasses issues of gender, culture, race and class, including issues of sexualities and social justice.

Prerequisite: Recommended: previous lower-division course work in Women's Studies.

Repeatability: Unlimited as topics vary.

WOMN ST 139W. Topics in Gender Studies. 4 Units.

Various topics in gender studies. Encompasses issues of gender, culture, race and class, including issues of sexualities and social justice.

Prerequisite: Satisfactory completion of the Lower-Division writing requirement. Recommended previous Lower-Division course work in Women's Studies.

Repeatability: Unlimited as topics vary.

(Ib)

WOMN ST 155. Topics in Women's Studies. 4 Units.

Designed to provide students with an opportunity to do advanced work in Women's Studies.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

Repeatability: Unlimited as topics vary.

WOMN ST 157A. Topics in Queer Studies. 4 Units.

Explores issues in queer studies from one or more of the following perspectives: theoretical, historical, legal, economic, political, sociological, and representation in the arts.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

Repeatability: Unlimited as topics vary.

WOMN ST 157B. Queer Lives and Knowledge. 4 Units.

Explores the emergence of historical elaboration of non-normative sexual identities, practices, and communities; focuses on medical, legal, literary, aesthetic, scientific, and religious notions about homosexuality and appropriations and subversions of these notions by queer people.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

Repeatability: Unlimited as topics vary.

WOMN ST 165B. Sexuality, Health and Medicine. 4 Units.

Focuses on cultural and political-economic analysis and representations of disease both within the U.S. and globally.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

WOMN ST 165F. Gender and Technology. 4 Units.

Using a variety of disciplinary methods, examines how various technological processes and products produce culturally complex meanings associated with gender and technology.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

WOMN ST 167A. Militarism and Gender. 4 Units.

Examination of feminist approaches to militarism, war, and political violence drawing on representations of women as both victims of and participants in military violence; effects of militarism on formations of gender; effects of military industrial complex on nationalism and identity.

Prerequisite: Recommended previous Lower-Division course work in Women's Studies.

WOMN ST 168B. The Politics of Style. 4 Units.

Examination of the emergence of style and lifestyle in relation to gender and sexuality; analysis of subcultures, politics, and representation of style in relation to formation of social identities.

Prerequisite: Recommended previous lower-division course work in Women's Studies.

WOMN ST 170. Gender, Feminism, Literature, and Language. 4 Units.

Topics cover issues in language and literature which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 171. Gender, Feminism, and History. 4 Units.

Topics cover issues in history which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 172. Gender, Race, and Nation in Latin America. 4 Units.

Addresses the importance of gender and race to nation-making in Latin America during the 19th and 20th centuries (1810-1945). Considers how hierarchies between men and women shaped ideas about family, the state, and modernity.

Same as INTL ST 177H, HISTORY 166A.

WOMN ST 173. Gender, Feminism, and Philosophy. 4 Units.

Topics cover issues in philosophy which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 174. Gender, Feminism, and the Arts. 4 Units.

Topics cover issues in the arts which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 175. Gender, Feminism, and the Media. 4 Units.

Topics cover issues in the media which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 176. Race and Empire in Colonial Latin America . 4 Units.

Explores native Latin Americans' and free Africans' incorporation and defiance of Iberian colonization through their gender positions. Focus: religious adaptations, resistance movements, legal systems, and emergence of multicultural communities to explain how race and gender shaped European empires.

Same as HISTORY 165, ANTHRO 162C.

WOMN ST 180. Gender, Feminism, and Anthropology. 4 Units.

Topics cover issues in Anthropology which relate to women or gender, or which are taught from a feminist methodological perspective.

Prerequisite: Recommended: Previous Lower-Division course work in Women's Studies.

Repeatability: Unlimited as topics vary.

WOMN ST 181. Gender, Feminism, and Cognitive Psychology. 4 Units.

Topics cover issues in cognitive psychology which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 182. Gender, Feminism and Economics. 4 Units.

Topics cover issues in economics which relate to women and gender or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 183. Gender, Feminism, and Sociology. 4 Units.

Topics cover issues in sociology which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 184. Gender, Feminism, and Political Science. 4 Units.

Topics cover issues in political science which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 185. Gender, Feminism, and Social Sciences. 4 Units.

Topics cover issues in social sciences which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 187. Gender, Feminism, and Social Ecology. 4 Units.

Topics cover issues in social ecology which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 188. Gender, Feminism, and Science. 4 Units.

Topics cover issues in science which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 189. Gender, Feminism, and Interdisciplinary Studies. 4 Units.

Topics cover issues in interdisciplinary studies which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

WOMN ST 190. Topics in Sexualities Studies. 4 Units.

Topics cover issues in the humanities, social sciences, sciences, and arts that relate to critical inquiry of sexualities.

Repeatability: Unlimited as topics vary.

WOMN ST 197. Senior Seminar in Women's Studies. 4 Units.

Students read advanced scholarship in Women's Studies and complete a major seminar paper.

Prerequisite: Satisfactory completion of the upper-division writing requirement.

Restriction: Majors only

WOMN ST 198. Directed Group Study. 4 Units.

Special topics through directed reading. Paper required.

Repeatability: Unlimited as topics vary.

WOMN ST 199. Independent Study . 1-4 Units.

Directed reading and research in consultation with a faculty member. Substantial written work required. Includes independent study, involving 3-12 hours a week.

Repeatability: May be repeated for credit unlimited times.

WOMN ST 200A. Feminist Knowledge and Social Change. 4 Units.

Provides a broad and introductory overview of Women's Studies and feminist knowledge, including key concepts, theoretical frameworks, disciplinary approaches and methods, and critical debates that have shaped the field.

Repeatability: May be taken for credit 2 times.

WOMN ST 200B. Problems in Feminist Research. 4 Units.

Colloquium on analytic approaches to interdisciplinary feminist research in Women's Studies and exploration of how feminist knowledges are produced in different academic disciplines.

Prerequisite: WOMN ST 200A.

Repeatability: May be taken for credit 2 times.

WOMN ST 201. Special Topics in Feminist Studies. 4 Units.

Seminars on various topics in feminist studies.

Repeatability: Unlimited as topics vary.

WOMN ST 210A. Graduate Feminist Theory. 4 Units.

In-depth introduction to various theoretical frameworks that have and continue to inform scholarship in Women's Studies including (but not limited to) identity, representation, and political economy.

Repeatability: Unlimited as topics vary.

WOMN ST 260A. Advanced Seminar in Feminist Studies. 4 Units.

Graduate seminar covering various areas of research within Women's Studies as an interdisciplinary field. Recommended for advanced graduate students.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate only.

WOMN ST 290. Directed Research. 2-12 Units.

Directed graduate study/research in Women's Studies.

Repeatability: May be taken for credit for 24 units.

Restriction: Graduate only.

WOMN ST 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

Restriction: Graduate only.

Donald Bren School of Information and Computer Sciences

Hal S. Stern, **Dean**

6210 Donald Bren Hall

Academic Counseling: (949) 824-5156

<http://www.ics.uci.edu/>

Overview

The Donald Bren School of Information and Computer Sciences (Bren ICS) embodies excellence, creativity, and collaborative innovation in computer science and information technology. As the only independent computing school in the University of California system, it is well-positioned to continue its tradition of exploring and advancing the boundaries of a broad, multidisciplinary field on a global scale.

A \$20-million endowment from The Irvine Company Chairman Donald Bren drives the School's vigorous recruitment and retention of distinguished faculty scholars. The faculty have extensive training in traditional computer science, as well as engineering, mathematics and statistics, and the social sciences. The School's stand-alone structure, as opposed to being part of an engineering school, enables the faculty to take the broadest possible view of computer science and information technology. This breadth is reflected in the diverse set of academic degree options for undergraduate and graduate students, some which are interdisciplinary and jointly administered with other academic units.

The School's three departments, Computer Science, Informatics, and Statistics, fuel a wide range of instructional and research efforts including design of algorithms and data structures; computer architecture and embedded computer systems; networked and distributed systems; systems software; social and mobile computing; artificial intelligence, machine learning and data mining; computer games and virtual worlds; databases and information retrieval; computer graphics and visualization; bioinformatics, computational biology and genomics; computer-supported cooperative work, human-centered computing and human-computer interaction; security and privacy; software engineering; managerial and social aspects of computing technology; and statistics. The vibrant Bren School community continues to explore innovative topics ranging from building complete computer systems on chips smaller than a human fingernail to developing user interface systems that allow workers on opposite sides of the world to collaborate effectively. Bren School research continues to focus on how computing and information technology can be used to solve a broad set of real-world problems such as improving how first responders communicate during a crisis, optimizing transportation systems, analyzing data to expedite biological research, and improving network security.

Faculty are active participants and leaders of numerous research institutes spanning computer science, including the Institute for Genomics and Bioinformatics; Institute for Software Research; Center for Computer Games and Virtual Worlds; Center for Embedded Computer Systems; California Institute for Telecommunications and Information Technology (Calit2); Center for Machine Learning and Intelligent Systems; Center for Organizational Research; Center for Research on Information Technology and Organizations; Genetic Epidemiology Research Institute; Center for Pervasive Communications and Computing; Laboratory for Ubiquitous

Computing and Interaction; Secure Computing and Network Center; Institute for Mathematical Behavioral Sciences; Center for Ethnography; Institute for Transportation Studies; and Ada Byron Research Center.

Faculty and student-driven research in the Bren School is supported through a variety of grants, gifts, and contracts from public and private institutions such as the State of California, the U.S. Department of Education, various U.S. defense agencies, the National Science Foundation, the National Institutes of Health, NASA, and various companies, including Adobe, The Aerospace Corporation, Apple, Boeing, Disney, Experian, Google, Hewlett-Packard, IBM, Intel, Microsoft, Samsung, and Yahoo! Since 2001, ICS has received nearly \$100 million in extramural funding, in addition to the recent \$20-million endowment.

Faculty and alumni of the Bren School of ICS have contributed some of computing's most significant advancements, including revolutionizing computer-aided drafting techniques; the creation of the current Hypertext Transfer Protocol (HTTP/1.1); development of the Internet standards for HTTP and Uniform Resource Identifiers (URI); the founding of the Apache HTTP Server Project that produces the software for over 60 percent of public Internet Web sites; and the creation of the Domain Name System (DNS) that translates Web and e-mail addresses into the numeric system used to route information along the Internet.

The Bren School is committed to increasing diversity in the computing and information technology fields. The Ada Byron Research Center was created in 2003 to address research and outreach topics aimed at increasing the participation of women and other underrepresented populations in computer science, engineering, digital media, and related information technology areas. The School is an active partner of the National Center for Women & Information Technology, whose overarching goal is parity in the professional information technology workforce.

Degrees

Business Information Management ¹	B.S.
Computer Game Science	B.S.
Computer Science	B.S., M.S., Ph.D.
Computer Science and Engineering ²	B.S.
Informatics	B.S.
Information and Computer Science	B.S., M.S., Ph.D.
Networked Systems ²	M.S., Ph.D.
Software Engineering	B.S., M.S., Ph.D.
Statistics	M.S., Ph.D.

¹ Offered jointly with The Paul Merage School of Business. See the Interdisciplinary Studies (p. 622) section of the *Catalogue* for information.

² Offered jointly with The Henry Samueli School of Engineering. See the Interdisciplinary Studies (p. 622) section of the *Catalogue* for information.

Undergraduate Program

A Bren School of ICS undergraduate education is a blend of scholarship, science, technology, and practical application that forms an excellent foundation for professional life.

The basis of the undergraduate program is a set of fundamental courses in mathematics and computer science, supplemented by general education

courses from other academic disciplines. A premium is placed on both communication and quantitative skills. Students start early with hands-on experience with advanced computing systems, and intense use of computer and network technologies continues throughout the undergraduate program. Students study data organization, algorithm design and analysis, design and organization of hardware and network systems, software engineering, artificial intelligence, social aspects of system design and use, and management of technology. In the process, students work with state-of-the-art hardware and software technologies, and learn several contemporary programming languages.

The Donald Bren School of Information and Computer Sciences offers seven majors: Business Information Management (BIM), offered jointly with The Paul Merage School of Business; Computer Game Science (CGS); Computer Science (CompSci); Computer Science and Engineering (CSE), offered jointly with The Henry Samueli School of Engineering; Informatics (IN4MATX); Information and Computer Science (ICS); and Software Engineering (SE). There are also programs of study leading to minors in Bioinformatics, Digital Information Systems, Health Informatics, Informatics, Information and Computer Science, and Statistics.

B.S. in Business Information Management (p. 635). The undergraduate Business Information Management (BIM) major seeks to educate students to understand and apply the theories and concepts of a broad, integrated curriculum covering computing (computer science, informatics, and software); business fundamentals (accounting, finance, marketing, strategy, and operations); and analytical methods (mathematics, statistics, economics, management science, and decision analysis). The fundamentals of information and computer science provide the foundation for understanding and evaluating the technology through which most of the business information is gathered and presented, while the business fundamentals provide a background and context in which information and its analysis will be applied. The major is administered by the Donald Bren School of Information and Computer Sciences and is a collaborative, interdisciplinary degree program between the Bren School and The Paul Merage School of Business.

B.S. in Computer Game Science. The Computer Game Science (CGS) major combines a solid foundation in computer science with a focus on designing, building, and understanding computer games and other forms of interactive media. The fundamentals of information and computer science, along with course work in mathematics, statistics, physics, and film and media studies, provide students with the concepts and tools to study a wide scope of computer game technologies. The major emphasizes design, collaboration, and the understanding of computer games and related technologies and media in a social and cultural context.

B.S. in Computer Science (p. 587). The Computer Science major emphasizes the principles of computing that underlie our modern world, and provides a strong foundational education to prepare students for the broad spectrum of careers in computing. This major can serve as preparation for either graduate study or a career in industry. Students receive a solid background in low-level architecture and systems; middle-level infrastructure, algorithms, and mathematical foundations. This is a highly flexible degree that allows students to explore a broad range of topics in modern computing. In order to achieve some focus in their upper-division studies, students are required to satisfy the requirements for one of the eight specializations: Algorithms, Architecture and Embedded Systems, Bioinformatics, Information, Intelligent Systems, Networked Systems, Systems and Software, and Visual Computing. Additional electives can be used to satisfy a second specialization or obtain a broader understanding of the field.

B.S. in Computer Science and Engineering (p. 637). This program is designed to provide students with the fundamentals of computer science, both hardware and software, and the application of engineering concepts, techniques, and methods to both computer systems engineering and software system design. The Computer Science and Engineering (CSE) major gives students access to multidisciplinary problems in engineering with a focus on total systems engineering. Students learn the computer science principles that are critical to development of software, hardware, and networking of computer systems. From that background, engineering concepts and methods are added to give students exposure to circuit design, network design, and digital signal processing. Elements of engineering practice include a systems view, manufacturing and economic issues, and multidisciplinary engineering applications. The program is administered jointly by the Department of Computer Science in the Bren School of ICS and the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering.

B.S. in Informatics (p. 605). Within the overall discipline of information and computer science, the Informatics (IN4MATX) major is concerned with the relationship between what is inside the computer and what is outside. The Informatics major addresses the broad set of issues surrounding design, ranging from initial requirements gathering to estimating and measuring the impact of alternative solutions—all from a multidisciplinary perspective that includes computer science, information science, organizational science, social science, and cognitive science. Students pursuing the B.S. in Informatics complete a specialization in one of two areas: human-computer interaction, or organizations and information technology.

B.S. in Information and Computer Science. The degree in Information and Computer Science is an individually designed degree. Students must submit a proposal for a four-year plan of study along with a rationale for why the proposed plan is a well-motivated set of courses that does not fit into any of the existing ICS majors. Students submitting proposals are strongly encouraged to follow the lower-division requirements for one of the Bren School majors (or provide a rationale for why this is not appropriate) and should include at least 48 units of upper-division ICS, Computer Science, Informatics, or Statistics courses. Proposals must be approved by the ICS Associate Dean for Student Affairs.

B.S. in Software Engineering. The Software Engineering major prepares students to be productive members of software engineering teams in a variety of application domains, with focus on the domains of major importance within each decade. It combines a solid foundation in computer science with knowledge of how to engineer modern software systems, and how to function within teams. Course work in mathematics and statistics provides students the basis for rigorous thinking; course work in the foundations of computer science provides students the basis for computational thinking; course work in topics of software engineering prepares students for the production of software; project courses prepare students for the practice of software development. The major emphasizes the design and implementation of large software systems.

Honors

Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to approximately the top 12 percent of the graduating seniors. A general criterion is that a student must have completed at least 72 units in residence at the University of California. The student's cumulative record at the end of the final quarter is the basis for consideration of awarding Latin Honors. Other important factors are considered (see Honors Recognition (p. 58)).

Careers

Graduates of the Donald Bren School of Information and Computer Sciences pursue a variety of careers. Many graduates specify, design, and develop a variety of computer-based systems comprised of software and hardware in virtually every application domain, such as aerospace, automotive, biomedical, consumer products, engineering, entertainment, environmental, finance, investment, law, management, manufacturing, and pharmacology. Graduates also find jobs as members of research and development teams, developing advanced technologies, designing software and hardware systems, and specifying, designing, and maintaining computing infrastructures for a variety of institutions. Some work for established or start-up companies while others work as independent consultants. After a few years in industry, many move into management or advanced technical positions. Many students also use the undergraduate major as preparation for graduate study in computer science or another field (e.g., medicine, law, engineering, management).

Admissions

To ensure admission consideration for the fall quarter, students should be sure to file their application by November 30 of the prior year. The selection criteria include grades, test scores, and other considerations.

Transfer Student Policy

Transfer requirements vary by major.

Business Information Management (p. 635)
 Computer Game Science
 Computer Science (p. 587)
 Computer Science and Engineering (p. 637)
 Informatics (p. 605)
 Information and Computer Science
 Software Engineering

NOTE TO TRANSFER APPLICANTS: These majors require a series of lower-division courses, and prerequisites constrain the order in which they can be taken. Junior-level transfer students who must complete a significant part of this sequence may find that it will take longer than two years at UCI to complete their degree. Java and C++ are used in the curriculum; therefore, transfer students should plan to learn these languages by studying on their own or by completing related programming courses prior to their first quarter at UCI.

Change of Major

Students interested in changing their major to one offered by the School should contact the ICS Student Affairs Office for more information and assistance. Information is also available at <http://www.changeofmajor.uci.edu>.

Major and minor restrictions: Click on the "Major/Minor Restrictions" tab at the top of this page.

Special Programs and Courses

The Bren School of ICS Honors Program

The Bren School of ICS Honors Program provides selected upper-division students an opportunity to carry out a research project under the direction of a faculty member in the School. Eligible students participate in the ICS Honors Seminar (I&C SCI H197), which provides an introduction to the range of current faculty research. Each student then affiliates with an ICS faculty advisor who agrees to supervise a minimum of two quarters of research. The participating student prepares a final written research

report and submits a copy for review to both the faculty advisor and the Honors Program advisor. Successful completion of the Honors Program earns the student a certificate and medal from the School. Further, a notation of successful completion is added to the student's transcript. For more information about course requirements, application procedures, and deadlines visit <http://www.ics.uci.edu/ugrad/honors/index.php>, or contact the Student Affairs Office at (949) 824-5156.

Other Opportunities

Bren School of ICS undergraduates may complement their educational experience by participating in other programs. Information about the following programs is available elsewhere in the *Catalogue* and via the program Web sites: Campuswide Honors Program, Undergraduate Research Opportunities Program, Education Road Program, and Student Achievement Guided by Experience (SAGE Scholars).

Concentration: Engineering and Computer Science in the Global Context

The globalization of the marketplace for information technology services and products makes it likely that Bren ICS graduates will work in multicultural settings or be employed by companies with extensive international operations, or customer bases. The goal of the concentration is to help students develop and integrate knowledge of the history, language, and culture of a country or geographic region outside the United States, through course work both at UCI and an international host campus, followed by a technology-related internship in the host country.

All Bren School majors in good standing may propose an academic plan that demonstrates the ability to complete the concentration (a minimum of eight courses) and other requirements for graduation in a reasonable time frame. It is expected that a student's proposal will reflect a high degree of planning that includes the guidance of academic counselors and those at the UCI Study Abroad Center regarding course selection, as well as considerations related to internship opportunities, housing, and financial aid. Each student's proposed program of study must be approved by the Bren School of ICS Associate Dean for Student Affairs. The Associate Dean will be available to assist qualified students with the development of a satisfactory academic plan, as needed.

The concentration consists of the following components:

1. A minimum of eight courses at UCI or at the international campus with an emphasis on the culture, language (if applicable and necessary), history, literature of the country that corresponds to the international portion of the program, international law, international labor policy, global issues, global institutions, global conflict and negotiation, and global economics;
2. A one- or two-semester sequence of technical courses related to the major and, possibly, culture, history, and literature courses taken at an international university;
3. A two-month or longer technical internship experience in the same country as the international educational experience.

More information about the requirements for the concentration is available in the Bren ICS Student Affairs Office.

Undergraduate Major in Business Information Management (BIM)

This program is administered jointly by the Bren School of ICS and The Paul Merage School of Business. For information, see the Interdisciplinary Studies (p. 635) section of the *Catalogue*.

Requirements for the B.S. Degree in Business Information Management

All students must meet the University Requirements (p. 60).
Major Requirements: See the **Interdisciplinary Studies** (p. 635) section of the *Catalogue*.

Undergraduate Major in Computer Game Science

The Computer Game Science major gives students a strong foundation in introductory information and computer science, an extensive education in technologies and design practices associated with computer games, and an opportunity to focus in two areas of particular interest to the student. Students who complete the major will be able to create interactive and human-centered game designs; implement games using skills in modeling, graphics, software engineering, hardware architectures, human interfaces, and aesthetics; and evaluate games and game technology for their use in education, art, and social change.

Career Paths. A wide variety of careers and graduate programs are open to Computer Game Science (CGS) graduates. The video game industry is comparable in size to the film and music industries, and job growth projections are strong for people with strong technical backgrounds. Many other fields, including mobile software development, interactive entertainment, and training and education software have demand for similar skill sets and knowledge. CGS graduates are well-trained in computer science, and can thus pursue graduate programs or any career that involves designing, implementing, evaluating, or interacting with computer-based systems.

Admissions

Freshman Applicants: See the **Undergraduate Admissions** section.

Transfer Applicants:

Junior-level applicants who satisfactorily complete course requirements will be given preference for admission. Applicants must satisfy the following requirements:

1. Complete one year of approved college-level math, preferably courses in calculus equivalent to UCI's MATH 2A-MATH 2B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. Complete one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Python, Scheme, C++, or other object-oriented or high-level programming language.

Transfer applicants to the Computer Game Science major should be aware that several lower-division courses must be taken at UCI; therefore, the minimum time to degree completion will exceed two years.

*NOTE: Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java and C++ are used in the curriculum; therefore, transfer students should plan to learn these languages by studying on their own or

by completing related programming courses prior to their first quarter at UCI.

Requirements for the B.S. Degree in Computer Game Science

All students must meet the University Requirements (p. 60).

Major Requirements

Lower-division

A. Select one of the two groups of courses:

I&C SCI 21	Introduction to Computer Science I
I&C SCI 22	Introduction to Computer Science II
I&C SCI 45C	Programming in C/C++ as a Second Language
I&C SCI 46	Data Structure Implementation and Analysis
or	
I&C SCI 31	Introduction to Programming
I&C SCI 32	Programming with Software Libraries
I&C SCI 33	Intermediate Programming
I&C SCI 45C	Programming in C/C++ as a Second Language
I&C SCI 46	Data Structure Implementation and Analysis

B. Complete:

I&C SCI 51	Introductory Computer Organization
------------	------------------------------------

C. Complete:

IN4MATX 43	Introduction to Software Engineering
or I&C SCI 52	Introduction to Software Engineering

D. Complete:

MATH 2A	Single-Variable Calculus
MATH 2B	Single-Variable Calculus
I&C SCI 6N	Computational Linear Algebra
or MATH 3A	Introduction to Linear Algebra
I&C SCI 6B	Boolean Algebra and Logic
I&C SCI 6D	Discrete Mathematics for Computer Science
STATS 67	Introduction to Probability and Statistics for Computer Science

E. Complete:

I&C SCI 60	Computer Games and Society
I&C SCI 61	Game Systems and Design
I&C SCI 62	Game Technologies and Interactive Media

F. Complete:

PHYSICS 3A	Basic Physics
------------	---------------

G. Complete:

FLM&MDA 85A	Introduction to Film and Visual Analysis
-------------	--

Upper-division

A. Computer Game Science Core Requirements

I&C SCI 160	Graphics Processors and Game Platforms
I&C SCI 161	Game Engine Lab

I&C SCI 167	Multiplayer Game Systems
I&C SCI 168	Multiplayer Game Project
I&C SCI 169A- 169B	Capstone Game Project I and Capstone Game Project II
and select two of the following:	
I&C SCI 162	Modeling and World Building
I&C SCI 163	Mobile and Ubiquitous Games
I&C SCI 166	Game Design
B. Computer Science Core	
COMPSCI 112	Computer Graphics
COMPSCI 171	Introduction to Artificial Intelligence
C. Select one of the following:	
COMPSCI 122A	Introduction to Data Management
IN4MATX 113	Requirements Analysis and Engineering
IN4MATX 121	Software Design I
IN4MATX 131	Human Computer Interaction
D. CGS Elective Courses:	
Five additional courses chosen from those listed in E	
E. At least three of the 16 upper-division courses satisfying A–D must be in the same Bren ICS track.	

Bren ICS Tracks:

Algorithms

COMPSCI 161	Design and Analysis of Algorithms
COMPSCI 162	Formal Languages and Automata
COMPSCI 163	Graph Algorithms
COMPSCI 164	Computational Geometry and Geometric Modeling
COMPSCI 165	Project In Algorithms And Data Structures

Artificial Intelligence

COMPSCI 171	Introduction to Artificial Intelligence
COMPSCI 174	Bioinformatics
COMPSCI 175	Project in Artificial Intelligence
COMPSCI 177	Applications of Probability in Computer Science
COMPSCI 178	Machine Learning and Data-Mining
COMPSCI 179	Algorithms for Probabilistic and Deterministic Graphical Models

Computational Biology

COMPSCI 183	Introduction to Computational Biology
COMPSCI 184A	Representations and Algorithms for Molecular Biology
COMPSCI 184B	Probabilistic Modeling of Biological Data
COMPSCI 184C	Computational Systems Biology

Computer Graphics and Vision

COMPSCI 111	Digital Image Processing
COMPSCI 112	Computer Graphics
COMPSCI 114	Projects in Advanced 3D Computer Graphics

COMPSCI 116	Computational Photography and Vision
COMPSCI 117	Project in Computer Vision

Computer Networks

COMPSCI 131	Parallel and Distributed Computing
COMPSCI 132	Computer Networks
COMPSCI 133	Advanced Computer Networks
COMPSCI 134	Computer and Network Security
COMPSCI 137/IN4MATX 124	Internet Applications Engineering

Databases

COMPSCI 121/IN4MATX 141	Information Retrieval
COMPSCI 122A	Introduction to Data Management
COMPSCI 122B	Project in Databases and Web Applications
COMPSCI 125	Next Generation Search Systems

Hardware

COMPSCI 145A	Embedded Computing Systems
COMPSCI 151	Digital Logic Design
COMPSCI 153	Logic Design Laboratory
COMPSCI 154	Computer Design Laboratory

Human-Computer Interaction

IN4MATX 131	Human Computer Interaction
IN4MATX 132	Project in Human-Computer Interaction Requirements and Evaluation
IN4MATX 133	User Interaction Software
IN4MATX 134	Project in User Interaction Software

Operating Systems

COMPSCI 143A	Principles of Operating Systems
COMPSCI 143B	Project in Operating System Organization
COMPSCI 144	High-performance Computers and Program Optimization
COMPSCI 146	Programming in Multitasking Operating Systems

Programming Languages and Compilers

IN4MATX 101	Concepts in Programming Languages I (same as COMPSCI 141)
IN4MATX 102	Concepts of Programming Language II
COMPSCI 142A	Compilers and Interpreters
COMPSCI 142B	Language Processor Construction

Project Management

IN4MATX 151	Project Management
IN4MATX 161	Social Analysis of Computerization
IN4MATX 162W	Organizational Information Systems

Simulation and Optimization

COMPSCI 115	Computer Simulation
COMPSCI 168	Network Optimization
COMPSCI 169	Introduction to Optimization

Social Impacts of Computing

IN4MATX 161	Social Analysis of Computerization
IN4MATX 162W	Organizational Information Systems

IN4MATX 163	Project in the Social and Organizational Impacts of Computing
Software Design	
IN4MATX 121	Software Design I
IN4MATX 122	Software Design II
IN4MATX 123	Software Architecture
Software Engineering	
IN4MATX 113	Requirements Analysis and Engineering
IN4MATX 115	Software Testing, Analysis, and Quality Assurance
IN4MATX 124	Internet Applications Engineering (same as COMPSCI 137)
Non-Track Courses (some of these courses have prerequisites that are not part of the CGS major):	
Computer Game Science	
I&C SCI 162	Modeling and World Building
I&C SCI 163	Mobile and Ubiquitous Games
I&C SCI 166	Game Design
Business Management	
MGMT 101	Management Science
MGMT 102	Managing Organizational Behavior
MGMT 105	Introduction to Marketing
MGMT 154	International Marketing
MGMT 155	Brand Management
Cognitive Science	
PSYCH 130A	Perception and Sensory Processes
PSYCH 131A	Vision
PSYCH 131B	Hearing
PSYCH 135M	The Mind/Body Problem
PSYCH 140C	Cognitive Science
Mathematics	
MATH 112A- 112B- 112C	Introduction to Partial Differential Equations and Applications and Introduction to Partial Differential Equations and Applications
MATH 115	Mathematical Modeling
MATH 121A- 121B	Linear Algebra and Linear Algebra
Film and Media Studies	
FLM&MDA 113	Narrative/Image
FLM&MDA 114	Film, Media, and the Arts
FLM&MDA 117A	Introduction to Screenwriting
FLM&MDA 144	Studies in New Media

With the approval of the ICS Associate Dean for Student Affairs, a student may design a new track, or an Independent Study, Honors Research, or Special Topics course may be substituted for a course in a track. Computer Game Science (CGS) elective courses may not be counted as part of the Management minor or the Biomedical Computing minor.

Undergraduate Major in Information and Computer Science

The Information and Computer Science major is intended for highly motivated students who are currently enrolled at UCI, who find that their academic and career interests are not well served by any of the existing ICS majors, and would be better served by a uniquely designed course of study.

Application Process

New students are not admitted directly to the Information and Computer Science major. Continuing students can apply to change their major to Information and Computer Science no earlier than the fall quarter of their sophomore year. Students must submit a proposal for a four-year plan of study, along with rationale explaining why the proposed plan is a well-motivated and coherent set of courses that does not fit into any of the existing ICS majors. Students submitting proposals are strongly encouraged to follow the lower-division requirements for one of the ICS majors (or provide a rationale for why this is not appropriate) and should include at least 48 units of upper-division ICS, Computer Science, Informatics, or Statistics courses. Proposals must be approved by the ICS Associate Dean for Student Affairs. See the ICS Student Affairs Office for more details. Complete information about changing majors to ICS is available at <http://www.changeofmajor.uci.edu>.

Admissions

New students are not admitted directly to the Information and Computer Science major.

Transfer Applicants:

Students are strongly encouraged to follow the transfer preparation guidelines for any of the other Bren ICS majors.

Requirements for the B.S. Degree in Information and Computer Science

All students must meet the University Requirements (p. 60).
Major Requirements: See the ICS Student Affairs Office.

Minor in Information and Computer Science

Students outside the School may also pursue a minor in Information and Computer Science. The minor provides a focused study of Information and Computer Science to supplement a student's major program of study and prepares students for a profession, career, or academic pursuit in which computer science is an integral part but is not the primary focus. The ICS minor contributes to students' competence in computing technology and proficiency in programming as well as exposing them to the fundamentals of computer science. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests.

Requirements for the Minor

Select one of the following groups:

I&C SCI 21- 22- 46	Introduction to Computer Science I and Introduction to Computer Science II and Data Structure Implementation and Analysis
--------------------	---

or

I&C SCI 31- 32- 33- 45C- 46	Introduction to Programming and Programming with Software Libraries and Intermediate Programming and Programming in C/C++ as a Second Language and Data Structure Implementation and Analysis
-----------------------------	---

Complete:

I&C SCI 6D	Discrete Mathematics for Computer Science
------------	---

Complete one of:

I&C SCI 51	Introductory Computer Organization
or I&C SCI 52	Introduction to Software Engineering
or IN4MATX 43	Introduction to Software Engineering

Select two upper-division from the following: ¹

CS 111-144	
CS 151-177	
IN4MATX 101-102	
IN4MATX 111-119	
IN4MATX 123	Software Architecture
IN4MATX 125	Computer Game Development
IN4MATX 131	Human Computer Interaction

IN4MATX 132-134

IN4MATX 141	Information Retrieval
IN4MATX 148	Project in Ubiquitous Computing
IN4MATX 153	Computer Supported Cooperative Work
IN4MATX 161-163	
IN4MATX 171	Introduction to Medical Informatics

¹ COMPSCI 190-199 and IN4MATX 190-199 may not be applied to the minor.

Major and minor restrictions: Click on the "Major/Minor Restrictions" tab at the top of this page.

Undergraduate Major in Software Engineering

The Software Engineering major gives students a strong foundation in software engineering as well as a solid basis in computer science. Students who complete the major will be able to be productive members of software engineering teams in a variety of application domains including, but not restricted to, Web and mobile applications. The acquired technical knowledge and appreciation for life-long learning, combined with the ability to place software in the social context in which it is developed, empowers students to create novel applications that have the potential to bring social change.

Admissions

Freshman Applicants: See the Undergraduate Admissions (p. 38) section.

Transfer Applicants:

Junior-level applicants who satisfactorily complete course requirements will be given preference for admission. Applicants must satisfy the following requirements:

1. Completion of one year of college-level mathematics (calculus or discrete math).
2. Completion of one year of transferable Computer Science courses*; at least one of these should involve concepts such as those found in Java, Python, Scheme, C++, or other object-oriented or high-level programming language.

*NOTE: Additional Computer Science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java and C++ are used in the curriculum; therefore, transfer students should plan to learn these languages by studying on their own or by completing related programming courses prior to their first quarter at UCI.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree.

Requirements for the B.S. Degree in Software Engineering

All students must meet the University Requirements (p. 60).

Major Requirements

Lower-division

A. Select one of the following:

I&C SCI 21- 22	Introduction to Computer Science I and Introduction to Computer Science II
----------------	--

or

IN4MATX 41- 42	Informatics Core Course I and Informatics Core Course II
----------------	--

or

I&C SCI 31- 32- 33	Introduction to Programming and Programming with Software Libraries and Intermediate Programming
--------------------	--

B. Complete:

I&C SCI 45C	Programming in C/C++ as a Second Language
-------------	---

C. Complete:

I&C SCI 45J	Programming in Java as a Second Language
-------------	--

D. Complete:

I&C SCI 46	Data Structure Implementation and Analysis
------------	--

E. Complete:

IN4MATX 43 or I&C SCI 52	Introduction to Software Engineering Introduction to Software Engineering
-----------------------------	--

F. Complete:

I&C SCI 51	Introductory Computer Organization
------------	------------------------------------

G. Complete:

MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
I&C SCI 6B	Boolean Algebra and Logic
I&C SCI 6D	Discrete Mathematics for Computer Science
I&C SCI 6N	Computational Linear Algebra
STATS 67	Introduction to Probability and Statistics for Computer Science

Upper-division

A. Core Requirements

COMPSCI 122A	Introduction to Data Management
COMPSCI 143A	Principles of Operating Systems
COMPSCI 132	Computer Networks
COMPSCI 161	Design and Analysis of Algorithms
IN4MATX 101/COMPSCI 141	Concepts in Programming Languages I
IN4MATX 113	Requirements Analysis and Engineering
IN4MATX 115	Software Testing, Analysis, and Quality Assurance
IN4MATX 131	Human Computer Interaction
IN4MATX 121	Software Design I

IN4MATX 122	Software Design II
IN4MATX 123	Software Architecture
IN4MATX 151	Project Management
IN4MATX 191A	Senior Design Project
IN4MATX 191B	Senior Design Project
IN4MATX 191C	Senior Design Project
I&C SCI 139W	Critical Writing on Information Technology

B. Select four of the following:

IN4MATX 102	Concepts of Programming Language II
IN4MATX 124	Internet Applications Engineering
IN4MATX 125/COMPSCI 113	Computer Game Development
IN4MATX 133	User Interaction Software
IN4MATX 134	Project in User Interaction Software
IN4MATX 141/COMPSCI 121	Information Retrieval
IN4MATX 143	Information Visualization
IN4MATX 148	Project in Ubiquitous Computing
IN4MATX 161	Social Analysis of Computerization
COMPSCI 133	Advanced Computer Networks
COMPSCI 134	Computer and Network Security
COMPSCI 142A	Compilers and Interpreters
COMPSCI 142B	Language Processor Construction
COMPSCI 145A	Embedded Computing Systems
COMPSCI 145B	Embedded Computing System Lab
COMPSCI 146	Programming in Multitasking Operating Systems
COMPSCI 165	Project In Algorithms And Data Structures
I&C SCI 160	Graphics Processors and Game Platforms
I&C SCI 167	Multiplayer Game Systems
I&C SCI 168	Multiplayer Game Project

Software Engineering elective courses may not be counted as part of the Management minor or the Biomedical Computing minor.

Career Paths. A wide variety of careers and graduate programs are open to Software Engineering graduates. The Web and mobile applications industry is a multi-billion dollar industry, and job growth projections are the strongest for people with strong technical backgrounds. Many other application domains, including interactive entertainment, medical information systems, and training and education software have demand for similar skill sets and knowledge. Graduate school in either computer science or software engineering or a related IT field is also a possible career path.

Sample Program of Study — Software Engineering

Major and Minor Restrictions

- Students majoring in Business Information Management may not double major in Business Administration nor minor in Management, Informatics, or Information and Computer Science.
- The major in Computer Science (CS) cannot be combined with the major in Computer Science and Engineering (CSE).
- The major in Computer Science and Engineering (CSE) cannot be combined with the major in Computer Engineering (offered by The Henry Samueli School of Engineering).
- The major in Information and Computer Science (ICS) cannot be combined with the majors in Computer Game Science, Computer Science (CS), Computer Science and Engineering (CSE), Informatics, or Software Engineering.
- Courses used to complete the minor in Digital Information Systems may not also count toward the requirements for the Information and Computer Science minor or the Informatics minor.
- Informatics majors in the Organizations and Information Technology specialization may not also pursue the Management minor.
- Any major in Computer Science, Computer Game Science, Informatics, Information and Computer Science, or Software Engineering may take any other minor in the Bren School of Information and Computer Sciences, provided that they take a minimum of five courses toward the minor that do not count toward any other major or minor.

Students who have completed both I&C SCI 21 and I&C SCI 22 with grades of C or better and who wish to change majors to Informatics may use I&C SCI 21 and I&C SCI 22 in satisfaction of the requirements of IN4MATX 41 and IN4MATX 42.

Students who have completed both IN4MATX 41 and IN4MATX 42 with grades of C or better and who wish to change majors to Computer Game Science, Computer Science, or Information and Computer Science may use IN4MATX 41 and IN4MATX 42 in satisfaction of the requirement of I&C SCI 21 and I&C SCI 22.

Students enrolled in other degree programs who are interested in the field of computer science may pursue the Bren School introductory course sequences (I&C SCI 31/CSE 41, I&C SCI 32/CSE 42, and I&C SCI 33/CSE 43) followed by other courses for which they have met the prerequisites as far as their interests require and their programs permit. The introductory courses, along with other lower-division ICS courses, may be used to fulfill General Education requirements. Nonmajors

may also take other Bren ICS courses for which they have met the prerequisites.

The ICS Student Affairs Office is staffed by professional academic counselors and peer advisors. These individuals are available to assist students with program planning, questions on University and School policies and procedures, progress toward graduation, and other issues that arise in the course of a student's education. **Faculty also are available for advising, generally for suggestions of additional course work in the student's academic, research, and career interest areas and on preparation for graduate school.**

Graduate Programs in Information and Computer Science

The Bren School of ICS offers M.S. and Ph.D. degrees in Computer Science, Information and Computer Science, Networked Systems, Software Engineering, and Statistics.

ICS Ph.D. students must complete a concentration in Informatics (INF).

ICS M.S. students must complete one of the following concentrations: Embedded Systems or Informatics (INF).

For additional information about the following graduate programs and requirements, click on these links: Computer Science (p. 592); Statistics (p. 617); Networked Systems (p. 622), which is supervised by an interdepartmental faculty group from the Department of Computer Science in the Bren School and the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering. Information is available on the Interdisciplinary Studies section of the *Catalogue*.

Admission

Applicants will be evaluated on the basis of their prior academic record. Applicants for the M.S. degree are expected to have a bachelor's degree in computer science or a related field. Those who do not have an undergraduate degree in computer science may take the Computer Science Subject GRE test to demonstrate sufficient background in the field. Scores are reviewed on a case-by-case basis. Ph.D. applicants will additionally be evaluated in their potential for creative research and teaching in Information and Computer Science.

Applicants are expected to have (1) skills in computer programming at least equivalent to those obtained in college-level courses in programming and language development; (2) skills in mathematics equivalent to those obtained in complete college-level courses in logic and set theory, analysis, linear algebra and modern algebra, or probability and statistics; (3) data structures, analysis of algorithms, automata theory, or formal languages; and (4) computer architectures.

All applicants are evaluated on the materials submitted: letters of recommendation, official GRE test scores, official college transcripts, and personal statement. For more information, contact the ICS graduate counselor at (949) 824-5156 or send e-mail to gcounsel@ics.uci.edu.

Financial Assistance

Financial assistance is available to Ph.D. students in the form of fellowships, teaching assistantships, and research assistantships. Although assistance varies, it is the School's goal to support all entering Ph.D. students, subject to availability of funds. International students who are not citizens of countries where English is either the primary or

dominant language, as approved by Graduate Council, and who apply for teaching assistantships must take one of the approved English proficiency examinations. More information is available in the Graduate Division (p. 114) section of the *Catalogue*.

Students with a Previously Earned Master's Degree

Credit for one or all required courses may be given at the time of admission to those students who have completed a master's degree in computer science or a closely related field. Course equivalency will be determined by the Bren School Associate Dean for Student Affairs following a written recommendation from a sponsoring research advisor. Research advisors can require that a student take additional courses when this is appropriate.

An additional M.S. degree will not be awarded if the student currently holds an M.S. degree in computer science or a related field from another university.

Course Substitutions

A student who has taken relevant graduate courses at UCI or another university may petition to have a specific course certified as equivalent to one which satisfies Bren School of ICS requirements. The petition should describe the course and should be approved by either the student's advisor or the instructor teaching the class, and by the Associate Dean for Student Affairs. Only two courses can be substituted.

Master of Science Program

The Bren School offers M.S. degrees in Computer Science, Information and Computer Science, Networked Systems, Software Engineering, and Statistics.

Students pursuing the M.S. in Information and Computer Science must complete a concentration in Embedded Systems or Informatics (INF).

For additional information about the following graduate programs and requirements, click on these links: Computer Science (p. 592); Statistics (p. 617); Networked Systems (p. 622).

M.S. students may select one of two options, the thesis plan or the comprehensive examination plan, as described below. The normative time for completion of the M.S. degree is two years. All study must be completed within four calendar years from the date of admission.

Plan I: Thesis Plan. The thesis option is available for graduate students who may wish to continue on to a Ph.D. program or those who wish to concentrate on a specific problem. To qualify for this option, students must be in good academic standing with their Department. The student must enroll in at least two quarters of Thesis Supervision (CS 298 or IN4MATX 298) that will substitute for two required courses as specified under the concentration area or specialization of choice. All required courses must be completed with a grade of B or better, and the student must write a research or thesis project. A committee of three faculty members (voting members of the Academic Senate) will guide the student and give final approval of the thesis. The committee will consist of an advisor (faculty member from the student's department) who is willing to supervise the thesis project, and two other faculty members (one of which must be from the student's department) who are willing to serve on the committee as readers of the thesis. An oral presentation of the thesis to the committee will be required. Seminar courses that have an "S" suffix (e.g., 209S) do not count toward degree requirements.

Plan II: Comprehensive Examination Plan. The student completes the required units as specified under the concentration area. Each course must be completed with a grade of B or better. Seminar courses that have an "S" suffix (e.g., 209S) do not count toward degree requirements. The student must take a comprehensive examination given by ICS faculty. The examination covers the core requirements.

ICS Concentration in Embedded Systems—M.S.

The goal of this program is to prepare students for challenges in developing future embedded systems. These future systems will further integrate communications, multimedia, and advanced processors with complex embedded and real-time software for automotive, medical, telecommunications, and many other application domains. Furthermore, embedded systems are becoming parallel, deploying multiprocessor systems-on-a-chip and parallel application software. An in-depth knowledge of the underlying scientific and engineering principles is required to understand these advances and to contribute productively to development of such systems. This program helps students master embedded system fundamentals, advanced computer architecture and compilers, networking, security, embedded, parallel and distributed software, and computer graphics in a sequence of courses and labs. Students also complete a large embedded systems project and may choose to write a Master's thesis.

Required Courses

The following courses must be completed with a grade of B or better.

Select six of the following:

List A	
COMPSCI 244	Introduction to Embedded and Ubiquitous Systems
COMPSCI 247	Design Automation and Prototyping of Embedded Systems
COMPSCI 250A	Computer Systems Architecture
COMPSCI 232	Computer and Communication Networks
COMPSCI 203	Network and Distributed Systems Security
COMPSCI 242	Parallel Computing
COMPSCI 250B	Modern Microprocessors
COMPSCI 230	Distributed Computer Systems
COMPSCI 243	High-Performance Architectures and Their Compilers

Select six additional courses in one of the following two ways:

1. For students pursuing the M.S. thesis option, two four-unit courses in Thesis Supervision (CS 298) plus four graduate courses taken from List A or the following List B
2. For all other students, six graduate courses taken from List A or the following List B

List B	
COMPSCI 241	Advanced Compiler Construction
COMPSCI 245	Software for Embedded Systems
COMPSCI 246	Validation and Testing of Embedded Systems
COMPSCI 252	Introduction to Computer Design
EECS 211	Advanced System Software

COMPSCI 211A	Visual Computing
COMPSCI 248A/IN4MATX 241	Introduction to Ubiquitous Computing
IN4MATX 211	Software Engineering
IN4MATX 235	Advanced User Interface Architecture
COMPSCI 236	Wireless and Mobile Networking
COMPSCI 267	Data Compression
COMPSCI 265	Graph Algorithms
EECS 223	Real-Time Computer Systems

M.S. Students who do not have an undergraduate degree in Computer Science or equivalent must also take COMPSCI 260.

Comprehensive Examination or Thesis

Each student must either (1) pass a comprehensive examination administered by the Embedded Systems faculty; or (2) submit a thesis for approval by a three-person committee consisting of an advisor (who is an ICS Embedded Systems full-time faculty member) and two other full-time faculty members (one of which must be from ICS).

ICS Concentration in Informatics—M.S.

See course requirements under Doctor of Philosophy program, on this page.

Doctor of Philosophy Program

The Bren School offers Ph.D. degrees in Computer Science, Information and Computer Science, Networked Systems, Software Engineering, and Statistics.

Students pursuing the Ph.D. in Information and Computer Science must complete a concentration in Informatics (INF).

For additional information about the following graduate programs and requirements, click on these links: Computer Science (p. 592); Statistics (p. 617); Networked Systems (p. 622).

The Ph.D. program is research oriented and encourages students to work together with faculty to solve advanced problems in information and computer science. The program is designed for full-time study, and the normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years. Students enrolled in the Ph.D. program must maintain satisfactory academic progress.

Teaching Requirements for the Ph.D. Program

All ICS doctoral students are required to participate in a minimum of two quarters of teaching activities before graduating. College-level teaching activities in UCI Summer Sessions or UCI Extension, or service at other U.S. universities may be accepted in fulfillment of this requirement.

Timeline for the Ph.D. Program

All course requirements must be satisfied prior to the student's application for advancement to candidacy. The normative time for advancement to candidacy is four years (three years for students who entered with a master's degree). Information on the selection of committees, advancement to candidacy, development of a doctoral dissertation, and final examination on the dissertation is available from the ICS Student Affairs Office.

ICS Concentration in Informatics (INF)—M.S. and Ph.D.

Informatics is the interdisciplinary study of the design, application, use, and impact of information technology. It goes beyond technical design to focus on the relationship between information system design and use in real-world settings. These investigations lead to new forms of system architecture, new approaches to system design and development, new means of information system implementation and deployment, and new models of interaction between technology and social, cultural, and organizational settings.

In the Donald Bren School of Information and Computer Sciences, Informatics is concerned with software architecture, software development, design and analysis, programming languages, ubiquitous computing, information retrieval and management, human-computer interaction, computer-supported cooperative work, and other topics that lie at the relationship between information technology design and use in social and organizational settings. Effective design requires an ability to analyze things from many different perspectives, including computer science, information science, organizational science, social science, and cognitive science. Relevant courses in those disciplines are therefore an integral part of the program and give this concentration a unique interdisciplinary flavor—which is imperative as the computing and information technology fields play such a pervasive role in our daily lives.

Students must complete the Survey courses, Informatics Core courses, Informatics Breadth courses, and a focus track in General Informatics, Interactive and Collaborative Technology, or Ubiquitous Computing. All courses must be passed with a grade of B or better.

Survey of Research and Research Methods: IN4MATX 201 Research Methodology for Informatics and two quarters of IN4MATX 209S Seminar in Software . Students in the M.S. program may substitute for IN4MATX 201 one additional four-unit Informatics course numbered 200–299.

Informatics Core Courses: three courses chosen from IN4MATX 211 Software Engineering, Human-Computer Interaction (IN4MATX 231 User Interface Design and Evaluation or IN4MATX 232 Research in Human-Centered Computing), IN4MATX 241 Introduction to Ubiquitous Computing, IN4MATX 261 Social Analysis of Computing.

Informatics Breadth: two four-unit graduate courses in ICS, CS, or Statistics, outside of Informatics.

Students must choose a track and complete the required courses:

General Informatics Track (GEN)

Electives: six four-unit graduate courses approved by the student's advisor and the Department Chair, excluding 290s, 298s, and 299s.

Interactive and Collaborative Technology Track (ICT)

ICT electives (group 1): two courses chosen from IN4MATX 263 Computerization, Work, and Organizations, IN4MATX 265 Theories of Computerization and Information Systems, IN4MATX 203 Qualitative Research Methods in Information Systems, IN4MATX 205 Quantitative Research Methods in Information Systems.

ICT electives (group 2): two courses chosen from IN4MATX 233 Knowledge-Based User Interfaces, IN4MATX 235 Advanced User Interface Architecture, IN4MATX 251 Computer-Supported Cooperative Work.

ICT Breadth: two four-unit graduate courses approved by the student's advisor, excluding 290s, 298s, and 299s. Students are encouraged, but not required, to take them outside of Informatics.

Ubiquitous Computing Track (UBICOMP)

Additional required courses: IN4MATX 242 Ubiquitous Computing and Interaction and IN4MATX 244 Introduction to Embedded and Ubiquitous Systems.

UBICOMP Breadth: four four-unit graduate courses approved by the student's advisor excluding 290s, 298s, and 299s. Students are encouraged, but not required, to take them outside of Informatics.

Research Project for the Ph.D.

Each student must find an Informatics faculty advisor and successfully complete a research project with that faculty member by the end of the second year. The research project should be done over at least two quarters of independent study or thesis supervision (IN4MATX 299 or IN4MATX 298) with that faculty.

Written Assessment for the Ph.D.

Each student must pass a written assessment. Students in the ICT track must pass a written examination (also known as phase II exam) regularly administered by the Department. This examination is based on predetermined reading lists maintained by the ICT faculty. Students in the UBICOMP and GEN tracks must describe the research project in a publication-quality report, which must be approved by three UBICOMP and Informatics faculty, respectively.

Candidacy Examination for the Ph.D.

Each student must pass the oral advancement to candidacy examination, which assesses the student's ability to conduct, present, and orally defend research work at the doctoral level. The candidacy committee will consist of five faculty members, the majority of whom must be members of the student's program, and the examination is conducted in accordance with UCI Senate regulations. The student must complete the course requirements, complete the research project, and pass the written assessment prior to advancing to candidacy. The oral candidacy examination consists of a research presentation by the student, followed by questions from the candidacy committee.

Students in the UBICOMP and GEN tracks, additionally to questions about the presented research, will also be asked questions about a predetermined list of readings. In the case of UBICOMP, that list is maintained by the UBICOMP faculty; in the case of GEN, that list is to be determined by the student's committee.

Doctoral Dissertation Topic Defense

The student must present a substantial written document representing the student's dissertation plan. This document must include the proposed dissertation abstract, a dissertation outline, a comprehensive survey of related work, and a detailed plan for completing the work. The dissertation plan is presented by the student to the dissertation committee, which must unanimously approve the student's proposal. The dissertation defense committee is formed in accordance with UCI Senate regulations.

Doctoral Dissertation and Final Examination

The student is required to complete a doctoral dissertation in accordance with Academic Senate regulations. In addition, the student must pass an oral thesis defense which consists of a public presentation of the student's research followed by an oral examination by the student's

doctoral committee. The thesis must be approved unanimously by the committee.

Faculty

Shannon Alfaro, M.S. University of California, Irvine, *Lecturer in Computer Science*

Pierre Baldi, Ph.D. California Institute of Technology, *Director of the Institute for Genomics and Bioinformatics and UCI Chancellor's Professor of Computer Science, Biomedical Engineering, and Biological Chemistry*

Lubomir Bic, Ph.D. University of California, Irvine, *Professor of Computer Science, Electrical Engineering and Computer Science, and Biomedical Engineering*

Geoffrey Bowker, Ph.D. University of Melbourne, *Professor of Informatics*

Elaheh Bozorgzadeh, Ph.D. University of California, Los Angeles, *Associate Professor of Computer Science*

Michael Carey, Ph.D. University of California, Berkeley, *Department Vice Chair and Donald Bren Professor of Computer Science*

Yunan Chen, Ph.D. Drexel University, *Assistant Professor of Informatics*

Rina Dechter, Ph.D. University of California, Los Angeles, *Professor of Computer Science*

Michael Dillencourt, Ph.D. University of Maryland, *Professor of Computer Science*

J. Paul Dourish, Ph.D. University College, London, *Professor of Informatics and of Computer Science*

Nikil Dutt, Ph.D. University of Illinois, *UCI Chancellor's Professor of Computer Science and of Electrical Engineering and Computer Science*

Magda El Zarki, Ph.D. Columbia University, *Professor of Computer Science, Informatics, and Electrical Engineering and Computer Science*

David Eppstein, Ph.D. Columbia University, *Professor of Computer Science*

Julian Feldman, Ph.D. Carnegie Institute of Technology, *Professor Emeritus of Computer Science*

Charles Fowlkes, Ph.D. University of California, Berkeley, *Assistant Professor of Computer Science*

Michael Franz, D.Sc. Techn. Swiss Federal Institute of Technology (ETH), *Professor of Computer Science*

Daniel Frost, Ph.D. University of California, Irvine, *Senior Lecturer with Security of Employment, Computer Science and Informatics*

Daniel L. Gillen, Ph.D. University of Washington, *Associate Professor of Statistics*

Tony Givargis, Ph.D. University of California, Riverside, *Associate Dean for Student Affairs for the Donald Bren School of Information and Computer Sciences and Professor of Computer Science and of Informatics*

Michael T. Goodrich, Ph.D. Purdue University, *Department Chair and UCI Chancellor's Professor of Computer Science*

Richard H. Granger, Ph.D. Yale University, *Professor Emeritus of Computer Science*

Judith Gregory, Ph.D. University of California, San Diego, *Associate Adjunct Professor of Informatics*

Stacey Hancock, Ph.D. Colorado State University, *Lecturer with Potential Security of Employment, Statistics*

Ian G. Harris, Ph.D. University of California, San Diego, *Associate Professor of Computer Science*

Gillian Hayes, Ph.D. Georgia Institute of Technology, *Assistant Professor of Informatics*

Wayne Hayes, Ph.D. University of Toronto, *Associate Professor of Computer Science*

Daniel Hirschberg, Ph.D. Princeton University, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Alexander Ihler, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Computer Science*

Sandy Irani, Ph.D. University of California, Berkeley, *Department Vice Chair and Professor of Computer Science*

Mizuko "Mimi" Ito, Ph.D. Stanford University, *Professor in Residence of Anthropology and Informatics, and John D. and Catherine T. MacArthur Foundation Chair in Digital Media and Learning*

Ramesh C. Jain, Ph.D. Indian Institute of Technology, *Donald Bren Professor of Information and Computer Sciences*

Stanislaw Jarecki, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Computer Science*

Wesley O. Johnson, Ph.D. University of Minnesota, *Department Vice Chair and Professor of Statistics*

James A. Jones, Ph.D. Georgia Institute of Technology, *Assistant Professor of Informatics*

Scott Jordan, Ph.D. University of California, Berkeley, *Professor of Computer Science and of Electrical Engineering and Computer Science*

David G. Kay, J.D. Loyola Law School, Los Angeles; M.S. University of California, Los Angeles, *Department Vice Chair of Informatics and Senior Lecturer with Security of Employment, Informatics and Computer Science*

Dennis F. Kibler, Ph.D. University of California, Irvine, and Ph.D. University of Rochester, *Professor Emeritus of Computer Science*

Cory Knobel, Ph.D. University of Michigan, Ann Arbor, *Assistant Adjunct Professor of Informatics*

Alfred Kobsa, Ph.D. University of Vienna, *Professor of Informatics and of Computer Science*

Richard H. Lathrop, Ph.D. Massachusetts Institute of Technology, *Professor of Computer Science and of Biomedical Engineering*

Chen Li, Ph.D. Stanford University, *Department Vice Chair and Professor of Computer Science*

Cristina Videira Lopes, Ph.D. Northeastern University, *Professor of Informatics and of Computer Science*

George S. Lueker, Ph.D. Princeton University, *Professor Emeritus of Computer Science*

Aditi Majumder, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Computer Science*

Gloria Mark, Ph.D. Columbia University, *Professor of Informatics*

Melissa Mazmanian, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Informatics*

Gopi Meenakshisundaram, Ph.D. University of North Carolina, *Associate Professor of Computer Science*

Sharad Mehrotra, Ph.D. University of Texas at Austin, *Professor of Computer Science*

Eric D. Mjolsness, Ph.D. California Institute of Technology, *Professor of Computer Science and of Mathematics*

Bonnie Nardi, Ph.D. University of California, Irvine, *Professor of Informatics*

Alexandru Nicolau, Ph.D. Yale University, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Gary Olson, Ph.D. Stanford University, *Donald Bren Professor of Informatics*

Judy Olson, Ph.D. University of Michigan, *Donald Bren Professor of Informatics*

Hernando Ombao, Ph.D. University of Michigan, *Associate Professor of Statistics*

Donald J. Patterson III, Ph.D. University of Washington, *Associate Professor of Informatics*

Richard Pattis, M.S. Stanford University, *Senior Lecturer with Security of Employment, Computer Science and Informatics*

Deva Ramanan, Ph.D. University of California, Berkeley, *Associate Professor of Computer Science*

David F. Redmiles, Ph.D. University of Colorado, *Professor of Informatics*

Amelia C. Regan, Ph.D. University of Texas, Austin, *Professor of Computer Science*

Debra J. Richardson, Ph.D. University of Massachusetts, Amherst, *Professor of Informatics*

Isaac Scherson, Ph.D. Weizmann Institute of Science, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Babak Shahbaba, Ph.D. University of Toronto, *Assistant Professor of Statistics*

Padhraic Smyth, Ph.D. California Institute of Technology, *Professor of Computer Science and of Biomedical Engineering*

Thomas A. Standish, Ph.D. Carnegie Institute of Technology, *Professor Emeritus of Informatics*

Hal S. Stern, Ph.D. Stanford University, *Ted and Janice Smith Family Foundation Dean of the Donald Bren School of Information and Computer Sciences and Professor of Statistics*

Richard Taylor, Ph.D. University of Colorado, *Director of the Institute for Software Research and UCI Chancellor's Professor of Informatics*

Alex Thornton, B.S. University of California, Irvine, *Lecturer in Computer Science*

Bill Tomlinson, Ph.D. Massachusetts Institute of Technology; M.F.A. California Institute of the Arts, *Department Vice Chair and Associate Professor of Informatics*

Gene Tsudik, Ph.D. University of Southern California, *Director of Networked Systems and Professor of Computer Science*

Jessica Utts, Ph.D. Pennsylvania State University, *Department Chair and Professor of Statistics*

André van der Hoek, Ph.D. University of Colorado, Boulder, *Department Chair and Professor of Informatics*

Alexander V. Veidenbaum, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*

Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*

Max Welling, Ph.D. Utrecht University, *Professor of Computer Science*

Xiaohui Xie, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Computer Science*

Guoqing Harry Xu, Ph.D. Ohio State University, *Assistant Professor of Computer Science*

Yaming Yu, Ph.D. Harvard University, *Associate Professor of Statistics*

Zhaoxia Yu, Ph.D. Rice University, *Assistant Professor of Statistics*

Hadar Ziv, Ph.D. University of California, Irvine, *Lecturer in Informatics*

Courses

I&C SCI 3. Internet Technologies and their Social Impact. 4 Units.

Examines current Internet technologies and social implications at the individual, group, and societal level. Blogs, wikis, sharing of video, photos, and music, e-commerce, social networking, gaming, and virtual environments. Issues include privacy, trust, identity, reputation, governance, copyright, and malicious behavior.

(III)

I&C SCI 4. Human Factors for the Web. 4 Units.

Principles of human-computer interaction in evaluating, designing, and developing information presented on the World Wide Web. User characteristics, usability analysis, navigation and organization. Color, typography, multimedia, information visualization, prototyping, user studies, evaluation strategies. Web accessibility.

Restriction: May not be taken for credit after IN4MATX 131.

(II)

I&C SCI 5. Environmental Issues in Information Technology. 4 Units.

Explores the relationship between recent developments in information technology and current global environmental issues. Potential topics include ecoinformatics, e-waste, technological life cycle assessment, and online community building. Activities involve reading, writing, discussion, and a final project.

(II)

I&C SCI 6B. Boolean Algebra and Logic . 4 Units.

Relations and their properties; Boolean algebras, formal languages; finite automata.

Prerequisite: High school mathematics through trigonometry.

(Vb)

I&C SCI 6D. Discrete Mathematics for Computer Science. 4 Units.

Covers essential tools from discrete mathematics used in computer science with an emphasis on the process of abstracting computational problems and analyzing them mathematically. Topics include: mathematical induction, combinatorics, and recurrence relations.

Prerequisite: High school mathematics through trigonometry.

(Vb)

I&C SCI 6N. Computational Linear Algebra. 4 Units.

Matrices and linear transformations, systems of linear equations, determinants, linear vector spaces, eigenvalues and eigenvectors, orthogonal matrices, diagonalization, and least squares. Topics will be taught primarily from an algorithmic perspective, including computational solutions, applications, and numerical error analysis.

Overlaps with MATH 6G, MATH 3A.

(II, Vb)

I&C SCI 7. Introducing Modern Computational Tools. 4 Units.

A unified look at a spectrum of modern tools for building, solving, and analyzing simple computational models (deterministic and random) in diverse subject areas. Tools include those for numeric/symbolic computation, and those for acquiring, organizing, translating, processing, and displaying information.

(Va)

I&C SCI 8. Practical Computer Security. 4 Units.

Principles of practical computer security to enable students to defend themselves against malicious threats. Firewalls, anti-virus, secure setup of a wireless access point. Cryptography basics and its application. Embedded devices and related security issues.

(II)

I&C SCI 10. How Computers Work. 4 Units.

Introduction to digital computer and communication systems. Capabilities and limitations of information technology. Representing information in digital form. Overview of computer organization, Internet, operating systems, software. Human-computer interaction and social impact.

Restriction: May not be taken for credit after I&C SCI 51, I&C SCI 52, I&C SCI 105, or IN4MATX 43.

(II)

I&C SCI 11. The Internet and Public Policy. 4 Units.

How the Internet works. Current public policy issues concerning the Internet. Introductory economics. Communications law. Interactions between information technology, economics, and law. Case studies about Internet and communications policy.

Same as ECON 11.

(II or III.)

I&C SCI 21. Introduction to Computer Science I. 6 Units.

Introduces fundamental concepts related to computer software design and construction. Develops initial design and programming skills using a high-level language. Fundamental concepts of control structures, data structures, and object-oriented programming.

Same as CSE 21.

Overlaps with I&C SCI H21, I&C SCI 31, EECS 10, EECS 12, ENGRMAE 10.

Restriction: CSE 21 or I&C SCI 21 may not be taken for credit if taken after IN4MATX 42.

(II, Vb)

I&C SCI H21. Honors Introduction to Computer Science I. 6 Units.

Introduces fundamental concepts of computer software design and construction. Develops initial design and programming skills using a high-level language. Fundamental concepts of control structures, data structures, functional and object-oriented programming. Introduces topics in computer organization and social impact of technology.

Overlaps with I&C SCI 21, I&C SCI 31, CSE 21, EECS 10, EECS 12, ENGR 10.

Restriction: Information and Computer Science, Computer Science Engineering, and Computer Science majors only. Campuswide Honors Program students only. May not be taken for credit after IN4MATX 42.

(II, Vb)

I&C SCI 22. Introduction to Computer Science II. 6 Units.

Abstract behavior of classic data structures (stacks, queues, sorted and unsorted maps), alternative implementations, analysis of time, and space efficiency.

Prerequisite: CSE 21 or I&C SCI 21 or I&C SCI H21. CSE 21 with a grade of C or better. I&C SCI 21 with a grade of C or better. I&C SCI H21 with a grade of C or better.

Same as CSE 22.

Overlaps with I&C SCI H22, CSE 22, CSE 42, I&C SCI 32, CSE 43.

(II, Vb)

I&C SCI H22. Honors Introduction to Computer Science II. 6 Units.

Abstract behavior of classic data structures (stacks, queues, sorted and unsorted maps), alternative implementations. Recursion. Mathematical analysis of time and space efficiency, program analysis and correctness, system design techniques, programming paradigms.

Prerequisite: I&C SCI H21 or I&C SCI 21 or CSE 21. I&C SCI H21 with a grade of B- or better. I&C SCI 21 with a grade of A or better. CSE 21 with a grade of A or better.

Overlaps with IN4MATX 42, CSE 22, CSE 42, I&C SCI 22, I&C SCI 33, CSE 43.

(II, Vb)

I&C SCI H23. Honors Introduction to Computer Science III. 4 Units.

Builds on ICS H22 with respect to mathematical tools and analysis. Focuses on fundamental algorithms in computer science, basic data structures for primary and secondary memory, storage allocation and management techniques, data description, and design techniques.

Prerequisite: I&C SCI H22 or I&C SCI 22 or IN4MATX 42. I&C SCI H22 with a grade of B- or better. I&C SCI 22 with a grade of A or better. CSE 22 with a grade of A or better. IN4MATX 42 with a grade of A or better.

Overlaps with I&C SCI 46, CSE 46.

(Vb)

I&C SCI 31. Introduction to Programming. 4 Units.

Introduction to fundamental concepts and techniques for writing software in a high-level programming language. Covers the syntax and semantics of data types, expressions, exceptions, control structures, input/output, methods, classes, and pragmatics of programming.

Same as CSE 41.

Overlaps with I&C SCI 21, CSE 21, I&C SCI H21, EECS 10, EECS 12.

(II, Vb)

I&C SCI 32. Programming with Software Libraries. 4 Units.

Construction of programs for problems and computing environments more varied than in CSE41. Using library modules for applications such as graphics, sound, GUI, database, Web, and network programming. Language features beyond those in CSE41 are introduced as needed.

Prerequisite: I&C SCI 31 or CSE 41. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better.

Same as CSE 42.

Overlaps with I&C SCI 22, CSE 22, I&C SCI H22, IN4MATX 42.

(II and (VA or VB).)

I&C SCI 33. Intermediate Programming. 4 Units.

Intermediate-level language features and programming concepts for larger, more complex, higher-quality software. Functional programming, name spaces, modules, class protocols, inheritance, iterators, generators, operator overloading, reflection. Analysis of time and space efficiency.

Prerequisite: I&C SCI 32 or CSE 42. I&C SCI 32 with a grade of C or better. CSE 42 with a grade of C or better.

Same as CSE 43.

Overlaps with I&C SCI 33, I&C SCI 22, CSE 22, I&C SCI H22, IN4MATX 42.

(II, Vb)**I&C SCI 45C. Programming in C/C++ as a Second Language. 4 Units.**

An introduction to the lexical, syntactic, semantic, and pragmatic characteristics of the C/C++ languages for experienced programmers. Emphasis on object-oriented programming, using standard libraries, and programming with manual garbage collection. Formerly ICS 65.

Prerequisite: I&C SCI 22 or CSE 22 or IN4MATX 42 or I&C SCI 33 or CSE 43. I&C SCI 22 with a grade of C or better. CSE 22 with a grade of C or better. IN4MATX 42 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Same as CSE 45C.

I&C SCI 45J. Programming in Java as a Second Language. 4 Units.

An introduction to the lexical, syntactic, semantic, and pragmatic characteristics of the Java language for experienced programmers. Emphasis on object-oriented programming, using standard libraries, and programming with automatic garbage collection.

Prerequisite: I&C SCI 33 or CSE 43. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Overlaps with I&C SCI 22, CSE 22, I&C SCI 23, CSE 23, IN4MATX 45.

Restriction: I&C SCI 45J may not be taken for credit after I&C SCI 22, CSE 22, I&C SCI 23, CSE 23, or IN4MATX 45.

I&C SCI 46. Data Structure Implementation and Analysis. 4 Units.

Focuses on implementation and mathematical analysis of fundamental data structures and algorithms. Covers storage allocation and memory management techniques.

Prerequisite: CSE 45C or I&C SCI 45C or I&C SCI 65. CSE 45C with a grade of C or better. I&C SCI 45C with a grade of C or better. I&C SCI 65 with a grade of C or better.

Same as CSE 46.

Overlaps with I&C SCI H23.

(Vb)**I&C SCI 51. Introductory Computer Organization. 6 Units.**

Multilevel view of system hardware and software. Operation and interconnection of hardware elements. Instruction sets and addressing modes. Virtual memory and operating systems. Laboratory work using low-level programming languages. Course may be offered online.

Prerequisite: I&C SCI 21 or CSE 21 or I&C SCI 31 or CSE 41 or IN4MATX 42 or I&C SCI 6B. IN4MATX 42 with a grade of C or better.

(II)**I&C SCI 52. Introduction to Software Engineering. 6 Units.**

Introduction to concepts, methods, and current practice of software engineering. Study of large-scale software production; software life cycle models as an organizing structure; principles and techniques appropriate for each stage of production. Laboratory work involves a project illustrating these elements.

Prerequisite: I&C SCI 23. I&C SCI 23 with a grade of C or better.

Overlaps with I&C SCI 105, IN4MATX 43.

I&C SCI 53. Principles in System Design. 4 Units.

Principles and practice of engineering of computer software and hardware systems. Topics include techniques for controlling complexity; strong modularity using client-server design, virtual memory, and threads; networks; coordination of parallel activities; security and encryption; and performance optimizations.

Corequisite: I&C SCI 53L.

Prerequisite: I&C SCI 51.

I&C SCI 53L. Principles in System Design Library. 2 Units.

Required laboratory section and co-requisite for I&C SCI 53.

Corequisite: I&C SCI 53.

Prerequisite: I&C SCI 51.

I&C SCI 60. Computer Games and Society. 4 Units.

The study and critical analysis of computer games as art objects, cultural artifacts, gateways to virtual worlds, educational aids, and tools for persuasion and social change. Emphasis on understanding games in their historical and cultural context.

Overlaps with UNI STU 12A, UNI STU 12B, UNI STU 12C.

(III)**I&C SCI 61. Game Systems and Design. 4 Units.**

Principles and usage of game design elements. Introduction to technologies that support modern computer games. Students design, implement, and critique several small games.

(II)**I&C SCI 62. Game Technologies and Interactive Media. 4 Units.**

Technologies for interactive media and game design. Web-based software systems, virtual world platforms, and game engines. Emphasis on conceptual and architectural aspects of these technologies.

Prerequisite: I&C SCI 21 or CSE 21 or I&C SCI 31 or CSE 41 or IN4MATX 42. IN4MATX 42 with a grade of C or better.

I&C SCI 77A. Topics in Mathematics and Computation in the Digital Age. 4 Units.

Signals in Matlab; blurring, filtering; elements of linear algebra, statistics, optimization; blind matrix inversion; de-correlation method, stochastic gradient descent method, applications to sounds and images.

Corequisite: MATH 2J or MATH 6G

Prerequisite: MATH 2A and MATH 2B and (I&C SCI 21 or CSE 21 or IN4MATX 41)

Same as MATH 77A.

Restriction: Prerequisite required and Lower division only

(II, Va)

I&C SCI 77B. Topics in Mathematics and Computation in the Digital Age. 4 Units.

Basic concepts of collaborative filtering; Clustering; Matrix factorization & Principal Components Analysis; Regression; Classification: naive Bayes classifier, decision trees, Perceptron (neural networks).

Corequisite: MATH 2J or MATH 6G

Prerequisite: MATH 2A and MATH 2B and (I&C SCI 21 or CSE 21 or IN4MATX 41)

Same as MATH 77B.

Restriction: Prerequisite required and Lower division only

(II, Va)

I&C SCI 77C. Topics in Mathematics and Computation in the Digital Age. 4 Units.

Image de-noising, de-blurring, low pass filtering; image segmentation and classification; Sparse representation; visualization.

Corequisite: MATH 2J or MATH 6G

Prerequisite: MATH 2A and MATH 2B and (I&C SCI 21 or CSE 21 or IN4MATX 41)

Same as MATH 77C.

Restriction: Prerequisite required and Lower division only

(II, Va)

I&C SCI 77D. Topics in Mathematics and Computation in the Digital Age. 4 Units.

Combinatorial Game Theory - game classification, tree graphs, strategy analysis, Sprague Grundy functions, Bouton's Theorem; Zero-Sum and General-Sum Game Theory - pay off matrices, Minimax Theorem, Nash equilibrium; Machine learning - Search algorithms.

Corequisite: MATH 2J or MATH 6G

Prerequisite: MATH 2A and MATH 2B and (I&C SCI 21 or CSE 21 or IN4MATX 41)

Same as MATH 77D.

Restriction: Prerequisite required and Lower division only

(II, Va)

I&C SCI 80. Special Topics in Information and Computer Science. 2-4 Units.

Studies in selected areas of information and computer sciences. Topics addressed vary each quarter.

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

I&C SCI 90. New Students Seminar. 1 Unit.

Introduces students to the Donald Bren School of Information and Computer Sciences. Focuses on advising students making the transition to UCI, community building, and mostly surveying the technical areas within departments in ICS, via talks by faculty on their research.

Grading Option: Pass/no pass only.

I&C SCI 105. Digital Information Systems. 4 Units.

Design and analysis of digital information systems. Covers underlying database and network technology, and software engineering principles used to build these systems. Evaluating digital information systems, and recognizing common flaws and vulnerabilities.

Prerequisite: I&C SCI 10 or I&C SCI 21 or CSE 21 or I&C SCI H21 or IN4MATX 41. I&C SCI 10 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. I&C SCI H21 with a grade of C or better. IN4MATX 41 with a grade of C or better.

Overlaps with I&C SCI 52, IN4MATX 43.

I&C SCI 139W. Critical Writing on Information Technology. 4 Units.

Study and practice of critical writing and oral communication as it applies to information technology. Each student writes assignments of varying lengths, totaling at least 4,000 words.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only.

(Ib)

I&C SCI 160. Graphics Processors and Game Platforms. 4 Units.

Principles of computer architecture emphasizing hardware used with general purpose processor to support high-performance computer games and graphics engines.

Prerequisite: I&C SCI 51.

Overlaps with COMPSCI 152.

I&C SCI 161. Game Engine Lab. 4 Units.

The use of an open source game or graphics engine in the design and implementation of a computer game. Principles of game engine design. Students work on teams to design, implement, and evaluate new computer games based on an engine.

Prerequisite: I&C SCI 45C or I&C SCI 65.

I&C SCI 162. Modeling and World Building. 4 Units.

Use of 3D modeling software and related tools to design and create animated, textured models and expansive virtual worlds incorporating objects, scenes, and venues for activity within game worlds and online environments.

Prerequisite: COMPSCI 112.

I&C SCI 163. Mobile and Ubiquitous Games. 4 Units.

Design and technology of mobile games, including mixed reality gaming, urban games, and locative media. Case studies of significant systems. Uses and limitations of location-based technologies. Infrastructures and their relationships to gameplay and design.

Prerequisite: I&C SCI 61 and (I&C SCI 10 or I&C SCI 21 or I&C SCI 31 or IN4MATX 41).

I&C SCI 166. Game Design. 4 Units.

Game design takes into consideration psychology, narrative, platform features and limitations, marketing, computer science capabilities, human-computer interface principles, industry trends, aesthetic judgment, and other factors. Students focus on video game design through lectures, readings, presentations, implementation, and play testing.

Prerequisite: I&C SCI 61 and (IN4MATX 43 or I&C SCI 52).

I&C SCI 167. Multiplayer Game Systems. 4 Units.

Foundations and technologies that enable multiuser, networked, and persistent virtual environments. Emphasis on database design and management, network protocols, and concurrency control to accommodate large numbers of simultaneous users.

Corequisite: I&C SCI 160.

Prerequisite: I&C SCI 51.

I&C SCI 168. Multiplayer Game Project. 4 Units.

Designing and implementing a multiuser, networked, and persistent virtual environment or game. Emphasis on cultural aspects, community building, user interface issues and design, security, privacy, and economics.

Prerequisite: (I&C SCI 52 or IN4MATX 43) and I&C SCI 167. IN4MATX 43 with a grade of C or better.

I&C SCI 169A. Capstone Game Project I. 4 Units.

Students work in teams to design and implement a new computer game or virtual world. Emphasis on sound, art, and level design, building a community, cut scenes, production values, full utilization of hardware and software platform, and current industry trends.

Prerequisite: I&C SCI 168.

Grading Option: In progress only.

I&C SCI 169B. Capstone Game Project II. 4 Units.

Students work in teams to design and implement a new computer game or virtual world. Emphasis on sound, art, and level design, building a community, cut scenes, production values, full utilization of hardware and software platform, and current industry trends.

Prerequisite: I&C SCI 169A.

I&C SCI 192. Industrial or Public Sector Field Study. 2 Units.

Students participate in an off-campus, supervised internship for a minimum of 60 hours. Students apply classroom knowledge through internship projects in the private sector or nonprofit agencies.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 2 times.

I&C SCI 193. Tutoring in ICS. 2 Units.

Principles and practice of providing technical assistance to novice learners in information and computer sciences.

Repeatability: May be taken for credit for 18 units.

Restriction: ICS Peer Tutoring Program students only.

I&C SCI H197. Honors Seminar. 2 Units.

An overview of computer science and selected recent trends in research. Students attend talks on current faculty research, with opportunities for discussion.

Grading Option: Pass/no pass only.

Restriction: Bren School of ICS Honors Program or Campuswide Honors Program students only.

I&C SCI 398A. Teaching Assistant Training Seminar. 2 Units.

Theories, methods, and resources for teaching computer science at the university level, particularly by teaching assistants. Classroom presentations, working with individuals, grading, motivating students. Participants will give and critique presentations and may be videotaped while teaching.

Grading Option: Satisfactory/unsatisfactory only.

I&C SCI 398B. Advanced Teaching Assistant Seminar. 4 Units.

Teaching computer science at the university level, emphasizing issues in teaching an entire course. Course organization, designing examinations and projects, grading, motivating students. Participants will begin to assemble teaching portfolios.

Prerequisite: EDUC 398A.

Grading Option: Satisfactory/unsatisfactory only.

I&C SCI 399. University Teaching. 4 Units.

Involves on-the-job experience for Teaching Assistants.

Repeatability: May be repeated for credit unlimited times.

Restriction: Teaching assistants only.

Department of Computer Science

Michael T. Goodrich, **Department Chair**

Chen Li, **Department Vice Chair**

Undergraduate Major in Computer Science

The Computer Science major emphasizes the principles of computing that underlie our modern world, and provides a strong foundational education to prepare students for the broad spectrum of careers in computing. This major can serve as preparation for either graduate study or a career in industry. Students receive a solid background in low-level architecture and systems; middle-level infrastructure, algorithms, and mathematical foundations. This is a highly flexible degree that allows students to explore a broad range of topics in modern computing. In order to achieve some focus in their upper-division studies, students are required to satisfy the requirements for one of the eight specializations described below. Additional electives can be used to satisfy a second specialization or obtain a broader understanding of the field.

Algorithms. This specialization focuses on fundamental computational techniques, including their analysis and applications to topics in computer vision, computer games, graphics, artificial intelligence, and information retrieval. Topics include data structures, graph and network algorithms, computational geometry, probabilistic algorithms, complexity theory, and cryptography.

Architecture and Embedded Systems. This specialization integrates principles of embedded systems, software, hardware, computer architecture, distributed systems and networks, and prepares students to design and create efficient hardware/software architectures for emerging application areas. Students in this specialization will build upon a strong foundation in software and hardware and learn how to design networked embedded systems, and efficient computer architectures for a diverse set of application domains such as gaming, visualization, search, databases, transaction processing, data mining, and high-performance and scientific computing.

Bioinformatics. This specialization introduces students to the interdisciplinary intersection of biology and medicine with computer science and information technology. Students who complete the specialization will understand biomedical computing problems from the computer science perspectives, and be able to design and develop software that solves computational problems in biology and medicine.

Information. This specialization is intended to prepare students for working with and developing a wide variety of modern data and information systems. Topics covered by this concentration include database management, information retrieval, Web search, data mining, and data-intensive computing.

Intelligent Systems. This specialization will introduce students to the principles underlying intelligent systems, including topics such as representing human knowledge, building automated reasoning systems, developing intelligent search techniques, and designing algorithms that adapt and learn from data. Students in this specialization will use these principles to solve problems across a variety of applications such as computer vision, information retrieval, data mining, automated recommender systems, bioinformatics, as well as individually designed projects.

Networked Systems. This specialization focuses on Internet architecture, Internet applications, and network security. It also encourages students to learn about operating systems, databases, search, programming, embedded systems, and performance.

Systems and Software. This specialization deals with principles and design of systems and software. It emphasizes the interaction between software and the computing infrastructure on which it runs and the performance impact of design decisions. Core topics include the hardware/software interface, languages and compilers, operating systems, parallel and distributed computing. Elective topics include networking, security, graphics, and databases.

Visual Computing. This specialization encompasses the digital capture, processing, synthesis and display of visual data such as images and video. This specialization includes computer vision, image processing, and graphics, and covers such topics as the representation of 3D objects, visual recognition of objects and people, interactive and photo-realistic image rendering, and physics and perception of light and color.

The Department also offers a joint undergraduate degree in Computer Science and Engineering, in conjunction with The Henry Samueli School

of Engineering; information is available in the Interdisciplinary Studies (p. 637) section of the *Catalogue*.

Admissions

Freshman Applicants: See the Undergraduate Admissions (p. 38) section.

Transfer Applicants:

Junior-level applicants who satisfactorily complete course requirements will be given preference for admission. Applicants must satisfy the following requirements:

1. Complete one year of approved college-level math, preferably courses in calculus equivalent to UCI's MATH 2A-MATH 2B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. Completion of one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Python, Scheme, C++, or other object-oriented or high-level programming language.

*NOTE: Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java and C++ are used in the curriculum; therefore, transfer students should plan to learn these languages by studying on their own or by completing related programming courses prior to their first quarter at UCI.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree.

Requirements for the B.S. Degree in Computer Science

All students must meet the University Requirements (p. 60).

Major Requirements

Lower-division

A. Core	
I&C SCI 31	Introduction to Programming
I&C SCI 32	Programming with Software Libraries
I&C SCI 33	Intermediate Programming
I&C SCI 51	Introductory Computer Organization
I&C SCI 45C	Programming in C/C++ as a Second Language
I&C SCI 46	Data Structure Implementation and Analysis
I&C SCI 53	Principles in System Design
I&C SCI 53L	Principles in System Design Library
I&C SCI 90	New Students Seminar
IN4MATX 43	Introduction to Software Engineering
B. Complete:	
MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
I&C SCI 6B	Boolean Algebra and Logic

I&C SCI 6D	Discrete Mathematics for Computer Science
I&C SCI 6N or MATH 3A	Computational Linear Algebra Introduction to Linear Algebra
STATS 67	Introduction to Probability and Statistics for Computer Science

C. Two courses approved for General Education category II except those offered by CSE, Economics, ICS, or Mathematics. University Studies courses can be used with the approval of the CS Vice Chair for Undergraduate Studies.

Upper-division

A. Core

COMPSCI 161	Design and Analysis of Algorithms
I&C SCI 139W	Critical Writing on Information Technology

B. Electives: Select eleven of the following:

COMPSCI 111–189	
IN4MATX 102	Concepts of Programming Language II
IN4MATX 113	Requirements Analysis and Engineering
IN4MATX 115	Software Testing, Analysis, and Quality Assurance
IN4MATX 121	Software Design I
IN4MATX 122	Software Design II
IN4MATX 123	Software Architecture
IN4MATX 131	Human Computer Interaction
IN4MATX 133	User Interaction Software
IN4MATX 134	Project in User Interaction Software
I&C SCI 160	Graphics Processors and Game Platforms
I&C SCI 161	Game Engine Lab
I&C SCI 162	Modeling and World Building

C. The upper-division electives must satisfy the following criteria:

1. At least two project courses from:

COMPSCI 113	Computer Game Development
COMPSCI 114	Projects in Advanced 3D Computer Graphics
COMPSCI 117	Project in Computer Vision
COMPSCI 122B	Project in Databases and Web Applications
COMPSCI 122C	Principles of Data Management
COMPSCI 133	Advanced Computer Networks
COMPSCI 142B	Language Processor Construction
COMPSCI 143B	Project in Operating System Organization
COMPSCI 145A- 145B	Embedded Computing Systems and Embedded Computing System Lab
COMPSCI 153	Logic Design Laboratory
COMPSCI 154	Computer Design Laboratory
COMPSCI 165	Project In Algorithms And Data Structures
COMPSCI 175	Project in Artificial Intelligence
COMPSCI 189	Project in Bioinformatics

IN4MATX 134	Project in User Interaction Software
-------------	--------------------------------------

2. The set of chosen electives should satisfy at least one of the following specializations:

Algorithms

Two courses from:

COMPSCI 111	Digital Image Processing
COMPSCI 112	Computer Graphics
COMPSCI 116	Computational Photography and Vision
COMPSCI 121	Information Retrieval
COMPSCI 125	Next Generation Search Systems
COMPSCI 171	Introduction to Artificial Intelligence
COMPSCI 178	Machine Learning and Data-Mining
COMPSCI 184A	Representations and Algorithms for Molecular Biology

and at least four courses from:

COMPSCI 162	Formal Languages and Automata
COMPSCI 163	Graph Algorithms
COMPSCI 164	Computational Geometry and Geometric Modeling
COMPSCI 165	Project In Algorithms And Data Structures
COMPSCI 167	Introduction to Applied Cryptography
COMPSCI 168	Network Optimization
COMPSCI 169	Introduction to Optimization
COMPSCI 177	Applications of Probability in Computer Science
COMPSCI 179	Algorithms for Probabilistic and Deterministic Graphical Models

Architecture and Embedded Systems

COMPSCI 145A- 145B	Embedded Computing Systems and Embedded Computing System Lab (counts as one course)
COMPSCI 151	Digital Logic Design
COMPSCI 152	Computer Systems Architecture
and two courses from:	
COMPSCI 131	Parallel and Distributed Computing
COMPSCI 132	Computer Networks
COMPSCI 142A	Compilers and Interpreters
COMPSCI 143A	Principles of Operating Systems
COMPSCI 144	High-performance Computers and Program Optimization

and three courses from:

COMPSCI 113	Computer Game Development
COMPSCI 133	Advanced Computer Networks
COMPSCI 142B	Language Processor Construction
COMPSCI 143B	Project in Operating System Organization
COMPSCI 144	High-performance Computers and Program Optimization
COMPSCI 146	Programming in Multitasking Operating Systems
COMPSCI 153	Logic Design Laboratory
COMPSCI 154	Computer Design Laboratory

Bioinformatics

COMPSCI 178	Machine Learning and Data-Mining
COMPSCI 184A	Representations and Algorithms for Molecular Biology
COMPSCI 189	Project in Bioinformatics
and three courses from:	
COMPSCI 122A	Introduction to Data Management
COMPSCI 163	Graph Algorithms
COMPSCI 171	Introduction to Artificial Intelligence
COMPSCI 175	Project in Artificial Intelligence
COMPSCI 184B	Probabilistic Modeling of Biological Data
COMPSCI 184C	Computational Systems Biology
one of which must be:	
COMPSCI 184B	Probabilistic Modeling of Biological Data
or COMPSCI 184C	Computational Systems Biology

Information

COMPSCI 121	Information Retrieval
COMPSCI 122A	Introduction to Data Management
COMPSCI 178	Machine Learning and Data-Mining
and three courses from:	
COMPSCI 122B	Project in Databases and Web Applications
COMPSCI 125	Next Generation Search Systems
COMPSCI 132	Computer Networks
COMPSCI 134	Computer and Network Security
COMPSCI 141	Concepts in Programming Languages I
COMPSCI 142A	Compilers and Interpreters
COMPSCI 143A	Principles of Operating Systems
COMPSCI 163	Graph Algorithms
COMPSCI 165	Project In Algorithms And Data Structures
COMPSCI 167	Introduction to Applied Cryptography
COMPSCI 179	Algorithms for Probabilistic and Deterministic Graphical Models
at least one of which must be:	
COMPSCI 122B	Project in Databases and Web Applications
or COMPSCI 125	Next Generation Search Systems
or COMPSCI 179	Algorithms for Probabilistic and Deterministic Graphical Models

Intelligent Systems

COMPSCI 171	Introduction to Artificial Intelligence
COMPSCI 175	Project in Artificial Intelligence
COMPSCI 178	Machine Learning and Data-Mining
and at least one course from:	
COMPSCI 177	Applications of Probability in Computer Science
or COMPSCI 179	Algorithms for Probabilistic and Deterministic Graphical Models
and at least one course from:	
COMPSCI 162	Formal Languages and Automata

COMPSCI 163	Graph Algorithms
COMPSCI 164	Computational Geometry and Geometric Modeling
COMPSCI 168	Network Optimization
COMPSCI 169	Introduction to Optimization
and at least one course from:	
COMPSCI 116	Computational Photography and Vision
COMPSCI 121	Information Retrieval
COMPSCI 125	Next Generation Search Systems
COMPSCI 174	Bioinformatics
COMPSCI 184B	Probabilistic Modeling of Biological Data

Networked Systems

COMPSCI 132	Computer Networks
COMPSCI 133	Advanced Computer Networks
COMPSCI 143A	Principles of Operating Systems
and four courses from:	
COMPSCI 115	Computer Simulation
COMPSCI 121	Information Retrieval
COMPSCI 122A	Introduction to Data Management
COMPSCI 122B	Project in Databases and Web Applications
COMPSCI 125	Next Generation Search Systems
COMPSCI 131	Parallel and Distributed Computing
COMPSCI 134	Computer and Network Security
COMPSCI 137	Internet Applications Engineering
COMPSCI 141	Concepts in Programming Languages I
COMPSCI 143B	Project in Operating System Organization
COMPSCI 145A	Embedded Computing Systems
COMPSCI 146	Programming in Multitasking Operating Systems
COMPSCI 163	Graph Algorithms
COMPSCI 167	Introduction to Applied Cryptography
COMPSCI 168	Network Optimization
COMPSCI 169	Introduction to Optimization
COMPSCI 177	Applications of Probability in Computer Science
at least two of which must be from:	
COMPSCI 131	Parallel and Distributed Computing
COMPSCI 134	Computer and Network Security
COMPSCI 137	Internet Applications Engineering
COMPSCI 143B	Project in Operating System Organization
COMPSCI 167	Introduction to Applied Cryptography

Systems and Software

COMPSCI 131	Parallel and Distributed Computing
COMPSCI 141	Concepts in Programming Languages I
COMPSCI 142A	Compilers and Interpreters
COMPSCI 143A	Principles of Operating Systems
COMPSCI 152	Computer Systems Architecture

and two courses from:	
COMPSCI 112	Computer Graphics
COMPSCI 122A	Introduction to Data Management
COMPSCI 122B	Project in Databases and Web Applications
COMPSCI 132	Computer Networks
COMPSCI 134	Computer and Network Security
COMPSCI 142B	Language Processor Construction
COMPSCI 143B	Project in Operating System Organization
COMPSCI 144	High-performance Computers and Program Optimization
COMPSCI 145A- 145B	Embedded Computing Systems and Embedded Computing System Lab
COMPSCI 146	Programming in Multitasking Operating Systems

at least one of which must be:

COMPSCI 142B or COMPSCI 143B	Language Processor Construction Project in Operating System Organization
---------------------------------	---

Visual Computing

COMPSCI 111	Digital Image Processing
COMPSCI 112	Computer Graphics
COMPSCI 116	Computational Photography and Vision

and three courses from:

COMPSCI 114	Projects in Advanced 3D Computer Graphics
COMPSCI 115	Computer Simulation
COMPSCI 117	Project in Computer Vision
COMPSCI 163	Graph Algorithms
COMPSCI 164	Computational Geometry and Geometric Modeling
COMPSCI 169	Introduction to Optimization
COMPSCI 171	Introduction to Artificial Intelligence
COMPSCI 178	Machine Learning and Data-Mining
I&C SCI 160	Graphics Processors and Game Platforms
I&C SCI 161	Game Engine Lab
I&C SCI 162	Modeling and World Building

at least one of which must be:

COMPSCI 114	Projects in Advanced 3D Computer Graphics
or COMPSCI 117	Project in Computer Vision

Minor in Bioinformatics

The minor provides a focused study of bioinformatics to supplement a student's major program of study and prepares students for a profession, career, or academic pursuit in which biomedical computing is an integral part but is not the primary focus. The Bioinformatics minor contributes to students' competence in computing applied to biomedical problems and data, as well as exposing them to the fundamentals of the life sciences from a computer science perspective. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests.

Students who complete the minor requirements will be able to do the following: synthesize computer science, quantitative methods, and biological science; understand the synergistic set of reciprocal influences between life and computational sciences and technologies; discuss biomedical computing problems and corresponding computer science perspectives; and employ principles, methods, and technologies fundamental to biomedical computing.

Requirements

Select one of the following:

I&C SCI 21- 22	Introduction to Computer Science I and Introduction to Computer Science II
----------------	--

or

I&C SCI 31/CSE 41	Introduction to Programming
-------------------	-----------------------------

Complete:

I&C SCI 32/CSE 42	Programming with Software Libraries
I&C SCI 33/CSE 43	Intermediate Programming
BIO SCI 93	From DNA to Organisms
COMPSCI 183/BIO SCI M123	Introduction to Computational Biology
COMPSCI 184A	Representations and Algorithms for Molecular Biology
COMPSCI 184B	Probabilistic Modeling of Biological Data
or COMPSCI 184C	Computational Systems Biology
COMPSCI 189	Project in Bioinformatics

Undergraduate Major in Computer Science and Engineering (CSE)

This program is administered jointly by the Department of Computer Science in the Bren School of ICS, and the Department of Electrical Engineering and Computer Science (EECS) in The Henry Samueli School of Engineering. For information, see the Interdisciplinary Studies (p. 637) section of the *Catalogue*.

Requirements for the B.S. Degree in Computer Science and Engineering

All students must meet the University Requirements (p. 60).

Major Requirements: See the Interdisciplinary Studies (p. 637) section.

Graduate Program in Computer Science

The field of Computer Science is concerned with the design, analysis, and implementation of computer systems as well as the use of computation as it is applied to virtually every field of study and use in the everyday world. Computer systems can range in scope from small embedded systems to the Internet as a whole. Research in computer science involves mathematical analysis, empirical experimentation, and the implementation of prototype systems. Core research areas include artificial intelligence and machine learning, bioinformatics, computer architecture, embedded systems, graphics and visual computing, databases and information management, multimedia, networked and distributed systems, programming languages and compilers, security and cryptography, design and analysis of algorithms, scientific computing, and ubiquitous computing.

The M.S. and Ph.D. degrees in Computer Science (CS) are broad and flexible programs which offer students opportunities for graduate study in the full spectrum of intellectual activity in computer science.

Master of Science in Computer Science

The course requirements for the M.S. are identical to those of the Ph.D., although completion plans differ. For additional information about the M.S. completion plan options, the Bren School of ICS's graduate programs, and general information about admissions, click here (p. 578).

Doctor of Philosophy in Computer Science

Required Courses

Each student must complete at least 47 units of course work with an average GPA of at least 3.5 for Ph.D. students and 3.0 for M.S. students. In addition, students must receive at least a B in each course counted toward filling these requirements. The set of core and elective courses chosen by a student must be approved by the student's research advisor before advancement to candidacy. Faculty associated with each research area will provide suggested curricula for that area to guide students in their selection of courses. These curricula will also help Ph.D. students to prepare for their candidacy examination (see below) which must be taken in a specific research area.

Students must complete three quarters of COMPSCI 200S, four core courses, and seven elective courses. The course requirements are as follows:

Students must select four areas from the list of seven areas given below. From each area, they must select at least one of the courses listed for that area.

Data Structures and Algorithms

COMPSCI 260	Fundamentals of the Design and Analysis of Algorithms
COMPSCI 261	Data Structures
COMPSCI 263	Analysis of Algorithms

Architecture/Embedded Systems

COMPSCI 250A	Computer Systems Architecture
COMPSCI 244	Introduction to Embedded and Ubiquitous Systems

System Software

COMPSCI 241	Advanced Compiler Construction
COMPSCI 243	High-Performance Architectures and Their Compilers
COMPSCI 230	Distributed Computer Systems

Artificial Intelligence

COMPSCI 271	Introduction to Artificial Intelligence
COMPSCI 273A	Machine Learning

Networks/Multimedia

COMPSCI 232	Computer and Communication Networks
COMPSCI 203	Network and Distributed Systems Security
COMPSCI 212	Multimedia Systems and Applications

Database Systems

COMPSCI 222	Principles of Data Management
COMPSCI 223	Transaction Processing and Distributed Data Management

Scientific and Visual Computing

COMPSCI 206	Principles of Scientific Computing
COMPSCI 211A	Visual Computing

Seven elective courses from any set of CS, Informatics, or Statistics courses, including the above core courses, but excluding COMPSCI 290, COMPSCI 298, COMPSCI 299, or any course with a suffix of "S."

Two of these courses can be graduate courses offered by a department outside of ICS, with written consent of the advisor (M.S. students must obtain written consent from the Computer Science Vice Chair for Graduate Studies).

Two of the courses can be undergraduate courses from the following list:

COMPSCI 111	Digital Image Processing
COMPSCI 112	Computer Graphics
COMPSCI 122A	Introduction to Data Management
COMPSCI 132	Computer Networks
COMPSCI 142A	Compilers and Interpreters
COMPSCI 143A	Principles of Operating Systems
COMPSCI 152	Computer Systems Architecture
COMPSCI 161	Design and Analysis of Algorithms
COMPSCI 171	Introduction to Artificial Intelligence
COMPSCI 178	Machine Learning and Data-Mining

I&C SCI 161	Game Engine Lab
I&C SCI 162	Modeling and World Building
I&C SCI 163	Mobile and Ubiquitous Games
I&C SCI 166	Game Design

Students may not retake courses they have used toward an undergraduate degree and receive credit toward the graduate requirements.

No more than two undergraduate courses or COMPSCI 295s may be taken to satisfy elective course requirements.

Ph.D. students are required to serve as teaching assistants for at least two quarters.

Research Project for the Ph.D. Degree

Doctoral students must find a faculty advisor and successfully complete a research project with that faculty member by the end of their second year. In coordination with this project the student must also take at least one independent studies course (COMPSCI 299) with their faculty advisor. The objective of the research project is to demonstrate early in the program the student's ability to carry out basic research in computer science.

Finally, the student must present the outcome of the research in a technical report, which must be approved by the advisor. The project may or may not be a stepping-stone toward a dissertation, and must be completed by the end of the second year, and prior to advancement to candidacy.

Advancement to Candidacy Examination

The objective of the candidacy examination is to demonstrate in-depth knowledge of an area of computer science and readiness to carry out independent research at the doctoral level in that area. The student must complete all pre-candidacy course requirements and the research project prior to advancing to candidacy. All requirements for candidacy including the candidacy examination must be completed by the end of the third year (or, for students entering the program with an M.S. in Computer Science, by the end of the second year). If the student does not pass on the first trial, the student will be allowed until the end of the first quarter of the fourth year to advance to candidacy. Consult the ICS Graduate Office for policies regarding committee membership. The format is an oral examination during which the student is tested on knowledge relevant to the chosen area of specialization. Each area is defined by a set of topics and reading list, which are maintained by the Computer Science Department office. New areas or changes to existing areas must be approved by a majority vote of the CS faculty in accordance with the Department's bylaws. The current areas include the following: Algorithms and Data Structures; Computer Architecture and Embedded Systems; Database Systems and Multimedia; Computer Networks; Distributed Systems; Artificial Intelligence and Machine Learning; Informatics in Biology and Medicine; Computer Graphics and Visual Computing; Cryptography and Computer Security; Computational Neuroscience; Scientific Computing; Systems Software.

The examination is graded pass or fail. In order to pass, the Candidacy Committee must unanimously approve the final outcome. In the case of a fail, the examination may be retaken once. Students who fail on the second try will be recommended for disqualification from the doctoral program.

Doctoral Dissertation Topic Defense

The student must produce a substantial written document representing the dissertation plan. This must include the proposed dissertation abstract, a dissertation outline, and a detailed plan for completing the work. A dissertation defense committee is formed in accordance with UCI Senate regulations. The dissertation committee must unanimously approve the student's proposal. At the discretion of the student's advisor, the student may be required to give an oral presentation of the proposed plan to the committee. This must be completed by the end of the fourth year. It is expected that this will be done at least a year prior to the final examination and before most of the dissertation research and writing are undertaken. The idea is for students to demonstrate that they have a clear plan for carrying out the research for their dissertation. It also gives the student an understanding of what will be expected for final approval of the dissertation.

Doctoral Dissertation and Final Examination

Ph.D. students are required to complete a Ph.D. dissertation in accordance with Academic Senate regulations. In addition, they must pass an oral dissertation defense which consists of a public seminar presenting results followed by a private examination by the doctoral committee and other interested members of the Computer Science Department faculty.

Students entering the Ph.D. program with an M.S. in Computer Science must advance to candidacy within two years. All others must advance within three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Graduate Program in Mathematical and Computational Biology

The graduate program in Mathematical and Computational Biology (MCB) is a one-year "gateway" program designed to function in concert with selected graduate programs, including the Ph.D. in Computer Science. The time to degree for students entering the Ph.D. program in Computer Science from MCB begins when the student first transfers to the Computer Science program. Detailed information is available online at <http://mcsb.bio.uci.edu/> and in the School of Biological Sciences (p. 196) section of the *Catalogue*.

Faculty

Shannon Alfaro: Embedded computer systems

Pierre Baldi: Bioinformatics, machine learning

Lubomir Bic: Parallel and distributed computing, mobile agents

Elaheh Bozorgzadeh: Design automation and synthesis for embedded systems, VLSI CAD, and reconfigurable computing

Michael Carey: Database management systems, data-intensive computing

Rina Dechter: Complexity of automated reasoning models, constraint-based reasoning, distributed connectionist models, causal models, probabilistic reasoning

Michael Dillencourt: Computational geometry, analysis of algorithms, data structures

Nikil Dutt: Embedded systems, computer architecture, electronic design automation, software systems, brain-inspired architectures and computing

Magda El Zarki: Telecommunications, networks, wireless communication, video transmission

David Eppstein: Analysis of algorithms, computational geometry, graph theory

Julian Feldman: Social and organizational impacts of computer resource management; economics of computing

Charles Fowlkes: Computer vision, machine learning, computational biology

Michael Franz: Systems software, particularly compilers and virtual machines, trustworthy computing, software engineering

Daniel Frost: Artificial intelligence, software engineering, computer graphics, teaching of programming

Tony Givargis: Embedded systems, platform-based system-on-a-chip design, low-power electronics

Michael Goodrich: Computer security, algorithm design, data structures, Internet algorithmics, geometric computing, graphic drawing

Richard Granger: Computational and cognitive neuroscience

Ian Harris: Hardware/software covalidation, manufacturing test

Wayne Hayes: High-performance scientific computing, dynamical systems and chaos, applied mathematics, graph theory, optimization

Daniel Hirschberg: Analysis of algorithms, concrete complexity, data structures, models of computation

Alexander Ihler: Artificial intelligence, automated reasoning, machine learning, data mining

Sandy Irani: Analysis of algorithms; quantum computation, online algorithms

Ramesh C. Jain: Computer vision, media information systems, experimental environments

Stanislaw Jarecki: Cryptography, security, fault-tolerant distributed computing

Scott Jordan: Pricing and differentiated services in the Internet, resource allocation in wireless multimedia networks, and telecommunications policy

David G. Kay: Computer law, computer science education

Dennis Kibler: Machine learning, genomic analysis

Alfred Kobsa: User modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science

Richard Lathrop: Modeling structure and function, machine learning, intelligent systems and molecular biology, protein structure/function prediction

Chen Li: Databases, information systems, search, data quality, data-intensive computing

George Lueker: Computational complexity; probabilistic analysis of algorithms; data structures

Aditi Majumder: Novel displays and cameras for computer graphics and visualization, human-computer interaction, applied computer vision

Gopi Meenakshisundaram: Geometry and topology for computer graphics, image-based rendering, object representation, surface reconstruction, collision detection, virtual reality, telepresence

Sharad Mehrotra: Multimedia information systems, multidimensional databases, uncertainty processing in databases, data structures, information retrieval, distributed databases, workflow automation

Eric Mjolsness: Computational biology, machine learning, scientific modeling languages, artificial intelligence

Alexandru Nicolau: Architecture, parallel computation, and programming languages and compilers

Richard Pattis: Microworlds for teaching programming, debugging, computational tools for non-computer scientists

Deva Ramanan: Artificial intelligence: automated reasoning, machine learning, data mining; large-scale data analysis: information access and management, databases, information infrastructure; computer graphics, visualization, digital arts

Amelia Regan: Operations research, large-scale network optimization, ad hoc vehicular networks, distributed and parallel computing

Isaac Scherson: Parallel computing architectures, massively parallel systems, parallel algorithms, complexity, orthogonal multiprocessing systems

Padhraic Smyth: Statistical pattern recognition, automated analysis of large data sets, applications of probability and statistics to problems in artificial intelligence

Gene Tsudik: Security and cryptography, networks and operating systems

Alexander Veidenbaum: Computer architecture, interconnection networks, compilers, embedded systems

Nalini Venkatasubramanian: Parallel and distributed systems, multimedia servers and applications, internetworking, high-performance architectures, resource management

Max Welling: Statistical machine learning and probabilistic inference with applications to pattern recognition and computer vision

Xiaohui Xie: Artificial intelligence, automated reasoning, machine learning, data mining, biomedical informatics, computational biology

Harry Xu: Programming languages, compilers, software systems

Affiliated Faculty

Nader Bagherzadeh: Parallel processing, computer architecture, computer graphics, VLSI design

Pai Chou: Hardware/software co-design, embedded systems, component-based design, specification methodology, interface synthesis, real-time systems

Brian Demsky: Software reliability, compilers, programming languages, software engineering, robust software, data structure repair

Rainer Doemer: System-level design, embedded computer systems, design methodologies, specification and modeling languages

Paul Dourish: Human-computer interaction, computer-supported cooperative work

Daniel Gajski: Computer and information systems, software/hardware codesign, algorithms and methodologies for embedded systems, CAD environments, science of design

Jean-Luc Gaudiot: Parallel processing, computer architecture, processor architecture

Jeffery Krichmar: Neurorobotics, embodied cognition, biologically plausible models of learning and memory, and the effect of neural architecture on neural function

Fadi Kurdahi: VLSI system design, design automation of digital systems

Cristina Videira Lopes: Programming languages, acoustic communications, operating systems, software engineering

Athina Markopoulou: Design, analysis, and optimization of network protocols and algorithms

Phillip Sheu: Semantic computing, complex biological systems and future Internet technologies

Alice Silverberg: Theory of abelian varieties, application of arithmetic algebraic geometry to cryptography

Mark Steyvers: Computational models of memory, reasoning, and perception

Hong-Kai Zhao: Computational applied mathematics

Courses

COMPSCI 111. Digital Image Processing. 4 Units.

Introduction to the fundamental concepts of digital signal and image processing as applicable in areas such as multimedia, graphics, AI, data mining, databases, vision, or video games. Topics include image representation, space- and frequency-domain transformations, filters, segmentation, and compression.

Prerequisite: (I&C SCI 23 or CSE 23 or I&C SCI 46 or CSE 46) and I&C SCI 6D and (MATH 6G or MATH 3A or I&C SCI 6N). I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. I&C SCI 6D with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better.

COMPSCI 112. Computer Graphics. 4 Units.

Introduction to the fundamental principles of 3D computer graphics including polygonal modeling, geometric transformations, visibility algorithms, illumination models, texturing, and rasterization. Use of an independently-learned 3D graphics API to implement these techniques.

Prerequisite: (I&C SCI 22 or CSE 22 or I&C SCI H22 or I&C SCI 33 or CSE 43) and (I&C SCI 65 or I&C SCI 45C or CSE 45C) and (MATH 6G or MATH 3A or I&C SCI 6N). I&C SCI 22 with a grade of C or better. CSE 22 with a grade of C or better. I&C SCI H22 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 65 with a grade of C or better. I&C SCI 45C with a grade of C or better. CSE 45C with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better.

COMPSCI 113. Computer Game Development. 4 Units.

Introduction to the principles of interactive 2D and 3D computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work.

Prerequisite: COMPSCI 112 or COMPSCI 171 or IN4MATX 121 or ART 106B or I&C SCI 163 or I&C SCI 166.

Same as IN4MATX 125.

COMPSCI 114. Projects in Advanced 3D Computer Graphics. 4 Units.

Projects in advanced 3D graphics such as illumination, geometric modeling, visualization, and animation. Topics may include physically based and global illumination, solid modeling, curved surfaces, multiresolution modeling, image-based rendering, basic concepts of animation, and scientific visualization.

Prerequisite: COMPSCI 112 and (I&C SCI 65 or I&C SCI 45C or CSE 45C). I&C SCI 45C with a grade of C or better. CSE 45C with a grade of C or better. Recommended: COMPSCI 161 or CSE 161 or COMPSCI 164 or COMPSCI 165.

COMPSCI 115. Computer Simulation. 4 Units.

Discrete event-driven simulation; continuous system simulation; basic probability as pertaining to input distributions and output analysis; stochastic and deterministic simulation; static and dynamic system simulation.

Prerequisite: I&C SCI 6B and (MATH 6G or I&C SCI 6N) and STATS 67 and I&C SCI 51 and (I&C SCI 52 or IN4MATX 43). I&C SCI 6B with a grade of C or better. MATH 6G with a grade of C or better. I&C SCI 6N with a grade of C or better. STATS 67 with a grade of C or better. I&C SCI 51 with a grade of C or better. I&C SCI 52 with a grade of C or better. IN4MATX 43 with a grade of C or better.

Restriction: Upper-division students only.

COMPSCI 116. Computational Photography and Vision. 4 Units.

Introduces the problems of computer vision through the application of computational photography. Specific topics include photo-editing (image warping, compositing, hole filling), panoramic image stitching, and face detection for digital photographs.

Prerequisite: I&C SCI 6D and (MATH 6G or MATH 3A or I&C SCI 6N) and MATH 2B and (I&C SCI 23 or CSE 23 or I&C SCI 46 or CSE 46). I&C SCI 6D with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better. MATH 2B with a grade of C or better. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better.

COMPSCI 117. Project in Computer Vision. 4 Units.

Students undertake construction of a computer vision system. Topics may include automatically building 3D models from photographs, searching photo collections, robot navigation, and human motion tracking.

Prerequisite: I&C SCI 6D and (MATH 6G or MATH 3A or I&C SCI 6N) and MATH 2B and (I&C SCI 23 or CSE 23 or I&C SCI H23 or I&C SCI 46 or CSE 46) and (COMPSCI 112 or COMPSCI 116 or COMPSCI 171 or COMPSCI 178). I&C SCI 6D with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better. MATH 2B with a grade of C or better. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI H23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better.

COMPSCI 121. Information Retrieval. 4 Units.

An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents.

Prerequisite: (IN4MATX 45 or I&C SCI 46 or CSE 46 or ((I&C SCI 33 or CSE 43) and I&C SCI 45J)) and (STATS 7 or STATS 67). IN4MATX 45 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 45J with a grade of C or better.

Same as IN4MATX 141.

COMPSCI 122A. Introduction to Data Management. 4 Units.

Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming.

(Design units: 1)

Prerequisite: I&C SCI 23 or CSE 23 or I&C SCI H23 or I&C SCI 46 or CSE 46 or IN4MATX 45 or I&C SCI 33 or CSE 43 or EECS 114. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI H23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. IN4MATX 45 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Same as EECS 116.

Restriction: School of Information and Computer Sciences majors and Computer Engineering majors have first consideration for enrollment.

COMPSCI 122B. Project in Databases and Web Applications. 4 Units.

Introduces students to advanced database technologies and Web applications. Topics include but are not limited to database connectivity (ODBC/JDBC), extending databases using stored procedures, database administration, Web servers, Web programming languages (Java servlets, XML, Ajax, and mobile platforms).

Prerequisite: (COMPSCI 122A or EECS 116) and I&C SCI 45J.

COMPSCI 122C. Principles of Data Management. 4 Units.

Covers fundamental principles underlying data management systems. Content includes key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing.

Prerequisite: COMPSCI 122A and COMPSCI 143A and COMPSCI 152.

Concurrent with COMPSCI 222.

COMPSCI 125. Next Generation Search Systems. 4 Units.

Discusses concepts and techniques related to all aspects of search systems. After considering basic search technology and the state-of-art systems, rapidly developing techniques for multimedia search, local search, event-search, and video-on-demand are explored.

Prerequisite: I&C SCI 21 or CSE 21 or IN4MATX 41 or I&C SCI 31 or IN4MATX 41.

Restriction: Upper-division students only.

Concurrent with COMPSCI 225.

COMPSCI 131. Parallel and Distributed Computing. 4 Units.

Parallel and distributed computer systems. Parallel programming models. Common parallel and distributed programming issues. Specific topics covered include parallel programming, performance models, coordination and synchronization, consistency and replication, transactions, fault tolerance.

Prerequisite: I&C SCI 53 and I&C SCI 53L and (I&C SCI 45C or I&C SCI 65 or equivalent).

COMPSCI 132. Computer Networks. 4 Units.

Computer network architectures, protocols, and applications. Internet congestion control, addressing, and routing. Local area networks. Multimedia networking.

(Design units: 2)

Prerequisite: EECS 55 or STATS 67.

Same as EECS 148.

Restriction: Computer Engineering and Computer Science and Engineering majors have first consideration for enrollment.

COMPSCI 133. Advanced Computer Networks. 4 Units.

Fundamental principles in computer networks are applied to obtain practical experience and skills necessary for designing and implementing computer networks, protocols, and network applications. Various network design techniques, simulation techniques, and UNIX network programming are covered.

Prerequisite: COMPSCI 132.

COMPSCI 134. Computer and Network Security. 4 Units.

Overview of modern computer and networks security, attacks, and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials.

Prerequisite: I&C SCI 6D and (I&C SCI 33 or CSE 43 or I&C SCI 22 or CSE 22 or IN4MATX 42) and (COMPSCI 122A or EECS 116 or COMPSCI 132 or COMPSCI 143A or CSE 104).

COMPSCI 137. Internet Applications Engineering. 4 Units.

Concepts in Internet applications engineering with emphasis on the Web. Peer-to-Peer and Interoperability. Topics include HTTP and REST, Remote Procedure/Method Calls, Web Services, data representations, content distribution networks, identity management, relevant W3C/IETF standards, and relevant new large-scale computing styles.

Prerequisite: COMPSCI 132.

Same as IN4MATX 124.

Restriction: Upper-division students only.

COMPSCI 141. Concepts in Programming Languages I. 4 Units.

In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Course may be offered online.

Prerequisite: (IN4MATX 42 or I&C SCI 51 or CSE 31 or EECS 31) and (IN4MATX 45 or I&C SCI 23 or CSE 23 or I&C SCI 33 or CSE 43). IN4MATX 42 with a grade of C or better. I&C SCI 51 with a grade of C or better. CSE 31 with a grade of C or better. EECS31 with a grade of C or better. IN4MATX 45 with a grade of C or better. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Same as CSE 141, IN4MATX 101.

COMPSCI 142A. Compilers and Interpreters. 4 Units.

Introduction to the theory of programming language processors covering lexical analysis, syntax analysis, semantic analysis, intermediate representations, code generation, optimization, interpretation, and run-time support.

Prerequisite: CSE 141 or COMPSCI 141 or IN4MATX 101.

Same as CSE 142.

COMPSCI 142B. Language Processor Construction. 4 Units.

Project course which provides working laboratory experience with construction and behavior of compilers and interpreters. Students build actual language processors and perform experiments which reveal their behaviors.

Prerequisite: COMPSCI 142A or CSE 142.

COMPSCI 143A. Principles of Operating Systems. 4 Units.

Principles and concepts of process and resource management, especially as seen in operating systems. Processes, memory management, protection, scheduling, file systems, and I/O systems are covered. Concepts illustrated in the context of several well-known systems. Course may be offered online. Course may be offered online.

Prerequisite: (I&C SCI 23 or CSE 23 or I&C SCI 46 or CSE 46) and (I&C SCI 51 or EECS 31 or CSE 31).

Overlaps with EECS 111.

COMPSCI 143B. Project in Operating System Organization. 4 Units.

Detailed specification and design of critical components of an actual operating system including a memory manager, a process server, and a file/I/O subsystem. Hardware/software tradeoffs. Emphasis on logical organization of system and communication.

Prerequisite: COMPSCI 143A or CSE 104.

COMPSCI 144. High-performance Computers and Program Optimization. 4 Units.

Analyzes the relationship between computer architecture and program optimization. High-performance and parallelizing compilers for RISC, Superscalar, and VLIW architectures are discussed.

Prerequisite: I&C SCI 51. Recommended: COMPSCI 142A. I&C SCI 51 with a grade of C or better.

COMPSCI 145A. Embedded Computing Systems. 4 Units.

Principles of embedded computing systems: embedded systems architecture, hardware/software components, system software and interfacing, real-time operating systems, hardware/software co-development, and communication issues. Examples of embedded computing in real-world application domains. Simple programming using an embedded systems development environment.

Corequisite: CompSci 145B.

Prerequisite: (CSE 46 or I&C SCI 46 or CSE 23 or I&C SCI 23 or I&C SCI 51 or CSE 31 or EECS 31) and (CSE 132 or EECS 112).

Same as CSE 145A.

COMPSCI 145B. Embedded Computing System Lab. 2 Units.

Laboratory section to accompany CSE 145A or COMPSCI 145A.

(Design units: 0)

Corequisite: CSE145A or COMPSCI 145A.

Same as CSE 145B.

COMPSCI 146. Programming in Multitasking Operating Systems. 4 Units.

User- and systems-level programming of modern Internet-connected, multi-user, multitasking operating systems. Shells, scripting, filters, pipelines, programmability, extensibility, concurrency, inter-process communication. Concrete examples of a modern operating system (such as, but not necessarily, Unix programmed in C) are used.

Prerequisite: (I&C SCI 23 or CSE 23 or I&C SCI 46 or CSE 46) and I&C SCI 51. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. I&C SCI 51 with a grade of C or better. Recommended: COMPSCI 143A.

COMPSCI 151. Digital Logic Design. 4 Units.

Boolean algebra. Design/analysis of combinational and sequential systems using SSI/MSI/LSI modules. Number systems. Error detecting and correction codes. Arithmetic algorithms. Hardware/ firmware implementation of algorithms.

Prerequisite: (I&C SCI 33 or CSE 43 or I&C SCI 23 or CSE 43) and I&C SCI 51 and I&C SCI 6B and I&C SCI 6D. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 23 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 51 with a grade of C or better.

COMPSCI 152. Computer Systems Architecture. 4 Units.

Design of computer elements; ALU, control unit, and arithmetic circuits. Memory hierarchy and organization. Caches. Function unit sharing and pipelining. I/O and interrupt processing. RTL and behavioral modeling using hardware description languages. Microprocessor organization and implementation techniques.

Prerequisite: COMPSCI 151.

Overlaps with EECS 112, EECS H112, CSE H132, I&C SCI 160.

COMPSCI 153. Logic Design Laboratory. 4 Units.

Introduction to standard integrated circuits. Construction and debugging techniques. Design of digital systems using LSI and MSI components. Practical use of circuits in a laboratory environment, including implementation of small digital systems such as arithmetic modules, displays, and timers.

Prerequisite: COMPSCI 151.

COMPSCI 154. Computer Design Laboratory. 4 Units.

Underlying primitives of computer instruction sets. Principles of microprogramming. Microprogramming. Microprograms written for one or more systems. Typical microprogramming applications discussed and implemented or simulated.

Prerequisite: Prerequisite or corequisite: COMPSCI 151.

COMPSCI 161. Design and Analysis of Algorithms. 4 Units.

Techniques for efficient algorithm design, including divide-and-conquer and dynamic programming, and time/space analysis. Fast algorithms for problems applicable to networks, computer games, and scientific computing, such as sorting, shortest paths, minimum spanning trees, network flow, and pattern matching.

Prerequisite: (I&C SCI 23 or CSE 23 or I&C SCI 46 or CSE 46) and I&C SCI 6B and I&C SCI 6D and MATH 2B. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better.

Same as CSE 161.

COMPSCI 162. Formal Languages and Automata. 4 Units.

Formal aspects of describing and recognizing languages by grammars and automata. Parsing regular and context-free languages. Ambiguity, nondeterminism. Elements of computability; Turning machines, random access machines, undecidable problems, NP-completeness.

Prerequisite: (I&C SCI 23 or CSE 23 or I&C SCI 46 or CSE 46) and MATH 2A and MATH 2B and I&C SCI 6B and I&C SCI 6D. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better.

Same as LINGUIS 102.

COMPSCI 163. Graph Algorithms. 4 Units.

Algorithms for solving fundamental problems in graph theory. Graph representations, graph traversal, network flow, connectivity, graph layout, matching problems.

Prerequisite: COMPSCI 161 or CSE 161.

COMPSCI 164. Computational Geometry and Geometric Modeling. 4 Units.

Algorithms and data structures for computational geometry and geometric modeling, with applications to game and graphics programming. Topics: convex hulls, Voronoi diagrams, algorithms for triangulation, motion planning, and data structures for geometric searching and modeling of 2D and 3D objects.

Prerequisite: I&C SCI 23 or CSE 23 or I&C SCI H23 or I&C SCI 46 or CSE 46. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI H23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better.

COMPSCI 165. Project In Algorithms And Data Structures. 4 Units.

Design, implementation, execution, and analysis of algorithms for problems such as sorting, searching, data compression, and data encryption. Time-space-structure trade-offs.

Prerequisite: COMPSCI 161 or CSE 161. Recommended: I&C SCI 45C OR CSE 45C.

COMPSCI 167. Introduction to Applied Cryptography. 4 Units.

An introduction to the essential aspects of applied cryptography, as it is used in practice. Topics include classical cryptography, block ciphers, stream ciphers, public-key cryptography, digital signatures, one-way hash functions, basic cryptographic protocols, and digital certificates and credentials.

Prerequisite: COMPSCI 161 or CSE 161.

Restriction: Upper-division students only.

COMPSCI 168. Network Optimization. 4 Units.

Network modeling techniques and related algorithms for solving large-scale integer programming problems. Exact methods and heuristic techniques. Applications include computer and communications networks and transportation and logistics networks.

Restriction: Upper-division students only.

COMPSCI 169. Introduction to Optimization. 4 Units.

A broad introduction to optimization. Unconstrained and constrained optimization. Equality and inequality constraints. Linear and integer programming. Stochastic dynamic programming.

Prerequisite: MATH 2D and (MATH 3A or MATH 6G) and STATS 67.

Concurrent with COMPSCI 268.

COMPSCI 171. Introduction to Artificial Intelligence. 4 Units.

Different means of representing knowledge and uses of representations in heuristic problem solving. Representations considered include predicate logic, semantic nets, procedural representations, natural language grammars, and search trees.

Corequisite: STATS 67.

Prerequisite: (I&C SCI 23 or CSE 23 or I&C SCI 46 or CSE 46) and MATH 2B.

COMPSCI 174. Bioinformatics. 4 Units.

Introduces fundamental problems in biology that lend themselves to computational approaches. The lectures present the necessary biological background to understand the importance of the problem and the data available for algorithmic analysis.

Prerequisite: COMPSCI 171. COMPSCI 171 with a grade of C or better.

COMPSCI 175. Project in Artificial Intelligence. 4 Units.

Construction of a working artificial intelligence system. Evaluation of capabilities of the system including impact of knowledge representation.

Prerequisite: COMPSCI 171.

COMPSCI 177. Applications of Probability in Computer Science. 4 Units.

Application of probability to real-world problems in computer science. Typical topics include analysis of algorithms and graphs, probabilistic language models, network traffic modeling, data compression, and reliability modeling.

Prerequisite: MATH 2B and STATS 67 and I&C SCI 6B and I&C SCI 6D and (MATH 6G or MATH 3A or I&C SCI 6N).

COMPSCI 178. Machine Learning and Data-Mining. 4 Units.

Introduction to principles of machine learning and data mining applied to real-world datasets. Typical applications include spam filtering, object recognition, and credit scoring.

Prerequisite: I&C SCI 6B and I&C SCI 6D and (I&C SCI 6N or MATH 6G or MATH 3A) and MATH 2B and STATS 67.

COMPSCI 179. Algorithms for Probabilistic and Deterministic Graphical Models. 4 Units.

Graphical model techniques dealing with probabilistic and deterministic knowledge representations. Focuses on graphical models, such as constraint networks, Bayesian networks and Markov networks that have become a central paradigm for knowledge representation and reasoning in Artificial Intelligence and general computer science.

Prerequisite: I&C SCI 23 or CSE 23 or I&C SCI 46 or (CSE 46 and MATH 2A and MATH 2B and STATS 67)

Restriction: Prerequisite required

COMPSCI 183. Introduction to Computational Biology. 4 Units.

The use of theories and methods based on computer science, mathematics, and physics in molecular biology and biochemistry. Basics in biomolecular modeling. Analysis of sequence and structural data of biomolecules. Analysis of biomolecular functions.

Prerequisite: MATH 2D or MATH 2J or MATH 7 or STATS 7 or STATS 8.

Same as BIO SCI M123.

Concurrent with MOL BIO 223.

COMPSCI 184A. Representations and Algorithms for Molecular Biology. 4 Units.

Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes.

Prerequisite: BIO SCI M123 and COMPSCI 183.

Concurrent with COMPSCI 284A.

COMPSCI 184B. Probabilistic Modeling of Biological Data. 4 Units.

A unified Bayesian probabilistic framework for modeling and mining biological data. Applications range from sequence (DNA, RNA, proteins) to gene expression data. Graphical models, Markov models, stochastic grammars, structure prediction, gene finding, evolution, DNA arrays, single- and multiple-gene analysis.

Prerequisite: COMPSCI 184A.

Concurrent with COMPSCI 284B.

COMPSCI 184C. Computational Systems Biology. 4 Units.

Computational inference and modeling of gene regulation networks, signal transduction pathways, and the effects of regulatory networks in cellular processes, development, and disease. Introduction of required mathematical, computational, and data handling tools.

Prerequisite: COMPSCI 184A.

Concurrent with COMPSCI 284C.

COMPSCI 189. Project in Bioinformatics. 4 Units.

Teaches problem definition and analysis, data representation, algorithm design, component integration, solution validation, and testability with teams specifying, designing, building, and testing a solution to a bioinformatics problem. Lectures include engineering values, discussions, and ethical ramifications of biomedical computing issues.

Prerequisite: COMPSCI 184A. COMPSCI 184A with a grade of C or better.

COMPSCI 190. Special Topics in Information and Computer Science. 4 Units.

Studies in selected areas of Information and Computer Science. Topics addressed vary each quarter.

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

COMPSCI H198. Honors Research. 4 Units.

Directed independent research in computer science for honors students.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: May be repeated for credit unlimited times.

Restriction: Upper-division students only. Bren School of ICS Honors Program or Campuswide Honors Program students only.

COMPSCI 199. Individual Study. 2-5 Units.

Individual research or investigation with Computer Science faculty.

Repeatability: May be repeated for credit unlimited times.

COMPSCI 200S. Seminar in Computer Science Research. 1 Unit.

Graduate colloquium series. Includes weekly talks by notable computer scientists.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

COMPSCI 201. Foundations of Cryptographic Protocols. 4 Units.

Explores fundamental cryptographic tools, including encryption, signatures, and identification schemes. Students are introduced to the provable security paradigm of modern cryptography, focusing on understanding of security properties provided by cryptographic tools, and on proving security (or insecurity) of cryptographic constructions.

Prerequisite: COMPSCI 260 or COMPSCI 263.

COMPSCI 202. Applied Cryptography. 4 Units.

Design and analysis of algorithms for applied cryptography. Topics include symmetric and asymmetric key encryption, digital signatures, one-way hash functions, digital certificates and credentials, and techniques for authorization, non-repudiation, authentication, identification, data integrity, proofs of knowledge, and access control.

Prerequisite: COMPSCI 260 and COMPSCI 263.

COMPSCI 203. Network and Distributed Systems Security. 4 Units.

Modern computer and networks security: attacks and countermeasures, authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Group communication and multicast security techniques. Covers secure e-commerce and applications of public key methods, digital certificates, and credentials.

Prerequisite: EECS 148 or COMPSCI 132.

Same as NET SYS 240.

COMPSCI 206. Principles of Scientific Computing. 4 Units.

Overview of widely used principles and methods of numerical and scientific computing, including basic concepts and computational methods in linear algebra, optimization, and probability.

Prerequisite: Basic courses in multivariate calculus, linear algebra, and probability.

Overlaps with STATS 230.

COMPSCI 211A. Visual Computing. 4 Units.

Fundamentals of image processing (convolution, linear filters, spectral analysis), vision geometry (projective geometry, camera models and calibration, stereo reconstruction), radiometry (color, shading, illumination, BRDF), and visual content synthesis (graphics pipeline, texture- bump-, mip-mapping, hidden surface removal, anti-aliasing).

COMPSCI 211B. Advanced Topics in 3D Computer Graphics. 4 Units.

Advanced topics in 3D graphics on rendering, geometric modeling, and visualization. Subjects range from illumination and shading, and multiresolution representations, to other advanced algorithms and data structures in graphics. Also looks at trends that go beyond traditional computer graphics.

Prerequisite: (COMPSCI 161 or COMPSCI 164 or COMPSCI 211A) and COMPSCI 266.

COMPSCI 212. Multimedia Systems and Applications. 4 Units.

Organization and structure of modern multimedia systems; audio and video encoding/compression; quality of service concepts; scheduling algorithms for multimedia; resource management in distributed and multimedia systems; multimedia protocols over high-speed networks; synchronization schemes; multimedia applications and teleservices.

Prerequisite: (COMPSCI 143A and COMPSCI 161) or B.S. degree in Computer Science. Recommended: COMPSCI 131 and COMPSCI 132 and COMPSCI 133.

COMPSCI 213. Introduction to Visual Perception. 4 Units.

Introduction to the process of human visual perception. Offers the physiological and psychophysical approach to understand vision, introducing concepts of perception of color, depth, movement. Examples of quantification and application of these models in computer vision, computer graphics, multimedia, HCI.

Prerequisite: MATH 121A.

COMPSCI 216. Image Understanding. 4 Units.

The goal of image understanding is to extract useful semantic information from image data. Course covers low-level image and video processing techniques, feature descriptors, segmentation, objection recognition, and tracking.

Prerequisite: I&C SCI 6D and (MATH 6G or MATH 3A) and MATH 2B and I&C SCI 23.

COMPSCI 217. Light and Geometry in Computer Vision. 4 Units.

Examines the issues of light transport and multiview geometry in computer vision. Applications include camera calibration, 3D understanding, stereo reconstruction, and illumination estimation.

Prerequisite: I&C SCI 6D and (MATH 6G or MATH 3A) and MATH 2B and I&C SCI 23 and COMPSCI 211A.

COMPSCI 221. Information Retrieval, Filtering, and Classification. 4 Units.

Algorithms for the storage, retrieval, filtering, and classification of textual and multimedia data. The vector space model, Boolean and probabilistic queries, and relevance feedback. Latent semantic indexing; collaborative filtering; and relationship to machine learning methods.

Prerequisite: COMPSCI 161 and COMPSCI 171 and (MATH 3A or MATH 6G).

Same as IN4MATX 225.

Restriction: Graduate students only.

COMPSCI 222. Principles of Data Management. 4 Units.

Covers fundamental principles underlying data management systems. Content includes key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing.

Prerequisite: COMPSCI 122A and COMPSCI 143A and COMPSCI 152.

Concurrent with COMPSCI 122C.

COMPSCI 223. Transaction Processing and Distributed Data Management. 4 Units.

Covers fundamental principles underlying transaction processing including database consistency, concurrency control, database recovery, and fault-tolerance. Includes transaction processing in centralized, distributed, parallel, and client-server environments.

Prerequisite: COMPSCI 222 and COMPSCI 131.

COMPSCI 224. Advanced Topics in Data Management. 4 Units.

Selected advanced topics in data management. Content differs in each offering and with instructor's interests. Intended for students interested in data management with focus on reading and critiquing recent research papers, presentations, and substantial research projects.

Prerequisite: COMPSCI 143A and COMPSCI 152 and COMPSCI 161 and COMPSCI 222 and COMPSCI 223.

COMPSCI 225. Next Generation Search Systems. 4 Units.

Discusses concepts and techniques related to all aspects of search systems. After considering basic search technology and the state-of-art systems, rapidly developing techniques for multimedia search, local search, event-search, and video-on-demand are explored.

Prerequisite: I&C SCI 21 or CSE 21 or IN4MATX 41 or I&C SCI 31 or CSE 41.

Restriction: Upper-division or Graduate students only.

Concurrent with COMPSCI 125.

COMPSCI 230. Distributed Computer Systems. 4 Units.

Principles of distributed computing systems. Topics covered include message-passing, remote procedure calls, distributed shared memory synchronization, resource and process/thread management, distributed file systems, naming and security.

COMPSCI 232. Computer and Communication Networks. 4 Units.

Network architecture of the Internet, telephone networks, cable networks, and cell phone networks. Network performance models. Network performance models. Advanced concepts and implementations of flow and congestion control, addressing, internetworking, forwarding, routing, multiple access, streaming, and quality-of-service.

Prerequisite: EECS 148 or COMPSCI 132.

Same as EECS 248A, NET SYS 201.

Restriction: Graduate students only.

COMPSCI 233. Networking Laboratory. 4 Units.

A laboratory-based introduction to basic networking concepts such as addressing, sub-netting, bridging, ARP, and routing. Network simulation and design. Structured around weekly readings and laboratory assignments.

Prerequisite: EECS 148 or COMPSCI 132.

Same as NET SYS 202.

COMPSCI 234. Advanced Networks. 4 Units.

Design principles of networked systems, advanced routing and congestion control algorithms, network algorithms, network measurement, management, security, Internet economics, and emerging networks.

Prerequisite: NET SYS 201 or COMPSCI 232 OR EECS 248A.

Same as NET SYS 210.

COMPSCI 236. Wireless and Mobile Networking. 4 Units.

Introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design, performance analysis, and protocols. Topics covered include: an introduction to wireless networking, digital cellular, next generation cellular, wireless LANs, and mobile IP.

Prerequisite: EECS 148 or COMPSCI 132.

Same as NET SYS 230.

COMPSCI 237. Middleware for Networked and Distributed Systems. 4 Units.

Discusses concepts, techniques, and issues in developing distributed systems middleware that provides high performance and Quality of Service for emerging applications. Also covers existing standards (e.g., CORBA, DCOM, Jini, Espeak) and their relative advantages and shortcomings.

Prerequisite: An undergraduate-level course in operating systems and networks.

Same as NET SYS 260.

COMPSCI 240. Language-Based Security. 4 Units.

Teaches state-of-the-art language-based techniques for increasing the security and reliability of software systems. Covers static (e.g., bytecode verification, proof-carrying code) and dynamic (e.g., reference monitors, stack inspection) techniques. Also discusses information flow and securing legacy code.

Prerequisite: COMPSCI 230 or COMPSCI 242 or COMPSCI 262.

COMPSCI 241. Advanced Compiler Construction. 4 Units.

Advanced study of programming language implementation techniques: optimizations such as common sub-expression elimination, register allocation, and instruction scheduling. Implementation of language features such as type-directed dispatch, garbage collection, dynamic linking, and just-in-time code generation.

Prerequisite: COMPSCI 142A.

COMPSCI 242. Parallel Computing. 4 Units.

Definition of parallel processing systems. Theory and application of arrays, trees, and hypercubes. Computational models, applications: sorting, integer arithmetic, matrix operations, Fast Fourier Transform, and others. Interconnection networks: a framework for the description, analysis, and construction of hypercube-derived networks.

COMPSCI 243. High-Performance Architectures and Their Compilers. 4 Units.

Emphasis on the development of automatic tools (i.e., compilers/environments) for the efficient exploitation of parallel machines, and the trade-offs between hardware and software in the design of supercomputing and high-performance machines.

COMPSCI 244. Introduction to Embedded and Ubiquitous Systems. 4 Units.

Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains.

Prerequisite: (I&C SCI 51 and COMPSCI 152 and (MATH 3A or MATH 6G or I&C SCI 6D) and COMPSCI 161) or B.S. degree in Computer Science.

Same as IN4MATX 244.

COMPSCI 245. Software for Embedded Systems. 4 Units.

Embedded computing elements, device interfaces, time-critical IO handling. Embedded software design under size, performance, and reliability constraints. Software timing and functional validation. Programming methods and compilation for embeddable software. Embedded runtime systems. Case studies of real-time software systems.

Prerequisite: (I&C SCI 51 and COMPSCI 152 and (MATH 3A or MATH 6G or I&C SCI 6D) and COMPSCI 161) or B.S. degree in Computer Science.

COMPSCI 246. Validation and Testing of Embedded Systems. 4 Units.

Embedded system building blocks including IP cores. Co-simulation. Formal verification using model checking. Verification environments. Test challenges in core integration: compliance, feature, random, and collision testing. Core access and test integration. Interface-based verification and standards.

Prerequisite: B.S. degree in Computer Science or basic courses in algorithms & data structures, calculus, discrete math, linear algebra, symbolic logic.

COMPSCI 247. Design Automation and Prototyping of Embedded Systems. 4 Units.

System representation and modeling. Abstract and language models. Simulation as a modeling activity. Computation and hw/sw systems prototypes. System analysis using models. Constraint and interface modeling. Behavioral compilation and synthesis.

Prerequisite: (I&C SCI 6D and I&C SCI 51 and COMPSCI 152 and COMPSCI 161 and COMPSCI 244 and (MATH 3A or MATH 6G)) or B.S. degree in Computer Science.

COMPSCI 248A. Introduction to Ubiquitous Computing. 4 Units.

The "disappearing computer" paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation.

Same as IN4MATX 241.

COMPSCI 248B. Ubiquitous Computing and Interaction. 4 Units.

Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work.

Prerequisite: IN4MATX 231 and IN4MATX 241.

Same as IN4MATX 242.

COMPSCI 249S. Seminar in Compilers and Operating Systems. 2 Units.

Current research and research trends in system-level software such as compilers and operating systems. Forum for presentation and criticism by students of new published research and work in progress.

Prerequisite: (COMPSCI 142A and COMPSCI 143A) or B.S. degree in Computer Science.

Repeatability: May be taken for credit 4 times.

COMPSCI 250A. Computer Systems Architecture. 4 Units.

Study of architectural issues and their relation to technology and software: design of processor, interconnections, and memory hierarchies.

Prerequisite: COMPSCI 152.

COMPSCI 250B. Modern Microprocessors. 4 Units.

Fundamental concepts and recent advances in computer architecture necessary to understand and use modern microprocessors. Topics span out-of-order execution, multiple instruction issue, control/data speculation, predication, advanced cache and DRAM organizations, embedded systems, DSP and multi-media instructions.

Prerequisite: COMPSCI 250A.

Overlaps with COMPSCI 243.

COMPSCI 252. Introduction to Computer Design. 4 Units.

The methodology and use of CAD tools for computer design, accomplished by a lab in which students practice design using commercially available silicon compilers and other tools.

Prerequisite: COMPSCI 151 and COMPSCI 152.

COMPSCI 253. Analysis of Programming Languages. 4 Units.

Concepts in modern programming languages, their interaction, and the relationship between programming languages and methods for large-scale, extensible software development. Empirical analysis of programming language usage.

Same as IN4MATX 212.

COMPSCI 259S. Seminar in Design Science. 2 Units.

Current research and research trends in design science. Forum for presentation and criticism by students of research work in progress.

Repeatability: May be taken for credit 18 times.

COMPSCI 260. Fundamentals of the Design and Analysis of Algorithms. 4 Units.

Covers fundamental concepts in the design and analysis of algorithms and is geared toward non-specialists in theoretical computer science. Topics include: deterministic and randomized graph algorithms, fundamental algorithmic techniques like divide-and-conquer strategies and dynamic programming, and NP-completeness.

Prerequisite: COMPSCI 161.

COMPSCI 261. Data Structures. 4 Units.

An in-depth treatment of data structures and their associated management algorithms including resource complexity analysis.

Prerequisite: I&C SCI 23 and COMPSCI 161.

COMPSCI 262. Computational Complexity. 4 Units.

Advanced course in computational models and complexity classes. Covers the fundamentals of Turing Machines, Decidability, and NP-completeness. Includes discussion of more advanced topics including polynomial hierarchy, randomized complexity classes, #P-completeness and hardness of approximation.

Prerequisite: COMPSCI 162.

COMPSCI 263. Analysis of Algorithms. 4 Units.

Analysis of correctness and complexity of various efficient algorithms; discussion of problems for which no efficient solutions are known.

Prerequisite: COMPSCI 161 and COMPSCI 261.

COMPSCI 264. Quantum Computation and Information. 4 Units.

Basic models for quantum computation and their foundations in quantum mechanics. Quantum complexity classes and quantum algorithms including algorithms for factoring and quantum simulation. Introduction to quantum information theory and quantum entanglement.

Prerequisite: Basic courses in linear algebra and algorithms.

COMPSCI 265. Graph Algorithms. 4 Units.

Graph definitions, representation methods, graph problems, algorithms, approximation methods, and applications.

Prerequisite: COMPSCI 161 and COMPSCI 261.

COMPSCI 266. Computational Geometry. 4 Units.

An overview of some of the basic problems in computational geometry and of some algorithmic and data-structuring techniques appropriate to their solution.

Prerequisite: COMPSCI 161 and COMPSCI 261.

COMPSCI 267. Data Compression. 4 Units.

An introduction to the theory and practice of modern data compression techniques. Topics include codes, coding, modeling, text compression, lossless and lossy image compression standards and systems, audio compression.

Prerequisite: (COMPSCI 261 and COMPSCI 260) or COMPSCI 261.

COMPSCI 268. Introduction to Optimization. 4 Units.

A broad introduction to optimization. Unconstrained and constrained optimization. Equality and inequality constraints. Linear and integer programming. Stochastic dynamic programming.

Prerequisite: MATH 2D and (MATH 3A or MATH 6G) and STATS 67.

Concurrent with COMPSCI 169.

COMPSCI 269S. Seminar in the Theory of Algorithms and Data Structures. 2 Units.

Current research and research trends in the Theory of algorithms and data structures.

Repeatability: May be taken for credit 18 times.

COMPSCI 271. Introduction to Artificial Intelligence. 4 Units.

The study of theories and computational models for systems which behave and act in an intelligent manner. Fundamental subdisciplines of artificial intelligence including knowledge representation, search, deduction, planning, probabilistic reasoning, natural language parsing and comprehension, knowledge-based systems, and learning.

COMPSCI 273A. Machine Learning. 4 Units.

Computational approaches to learning algorithms for classifications, regression, and clustering. Emphasis is on discriminative classification methods such as decision trees, rules, nearest neighbor, linear models, and naive Bayes.

Prerequisite: COMPSCI 271 and COMPSCI 206.

COMPSCI 274A. Probabilistic Learning: Theory and Algorithms. 4 Units.

An introduction to probabilistic and statistical techniques for learning from data, including parameter estimation, density estimation, regression, classification, and mixture modeling.

Prerequisite: COMPSCI 206.

COMPSCI 274B. Learning in Graphical Models. 4 Units.

Models for data analysis are presented in the unifying framework of graphical models. The emphasis is on learning from data but inference is also covered. Real world examples are used to illustrate the material.

Prerequisite: COMPSCI 274A.

COMPSCI 275. Network-based Reasoning/Constraint Networks. 4 Units.

Study of the theory and techniques of constraint network model. Covers techniques for solving constraint satisfaction problems: backtracking techniques, consistency algorithms, and structure-based techniques. Tractable subclasses. Extensions into applications such as temporal reasoning, diagnosis, and scheduling.

Prerequisite: Basic course in algorithm design and analysis.

COMPSCI 276. Network-based reasoning/Belief Networks. 4 Units.
Focuses on reasoning with uncertainty using "Bayes Networks" that encode knowledge as probabilistic relations between variables, and the main task is, given some observations, to update the degree of belief in each proposition.

Prerequisite: A basic course in probability.

COMPSCI 277. Data Mining. 4 Units.

Introduction to the general principles of inferring useful knowledge from large data sets (commonly known as data mining or knowledge discovery). Relevant concepts from statistics, databases and data structures, optimization, artificial intelligence, and visualization are discussed in an integrated manner.

Prerequisite: COMPSCI 273A or COMPSCI 274A.

COMPSCI 278. Probability Models. 4 Units.

Advanced probability, discrete time Markov chains, Poisson processes, continuous time Markov chains. Queuing or simulation as time permits.

Prerequisite: STATS 120A.

Concurrent with STATS 121.

COMPSCI 279S. Seminar in Artificial Intelligence. 2 Units.

Current research and research trends in artificial intelligence.

Repeatability: May be taken for credit 18 times.

COMPSCI 284A. Representations and Algorithms for Molecular Biology. 4 Units.

Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes.

Prerequisite: A Basic course in algorithms, or a basic course in molecular biology.

Concurrent with COMPSCI 184A.

COMPSCI 284B. Probabilistic Modeling of Biological Data. 4 Units.

A unified Bayesian probabilistic framework for modeling and mining biological data. Applications range from sequence (DNA, RNA, proteins) to gene expression data. Graphical models, Markov models, stochastic grammars, structure prediction, gene finding, evolution, DNA arrays, single- and multiple-gene analysis.

Prerequisite: COMPSCI 284A.

Concurrent with COMPSCI 184B.

COMPSCI 284C. Computational Systems Biology. 4 Units.

Computational inference and modeling of gene regulation networks, signal transduction pathways, and the effects of regulatory networks in cellular processes, development, and disease. Introduction of required mathematical, computational, and data handling tools.

Prerequisite: COMPSCI 284A or COMPSCI 284B or (BIO SCI 99 and Math 2D and 2J).

Concurrent with COMPSCI 184C

COMPSCI 285. Mathematical and Computational Biology . 4 Units.

analytical and numerical methods for dynamical systems, temporal-spatial dynamics, steady state, stability, stochasticity. Application to life sciences: genetics, tissue growth and patterning, cancers, ion channels gating, signaling networks, morphogen gradients. Probabilistic methods.

Prerequisite: MATH 227A.

Same as MATH 227C.

COMPSCI 288A. Biological Networks. 4 Units.

Introduces the basics of primarily graph theoretic analysis and modeling of biological networks. Presents the necessary biological background for understanding different types of biological networks as well as mathematical, algorithmic, and computational complexity issues associated with them.

Prerequisite: I&C SCI 6D and (COMPSCI 161 or CSE 161)and BIO SCI M123.

COMPSCI 289S. Seminar for Informatics in Biology and Medicine. 2 Units.

Current research and research trends in bioinformatics and medical informatics. Forum for presentation and criticism by students of recently published research and work in progress.

Prerequisite: COMPSCI 284A or COMPSCI 284B.

Repeatability: May be repeated for credit unlimited times.

COMPSCI 290. Research Seminar. 2 Units.

Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

COMPSCI 295. Special Topics in Information and Computer Science . 4 Units.

Studies in selected areas of Information and Computer Science. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

COMPSCI 296. Elements of Scientific Writing. 4 Units.

Introduces the concepts and principles of good scientific writing, demonstrates them by examples drawn from the literature, and uses a hands-on approach to apply them to documents being written by the participants.

Grading Option: Satisfactory/unsatisfactory only.

COMPSCI 298. Thesis Supervision. 2-12 Units.

Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Information and Computer Science majors only.

COMPSCI 299. Individual Study. 2-12 Units.

Individual research or investigation with Computer Science faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Information and Computer Science majors only.

Department of Informatics

5019 Donald Bren Hall; (949) 824-2901

<http://www.informatics.uci.edu/>

André van der Hoek, **Department Chair**

Informatics is the interdisciplinary study of the design, application, use, and impact of information technology. It goes beyond technical design, to focus on the relationship between information system design and use in real-world settings. These investigations lead to new forms of system architecture, new approaches to system design and development, new means of information system implementation and deployment, and new models of interaction between technology and social, cultural, and organizational settings.

Undergraduate Major in Informatics

Students in the Informatics major study human-computer interaction, social computing, computer-supported cooperative work, ubiquitous computing, organizational computing, and other topics that address the relationship between information technology design and use in social and organizational settings. The Informatics major addresses the broad set of issues surrounding design, all from a multidisciplinary perspective that includes computer science, information science, organizational science, social science, and cognitive science.

Courses offer extensive treatment of the conceptual underpinnings of the discipline and provide in-depth practical experiences, often performed on real-world examples and involving outside organizations. Students completing the major will be well suited for advanced careers in information technology or for further study at the graduate level. Specific careers include, but are not limited to, system or information analyst; system or information designer; project manager; and user interface and interaction designer. Career settings include corporations, nonprofit organizations, start-ups, and independent consulting.

Informatics majors complete one of two specializations: Human-Computer Interaction (HCI) or Organizations and Information Technology (OIT). More information is available online at <http://www.ics.uci.edu/informatics/ugrad>.

Admissions

Freshmen Applicants: See the Undergraduate Admissions (p. 38) section.

Transfer Applicants:

Students transferring into the major must satisfy the following requirements:

1. Completion of one college-level mathematics course; courses equivalent to I&C SCI 6B Boolean Algebra and Logic, STATS 7 Basic Statistics or STATS 67 Introduction to Probability and Statistics for Computer Science are preferred as these courses facilitate scheduling after transfer to UCI.

2. Completion of one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Python, Scheme, C++, or other object-oriented or high-level programming language.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree.

More information is available at <http://www.ics.uci.edu/informatics/ugrad> or at the ICS Student Affairs Office; telephone (949) 824-5156; e-mail: ucounsel@uci.edu.

Requirements for the B.S. Degree in Informatics

All students must meet the University Requirements (p. 60).

Major Requirements

Lower-division

A. Select one of the following:

IN4MATX 41- 42- 45

Informatics Core Course I
and Informatics Core Course II
and Patterns of Software
Construction

or

I&C SCI 31- 32- 33

Introduction to Programming
and Programming with Software
Libraries
and Intermediate Programming

or

I&C SCI 21- 22- 46

Introduction to Computer Science I
and Introduction to Computer
Science II
and Data Structure Implementation
and Analysis

or

I&C SCI 21- 22-IN4MATX 45

Introduction to Computer Science I
and Introduction to Computer
Science II
and Patterns of Software
Construction

B. Select one of the following:

I&C SCI 90

New Students Seminar

or IN4MATX 44

Seminar in Informatics Research
Topics

C. Select one of the following:

I&C SCI 52

Introduction to Software Engineering

or IN4MATX 43

Introduction to Software Engineering

D. Complete:

I&C SCI 45J

Programming in Java as a Second
Language

E. Complete:

I&C SCI 6B

Boolean Algebra and Logic

and

STATS 7

Basic Statistics

or STATS 67

Introduction to Probability and
Statistics for Computer Science

Upper-division**A. Informatics Core Requirements:**

IN4MATX 113	Requirements Analysis and Engineering
IN4MATX 121	Software Design I
IN4MATX 131	Human Computer Interaction
IN4MATX 151	Project Management
IN4MATX 161	Social Analysis of Computerization
IN4MATX 191A- 191B- 191C	Senior Design Project and Senior Design Project and Senior Design Project

B. One of the following specializations:**Human-Computer Interaction**

Complete:	
IN4MATX 132	Project in Human-Computer Interaction Requirements and Evaluation

and select three of the following:

IN4MATX 133	User Interaction Software
IN4MATX 141	Information Retrieval
IN4MATX 143	Information Visualization
IN4MATX 153	Computer Supported Cooperative Work
IN4MATX 162W	Organizational Information Systems
IN4MATX 171	Introduction to Medical Informatics

and select two project courses from the following:

IN4MATX 125	Computer Game Development
IN4MATX 134	Project in User Interaction Software
IN4MATX 148	Project in Ubiquitous Computing
IN4MATX 163	Project in the Social and Organizational Impacts of Computing

and select four additional courses from the following:

Informatics 100–190	
PUBHLTH 166	Geographic Information Systems

Organizations and Information Technology

Complete:	
PUBHLTH 141	Clinical Health Psychology
PUBHLTH 162	Human Ecology of Health
PUBHLTH 163	Introduction to Environmental Health Science

MGMT 5	Management of Contemporary Organisations
--------	--

MGMT 102	Managing Organizational Behavior
----------	----------------------------------

and select four of the following:

MGMT 107	Introduction to Management Information Systems
MGMT 159	Design Management
MGMT 170	Technologies for Business
MGMT 173	Business Intelligence for Analytical Decisions
MGMT 175	Information Technology (IT) and Strategy

MGMT 178	Management of Information Technology
PSY BEH 9	Introduction to Psychology
PSY BEH 104S	Social Animal: An Introduction to Social Psychology
PSY BEH 176S	Motivation
PSY BEH 180S	Organizational/Industrial Psychology
SOCIO 41	Small Group Behavior
SOCIO 135	Social Psychology of Networks
SOCIO 141	Organizations
SOCIO 143	Social Networks and Social Support
SOCIO 145	Occupations and Professions

IN4MATX 100–190

and select two additional courses from the following:

IN4MATX 100–190
COMPSCI 100–199

Major and minor restrictions: Informatics majors pursuing minors outside of the Bren School of ICS may not count more than four courses toward both the major and minor.

Minor in Digital Information Systems

Students outside the Bren School of ICS may pursue a minor in Digital Information Systems (DIS). The minor is designed for students who want to learn about information systems, computation, and digital communication without preparing to be computer programmers. Students completing the DIS minor will be able to understand the role of digital information systems in society, and will learn about the technological underpinnings of these systems and constraints on their design and use.

Requirements for the Minor

Select two of the following:

I&C SCI 3	Internet Technologies and their Social Impact
I&C SCI 4	Human Factors for the Web
I&C SCI 5	Environmental Issues in Information Technology
I&C SCI 7	Introducing Modern Computational Tools
I&C SCI 8	Practical Computer Security
I&C SCI 11	The Internet and Public Policy
I&C SCI 22	Introduction to Computer Science II
or CSE 22	Introduction to Computer Science II
I&C SCI H22	Honors Introduction to Computer Science II
IN4MATX 42	Informatics Core Course II
or I&C SCI 32	Programming with Software Libraries
IN4MATX 43	Introduction to Software Engineering ¹
I&C SCI 61	Game Systems and Design

Select one of the following:

I&C SCI 10	How Computers Work
I&C SCI 21	Introduction to Computer Science I
or CSE 21	Introduction to Computer Science I
I&C SCI H21	Honors Introduction to Computer Science I
IN4MATX 41	Informatics Core Course I
or I&C SCI 31	Introduction to Programming

Select four of the following:

I&C SCI 105	Digital Information Systems ¹
IN4MATX 131	Human Computer Interaction

IN4MATX 132	Project in Human-Computer Interaction Requirements and Evaluation
IN4MATX 143	Information Visualization
IN4MATX 148	Project in Ubiquitous Computing
IN4MATX 151	Project Management
IN4MATX 161	Social Analysis of Computerization
IN4MATX 162	
IN4MATX 163	Project in the Social and Organizational Impacts of Computing
IN4MATX 171	Introduction to Medical Informatics
IN4MATX 172	Project in Health Informatics

¹ Students cannot take both IN4MATX 43 and I&C SCI 105.

NOTE: Bren School of ICS majors may not minor in Digital Information Systems. Courses used to complete the minor in Digital Information Systems may not also count toward the requirements for the Information and Computer Science minor or the Informatics minor.

Minor in Health Informatics

The minor in Health Informatics prepares students to understand the expanding role of information technology (IT) in health care and to participate in creating IT solutions to health care issues. It includes course work and fieldwork addressing a variety of health care IT settings. Students completing this minor will gain practical experience applying IT to serve the health care needs of communities and individuals.

Requirements for the Minor

Complete:

IN4MATX 171	Introduction to Medical Informatics
IN4MATX 172	Project in Health Informatics

Select two of the following:

I&C SCI 4	Human Factors for the Web ¹
I&C SCI 7	Introducing Modern Computational Tools ¹
I&C SCI 10	How Computers Work ¹
I&C SCI 31	Introduction to Programming ¹
I&C SCI 32	Programming with Software Libraries ¹
IN4MATX 121	Software Design I
IN4MATX 123	Software Architecture
IN4MATX 131	Human Computer Interaction
IN4MATX 133	User Interaction Software
IN4MATX 143	Information Visualization
COMPSCI 111	Digital Image Processing
COMPSCI 121/IN4MATX 141	Information Retrieval
COMPSCI 122A	Introduction to Data Management
COMPSCI 131	Parallel and Distributed Computing
COMPSCI 134	Computer and Network Security
COMPSCI/CSE 145A	Embedded Computing Systems
COMPSCI 171	Introduction to Artificial Intelligence
COMPSCI 178	Machine Learning and Data-Mining

Select two of the following:

NUR SCI 110W	Frameworks for Professional Nursing Practice
PUBHLTH 101	Introduction to Epidemiology
PUBHLTH 104	Analytic and Applied Epidemiology
PUBHLTH 122	Health Policy
PUBHLTH 124	Environmental and Public Health Policy

Select one of the following:

IN4MATX 151	Project Management
IN4MATX 161	Social Analysis of Computerization
IN4MATX 162	
STATS 7	Basic Statistics
STATS 8	Introduction to Biological Statistics
STATS 67	Introduction to Probability and Statistics for Computer Science

- ¹ This course may only be counted by majors outside of the Bren School of ICS.

NOTE: No more than one of these courses may be used to satisfy both the requirements of this minor and the requirements of the student's major. A student must earn a grade of C or better in all courses used to satisfy the requirements of this minor.

Minor in Informatics

The minor provides a focused study of Informatics to supplement a student's major program of study and prepares students for a profession, career, or academic pursuit in which information and software design is an integral part but is not the primary focus. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests. The minor particularly centers on understanding the relationships among computers and people, and how these relationships must be addressed in information and software design.

Requirements for the Minor

Select one of the following:

IN4MATX 41- 42- 45	Informatics Core Course I and Informatics Core Course II and Patterns of Software Construction
or	
I&C SCI 31- 32- 33	Introduction to Programming and Programming with Software Libraries and Intermediate Programming

Complete:

I&C SCI 90 or IN4MATX 44	New Students Seminar Seminar in Informatics Research Topics
-----------------------------	--

Complete:

I&C SCI 52 or IN4MATX 43	Introduction to Software Engineering Introduction to Software Engineering
-----------------------------	--

Complete:

IN4MATX 131	Human Computer Interaction
and	

IN4MATX 161

Social Analysis of Computerization

and at least two additional upper-division courses in Informatics

Before enrolling in any course for the Informatics minor, students should ensure that they meet its prerequisites. See the course prerequisites listed in the *Catalogue* or on the Informatics Web site at <http://www.ics.uci.edu/informatics/ugrad>.

NOTE: A maximum of two courses can be taken Pass/Not Pass to satisfy the minor in Informatics. Students majoring in Information and Computer Science, Computer Science, or Computer Science and Engineering cannot minor in Informatics. Students who are considering a major in Informatics must complete the Informatics courses with a letter grade.

Graduate Program in Software Engineering

The field of Software Engineering is concerned with the creation and analysis of the complex software systems that underlie modern society. Research in Software Engineering targets software artifacts and the people who create them. The field is large, and it encompasses engineering design research, i.e., the creation of new software artifacts with some desirable properties, as well as empirical research, i.e., the study of the effects that software development tools and methods have in the context of software development teams. Topics include software architectures, testing and debugging, software development tools, formal languages, requirements engineering, mining of large software-related data sources, reverse engineering, and development processes.

The Ph.D. degree in Software Engineering (SE) offers students opportunities for graduate study in the spectrum of intellectual activity in SE. The M.S. degree in SE complements undergraduate knowledge in related fields with a solid framework for understanding the development of complex software systems.

Undergraduate Preparation for Admission. Typically, incoming students will have an undergraduate degree in computer science, though students may have an undergraduate degree in any field. Additionally they must have significant experience in software development. The ideal applicant is one who shows a considerable analytical depth in the practice of software development, typically gained from first-hand experience with large projects. Students admitted without a major in computer science, informatics, or equivalent will be expected to take undergraduate courses to fill any gaps.

Incoming students who already have a M.S. in Computer Science or closely related field may be exempted from (part of) the pre-candidacy course requirements by petition to the Graduate Dean, as filed by the student's faculty advisor.

Program of Study for the Ph.D. Degree

Pre-Candidacy Course Requirements

Students must complete four software engineering core courses, six elective courses, and two quarters of seminars, literature survey, and individual study courses.

1. Software Engineering Core Courses:

IN4MATX 211	Software Engineering
IN4MATX 212	Analysis of Programming Languages

IN4MATX 215	Software Analysis and Testing
IN4MATX 221	Software Architecture
2. Software Engineering Electives. Six elective courses chosen from the following courses offered by the School of ICS (all four units). The set of elective courses chosen by the student must be approved by the student's research advisor. With the advisor's permission, the student may substitute other non-seminar courses, as long as they are related to the student's research interests.	
IN4MATX 203	Qualitative Research Methods in Information Systems
IN4MATX 205	Quantitative Research Methods in Information Systems
IN4MATX 214	Requirements Engineering and Specification
IN4MATX 217	Software Processes
IN4MATX 219	Software Environments
IN4MATX 223	Applied Software Design Techniques
IN4MATX 231	User Interface Design and Evaluation
IN4MATX 233	Knowledge-Based User Interfaces
IN4MATX 235	Advanced User Interface Architecture
IN4MATX 241	Introduction to Ubiquitous Computing
IN4MATX 242	Ubiquitous Computing and Interaction
IN4MATX 251	Computer-Supported Cooperative Work
IN4MATX 261	Social Analysis of Computing
IN4MATX 269	Computer Law
COMPSCI 203	Network and Distributed Systems Security
COMPSCI 221	Information Retrieval, Filtering, and Classification
COMPSCI 222	Principles of Data Management
COMPSCI 225	Next Generation Search Systems
COMPSCI 230	Distributed Computer Systems
COMPSCI 232	Computer and Communication Networks
COMPSCI 237	Middleware for Networked and Distributed Systems
COMPSCI 241	Advanced Compiler Construction
COMPSCI 273A	Machine Learning
COMPSCI 277	Data Mining
3. Seminars and Individual Study:	
IN4MATX 209S	Seminar in Software (two quarters; four units each)
IN4MATX 291S	Literature Survey in Software Engineering (two quarters; two units each)
IN4MATX 299	Individual Study (two quarters; four units each)

Qualifying Examinations

Written Comprehensive Examination

Students must pass a written examination testing their knowledge of the relevant topics and literature in Software Engineering and their ability to formulate clear arguments in writing and under time constraints. This examination is based on a predetermined reading list maintained by the program faculty. Preparation for this exam is done during two quarters of IN4MATX 291S. This exam is administered at most twice a year.

The exam is graded a Ph.D. PASS, M.S. PASS or FAIL. In case of M.S. PASS or FAIL, it may be re-taken once more, within 12 months, in an attempt to qualify for a Ph.D. PASS. A second M.S. PASS or FAIL results in disqualification of the student from the doctoral program (with or without a terminal M.S. degree).

Research Assessment

Students must find a faculty advisor and successfully complete a research project with that faculty member. The research project should be done over at least two quarters of independent study with that faculty member. The goal of this research assessment is to introduce the student to the practice of scientific publication.

Based on the project, the student must produce a research paper of publishable quality. This research paper must be reviewed by three faculty members in a peer-review process, revised by the student, and approved by the three faculty members.

The research assessment is graded PASS or FAIL. In case of FAIL, the student can re-submit the paper at most one more time within the maximum period of six months. A second FAIL results in disqualification from the program.

Advancement to Candidacy Examination

Each Ph.D. student must pass the oral advancement to candidacy exam, which assesses the student's ability to conduct, present, and orally defend research work at the doctoral level. The research project and paper are the basis for the student's oral advancement to candidacy exam. The oral candidacy exam consists of the research presentation by the student, followed by questions from the candidacy committee.

The student must complete the course requirements, and pass the two qualifying examinations prior to advancing to candidacy. The candidacy committee will consist of five faculty members, the majority of whom must be members of the student's program, and is conducted in accordance with UCI Senate regulations.

Dissertation Topic Defense

The student must present a carefully articulated document representing the student's dissertation plan. This document must include the proposed dissertation abstract, a discussion of the approach, a comprehensive survey of related work, and a plan for completing the work. The dissertation plan is presented by the student to the dissertation committee, who must unanimously approve the student's proposal. The dissertation defense committee is formed in accordance to UCI Senate regulations.

Doctoral Dissertation and Final Examination

Students are required to complete a doctoral dissertation in accordance with Academic Senate regulations. In addition, they must pass an oral thesis defense which consists of a public presentation of the student's research followed by an oral examination by the student's doctoral committee. The committee must approve the thesis unanimously.

The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is seven years.

Program of Study for the M.S. Degree

Course Requirements

M.S. students must complete four software engineering core courses, six elective courses, and two quarters of seminars (IN4MATX 209S). Students doing Capstone Plan I (Thesis) must complete two quarters, four units each, of Thesis Supervision (IN4MATX 298); students doing Capstone Plan II (Comprehensive Examination) must complete two quarters of literature survey courses.

The course requirements are identical to the Ph.D. degree, diverging only in making the Literature Survey and the Individual Study courses mutually exclusive, depending on the students' Capstone option.

Capstone Requirement

Plan I: Thesis Option. Students must take and pass the Research Assessment examination. Additionally, students are required to defend their thesis in a public exam according to UCI Senate Policy. This requirement must be completed by the end of the second year.

Plan II: Comprehensive Examination Option. Students must take the written comprehensive examination, and obtain an M.S. PASS or higher. This requirement must be completed by the end of the second year. In case of FAIL, the exam may be re-taken once more. A second FAIL results in disqualification of the student from the master's program.

Restriction

The M.S. degree will not be awarded to students who currently hold a M.S. degree in software engineering or a related field from the same or another university.

Requirements Beyond Graduate Division Minimum Requirements

All Ph.D. students are expected to maintain a minimum GPA of 3.5 throughout the program. All M.S. students are expected to maintain a minimum GPA of 3.0 throughout the program. Failure to maintain this minimum will result in a recommendation that the student be disqualified. In addition, no grade lower than a B is counted toward satisfying any course requirements.

Graduate Concentrations

For graduate concentrations in Informatics, [click here](#) (p. 578).

Faculty

Geoffrey Bowker: Values in design, social studies of databases, science and technology studies

Yunan Chen: Medical informatics, human-computer interaction

Paul Dourish: Human-computer interaction, computer-supported cooperative work

Daniel Frost: Artificial intelligence, software engineering, computer graphics, teaching of programming

Judith Gregory: Values in design, translational biomedical informatics, participatory design, design and emotion

Gillian Hayes: Interactive and collaborative technology, human-computer interaction, computer-supported cooperative work, educational technology, ubiquitous computing

Mizuko "Mimi" Ito: Ethnography, game studies, youth culture, learning sciences, online communities

James A. Jones: Software engineering, software testing and analysis, debugging and fault localization, static and dynamic analysis, software visualization

David G. Kay: Computer law, computer science education

Cory Knobel: Interactive and collaborative technology, values in design, modes of knowledge representation, philosophy of science and technology

Alfred Kobsa: User modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science

Cristina Videira Lopes: Programming languages, acoustic communications, operating systems, software engineering

Gloria Mark: Computer-supported cooperative work, human-computer interaction

Melissa Mazmanian: Computer-mediated communication, organization studies, information and communication technologies in practice, social response to emerging technologies, work/non-work negotiations in the information age

Bonnie Nardi: Computer-supported collaborative work, human-computer interaction, computer-mediated communication, user studies methods, activity theory, cultural responses to technology development

Gary Olson: Interactive and collaborative technology, human-computer interaction, computer-supported cooperative work

Judy Olson: Interactive and collaborative technology, human-computer interaction, computer-supported cooperative work

Donald J. Patterson: Ubiquitous computing, pervasive computing, human-computer interaction, artificial intelligence, intelligent context for situated computing

Richard Pattis: Microworlds for teaching programming, debugging, computational tools for non-computer scientists

David F. Redmiles: Computer-supported cooperative work, human computer interaction, software engineering, globally distributed development teams, user interfaces, software tools

Debra J. Richardson: Software engineering; program testing; life-cycle validation; software environments

Thomas A. Standish: Software testing and analysis, software semantics and epistemology, programming and cognition, and software comprehension

Richard Taylor: Software engineering, user interfaces, environments, team support

Bill Tomlinson: Environmental informatics, educational technology, computer graphics/visualization/digital arts

André van der Hoek: Software engineering

Hadar Ziv: Software testing, requirements engineering, Bayesian modeling

The faculty in the Department of Informatics also contribute to the Informatics concentration in the ICS graduate program. This includes the General track, Interactive and Collaborative Technology track, and Ubiquitous Computing track.

Affiliated Faculty

Christopher Dobrian: Electronic music, composition

Magda El Zarki: Telecommunications, networks, wireless communication, video transmission

Tony Givargis: Embedded systems, platform-based system-on-a-chip design, low-power electronics

Vijay Gurbaxani: Economics of information systems management, impact of information technology on organization and market structure

Peter Krapp: Digital culture, media theory, cultural memory, history, and theory of artificial worlds

Robert Nideffer: Electronic intermedia, interface theory and design, technology and culture, contemporary social theory

Simon Penny: Robotic sculpture, interactive environments, electronic media, art practice history, and critical theory

Kavita Philip: Science and technology studies, South Asian studies, political ecology, critical studies of race, gender, colonialism, new media, and globalization

Alladi Venkatesh: Social impacts of information technology, Internet and the New Economy, Smart Home technologies, children and multimedia

Mark Warschauer: Language, literacy, technology

Courses

IN4MATX 41. Informatics Core Course I. 6 Units.

Fundamental concepts of computer software design and construction. Data, algorithms, functions, and abstractions. Overview of computer systems: data representation, architectural components, operating systems, networks. Introduction to information systems: parties involved, architectural alternatives, usability, organizational and social concerns.

Restriction: IN4MATX 41 may not be taken for credit if taken after I&C SCI 22 or CSE 22.

(II, Vb)

IN4MATX 42. Informatics Core Course II. 6 Units.

Alternative data structure implementations; analysis of time and space efficiency. Object-oriented programming concepts and techniques: classes, objects, inheritance, interfaces. Formal languages and automata. Problem modeling and design tradeoffs.

Prerequisite: IN4MATX 41. IN4MATX 41 with a grade of C or better.

Overlaps with I&C SCI 32, CSE 42, I&C SCI 33, CSE 43, I&C SCI 22, CSE 22.

(II, Vb)

IN4MATX 43. Introduction to Software Engineering. 4 Units.

Concepts, methods, and current practice of software engineering. Large-scale software production, software life cycle models, principles and techniques for each stage of development.

Overlaps with I&C SCI 52, I&C SCI 105.

IN4MATX 44. Seminar in Informatics Research Topics. 2 Units.

Introduction to current research topics in Informatics. Various faculty members present current research and relate it to the course content of the Informatics degree program.

Grading Option: Pass/no pass only.

IN4MATX 45. Patterns of Software Construction. 4 Units.

Building software applications; reusing and integrating components; designing for reuse. Effective use of libraries and APIs, file and network I/O, creation of user interfaces.

Prerequisite: IN4MATX 42 or I&C SCI 22 or CSE 22 or I&C SCI H22. I&C SCI H22 with a grade of C or better.

(Vb)

IN4MATX 101. Concepts in Programming Languages I. 4 Units.

In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Course may be offered online.

Prerequisite: (IN4MATX 42 or I&C SCI 51 or CSE 31 or EECS 31) and (IN4MATX 45 or I&C SCI 23 or CSE 23 or I&C SCI 33 or CSE 43). IN4MATX 42 with a grade of C or better. I&C SCI 51 with a grade of C or better. CSE 31 with a grade of C or better. EECS31 with a grade of C or better. IN4MATX 45 with a grade of C or better. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Same as COMPSCI 141, CSE 141.

IN4MATX 102. Concepts of Programming Language II. 4 Units.

In-depth study of major programming paradigms: imperative, functional, declarative, object-oriented, and aspect-oriented. Understanding the role of programming languages in software development and the suitability of languages in context. Domain-specific languages. Designing new languages for better software development support.

Prerequisite: IN4MATX 101 or COMPSCI 141 or CSE 141. CSE 141 with a grade of C or better.

IN4MATX 113. Requirements Analysis and Engineering. 4 Units.

Aims to equip students to develop techniques of software-intensive systems through successful requirements analysis techniques and requirements engineering. Students learn systematic process of developing requirements through cooperative problem analysis, representation, and validation.

Prerequisite: IN4MATX 42 and (I&C SCI 22 or CSE 22 or I&C SCI 33 or CSE 43) and (IN4MATX 43 or I&C SCI 52) IN4MATX 42 with a grade of C or better. I&C SCI 22 with a grade of C or better. CSE 22 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. IN4MATX 43 with a grade of C or better. I&C SCI 52 with a grade of C or better.

IN4MATX 115. Software Testing, Analysis, and Quality Assurance. 4 Units.

Aims to prepare students to develop high-quality software through successful verification and validation techniques. Fundamental principles of software testing, how to test software, and how to ensure the thoroughness of testing to gain confidence in the correctness of the software.

Prerequisite: I&C SCI 6B and (IN4MATX 42 or I&C SCI 22 or CSE 22 or I&C SCI 33 or CSE 43) and (IN4MATX 43 or I&C SCI 52). CSE 43 with a grade of C or better. I&C SCI 52 with a grade of C or better.

IN4MATX 117. Project in Software System Design. 4 Units.

Specification, design, construction, testing, and documentation of a complete software system. Special emphasis on the need for and use of teamwork, careful planning, and other techniques for working with large systems.

Prerequisite: (IN4MATX 43 or I&C SCI 52) and (I&C SCI 33 or CSE 43 or I&C SCI 22 or CSE 22 or IN4MATX 42) I&C SCI 52 with a grade of a C or better. IN4MATX 42 with a grade of C or better.

Restriction: Upper-division students only.

IN4MATX 121. Software Design I. 4 Units.

Introduction to application design: designing the overall functionality of a software application. Topics include general design theory, software design theory, and software architecture. Includes practice in designing and case studies of existing designs.

Prerequisite: IN4MATX 45 or I&C SCI 23 or CSE 23 or I&C SCI 33 or CSE 43. IN4MATX 45 with a grade of C or better. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Restriction: Upper-division students only.

IN4MATX 122. Software Design II. 4 Units.

Introduction to implementation design: designing the internals of a software application. Topics include design aesthetics, design implementation, design recovery, design patterns, and component reuse. Includes practice in designing and case studies of existing designs.

Prerequisite: (I&C SCI 45J or I&C SCI 23 OR I&C SCI 46 OR IN4MATX 45) and (IN4MATX 101 or COMPSCI 141 or CSE 141).

IN4MATX 123. Software Architecture. 4 Units.

Prepares students to engineer well-structured software systems. Students learn a wide range of software architectural styles, architectural platforms that provide standard services to applications, and formal architecture description languages.

Prerequisite: IN4MATX 122 or ((IN4MATX 101 or COMPSCI 141 or CSE 141) and IN4MATX 113).

IN4MATX 124. Internet Applications Engineering. 4 Units.

Concepts in Internet applications engineering with emphasis on the Web. Peer-to-Peer and Interoperability. Topics include HTTP and REST, Remote Procedure/Method Calls, Web Services, data representations, content distribution networks, identity management, relevant W3C/IETF standards, and relevant new large-scale computing styles.

Prerequisite: COMPSCI 132.

Same as COMPSCI 137.

Restriction: Upper-division students only.

IN4MATX 125. Computer Game Development. 4 Units.

Introduction to the principles of interactive 2D and 3D computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work.

Prerequisite: COMPSCI 112 or COMPSCI 171 or IN4MATX 121 or ART 106B or I&C SCI 163 or I&C SCI 166.

Same as COMPSCI 113.

IN4MATX 131. Human Computer Interaction. 4 Units.

Basic principles of human-computer interaction (HCI). Introduces students to user interface design techniques, design guidelines, and usability testing. Students gain the ability to design and evaluate user interfaces and become familiar with some of the outstanding research problems in HCI.

Prerequisite: IN4MATX 41 or I&C SCI 10 or I&C SCI 21 or CSE 21 or I&C SCI H21 or I&C SCI 31 or CSE 41 or ENGR 10 or ENGRMAE 10 or EECS 10. IN4MATX 41 with a grade of C or better. I&C SCI 10 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. I&C SCI H21 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. ENGR 10 with a grade of C or better. ENGRMAE 10 with a grade of C or better. EECS 10 with a grade of C or better.

Restriction: Upper-division students only.

IN4MATX 132. Project in Human-Computer Interaction Requirements and Evaluation. 4 Units.

Students undertake significant projects in the elicitation and specification of HCI requirements and the thorough evaluation of user interfaces.

Prerequisite: IN4MATX 131.

IN4MATX 133. User Interaction Software. 4 Units.

Introduction to human-computer interaction programming. Emphasis on current tools, standards, methodologies for implementing effective interaction designs. Widget toolkits, Web interface programming, geo-spatial and map interfaces, mobile phone interfaces. Strategies for evaluation of user interfaces.

Prerequisite: IN4MATX 45 or I&C SCI 23 or CSE 23 or ((I&C SCI 33 or CSE 43) and I&C SCI 45J). IN4MATX 45 with a grade of C or better. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 45J with a grade of C or better.

IN4MATX 134. Project in User Interaction Software. 4 Units.

Students complete an end-to-end user interface programming project based on an iterative design paradigm. Topics may include requirements brainstorming, paper prototyping, iterative development, cognitive walk-through, quantitative evaluation, and acceptance testing. Materials fee.

Prerequisite: IN4MATX 131 and IN4MATX 133.

IN4MATX 141. Information Retrieval. 4 Units.

An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents.

Prerequisite: (IN4MATX 45 or I&C SCI 46 or CSE 46 or ((I&C SCI 33 or CSE 43) and I&C SCI 45J)) and (STATS 7 or STATS 67). IN4MATX 45 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 45J with a grade of C or better.

Same as COMPSI 121.

IN4MATX 143. Information Visualization. 4 Units.

Introduction to interactive visual interfaces for large datasets, and to principles of human visual perception and human computer interaction that inform their design. Various applications for data analysis and monitoring are discussed.

Prerequisite: IN4MATX 131 or I&C SCI 52 or (IN4MATX 43 and (I&C SCI 31 or CSE 41 or I&C SCI 21 or CSE 21 or IN4MATX 41)). IN4MATX 131 with a grade of C or better. I&C SCI 52 with a grade of C or better. IN4MATX 43 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. IN4MATX 41 with a grade of C or better.

IN4MATX 148. Project in Ubiquitous Computing. 4 Units.

Introduction to ubiquitous computing research methods, tools, and techniques. Prototyping, design, and evaluation of physical computing applications, smart environments, embedded systems, and future computing scenarios. Includes hands-on in-class laboratory exercises. Materials fee.

Prerequisite: I&C SCI 10 or I&C SCI 21 or I&C SCI 31 or IN4MATX 41. IN4MATX 41 with a grade of C or better.

Restriction: Upper-division students only.

IN4MATX 151. Project Management. 4 Units.

Introduces theoretical and practical aspects of project management. Topics include organizational theory, group behavior, project management skills, case studies, personal and group productivity tools, management of distributed work, stakeholders, consultants, and knowledge management. Students do a project exercise.

Prerequisite: IN4MATX 43 or I&C SCI 52. I&C SCI 52 with a grade of C or better.

Restriction: Upper-division students only.

IN4MATX 153. Computer Supported Cooperative Work. 4 Units.

Introduces concepts and principles of collaborative systems. Topics may include shared workspaces, group interaction, workflow, architectures, interaction between social and technical features of group work, and examples of collaborative systems used in real-world settings. Students develop a simple collaborative application.

Prerequisite: (IN4MATX 161 or I&C SCI 52 or IN4MATX 43) and (I&C SCI 31 or CSE 41 or I&C SCI 21 or CSE 21 or IN4MATX 41). I&C SCI 52 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. IN4MATX 41 with a grade of C or better.

IN4MATX 161. Social Analysis of Computerization. 4 Units.

Introduction of computerization as a social process. Examines the social opportunities and problems raised by new information technologies, and the consequences of different ways of organizing. Topics include computerization and work life, privacy, virtual communities, productivity paradox, systems risks.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement. IN4MATX 41 or I&C SCI 10 or I&C SCI 21 or CSE 21 or I&C SCI 31 or CSE 41 or ENGR 10 or EECS 10 or ENGRMAE 10. IN4MATX 41 with a grade of C or better. I&C SCI 10 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. ENGR 10 with a grade of C or better. EECS 10 with a grade of C or better. ENGRMAE 10 with a grade of C or better.

IN4MATX 162W. Organizational Information Systems. 4 Units.

Introduction to role of information systems in organizations, components and structure of organizational information systems, and techniques used in information systems analysis, design, and implementation.

Prerequisite: IN4MATX 161. Satisfactory completion of the Lower-Division Writing requirement.

(Ib)

IN4MATX 163. Project in the Social and Organizational Impacts of Computing. 4 Units.

Students undertake projects intended to gather and analyze data from situations in which computers are used, organize and conduct experiments intended to test hypotheses about impacts, and explore the application of concepts learned in previous courses.

Prerequisite: IN4MATX 162.

IN4MATX 171. Introduction to Medical Informatics. 4 Units.

Broad overview of medical informatics for students with varied backgrounds. Electronic medical records, online resources, mobile technologies, patient safety, and computational design. Legal, ethical, and public policy issues. Health systems management. Evaluation and fieldwork for health systems.

Same as PUBHLTH 105.

Restriction: Upper-division students only.

IN4MATX 172. Project in Health Informatics. 4 Units.

Students undertake significant quarter-long projects related to health informatics. Topics may include field evaluations of health care technologies, prototypes, iterative design, and system implementations.

Prerequisite: PUBHLTH 105 or IN4MATX 171.

Same as PUBHLTH 106.

IN4MATX 190. Special Topics in Informatics. 4 Units.

Studies in selected areas of informatics. Topics addressed vary each quarter.

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

IN4MATX 191A. Senior Design Project. 4 Units.

Group supervised project in which students analyze, specify, design, construct, evaluate, and adapt a significant information processing system. Topics include team management, professional ethics, and systems analysis.

Corequisite: IN4MATX 123.

Prerequisite: IN4MATX 121 and IN4MATX 131 and IN4MATX 151 and IN4MATX 161.

Restriction: Upper-division students only.

IN4MATX 191B. Senior Design Project. 4 Units.

Group supervised project in which students analyze, specify, design, construct, evaluate, and adapt a significant information processing system. Topics include team management, professional ethics, and systems analysis.

Prerequisite: IN4MATX 191A.

Grading Option: In progress only.

IN4MATX 191C. Senior Design Project. 4 Units.

Group supervised project in which students analyze, specify, design, construct, evaluate, and adapt a significant information processing system. Topics include team management, professional ethics, and systems analysis.

Prerequisite: IN4MATX 191B.

IN4MATX H198. Honors Research. 4 Units.

Directed independent research in Informatics for honors students.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: May be repeated for credit unlimited times.

Restriction: Bren School of ICS Honors Program or the Campuswide Honors Program students only.

IN4MATX 199. Individual Study. 2-5 Units.

Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

IN4MATX 201. Research Methodology for Informatics. 4 Units.

Introduction to strategies and idioms of research in Informatics. Includes examination of issues in scientific inquiry, qualitative and quantitative methods, and research design. Both classic texts and contemporary research literature are read and analyzed.

IN4MATX 203. Qualitative Research Methods in Information Systems. 4 Units.

Introduction to qualitative research methods used to study computerization and information systems, such as open-ended interviewing, participant observation, and ethnography. Studies of the methods in practice through examination of research literature.

Prerequisite: IN4MATX 261 or IN4MATX 251.

IN4MATX 205. Quantitative Research Methods in Information Systems. 4 Units.

Quantitative research methods used to study computerization and information systems. Design of instruments, sampling, sample sizes, and data analysis. Validity and reliability. Longitudinal versus cross-sectional designs. Analysis of secondary data. Studies of the methods through examination of research literature.

Prerequisite: (IN4MATX 251 or IN4MATX 261) and basic knowledge of elementary statistics.

IN4MATX 207S. Doctoral Seminar on Research and Writing. 2 Units.

Doctoral seminar centered on original research and writing. Provides a chance for doctoral students at all levels to present original work, brainstorm ongoing issues, and learn to provide and receive critical feedback from peers.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

IN4MATX 209S. Seminar in Software . 2 Units.

Current research and research trends in informatics. Forum for presentation and criticism by students of research work in progress.

Repeatability: Unlimited as topics vary.

IN4MATX 211. Software Engineering. 4 Units.

Study of the concepts, methods, and tools for the analysis, design, construction, and measurement of complex software-intensive systems. Underlying principles emphasized. State-of-the-art software engineering and promising research areas covered, including project management.

IN4MATX 212. Analysis of Programming Languages. 4 Units.

Concepts in modern programming languages, their interaction, and the relationship between programming languages and methods for large-scale, extensible software development. Empirical analysis of programming language usage.

Same as COMPSCI 253.

IN4MATX 214. Requirements Engineering and Specification. 4 Units.

Study of rigorous techniques in requirements engineering – requirements definition phase of software development – with focus on modeling and specification. Topics include notations and models for requirements specification; and methods, tools and processes for software requirements elicitation, representation, analysis.

Restriction: Graduate students only.

IN4MATX 215. Software Analysis and Testing. 4 Units.

Studies techniques for developing confidence in software from traditional testing schemes to integrated, multitechnique analytic approaches. Considers strengths and weaknesses and explores opportunities for synergistic technique application. Emphasis is on approaches integrated into the software process.

IN4MATX 217. Software Processes. 4 Units.

Explores vehicles for modeling, coding, and analyzing software processes. Considers integration of software process programming approaches with traditional management issues. Explores the use of software process execution as a vehicle for effective integration of tools into environments.

IN4MATX 219. Software Environments. 4 Units.

Study of the requirements, concepts, and architectures of comprehensive, integrated, software development and maintenance environments. Major topics include process support, object management, communication, interoperability, measurement, analysis, and user interfaces in the environment context.

IN4MATX 221. Software Architecture. 4 Units.

Study of the concepts, representation techniques, development methods, and tools for architecture-centric software engineering. Topics include domain-specific software architectures, architectural styles, architecture description languages, software connectors, and dynamism in architectures.

IN4MATX 223. Applied Software Design Techniques. 4 Units.

Study of concepts, representations, techniques, and case studies in structuring software systems, with an emphasis on design considerations. Topics include static and dynamic system structure, data models, abstractions, naming, protocols and application programmer interfaces.

IN4MATX 225. Information Retrieval, Filtering, and Classification. 4 Units.

Algorithms for the storage, retrieval, filtering, and classification of textual and multimedia data. The vector space model, Boolean and probabilistic queries, and relevance feedback. Latent semantic indexing; collaborative filtering; and relationship to machine learning methods.

Prerequisite: COMPSCI 161 and COMPSCI 171 and (MATH 3A or MATH 6G).

Same as COMPSCI 221.

Restriction: Graduate students only.

IN4MATX 231. User Interface Design and Evaluation. 4 Units.

Introduction to the design and evaluation of user interfaces, with an emphasis on methodology. Cognitive principles, design life cycle, on-line and off-line prototyping techniques. Toolkits and architectures for interactive systems. Evaluation techniques, including heuristic and laboratory methods.

IN4MATX 232. Research in Human-Centered Computing. 4 Units.

Introduction to contemporary topics in human-computer interaction, including methods, technologies, design, and evaluation. Emerging application domains and their challenges to traditional research methods. Advanced architectures and technologies. Critical issues.

Prerequisite: Some familiarity with HCI principles.

IN4MATX 233. Knowledge-Based User Interfaces. 4 Units.

Concepts related to the development of interactive software systems with a focus on knowledge-based tools and human-centered design. Topics span the fields of human-computer interaction, software engineering, and knowledge representation.

Prerequisite: COMPSCI 171.

IN4MATX 235. Advanced User Interface Architecture. 4 Units.

Architectural concerns in advanced interactive systems. The design of current and emerging platforms for novel interactive systems. Paradigms such as constraint-based programming, multimodal interaction, and perceptual user interfaces for individual, distributed, and ubiquitous applications.

IN4MATX 241. Introduction to Ubiquitous Computing. 4 Units.

The "disappearing computer" paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation.

Same as COMPSCI 248A.

IN4MATX 242. Ubiquitous Computing and Interaction. 4 Units.

Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work.

Prerequisite: IN4MATX 231 and IN4MATX 241.

Same as COMPSCI 248B.

IN4MATX 244. Introduction to Embedded and Ubiquitous Systems. 4 Units.

Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains.

Prerequisite: (I&C SCI 51 and COMPSCI 152 and (MATH 3A or MATH 6G or I&C SCI 6D) and COMPSCI 161) or B.S. degree in Computer Science.

Same as COMPSCI 244.

IN4MATX 251. Computer-Supported Cooperative Work. 4 Units.

The role of information systems in supporting work in groups and organizations. Examines various technologies designed to support communication, information sharing, and coordination. Focuses on behavioral and social aspects of designing and using group support technologies.

IN4MATX 261. Social Analysis of Computing. 4 Units.

The social and economic impacts of computing and information technologies on groups, organizations, and society. Topics include computerization and changes in the character of work, social control and privacy, electronic communities, and risks of safety-critical systems to people.

IN4MATX 263. Computerization, Work, and Organizations. 4 Units.

Selected topics in the influence of computerization and information systems in transforming work and organizations. Theories of organization and organizational change. Processes by which diverse information technologies influence changes in work and organizations over short and long time periods.

Prerequisite: IN4MATX 251 or IN4MATX 251.

IN4MATX 265. Theories of Computerization and Information Systems. 4 Units.

Social and economic conceptions of information technology. Macrosocial and economic conditions that foster changes in information technologies. Social construction of information and computer technology in professional worlds. Theories of information technology and large-scale social change.

Prerequisite: IN4MATX 251 or IN4MATX 261.

IN4MATX 267. Digital Media and Society. 4 Units.

Selected topics in the technological and social aspects of online interactions, and policy including online games, social media, electronic activism, e-commerce, and digital libraries. Media-theoretic approaches to digital technology. Architectures, infrastructure considerations, and their consequences.

Prerequisite: IN4MATX 251 or IN4MATX 261.

IN4MATX 269. Computer Law. 4 Units.

The American legal system and its provisions affecting computer systems, computer networks, and information processing. Intellectual property, contracts, privacy, liability for malfunction, computer crime, constitutional issues, transborder data flow, computer-based evidence, and litigation.

Restriction: Graduate students only.

IN4MATX 273. Information Technology in Global Sustainability. 4 Units.

Explores the relationship between recent developments in information technology and the global transition to sustainability. Topics include the role of IT systems in the provision of human needs and wants (e.g., smart grids, food systems, and other IT-enabled infrastructure).

Restriction: Graduate students only.

IN4MATX 290. Research Seminar. 2 Units.

Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

IN4MATX 291S. Literature Survey in Software Engineering. 2 Units.

Reading and analysis of relevant literature in Software Engineering under the direction of a faculty member.

Repeatability: May be repeated for credit unlimited times.

IN4MATX 295. Special Topics in Informatics. 4 Units.

Studies in selected areas of informatics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

IN4MATX 298. Thesis Supervision. 2-12 Units.

Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

IN4MATX 299. Individual Study. 2-12 Units.

Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Department of Statistics

2019 Donald Bren Hall; (949) 824-5392; Fax: (949) 824-9863
stat@uci.edu; <http://www.stat.uci.edu/>
Jessica Utts, **Department Chair**

Statistics is the science concerned with developing and studying methods for collecting, analyzing, interpreting, and presenting empirical data. Statistical principles and methods are important for addressing questions in public policy, medicine, industry, and virtually every branch of science. Interest in statistical methods has increased dramatically with the abundance of large databases in fields like computer science (Internet and Web traffic), business and marketing (transaction records), and biology (the human genome and related data). It is the substantive questions in such areas of application that drive the development of new statistical methods and motivate the mathematical study of the properties of these methods.

Undergraduate Program in Statistics

The Department of Statistics offers lower-division undergraduate courses designed to introduce students to the field of statistics (STATS 7, STATS 8, STATS 67) and upper-division undergraduate courses on the theoretical foundations of probability and statistics (STATS 120A-STATS 120B-STATS 120C, STATS 121) and statistical methodology (STATS

110-STATS 111-STATS 112). The Department is in the process of planning an undergraduate degree program in Statistics. In the interim, students interested in focusing on statistics are encouraged to consider a minor in Statistics along with a major in a field of interest.

Minor in Statistics

The minor in Statistics is designed to provide students with exposure to both statistical theory and practice. The minor requires a total of seven courses. These include a mathematics course, five core statistics courses, and an elective that may be taken from among several departments. Some of the courses used to complete the minor may include prerequisites that may or may not be part of a student's course requirements for their major. Because of this, the minor is somewhat intensive, but it is a useful complement to a variety of undergraduate fields for mathematically inclined students. The minor, supplemented with a few additional courses (mathematics and computing), would provide sufficient background for graduate study in statistics. Students considering a minor in Statistics should meet with the Director of Undergraduate Studies in Statistics as early as possible to plan their course work.

NOTE: Students may not receive both a minor in Statistics and a specialization in Statistics within the Mathematics major.

Requirements for the Minor

Required Courses

MATH 3A or MATH 6G	Introduction to Linear Algebra Linear Algebra
STATS 120A- 120B- 120C	Introduction to Probability and Statistics and Introduction to Probability and Statistics and Introduction to Probability and Statistics
STATS 110- 111	Statistical Methods for Data Analysis I and Statistical Methods for Data Analysis II

Select one elective from the following: ¹

STATS 7	Basic Statistics (or equivalent course) ²
STATS 112	Statistical Methods for Data Analysis III
STATS 121	Probability Models
MATH 105A or MATH 105B	Numerical Analysis Numerical Analysis
MATH 130B or MATH 130C	Probability and Stochastic Processes Probability and Stochastic Processes
I&C SCI 21	Introduction to Computer Science I

¹ Or can substitute another course with approval of the Director of Undergraduate Studies.

² Only if taken prior to STATS 110

Graduate Program in Statistics

Research in statistics can range from mathematical studies of the theoretical underpinnings of a statistical model or method to the development of novel statistical models and methods and a thorough study of their properties. Frequently, statistics research is motivated and informed by collaborations with experts in a particular substantive field. Their scientific studies and data collection efforts may yield complex data that cannot be adequately handled using standard statistical methodology. Statisticians aim to develop methods that address the scientific or policy questions of the researcher. In doing so, statisticians must consider how efficiently and effectively the proposed methodology can be implemented and what guarantees can be provided as to the performance of the proposed methods. Such questions can often be answered using a combination of mathematical, analytical, and computational techniques.

Background: Individuals from a variety of backgrounds can make significant contributions to the field of statistics as long as they have sufficient background in statistics, mathematics, and computing. Undergraduate preparation in statistics, mathematics, and computing should include multivariate calculus (the equivalent of UCI courses MATH 2A-MATH 2B, MATH 2D-MATH 2E), linear algebra (MATH 121A), elementary analysis (MATH 140A-MATH 140B), introductory probability and statistics (STATS 120A-STATS 120B-STATS 120C), and basic computing (I&C SCI 21). For students with undergraduate majors outside of mathematics and statistics, it is possible to make up one or two missing courses during the first year in the program.

Students may be admitted to either the master's program or the doctoral program. For additional information about the Bren School of ICS's graduate programs and admissions information, click here (p. 578).

Master of Science in Statistics

Statistics Course Requirements: Intermediate Probability & Statistical Theory (STATS 200A-STATS 200B-STATS 200C); Statistical Methodology (STATS 202, STATS 203, STATS 210); three quarters of Seminar in Statistics (STATS 280); six other graduate courses in or related to statistics, at least three of which are offered by the Department of Statistics. STATS 211 and STATS 212 may be substituted for STATS 202 and STATS 203.

At most one of the six elective courses may be an Individual Study (STATS 299), and only with prior approval of the Department Graduate Committee.

The entire program of courses must be approved by the Statistics Department Graduate Committee. Students with previous graduate training in statistics may petition the Committee to substitute other courses for a subset of the required courses. Students are required to pass a written comprehensive examination ordinarily at the end of the first year, covering the material from STATS 200A-STATS 200B-STATS 200C, and either STATS 202, STATS 203, and STATS 210 or STATS 210, STATS 211, and STATS 212.

Doctor of Philosophy in Statistics

Statistics Course Requirements: Intermediate Probability and Statistics (STATS 200A-STATS 200B-STATS 200C); Statistical Methodology (STATS 210, STATS 211, STATS 212); Advanced Probability & Statistics Topics (STATS 220A-STATS 220B); Bayesian Statistical Analysis (STATS 225); Statistical Computing Methods (STATS 230); five other graduate courses in or related to statistics, at least two of which are offered by

the Department of Statistics. These courses must be completed prior to candidacy.

In addition, continual enrollment in Seminar in Statistics (STATS 280) is required in all quarters.

Additional Ph.D. requirements:

Each Ph.D. student is required to take a written comprehensive examination, ordinarily at the end of the first year, covering the material from STATS 200A-STATS 200B-STATS 200C, STATS 210, STATS 211, and STATS 212. In addition, each student is required to take a written comprehensive examination after completion of the second year course work, covering material from STATS 220A-STATS 220B, STATS 225, and STATS 230.

Ph.D. students who have passed the written comprehensive examinations are required to give a post-comprehensive research presentation each year.

Ph.D. students are required to serve as teaching assistants for at least two quarters.

Ph.D. students are required to demonstrate substantive knowledge of an application area outside of statistics (e.g., computer science, economics, cognitive sciences, biology, or medicine). Such knowledge can be demonstrated by course work in the application area (three quarter courses), co-authorship of publishable research in the application area, or other evidence of supervised collaborative work that is substantiated by an expert in the field. In the case of a theoretically oriented student, the outside application area may be mathematics.

The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Master of Science in Statistics for Students Enrolled in a Doctoral Program at UCI

Students who are currently enrolled in a doctoral program at UCI and wish to pursue a Master of Science degree in Statistics at the same time should consult with the Director of Graduate Studies in Statistics to register their interest with the Department, to develop a program of study, and to establish a relationship with a faculty advisor in Statistics. The degree requirements including the comprehensive examination are the same as those listed under the Master of Science in Statistics. The Statistics Department Graduate Committee must be petitioned for permission to sit for the comprehensive examination. The petition should include the proposed plan of study and a current official UCI transcript. A petition for the degree must be filed with the Statistics Department Graduate Committee for approval two quarters before the degree is awarded.

Faculty

Daniel L. Gillen: Biostatistics, survival analysis and longitudinal methods, group sequential methods, design and analysis of clinical trials, applications to biological and clinical studies

Wesley O. Johnson: Bayesian semi-parametric inference, survival analysis, prediction, specification of priors, applications in epidemiology, diagnostic testing, longitudinal and mixed modeling, asymptotics

Babak Shahbaba: Biostatistics, Bayesian methodology, statistical machine learning, and applying novel statistical methods to solve research questions in genetics, proteomics, and cancer studies

Hernando Ombao: Time series analysis, methods for spatio-temporal data, wavelets, applications to neuroscience and brain signal analysis

Hal S. Stern: Bayesian methodology, hierarchical modeling, model checking/model diagnostics, statistical applications in the biological and social sciences, statistics and sports

Jessica Utts: Statistical education and literacy; statistical applications to parapsychology, medicine, epidemiology, and transportation

Yaming Yu: Statistical computation, Bayesian methodology, and missing data problems

Zhaoxia Yu: Statistical genetics, genomics, and bioinformatics

Courses

STATS 7. Basic Statistics. 4 Units.

Introduces basic inferential statistics including confidence intervals and hypothesis testing on means and proportions, t-distribution, Chi Square, regression and correlation. F-distribution and nonparametric statistics included if time permits. Course may be offered online.

Overlaps with STATS 8, BIO SCI 7, MGMT 7.

Restriction: STATS 7 may not be taken for credit if taken after STATS 67.

(Va)

STATS 8. Introduction to Biological Statistics . 4 Units.

Introductory statistical techniques used to collect and analyze experimental and observational data from health sciences and biology. Includes exploration of data, probability and sampling distributions, basic statistical inference for means and proportions, linear regression, and analysis of variance. Course may be offered online.

Overlaps with MATH 7, SOCECOL 13, MGMT 7.

(Va)

STATS 67. Introduction to Probability and Statistics for Computer Science. 4 Units.

Introduction to the basic concepts of probability and statistics with discussion of applications to computer science.

Prerequisite: MATH 2B.

Overlaps with STATS 7, MGMT 7.

Restriction: STATS 7 and MGMT 7 may not be taken for credit if taken after STATS 67.

(Va)

STATS 110. Statistical Methods for Data Analysis I. 4 Units.

Introduction to statistical methods for analyzing data from experiments and surveys. Methods covered include two-sample procedures, analysis of variance, simple and multiple linear regression.

Prerequisite: STATS 7 or (STATS 120A and STATS 120B and STATS 120C).

Concurrent with STATS 201.

STATS 111. Statistical Methods for Data Analysis II. 4 Units.

Introduction to statistical methods for analyzing data from surveys or experiments. Emphasizes application and understanding of methods for categorical data including contingency tables, logistic and Poisson regression, loglinear models.

Prerequisite: STATS 110.

Concurrent with STATS 202.

STATS 112. Statistical Methods for Data Analysis III. 4 Units.

Introduction to statistical methods for analyzing longitudinal data from experiments and cohort studies. Topics covered include survival methods for censored time-to-event data, linear mixed models, non-linear mixed effects models, and generalized estimating equations.

Prerequisite: STATS 111.

Concurrent with STATS 203.

STATS 120A. Introduction to Probability and Statistics. 4 Units.

Introductory course covering basic principles of probability and statistical inference. Axiomatic definition of probability, random variables, probability distributions, expectation.

Prerequisite: MATH 2A and MATH 2B and (MATH 2D or MATH 4).

Same as MATH 131A.

Overlaps with MATH 130A, MATH 132A.

STATS 120B. Introduction to Probability and Statistics. 4 Units.

Introductory course covering basic principles of probability and statistical inference. Point estimation, interval estimating, and testing hypotheses, Bayesian approaches to inference.

Prerequisite: (MATH 131A or STATS 120A) and (MATH 3A or MATH 6G or MATH 4).

Same as MATH 131B.

STATS 120C. Introduction to Probability and Statistics. 4 Units.

Introductory course covering basic principles of probability and statistical inference. Linear regression, analysis of variance, model checking.

Prerequisite: MATH 131B or STATS 120B.

Same as MATH 131C.

STATS 121. Probability Models. 4 Units.

Advanced probability, discrete time Markov chains, Poisson processes, continuous time Markov chains. Queuing or simulation as time permits.

Prerequisite: STATS 120A.

Concurrent with COMPSCI 278.

STATS 199. Individual Study. 2-5 Units.

Individual research or investigations under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

STATS 200A. Intermediate Probability and Statistical Theory. 4 Units.

Basics of probability theory, random variables and basic transformations, univariate distributions—discrete and continuous, multivariate distributions.

Prerequisite: STATS 120C.

STATS 200B. Intermediate Probability and Statistical Theory. 4 Units.

Random samples, transformations, limit laws, normal distribution theory, introduction to stochastic processes, data reduction, point estimation (maximum likelihood).

Prerequisite: STATS 200A.

STATS 200C. Intermediate Probability and Statistical Theory. 4 Units.

Interval estimation, hypothesis testing, decision theory and Bayesian inference, basic linear model theory.

Prerequisite: STATS 200B.

STATS 201. Statistical Methods for Data Analysis I. 4 Units.

Introduction to statistical methods for analyzing data from experiments and surveys. Methods covered include two-sample procedures, analysis of variance, simple and multiple linear regression.

Prerequisite: Knowledge of basic statistics.

Concurrent with STATS 110.

STATS 202. Statistical Methods for Data Analysis II. 4 Units.

Introduction to statistical methods for analyzing data from surveys or experiments. Emphasizes application and understanding of methods for categorical data including contingency tables, logistic and Poisson regression, loglinear models.

Prerequisite: STATS 201.

Concurrent with STATS 111.

STATS 203. Statistical Methods for Data Analysis III. 4 Units.

Introduction to statistical methods for analyzing longitudinal data from experiments and cohort studies. Topics covered include survival methods for censored time-to-event data, linear mixed models, non-linear mixed effects models, and generalized estimating equations.

Prerequisite: STATS 202.

Concurrent with STATS 112.

STATS 210. Statistical Methods I: Linear Models. 4 Units.

Statistical methods for analyzing data from surveys and experiments. Topics include randomization and model-based inference, two-sample methods, analysis of variance, linear regression and model diagnostics.

Prerequisite: Knowledge of basic statistics, calculus, linear algebra.

STATS 211. Statistical Methods II: Generalized Linear Models. 4 Units.

Development of the theory and application of generalized linear models. Topics include likelihood estimation and asymptotic distributional theory for exponential families, quasi-likelihood and mixed model development. Emphasizes methodological development and application to real scientific problems.

Corequisite: STATS 200B.

Prerequisite: STATS 210.

STATS 212. Statistical Methods III: Methods for Correlated Data. 4 Units.

Development and application of statistical methods for analyzing corrected data. Topics covered include repeated measures ANOVA, linear mixed models, non-linear mixed effects models, and generalized estimating equations. Emphasizes both theoretical development and application of the presented methodology.

Prerequisite: STATS 211.

STATS 220A. Advanced Probability and Statistics Topics. 4 Units.

Advanced topics in probability and statistical inference including measure theoretic probability, large sample theory, decision theory, resampling and Monte Carlo methods, nonparametric methods.

Prerequisite: STATS 200C.

STATS 220B. Advanced Probability and Statistics Topics. 4 Units.

Advanced topics in probability and statistical inference including measure theoretic probability, large sample theory, decision theory, resampling and Monte Carlo methods, nonparametric methods.

Prerequisite: STATS 220A.

STATS 225. Bayesian Statistical Analysis. 4 Units.

Introduction to the Bayesian approach to statistical inference. Topics include univariate and multivariate models, choice of prior distributions, hierarchical models, computation including Markov chain Monte Carlo, model checking, and model selection.

Prerequisite: Two quarters of upper-division or graduate training in probability and statistics.

STATS 226. Advanced Topics in Modern Bayesian Statistical Inference. 4 Units.

Modern Bayesian Statistics: selected topics from theory of Markov chains, application of theory to modern methods of Markov chain Monte Carlo sampling; Bayesian non-parametric and semiparametric modeling, including Dirichlet Process Mixtures; Mixtures of Polya Trees.

Prerequisite: STATS 200C.

STATS 230. Statistical Computing Methods. 4 Units.

Numerical computations and algorithms with applications in statistics. Topics include optimization methods including the EM algorithm, random number generation and simulation, Markov chain simulation tools, and numerical integration.

Prerequisite: Two quarters of upper-division or graduate training in probability and statistics.

Overlaps with COMPSCI 206.

STATS 235. Modern Data Analysis Methods . 4 Units.

Introduces selected modern tools for data analysis. Emphasizes use of computational and resampling techniques for data analyses when the data do not conform to standard toolbox of regression models and/or complexity of modeling problem threatens validity of standard methods.

Prerequisite: STATS 120C.

Restriction: Graduate students only.

STATS 240. Multivariate Statistical Methods. 4 Units.

Theory and application of multivariate statistical method. Topics include: likelihood and Bayesian inference for the multivariate normal model, visualization of multivariate data, data reduction techniques, cluster analysis, and multivariate statistical models.

Prerequisite: STATS 200A and STATS 200B and STATS 200C and MATH 121A

Restriction: Prerequisite required

STATS 245. Time Series Analysis. 4 Units.

Statistical models for analysis of time series from time and frequency domain perspectives. Emphasizes theory and application of time series data analysis methods. Topics include ARMA/ARIMA models, model identification/estimation, linear operators, Fourier analysis, spectral estimation, state space models, Kalman filter.

Prerequisite: STATS 200C.

STATS 250. Biostatistics. 4 Units.

Statistical methods commonly used to analyze data arising from clinical studies. Topics include analysis of observational studies and randomized clinical trials, techniques in the analysis of survival and longitudinal data, approaches to handling missing data, meta-analysis, nonparametric methods.

Prerequisite: STATS 210.

STATS 255. Statistical Methods for Survival Data. 4 Units.

Statistical methods for analyzing survival data from cohort studies. Topics include parametric and nonparametric methods, the Kaplan-Meier estimator, log-rank tests, regression models, the Cox proportional hazards model and accelerated failure time models, efficient sampling designs, discrete survival models.

Prerequisite: STATS 211.

STATS 257. Introduction to Statistical Genetics. 4 Units.

Provides students with knowledge of the basic principles, concepts, and methods used in statistical genetic research. Topics include principles of population genetics, and statistical methods for family- and population-based studies.

Prerequisite: Two quarters of upper-division or graduate training in statistical methods.

Same as EPIDEM 215.

STATS 260. Inference with Missing Data. 4 Units.

Statistical methods and theory useful for analysis of multivariate data with partially observed variables. Bayesian and likelihood-based methods developed. Topics include EM-type algorithms, MCMC samplers, multiple imputation, and general location model. Applications from economics, education, and medicine are discussed.

Prerequisite: STATS 200C and STATS 210.

STATS 262. Theory and Practice of Sample Surveys. 4 Units.

Basic techniques and statistical methods used in designing surveys and analyzing collected survey data. Topics include simple random sampling, ratio and regression estimates, stratified sampling, cluster sampling, sampling with unequal probabilities, multistage sampling, and methods to handle nonresponse.

Prerequisite: STATS 120C.

STATS 265. Causal Inference. 4 Units.

Various approaches to causal inference focusing on the Rubin causal model and propensity-score methods. Topics include randomized experiments, observational studies, non-compliance, ignorable and non-ignorable treatment assignment, instrumental variables, and sensitivity analysis. Applications from economics, politics, education, and medicine.

Prerequisite: STATS 200C and STATS 210.

STATS 270. Stochastic Processes. 4 Units.

Introduction to the theory and application of stochastic processes. Topics include Markov chains, continuous-time Markov processes, Poisson processes, and Brownian motion. Applications include Markov chain Monte Carlo methods and financial modeling (for example, option pricing).

Prerequisite: STATS 120C.

Overlaps with MATH 271A, MATH 271B, MATH 271C.

STATS 275. Statistical Consulting. 4 Units.

Training in collaborative research and practical application of statistics. Emphasis on effective communication as it relates to identifying scientific objectives, formulating a statistical analysis plan, choice of statistical methods, and interpretation of results and their limitations to non-statisticians.

Prerequisite: STATS 203 or STATS 212.

Repeatability: May be taken for credit 2 times.

STATS 280. Seminar in Statistics. 0.5 Units.

Periodic seminar series covering topics of current research in statistics and its application.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

STATS 281. Topics in Astrostatistics. 1-4 Units.

Topics in statistical methods for astronomy, astrophysics, particle physics, and solar physics, typically including spectral analysis, image processing and analysis, time series, classification, clustering, massive data, etc. Emphasizes computationally intensive methods, Bayesian and frequentist methods, machine learning, and signal processing.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

STATS 295. Special Topics in Statistics. 4 Units.

Studies in selected areas of statistics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

STATS 298. Thesis Supervision. 2-12 Units.

Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

Repeatability: May be repeated for credit unlimited times.

STATS 299. Individual Study. 2-12 Units.

Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Interdisciplinary Studies

UCI offers a variety of interdisciplinary programs of study which span the boundaries of traditional academic scholarship and provide students with opportunities to pursue subject areas deriving from the interaction of different disciplines. Faculty participation is determined by research and teaching interests and, as such, faculty may be drawn from various departments and schools across the campus.

This section presents information about the following:

Business Information Management (p. 635) (major)
 Computer Science and Engineering (p. 637) (major)
 Civic and Community Engagement (p. 629) (minor)
 Global Sustainability (p. 632) (minor)
 History and Philosophy of Science (p. 634) (minor)
 Native American Studies (p. 634) (minor)
 Pharmacological Sciences (p. 624) (graduate program)
 Networked Systems (p. 622) (graduate program)
 Transportation Science (p. 625) (graduate program)

Graduate Program in Networked Systems

(949) 824-1755

<http://www.networkedsystems.uci.edu/>

Gene Tsudik (**Director**)

Ender Ayanoglu (**Director**)

The graduate program in Networked Systems is administered by faculty from two academic units: the Department of Computer Science (CS) in the Donald Bren School of Information and Computer Sciences, and the Department of Electrical Engineering and Computer Science (EECS) in The Henry Samueli School of Engineering. The program offers M.S. and Ph.D. degrees in Networked Systems.

The Networked Systems program provides education and research opportunities to graduate students in the areas of computer and telecommunication networks. Networked Systems include telephone, cable TV networks, wireless, mobile, ad hoc, and cellular phone networks, as well as the Internet. Networked Systems, as a field, is inherently interdisciplinary since it combines technology in software, hardware,

and communications. As a result, it transcends traditional departmental boundaries. Networked Systems draws primarily from Computer Science, Computer Engineering, and Electrical Engineering. At UCI, these areas are housed in two departments: CS and EECS. The Networked Systems program unites the respective strengths of these two departments and provides integrated M.S. and Ph.D. degrees in this area.

Program requirements include core, breadth, and concentration courses. **Core courses** are taken by all Networked Systems students and form a foundation for networking topics. **Breadth courses** may be selected from technical courses (including distributed systems, algorithms, data structures, operating systems, databases, random processes, and linear systems) and management and applications of technology (including educational technology, management of information technology, and social impact). **Concentration courses** may be selected from a long list including courses on networks, performance, middleware, communications, and operations research. Core, breadth, and concentration course lists are available on the Networked Systems Web site (<http://www.networkedsystems.uci.edu>) or from the Networked Systems Program Office.

Admission

Prospective graduate students apply directly to the Networked Systems program, specifying M.S. or Ph.D. degree goal. Applicants who do not hold a bachelor's degree in Computer Science, Computer Engineering, or Electrical Engineering may be required to take supplementary course work to obtain and demonstrate sufficient background in the field.

Applicants are evaluated on the basis of prior academic record and potential for creative research and teaching, as demonstrated in their application materials including official university transcripts, letters of recommendation, GRE test scores, and statement of purpose.

Master of Science Program

Students pursuing the M.S. degree may choose either Plan I (Thesis Plan) or Plan II (Comprehensive Examination Plan). Students following Plan I must complete the three core courses, two courses chosen from the breadth course list with at most one chosen from the Management and Applications of Technology list, three courses chosen from the concentration course lists with at least one course chosen from at least two different concentrations, two additional courses chosen with the approval of the advisor, and a thesis. In addition, students pursuing Plan I must enroll in two courses of thesis-related research: COMPSCI 298 or EECS 296.

Students following Plan II must complete the three core courses, three courses chosen from the breadth course list with at most two chosen from the Management and Applications of Technology list, four courses chosen from the concentration course lists with at least one course chosen from at least three different concentrations, and two additional courses chosen with the approval of the advisor. Students pursuing this option must also pass a comprehensive examination which will be administered through NET SYS 295 and will consist of a term paper on a topic relevant to the student's educational program and that term's speakers.

Doctor of Philosophy Program

The Ph.D. degree requires the following 13 courses: three core courses; three courses chosen from the breadth course list, with at most two chosen from the Management and Applications of Technology list; four courses chosen from the concentration course lists, with at least one course chosen from at least three different concentrations; and three

additional courses, chosen with the approval of the research advisor. Students must also complete two teaching practicum courses (I&C SCI 399) and a dissertation.

Courses applied to the M.S. degree can also be applied to the Ph.D. degree. Students who have taken similar graduate-level courses at another university may petition to apply these courses to the Ph.D. requirements. Ph.D. students who have served as teaching assistants, readers, or tutors at another university may petition to apply this experience toward the teaching practicum requirement. Normative time for advancement to candidacy is three years (two for students who entered with a master's degree). Normative time for completion of the Ph.D. is six years (five for students who entered with a master's degree), and maximum time permitted is seven years.

Faculty

Animashree Anandkumar, Ph.D. Cornell University, *Assistant Professor of Electrical Engineering and Computer Science* (statistical signal processing, information theory, and networking with a focus on graphical models)

Ender Ayanoglu, Ph.D. Stanford University, *Director of Networked Systems and Professor of Electrical Engineering and Computer Science* (next generation wireless, broadband, and optical communications)

Pai Chou, Ph.D. University of Washington, *Professor of Electrical Engineering and Computer Science* (hardware and software co-design, power-aware and adaptive embedded systems, system synthesis, and embedded instruments)

Magda El Zarki, Ph.D. Columbia University, *Professor of Computer Science, Informatics, and Electrical Engineering and Computer Science* (telecommunications, networks, wireless communication, video transmission)

Hamid Jafarkhani, Ph.D. University of Maryland, *UCI Chancellor's Professor of Electrical Engineering and Computer Science* (communication theory, coding, wireless networks, multimedia networking)

Scott Jordan, Ph.D. University of California, Berkeley, *Professor of Computer Science and of Electrical Engineering and Computer Science* (pricing and differentiated services in the Internet, resource allocation in wireless multimedia networks, and telecommunications policy)

Athina Markopoulou, Ph.D. Stanford University, *Associate Professor of Electrical Engineering and Computer Science* (network, reliability, security, multimedia networking, measurement and control)

Amelia Regan, Ph.D. University of Texas, Austin, *Professor of Computer Science* (operations research, network optimization, data mining)

Gene Tsudik, Ph.D. University of Southern California, *Director of Networked Systems and Professor of Computer Science* (security and applied cryptography, mobile/ad-hoc networks and distributed systems)

Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science* (parallel and distributed systems, multimedia, internetworking, high-performance architectures, resource management)

Courses

NET SYS 201. Computer and Communication Networks. 4 Units.

Network architecture of the Internet, telephone networks, cable networks, and cell phone networks. Network performance models. Network performance models. Advanced concepts and implementations of flow and congestion control, addressing, internetworking, forwarding, routing, multiple access, streaming, and quality-of-service.

Prerequisite: EECS 148 or COMPSCI 132.

Same as COMPSCI 232, EECS 248A.

Restriction: Graduate students only.

NET SYS 202. Networking Laboratory. 4 Units.

A laboratory-based introduction to basic networking concepts such as addressing, sub-netting, bridging, ARP, and routing. Network simulation and design. Structured around weekly readings and laboratory assignments.

Prerequisite: EECS 148 or COMPSCI 132.

Same as COMPSCI 233.

NET SYS 210. Advanced Networks. 4 Units.

Design principles of networked systems, advanced routing and congestion control algorithms, network algorithms, network measurement, management, security, Internet economics, and emerging networks.

Prerequisite: NET SYS 201 or COMPSCI 232 OR EECS 248A.

Same as COMPSCI 234.

NET SYS 230. Wireless and Mobile Networking. 4 Units.

Introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design, performance analysis, and protocols. Topics covered include: an introduction to wireless networking, digital cellular, next generation cellular, wireless LANs, and mobile IP.

Prerequisite: EECS 148 or COMPSCI 132.

Same as COMPSCI 236.

NET SYS 240. Network and Distributed Systems Security. 4 Units.

Modern computer and networks security: attacks and countermeasures, authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Group communication and multicast security techniques. Covers secure e-commerce and applications of public key methods, digital certificates, and credentials.

Prerequisite: EECS 148 or COMPSCI 132.

Same as COMPSCI 203.

NET SYS 256. Network Coding: Theory and Applications. 4 Units.

Theoretical frameworks for network coding: linear, algebraic and random network coding; linear programming and combinatorial frameworks. Network code design. Benefits and costs. Practical network coding. Applications to wireless networks, content distribution, security, and other areas.

Prerequisite: EECS 248A or NET SYS 201 or COMPSCI 232.

Same as EECS 246.

Restriction: Graduate students only.

NET SYS 260. Middleware for Networked and Distributed Systems. 4 Units.

Discusses concepts, techniques, and issues in developing distributed systems middleware that provides high performance and Quality of Service for emerging applications. Also covers existing standards (e.g., CORBA, DCOM, Jini, Espeak) and their relative advantages and shortcomings.

Prerequisite: An undergraduate-level course in operating systems and networks.

Same as COMPSCI 237.

NET SYS 261. Distributed Computer Systems. 4 Units.

Design and analysis techniques for decentralized computer architectures, communication protocols, and hardware-software interface. Performance and reliability considerations. Design tools.

Prerequisite: EECS 211 and EECS 213.

Same as EECS 218.

Restriction: Graduate students only.

NET SYS 270. Topics in Networked Systems. 4 Units.

Study of Networked concepts.

Repeatability: Unlimited as topics vary.

NET SYS 295. Networked Systems Seminar. 1 Unit.

Current research in networked systems. Includes talks by UCI faculty, visiting researchers, and Networked Systems graduate students.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Graduate Program in Pharmacological Sciences

Graduate Student Affairs: (949) 824-7651 (Program administered by the Department of Pharmacology)
<http://www.pharmacology.uci.edu> and <http://www.pharmsci.uci.edu>

Geoffrey W. Abbott, **Graduate Program Director/Advisor for the Interdisciplinary Program**

Overview

The Department of Pharmacology in conjunction with the Department of Pharmaceutical Sciences offers an interdisciplinary program leading to a Ph.D. degree in Pharmacological Sciences. The Ph.D. degree prepares students for careers in academic research institutions, in the biotechnology and pharmaceutical industry, in federal and state agencies, and in private research institutions by providing a research-intensive approach to the study of pharmacology.

Faculty research programs in the Department of Pharmacology that are currently available through this program include molecular and cellular pharmacology, neurosciences, gene regulation, circadian rhythms, epigenetic modifications, neuropharmacology, psychopharmacology, cardiovascular pharmacology, structure-based drug design, and screening-based drug discovery. Emphasis is placed on providing an integrated understanding of drug receptors: their structure, location, and function; molecular aspects of drug action; receptor signaling mechanisms;

structure-activity relationships and drug design; the influence of genetic variation on drug-receptor interactions; and the role of receptors and drugs in development and aging, plasticity, reinforcement and drug abuse, neural disorders, and cardiovascular physiology and disease. Information about the Department of Pharmacology faculty and their research programs is available at <http://www.pharmacology.uci.edu/>. For course descriptions see the Department of Pharmacology (p. 703) in the School of Medicine section of the *Catalogue*.

Faculty research programs in the Department of Pharmaceutical Sciences that are available through this program currently include organic, medicinal, and bioorganic chemistry; structural biology; structure-based drug design; high-throughput screening; molecular neuropharmacology; the pharmacology of aging; natural product biosynthesis and synthase engineering; cancer prevention and therapy; gene regulation and intercellular signaling; computational biology and bioinformatics; and nanomedicine for targeted drug and gene delivery. Information about the Department of Pharmaceutical Sciences faculty and their research programs is available at <http://www.pharmsci.uci.edu>. For course descriptions see the Department of Pharmaceutical Sciences (p. 720) in the *Catalogue*.

Program Requirements

Prerequisites for admission include a bachelor's degree in one of the core disciplines of pharmacology, namely a physical science (including computer science), a biological science, biochemical or biomedical engineering, or allied field. Non-biological sciences majors must have passed a minimum of two quarters (or one semester) of introductory biology. In addition, courses in biochemistry, pharmacology, protein structure and function, biophysics, or related fields would be a plus regardless of major. The general Graduate Record Examination is required for admission; subject GRE exams are optional but can provide valuable additional information to the admissions committee in marginal applications. The graduate program requires a diverse group of classroom courses selected by the student in consultation with the Graduate Advisor. The departmental requirements leave the student a great deal of latitude in choosing an area of emphasis. In keeping with this principle and the highly interdisciplinary nature of pharmacology, and subject to the approval of the Graduate Advisor, students may take graduate courses in allied fields outside the Department such as Biological Sciences, Physical Sciences, Engineering, or Computer Science. Similarly, up to eight units of graduate courses taken through UCI University Extension and/or UCI upper-division undergraduate classes can be counted toward the elective course requirements with prior written approval from the Graduate Director. In addition, two lab rotations of one quarter in length are required.

Advancement to candidacy for the Ph.D. normally takes place in the third year and is based on an oral and written exam assessing overall performance and progress in the program. Students may also receive the M.S. degree after completion of appropriate requirements. The main additional requirement for the Ph.D. is the satisfactory completion and oral defense of a written dissertation based on original research carried out under the guidance of a faculty member. All candidates for the Ph.D. degree are required to engage in research activities throughout the course of their academic programs. This requirement applies to all students whether or not they are compensated for such services. An appointment as a graduate student researcher is awarded on the basis of scholarship and not as compensation for services rendered. The normative time for advancement to candidacy is three years, and all requirements for the Ph.D. degree should be completed within five years (the maximum time permitted is seven years). For more information,

contact the Pharmacological Sciences Graduate Program Director/Advisor.

Graduate Program Faculty—Pharmacology

Geoffrey W. Abbott: Biology and pharmacology of voltage-gated potassium channels, voltage-independent potassium channels, and ion transporters

Emiliana Borrelli (*Joint*): Dopamine signaling and drugs of addiction; mouse models of neurological and neuropsychiatric disorders

Olivier Civelli: Molecular biology of G protein-coupled receptors; discovery of novel neuropeptides; functional characterization of novel neuropeptides, discovery of active components of traditional Chinese medicines

Frederick J. Ehler: Muscarinic receptor coupling mechanisms; functional role of muscarinic receptor subtypes; pharmacological methods of analysis; analysis of drug receptor interactions

Pietro R. Galassetti (*Joint*): Physiological and altered adaptive responses to stress in healthy and dysmetabolic children and adults; non-invasive monitoring of metabolic variables through analysis of exhaled gases

Kelvin W. Gee: Pharmacology of allosteric modulators of the GABAA receptor, selective modulation of GABAA receptor subtypes; novel molecular targets for neuropharmacological agents and drug discovery

Naoto Hoshi: Physiological role and regulation of the M-channel, molecular biology, electrophysiology and live cell FRET imaging

Frances M. Leslie: Addiction, drugs of abuse and brain development

Z. David Luo (*Joint*): Molecular mechanisms of pain transduction; study gene regulation and signaling pathways in chronic pain processing using animal models, and molecular biology techniques

Daniele Piomelli (*Joint*): Lipid-derived signaling, special emphasis on endogenous cannabinoids; role in pain, mental health and inflammation; cellular and system pharmacology and medicinal chemistry used to identify pharmacological agents that interfere with the functions exerted by endocannabinoids and other signaling lipids

Qun-Yong Zhou: Pharmacology and physiology of prokineticins and prokineticin receptors

Xiaolin Zi (*Joint*): Cancer prevention and treatment using novel naturally occurring compounds and the study of their underlying molecular mechanisms; secreted Wnt antagonists in cancer growth and metastasis

Graduate Program Faculty—Pharmaceutical Sciences

Bruce Blumberg: Molecular embryology, molecular biology, developmental biology, functional genomics, endocrinology, pharmacology, high-throughput screening

Richard Chamberlin: Organic synthesis, chemical biology, medicinal chemistry

John Fruehauf: Mechanisms of drug action and resistance with the goal of improving therapeutic outcomes for cancer patients

Celia Goulding: Structural biology, biochemistry, proteomics, microbiology, X-ray crystallography

Stephen Hanessian: Organic, bioorganic, and medicinal chemistry

Mahtab Jafari: Anti-aging effects of botanicals and pharmaceutical compounds; the impact of botanical extracts on mitochondrial bioenergetics, oxidative stress, and other pathways of aging using cell culture and *Drosophila*

Young Kwon: Gene therapy, drug delivery, cancer-targeted therapeutics, combined molecular imaging and therapy, cancer vaccine

Andrej Luptak: RNA biology and chemistry

David Mobley: Computational techniques for drug discovery, free energy calculations, molecular simulations, solubility

Thomas Poulos: Protein crystallography, protein engineering, heme enzyme structure and function

Jennifer Prescher: Chemical biology, molecular imaging, organic chemistry, immunology, bioorthogonal chemistry, post-translational modifications

Rainer Reinscheid: Neuropharmacology of peptide transmitters involved in stress, sleep, and memory using cellular and transgenic animal models

Paolo Sassone-Corsi: Signal transduction and gene expression; chromatin remodeling and epigenetics; germ cell differentiation; circadian clock and rhythms

Shiou-Chuan (Sheryl) Tsai: Biochemistry, chemical biology, structural biology, enzymology, microbiology

Weian Zhao: Stem cell therapy, diagnostics, biosensors, nano- and microtechnology, aptamers

Graduate Program in Transportation Science

(949) 824-5989, -5906; Fax (949) 824-8385

<http://www.transci.uci.edu/>

Jean-Daniel Saphores, **Director**

The graduate program in Transportation Science includes faculty from three academic units: the Department of Civil and Environmental Engineering in The Henry Samueli School of Engineering, the Department of Economics in the School of Social Sciences, and the Department of Planning, Policy, and Design in the School of Social Ecology. The program is designed to educate students in a broad set of competencies and perspectives that mirror the actual practice of current transportation research. The M.S. and Ph.D. degrees in Transportation Science are offered.

Admission

Admission is limited to a small number of exceptionally talented, independent, and self-disciplined students. The deadline for application for admission is March 1 for fall quarter. A second window for application for admission for winter or spring quarters is open from April 15 through June 1 but funding options for this second window may be very limited. All applicants must take the Graduate Record Exam (GRE) prior to the application deadline. Applicants whose first language is not English must also submit Test of English as a Foreign Language (TOEFL) scores.

Master of Science Degree

The M.S. degree program has two options: (1) thesis; and (2) comprehensive examination. Students will choose one of these two options. For both options, no more than 12 credit hours of non-transportation courses can count toward the required number of course-work units. Exceptions must be approved by the student's advisor and the Director of the Transportation Science program. Opportunities are available for part-time study toward the M.S. degree. The normative time for completion of the M.S. is one year, and the maximum time permitted is four years, as part-time status is allowed.

Transportation courses must be chosen from lists in each of the three program areas. Each student must choose (1) at least three graduate courses from *Area 1 (Transportation Systems Engineering)*, and (2) at least one graduate course from each of *Area 2 (Urban and Transportation Economics)* and *Area 3 (Transportation Planning)*, and at least one additional graduate courses from either of these two areas.

Specific courses in each of these areas are shown below (transportation courses are indicated with an asterisk):

Area 1 (Transportation Systems Engineering)

ENGRCEE 220A	Travel Demand Analysis I *
ENGRCEE 221A	Transportation Systems Analysis I *
ENGRCEE 224A	Transportation Data Analysis I *
ENGRCEE 225A	Transportation Planning Models I *
ENGRCEE 225B	Transportation Planning Models II *
ENGRCEE 226A	Traffic Flow Theory I *
ENGRCEE 228A	Urban Transportation Networks I *
ENGRCEE 229A	Traffic Systems Operations and Control I

Area 2 (Urban and Transportation Economics) ¹

ECON 210A- 210B	Microeconomic Theory I and Microeconomic Theory II
ECON 281A- 281B	Urban Economics I and Urban Economics II *
ECON 282A- 282B	Transportation Economics I and Transportation Economics II *
Economics 289 A–Z*	

Area 3 (Transportation Planning)

PP&D 202	History of Urban Planning
PP&D 207	Development Control Law and Policy
PP&D 212	Transportation Planning *
PP&D 223	Regional Analysis
PP&D 231	Transportation and Environmental Health *
PP&D 233	Transportation, Transit, and Land-Use Policy and Planning *
PP&D 235	Geographic Information Systems (GIS) Problem Solving in Planning
PP&D 237	Introduction to Geographic Information Systems

PP&D 238	Advanced Geographic Information Systems
PP&D 242	Regional Development Theory
PP&D 244	Land-Use Policy
PP&D 252	Issues in Environmental Law and Policy

Pre-approved upper-division undergraduate courses, independent study units, or seminars:

A. Pre-approved upper-division undergraduate courses:

ENGRCEE 121	Transportation Systems I: Analysis and Design
ENGRCEE 122	Transportation Systems II: Operations & Control
ENGRCEE 123	Transportation Systems III: Planning & Forecasting
ENGRCEE 124	Transportation Systems IV: Freeway Operations and Control
ENGRCEE 125	Transportation and the Environment
ECON 105A- 105B	Intermediate Quantitative Microeconomics and Macroeconomics I and Intermediate Quantitative Microeconomics and Macroeconomics II
ECON 123A- 123B	Econometrics I and Econometrics II
ECON 149	Special Topics in Economics of Public and Private Organizations

B. Independent study units:

ENGRCEE 296	Master of Science Thesis Research
ENGRCEE 298	Special Topics in Civil Engineering
ENGRCEE 299	Individual Research
ECON 299	Independent Study
PP&D 298	Directed Studies in Urban Planning
PP&D 299	Independent Study in Urban Planning

C. Seminars:

ECON 285A- 285B- 285C	Colloquium for Transportation Science I and Colloquium for Transportation Science II and Colloquium for Transportation Science III (At most two of these classes may count toward the required units.)
-----------------------	--

D. Students who choose the thesis option may also select up to eight units of the following:

ENGRCEE 296	Master of Science Thesis Research (4 to 12 units)
PP&D 298	Directed Studies in Urban Planning (2 to 4 units)

¹ NOTE: ECON 281A-ECON 281B and ECON 282A-ECON 282B require ECON 210A or consent of the instructor. Students can only count one ECON 289 course toward the required number of units.

Substitutions must be approved by the Transportation Science executive committee. Alternatively, students may petition the Director of the Transportation Science program after approval by their advisor.

Plan I: Thesis Option

Students who select the thesis option must complete at least 36 units of study, up to eight of which can be taken in conjunction with the thesis research topic (thesis units should be taken in the home department of the faculty advisor); they must also complete at least 28 units of course work with no more than eight units of pre-approved upper-division undergraduate courses, independent study units, or seminars. The thesis should reflect an original research investigation and it must be approved by a thesis committee of at least three full-time faculty members (a majority of which must be Transportation Science faculty) with primary appointments in at least two of the following departments: Civil and Environmental Engineering, Economics, and Planning, Policy and Design. Thesis research findings must be presented in a public seminar.

Plan II: Comprehensive Examination Option

Students who select the comprehensive examination option must successfully complete 36 units of course work and pass a comprehensive examination. These units may include no more than six units of pre-approved upper-division undergraduate courses, independent study units, or seminars. The comprehensive examination requirements may be met with a 20-page paper dealing with a transportation topic; this paper must be approved by the student's advisor and the Director of the Transportation Science program.

Doctor of Philosophy Degree

The Ph.D. degree indicates attainment of an original and significant research contribution to the state-of-the-art in the candidate's field, and an ability to communicate advanced concepts to a non-specialized audience. All students must complete a core curriculum consisting of eight courses from Civil Engineering, Economics, and Social Ecology plus the graduate colloquium. Students may apply to the Director of Enrollment and Graduate Academic Affairs for exemption from specific courses based upon the evidence of prior course work. Students also must successfully complete at least six courses from among the four specialization areas: (1) Methods and Analysis; (2) Transportation Systems Economics; (3) Traffic Analysis; and (4) Planning and Policy Analysis.

At least four of these six courses must be from one specialization.

Students must complete the following general theory core courses:

Civil Engineering:

ENGRCEE 220A	Travel Demand Analysis I
ENGRCEE 225A	Transportation Planning Models I
ENGRCEE 225B	Transportation Planning Models II
Urban Planning:	
PP&D 202 or PP&D 212	History of Urban Planning Transportation Planning
PP&D 223 or PP&D 242	Regional Analysis Regional Development Theory
Economics:	
ECON 123A- 123B	Econometrics I and Econometrics II
ECON 282A- 282B	Transportation Economics I and Transportation Economics II

Transportation Science:

ECON 285A- 285B- 285C	Colloquium for Transportation Science I and Colloquium for Transportation Science II and Colloquium for Transportation Science III
-----------------------	--

It is expected that all students will have sufficient background in one of the core disciplines to be exempted from some of the courses. Substitutions may be approved by the program director.

In addition to the general theory core courses, students must take at least six additional courses chosen from among the four specialization areas below.

Methods and Analysis Specialization

ENGRCEE 220B	Travel Demand Analysis II
ENGRCEE 224A	Transportation Data Analysis I
ENGRCEE 225A- 225B	Transportation Planning Models I and Transportation Planning Models II
ENGRCEE 228A	Urban Transportation Networks I
ENGRCEE 283	Mathematical Methods in Engineering Analysis
ECON 220A	Statistics & Econometrics I (also ECON 220B, ECON 220C, ECON 220D)
ECON 223A	Discrete Choice Econometrics
ECON 224A	Time Series Econometrics
PP&D 206	Microeconomic Analysis for Urban Planning
PP&D 223	Regional Analysis
PP&D 237	Introduction to Geographic Information Systems
PP&D 238	Advanced Geographic Information Systems
PP&D 242	Regional Development Theory
SOCECOL 264A- 264B	Data Analysis and Data Analysis
SOCECOL 266B	Applied Logistic Regression
SOCECOL 272A	Structural Equation Modeling I

Transportation Systems Economics Specialization

ECON 241A- 241B	Industrial Organization I and Industrial Organization II
ECON 281A- 281B	Urban Economics I and Urban Economics II

Traffic Analysis Specialization

ENGRCEE 221A- 221B	Transportation Systems Analysis I and Transportation Systems Analysis II
ENGRCEE 226A- 226B	Traffic Flow Theory I and Traffic Flow Theory II
ENGRCEE 228A- 228B	Urban Transportation Networks I and Urban Transportation Networks II

ENGRCEE 229A- 229B	Traffic Systems Operations and Control I and Traffic Systems Operations and Control II
Transportation Planning and Policy Analysis Specialization	
ENGRCEE 225A- 225B	Transportation Planning Models I and Transportation Planning Models II
ECON 282A	Transportation Economics I
PP&D 202	History of Urban Planning
PP&D 207	Development Control Law and Policy
PP&D 212	Transportation Planning
PP&D 235	Geographic Information Systems (GIS) Problem Solving in Planning
PP&D 242	Regional Development Theory
PP&D 244	Land-Use Policy
PP&D 252	Issues in Environmental Law and Policy
PP&D 253	Site Planning
PP&D 275	Special Topics in Urban Planning

Other requirements include a replication project, in which students replicate the empirical work of a published paper from a major transportation journal; the qualifying examination, which consists of the oral defense of the student's dissertation proposal; and completion of the dissertation.

The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Replication Project

Prior to preparing a dissertation proposal, each student who has not completed a master's thesis (or otherwise independently published) must replicate the empirical work of a published paper from a major transportation journal, chosen by the student and approved by the advisor. This replication may involve the collection of new data, the use of better statistical techniques, additional simulations, or the identification and correction of theoretical errors. Through the replication project, students gain direct experience in reducing a general problem to a manageable research project, in using data, and in carrying out a research project.

Qualifying Examination

Upon completion of the general theory core courses, the specialization area courses, and the replication requirements, each student must develop a dissertation proposal defining the research problem, related literature, research methods, and data resources. The Ph.D. qualifying examination consists of an oral defense of that proposal before a candidacy committee chosen according to normal campus regulations, upon the recommendation of the Graduate Director. Typically, this is a committee of at least three members of the Transportation Science faculty and at least one faculty member who is not associated with Transportation Science.

Dissertation Requirement

Following advancement to candidacy, the dissertation is supervised by a doctoral committee ordinarily consisting of at least three members of the candidacy committee, a majority of which must be Transportation Science

faculty. The dissertation must demonstrate the student's ability to originate interesting and significant research problems, to investigate such problems both broadly and deeply, and to write scholarly material of publishable quality. Certification of the dissertation will be by the student's doctoral committee. Dissertation research units should be earned in the department selected by the chair of the candidacy committee (e.g., ENGRCEE 297, ECON 290, or SOCECOL 296).

Research Facilities

UCI is a major research university and has an excellent library collection, as well as special interlibrary loan arrangements with other University of California libraries including the Transportation Library at Berkeley. Research is coordinated with the Irvine branch of the Institute of Transportation Studies (ITS). Approximately 30 to 40 graduate students are employed as research assistants each year in ITS. Research covers a broad spectrum of transportation issues. Current funded research projects focus upon intelligent transportation systems (ITS), particularly advanced transportation management systems; planning and analysis of transportation systems; transportation systems operation and control; transportation engineering; transportation safety; road and congestion pricing; environmental and energy issues and demand for alternative fuel vehicles; public transit operations, transportation-land use interactions, demand for autos, and travel demand.

ITS is part of the University of California Transportation Center, one of ten federally designated centers of excellence for transportation research. The transportation research program at UCI is also supported by the Advanced Transportation Management Systems (ATMS) Laboratories. The Institute maintains a regular publications series documenting research conducted within its programs and is the editorial headquarters of the *Journal of Regional Science*.

Faculty

David Brownstone, Ph.D. University of California, Berkeley, *Professor of Economics*

Jan K. Brueckner, Ph.D. Stanford University, *Department Chair and Professor of Economics*

Joseph F. DiMento, Ph.D., J.D. University of Michigan, *Professor of Law; Criminology, Law and Society; Planning, Policy, and Design; Social Ecology; and Management*

Gordon J. Fielding, Ph.D. University of California, Los Angeles, *Professor Emeritus of Social Sciences*

R. (Jay) Jayakrishnan, Ph.D. University of Texas at Austin, *Professor of Civil and Environmental Engineering*

Wenlong Jin, Ph.D. University of California, Davis, *Assistant Professor of Civil and Environmental Engineering*

Michael McNally, Ph.D. University of California, Irvine, *Professor of Civil and Environmental Engineering and of Planning, Policy, and Design*

Wilfred W. Recker, Ph.D. Carnegie-Mellon University, *Professor of Civil and Environmental Engineering*

Amelia C. Regan, Ph.D. University of Texas, Austin, *Professor of Computer Science*

Stephen G. Ritchie, Ph.D. Cornell University, *Director of the Institute of Transportation Studies and Professor of Civil and Environmental Engineering*

Jean-Daniel M. Saphores, Ph.D. Cornell University, *Director of the Graduate Program in Transportation Science and Associate Professor of Civil and Environmental Engineering, Economics, and Planning, Policy, and Design*

Kenneth A. Small, Ph.D. University of California, Berkeley, *Professor Emeritus of Economics*

Affiliated Faculty

Arthur S. DeVany, Ph.D. University of California, Los Angeles, *Professor Emeritus of Economics*

Amihai Glazer, Ph.D. Yale University, *Professor of Economics*

John D. Houston, Ph.D. University of California, Los Angeles, *Assistant Professor of Planning, Policy, and Design*

Sandra S. Irani, Ph.D. University of California, Berkeley, *Department Vice Chair and Professor of Computer Science*

Raymond W. Novaco, Ph.D. Indiana University, *Professor of Psychology and Social Behavior*

Luis Suarez-Villa, Ph.D. Cornell University, *Professor of Planning, Policy, and Design*

Carole J. Uhlaner, Ph.D. Harvard University, *Associate Professor of Political Science and Economics*

Christian Werner, Ph.D. The Free University of Berlin, *Professor Emeritus of Economics*

Minor in Civic and Community Engagement

http://www.due.uci.edu/engagement_minor/

The minor in Civic and Community Engagement is an interdisciplinary program that provides students with the knowledge, skills, attitudes, and values to engage as citizens and active community members in the twenty-first century. The minor is distinguished both by what students learn, and by *how* they learn it.

Teaching and learning. The minor introduces students from majors across the campus to the traditions and public movements of service and their historical and contemporary philosophical underpinnings. The minor provides a theoretical and empirical framework to increase students' understanding of public problems (environmental, social, and other) from multiple disciplinary perspectives. Students learn about strategies to address public problems, including through public policy; through the involvement of community-based and nonprofit organizations; and through the cultivation of leadership. The minor helps students build on their major programs of study to make connections between public problems and issues of equity and social justice.

Research. The minor increases students' knowledge of the epistemological and methodological underpinnings of community-based research as a strategy for understanding and addressing public problems.

Service. The minor helps students to ground their understanding of public problems by participating in service-learning opportunities and by reflecting critically on those experiences.

The minor is open to all UCI students. Course descriptions are available in the academic department sections of the *Catalogue*.

More information about the minor in Civic and Community Engagement is available from the Division of Undergraduate Education, at (949) 824-3291 or at cceminor@uci.edu, or online at http://www.due.uci.edu/engagement_minor/

Requirements for the Minor

Completion of eight courses (28 units total). A maximum of two courses for the minor may overlap with courses required for a student's major or for another minor.

A. Complete:

UNI STU 10	Introduction to Civic and Community Engagement
------------	--

B. Complete:

UNI STU 100	Doing Research in the Community
-------------	---------------------------------

C. Select four upper-division elective courses related to public problems and civic and community engagement, from the following:

Environmental Stewardship:

BIO SCI E150	Conservation Biology
BIO SCI E181	Conservation in the American West
BIO SCI E189	Environmental Ethics
BIO SCI 191A- 191B	Senior Seminar on Global Sustainability I and Senior Seminar on Global Sustainability II
BIO SCI 191C	Senior Seminar on Global Sustainability III
EARTHSS 180	Environmental Sustainability I
EARTHSS 182	Environmental Sustainability II
EARTHSS 190A- 190B	Senior Seminar on Global Sustainability I and Senior Seminar on Global Sustainability II
EARTHSS 190C	Senior Seminar on Global Sustainability III
ECON 145E	Economics of the Environment
INTL ST 120	Global Environmental Issues
PP&D 131	Environmental Sustainability I
PP&D 132	Environmental Sustainability II
PP&D 136	Global Environmental Issues
PP&D 139	Water Resource Policy
POL SCI 143D	Global Environmental Issues
PUBHLTH 160	Environmental Pollution and Remediation
PUBHLTH 164	Toxic Chemicals in the Environment
SOCECOL 186A- 186B	Senior Seminar on Global Sustainability I and Senior Seminar on Global Sustainability II
SOCECOL 186CW	Writing/Senior Seminar on Global Sustainability III

Educational Equity:

ASIANAM 139	Asian Americans and Education
CHC/LAT 182	Latina/Latino Access and Persistence in Higher Education
ECON 158	Economics of Education
EDUC 104E	Multimedia and the Arts in the Multicultural Classroom
EDUC 121	Child Care Research and Policy
EDUC 124	Multicultural Education in K-12 Schools
EDUC 128	Exceptional Learners
EDUC 132	Reading and Writing Enrichment for After-School Programs
EDUC 150	Changing the High School Experience
EDUC 160	Foundations of Out-of-School Learning
EDUC 182	Latina/Latino Access and Persistence in Higher Education
SOCECOL 181	Mentors in Higher Education

Health and Communities:

ANTHRO 128B	Race, Gender, and Science
ANTHRO 134G	HIV/AIDS in a Global Context
ASIANAM 134	Asian American Community Public Health
CHC/LAT 176	Race, Gender, and Science
IN4MATX 171	Introduction to Medical Informatics
INTL ST 122	Nuclear Environments
NUR SCI 170	Community-Based Health Care
PHILOS 131C	Medical Ethics
PP&D 111	Strategies of Health Promotion
PP&D 112	Foundations of Community Health
PP&D 170	Health Policy
PUBHLTH 122	Health Policy
PUBHLTH 143	Social Ecology of Health Promotion
PUBHLTH 147	Drug Abuse and Its Prevention
PUBHLTH 167	Air Pollution, Climate, and Health
PUBHLTH 168	Nuclear Environments
PUBHLTH 173	Health and Global Environmental Change
SOCECOL E127	Nuclear Environments
SOCECOL 131	Social Ecology of Health Promotion
WOMN ST 165B	Sexuality, Health and Medicine

Public History and Public Art:

AFAM 111A	Modern African American Art
AFAM 111B	Contemporary African American Art
AFAM 138	Topics in African American History
ART 116	Feminist Issues in Art
ART 121	Issues in Race and Representation
ART 123A	Issues in the New Culture Wars
ART HIS 140A	History of Contemporary Art
ART HIS 140B	Topics in Contemporary Art
ART HIS 163	Asian American Art, Contemporary
ART HIS 164A	Modern African American Art

ART HIS 164B	Contemporary African American Art
ART HIS 164C	Topics in African American Art
ASIANAM 137	Asian American Labor
CHC/LAT 132A	Chicana/Chicano History: Pre-Colonial to 1900
CHC/LAT 132B	Chicana/Chicano History: Twentieth Century
CHC/LAT 134	U.S. Latino Literature and Cultures
CHC/LAT 135	Latinas in the Twentieth Century U.S.
COM LIT 100A	Nations, Regions, and Beyond
COM LIT 105	Comparative Multiculturalism
COM LIT 107	Colonialisms and Postcolonialisms
COM LIT 140	Critical Cultural Studies
DANCE 110	World Dance
DRAMA 103	Lectures in Dramatic Literature
DRAMA 122	Asian American Theatre
ENGLISH 105	Multicultural Topics in Literatures in English
HISTORY 130B	Modern Jewish History
HISTORY 142A	California in Modern America
HISTORY 148B	Topics in Multicultural U.S. History
HISTORY 150	Topics in African American History
HISTORY 151A	Chicana/Chicano History: Pre-Colonial to 1900
HISTORY 151B	Chicana/Chicano History: Twentieth Century
HISTORY 151C	Latinas in the Twentieth Century U.S.
HISTORY 152	Topics in Asian-American History

Additional elective courses may be substituted by petition.	

D. Select eight units of an approved internship related to civic and community engagement. Internships will typically be completed over one or more quarters. Internships must be approved for credit toward the minor.¹

The internship can be completed through the following courses:

ANTHRO 197	Field Study
ARTS 199	Independent Study
BIO SCI 14	California Teach 1: Introduction to Science and Mathematics Teaching
BIO SCI 101	California Teach 2: Middle School Science and Mathematics Teaching
BIO SCI 102	California Teach 3: High School Science and Mathematics Teaching
CHEM 191	Chemistry Outreach Program
CHC/LAT 191A- 191B- 191C	HABLA: Language Intervention for Disadvantaged Children and HABLA: Language Intervention for Disadvantaged Children and HABLA: Language Intervention for Disadvantaged Children
EDUC 100	Educational Strategies for Tutoring and Teacher Aiding
EDUC 141A- 141B- 141C	Jumpstart I: Early Language, Literacy, and Social Development and Jumpstart I: Early Language, Literacy, and Social Development and Jumpstart I: Early Language, Literacy, and Social Development
EDUC 160L	After-school Programs Fieldwork
EDUC 181B	Principles and Practices of Coaching Sports II: Field Practicum
ENGR 197A	Educational Strategies for Tutoring and Teacher Aiding
HUMAN 195	Humanities Out There (H.O.T) Practicum
IN4MATX 117	Project in Software System Design
IN4MATX 132	Project in Human-Computer Interaction Requirements and Evaluation
IN4MATX 163	Project in the Social and Organizational Impacts of Computing
IN4MATX 191A- 191B- 191C	Senior Design Project and Senior Design Project and Senior Design Project
MATH 192	Studies in the Learning and Teaching of Secondary Mathematics
PHY SCI 5	California Teach 1: Introduction to Science and Mathematics Teaching
PHY SCI 105	California Teach 2: Middle School Science and Mathematics Teaching
PHY SCI 106	California Teach 3: High School Science and Mathematics Teaching
PHYSICS 191	Field Experience in Physics Education

PSYCH 141J- 141K- 141L	Jumpstart I: Early Language, Literacy, and Social Development and Jumpstart I: Early Language, Literacy, and Social Development and Jumpstart I: Early Language, Literacy, and Social Development
PSYCH 144A- 144B- 144C	HABLA: Language Intervention for Disadvantaged Children and HABLA: Language Intervention for Disadvantaged Children and HABLA: Language Intervention for Disadvantaged Children
PSYCH 145P- 145Q- 145R	Attention and Learning Deficits in Children I and Attention and Learning Deficits in Children II and Attention and Learning Deficits in Children III
PUBHLTH 195	Public Health Practicum
SOCECOL 195	Field Study
SOC SCI 186A- 186B- 186C	HABLA: Language Intervention for Disadvantaged Children and HABLA: Language Intervention for Disadvantaged Children and HABLA: Language Intervention for Disadvantaged Children
SOC SCI 193B- 193C	Field Studies in Public and Community Service and Field Studies in Public and Community Service
SOC SCI 194A	Public Service Internship
SOC SCI 194B	Community Internship
SOC SCI 195A-195B-195C	
SOC SCI 196	Global Connect
SOC SCI 197	Professional Internship
UCDC 170	Washington DC Internship
UNI STU 181	Internship in Civic and Community Engagement
UNI STU 185	UC Center Sacramento Internship

- ¹ See the Web site for the minor for a list of hours of community service-learning for internship options at http://www.due.uci.edu/engagement_minor/.

Residence Requirement for the Minor: Students must complete at least four of the required courses for the minor in residence at UCI.

Courses in University Studies

UNI STU 10	Introduction to Civic and Community Engagement
UNI STU 100	Doing Research in the Community
UNI STU 181	Internship in Civic and Community Engagement

Core Faculty

Peter J. Bryant, *Professor Emeritus of Developmental and Cell Biology*

William J. Cooper, *Director of the Urban Water Research Center (UWRC) and Professor of Civil and Environmental Engineering and of Chemical Engineering and Materials Science*

Paula Garb, *Co-Director of the Center for Citizen Peacebuilding and Lecturer in Anthropology*

Gillian Hayes, *Assistant Professor of Informatics*

Joseph Mahoney, *Professor of Education and of Psychology and Social Behavior*

Virginia Mann, *Professor of Cognitive Sciences and Education*

Carrie J. Noland, *Professor of French*

James S. Nowick, *Professor of Chemistry*

Ellen F. Olshansky, *Director of the Program in Nursing Science and Professor, Program in Nursing Science*

Jone L. Pearce, *Director of the Center for Leadership and Team Development and Dean's Professor of Management*

Affiliated Faculty

Molly Lynch, *Associate Professor of Dance*

Michael J. Montoya, *Associate Professor of Anthropology, Chicano/Latino Studies, and Public Health*

Bill Tomlinson, *Associate Professor of Informatics*

Tiffany Willoughby-Herard, *Assistant Professor of African American Studies*

Maria Estela Zarate, *Assistant Professor of Education*

Minor in Global Sustainability

321 Steinhaus Hall; (949) 824-6006; Fax (949) 824-2181
<http://www.ess.uci.edu/content/minor-global-sustainability>

Peter A. Bowler, **Director of the Minor**; Director of the UCI Arboretum and Herbarium, Faculty Manager of the UC Natural Reserve System Burns Piñon Ridge and San Joaquin Marsh Reserves, and Senior Lecturer with Security of Employment, Ecology and Evolutionary Biology

The interdisciplinary minor in Global Sustainability trains students to understand the changes that are needed for the human population to live in a sustainable relationship with the resources available on this planet.

As a result of population growth and the pursuit of higher standards of living, humanity has initiated many global trends that cannot be sustained indefinitely. Some of these trends are physicochemical in nature, such as the rapid depletion of fossil fuels and the increasing pollution of our environment, including the accumulation of ozone-depleting chemicals with consequent increase of ultraviolet radiation at the Earth's surface, and the buildup of atmospheric carbon dioxide and other molecules that are instrumental in exacerbating global warming. Other trends are biological ones including the degradation of agricultural land, the destruction of many kinds of wildlife habitat with associated high rates of species extinction, and the depletion of wildlife populations by over-exploitation. Global changes are also taking place in human societies including loss of cultural diversity, a growing income gap between rich and poor nations leading to deepening poverty and additional pressure for biological resource

exploitation, accelerating urbanization with associated social problems, and regional population and economic imbalances leading to escalating political tensions and potential for conflict. This program examines the causes and interrelationships of these problems and considers new approaches to solving them. Its goal is to provide broad, interdisciplinary training that will allow students to better understand and effectively deal with the serious environmental problems that we will face in the twenty-first century.

The minor is open to all UCI students. Courses in addition to those already approved for the minor (below) may be petitioned, and the list will be updated on an annual basis.

Requirements for the Minor

A. Completion of an introductory course anthology that may include any three of the following in any order (one from each group)

Select one of the following:

EARTHSS 1	Introduction to Earth System Science
EARTHSS 3	Oceanography
EARTHSS 5	The Atmosphere
EARTHSS 15	Introduction to Global Climate Change
UNI STU 13A	Introduction to Global Sustainability I

Select one of the following:

BIO SCI 6	Tropical Biology: Race to Save the Tropics
BIO SCI 9K/EARTHSS 13	Global-Change Biology
BIO SCI 55	Introduction to Ecology
BIO SCI 65	Biodiversity & Conservation
BIO SCI 94	From Organisms to Ecosystems
PP&D 131/EARTHSS 180	Environmental Sustainability I
PP&D 132/EARTHSS 182	Environmental Sustainability II
UNI STU 13B	Introduction to Global Sustainability II

Select one of the following:

ANTHRO 30A	Global Issues in Anthropological Perspective
ANTHRO 41A	Global Cultures and Society
SOCECOL E8	Introduction to Environmental Analysis and Design
SOCIO 44	Populations
POL SCI 41A	Introduction to International Relations
PUBHLTH 30	Human Environments
PUBHLTH 60	Environmental Quality and Health
UNI STU 13C	Introduction to Global Sustainability III

B. Three relevant elective courses (12 units):

One elective course must be taken in each of the following three disciplines, and at least two of these must be upper division. While courses from the introductory course list (above) apply, the same course may not be used to complete both the introductory lower-division sequence and the supplemental three courses. As they arise, additional courses may be petitioned to fulfill this requirement as well as the lower-division introductory category.

Biological Sciences:

Select one of the following:

BIO SCI 6	Tropical Biology: Race to Save the Tropics
BIO SCI 9K/EARTHSS 13	Global-Change Biology
BIO SCI 55	Introduction to Ecology
BIO SCI 94	From Organisms to Ecosystems
BIO SCI 65	Biodiversity & Conservation
BIO SCI E106	Processes in Ecology and Evolution
BIO SCI E118/EARTHSS 164	Ecosystem Ecology
BIO SCI E150	Conservation Biology
BIO SCI E175	Restoration Ecology
BIO SCI E178	Ocean Ecology
BIO SCI E179	Limnology and Freshwater Biology
BIO SCI E182	Mediterranean Ecosystems: Biodiversity and Conservation
BIO SCI E186	Population and Community Ecology
BIO SCI E189	Environmental Ethics
UNI STU 13B	Introduction to Global Sustainability II

Physical Sciences:

Select one of the following:

EARTHSS 1	Introduction to Earth System Science
EARTHSS 3	Oceanography
EARTHSS 5	The Atmosphere
EARTHSS 13/BIO SCI 9K	Global-Change Biology
EARTHSS 15	Introduction to Global Climate Change
EARTHSS 51	Land Interactions
EARTHSS 55	Earth's Atmosphere
EARTHSS 60A	Fundamental Processes in Earth and Environmental Studies
EARTHSS 60B	Local and Regional Environmental Issues
EARTHSS 60C	Global Environmental Issues
EARTHSS 164/BIO SCI E118	Ecosystem Ecology
EARTHSS 180/PP&D 131	Environmental Sustainability I
EARTHSS 182/PP&D 132	Environmental Sustainability II
PUBHLTH 90	Natural Disasters
UNI STU 13A	Introduction to Global Sustainability I

Social Sciences/Social Ecology/Public Health:

Select one of the following:

ANTHRO 2A	Introduction to Sociocultural Anthropology
ANTHRO 30A	Global Issues in Anthropological Perspective
ANTHRO 41A	Global Cultures and Society
ANTHRO 125A	Economic Anthropology
ANTHRO 125B	Ecological Anthropology
SOCECOL E8	Introduction to Environmental Analysis and Design
SOCECOL E113/INTL ST 121	Social Ecology of Peace
PP&D 131/EARTHSS 180	Environmental Sustainability I
PP&D 132/EARTHSS 182	Environmental Sustainability II

PP&D 134	Human Ecology
PP&D 136/INTL ST 120/POL SCI 143D	Global Environmental Issues
SOCIOL 44	Populations
POL SCI 41A	Introduction to International Relations
PUBHLTH 30	Human Environments
PUBHLTH 60	Environmental Quality and Health
PUBHLTH 90	Natural Disasters
UNI STU 13C	Introduction to Global Sustainability III

C. Senior Seminar on Global Sustainability I, II, III

To fulfill the requirements for the minor, students must complete the sequence below, which includes a seminar, directed study, and independent research in a relevant area. This work forms the basis for the senior research paper.

BIO SCI 191A- 191B- 191CW	Senior Seminar on Global Sustainability I and Senior Seminar on Global Sustainability II and Writing/Senior Seminar on Global Sustainability III (same as EARTHSS 190A-190B-190CW and SOCECOL 186A-186B-186CW)
---------------------------	--

Minor in Native American Studies

<http://eee.uci.edu/clients/tcthorne/idp/>

The minor in Native American Studies is an interdisciplinary, interschool program which focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis. The research and teaching interests of faculty from different departments enrich study in the minor.

The minor is open to all UCI students. Advising information is available from the undergraduate counseling offices in the Schools of Humanities and Social Sciences.

Requirements for the Minor

A. Core Courses:

HISTORY 12	Introductory Topics in History
HISTORY 15A	Native American History
SOCIOL 65/ANTHRO 85A	Cultures in Collision: Indian-White Relations Since Columbus

B. Select four upper-division courses from the following:

ANTHRO 121D	Cross-Cultural Studies in Gender
ANTHRO 135A	Religion and Social Order
ANTHRO 162A	Peoples and Cultures of Latin America
ART HIS 175	Studies in Native and Tribal Art
CRM/LAW C158	U. S. Law and Native Americans: Colonial Imagery, Native Nationhood
EDUC 124	Multicultural Education in K-12 Schools

HISTORY 161A	Indian and Colonial Societies in Mexico
SOC SCI 175B	Ethnic and Racial Communities
Students may also select from the following courses when the topics presented relate to Native American Studies:	
ANTHRO 149	Special Topics in Archaeology
ANTHRO 169	Special Topics in Area Studies
COM LIT 105	Comparative Multiculturalism
ENGLISH 105	Multicultural Topics in Literatures in English
HISTORY 169	Topics in Latin American History
SOCIOL 149	Special Topics: Structures
SOCIOL 169	Special Topics: Age, Gender, Race, and Ethnicity

Participating Faculty

Rachel O'Toole, *Associate Professor of History*

Jaime E. Rodríguez, *Professor Emeritus of History*

Gabriele Schwab, *UCI Chancellor's Professor of Comparative Literature and English*

Patricia Seed, *Professor of History*

Tanis Thorne, *Lecturer in History*

Steven C. Topik, *Professor of History*

Minor in the History and Philosophy of Science

(949) 824-6495

Brian Skyrms, **Director**

The minor in the History and Philosophy of Science is intended for students who wish to study the history of science, the philosophical foundations of scientific inquiry, and the relationship between science and other fields. The history of science explores how science is actually done and how it has influenced history. This may involve tracking down an idea's source or its influences, evaluating the cultural forces at work in the generation of a scientific theory or the reaction of culture to science, or taking a detailed look at the work of a particular scientist or movement within science. The philosophy of science is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences. Philosophy of science courses cover such topics as the role of logic and language in science and in mathematics, scientific explanation, evidence, and probability. These courses may also cover work that has been done on the philosophical problems in specific sciences—for example, the direction of time in physics, the model of mind in psychology, the structure of evolution theory in biology, and the implications of Gödel's incompleteness theorems for mathematics.

The minor is available to all UCI students.

Requirements for the Minor

A. Select two of the following:

LPS 31	Introduction to Inductive Logic
--------	---------------------------------

LPS 40	The Nature of Scientific Inquiry
HISTORY 60	The Making of Modern Science
B. Select two of the following:	
HISTORY 135B	Navigation
HISTORY 135D	History of Cartography
HISTORY 135E	Topics in the History of Science and Technology
PHILOS 110–115 (when topic is science)	
PSYCH 120H	History of Psychology
C. Select three of the following:	
LINGUIS 141	Topics in Philosophy of Language
LINGUIS 143	Semantics
LPS 106	Topics in Logic
LPS 108	Topics in Induction, Probability, and Decision Theory
LPS 140	Topics in Philosophy of Science
LPS 141A	Topics in Philosophy of Physics
LPS 141B	Geometry and Spacetime
LPS 141C	Philosophy of Quantum Mechanics
LPS 141D	Probability and Determinism
LPS 142W	Writing/Philosophy of Biology
LPS 143	Topics in Philosophy of Psychology
LPS 145	Topics in Philosophy of Language
LPS 146	Topics in Philosophy of Logic
LPS 147	Topics in Philosophy of Mathematics

Participating Faculty

Francisco J. Ayala, *University Professor and Donald Bren Professor of Biological Sciences*

Jeffrey A. Barrett, *Professor of Logic and Philosophy of Science*

William H. Batchelder, *Professor of Cognitive Sciences*

Paul C. Eklof, *Professor Emeritus of Mathematics*

Matthew D. Foreman, *Professor of Mathematics and of Logic and Philosophy of Science*

Douglas M. Haynes, *Associate Vice Provost for Equity and Diversity and Associate Professor of History*

Donald Hoffman, *Professor of Cognitive Sciences*

Karl G. Hufbauer, *Professor Emeritus of History*

Mary-Louise Kean, *Professor Emerita of Cognitive Sciences*

Stuart M. Krassner, *Professor Emeritus of Developmental and Cell Biology*

J. Karel Lambert, *Professor Emeritus of Philosophy*

Penelope Maddy, *UCI Distinguished Professor of Logic and Philosophy of Science and of Mathematics*

Louis Narens, *Professor of Cognitive Sciences*

Alan Nelson, *Professor Emeritus of Philosophy*

Riley Newman, *Professor Emeritus of Physics*

Robert Newsom, *Professor Emeritus of English*

Terence D. Parsons, *Professor of Philosophy, UCLA*

A. Kimball Romney, *Professor Emeritus of Anthropology*

Michael R. Rose, *Professor of Ecology and Evolutionary Biology*

Jonas Schultz, *Professor Emeritus of Physics*

Brian Skyrms, *Director of the Minor in the History and Philosophy of Science and UCI Distinguished Professor of Logic and Philosophy of Science and of Economics*

Norman M. Weinberger, *Research Professor of Neurobiology and Behavior*

Peter Woodruff, *Professor Emeritus of Philosophy*

Undergraduate Major in Business Information Management

As the business environment becomes increasingly global and information-centric, the need has increased for graduates who understand and can use technology that gathers and provides information, who are able to distill and recognize patterns in that information, and who can apply those analyses to achieve business objectives.

The undergraduate Business Information Management major administered by the Donald Bren School of Information and Computer Sciences is a collaborative, interdisciplinary degree program between the Bren School and The Paul Merage School of Business. The program seeks to educate students to understand and then apply the theories and concepts of a broad, integrated curriculum covering computing, informatics, business fundamentals, and analytical decision-making. The major prepares students for a wide variety of careers and life experiences. Business Information Management majors can pursue careers in the for-profit and not-for-profit sectors or can proceed to graduate school in several disciplines, including information systems, computing, economics, business, and law.

The curriculum is presented across three general academic areas: Computing (computer science, informatics, and software); Business Foundations (accounting, finance, marketing, strategy, and operations); and Analytical Methods (mathematics, statistics, economics, management science, and decision analysis). The fundamentals of information and computer science, including the rudiments of software design and construction with an emphasis on data management, provide the foundation for understanding, describing, and evaluating the technology through which most business information is gathered and presented. The business fundamentals, covering all the functional areas in the Merage School, provide a background and context in which information and its analysis will be applied.

Admissions

If the number of Business Information Management applicants exceeds the number of positions available, applicants may be subject to screening beyond minimum University of California admissions requirements.

Freshmen Applicants: See the Undergraduate Admissions (p. 38) section.

Transfer Applicants: Junior-level applicants who satisfactorily complete the following requirements will be given preference for admission:

1. Completion of one year of approved college-level math, preferably courses in calculus equivalent to UCI's MATH 2A-MATH 2B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. Completion of one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Python, Scheme, C++, or other object-oriented or high-level programming language.
3. Completion of one year of introductory accounting theory and practice equivalent to UCI's MGMT 30A-MGMT 30B.
4. Completion of one year of micro- and macro-economics theory equivalent to UCI's ECON 20A-ECON 20B.

*NOTE: The introductory sequence in ICS has moved to Python. The Bren School of ICS strongly encourages all participants to become familiar with this programming language prior to matriculation. Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing a Java-related programming course prior to their first quarter at UCI.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree.

More information is available at <http://www.ics.uci.edu/ugrad> or at the Bren School of ICS Student Affairs Office; telephone (949) 824-5156; e-mail: ucounsel@uci.edu.

Requirements for the B.S. Degree in Business Information Management

All students must meet the University Requirements (p. 60).

Major Requirements

A. **Lower-Division:** Select one of the following course groups:

1. I&C SCI 31, I&C SCI 32, I&C SCI 33, and I&C SCI 45J;
2. IN4MATX 41, IN4MATX 42, and either IN4MATX 45 or I&C SCI 46;
3. I&C SCI 21, I&C SCI 22 and either IN4MATX 45 or I&C SCI 46.

Complete the following:

IN4MATX 43	Introduction to Software Engineering (or I&C SCI 52)
MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
I&C SCI 6D	Discrete Mathematics for Computer Science
MATH 6G	Linear Algebra
or I&C SCI 6N	Computational Linear Algebra

Select one of the following:

STATS 7	Basic Statistics
or STATS 8	Introduction to Biological Statistics
or STATS 67	Introduction to Probability and Statistics for Computer Science

Complete the following:

ECON 20A- 20B	Basic Economics I and Basic Economics II
MGMT 30A- 30B	Principles of Accounting I and Principles in Accounting II
B. Upper-Division Core:	
MGMT 101	Management Science
MGMT 102	Managing Organizational Behavior
MGMT 105	Introduction to Marketing
MGMT 107	Introduction to Management Information Systems
MGMT 109	Introduction to Managerial Finance
MGMT 110	Strategic Management
MGMT 173	Business Intelligence for Analytical Decisions
MGMT 178	Management of Information Technology
MGMT 189	Operations Management
COMPSCI 121/IN4MATX 141	Information Retrieval
COMPSCI 122A/EECS 116	Introduction to Data Management
IN4MATX 113	Requirements Analysis and Engineering
IN4MATX 143	Information Visualization
STATS 110	Statistical Methods for Data Analysis I

C. Electives:

Select five upper-division courses, except independent study and internships, with at least three of the five courses to be taken within the Bren School. Upper-division courses completed via the UC Education Abroad Program may also be utilized toward this requirement upon prior approval by the Bren School of ICS Student Affairs Office.

NOTE: Students majoring in Business Information Management may not double major in Business Administration nor minor in Management, Informatics, or Information and Computer Science.

Sample Program of Study — Business Information Management

Freshman		
Fall	Winter	Spring
ECON 20A	ECON 20B	IN4MATX 43
MATH 2A	MATH 2B	I&C SCI 6N or MATH 6G
WRITING 39A	WRITING 39B	WRITING 39C
		GE VI
Sophomore		
Fall	Winter	Spring
I&C SCI 31	I&C SCI 32	I&C SCI 33
MGMT 30A	MGMT 30B	MGMT 102
I&C SCI 6D	STATS 7, 8, or 67	GE III
GE II	GE IV	GE IV
Junior		
Fall	Winter	Spring
I&C SCI 45J	COMPSCI 122A	IN4MATX 143
MGMT 107	IN4MATX 113	GE VII
GE IV	MGMT 101	UD Elective
ISC UD Elective	MGMT 178	UD Writing
Senior		
Fall	Winter	Spring
ICS UD Elective	COMPSCI 121	MGMT 110

MGMT 105	MGMT 109	GE VIII
MGMT 173	MGMT 189	ICS UD Elective
STATS 110	UD Elective	

Students are advised that this sample program lists the minimum requirements; it is possible that students may have to take additional courses to prepare for required courses.

The lower-division writing requirement must be completed by the end of the seventh quarter at UCI.

It is strongly recommended that students meet with an academic advisor to create an academic plan tailored to meet their specific areas of interest.

Undergraduate Major in Computer Science and Engineering

The undergraduate program in Computer Science and Engineering is administered by faculty from two academic units: the Department of Computer Science (CS) in the Donald Bren School of Information and Computer Sciences, and the Department of Electrical Engineering and Computer Sciences (EECS) in The Henry Samueli School of Engineering. For faculty listings click on the tab above. Successful completion of the program leads to a B.S. degree in Computer Science and Engineering.

Program Educational Objectives: Graduates of the program will: (1) establish a productive Computer Science and Engineering career in industry, government, or academia; (2) engage in professional practice of computer systems engineering and software systems engineering; (3) promote the development of innovative systems and solutions using hardware and software integration; (4) promote design, research, and implementation of products and services in the field of Computer Science and Engineering through strong communication, leadership, and entrepreneurial skills.

(Program educational objectives are those aspects of computer science and engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

This program is designed to provide students with the fundamentals of computer science, both hardware and software, and the application of engineering concepts, techniques, and methods to both computer systems engineering and software system design. The program gives students access to multidisciplinary problems in engineering with a focus on total systems engineering. Students learn the computer science principles that are critical to development of software, hardware, and networking of computer systems. From that background, engineering concepts and methods are added to give students exposure to circuit design, network design, and digital signal processing. Elements of engineering practice include systems view, manufacturing and economic issues, and multidisciplinary engineering applications.

Career Paths. Most likely careers will involve building the computer-based infrastructure—computers, networks, embedded devices, as well as operating systems, compilers, and networking software. The focus is on cooperation between hardware and software to yield the highest performance. Examples of such problem areas would be in traffic management, flight control, earthquake monitoring, automotive control, and smart homes.

Admissions

High School Students: Students must have completed four years of mathematics through pre-calculus or math analysis and are advised to have completed one year each of chemistry and physics. One semester of programming course work is also advised. That preparation, along with honors courses and advanced placement courses, is fundamental to success in the program.

The Henry Samueli School of Engineering recommends that freshmen applicants in Engineering majors take the SAT Subject Test, Math Level 2.

Transfer Students. Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer, including one year of approved calculus; one year of calculus-based physics with laboratories (mechanics, electricity and magnetism); one year of transferable computer science courses¹ involving concepts such as those found in Java, Python, Scheme, C++, or other object-oriented, high-level programming language, and one additional approved transferable course for the major (an approved math, science, or CSE course).

- ¹ Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major of interest. Java and C++ are used in the curriculum; therefore, transfer students should plan to learn these languages by studying on their own or by completing related programming courses prior to their first quarter at UCI.

Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact the Donald Bren School of Information and Computer Sciences at (949) 824-5156 or The Henry Samueli School of Engineering at (949) 824-4334.

Change of Major

Students interested in changing their major to Computer Science and Engineering should contact the Student Affairs Office in the Bren School of ICS or The Henry Samueli School of Engineering for information about change-of-major requirements. Information is also available at <http://www.changeofmajor.uci.edu>.

Requirements for the B.S. Degree in Computer Science and Engineering

All students must meet the University Requirements (p. 60).

Major Requirements

Mathematics and Basic Science Courses

Mathematics Courses: Students must complete a minimum of 32 units of mathematics including:

MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
MATH 2D	Multivariable Calculus
MATH 3A	Introduction to Linear Algebra
MATH 3D	Elementary Differential Equations
I&C SCI 6B	Boolean Algebra and Logic
I&C SCI 6D	Discrete Mathematics for Computer Science
STATS 67	Introduction to Probability and Statistics for Computer Science

Basic Science Courses: Students must complete a minimum of 18 units of basic science courses including:

PHYSICS 7C- 7LC Classical Physics
and Classical Physics Laboratory

PHYSICS 7D- 7LD Classical Physics
and Classical Physics Laboratory

Students select, with the approval of a faculty advisor, two additional basic science courses needed to satisfy school and department requirements.

Engineering and Computing Topics Courses

Students must complete a minimum of 72 units of engineering topics, 24 units of engineering design, and 63 units of computing topics. All courses below qualify as engineering topics; those marked with an asterisk (*) qualify as computing topics also. The following courses must be completed:

CSE 31 Introduction to Digital Systems *

CSE 31L Introduction to Digital Logic
Laboratory *

CSE 41 Introduction to Programming *

CSE 42 Programming with Software
Libraries *

CSE 43 Intermediate Programming *

CSE 45C Programming in C/C++ as a Second
Language *

CSE 46 Data Structure Implementation and
Analysis *

CSE 50 Discrete-Time Signals and Systems

CSE 70A Network Analysis I

CSE 90 Systems Engineering and Technical
Communications

CSE 112 Electronic Devices and Circuits

CSE 132 Organization of Digital Computers *

CSE 132L Organization of Digital Computers
Laboratory *

CSE 135A Digital Signal Processing

CSE 135B Digital Signal Processing Design
and Laboratory

CSE 141 Concepts in Programming
Languages I *

CSE 142 Compilers and Interpreters *

CSE 145A Embedded Computing Systems *

CSE 145B Embedded Computing System Lab *

CSE 161 Design and Analysis of Algorithms *

CSE 181A- 181B- 181CW Senior Design Project
and Senior Design Project
and Senior Design Project

IN4MATX 43 Introduction to Software Engineering
*

COMPSCI 132/EECS 148 Computer Networks *

COMPSCI 143A Principles of Operating Systems *

or

EECS 111

System Software *

Students select, with the approval of a faculty advisor, any additional engineering and computer topics courses needed to satisfy school and department requirements.

Technical Elective Courses:

Students must complete a minimum of two courses (with 3 or more units each) of technical electives. A technical elective may be any upper-division course from the Departments of Computer Science, Electrical Engineering and Computer Science, or Informatics, not otherwise used for the CSE degree, chosen from the following ranges:

Computer Science: 100–189

Electrical Engineering and Computing Science: 100–189

Informatics: 100–139

(The nominal Computer Science and Engineering program will require 188 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary).

NOTE: Students majoring in Computer Science and Engineering may not complete the major in Computer Engineering, the major in Computer Science, the major or minor in Information and Computer Science, or the minor in Informatics.

Faculty

Shannon Alfaro, M.S. University of California, Irvine, *Lecturer in Computer Science*

Nader Bagherzadeh, Ph.D. University of Texas at Austin, *Professor of Electrical Engineering and Computer Science*

Lubomir Bic, Ph.D. University of California, Irvine, *Professor of Computer Science, Electrical Engineering and Computer Science, and Biomedical Engineering*

Elaheh Bozorgzadeh, Ph.D. University of California, Los Angeles, *Associate Professor of Computer Science*

Peter J. Burke, Ph.D. Yale University, *Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*

Pai H. Chou, Ph.D. University of Washington, *Professor of Electrical Engineering and Computer Science*

Rina Dechter, Ph.D. University of California, Los Angeles, *Professor of Computer Science*

Brian Demsky, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Electrical Engineering and Computer Science and of Computer Science*

Michael Dillencourt, Ph.D. University of Maryland, *Professor of Computer Science*

Rainer Doemer, Ph.D. University of Dortmund, *Associate Professor of Electrical Engineering and Computer Science and of Computer Science*

David Eppstein, Ph.D. Columbia University, *Professor of Computer Science*

Charles Fowlkes, Ph.D. University of California, Berkeley, *Assistant Professor of Computer Science*

Michael Franz, D.Sc. Techn. Swiss Federal Institute of Technology (ETH), *Professor of Computer Science*

Daniel D. Gajski, Ph.D. University of Pennsylvania, *Professor Emeritus of Electrical Engineering and Computer Science*

Jean-Luc Gaudiot, Ph.D. University of California, Los Angeles, *Professor of Electrical Engineering and Computer Science*

Tony Givargis, Ph.D. University of California, Riverside, *Associate Dean for Student Affairs for the Donald Bren School of Information and Computer Sciences and Professor of Computer Science and of Informatics*

Michael T. Goodrich, Ph.D. Purdue University, *Department Chair and UCI Chancellor's Professor of Computer Science*

Michael M. Green, Ph.D. University of California, Los Angeles, *Department Chair and Professor of Electrical Engineering and Computer Science*

Ian G. Harris, Ph.D. University of California, San Diego, *Associate Professor of Computer Science*

Glenn E. Healey, Ph.D. Stanford University, *Professor of Electrical Engineering and Computer Science*

Daniel Hirschberg, Ph.D. Princeton University, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Alexander Ihler, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Computer Science*

Sandy Irani, Ph.D. University of California, Berkeley, *Professor of Computer Science*

Syed A. Jafar, Ph.D. Stanford University, *Associate Professor of Electrical Engineering and Computer Science*

Hamid Jafarkhani, Ph.D. University of Maryland, College Park, *UCI Chancellor's Professor of Electrical Engineering and Computer Science*

Stanislaw Jarecki, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Computer Science*

Fadi Kurdahi, Ph.D. University of Southern California, *Professor of Electrical Engineering and Computer Science and of Computer Science*

Richard H. Lathrop, Ph.D. Massachusetts Institute of Technology, *Professor of Computer Science and of Biomedical Engineering*

Henry P. Lee, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science*

Kwei-Jay Lin, Ph.D. University of Maryland, *Professor of Electrical Engineering and Computer Science*

Aditi Majumder, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Computer Science*

Eric D. Mjolsness, Ph.D. California Institute of Technology, *Professor of Computer Science and of Mathematics*

Richard Pattis, M.S. Stanford University, *Senior Lecturer with Security of Employment, Computer Science and Informatics*

Deva Ramanan, Ph.D. University of California, Berkeley, *Associate Professor of Computer Science*

Amelia C. Regan, Ph.D. University of Texas, Austin, *Professor of Computer Science*

Phillip C.-Y. Sheu, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*

A. Lee Swindlehurst, Ph.D. Stanford University, *Professor of Electrical Engineering and Computer Science*

Alexander V. Veidenbaum, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*

Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*

Max Welling, Ph.D. Utrecht University, *Professor of Computer Science*

Courses

CSE 21. Introduction to Computer Science I. 6 Units.

Introduces fundamental concepts related to computer software design and construction. Develops initial design and programming skills using a high-level language. Fundamental concepts of control structures, data structures, and object-oriented programming.

Same as I&C SCI 21.

Overlaps with I&C SCI H21, I&C SCI 31, EECS 10, EECS 12, ENGRMAE 10.

Restriction: CSE 21 or I&C SCI 21 may not be taken for credit if taken after IN4MATX 42.

(II, Vb)

CSE 22. Introduction to Computer Science II. 6 Units.

Abstract behavior of classic data structures (stacks, queues, sorted and unsorted maps), alternative implementations, analysis of time, and space efficiency.

Prerequisite: CSE 21 or I&C SCI 21 or I&C SCI H21. CSE 21 with a grade of C or better. I&C SCI 21 with a grade of C or better. I&C SCI H21 with a grade of C or better.

Same as I&C SCI 22.

Overlaps with I&C SCI H22, CSE 22, CSE 42, I&C SCI 32, CSE 43.

(II, Vb)

CSE 31. Introduction to Digital Systems. 4 Units.

Digital representation of information. Specification, analysis, design and optimization of combinational and sequential logic, register-transfer components and register-transfer systems with datapaths and controllers. Introduction to high-level and algorithmic state-machines and custom processors. Course may be offered online.

(Design units: 2)

Prerequisite: CSE 41 or I&C SCI 31 or EECS 10 or EECS 12 or ENGRMAE 10 or CSE 21 or I&C SCI 21 or I&C SCI H21.

Same as EECS 31.

Restriction: Computer Engineering, Computer Science and Engineering, Electrical Engineering majors have first consideration for enrollment.

CSE 31L. Introduction to Digital Logic Laboratory. 3 Units.

Introduction to common digital integrated circuits: gates, memory circuits, MSI components. Operating characteristics, specifications, applications. Design of simple combinational and sequential digital systems (arithmetic processors game-playing machines). Construction and debugging techniques using hardware description languages and CAD tools. Materials fee. Course may be offered online.

(Design units: 3)

Prerequisite: (EECS 31 or CSE 31) and (EECS 10 or EECS 12 or (CSE 22 or I&C SCI 22) or (CSE 42 or I&C SCI 32)).

Same as EECS 31L.

Restriction: Computer Engineering, Computer Science and Engineering, and Electrical Engineering majors have first consideration for enrollment.

CSE 41. Introduction to Programming. 4 Units.

Introduction to fundamental concepts and techniques for writing software in a high-level programming language. Covers the syntax and semantics of data types, expressions, exceptions, control structures, input/output, methods, classes, and pragmatics of programming.

Same as I&C SCI 31.

Overlaps with I&C SCI 21, CSE 21, I&C SCI H21, EECS 10, EECS 12.

(II, Vb)

CSE 42. Programming with Software Libraries. 4 Units.

Construction of programs for problems and computing environments more varied than in CSE41. Using library modules for applications such as graphics, sound, GUI, database, Web, and network programming. Language features beyond those in CSE41 are introduced as needed.

Prerequisite: I&C SCI 31 or CSE 41. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better.

Same as I&C SCI 32.

Overlaps with I&C SCI 22, CSE 22, I&C SCI H22, IN4MATX 42.

(II and (VA or VB).)

CSE 43. Intermediate Programming. 4 Units.

Intermediate-level language features and programming concepts for larger, more complex, higher-quality software. Functional programming, name spaces, modules, class protocols, inheritance, iterators, generators, operator overloading, reflection. Analysis of time and space efficiency.

Prerequisite: I&C SCI 32 or CSE 42. I&C SCI 32 with a grade of C or better. CSE 42 with a grade of C or better.

Same as I&C SCI 33.

Overlaps with I&C SCI 33, I&C SCI 22, CSE 22, I&C SCI H22, IN4MATX 42.

(II, Vb)

CSE 45C. Programming in C/C++ as a Second Language. 4 Units.

An introduction to the lexical, syntactic, semantic, and pragmatic characteristics of the C/C++ languages for experienced programmers. Emphasis on object-oriented programming, using standard libraries, and programming with manual garbage collection. Formerly ICS 65.

Prerequisite: I&C SCI 22 or CSE 22 or IN4MATX 42 or I&C SCI 33 or CSE 43. I&C SCI 22 with a grade of C or better. CSE 22 with a grade of C or better. IN4MATX 42 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Same as I&C SCI 45C.

CSE 46. Data Structure Implementation and Analysis. 4 Units.

Focuses on implementation and mathematical analysis of fundamental data structures and algorithms. Covers storage allocation and memory management techniques.

Prerequisite: CSE 45C or I&C SCI 45C or I&C SCI 65. CSE 45C with a grade of C or better. I&C SCI 45C with a grade of C or better. I&C SCI 65 with a grade of C or better.

Same as I&C SCI 46.

Overlaps with I&C SCI H23.

(Vb)

CSE 50. Discrete-Time Signals and Systems. 4 Units.

Analysis of discrete-time linear-time-invariant (DTLTI) systems in the time domain and using z-transforms. Introduction to techniques based on Discrete-Time, Discrete, and Fast Fourier Transforms. Examples of their application to digital signal processing and digital communications.

(Design units: 0)

Prerequisite: EECS 70A or CSE 70A.

Same as EECS 50.

Restriction: Computer Engineering, Computer Science and Engineering, and Electrical Engineering majors have first consideration for enrollment.

CSE 70A. Network Analysis I. 4 Units.

Modeling and analysis of electrical networks. Basic network theorems. Sinusoidal steady state and transient analysis of RLC networks and the impedance concept.

(Design units: 1)

Corequisite: MATH 3D.

Prerequisite: PHYSICS 7D and (EECS 10 or EECS 12 or ENGRMAE 10 or CSE 41 or I&C SCI 31).

Same as EECS 70A.

Overlaps with ENGRMAE 60.

Restriction: Aerospace Engineering, Biomedical Engineering, Civil Engineering, Computer Engineering, Electrical Engineering, Materials Science Engineering, and Mechanical Engineering majors have first consideration for enrollment.

CSE 90. Systems Engineering and Technical Communications . 2 Units.

Introduces systems engineering concepts, including specifications and requirements, hardware and software design, integration, testing, and documentation. Emphasizes organization and writing of reports and effective presentations.

Restriction: Computer Science and Engineering majors have first consideration for enrollment.

CSE 104. Principles of Operating Systems. 4 Units.

Principles and concepts of process and resource management, especially as seen in operating systems. Processes, memory management, protection, scheduling, file systems, and I/O systems are covered. Concepts illustrated in the context of several well-known systems.

Prerequisite: (CSE 46 or I&C SCI 46 or CSE 23 or I&C SCI 23) and (I&C SCI 51 or CSE 31 or EECS 31).

Overlaps with EECS 111.

CSE 112. Electronic Devices and Circuits. 4 Units.

A first course in the design of Very Large Scale Integrated (VLSI) systems. Introduction to CMOS technology; MOS transistors and CMOS circuits. Analysis and synthesis of CMOS gates. Layout design techniques for building blocks and systems. Introduction to CAD tools.

(Design units: 4)

Prerequisite: PHYSICS 7D and (CSE 70A or EECS 70A).

Overlaps with EECS 119, EECS 170D.

Restriction: Computer Science and Engineering majors have first consideration for enrollment.

CSE 132. Organization of Digital Computers. 4 Units.

Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/out devices and interfaces. Microprogramming and microprocessors.

(Design units: 4)

Prerequisite: EECS 31L or CSE 31L.

Same as EECS 112.

Overlaps with COMPSCI 152.

Restriction: Computer Engineering, Computer Science and Engineering, and Electrical Engineering majors have first consideration for enrollment.

CSE 132L. Organization of Digital Computers Laboratory. 3 Units.

Specification and implementation of a processor-based system using a hardware description language such as VHDL. Hands-on experience with design tools including simulation, synthesis, and evaluation using testbenches.

(Design units: 3)

Prerequisite: EECS 112 or CSE 132.

Same as EECS 112L.

Restriction: Computer Engineering and Computer Science and Engineering majors have first consideration for enrollment.

CSE 135A. Digital Signal Processing. 3 Units.

Nature of sampled data, sampling theorem, difference equations, data holds, z-transform, w-transform, digital filters, Butterworth and Chebyshev filters, quantization effects.

(Design units: 2)

Prerequisite: EECS 50 or CSE 50.

Same as EECS 152A.

Restriction: Computer Engineering, Electrical Engineering, and Computer Science and Engineering majors have first consideration for enrollment.

CSE 135B. Digital Signal Processing Design and Laboratory. 3 Units.

Design and implementation of algorithms on a DSP processor and using computer simulation. Applications in signal and image processing, communications, radar, etc. Materials fee.

(Design units: 3)

Prerequisite: EECS 152A or CSE 135A.

Same as EECS 152B.

Restriction: Computer Engineering, Electrical Engineering, and Computer Science and Engineering majors have first consideration for enrollment.

CSE 141. Concepts in Programming Languages I. 4 Units.

In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Course may be offered online.

Prerequisite: (IN4MATX 42 or I&C SCI 51 or CSE 31 or EECS 31) and (IN4MATX 45 or I&C SCI 23 or CSE 23 or I&C SCI 33 or CSE 43). IN4MATX 42 with a grade of C or better. I&C SCI 51 with a grade of C or better. CSE 31 with a grade of C or better. EECS31 with a grade of C or better. IN4MATX 45 with a grade of C or better. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Same as COMPSCI 141, IN4MATX 101.

CSE 142. Compilers and Interpreters. 4 Units.

Introduction to the theory of programming language processors covering lexical analysis, syntax analysis, semantic analysis, intermediate representations, code generation, optimization, interpretation, and run-time support.

Prerequisite: CSE 141 or COMPSCI 141 or IN4MATX 101.

Same as COMPSCI 142A.

CSE 145A. Embedded Computing Systems. 4 Units.

Principles of embedded computing systems: embedded systems architecture, hardware/software components, system software and interfacing, real-time operating systems, hardware/software co-development, and communication issues. Examples of embedded computing in real-world application domains. Simple programming using an embedded systems development environment.

Corequisite: CompSci 145B.

Prerequisite: (CSE 46 or I&C SCI 46 or CSE 23 or I&C SCI 23 or I&C SCI 51 or CSE 31 or EECS 31) and (CSE 132 or EECS 112).

Same as COMPSCI 145A.

CSE 145B. Embedded Computing System Lab. 2 Units.

Laboratory section to accompany CSE 145A or COMPSCI 145A.

(Design units: 0)

Corequisite: CSE145A or COMPSCI 145A.

Same as COMPSCI 145B.

CSE 161. Design and Analysis of Algorithms. 4 Units.

Techniques for efficient algorithm design, including divide-and-conquer and dynamic programming, and time/space analysis. Fast algorithms for problems applicable to networks, computer games, and scientific computing, such as sorting, shortest paths, minimum spanning trees, network flow, and pattern matching.

Prerequisite: (I&C SCI 23 or CSE 23 or I&C SCI 46 or CSE 46) and I&C SCI 6B and I&C SCI 6D and MATH 2B. I&C SCI 23 with a grade of C or better. CSE 23 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better.

Same as COMPSCI 161.

CSE 181A. Senior Design Project. 3 Units.

Teaches problem definition, detailed design, integration and testability with teams of students specifying, designing, building, and testing complex systems. Lectures include engineering values, discussions, and ethical ramifications of engineering decisions. (Design units: 3).

Prerequisite: Restricted to students in Computer Science and Engineering.

Restriction: Majors only

CSE 181B. Senior Design Project. 3 Units.

Teaches problem definition, detailed design, integration and testability with teams of students specifying, designing, building, and testing complex systems. Lectures include engineering values, discussions, and ethical ramifications of engineering decisions.

(Design units: 3)

Prerequisite: CSE 181A.

Restriction: Computer Science and Engineering majors have first consideration for enrollment. CSE 181A-B-C must be taken in the same academic year.

CSE 181CW. Senior Design Project. 3 Units.

Completion, documentation, and presentation of projects started in CSE181A-B. Teaches engineering documentation writing and presentation skills. Students write comprehensive project reports individually. Each student participates in a public presentation of the project's results.

Prerequisite: CSE 181A and CSE 181B. Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Computer Science and Engineering majors have first consideration for enrollment.

(Ib)

CSE 198. Group Study. 1-4 Units.

Group study of selected topics in computer science and engineering.

(Design units: 0-4)

Prerequisite: Prerequisites vary.

Repeatability: May be repeated for credit unlimited times.

Restriction: Computer Science and Engineering majors only.

CSE 199. Individual Study. 1-4 Units.

Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Repeatability: May be taken for credit for 8 units.

CSE 199P. Individual Study. 1-4 Units.

Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

School of Law

Erwin Chemerinsky, **Dean**

General Information: law@uci.edu
http://www.law.uci.edu/

Overview

The School of Law offers the Juris Doctor (J.D.) degree through an innovative curriculum that includes in-depth study of legal doctrine, emphasizes experiential learning and clinical experience, and provides the professional training in lawyering skills necessary for the practice of law at the highest level of the profession. A hallmark of the School is that every student is required to have a clinical experience or equivalent in order to graduate.

Notably, the School of Law also participates in the UC Irvine Program in Law and Graduate Studies, a concurrent degree program that enables qualified students to pursue a doctoral or master's degree in a cognate field at the same time they are pursuing their law degree. Several current students, for example, are pursuing concurrent J.D./Ph.D. degrees, J.D./M.A. degrees, or J.D./M.B.A. degrees.

The School of Law builds on UCI's existing strengths in emerging technology, social policy, international business, environmental science and policy, health care, and other fields to produce leaders in law, government, and business for the twenty-first century. UCI Law graduates are encouraged to pursue careers in public service, including non-governmental organizations and philanthropic agencies. The School works aggressively to place students on their chosen career path whether that be with a private law firm, public interest or legal services office, government agency, and/or in a judicial clerkship. A wide array of employers from both the public and private sectors come to interview students on campus for summer positions and externships.

The School of Law has been granted provisional accreditation by the American Bar Association. A student at a provisionally approved law school and an individual who graduates while the school is provisionally approved are entitled to the same recognition given to students and graduates of fully approved law schools. The School will be eligible to pursue full accreditation in its fifth year of operation.

The School of Law seeks to enroll outstanding students who reflect a wide diversity of life experiences. Further information about admission requirements, application deadlines, tuition and fees, and curriculum is updated regularly on the School's Web site, <http://www.law.uci.edu>.

Degree

Law	J.D.
-----	------

In addition, concurrent degree study (J.D./Ph.D. and J.D./Master's) is available under the auspices of UC Irvine's Program in Law and Graduate Studies, which is described later in the School of Law section.

Faculty

Olufunmilayo B. Arewa, J.D. Harvard Law School; Ph.D., M.A. University of California, Berkeley; A.M. University of Michigan, *Professor of Law*

Sameer Ashar, J.D. Harvard Law School, *Clinical Professor of Law*

Mario Barnes, J.D. University of California, Berkeley; LL.M. University of Wisconsin at Madison, *Senior Associate Dean for Academic Affairs and Professor of Law and of Criminology, Law and Society*

Dan Burk, J.D. Arizona State University, J.S.M. Stanford Law School, M.S. Northwestern University, *UCI Chancellor's Professor of Law*

Alejandro Camacho, J.D. Harvard Law School, *Professor of Law and Political Science*

Jennifer Chacón, J.D. Yale Law School, *Professor of Law*

Erwin Chemerinsky, J.D. Harvard Law School, *Dean of the School of Law, UCI Distinguished Professor of Law and Political Science, and Raymond Pryke Endowed Chair in First Amendment Law*

Linda R. Cohen, Ph.D. California Institute of Technology, *Professor of Economics and Law*

Rachel Croskery-Roberts, J.D. University of Michigan, *Professor of Lawyering Skills*

Joseph F. DiMento, J.D., Ph.D. University of Michigan, *Professor of Law; Planning, Policy, and Design; Social Ecology; Management; Criminology, Law and Society; and Transportation Science*

Catherine Fisk, J.D. University of California, Berkeley; LL.M. University of Wisconsin at Madison, *UCI Chancellor's Professor of Law*

Bryant Garth, J.D. Stanford Law School; Ph.D. European University Institute, Florence, *Professor of Law*

Jonathan Glater, J.D., M.A. Yale University, *Assistant Professor of Law*

Richard L. Hasen, J.D., Ph.D., M.A. University of California, Los Angeles, *UCI Chancellor's Professor of Law and Political Science*

Carrie Hempel, J.D. Yale University School of Law, *Associate Dean of Clinical Education and Service Learning Programs, and Clinical Professor of Law*

David Kaye, J.D. University of California, Berkeley, *Assistant Clinical Professor of Law*

Sarah B. Lawsky, J.D. Yale Law School; LL.M. New York University, *Assistant Professor of Law*

Stephen Lee, J.D. University of California, Berkeley, *Assistant Professor of Law*

Christopher Leslie, J.D. University of California, Berkeley, M.P.P. Harvard University, *Professor of Law*

Elizabeth F. Loftus, Ph.D. Stanford University, *UCI Distinguished Professor of Psychology and Social Behavior; Criminology, Law and Society; Cognitive Sciences; and Law*

William M. Maurer, Ph.D. Stanford University, *Dean of the School of Social Sciences and Professor of Anthropology and Law*

Carrie Menkel-Meadow, J.D. University of Pennsylvania Law School; LL.D. (hon) Quinnipiac School of Law; Doctor of Laws (hon) Southwestern Law School, *UCI Chancellor's Professor of Law*

David Min, J.D. Harvard Law School, *Assistant Professor of Law*

Katherine Porter, J.D. Harvard Law School, *Professor of Law*

R. Anthony Reese, J.D. Stanford Law School, *UCI Chancellor's Professor of Law*

Michael Robinson-Dorn, J.D. Cornell Law School, *Clinical Professor of Law*

Trilby Robinson-Dorn, J.D. Tulane Law School, *Assistant Professor of Lawyering Skills*

Ezra Ross, J.D. Harvard Law School, *Assistant Professor of Lawyering Skills*

Carroll Seron, Ph.D. New York University, *Professor of Criminology, Law and Society, Sociology, and Law*

Robert Solomon, J.D. George Washington University of Law School, *Clinical Professor of Law*

Ann Southworth, J.D. Stanford Law School, *Professor of Law and Criminology, Law and Society*

Shauhin Talesh, J.D. University of Connecticut School of Law; Ph.D. University of California, Berkeley; LL.M. University of Connecticut School of Law, *Assistant Professor of Law, Sociology, and Criminology, Law and Society*

William C. Thompson, J.D. University of California, Berkeley, Ph.D. Stanford University, *Professor of Criminology, Law and Society, Psychology and Social Behavior, and Law*

Beatrice Tice, J.D. Stanford Law School, M.L.I.S. University of Washington, *Associate Dean of Library and Information Services and Professor of Law*

Christopher Tomlins, Ph.D. John Hopkins University, *UCI Chancellor's Professor of Law*

Grace Tonner, J.D. Loyola Law School, *Associate Dean of Lawyering Skills and Professor of Lawyering Skills*

Kerry Vandell, Ph.D. Massachusetts Institute of Technology, *Professor of Management; Law; and Planning, Policy, and Design*

Henry Weinstein, J.D. University of California, Berkeley, *Assistant Professor of the Practice of Law and Senior Lecturer in Literary Journalism*

Christopher Whytock, J.D. Georgetown University, Ph.D. Duke University, *Assistant Professor of Law and Political Science*

For up-to-date information on these appointments, please monitor the School's Web site at <http://www.law.uci.edu>.

Juris Doctor (J.D.) Requirements

Graduation Requirements

To earn the Juris Doctor, students must complete six semesters of study, earn 86 law semester credits, pass all required classes, complete the upper-level writing requirement, and have a minimum 2.0 (C) grade point average.

All students must complete at least 68 credits in regularly scheduled Law School classes.

"Regularly scheduled Law School classes" include

- Law School courses and seminars, including courses cross-listed at the Law School but originating in another school or department at the University;
- Law School clinics and clinical placements approved by the Associate Dean for Clinical Education and Service Learning;
- credits from another ABA-approved law school or from approved study in a foreign exchange program.

"Regularly scheduled Law School classes" do not include

- independent study work;
- non-law classes;
- research tutorials;
- externships (other than those deemed to meet the Law School's clinical requirement).

No more than 8 units of *optional* credit/no credit course work will count toward the 86-unit degree requirement.

First-Year Course Work Requirements

Students must pass all UCI Law School first-year courses, or their substantial equivalents, with grades of 1.0 (D) or higher. The Assistant Dean for Student Services will determine whether classes taken at another law school are sufficient for transfer students to meet the UCI Law first-year course work requirement. If not, the student will be notified which courses are needed to complete the requirement.

Upper-Level Academic Requirements

1. Writing Requirement

Students must complete at least one course where they are required to produce a major writing project with frequent feedback from a faculty member. This might include seminars, independent studies, or other work, so long as it involves substantial original analysis and research, multiple drafts, and is certified by the faculty members as meeting this requirement.

- A. At the completion of the first-year lawyering skills course, students will have a meeting with their professor and receive advice on the type of writing assistance they need and approaches they should consider in meeting the upper-level writing requirement.
- B. Students are strongly encouraged to develop a portfolio over the course of law school that will include all of their major written work and other forms of presentation.

2. Clinical Requirement

All students are required to complete at least one semester of clinical education, either in a Law School clinic or at a clinical placement that is approved by the Associate Dean of Clinical Education and Service Learning. This shall involve a live client or other real-life practical experience, appropriately supervised and designed to encourage reflection by students on their experiences and on the values and responsibilities of the legal profession, and the development of one's ability to assess his or her performance and level of competence.

First-Year Curriculum

UCI School of Law has an innovative curriculum designed to prepare students for the practice of law at the highest levels of the profession. Traditional areas of legal doctrine are covered in the first year, but in a novel way that focuses on training students in five methods of legal analysis: statutory, common law, procedural, constitutional, and

international. The course on Statutory Analysis, for example, uses criminal law as the vehicle for teaching students to read and interpret statutes.

One of UCI's signature first-year courses, Legal Profession, exposes students to the economics, sociology, and psychology of a legal career. The course also emphasizes professional ethics. Panels of attorneys from a wide range of practice areas speak to students throughout the year about ethical dilemmas they confront as well as their work and careers.

Throughout both the first-year and upper-level curriculum there is great emphasis on incorporating skills training into traditional classes. The first-year Legal Skills class teaches fact investigation, interviewing, legal writing and analysis, extensive legal research, negotiation and oral advocacy. In addition, all first-year students are assigned a lawyer mentor and are required to spend a specified number of hours observing that lawyer at work.

UCI has an active pro bono program in which students engage in volunteer legal work on behalf of underserved populations as early as their first year.

All first-year students enroll in the courses below. Additional information is available online at <http://www.law.uci.edu/registrar/curriculum.html>.

Fall Semester

Law 500 Common Law Analysis: Contracts (4). This course will focus primarily on the common law of contracts to teach this method of analysis, in which the law is derived from judicial decisions rather than statutes or the Constitution.

Law 503 Statutory Analysis (3). This course will use criminal law as a basis for teaching students the methods employed in all areas of law for analyzing statutes.

Law 504 Procedural Analysis (4). This course will use civil procedure as the foundation for teaching students about areas of law in which there are procedural rules, and how analysis and arguments are made in such contexts.

Law 506A Lawyering Skills I (3). This course, which will be part of both semesters, will focus on teaching skills that all lawyers use, such as fact investigation, interviewing, legal writing and analysis, legal research, negotiation and oral advocacy.

Law 507A Legal Profession I (2). This course, which will be part of both semesters, is designed to prepare students to chart rewarding and responsible careers in law. Drawing from various disciplines, including economics, history, sociology, and psychology, we will teach students about the variety of practice settings in which lawyers work and the professional opportunities and challenges of each. (Full description available at <http://www.law.uci.edu/registrar/curriculum.html>.)

Spring Semester

Law 501 Common Law Analysis: Torts (4). This course will use torts as a way of further examining the common law, and how lawyers reason and develop arguments in this area.

Law 502 Constitutional Analysis (4). This course will teach students basic areas of constitutional law such as separation of powers, federalism, and individual liberties. It will focus on how constitutional arguments are made, and how courts and lawyers analyze constitutional issues.

Law 505 International Legal Analysis (3). This course will introduce students to international law and the ways that analyses in this area are similar to and different from analysis in other areas of law.

Law 506B Lawyering Skills II (3). In the spring semester of this two-semester course, all students will gain experience in a legal clinic setting, where they will conduct intake interviews of actual clients at one or more legal services organization such as: The Learning Rights Center of Los Angeles, the Legal Aid Foundation of Los Angeles, the Legal Aid Society of Orange County, the Public Law Center, the United States Marines Corp Base at Camp Pendleton, and the UCI Consumer Protection Clinic.

Law 507B Legal Profession II (2). Continuation of fall semester course.

Upper-Level Courses

Below is an overview of the upper-level courses taught at UC Irvine School of Law. Not every course will be offered each year, and additional courses not listed may be offered. Additional information is available at <http://www.law.uci.edu/registrar/curriculum.html>. Course descriptions, content, and requirements are subject to change.

General Courses

Law 510 Administrative Law
 Law 511 Business Associations
 Law 512 Constitutional Law: First Amendment
 Law 513 Criminal Procedure
 Law 514 Evidence
 Law 515 Federal Courts
 Law 5155 Federal Criminal Law
 Law 516 Federal Income Taxation
 Law 517 Property
 Law 518 Remedies
 Law 5151 The Federal Judge

Business Law

Accounting and Finance for Lawyers
 Advanced Legal Writing: Business Drafting
 Law 521 Antitrust
 Antitrust Law & IP Rights
 Bankruptcy Law
 Business and Economics of Law Firm Practice
 Business and Regulation of Fund Investors
 Business Torts
 Commercial Transactions
 Law 526 Corporate Finance
 Insurance Law and Policy
 Investment Management Regulation
 Law and Theory Relating to the 2008 Financial Crisis
 Mergers and Acquisitions
 Organizations, Operations, and Tax Aspects of Public Charities and Private Foundations
 Public Companies
 Representing Business Clients
 SEC Enforcement Process
 Secured Credit
 Securities Regulation
 Statistics for Lawyers

Colloquium

Law 519 Writing for Publication in the Law Review
 Law 519X Advanced Writing for Publication in the Law Review

Criminal Law

Advanced Criminal Law, Practice, & Procedure
Memory & The Law
Documents and Artifacts in Socio-Legal Research
Topics in White Collar Crime

Employment Law

Employment Discrimination Law
Employment Law
Law 532 Labor Law

Entertainment Law

Entertainment Law
Sports Law

Family Law

Children and the Law
Law 541 Community Property
Law 542 Family Law
Gifts, Wills, and Trusts
Law 543 Advocating for Vulnerable Children: From Foster Care to Juvenile Justice

Intellectual Property

Law 545 Copyright Law
Digital Copyright Law
Cross-Border Trade in IP
Law 546 Intellectual Property Law
Law 547 Patent Law
Technical Protection of Author's Rights
Trademark and Unfair Competition Law

International and Comparative Law

China Law
Comparative Law
Law 552 International Business Transactions
International Contracts
International Environmental Law
Law 554 International Human Rights Law
International Trade Law
Islamic Law
Japanese Law
Jewish Law
Korean Law

Law and Medicine

Biomedical Ethics
Drug Discovery, Development & Commercialization
Health Care Law
Reproductive Technologies

Perspective Courses

Law 565 American Legal History
Cause Lawyering
Law 566 Spanish for Lawyers
Conflict of Laws
Critical Race Theory
Feminist Jurisprudence and the Law
Human Rights & Protest in 20th and 21st Century China
Jurisprudence

Law and Economics
Law 5691 Law and Literature
Law and Social Movements
Law 5775 Race and the Law
Sexual Orientation and the Law

Procedural Courses

Arbitration
Law 5711 Civil Rights Litigation
Complex Litigation
Conflicts of Law
Law 573 Dispute Resolution
Law 574 Negotiations and Mediation

Public Law

Animal Law
Civil Rights Law
Education Law
Election Law
Law 5788 Federal Public Land and Natural Resources Law
Law 5775 Race and the Law
Law 578 Environmental Law
Law 579 Immigration Law
Law 585 Land Use and Development Control Law
Legislation
Local Government Law
Law 5815 Organizations, Operations and Tax Aspects of Public Charities and Private Foundations
Law 582 Media Law
National Security Law
Natural Resources Law
Poverty Law
Regulatory Design and Innovation
White Collar Crime

Real Estate Law

Land Use Law
Real Estate Transactions

Skills Courses

Advanced Legal Research
Advanced Legal Writing
Global Justice Summit
Law 591 Appellate Litigation
Law 592 Appellate Advocacy
Negotiations
Spanish for Lawyers
Law 594 Trial Advocacy

Tax Law

Law 516 Basic Tax
Law 5950 Corporate Tax
Estate and Gift Taxation
Partnership & LLC Taxation
Law 5953 Taxation of Business Enterprises

Clinical/Externships

Law 597A Appellate Litigation Clinic
Law 597AC Advanced Community & Economic Development Clinic
Law 597AE Advanced Environmental Law Clinic
Law 597AH Advanced International Human Rights Clinic

Law 597AI Advanced Immigration Rights Clinic
 Law 597AP Advanced Consumer Protection Clinic
 Law 597C Community & Economic Development Clinic
 Law 597CP Consumer Protection Clinic
 Law 597D Family Violence Clinic
 Law 597E Environmental Law Clinic
 Law 597F Fair Employment & Housing Clinic
 Law 597H International Human Rights Clinic
 Law 597I Immigrant Rights Clinic
 Law 597J International Justice Clinic
 Law 5965D, 5965S, 5965P, 59651, 59653 Externships

Program in Law and Graduate Studies (J.D./Ph.D.; J.D./Master's)

(949) 824-4158

ctomlins@law.uci.edu; <http://www.law.uci.edu/plgs/>

Christopher Tomlins, **Director**

Highly qualified students interested in combining the study of law with graduate research and/or professional qualifications in cognate disciplines are invited to undertake concurrent degree study under the auspices of UC Irvine's Program in Law and Graduate Studies (PLGS). Students in this program pursue a coordinated curriculum leading to a J.D. degree from the School of Law in conjunction with a Master's or Ph.D. degree from any of the graduate professional or research degree programs at UCI that have been approved for this concurrent degree program. The objective of the program is to promote interdisciplinary study of law while also enabling students to obtain both a J.D. and a graduate degree in less time than would be required to acquire both degrees separately. The normative time for completion of the program is four years for J.D./Master's combinations and seven years for J.D./Ph.D. combinations. Additional information is available from the PLGS Program Director's Office, (949) 824-4158, or by e-mail to plgs@law.uci.edu. A full description of the program, with links to all relevant application information, can be found at <http://www.law.uci.edu/plgs/>.

UC Irvine's PLGS program is well suited to students interested in professional or academic careers focused on the interdisciplinary or multidisciplinary study of law and legal institutions, policy analysis, and/or applied research in law-related fields (for example, criminal justice and criminology, urban planning and environmental issues, discrimination, human rights, urban planning, environmental protection, and intellectual property). UC Irvine is nationally known for its graduate programs in such fields as Criminology, Law and Society; Psychology and Social Behavior; Anthropology; Management and Business; Literature; History; Performing Arts; and others.

Applicants must submit separate applications for admission to the School of Law and to the graduate program of their choice. Once admitted for study into both components of their program, concurrent degree students will work with the PLGS director and the director of their graduate program to develop a program of study that will permit efficient pursuit of both degrees. Ordinarily, students will commence their studies in their chosen graduate program and begin their first year of law instruction after one or more years of graduate program study. Upon completion of the first year of law instruction, students will pursue a coordinated curriculum of upper-level law study and graduate program study and research. Concurrent degree students' law enrollments will include a required "Graduate Legal Studies" colloquium and a 3-unit "Interdisciplinary Perspectives on Law" course or its equivalent. Concurrent degree students will be eligible for financial support through their chosen graduate program while pursuing

graduate degree studies, and through the law school while pursuing law studies.

Required Colloquium

University Studies 296 Graduate Legal Studies (.3). Monthly faculty/student colloquium to present and discuss socio-legal related research/issues. Course convened by Law School faculty with other faculty participation. Open to graduate students and Law students; required for PLGS students enrolled in Law portion of degree. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

Law 5655 Interdisciplinary Perspectives on Law. This course is a reading and discussion seminar. Students will read a book each week. For the first class, students will read the book and come to class prepared to discuss it. For the second class each student will write a 750-word critique (analytic precis) of the book; discussion of the book will continue in that class. The seminar will be organized into four roughly equal segments. The first will present four quite distinct accounts of law—law as education, as ideology, as politics, and as organized activism. The second will consider several distinct scholarly perspectives on law—cultural, rhetorical, sociological. The third will examine applications of interdisciplinarity to legal studies—of property, recording media, citizenship, and emergency politics. The fourth will continue "applications" and conclude the course by comparing two rather different studies of law and death.

School of Medicine

Ralph V. Clayman, M.D., Dean
Irvine Hall
Admissions and Outreach: (949) 824-5388
<http://www.som.uci.edu/>

School of Medicine Overview

The UCI School of Medicine became part of the University of California in 1965. Prior to this time it was known as the California College of Medicine which traces its roots to a private institution founded in 1896.

Mission Statement

The mission of the University of California, Irvine, School of Medicine is to promote biomedical sciences and medicine in Orange County, California, and beyond, through excellence in research, patient care, education, and community service. This mission is achieved through programs of excellence in the following:

Education: The School of Medicine is committed to provide educational programs of the highest quality to medical students, M.D./Ph.D. and M.D./M.B.A. students, residents, fellows, allied health, graduate academic students, practicing physicians and other health care professionals. Educational programs are offered along the continuum of medical education with programs in undergraduate, graduate, and continuing medical education. These programs emphasize the most current knowledge in the health sciences and reflect the changing practice of medicine. Further, the School of Medicine's educational programs are designed to stimulate life-long self-learning and critical inquiry and to exemplify those human values necessary to fulfill the professional commitments of a career in the health sciences.

Research: Excellence in research is an essential feature of the School of Medicine. Therefore, the School is committed to develop and maintain research programs in the health sciences which seek to advance basic scientific knowledge and the prevention, diagnosis, and treatment of human illness.

Clinical Care: Recognizing its responsibility to meet the educational needs of students and the diverse needs of the patient community, the School of Medicine is committed to programs of clinical excellence across the spectrum of patient care disciplines.

Service to the Public: As a publicly assisted institution, the School of Medicine is committed to serve the community as a vital resource of expertise and knowledge. The School further serves the public through the training of health professionals whose backgrounds reflect California's ethnic and cultural diversity and whose professional careers address California's health care needs.

Degrees

Biomedical and Translational Science	M.S.
Biomedical Sciences ¹	M.S., Ph.D.
Environmental Health Sciences	M.S., Ph.D.
Epidemiology	M.S., Ph.D.
Genetic Counseling	M.S.

Medicine	M.D.
Pharmacological Sciences ²	M.S., Ph.D.

- ¹ The School of Medicine's basic medical science departments of Anatomy and Neurobiology, Biological Chemistry, Microbiology and Molecular Genetics, Pathology and Laboratory Medicine, and Physiology and Biophysics offer graduate instruction leading to the M.S. and Ph.D. degrees in Biomedical Sciences.
- ² Offered in conjunction with the Department of Pharmaceutical Sciences.

The School of Medicine also offers the Medical Scientist Training Program (M.D./Ph.D.), the Program in Medical Education for the Latino Community (PRIME-LC), an M.D./M.B.A. program in cooperation with The Paul Merage School of Business, medical residency programs, and continuing medical education for physicians and other health care professionals.

Vision Statement

The University of California, Irvine, School of Medicine will achieve preeminence through the creation, application, and dissemination of new knowledge in the biomedical sciences and medicine. This will be accomplished through international leadership in biomedical research, development of new therapies, delivery of state-of-the-art medical care, and innovative biomedical education.

Health Sciences Complex

The Health Sciences Complex is a 121-acre site that houses UCI's medical school facilities. Twenty-nine acres have been developed to provide space for teaching, research, and patient care as well as offices for departmental administration.

The School's basic science instructional programs are located in modern, well-equipped, medical sciences buildings. These units provide space for first- and second-year classes, lecture halls (including the Dr. S. Jerome and Judith D. Tamkin Student Lecture Hall), offices and laboratories for various basic and clinical departments. Other buildings house the School's administration, laboratories, and study center (located in J. Edward Berk Hall).

The new Medical Education building symbolizes the University's ongoing commitment to high-quality medical education and innovation. The \$40-million, 65,000-square-foot building serves as the hub for nearly all non-hospital related educational activities for UC Irvine medical students, and incorporates the latest technology to help prepare tomorrow's doctors for healthcare in the digital age. The School of Medicine Educational Affairs Office is located in the Medical Education building, as well as the innovative Program in Medical Education for the Latino Community (PRIME-LC), an acclaimed program to improve healthcare for the Latino community by training medical students to care for this underserved population in a linguistically competent, culturally sensitive way.

The Medical Education building's telemedicine center includes a 60-seat interactive televideo auditorium where students watch UC Irvine physicians provide expert care over the Internet to patients in rural or other remote locations. Located on the second floor, the Clinical Skills Center is a cutting-edge facility for teaching and assessment of clinical skills, communication, and professionalism. The Center includes 17 fully equipped patient exam rooms, a central control room for exam administration and recording of all activities, and a computer software system that focuses on the capture, debriefing, and assessment of medical training. The building also features an advanced simulation learning center. The Simulation Lab is a four-suite lab that utilizes high-

fidelity human patient simulators with physiologically accurate responses to stimuli to enhance learning and assess competency. The lab is equipped with a fully operational anesthesia suite, a trauma suite, and a general ward environment. The Simulation Lab has two debriefing rooms for immediate feedback on performance as well as a large central control room for all simulation activities.

In addition, the 40,000-square-foot Plumwood House is devoted to basic research in the fields of neurological disorders, diagnostic systems and reagents, and industrial bioreactors. In this facility, faculty from the Department of Biological Chemistry share laboratory space with corporate researchers.

Outpatient services are available on campus through the Louis A. and Helen C. Gottschalk Medical Plaza and the Beckman Laser Institute. The Plaza capitalizes upon the broad range of diagnostic and therapeutic programs of the School as well as the extensive clinical expertise of the faculty. The facility offers primary care and specialty services. Special programs in diabetes, multiple sclerosis, Alzheimer's disease, and inflammatory bowel diseases also are offered. The Plaza also houses UC Irvine Corporate Health Services and the Gavin Herbert Eye Institute, which offers the latest in diagnostic health care for eye diseases, including computerized refraction analysis, glaucoma diagnosis, and ultrasound analysis of eye disorders.

Housing one of the world's leading programs in medical laser technology, the Beckman Laser Institute offers state-of-the-art treatment for cancer and dermatological conditions. The Institute specializes in the development and application of laser and other optical technologies for the diagnosis and treatment of disease.

Biomedical Research Center

UCI's Biomedical Research Center (BRC) is a landmark public-private collaboration between UCI and businesses involved in biomedical, biotechnological, and healthcare services. The Center enables UCI researchers and participating companies to work alongside one another, combining basic science, clinical study, and product development to find new approaches to the diagnosis and treatment of disease. The William J. Gillespie Neuroscience Research Facility, the first of several BRC buildings, is the home of a core group of prominent scientists investigating the causes and cures for neurological disorders, including Alzheimer's disease, Parkinson's disease, schizophrenia, and spinal cord injury. The second building is the Robert R. Sprague Family Foundation Hall, where scientists work to reveal the role of genetics in cancer treatment and prevention. The third building, the Dottie and George Hewitt Research Hall, is home to a state-of-the-art General Clinical Research Center and internationally recognized investigators studying infectious diseases, molecular medicine, immunology, and complementary and alternative medicine. The Sue and Bill Gross Stem Cell Research Center is the fourth building in UCI's Biomedical Research Center. Opened in 2010, this state-of-the-art research and clinical building fosters a multi-pronged approach to neurodegenerative repair and basic stem cell biology by supporting basic research, regenerative medicine, and drug-development programs.

Chao Family Comprehensive Cancer Center

The Chao Family Comprehensive Cancer Center is the only National Cancer Institute-designated facility in Orange County and one of only 40 such centers in the country. Overall, more than 100 faculty members at the Cancer Center are involved in several major research programs, encompassing everything from basic research that looks at how cancer cells grow to bone marrow transplantation. Located at the UC Irvine Medical Center in Orange, the 56,000-square-foot facility provides an

ideal setting for the practice of all the basic and clinical subspecialties involved in adult and pediatric oncology, including the application of the latest techniques for diagnosis and management of patients with cancer.

University of California, Irvine Health

UC Irvine Health is committed to providing the highest quality healthcare to Orange County and surrounding communities through UC Irvine Medical Center, Orange County's only university hospital.

UC Irvine Medical Center, located in the City of Orange, is a 415-bed, comprehensive medical care center. It is the principal clinical facility of the UC Irvine School of Medicine. The medical faculty of the School of Medicine together with the medical resident-physician staff, provide the professional care. A full scope of acute- and general-care services offered at UC Irvine Medical Center include cancer, cardiology, digestive disease, dermatology, obstetrics and gynecology, neonatology, psychiatry, family medicine, pathology, radiology, physical medicine and rehabilitation, ophthalmology, neurology, anesthesiology, orthopaedics, geriatrics, oncology, neurosurgery, otolaryngology, and urology.

UC Irvine Medical Center also has cardiac, neonatal, burn, medical, surgery, and neurosciences intensive care units, and more than 90 specialty outpatient services. It is Orange County's only Level I trauma center—the most comprehensive designation for the treatment of life-threatening injuries. In March 2009, the seven-story UC Irvine Douglas Hospital opened at UC Irvine Medical Center and includes 236 beds, 19 operating rooms, and interventional procedure rooms. Private patient rooms offer patients optimal comfort and healing and accommodate family members who wish to stay overnight. More information about UC Irvine Health is available online at <http://www.ucihealth.com>.

UCI Family Health Center-Santa Ana

The UCI Family Health Center-Santa Ana is a state-of-the-art primary care facility, conveniently located near the Santa Ana Civic Center. The Center has two missions—healthcare delivery and medical education.

As a community clinic, the Family Health Center's multilingual physicians and staff are committed to providing quality health care to patients, including the medically underserved. It provides primary care services to people of all ages including family medicine, preventive care for children and adults, and specialty care in pediatrics and obstetrics and gynecology.

As an integral part of the UCI School of Medicine, the Family Health Center provides educational and training opportunities for medical and nurse practitioner students, including the UCI Family Medicine and Obstetrics and Gynecology residency training programs.

UCI Family Health Center-Anaheim

The UCI Family Health Center-Anaheim provides care for more than 20,000 outpatient visits annually and training programs for resident physicians in primary care, general internal medicine, and general and adolescent pediatrics. There are additional programs in gynecology, dermatology, general surgery, podiatry, neurology, ophthalmology, optometry, orthopedics, psychiatry, and multispecialty faculty practice. The Center provides training for medical students in their primary care, general pediatric, adolescent medicine, and geriatric medicine rotations and electives.

Affiliated Hospitals and Clinics

Additional major teaching and research programs of the School of Medicine are conducted at the Veterans Affairs Long Beach Healthcare System, Children's Hospital of Orange County (CHOC), and Long Beach

Memorial Medical Center. Other academic programs are conducted in affiliation with San Bernardino County Medical Center, Fairview Developmental Center (Costa Mesa), Kaiser Foundation Hospital (Anaheim, Bellflower, and Riverside), Children's Hospital of Los Angeles, Metropolitan State Hospital (Norwalk), The City of Hope Medical Center (Duarte), Western Medical Center (Tustin/Santa Ana), the Kern Medical Center (Bakersfield), Clínica Sierra Vista (Lamont), Presbyterian (Newport Beach), Fountain Valley Hospital and Medical Center, and the Orange County Health Care Agency/Public Health Clinic.

School of Medicine Alumni Relations

The UCI School of Medicine is an outgrowth of what began in 1896 as the Pacific College of Osteopathy (PSO). Some years later it became the College of Osteopathic Physicians and Surgeons, which then evolved into the California College of Medicine in 1962 and subsequently joined the UC system in 1965. The Office of Alumni Relations provides programs and services for nearly 4,000 alumni of the School as well as for students. From financial support to Honor's Night awards, mentorship to reunions, the Office of Alumni Relations seeks to provide a cornerstone from which students and alumni can benefit from their relationships to one another and in so doing, strengthen the School of Medicine.

Faculty

Pablo Abbona, M.D. National University of Cuyo-Mendoza, *Division Director of Pediatric Radiology and Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

Geoffrey W. Abbott, Ph.D. University of London, *Department Vice Chair of Pharmacology and Professor, Departments of Pharmacology and of Physiology and Biophysics*

Hermelinda Abcede, M.D. Medical College of Wisconsin, *Health Sciences Assistant Clinical Professor, Department of Neurology*

Amir Abolhoda, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Surgery*

Behnoosh Afghani, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Pediatrics (Hospitalist Program and Pediatrics)*

Phyllis F. Agran, M.D. University of California, Irvine, M.P.H. Harvard University, *Professor Emeritus of Pediatrics (Gastroenterology)*

Anshu Agrawal, Ph.D. Lucknow University, *Associate Adjunct Professor, Department of Medicine (Immunology)*

Thomas Ahlering, M.D. Saint Louis University, *Professor, Department of Urology*

Jane C. Ahn, M.D. Mt. Sinai School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Kyle S. Ahn, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Shlomit Aizik, Ph.D. Tel Aviv University, *Assistant Professor in Residence, Department of Pediatrics (Exercise Medicine)*

Yama Akbari, M.D., Ph.D. University of California, Irvine, *Assistant Professor and Assistant Professor in Residence, Department of Neurology*

Gregory Albers, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Department of Medicine (Gastroenterology)*

Muthana Al-Ghazi, Ph.D. University of Manitoba, *Health Sciences Clinical Professor, Department of Radiation Oncology*

Lama Al-Khoury, M.D. American University of Beirut, *Health Sciences Assistant Clinical Professor, Department of Neurology*

Michael Alkire, M.D. University of California, Los Angeles, *Associate Professor in Residence, Department of Anesthesiology and Perioperative Care*

Byron J. Allen, M.D. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Medicine (Cardiology)*

Al Aly, M.D. Georgetown University School of Medicine, *Health Sciences Clinical Professor, Division of Plastic Surgery, Department of Surgery*

Alpesh Amin, M.D., M.B.A., M.A.C.P., S.F.H.M. Northwestern University, *Professor of Medicine, Management, Public Health, and Nursing Science; Executive Director, Hospitalist Program; and Thomas and Mary Cesario Endowed Chair in Medicine, Department of Medicine*

Arash Anavim, M.D. Tehran University, *Vice Chair and Health Sciences Associate Clinical Professor, Department of Radiological Sciences*

Bogi Andersen, M.D. University of Iceland, *Professor, Department of Medicine (Endocrinology) and Biological Chemistry*

Aileen J. Anderson, Ph.D. University of California, Irvine, *Director of the Christopher Reeve Foundation Spinal Cord Injury Core Facility and Associate Professor, Departments of Physical Medicine and Rehabilitation and of Anatomy and Neurobiology*

Cynthia T. Anderson, M.D. University of Tennessee, *Associate Director of Graduate Education for Anesthesiology and Perioperative Care, Vice Chair for Academic Affairs for Anesthesiology and Perioperative Care, and Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*

Brian S. Andrews, M.B., B.S. University of Sydney, *Professor Emeritus, Department of Medicine (Rheumatology)*

Hoda Anton-Culver, Ph.D. University of St. Andrews, *Chair and Professor, Department of Epidemiology; Director of the Genetic Epidemiology Research Institute (GERI); and Professor of Planning, Policy, and Design*

Stuart M. Arfin, Ph.D. Albert Einstein College of Medicine, *Professor Emeritus, Department of Biological Chemistry*

Steven A. Armentrout, M.D. University of Chicago, *Professor Emeritus, Department of Medicine (Hematology)*

William B. Armstrong, M.D. University of Washington, *Department Chair and Professor of Clinical Otolaryngology - Head and Neck Surgery*

Dylan M. Bach, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Pathology and Laboratory Medicine*

George Baerveldt, M.D. University of Pretoria, *Professor Emeritus of Clinical Ophthalmology*

Dean Bradford Baker, M.D. University of California, San Diego; M.P.H. University of California, Berkeley; *Chief, Division of Occupational and*

Environmental Medicine, Director of the UCI Center for Occupational and Environmental Health, and Professor of Clinical Medicine, Public Health, and Environmental Health, Science, and Policy

Pierre Baldi, Ph.D. California Institute of Technology, *Director of the Institute for Genomics and Bioinformatics and UCI Chancellor's Professor of Computer Science, Biomedical Engineering, Developmental and Cell Biology, and Biological Chemistry*

Kenneth M. Baldwin, Ph.D. University of Iowa, *Professor Emeritus, Department of Physiology and Biophysics*

Fayez Bany-Mohammed, M.B.B.S. University of Jordan, *Health Sciences Clinical Professor, Department of Pediatrics (Neonatology)*

Tallie Z. Baram, M.D. University of Miami, Ph.D. Weizmann Institute of Science, *Professor, Departments of Pediatrics, Neurology, Anatomy and Neurobiology, and Physiology and Biophysics, and Danette (Dee Dee) Shepard Chair in Neurological Studies*

Alan G. Barbour, M.D. Tufts University School of Medicine, *Professor, Departments of Microbiology and Molecular Genetics, Medicine (Infectious Diseases), and Ecology and Evolutionary Biology*

Steven J. Barker, M.D. University of Miami, Ph.D. California Institute of Technology, *Professor Emeritus, Department of Anesthesiology and Perioperative Care*

Ronald J. Barr, M.D. Johns Hopkins Medical School, *Professor Emeritus, Department of Dermatology*

Cristobal Barrios, M.D. University of Miami School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Surgery (Trauma and Critical Care/Burns)*

Cyril H. Barton, M.D. University of Colorado School of Medicine, *Professor Emeritus, Department of Medicine (Nephrology-Renal)*

Anjan Batra, M.D. Ohio State University, *Associate Professor of Clinical Pediatrics (Cardiology)*

S. Samuel Bederman, M.D., Ph.D. University of Toronto, *Health Sciences Assistant Clinical Professor, Department of Orthopaedic Surgery*

James D. Belluzzi, Ph.D. University of Chicago, *Adjunct Professor Recalled, Department of Pharmacology*

Lbachir BenMohamed, Ph.D. Pasteur Institute, *Associate Professor in Residence, Department of Ophthalmology*

Rimal B. Bera, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Psychiatry and Human Behavior*

Pam Berkson, M.S.N. California State University Long Beach, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Michael L. Berman, M.D. George Washington School of Medicine, *Professor Emeritus, Department of Obstetrics and Gynecology (Gynecologic Oncology)*

Stephen Berman, M.D. New York Medical College, Ph.D. University of California, Davis, *Health Sciences Clinical Professor, Department of Medicine (Infectious Diseases)*

Nicole P. Bernal, M.D. Case Western Reserve University, *Health Sciences Assistant Clinical Professor, Division of Critical Care Surgery ER Medicine/ Critical Care Surgery, Department of Surgery*

Michael W. Berns, Ph.D. Cornell University, *Professor, Departments of Surgery, Developmental and Cell Biology, and Biomedical Engineering, and Arnold and Mabel Beckman Chair in Laser Biomedicine*

Deepak K. Bhalla, Ph.D. Howard University, *Professor Emeritus, Department of Medicine*

Naveen Bhandarkar, M.D. Ohio State University, *Health Sciences Assistant Clinical Professor, Department of Otolaryngology - Head and Neck Surgery*

Nitin Bhatia, M.D. Baylor College of Medicine, *Associate Professor of Clinical Orthopaedic Surgery*

Anand Bhatt, M.D. University of Miami, Miller School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*

John Billimek, Ph.D. University of California, Irvine, *Assistant Adjunct Professor, Department of Medicine (General Internal Medicine)*

Robert H. Blanks, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Anatomy and Neurobiology*

Maureen E. Bocian, M.D. University of Illinois, *Professor of Clinical Pediatrics (Genetics) and of Obstetrics and Gynecology*

Stephen C. Bondy, Ph.D. University of Birmingham, *Professor, Departments of Medicine (Occupational and Environmental Medicine) and Pharmacology*

Emanuela Bonfoco, M.D., Ph.D. University of Pavia, *Health Sciences Associate Clinical Professor, Department of Family Medicine*

Emiliana Borrelli, Ph.D. University of Naples, *Professor, Departments of Microbiology and Molecular Genetics and of Pharmacology*

Swaraj Bose, M.B.B.S. All India Institute of Medical Sciences, *Health Sciences Associate Clinical Professor, Departments of Ophthalmology and Neurology*

Thangavijayan Bosemani, M.B.B.S. Sri Ramachandra Medical College and Research Institute, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

Daniela Bota, M.D., Ph.D. Carol Davila University of Medicine and Pharmacy, *Assistant Professor, Departments of Neurology and Neurological Surgery*

Elliot Botvinick, Ph.D. University of California, San Diego, *Assistant Professor, Department of Biomedical Engineering, and Assistant Professor in Residence, Department of Surgery (Beckman Laser Institute)*

Ralph Bradshaw, Ph.D. Duke University, *Professor Emeritus, Department of Physiology and Biophysics*

Peter Breen, M.D. University of Manitoba, *Associate Professor, Department of Anesthesiology and Perioperative Care*

Matthew Brenner, M.D. University of California, San Diego, *Professor, Department of Medicine (Pulmonary and Critical Care)*

Robert E. Bristow, M.D., M.B.A. University of Southern California, *Director of the Division of Gynecologic Oncology, Professor, Department of*

*Obstetrics and Gynecology (Gynecologic Oncology), and Philip J. DiSaia
Chair in Gynecologic Oncology*

Ashley Broussard, M.D. Tulane University School of Medicine, *Health
Sciences Assistant Clinical Professor, Department of Anesthesiology and
Perioperative Care*

Donald J. Brown, Ph.D. University of Colorado, *Associate Professor in
Residence, Department of Ophthalmology*

Michael J. Buchmeier, Ph.D. McMaster University, *Professor of Medicine
(Infectious Disease) and of Molecular Biology and Biochemistry*

Monte S. Buchsbaum, M.D. University of California, San Francisco,
Professor Emeritus, Department of Psychiatry and Human Behavior

Diep Ngoc Bui, M.D. Saigon Medical School, *Health Sciences Assistant
Clinical Professor, Department of Medicine (Hematology/Oncology)*

Lynette Bui, D.O. Midwestern University/Chicago College of Osteopathic
Medicine, *Health Sciences Assistant Clinical Professor, Department of
Family Medicine*

William E. Bunney, Jr., M.D. University of Pennsylvania, *UCI Distinguished
Professor Emeritus, Department of Psychiatry and Human Behavior, and
Della Martin Chair in Psychiatry*

Kerry P. Burnight, Ph.D. University of Southern California, *Health Sciences
Clinical Professor, Department of Family Medicine, Program in Geriatrics*

Joseph Burns, Ph.D., M.D. McGill University Faculty of Medicine, *Health
Sciences Associate Clinical Professor, Department of Radiological
Sciences*

Michael J. Burns, M.D. University of California, Irvine, *Health Sciences
Clinical Professor, Department of Emergency Medicine*

Claudia Buss, Ph.D. University of Trier, *Assistant Adjunct Professor,
Department of Pediatrics (Psychobiology)*

John A. Butler, M.D. Loyola Stritch School of Medicine, *Chief of Oncologic
Surgery and Professor, Department of Surgery*

Matthew J. Butteri, M.D. University of Southern California, *Health Sciences
Assistant Clinical Professor, Department of Medicine (Hospitalist Program
and General Internal Medicine)*

Michael D. Cahalan, Ph.D. University of Washington, *Department
Chair and UCI Distinguished Professor, Department of Physiology and
Biophysics*

Catherine M. Cahill, Ph.D. Dalhousie University, *Acting Associate
Professor and Acting Associate Professor in Residence, Department of
Anesthesiology and Perioperative Care*

Vincent J. Caiozzo, Ph.D. University of California, Irvine, *Professor in
Residence, Departments of Orthopaedic Surgery and of Physiology and
Biophysics*

Justin D. Call, M.D. University of Utah College of Medicine, *Professor
Emeritus, Department of Psychiatry and Human Behavior*

Anne L. Calof, Ph.D. University of California, San Francisco, *Professor,
Department of Anatomy and Neurobiology*

José A. Camacho, M.D., Ph.D. Universidad Central del Caribe, *Assistant
Professor, Department of Pediatrics (Human Genetics and Birth Defects)*

Joan Campbell, M.D. University of California, San Diego, *Director of
Women's Imaging and Health Sciences Clinical Professor, Department of
Radiological Sciences*

Maxime Cannesson, M.D., Ph.D. René Descartes University, *Director of
Cardiac Anesthesia and Associate Professor of Clinical Anesthesiology,
Department of Anesthesiology and Perioperative Care*

Charles R. Cantor, Ph.D. University of California, Berkeley, *UCI
Distinguished Adjunct Professor, Department of Physiology and
Biophysics*

Jamie Capasso, D.O. Kirksville College of Osteopathic Medicine, *Health
Sciences Assistant Clinical Professor, Department of Medicine (Hospitalist
Program and General Internal Medicine)*

Joseph C. Carmichael, M.D. University of Missouri, Columbia, *Health
Sciences Assistant Clinical Professor, Division of Colon and Rectal
Surgery, Department of Surgery*

Philip M. Carpenter, M.D. Southwestern Medical School, *Professor of
Clinical Pathology, Department of Pathology and Laboratory Medicine*

Jose Carrillo, M.D. Dartmouth Medical School, *Health Sciences Assistant
Clinical Professor, Department of Neurology*

Paolo Casali, M.D. University of Milan, *Senior Associate Dean for
Research and Graduate Studies, Director of the Center for Immunology,
and Donald Bren Professor, Department of Medicine (Immunology)*

Thomas C. Cesario, M.D. University of Wisconsin Medical School,
Professor Emeritus, Department of Medicine (Infectious Disease)

Barry F. Chaitin, M.D. New York University, *Department Chair and Health
Sciences Clinical Professor, Department of Psychiatry and Human
Behavior*

Bharath Chakravarthy, M.D. Boston University, *Health Sciences Assistant
Clinical Professor and Residency Program Director, Department of
Emergency Medicine and Program in Public Health*

Jefferson Y. Chan, M.D., Ph.D. University of California, San Francisco,
Associate Professor, Department of Pathology and Laboratory Medicine

Maria Chandler, M.D. University of California, Irvine, *Health Sciences
Associate Clinical Professor, Department of Pediatrics*

P. Anthony Chandraratna, M.B.B.S. University of Ceylon, *Professor
Emeritus, Department of Medicine (Cardiology)*

Carrie E. Davis Chandwani, M.D. Rosalind Franklin University, *Health
Sciences Assistant Clinical Professor, Department of Emergency Medicine*

K. George Chandy, Ph.D. University of Birmingham, M.B.B.S. Christian
Medical College, University of Madras, *Professor, Departments of
Physiology and Biophysics, and of Microbiology and Molecular Genetics*

Eric Y. Chang, M.D. Albert Einstein College of Medicine, *Assistant
Professor in Residence, Department of Anesthesiology and Perioperative
Care*

Kenneth J. Chang, M.D. Brown University, *Chief, Division of Gastroenterology and Professor of Clinical Medicine, Department of Medicine (Gastroenterology)*

Wayne Chang, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*

Elizabeth Chao, M.D. University of California, Irvine, *Assistant Adjunct Professor, Department of Pediatrics (Human Genetics and Metabolism)*

Constance Chen, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Medicine (Endocrinology)*

Dongbao Chen, Ph.D. Beijing Agricultural University, *Associate Professor, Departments of Obstetrics and Gynecology (Maternal-Fetal Medicine) and of Pathology and Laboratory Medicine*

Phang-Lang Chen, Ph.D. University of California, San Diego, *Associate Professor, Department of Biological Chemistry*

Kota Chetty, M.B.B.S. Guntur Medical College, *Health Sciences Clinical Professor, Department of Medicine (Pulmonary and Critical Care Medicine)*

Robert R. Chilcote, M.D. University of Rochester, *Professor Emeritus in Residence, Department of Pediatrics*

Vi Chiu, M.D. New York University, *Assistant Professor, Department of Medicine (Hematology/Oncology)*

Zang-Hee Cho, Ph.D. Uppsala University, *Professor Emeritus, Department of Radiological Sciences*

Bernard Choi, Ph.D. University of Texas at Austin, *Associate Professor in Residence, Department of Biomedical Engineering and Surgery (Beckman Laser Institute), and Associate Professor of Biomedical Engineering*

BongKyoo Choi, D.Sc. University of Massachusetts, *Assistant Professor, Department of Medicine (Occupational and Environmental Medicine)*

Byung H. (Ben) Choi, M.D. Severance Union Medical College, Ph.D. Yonsei University, *Professor Emeritus, Department of Pathology and Laboratory Medicine*

Ho Joon Choi, M.D. Seoul National University, *Health Sciences Clinical Professor, Departments of Anesthesiology and Perioperative Care and of Obstetrics and Gynecology*

Yung-In Choi, M.D. Yonsei University, *Health Sciences Clinical Professor, Department of Medicine (Endocrinology)*

Emilie Chow, M.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*

Luis Chui, M.D. University of San Marcos, *Health Sciences Clinical Professor, Department of Neurology*

Judith H. Chung, M.D., Ph.D. University of Pennsylvania School of Medicine, *Associate Professor of Clinical Obstetrics and Gynecology, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine) and PRIME-LC Program*

Olivier Civelli, Ph.D. Swiss Federal Institute of Technology, *Department Chair of Pharmacology and Professor, Departments of Pharmacology,*

Developmental and Cell Biology, and Pharmaceutical Sciences, and Eric L. and Lila D. Nelson Chair in Neuropharmacology

Susan Claster, M.D. University of Chicago, *Health Sciences Clinical Professor, Department of Medicine (Hematology/Oncology)*

Ralph V. Clayman, M.D. University of California, San Diego, *Dean of the School of Medicine and Professor, Department of Urology*

Melitza Cobham-Browne, M.D. Panama University, *Chief, Division of General Pediatrics and Health Sciences Clinical Professor, Department of Pediatrics*

Allen J. Cohen, M.D. University of Miami School of Medicine, Ph.D. Massachusetts Institute of Technology, *Health Sciences Clinical Professor, Department of Radiological Sciences*

Rebecca J. Coleman, M.D. University of California, San Francisco, *Health Sciences Assistant Clinical Professor, Department of Pediatrics (Neonatology)*

Martin Colman, M.B., Ch.B., M.M.Ed. (Rad. T.), D.M.R.T. University of Witwatersrand, *Professor Emeritus, Department of Radiation Oncology*

Henri G. Colt, M.D. University of Nice, School of Medicine, *Professor of Clinical Medicine (Pulmonary and Critical Care)*

John E. Connolly, M.D. Harvard Medical School, *Professor Emeritus, Department of Surgery (Vascular)*

Daniel Cooper, M.D. University of California, San Francisco, *Associate Dean of Clinical Translational Science, Department Chair and Professor of Pediatrics, and Professor, Department of Biomedical Engineering*

Maria A. Corrada-Bravo, Ph.D. Johns Hopkins School of Medicine, *Associate Adjunct Professor, Department of Neurology*

Carl W. Cotman, Ph.D. Indiana University, *Professor, Departments of Neurology, Neurobiology and Behavior, and Biomedical Engineering*

Steven C. Cramer, M.D. University of Southern California, *Professor, Departments of Neurology and of Anatomy and Neurobiology*

David Cribbs, Ph.D. West Virginia University, *Professor in Residence, Department of Neurology*

Francis M. Crinella, Ph.D. Louisiana State University, *Health Sciences Clinical Professor, Departments of Pediatrics (Child Development) and of Physical Medicine and Rehabilitation*

R. Wade Crow, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*

Roger L. Crumley, M.D. University of Iowa, *Professor Emeritus of Otolaryngology - Head and Neck Surgery*

Dwight Culver, M.D. Stanford University, *Health Sciences Clinical Professor Recalled, Department of Epidemiology*

Brian Cummings, Ph.D. University of California, Irvine, *Associate Professor, Departments of Physical Medicine and Rehabilitation and of Anatomy and Neurobiology*

Dennis D. Cunningham, Ph.D. University of Chicago, *Senior Associate Dean for Academic Affairs, School of Medicine, and Professor Emeritus, Department of Microbiology and Molecular Genetics*

Ralph W. Cygan, M.D. State University of New York Downstate Medical Center, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine) and Program in Public Health*

Dvora Cyrlak, M.D. Yale University, *Health Sciences Clinical Professor, Department of Radiological Sciences*

Xing Dai, Ph.D. University of Chicago, *Professor, Department of Biological Chemistry*

Amish Dangodara, M.D. University of Miami, *Health Sciences Clinical Professor, Department of Medicine (Hospitalist Program and General Internal Medicine)*

Parima Daroui, M.D. University of Medicine and Dentistry of New Jersey, *Health Sciences Assistant Clinical Professor, Department of Radiation Oncology*

Omar Darwish, D.O. Touro University of Osteopathic Medicine, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hospitalist Program and General Internal Medicine)*

Atreya Dash, M.D. University of Vermont, *Assistant Professor of Clinical Urology, Department of Urology*

Cyrus Dastur, M.D. Drexel University College of Medicine, *Health Sciences Assistant Clinical Professor, Department of Neurology*

Earle A. Davis, Ph.D. University of Illinois, *Senior Lecturer with Security of Employment Emeritus, Anatomy and Neurobiology*

Mohsen Davoudi, M.D. Tehran University, *Chief of Pulmonary and Critical Care and Health Sciences Assistant Clinical Professor, Department of Medicine (Pulmonary and Critical Care)*

Israel De Alba, M.D., M.P.H. Universidad de Guadalajara, *Associate Professor of Clinical Medicine, Department of Medicine (Hospitalist Program and General Internal Medicine)*

Luis M. de la Maza, M.D. Facultad de Medicina; Ph.D. University of Minnesota, *Professor, Department of Pathology and Laboratory Medicine*

Ralph Delfino, M.D. University of Chicago; Ph.D. McGill University, *Department Vice Chair and Associate Professor in Residence, Department of Epidemiology*

Michael Demetriou, M.D., Ph.D. University of Toronto, *Professor, Departments of Neurology and of Microbiology and Molecular Genetics*

Amy DeRoche, M.D. St Louis University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Sheetal Desai, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Medicine (Rheumatology)*

Robert Detrano, M.D., Ph.D. University of Rome, *Health Sciences Clinical Professor, Department of Radiological Sciences*

Catherine Diamond, M.D. Albany Medical Center, *Associate Professor of Clinical Medicine (Infectious Diseases)*

Philip J. DiSaia, M.D. Tufts University School of Medicine, *Professor Emeritus, Department of Obstetrics and Gynecology (Gynecologic Oncology)*

Hamid Djalilian, M.D. University of Minnesota, *Associate Professor of Clinical Otolaryngology, Department of Otolaryngology - Head and Neck Surgery*

Matthew Dolich, M.D. State University of New York at Stony Brook, *Health Sciences Clinical Professor, Department of Surgery*

Joseph H. Donnelly, M.D. Georgetown University, *Health Sciences Clinical Professor, Department of Pediatrics (Neurology)*

Peter J. Donovan, Ph.D. University College London, *Professor, Departments of Developmental and Cell Biology and of Biological Chemistry*

Emily Dow, M.D. University of Cincinnati, *Health Sciences Clinical Professor, Department of Family Medicine*

Michael V. Drake, M.D. University of California, San Francisco, *Chancellor and UCI Distinguished Professor, Department of Ophthalmology*

Sue Piper Duckles, Ph.D. University of California, San Francisco, *Professor Emerita, Department of Pharmacology*

Kenneth W. Dumars, M.D. University of Colorado School of Medicine, *Professor Emeritus, Department of Pediatrics*

Dang Duong, M.D. University of Washington, *Health Sciences Associate Clinical Professor, Department of Medicine (Hospitalist Program and General Internal Medicine)*

Anthony Durkin, Ph.D. University of Texas, *Associate Professor in Residence, Department of Surgery (Beckman Laser Institute)*

Emily A. Ebert, M.D. University of Arizona, M.P.H. University of Texas, *Health Sciences Clinical Professor, Department of Family Medicine*

Robert Edwards, M.D., Ph.D. Baylor College of Medicine, *Associate Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*

Rufus Edwards, Ph.D. University of Medicine and Dentistry of New Jersey and Rutgers, The State University of New Jersey, *Associate Professor of Public Health and Epidemiology*

Frederick J. Ehler, Ph.D. University of California, Irvine, *Professor, Department of Pharmacology*

Alan N. Elias, M.B., B.S. University of Calcutta, *Professor Emeritus, Department of Medicine (Endocrinology)*

Scott A. Engwall, M.D. University of Florida, *Clinical Director of Anesthesiology Services and Health Sciences Associate Clinical Professor and Operations Officer, Department of Anesthesiology and Perioperative Care*

Sonja Entringer, Ph.D. University of Trier, *Assistant Professor in Residence, Department of Pediatrics (Psychobiology)*

Gregory Evans, M.D. University of Southern California, *Chief of Plastic Surgery and Professor, Departments of Surgery (Plastic) and Biomedical Engineering*

James T. Evans, M.D. University of California, San Diego, *Health Sciences Clinical Professor, Department of Family Medicine*

Marc-Eivind Evensen, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Physical Medicine and Rehabilitation*

James H. Fallon, Ph.D. University of Illinois, *Professor Emeritus, Department of Anatomy and Neurobiology*

Hamed Farid, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

Marjan Farid, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*

Mitra Fatourehchi-Alsharif, M.D. University of Minnesota Medical School, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Lawrence Faziola, M.D. Creighton University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*

M. Joseph Fedoruk, M.D. University of Alberta, *Health Sciences Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*

Stephen Feig, M.D. New York University School of Medicine, *Division Director of Mammography and Professor of Clinical Radiological Sciences, Department of Radiological Sciences, and Fong and Jean Tsai Chair in Women's Imaging*

Philip Felgner, Ph.D. Michigan State University, *Adjunct Professor, Department of Medicine (Infectious Diseases)*

Gail Fernandez, M.D. Creighton University, *Director of Child Psychiatry Fellowship and Health Sciences Clinical Professor, Department of Psychiatry and Human Behavior*

Dayantha Fernando, M.D. Georgetown University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

R. Ryan Field, M.D. University of Kansas School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Laura Findeiss, M.D. University of Pittsburgh, *Division Director of Interventional Radiology and Health Sciences Associate Clinical Professor, Department of Radiological Sciences*

Mark Fisher, M.D. University of Cincinnati, *Professor, Departments of Neurology, Anatomy and Neurobiology, and Pathology and Laboratory Medicine*

Sheila T. Fitzgibbons, M.P.A. California State University, Long Beach, *Health Sciences Associate Clinical Professor, Department of Medicine (Infectious Disease)*

Lisa Flanagan, Ph.D. University of California, San Diego, *Assistant Professor, Departments of Neurology and of Anatomy and Neurobiology*

Pamela Flodman, M.S. University of California, Irvine, *Associate Adjunct Professor, Department of Pediatrics (Human Genetics and Birth Defects)*

Cecilia A. Florio, M.D., M.P.H. University of California, San Francisco, *Prime-LC Residency Director and Health Sciences Associate Clinical Professor, Department of Family Medicine*

Eldon L. Foltz, M.D. University of Michigan, Medical School, *Professor Emeritus, Department of Neurological Surgery*

Donald N. Forthal, M.D. University of California, Irvine, *Division Chief of Infectious Disease and Associate Professor, Department of Medicine (Infectious Disease)*

Michelle A. Fortier, Ph.D. University of Nebraska, *Assistant Professor in Residence, Department of Anesthesiology and Perioperative Care*

Clarence Foster III, M.D. The Johns Hopkins University, *Division Chief of Transplantation and Health Sciences Clinical Professor, Department of Surgery*

John C. Fox, M.D. Tufts University School of Medicine, *Director of Emergency Ultrasound, Director of Emergency Medicine Clerkship, and Professor of Clinical Emergency Medicine, Department of Emergency Medicine*

David Franklin, Psy.D. Alliant International University, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*

Kathryn Steinhaus French, M.S. University of Colorado, *Health Sciences Clinical Professor, Departments of Pediatrics (Human Genetics and Birth Defects) and of Obstetrics and Gynecology*

Richard M. Friedenbergl, M.D. State University of New York, *Professor Emeritus, Department of Radiological Sciences*

John P. Fruehauf, M.D. Rush University, *Associate Professor of Clinical Medicine (Hematology/Oncology), Pharmaceutical Sciences, Biological Chemistry, and Biomedical Engineering*

Roy M. Fujitani, M.D. University of Hawaii, *Chief of Vascular Surgery and Professor of Clinical Surgery (Vascular)*

David W. Furnas, M.D. University of California, San Francisco, *Professor Emeritus, Department of Surgery (Plastic)*

Pietro R. Galassetti, M.D. University of Rome, Ph.D. Vanderbilt University, *Associate Professor in Residence, Departments of Pediatrics and Pharmacology*

Christine M. Gall, Ph.D. University of California, Irvine, *Professor, Departments of Anatomy and Neurobiology and of Neurobiology and Behavior*

Anand Ganesan, M.D., Ph.D. Medical College of Wisconsin, *Assistant Professor, Departments of Dermatology and Biological Chemistry*

Sumit Garg, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*

John Jay Gargus, M.D., Ph.D. Yale University, *Professor, Departments of Physiology and Biophysics and of Pediatrics*

Thomas J. Garite, M.D. University of California, Irvine, *Professor Emeritus, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*

Chad P. Garner, Ph.D. Oxford University, *Associate Professor in Residence, Department of Epidemiology, and Associate Professor, Program in Public Health*

Leslie Garson, M.D. University of Kansas School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Ronald N. Gaster, M.D. University of California, Los Angeles, *Adjunct Professor, Department of Ophthalmology*

Gregory Gatchell, D.O. Ohio University College of Osteopathic Medicine, *Health Sciences Assistant Clinical Professor, Department of Family Medicine, Program in Geriatrics*

Alan B. Gazzaniga, M.D. Harvard Medical School, *Professor Emeritus, Department of Surgery (Thoracic)*

Kelvin W. Gee, Ph.D. University of California, Davis, *Professor, Department of Pharmacology*

Jean Gehricke, Ph.D. Free University of Berlin, *Assistant Adjunct Professor, Department of Pediatrics*

Gamal M. Ghoniem, M.D. University of Alexandria, *Professor of Clinical Urology, Department of Urology*

Samer S. Ghostine, M.D., M.S. Georgetown University School of Medicine, *Co-Director of Comprehensive Spine Program, Director of Neurosurgery Spine Service, and Assistant Professor of Clinical Neurological Surgery, Department of Neurological Surgery*

Lisa M. Gibbs, M.D. Stanford University, *Health Sciences Clinical Professor, Department of Family Medicine, Program in Geriatrics*

Stuart Gilman, M.D. Rush Medical College, M.P.H. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*

Kimberly Marie Gimenez, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*

Roland A. Giolli, Ph.D. University of California, Berkeley, *Professor Emeritus, Department of Anatomy and Neurobiology*

Melanie W. Gironde, Ph.D., M.S.W. University of California, Los Angeles, *Associate Adjunct Professor, Department of Family Medicine*

Gordon G. Globus, M.D. Tufts University School of Medicine, *Professor Emeritus, Department of Psychiatry and Human Behavior*

Shruti Gohil, M.D., M.P.H. Tufts University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Alan L. Goldin, M.D., Ph.D. University of Michigan, *Professor, Departments of Microbiology and Molecular Genetics, Physiology and Biophysics, and Anatomy and Neurobiology*

Sidney H. Golub, Ph.D. Temple University, *Professor Emeritus, Department of Microbiology and Molecular Genetics*

Deborah L. Goodman-Gruen, M.D. Chicago Medical School, Ph.D. University of California, Los Angeles; *Associate Adjunct Professor, Department of Epidemiology*

Scott C. Goodwin, M.D. Harvard Medical School, *Professor of Clinical Radiological Sciences, Department of Radiological Sciences, and Hasso Brothers Endowed Chair in Radiological Sciences*

Ian L. Gordon, M.D., Ph.D. University of Southern California, *Health Sciences Clinical Professor, Department of Surgery*

Namita A. Goyal, M.D. Ross University, *Health Sciences Assistant Clinical Professor, Department of Neurology*

Sergei Grando, M.D. Kiev Medical Institute, Ph.D. Post Graduate Institute for Physicians, Kiev, *Professor, Departments of Dermatology and of Biological Chemistry*

Stuart Green, M.D. New York Medical College, *Health Sciences Clinical Professor, Department of Orthopaedic Surgery*

Sheldon Greenfield, M.D. University of Cincinnati, *Interim Director of the Chao Family Comprehensive Cancer Center, Executive Co-Director of the Center for Health Policy Research, and Donald Bren Professor, Department of Medicine (General Internal Medicine)*

Fred S. Greensite, M.D. University of California, San Diego, *Professor, Department of Radiological Sciences*

Leonid Groysman, M.D. State Medical and Pharmaceutical University "Nicolae Testemitanu" of the Republic of Moldova, *Health Sciences Assistant Clinical Professor, Department of Neurology*

Mai Gu, M.D. Beijing Medical University; Ph.D. University of Manitoba, *Health Sciences Clinical Professor, Department of Pathology and Laboratory Medicine*

Jacqueline M. Guerrero, M.D., M.P.H. University of Rochester School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*

Rajesh Gulati, M.D. University College of Medical Sciences, University of Delhi, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*

Gultekin Gulsen, Ph.D. Bogazici University, *Associate Professor and Associate Professor in Residence, Departments of Radiological Sciences, Physics and Astronomy, and Biomedical Engineering*

Geeta K. Gupta, M.D. Harvard Medical School, *Health Sciences Clinical Professor, Department of Medicine (Infectious Diseases)*

Ranjan Gupta, M.D. Albany Medical College, *Department Chair and Professor, Orthopaedic Surgery, and Professor, Departments of Anatomy and Neurobiology and of Biomedical Engineering*

Sudhir Gupta, M.B., B.S., Ph.D. King George's Medical College, Lucknow University, *Chief of Basic and Clinical Immunology and Professor, Departments of Medicine (Basic and Clinical Immunology) and of Microbiology and Molecular Genetics*

George A. Gutman, Ph.D. Stanford University, *Professor Emeritus, Department of Microbiology and Molecular Genetics*

Ravi Chandra Gutta, M.D. Andhra Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine*

Grant Gwinup, M.D. University of Colorado School of Medicine, *Professor Emeritus, Department of Medicine (Endocrinology)*

Richard J. Haier, Ph.D. The Johns Hopkins University, *Professor in Residence Emeritus, Department of Pediatrics*

Harry T. Haigler, Ph.D. Vanderbilt University, *Associate Dean for Basic Science Medical Education and Professor, Department of Physiology and Biophysics*

James E. Hall, Ph.D. University of California, Riverside, *Professor, Department of Physiology and Biophysics*

Afshan B. Hameed, M.D., F.A.C.C. King Edward Medical College, *Health Sciences Associate Clinical Professor, Departments of Obstetrics and Gynecology (Maternal-Fetal Medicine) and of Cardiology*

Jason Handwerker, M.D. Harvard Medical School, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

Tabetha Harken, M.D., M.P.H. University of Colorado, *Health Sciences Assistant Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*

Kevin Harley, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (Nephrology)*

Anna Harris, M.D. Loma Linda University, *Health Sciences Associate Clinical Professor, Department of Anesthesiology and Perioperative Care and Co-Director of Department Performance Improvement/Quality Assurance*

Ronald M. Harris, M.D. University of California, San Francisco; M.B.A. University of Colorado, *Director of the Dermatopathology Lab and Health Sciences Clinical Professor, Department of Dermatology*

Anton N. Hasso, M.D. Loma Linda University, *Director of Neuroimaging Research and Development and Professor, Department of Radiological Sciences*

Justin T. Hata, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

G. Wesley Hatfield, Ph.D. Purdue University, *Professor Emeritus, Department of Microbiology and Molecular Genetics*

Tamera Hatfield, M.D., Ph.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*

David J. Haupt, D.P.M. California College of Podiatric Medicine, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Leif A. Havton, M.D., Ph.D. Umea University, *Vice Chair of Research and Professor and Professor in Residence, Departments of Anesthesiology and Perioperative Care, Neurology, and Anatomy and Neurobiology*

Marwah Helmy, M.D. University of California, Davis, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

Mohammad Helmy, M.D. University of California, Irvine, *Division Director of Ultrasound and Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

Walter L. Henry, M.D. Stanford University School of Medicine, *Professor Emeritus, Department of Medicine (Cardiology)*

June M. Herman, M.D. University of North Dakota, *Health Sciences Clinical Professor, Department of Radiological Sciences*

Neal Hermanowicz, M.D. Temple University, *Health Sciences Clinical Professor, Department of Neurology*

Klemens J. Hertel, Ph.D. University of Colorado, *Associate Dean for Graduate Studies, School of Medicine and Professor, Department of Microbiology and Molecular Genetics*

John A. Heydt, M.D. Temple University School of Medicine, *Senior Associate Dean for Clinical Affairs, School of Medicine, and Health Sciences Clinical Professor, Department of Family Medicine (Family Medicine and Sports Medicine)*

Elsie Hidalgo, M.D. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Pediatrics (General Pediatrics)*

Richard A. Hill, M.D. Northwestern University, *Professor Emeritus, Department of Ophthalmology*

Dan-Phuong (Esther) Ho, M.D. University of California, Los Angeles, *Assistant Residency Director and Health Sciences Associate Clinical Professor, Department of Family Medicine (Hospitalist Program and Family Medicine)*

Bang Hoang, M.D. University of California, Los Angeles, *Associate Professor, Department of Orthopaedic Surgery*

John C. Hoefs, M.D. George Washington University, *Professor Emeritus, Department of Medicine (Gastroenterology)*

M. Mark Hoffer, M.D. The University of Chicago School of Medicine, *Professor Emeritus, Department of Orthopaedic Surgery*

Christine Hollister, M.D. Dartmouth College, *Health Sciences Associate Clinical Professor, Department of Anesthesiology and Perioperative Care*

Todd C. Holmes, Ph.D. Massachusetts Institute of Technology, *Professor, Department of Physiology and Biophysics*

Christy Hom, Ph.D. University of Michigan, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*

Chang-Zern (John) Hong, M.D. National Taiwan University, *Health Sciences Clinical Professor, Department of Physical Medicine and Rehabilitation*

Susan Hopp, M.D. University of Guadalajara, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Naoto Hoshi, M.D., Ph.D. Kanazawa University School of Medicine, *Assistant Professor, Departments of Pharmacology and of Physiology and Biophysics*

David Hoyt, M.D. Case Western Reserve University, *Professor Emeritus, Department of Surgery*

David Hsiang, M.D. Jefferson Medical College, *Associate Professor of Clinical Surgery, Department of Surgery (Oncology)*

An-Fu Hsiao, M.D. Boston University, Ph.D. University of California, Los Angeles, *Assistant Professor in Residence, Department of Medicine (General Internal Medicine)*

Lanny Hsieh, M.D. New York University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hospitalist Program and Infectious Disease)*

Ke-Qin Hu, M.D. Tongji Medical University, *Professor of Clinical Medicine (Gastroenterology)*

Lan Huang, Ph.D. University of Florida, *Professor, Department of Physiology and Biophysics*

Susan Huang, M.D. Johns Hopkins University, *Associate Professor and Associate Professor in Residence, Department of Medicine (Infectious Disease)*

Taosheng Huang, M.D. Fujian Medical College, Ph.D. Mt. Sinai Medical School, *Associate Professor, Department of Pediatrics (Human Genetics and Birth Defects)*

F. Allan Hubbell, M.D., M.S.P.H. Baylor University College of Medicine, *Senior Associate Dean for Academic Affairs, School of Medicine and Professor, Department of Medicine (General Internal Medicine)*

Kanwalpreet Hundal, M.D. Pennsylvania State University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Lynn E. Hunt, M.D. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Pediatrics (General Pediatrics)*

Kenneth H. Ibsen, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Biological Chemistry*

Hirochito Ichii, M.D. Kobe University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Surgery*

David Imagawa, M.D., Ph.D. The Johns Hopkins University, *Professor of Clinical Surgery*

Leslie Israel, D.O. University of Health Sciences, Missouri, *Health Sciences Associate Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*

Padmini Iyer, M.D. Andhra University, *Health Sciences Clinical Professor, Department of Medicine (Hematology/Oncology)*

Sonali Iyer, M.D. Rosalind Franklin University/Chicago Medical School, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hospitalist Program and General Internal Medicine)*

Daniel C. Jaffurs, M.D., Ph.D. University of Pittsburgh, *Health Sciences Assistant Clinical Professor, Department of Surgery (Plastic)*

Vivek Jain, M.D. Memorial University, *Health Sciences Assistant Clinical Professor, Department of Neurology*

James Jakowatz, M.D. University of Kansas, *Health Sciences Clinical Professor, Department of Surgery*

Mehrdad Jalili, M.D. University of Isfahan, *Health Sciences Clinical Professor, Department of Pediatrics (Pediatric Pulmonary and Critical Care)*

M. Mazen Jamal, M.D. Damascus University, M.P.H. University of New Mexico, *Health Sciences Clinical Professor, Department of Medicine (Gastroenterology)*

Anthony A. James, Ph.D. University of California, Irvine, *UCI Distinguished Professor of Microbiology and Molecular Genetics and of Molecular Biology and Biochemistry*

Larry Jamner, Ph.D. State University of New York at Stony Brook, *Professor of Psychology and Social Behavior and of Pharmacology*

Rolland Jenkins, M.D. Southwestern University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Dennis C. Jerome, M.D. Wayne State University, *Health Sciences Clinical Professor, Department of Medicine (Basic/Clinical Immunology)*

James V. Jester, Ph.D. University of Southern California, *Professor in Residence, Departments of Ophthalmology and Biomedical Engineering, and Jack H. Skirball Endowed Chair*

Anna Jin, M.D. Tufts University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Nephrology)*

Rongsheng Jin, Ph.D. Columbia University, *Associate Professor, Department of Physiology and Biophysics*

Jennifer Johnson, M.D. University of Muenster, *Professor in Residence Emerita, Department of Pediatrics*

Joie P. Jones, Ph.D. Brown University, *Professor Emeritus, Department of Radiological Sciences*

Neil F. Jones, M.D. Oxford University, *Director of the UCI Hand Center and Professor, Department of Orthopaedic Surgery*

Tibor Juhasz, Ph.D. JATE University of Szeged, *Professor, Departments of Ophthalmology and Biomedical Engineering*

Andre Jung, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hematology/Oncology)*

Kwang Mook Jung, Ph.D. Chung-Ang University, *Assistant Adjunct Professor, Department of Anatomy and Neurobiology*

Frances Jurnak, Ph.D. University of California, Berkeley, *Professor Emerita, Department of Physiology and Biophysics*

Tatiana Kain, M.D. Ben Gurion School of Medicine, *Division Director of Nuclear Medicine and Health Sciences Associate Clinical Professor, Department of Radiological Sciences*

Zeev N. Kain, M.D., M.B.A., M.A. Ben Gurion School of Medicine, *Associate Dean for Clinical Operations, School of Medicine, and Chair and Professor, Department of Anesthesiology and Perioperative Care*

Peter Kaiser, Ph.D. University of Innsbruck, *Professor, Department of Biological Chemistry*

Kamyar Kalantar-Zadeh, M.D. University of Bonn School of Medicine, *Professor and Professor in Residence, Department of Medicine (Nephrology)*

Grace Kao, M.D. Taiwan University, *Health Sciences Associate Clinical Professor, Department of Neurology*

Robert Kaplan, M.D. Harvard Medical School, *Health Sciences Associate Clinical Professor, Department of Medicine (Infectious Diseases)*

Sherrie Kaplan, M.P.H., Ph.D. University of California, Los Angeles, *Assistant Vice Chancellor, Quality Measurement/Outcomes, Executive Co-Director of the Center for Health Policy Research, and Professor, Department of Medicine (General Internal Medicine)*

William E. Karnes, M.D. University of Minnesota, *Health Sciences Associate Clinical Professor, Department of Medicine (Gastroenterology)*

Moti L. Kashyap, M.B., B.S. King Edward VII College, *Professor in Residence Emeritus, Department of Medicine (General Internal Medicine)*

David Katz, M.D. Western Reserve University, *Professor Emeritus, Department of Radiological Sciences*

Claudia Kawas, M.D. University of Louisville, *Professor, Departments of Neurology and of Neurobiology and Behavior, and Nichols Clinical Neuroscience Chair*

Kirk A. Keegan, Jr., M.D. University of Maryland, *Professor Emeritus, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*

Hans S. Keirstead, Ph.D. University of British Columbia, *Professor, Departments of Anatomy and Neurobiology and of Neurological Surgery*

Kristen Kelly, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Department of Dermatology*

Richard Kelly, M.D. Stanford University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

M. Cristina Kenney, M.D. University of California, Los Angeles, Ph.D. University of Arizona, *Professor, Department of Ophthalmology*

Geoffrey Kenyota, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Pediatrics*

Morton Kern, M.D. Mount Sinai School of Medicine, *Health Sciences Clinical Professor, Department of Medicine (Cardiology)*

Joyce H. Keyak, Ph.D. University of California, San Francisco, *Professor in Residence, Departments of Radiological Sciences, Mechanical and Aerospace Engineering, and Biomedical Engineering*

Aaron Kheriaty, M.D. Georgetown University School of Medicine, *Director of Residency Training and Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*

Antoine Khoury, M.D. Ain Shams University, *Chief of Pediatric Urology and Professor, Department of Urology, and Walter R. Schmid Chair in Pediatric Urology*

Shahira Khoury, M.D. Ain Shams University, *Health Sciences Associate Clinical Professor, Department of Physical Medicine and Rehabilitation*

Nafiz Kiciman, M.D. Hacettepe University, *Health Sciences Clinical Professor, Department of Pediatrics (Cardiology and Neonatology)*

Jayashri Kidao, M.D. Christian Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (Gastroenterology)*

P. Douglas Kiester, M.D. Indiana University, Ph.D. University of Utah, *Health Sciences Clinical Professor, Department of Orthopaedic Surgery*

Yutaka Kikkawa, M.D. University of Tokyo, *Professor Emeritus, Department of Pathology and Laboratory Medicine*

David B. Kilgore, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Family Medicine*

Herbert P. Killackey, Ph.D. Duke University, *Vice Provost for Academic Personnel and Professor of Neurobiology and Behavior and of Anatomy and Neurobiology*

Jin Kim, M.D., Ph.D. University of Rochester, *Assistant Professor of Medicine, Assistant Professor in Residence, Department of Medicine (Cardiology)*

Moon Kim, M.D. Yonsei University, *Health Sciences Clinical Professor Emeritus, Department of Obstetrics and Gynecology (Reproductive Endocrinology and Infertility)*

Ronald C. Kim, M.D. Jefferson Medical College, *Health Sciences Clinical Professor, Departments of Pathology and Laboratory Medicine and of Neurology*

Suzy Kim, M.D. University of Southern California, *Director, Clinical Spinal Injury Program and Scientific Liaison, and Health Sciences Associate Clinical Professor, Department of Physical Medicine and Rehabilitation*

Virginia Kimonis, M.D. Southampton Medical School, *Professor, Department of Pediatrics (Genetics and Metabolism)*

Leonard M. Kitzes, Ph.D. University of California, Irvine, *Professor Emeritus, Department of Anatomy and Neurobiology*

Henry John Klassen, M.D., Ph.D. University of Pittsburgh, *Associate Professor in Residence, Department of Ophthalmology*

Michael T. Kleinman, Ph.D. New York University, *Adjunct Professor Recalled, Department of Medicine (Occupational and Environmental Medicine)*

Mark Kobayashi, M.D. Tulane University, *Health Sciences Clinical Professor, Department of Surgery (Plastic Surgery)*

Kristi L. Koenig, M.D. Mount Sinai School of Medicine, *Director of the Center for Disaster Medical Sciences and Professor of Clinical Emergency Medicine, Department of Emergency Medicine*

Allen Kong, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Division of Trauma/Critical Care, Department of Surgery*

Elliott Kornhauser, M.D. University of Toronto, *Health Sciences Associate Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*

Diana N. Krause, Ph.D. University of California, Los Angeles, *Adjunct Professor, Department of Pharmacology*

Mayil Krishnam, M.D. Stanley Medical College, *Division Director of Cardiovascular and Thoracic Imaging and Associate Professor of Clinical Radiological Sciences, Department of Radiological Sciences*

Jeffrey V. Kuo, M.D. Jefferson Medical College, *Health Sciences Clinical Professor, Department of Radiation Oncology*

Baruch D. Kuppermann, M.D. University of Miami, Ph.D. California Institute of Technology, *Professor, Departments of Ophthalmology and Biomedical Engineering*

Ronald M. Kurtz, M.D. University of California, San Diego, *Health Sciences Clinical Professor, Department of Ophthalmology*

John A. Kusske, M.D. University of California, San Francisco, *Interim Chair and Professor Emeritus, Department of Neurological Surgery, and Physician Advisor for the Transfer Center*

Kimberley Lakes, Ph.D. University of Wisconsin, *Assistant Professor in Residence, Department of Pediatrics (Behavior and Development)*

Jonathan Lakey, Ph.D. University of Alberta, *Acting Associate Professor, Department of Surgery (Islet Cell Transplantation)*

Chandana (Sandy) Lall, M.D. University College of Medical Sciences-University of Delhi, *Vice Chair, Division Director of Abdominal Imaging, and Health Sciences Clinical Professor, Department of Radiological Sciences*

Arthur D. Lander, M.D., Ph.D. University of California, San Francisco, *Director, Center for Complex Biological Systems and Donald Bren Professor of Developmental and Cell Biology, Biomedical Engineering, and Pharmacology*

Jaime Landman, M.D. Columbia College of Physicians and Surgeons, *Department Chair and Professor, Department of Urology*

Felicia Lane, M.D. Georgetown University, *Health Sciences Associate Clinical Professor, Department of Obstetrics and Gynecology (Urogynecology)*

John S. Lane III, M.D. University of California, Los Angeles, *Associate Professor of Clinical Surgery, Department of Surgery*

Karen Todd Lane, M.D. University of California, Los Angeles, *Associate Professor of Clinical Surgery, Department of Surgery*

Mark I. Langdorf, M.D. University of California, San Diego, *Department Chair of Emergency Medicine and Professor of Clinical Emergency Medicine*

David Lanum, M.D. University of Washington, *Health Sciences Clinical Professor, Department of Family Medicine*

Janos K. Lanyi, Ph.D. Harvard University, *Professor, Departments of Physiology and Biophysics and of Microbiology and Molecular Genetics*

Kathryn M. Larsen, M.D. University of Washington, *Health Sciences Clinical Professor, Department of Family Medicine*

George Lawry, M.D. Johns Hopkins University, *Chief, Division of Rheumatology and Health Sciences Clinical Professor, Department of Medicine (Rheumatology)*

Chinh D. Le, M.D. University of Medicine and Pharmacy of Hochiminh City, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine and Geriatrics)*

Khanh-Van Le-Bucklin, M.D. University of California, San Francisco, *Associate Dean for Graduate Medical Education; Director of Academic Affairs, LBMMC/Miller Children's Hospital; Executive Vice Chair of Pediatrics; and Health Sciences Clinical Professor, Department of Pediatrics*

Eva Y.-H. P. Lee, Ph.D. University of California, Berkeley, *Department Chair and UCI Chancellor's Professor, Department of Biological Chemistry*

Jenny Lee, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

John G. Lee, M.D. University of Miami, *Professor of Clinical Medicine, Department of Medicine (Gastroenterology)*

Robert Lee, M.D. University of Michigan, *Health Sciences Assistant Clinical Professor, Department of Medicine (Gastroenterology)*

Se-Young Lee, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Thay Q. Lee, Ph.D. Gothenburg University, *Professor in Residence, Departments of Orthopaedic Surgery and Biomedical Engineering*

Wen-Hwa Lee, Ph.D. University of California, Berkeley, *Donald Bren Professor of Biomedicine, Departments of Biological Chemistry and Pharmacology*

Michael Lekawa, M.D. Jefferson Medical College, *Chief of Trauma and Critical Care and Health Sciences Clinical Professor, Department of Surgery*

Marc A. Lerner, M.D. Mount Sinai School of Medicine, *Chief, Developmental/Behavioral Pediatrics and Health Sciences Clinical Professor, Department of Pediatrics*

Lawrence Lerno, M.D. University of Pittsburgh, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Frances M. Leslie, Ph.D. Aberdeen University, *Dean of the Graduate Division and Professor, Departments of Pharmacology and of Anatomy and Neurobiology*

Alvina Leung, M.D. Stanford University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Ellis Levin, M.D. Jefferson Medical College, *Vice Chair for Academic Affairs, Department of Medicine, Chief of Endocrinology, and Professor in Residence, Departments of Medicine (Endocrinology), Pharmacology, and Biological Chemistry*

Mark Levinstein, M.D. Northwestern University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Donald Levy, M.D. State University of New York Downstate Medical Center, College of Medicine, *Health Sciences Clinical Professor, Department of Medicine (Immunology)*

Solomon Liao, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Medicine (Hospitalist Program, General Internal Medicine, and Geriatrics)*

Richard Light, M.D. Johns Hopkins University, *Professor in Residence Emeritus, Department of Medicine (Pulmonary and Critical Care)*

Michael Lilly, M.D. Loma Linda University, *Professor of Clinical Medicine, Department of Medicine (Hematology/Oncology)*

Charles L. Limoli, Ph.D. University of California, San Diego, *Professor, Department of Radiation Oncology*

Fritz Lin, M.D. Medical College of Virginia, *Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*

Jack Lin, M.D. Rush Medical College, *Associate Professor of Clinical Neurology, Department of Neurology*

Jeanette Lin, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Medicine (Cardiology)*

Kenneth G. Linden, M.D. University of California, Irvine, Ph.D. University of California, Davis, *Health Sciences Associate Clinical Professor, Department of Dermatology*

Robert Lingua, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Ophthalmology*

Mark E. Linskey, M.D. Columbia University College of Physicians and Surgeons, *Surgical Director, Neuro-Oncology Program and Professor, Department of Neurological Surgery*

Linda Lipka, M.D. Columbia University, *Health Sciences Clinical Professor, Department of Ophthalmology*

Haoping Liu, Ph.D. Cornell University, *Professor, Department of Biological Chemistry*

Leslie Lock, Ph.D. University of California, San Francisco, *Assistant Professor, Departments of Biological Chemistry and of Developmental and Cell Biology*

Dawn Lombardo, D.O. Chicago College of Osteopathic Medicine, *Health Sciences Associate Clinical Professor (Cardiology)*

John Longhurst, M.D., Ph.D. University of California, Davis, *Associate Dean, School of Medicine; Director of the Susan Samueli Center for Integrative Medicine; Professor, Department of Medicine (Cardiology), Physiology and Biophysics, Pharmacology, and Biomedical Engineering; Lawrence K. Dodge Endowed Chair in Integrative Biology; and Susan Samueli Chair in Integrative Medicine*

Kenneth J. Longmuir, Ph.D. University of Oregon, *Professor, Department of Physiology and Biophysics*

Shahram Lotfipour, M.D. University of Iowa, *Associate Dean for Clinical Science and Professor of Clinical Emergency Medicine, Department of Emergency Medicine and Program in Public Health*

Ira T. Lott, M.D. The Ohio State University, *Associate Dean of Clinical Neurosciences, School of Medicine, Chief of Child Neurology, and Professor Emeritus, Departments of Pediatrics and Neurology*

Di Lu, M.D. Shanghai Medical University, *Health Sciences Clinical Professor, Department of Pathology and Laboratory Medicine*

Stephanie Lu, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*

Ulrike Luderer, M.D., Ph.D. Northwestern University; M.P.H. University of Washington, *Director of the Environmental Health Sciences Graduate Program and Associate Professor, Departments of Medicine (Occupational and Environmental Medicine) and of Developmental and Cell Biology*

Hartmut Luecke, Ph.D. Rice University, *Professor of Molecular Biology and Biochemistry and of Physiology and Biophysics*

Z. David Luo, M.D. Guangzhou Medical College, Ph.D. University of New York, *Associate Professor and Associate Professor in Residence, Departments of Anesthesiology and Perioperative Care and of Pharmacology*

Gary S. Lynch, Ph.D. Princeton University, *Professor, Departments of Psychiatry and Human Behavior, Cognitive Sciences, and Anatomy and Neurobiology*

David C. Lyon, Ph.D. Vanderbilt University, *Assistant Professor, Departments of Anatomy and Neurobiology and of Cognitive Sciences*

Fabio Macciardi, M.D. University of Milan, Ph.D. University of Catania, *Professor in Residence and Acting Professor, Department of Psychiatry and Human Behavior*

Gerald Maguire, M.D. St. Louis University, *Associate Dean, School of Medicine, Professor of Clinical Psychiatry, Department of Psychiatry and Human Behavior, and Kirkup Chair in Psychiatry and Human Behavior for the Medical Treatment of Stuttering*

Carol A. Major, M.D. Case Western Reserve University, *Health Sciences Clinical Professor, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*

Shaista Malik, M.D. University of California, Irvine, *Assistant Professor and Assistant Professor in Residence, Department of Medicine (Cardiology)*

Fred M. Malkin, M.D. University of Miami, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*

Alberto Manetta, M.D. University of Buenos Aires, *Professor Emeritus, Department of Obstetrics and Gynecology (Gynecologic Oncology)*

William Mantulin, Ph.D. Northeastern University, *Adjunct Professor, Department of Surgery and Biomedical Engineering (Beckman Laser Institute)*

Irina Maramba, M.D. Belgrade Medical School, Ph.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Pathology and Laboratory Medicine*

Donald C. Martin, M.D. University of British Columbia, *Professor Emeritus, Department of Surgery (Urology)*

G. Robert Mason, M.D. University of Chicago, Ph.D. Stanford University, *Professor Emeritus, Department of Surgery*

Farhad Mazdisnian, M.D. Jefferson Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (Pulmonary and Critical Care Medicine)*

Irene M. McAleer, M.D. Ohio State University, *Health Sciences Associate Clinical Professor, Department of Urology*

Michael McClelland, M.D., Ph.D. University of Georgia, *Adjunct Professor, Department of Pathology and Laboratory Medicine*

Christopher Eric McCoy, M.D. University of California, San Francisco, *Director of Simulation Education and Health Sciences Assistant Clinical Professor, Department of Emergency Medicine*

Jerry L. McCullough, Ph.D. Yale University, *Professor Emeritus, Department of Dermatology*

Elsbeth M. McDougall, M.D. University of Calgary, *Professor Emerita, Department of Urology*

Christine E. McLaren, Ph.D. Case Western Reserve, *Vice Chair and Professor, Department of Epidemiology*

Gordon McLaren, M.D. Stanford University, *Adjunct Professor, Department of Medicine (Hematology/Oncology)*

Calvin S. McLaughlin, Ph.D. Massachusetts Institute of Technology, *Professor Emeritus, Department of Biological Chemistry*

Gordon A. McLorie, M.D. Francis Xavier University, *Health Sciences Clinical Professor, Department of Urology*

Deena McRae, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*

Rita Mehta, M.D., M.G.M. Medical College, *Health Sciences Associate Clinical Professor, Department of Medicine (Hematology/Oncology)*

Daniel B. Menzel, Ph.D. University of California, Berkeley, *Professor Emeritus, Department of Medicine*

Dan Mercola, M.D. Southampton University; Ph.D. University of California, Los Angeles, *Professor, Department of Pathology and Laboratory Medicine*

Hooshang Meshkinpour, M.D. Tehran University, School of Medicine, *Professor Emeritus, Department of Medicine (Gastroenterology)*

Frank L. Meyskens, Jr., M.D. University of California, San Francisco, *Vice Dean of the School of Medicine; Professor, Departments of Medicine (Hematology/Oncology), Biological Chemistry, and Program in Public Health; and Daniel G. Aldrich, Jr. Endowed Chair*

John C. Middlebrooks, Ph.D. University of California, San Francisco, *Professor, Departments of Otolaryngology - Head and Neck Surgery, Neurobiology and Behavior, and Cognitive Sciences*

Ronald B. Miller, M.D. College of Physicians and Surgeons, Columbia University, *Health Sciences Clinical Professor of Medicine Emeritus, Founding Chief of the Renal Division and Founding Director of the Program in Medical Ethics, and Chair of the UCI Emeritae/i Association*

Jeffrey Milliken, M.D. University of Michigan, *Chief of Thoracic Surgery and Health Sciences Clinical Professor, Department of Surgery*

Steven D. Mills, M.D. New York Medical College, *Chief of Colon and Rectal Surgery and Health Sciences Associate Clinical Professor, Department of Surgery*

Eric N. C. Milne, M.B., Ch.B., F.R.C.R. University of Edinburgh, *Professor Emeritus, Department of Radiological Sciences*

Don S. Minckler, M.D. University of Oregon Medical School, *Professor of Clinical Ophthalmology and of Pathology and Laboratory Medicine*

Lilit Mnatsakanyan, M.D. Yerevan State Medical University, *Health Sciences Assistant Clinical Professor, Department of Neurology*

Sabee Molloy, Ph.D. University of Wisconsin, *Vice Chair of Research and Professor, Departments of Radiological Sciences, Electrical Engineering and Computer Science, and Biomedical Engineering*

Edwin S. Monuki, M.D., Ph.D. University of California, San Diego, *Acting Department Chair and Associate Professor, Department of Pathology and Laboratory Medicine*

Hamid Moradi, M.D. Oregon Health & Science University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Nephrology)*

Edgar M. Moran, M.D. University of Bucharest, *Professor in Residence Emeritus, Department of Medicine (Hematology/Oncology)*

Beverly C. Morgan, M.D. Duke University, *Professor Emerita, Department of Pediatrics (Cardiology)*

Timothy R. Morgan, M.D. Emory University, *Professor in Residence, Department of Medicine (Gastroenterology)*

David K. Morohashi, M.D. University of Washington, *Health Sciences Clinical Professor of Family Medicine*

Debra Morrison, M.D. Northwestern University, *Director of Pediatric Anesthesia Services, Director of Preoperative Clinic, and Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*

Sameh Mosaed, M.D. New York Medical College, *Health Sciences Associate Clinical Professor, Department of Ophthalmology*

H. David Mosier, M.D. The Johns Hopkins University School of Medicine, *Professor Emeritus, Department of Pediatrics (Endocrinology)*

Laura Mosqueda, M.D. University of Southern California, *Chair, Department of Family Medicine, Director of the Program in Geriatrics, Professor of Clinical Family Medicine (Family Medicine and Geriatrics), and Ronald W. Reagan Endowed Chair in Geriatrics*

Robert K. Moyzis, Ph.D. The Johns Hopkins University, *Professor Emeritus, Department of Biological Chemistry*

Tahseen Mozaffar, M.D. Aga Kahn University, *Professor of Clinical Neurology, Department of Neurology*

Dana Mukamel, Ph.D. University of Rochester, *Professor, Department of Medicine (General Internal Medicine)*

Jogeshwar Mukherjee, Ph.D. Jodhpur University, *Professor in Residence, Departments of Radiological Sciences and of Physiology and Biophysics*

J. Dennis Mull, M.D. Medical College of Virginia, *Professor Emeritus, Department of Family Medicine*

Maury Mulligan, M.D. Mt. Sinai University, New York, *Professor in Residence Emeritus, Department of Medicine (Infectious Disease)*

Penny Murata, M.D. Medical College of Pennsylvania, *Health Sciences Clinical Professor, Department of Pediatrics (General Pediatrics)*

Cynthia T. Murphy, M.D. University of South Dakota, *Health Sciences Associate Clinical Professor, Department of Physical Medicine and Rehabilitation*

Sandra Murray, M.D. University of California, San Diego, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*

Robert Myers, Ph.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*

Bavani Nadeswaran, M.D. University of West Indies, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*

Ajanta Naidu, M.B.B.S. Christian Medical College, *Health Sciences Associate Clinical Professor, Department of Pediatrics (Endocrinology)*

Wadie I. Najm, M.D., M.S.Ed. Brussels University, *Associate Dean and Health Sciences Clinical Professor, Department of Family Medicine*

Orhan Nalcioğlu, Ph.D. University of Oregon, *Professor Emeritus, Department of Radiological Sciences*

Chaitali Nangia, M.D. Lady Hardinge Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hematology/Oncology)*

Corey K. Nelson, M.D. Jefferson Medical College, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Edward Nelson, M.D. Oregon Health Sciences University, *Associate Professor, Departments of Medicine (Hematology/Oncology) and of Molecular Biology and Biochemistry*

J. Stuart Nelson, M.D. University of Southern California, Ph.D. University of California, Irvine, *Professor, Departments of Surgery (Beckman Laser Institute) and Biomedical Engineering*

Thomas L. Nelson, M.D. University of California, San Francisco, *Professor Emeritus, Department of Pediatrics*

Anthony B. Nesburn, M.D. Harvard Medical School, *Adjunct Professor, Department of Ophthalmology*

Richard S. Newman, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Pathology and Laboratory Medicine*

Hanh T. Nguyen, M.D. Medical College of Virginia, *Health Sciences Assistant Clinical Professor, Department of Family Medicine*

Lan Thi-Xuan Nguyen, M.D. University of California, San Diego, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*

Ninh T. Nguyen, M.D. University of Texas, *Chief of Gastrointestinal Surgery and Professor, Department of Surgery*

Tan Q.V. Nguyen, M.D. Michigan State University College of Human Medicine, *Health Sciences Assistant Clinical Professor, Department of Family Medicine*

Karen Noblett, M.D. University of California, Irvine, *Director of the Division of Urogynecology and Health Sciences Clinical Professor, Department of Obstetrics and Gynecology (Urogynecology)*

Diane O'Dowd, Ph.D. University of California, San Diego, *Department Chair and Professor of Developmental and Cell Biology, and Professor of Anatomy and Neurobiology*

Marc Ofstein, M.D. Georgetown University; M.P.H. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*

Letitia Oliveros, M.D. University of Iowa, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*

Bonnie Olsen, Ph.D. California School of Professional Psychology, *Health Sciences Clinical Professor, Department of Family Medicine*

Harold G. Olson, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Medicine (Cardiology)*

Robin Onishi, M.D. University of Washington, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*

Michael O'Reilly, M.D., M.S. University of Vermont College of Medicine, *Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*

Kathryn E. Osann, Ph.D. University of California, Berkeley, *Adjunct Professor, Department of Medicine (Hematology/Oncology)*

Megan Boysen Osborn, M.D. University of California, Irvine, *Assistant Professor of Clinical Emergency Medicine, Department of Emergency Medicine*

Donald R. Ostergard, M.D. University of California, San Francisco, *Professor Emeritus, Department of Obstetrics and Gynecology (Urogynecology)*

Sai-Hong Ignatius Ou, M.D., Ph.D. University of Texas, *Health Sciences Associate Clinical Professor, Department of Medicine (Hematology/Oncology)*

Andre Ouellette, Ph.D. Indiana University, *Professor Emeritus, Department of Pathology and Laboratory Medicine*

Madeleine V. Pahl, M.D. University of California, Irvine, *Chief of Nephrology and Professor, Department of Medicine (Nephrology/Renal)*

Marilyn J. Pais, M.D. Medical College of Pennsylvania, *Senior Lecturer with Security of Employment Emerita, Department of Radiological Sciences*

Nimisha Parekh, M.D., M.P.H. Tulane University, *Health Sciences Associate Clinical Professor, Department of Medicine (Gastroenterology)*

Hannah Lui Park, Ph.D. Stanford University, *Assistant Professor in Residence, Department of Epidemiology*

Steven Park, M.D., Ph.D. New York University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Infectious Disease)*

Ian Parker, Ph.D. University College, London, *Professor of Neurobiology and Behavior and of Physiology and Biophysics*

Angela Parkin, M.D. University of Texas Health Science Center School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Victor Passy, M.D. University of California, Irvine, *Senior Lecturer with Security of Employment Emeritus, Department of Otolaryngology - Head and Neck Surgery*

Pranav Patel, M.D. St. Louis University, *Chief of Cardiology and Health Sciences Associate Clinical Professor, Department of Medicine (Cardiology)*

Keyianoosh Z. Paydar, M.D. University of Tennessee, *Health Sciences Associate Clinical Professor, Department of Surgery (Plastic)*

Daniel Pelot, M.D. Howard University School of Medicine, *Senior Lecturer with Security of Employment Emeritus, Medicine (Gastroenterology)*

Danielle Perret Karimi, M.D. UMDNJ-Robert Wood Johnson Medical School, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Ellena Peterson, Ph.D. Georgetown University, *Associate Dean of Admissions and Outreach, School of Medicine, and Professor, Department of Pathology and Laboratory Medicine*

Robert F. Phalen, Ph.D. University of Rochester, *Professor, Department of Medicine (Occupational and Environmental Medicine)*

Son (Jason) Phan, M.D. University of Vermont College of Medicine, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

Aimee Pierce, M.D. Columbia University College of Physicians and Surgeons, *Health Sciences Assistant Clinical Professor, Department of Neurology*

Daniele Piomelli, Ph.D. Columbia University, *Professor, Departments of Anatomy and Neurobiology, Pharmacology, and Biological Chemistry, and Louise Turner Arnold Chair in the Neurosciences*

Hubert C. Pirkle, M.D. Indiana University, *Professor Emeritus, Department of Pathology and Laboratory Medicine*

Robert W. Porter, M.D., Ph.D. Northwestern University Medical School, *Professor in Residence Emeritus, Department of Surgery (Neurological)*

Dmitry Portnoy, M.D. First Moscow University Medical School, *Health Sciences Associate Clinical Professor, Department of Anesthesiology and Perioperative Care*

Manuel Porto, M.D. Rutgers College of Medicine, *Chair of the Department of Obstetrics and Gynecology, Professor of Clinical Obstetrics and Gynecology (Maternal-Fetal Medicine), and The Edward J. Quilligan Chair in Maternal-Fetal Medicine*

Steven G. Potkin, M.D. Washington University, *Professor, Department of Psychiatry and Human Behavior, and Robert R. Sprague Chair in Brain Imaging*

Thomas L. Poulos, Ph.D. University of California, San Diego, *UCI Chancellor's Professor, Departments of Molecular Biology and Biochemistry, Pharmaceutical Sciences, Physiology and Biophysics, and Chemistry*

Adrian Preda, M.D. Carol Davila University of Medicine, *Health Sciences Clinical Professor, Department of Psychiatry and Human Behavior*

Pamela E. Prete, M.D. Hahnemann Medical College, *Professor in Residence Emerita, Department of Medicine (Rheumatology)*

Henry W. Pribram, M.B.B.S. Cambridge University, *Professor Emeritus, Department of Radiological Sciences*

Michael D. Prislín, M.D. Georgetown University, *Associate Dean for Clinical Affairs, School of Medicine and Professor of Clinical Family Medicine*

Ralph E. Purdy, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Pharmacology*

Feng Qiao, Ph.D. University of California, Los Angeles, *Assistant Professor, Department of Biological Chemistry*

Lisa Quane, M.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Radiological Sciences*

Edward J. Quilligan, M.D. Ohio State University, *Professor Emeritus, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*

W. Leslie Quinlivan, M.B.B.S. University of London, *Professor Emeritus, Department of Obstetrics and Gynecology (Reproductive Endocrinology and Infertility)*

Manuela Raffatellu, M.D. University of Sassari, *Assistant Professor, Department of Microbiology and Molecular Genetics*

Gregory Rafijah, M.D. Universal Hospital Services/The Chicago Medical School, *Health Sciences Assistant Clinical Professor, Department of Orthopaedic Surgery*

Maryam Rahimi, M.D. Indiana University School of Medicine, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*

Govind R.C. Rajan, M.D., M.B.B.S. Maulana Azad Medical College University of Delhi, *Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*

Davinder Ramsingh, M.D. Medical College of Georgia, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Nilam S. Ramsinghani, M.B.B.S. Grant Medical College, *Department Chair and Health Sciences Clinical Professor, Department of Radiation Oncology*

Ibrahim Ramzy, M.D. Cairo University, *Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*

Leslie Randall, M.D. University of Louisville, *Assistant Professor of Clinical Obstetrics and Gynecology, Department of Obstetrics and Gynecology (Gynecology Oncology)*

Darren R. Raphael, M.D., M.B.A. University of California Irvine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Jody M. Rawles, M.D. Albany Medical College, Union University, *Health Sciences Associate Clinical Professor, Department of Psychiatry and Human Behavior*

Virgil Raymundo, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Medicine (Hospitalist Program and General Internal Medicine)*

Louis Recher, M.D. University of Basel, *Professor in Residence Emeritus, Department of Pathology and Laboratory Medicine*

Varalakshmi Reddy, M.B.B.S. Osmania Medical College, *Health Sciences Clinical Professor, Department of Pediatrics (General Pediatrics)*

J. Leslie Redpath, Ph.D. University of Newcastle, *Professor Emeritus, Department of Radiation Oncology*

Andrew Reikes, M.D. University of California, San Diego, *Interim Chief, Division of General Internal Medicine and Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine and Endocrinology)*

David J. Reinkensmeyer, Ph.D. University of California, Berkeley, *Professor, Departments of Mechanical and Aerospace Engineering, Biomedical Engineering, and Anatomy and Neurobiology*

Sherif Rezk, M.D. Alexandria University Faculty of Medicine, *Assistant Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*

Charles E. Ribak, Ph.D. Boston University, *Professor Emeritus, Department of Anatomy and Neurobiology*

James Rick, M.D., Ph.D. University of Illinois, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Cameron Ricks, M.D. American University of the Caribbean School of Medicine, *Health Sciences Assistant Clinical Professor and Operations Officer, Department of Anesthesiology and Perioperative Care*

Joseph B. Rinehart, M.D. Creighton University School of Medicine, *Health Sciences Assistant Clinical Professor and Operations Officer, Department of Anesthesiology and Perioperative Care*

Dante Roa, Ph.D. Florida State University, *Health Sciences Associate Clinical Professor, Department of Radiation Oncology*

Richard T. Robertson, Ph.D. University of California, Irvine, *Professor, Department of Anatomy and Neurobiology*

W. Edward Robinson, Jr., M.D., Ph.D. Vanderbilt University, *Professor in Residence, Departments of Pathology and Laboratory Medicine and of Microbiology and Molecular Genetics*

Leland Ronningen, M.D. University of the Health Sciences Uniformed Services, *Health Sciences Clinical Professor, Department of Urology*

Irwin A. Rose, Ph.D. University of Chicago, *UCI Distinguished Professor Emeritus, Department of Physiology and Biophysics*

Abraham Rosenbaum, M.D. The Technion Institute, *Health Sciences Clinical Associate Professor, Department of Anesthesiology and Perioperative Care*

Steven Ross, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Orthopaedic Surgery*

Lloyd Rucker, M.D. University of Kentucky, *Vice Chair for Educational Affairs, Department of Medicine; Director, Internal Medicine Residency Program; and Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*

Scott Rudkin, M.D. University of California, Irvine, *Assistant Dean of Continuing Medical Education, and Vice Chair and Health Sciences Clinical Professor, Department of Emergency Medicine*

Naghme Salamat Saberi, M.D. New York Medical College, *Health Sciences Associate Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*

Terra Safer, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Departments of Medicine and Pediatrics (General Internal Medicine)*

Angela Sagar, M.D. Ross University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*

Hamid M. Said, Ph.D. University of Aston, *Professor, Departments of Medicine (Gastroenterology, Nephrology) and of Physiology and Biophysics*

Jason Samarasena, M.D. Memorial University of Newfoundland, *Health Sciences Assistant Clinical Professor, Department of Medicine (Gastroenterology)*

Curt A. Sandman, Ph.D. Louisiana State University, *Professor Emeritus, Department of Psychiatry and Human Behavior*

Suzanne B. Sandmeyer, Ph.D. University of Washington, *Professor, Departments of Biological Chemistry and of Microbiology and Molecular Genetics*

Zsuzsanna Sandor, M.D. Semelweis Medical School, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*

Rozanne M. Sandri-Goldin, Ph.D. The Johns Hopkins University, *Department Chair and Professor, Department of Microbiology and Molecular Genetics*

I. James Sarfeh, M.D. Albany Medical College, *Professor Emeritus, Department of Surgery (General)*

Jon Sassin, M.D. St. Louis University, *Professor Emeritus, Department of Neurology*

Paolo Sassone-Corsi, Ph.D. University of Naples, *Director of the Center for Epigenetics and Metabolism, Donald Bren Professor, and UCI Distinguished Professor, Departments of Biological Chemistry and Pharmaceutical Sciences*

Catherine S. Sassoon, M.D. Gadjah Mada University School of Medicine, *Professor in Residence, Department of Medicine (Pulmonary and Critical Care)*

Mona Sazgar, M.D. McMaster University, *Health Sciences Associate Clinical Professor, Department of Neurology*

Justin T. Schaefer, Ph.D. University of California, Irvine, *Assistant Adjunct Professor, Department of Anatomy and Neurobiology*

Peter L. Schnall, M.D. Stanford University, M.P.H. Columbia University, *Health Sciences Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*

Steven S. Schreiber, M.D. Albany Medical College, *Professor in Residence, Departments of Neurology and of Anatomy and Neurobiology*

Sabrina E. Schuck, Ph. D. University of California, Riverside, *Health Sciences Assistant Clinical Professor, Department of Pediatrics, Child Development Center*

Carl Schultz, M.D. University of California, Irvine, *Professor of Clinical Emergency Medicine and Director of Disaster Medical Services, Department of Emergency Medicine*

Shruti Scott, D.O. Western University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hospitalist Program and General Internal Medicine)*

Tara Seery, M.D. University College Dublin, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hematology/Oncology)*

Gary Segal, M.D. University of Pennsylvania, *Health Sciences Clinical Professor, Department of Medicine (Infectious Diseases)*

Sonia Sehgal, M.D. St. George's University, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine and Geriatrics)*

Varun Sehgal, Ph.D. University of Florida, *Health Sciences Associate Clinical Professor, Department of Radiation Oncology*

Michael E. Selsted, M.D., Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Pathology and Laboratory Medicine*

Bert L. Semler, Ph.D. University of California, San Diego, *Director of the Center for Virus Research and Professor, Department of Microbiology and Molecular Genetics*

Leonard Sender, M.B.B.S. University of Witwatersrand, *Director of Clinical Oncology Services, Chief of Pediatric Oncology, and Health Sciences Clinical Professor, Department of Medicine (Hematology/Oncology)*

Stefano Sensi, M.D., Ph.D. University D'Annunzio, *Associate Adjunct Professor, Departments of Neurology and Pharmacology*

Cagin Senturk, M.D. Hacettepe University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*

Arnold Seto, M.D. Harvard-MIT Health Sciences and Technology, *Health Sciences Assistant Clinical Professor, Department of Medicine (Cardiology)*

Gaurang Shah, M.D. The Maharaja Sayajirao University of Baroda, *Health Sciences Clinical Professor, Department of Medicine (Nephrology)*

Shalini S. Shah, M.D. St. George's University, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Ronald C. Shank, Ph.D. Massachusetts Institute of Technology, *Professor Emeritus, Department of Medicine (Occupational and Environmental Medicine)*

Deane H. Shapiro, Jr., Ph.D. Stanford University, *Professor in Residence Emeritus, Department of Psychiatry and Human Behavior*

Johanna F. Shapiro, Ph.D. Stanford University, *Director of the Program in Medical Humanities and Arts and Professor, Department of Family Medicine*

Ankush Sharma, M.D. University of the Caribbean, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hospitalist Program and General Internal Medicine)*

Yongsheng Shi, Ph.D. Syracuse University *Assistant Professor, Department of Microbiology and Molecular Genetics*

Maria E. Shier, M.D. Albany Medical College, *VALBHS Medical Student Education Coordinator and Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*

Cynthia H. Sholly, M.D. University of Utah, *Health Sciences Clinical Professor, Department of Pediatrics (General Pediatrics)*

Herbert Sier, M.D. Medical College of Virginia, *Health Sciences Clinical Professor, Department of Internal Medicine, Program in Geriatrics*

Jack Sills, M.D. Northwestern University, *Health Sciences Clinical Professor, Department of Pediatric Neonatology*

Jennifer Simpson, M.D. University of Michigan, *Health Sciences Clinical Professor, Department of Ophthalmology*

Katherine Singh, M.S. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Pediatrics (Human Genetics and Birth Defects)*

Harry Skinner, M.D. University of South Carolina, Ph.D. University of California, Berkeley, *Professor Emeritus, Department of Orthopaedic Surgery*

Lewis M. Slater, M.D. University of Vermont Medical School, *Professor Emeritus, Department of Medicine (Hematology/Oncology)*

Steven L. Small, Ph.D. University of Maryland, M.D. University of Rochester, *Department Chair of Neurology and Professor, Departments of Neurology, Neurobiology and Behavior, and Cognitive Sciences, and Dr. Stanley van den Noort Endowed Chair*

Brian R. Smith, M.D. Universidad Autónoma de Guadalajara, *Health Sciences Assistant Clinical Professor, Department of Surgery*

Clyde W. Smith, M.D. University of Minnesota, *Health Sciences Clinical Professor, Department of Radiological Sciences*

Janellen Smith, M.D. University of Iowa, *Health Sciences Clinical Professor, Department of Dermatology*

Martin A. Smith, Ph.D. University of Newcastle Upon Tyne, *Professor, Department of Anatomy and Neurobiology*

Moyra Smith, M.D. University of Pretoria, Ph.D. University College London, *Professor Emerita, Department of Pediatrics (Human Genetics and Birth Defects)*

Ana Solodkin, Ph.D. National Polytechnic Institute, *Associate Professor, Departments of Anatomy and Neurobiology and of Neurology*

Ivan Soltesz, Ph.D. L. Eötvös University, *Department Chair of Anatomy and Neurobiology and UCI Chancellor's Professor, Departments of Anatomy and Neurobiology, Physiology and Biophysics, and Neurobiology and Behavior*

Charles Sondhaus, Ph.D. University of California, Berkeley, *Professor Emeritus, Department of Radiological Sciences*

Dara Sorkin, Ph.D. University of California, Irvine, *Associate Professor in Residence, Department of Medicine (General Internal Medicine)*

Martha Sosa-Johnson, M.D. University of California, San Diego, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*

Jennifer Soung, M.D. Albert Einstein College of Medicine, *Health Sciences Assistant Clinical Professor, Department of Dermatology*

Gerald S. Spear, M.D. The Johns Hopkins University, *Professor Emeritus, Department of Pathology and Laboratory Medicine*

Vinita Jain Speir, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*

M. Anne Spence, Ph.D. University of Hawaii, *Professor Emerita, Department of Pediatrics (Human Genetics and Birth Defects)*

Donald R. Sperling, M.D. Yale School of Medicine, *Professor Emeritus, Department of Pediatrics*

Lawrence D. Sporty, M.D. State University of New York, Downstate, *Senior Lecturer with Security of Employment Emeritus, Psychiatry and Human Behavior*

Michael J. Stamos, M.D. Case Western Reserve University, *Department Chair of Surgery, Professor of Clinical Surgery, and John E. Connolly Chair in Surgery*

Eric J. Stanbridge, Ph.D. Stanford University, *UCI Distinguished Professor Emeritus, Department of Microbiology and Molecular Genetics*

Arnold Starr, M.D. New York University School of Medicine, *Research Professor, Departments of Neurology and of Neurobiology and Behavior*

Kurt Stauder, D.P.H. University of La Verne, *Assistant Adjunct Professor, Department of Medicine (General Internal Medicine)*

Robert E. Steele, Ph.D. Yale University, *Professor of Biological Chemistry*

Joan S. Steffan, Ph.D. University of California, San Diego, *Associate Professor in Residence, Department of Psychiatry and Human Behavior*

Larry Stein, Ph.D. University of Iowa, *Professor Emeritus, Department of Pharmacology*

Robin Steinberg-Epstein, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Pediatrics (Behavior and Development)*

Roger F. Steinert, M.D. Harvard Medical School, *Department Chair of Ophthalmology, Professor of Clinical Ophthalmology and Biomedical Engineering, and Irving H. Leopold Chair in Ophthalmology*

Oswald Steward, Ph.D. University of California, Irvine, *Director, Reeve-Irvine Research Center; Senior Associate Dean for Research, School of Medicine; Professor, Departments of Anatomy and Neurobiology, Neurobiology and Behavior, and Neurosurgery; and Reeve-Irvine Chair in Spinal Cord Injury Research*

Suzanne Strom, M.D. University of Texas Medical School at Houston, *Director of Medical Student Stimulation, Residency Program Associate Director, and Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Min-Ying (Lydia) Su, Ph.D. University of California, Irvine, *Professor and Professor in Residence, Departments of Radiological Sciences and of Physics and Astronomy*

Veendamali Subramanian, Ph.D. University of Madras, *Assistant Adjunct Professor, Department of Medicine (Nephrology)*

Jeffrey Suchard, M.D. University of California, Los Angeles, *Director of Medical Pharmacology; Professor of Clinical Emergency Medicine, Departments of Emergency Medicine and Pharmacology*

Coral Sun, M.D. University of Florida College of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Shuichi Suzuki, M.D. Kitasato University School of Medicine, *Division Director of Neurointerventional Radiology and Associate Professor of Clinical Radiological Sciences, Department of Radiological Sciences*

James M. Swanson, Ph.D. The Ohio State University, *Professor Emeritus, Department of Pediatrics*

Bindhu Swaroop, M.D. St. George's University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

John E. Swett, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Anatomy and Neurobiology*

Paul S. Sypherd, Ph.D. Yale University, *Professor Emeritus, Department of Microbiology and Molecular Genetics*

Sandor Szabo, M.D. University of Belgrade Medical School; Ph.D. University of Montreal; M.P.H. Harvard University School of Public Health; *Chief of Diagnostic and Molecular Medicine Health Care Group and Professor in Residence, Departments of Pathology and Laboratory Medicine and of Pharmacology*

Steven Tam, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine, Program in Geriatrics)*

Ming Tan, M.D. The Johns Hopkins University, *Professor, Departments of Microbiology and Molecular Genetics and of Medicine (Infectious Disease)*

Siu Wa Tang, M.B., B.S. University of Hong Kong; Ph.D. University of Toronto, *Professor Emeritus, Department of Psychiatry and Human Behavior*

Jeremiah Tao, M.D. University of South Carolina, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*

Andrzej S. Tarnawski, M.D., D.Sc. University Medical School, *Professor, Department of Medicine (Gastroenterology)*

Jamshid Tehranzadeh, M.D. Pahlavi University Medical School, *Professor Emeritus, Department of Radiological Sciences*

Krishnansu Sujata Tewari, M.D. University of California, Irvine, *Associate Professor of Clinical Obstetrics and Gynecology, Department of Obstetrics and Gynecology (Gynecology Oncology)*

Gaby Thai, M.D. Tufts University, *Health Sciences Clinical Professor, Department of Neurology*

Trung Thai, M.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Psychiatry and Human Behavior*

Tejal Thakkar, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Medicine (Rheumatology)*

Leslie M. Thompson, Ph.D. University of California, Irvine, *Professor, Departments of Psychiatry and Human Behavior, Biological Chemistry, and Neurobiology and Behavior*

Lauri D. Thrupp, M.D. University of Washington School of Medicine, *Professor Emeritus, Department of Medicine (Infectious Diseases)*

Jeremiah G. Tilles, M.D. Harvard Medical School, *Professor Emeritus, Department of Medicine (Infectious Diseases)*

Kate Tobin, M.D. Loyola University Stritch School of Medicine, *Clinical Director of Outpatient Surgical Suites and Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

- Irina Todorov, M.D. Medical University of Sofia, *Health Sciences Associate Clinical Professor, Department of Family Medicine*
- Francesco Tombola, Ph.D. University of Padua, *Assistant Professor, Department of Physiology and Biophysics*
- Julianne S. Toohey, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Simin Torabzadeh, M.D. Universidad Central del Este, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine and Geriatrics)*
- Paul E. Touchette, Ed.D. Harvard University, *Adjunct Professor Recalled, Departments of Pediatrics (Neurology) and of Psychiatry and Human Behavior*
- Anne E. Tournay, M.B.B.S. University College London, *Health Sciences Associate Clinical Professor, Department of Pediatrics (Neurology)*
- Huy T. Tran, D. O. College of Osteopathic Medicine, Pomona, *Health Sciences Clinical Professor, Department of Family Medicine*
- Minh-Ha Tran, D.O. Western University of Health Sciences, *Health Sciences Assistant Clinical Professor, Department of Pathology and Laboratory Medicine*
- Bruce Tromberg, Ph.D. University of Tennessee, *Director of the Beckman Laser Institute and Professor, Departments of Surgery, Biomedical Engineering, and Physiology and Biophysics*
- Fong Tsai, M.D. Taipei Medical College, *Professor Emeritus of Clinical Radiology, Department of Radiological Sciences*
- Atur Turakhia, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*
- Martin C. Tynan, M.B.B.C.H. Trinity College Dublin, *Health Sciences Clinical Professor, Department of Orthopaedic Surgery*
- Cherry Uy, M.D. Far Eastern University, *Health Sciences Clinical Professor of Pediatrics (Neonatology/Perinatal Medicine)*
- Duane J. Vajgrt, M.D. University of California, San Francisco, *Health Sciences Clinical Professor of Radiological Sciences, Department of Radiological Sciences*
- Shermeen Vakharia, M.B.B.S. Aga Khan University Medical College, *Vice Chair for Quality and Patient Safety and Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Theodorus Van Erp, Ph.D. University of Utrecht, *Assistant Professor in Residence, Department of Psychiatry and Human Behavior*
- Nosratola D. Vaziri, M.D. Tehran University Medical School, *Professor Emeritus, Department of Medicine (Nephrology/Renal Diseases)*
- Charles P. Vega, M.D. University of Wisconsin, *Director of the Family Medicine Residency Program, Director of the UC Irvine Program in Medical Education for the Latino Community (PRIME-LC), and Health Sciences Clinical Professor, Department of Family Medicine*
- Sunil Verma, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Otolaryngology - Head and Neck Surgery*
- Larry E. Vickery, Ph.D. University of California, Santa Barbara, *Professor Emeritus, Department of Physiology and Biophysics*
- Anthony Vo, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Trung Vu, M.D., M.S. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*
- K. Mark Vuchinich, M.D., FACOG, University of California, San Diego, *Director of the Division of General Obstetrics and Gynecology and Health Sciences Associate Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*
- Thomas W. Waddington, M.D. Saint Louis University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Medicine*
- Matthew W. Wade, M.D. George Washington University, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*
- Pathik Wadhwa, Ph.D. University of California, Irvine, *Professor, Department of Psychiatry and Human Behavior*
- Feizal Waffarn, M.B.B.S. Madras Medical College, *Professor Emeritus, Department of Pediatrics (Neonatology)*
- Howard B. Waitzkin, M.D., Ph.D. Harvard University, *Professor Emeritus, Department of Medicine (General Internal Medicine and Primary Care)*
- Akio Wakabayashi, M.D. University of Tokyo Medical School, *Professor Emeritus, Department of Surgery (Thoracic)*
- James Wallis, M.D. Harvard Medical School, *Health Sciences Assistant Clinical Professor, Department of Medicine (Cardiology)*
- Roger N. Walsh, M.B.B.S., Ph.D. University of Queensland, *Professor, Department of Psychiatry and Human Behavior*
- Annabel Wang, M.D. McGill University, *Health Sciences Associate Clinical Professor, Department of Neurology*
- Ping H. Wang, M.D. Kaoshing University, *Professor, Departments of Medicine (Endocrinology) and of Physiology and Biophysics*
- Tommy J. Wang, M.D. University of California, Irvine, *Program Director, UCI-CHOC Pediatric Residency Program and Health Sciences Assistant Clinical Professor, Department of Pediatrics*
- James Ward, M.D. Loyola University Chicago, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hematology/Oncology)*
- Rooba Wardeh, M.D. University of Aleppo, *Health Sciences Assistant Clinical Professor, Department of Pathology and Laboratory Medicine*
- Marian L. Waterman, Ph.D. University of California, San Diego, *Department Vice Chair and Professor, Department of Microbiology and Molecular Genetics*
- David Webb, M.D. Tufts University, *Health Sciences Clinical Professor, Department of Medicine (Infectious Diseases)*

Steven L. Wechsler, Ph.D. University of North Carolina, *Professor, Departments of Ophthalmology and of Microbiology and Molecular Genetics*

Gerald D. Weinstein, M.D. University of Pennsylvania School of Medicine, *Professor Emeritus, Department of Dermatology*

John H. Weiss, M.D., Ph.D. Stanford University, *Professor, Departments of Neurology and of Anatomy and Neurobiology*

Li Wen, M.D. West China University of Medical Sciences, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Lari Wenzel, Ph.D. Arizona State University, *Professor, Department of Medicine (General Internal Medicine) and Program in Public Health*

Stephen H. White, Ph.D. University of Washington, *Professor Emeritus, Department of Physiology and Biophysics*

Sharon Wigal, Ph.D. State University of New York, *Health Sciences Clinical Professor, Department of Pediatrics, Child Development Center*

Tim Wigal, Ph.D. University of Texas, Austin, *Adjunct Professor, Department of Pediatrics, Child Development Center*

Jamie Wikenheiser, Ph.D. Case Western Reserve University, *Assistant Adjunct Professor, Department of Anatomy and Neurobiology*

Petra Wilder-Smith, Ph.D. Bern University; D.D.S. Guys Hospital, *Associate Professor in Residence, Department of Surgery*

James H. Williams, Jr., M.D. Harvard Medical School, *Adjunct Professor, Department of Medicine (Hospitalist Program and Pulmonary and Critical Care)*

Russell A. Williams, M.B.B.S. University of Sydney, *Associate Dean of Graduate Medical Education, Director of Surgery Medical Student Education, and Professor, Department of Surgery*

Archie F. Wilson, M.D. University of California, San Francisco, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Medicine (Pulmonary and Critical Care)*

Samuel Eric Wilson, M.D. Wayne State University, *Associate Dean of Affiliated Institutions and Professor, Department of Surgery*

Deborah Wing, M.D. Tulane University, *Director of the Division of Maternal-Fetal Medicine and Professor of Clinical Obstetrics and Gynecology, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*

Garrett A. Wirth, M.D. Albany Medical College, *Health Sciences Associate Clinical Professor, Department of Surgery (Plastic)*

Andrew Wong, M.D. University of Michigan, *Health Sciences Assistant Clinical Professor, Department of Emergency Medicine*

Brian Wong, M.D. The Johns Hopkins University, *Professor, Departments of Otolaryngology and Biomedical Engineering*

Edward K. Wong, Jr., M.D. University of Southern California, *Professor Emeritus, Department of Ophthalmology*

Jason Jun-Hang Wong, M.D. Queen's University, *Health Sciences Assistant Clinical Professor, Department of Radiation Oncology*

Nathan D. Wong, Ph.D. Yale University, *Adjunct Professor, Departments of Medicine (Cardiology) and Epidemiology*

San San Wong-Lee, M.D. Regional College, Rangoon, Burma, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*

Joseph Chong-Sang Wu, M.D. University of California, Irvine, *Associate Professor in Residence, Department of Psychiatry and Human Behavior*

Mark Wu, M.D. University of Wisconsin, *Associate Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*

Sing-Yung Wu, M.D. The Johns Hopkins University, Ph.D. University of Washington, *Professor in Residence, Department of Radiological Sciences*

Frederic Wyle, M.D. University of Pennsylvania, *Professor in Residence Emeritus, Department of Medicine (Infectious Diseases)*

Xiangmin Xu, Ph.D. Vanderbilt University, *Assistant Professor, Department of Anatomy and Neurobiology*

Daniel S. Yanni, M.D. University of California, San Diego, *Surgical Director, Neuro-Intensive Care Unit and Assistant Professor of Clinical Neurological Surgery, Department of Neurological Surgery*

Leman Yel, M.D. Hacettepe University, *Professor Emeritus of Clinical Medicine (Basic/Clinical Immunology)*

Kyoko Yokomori, Ph.D. University of Southern California; Ph.D. of Agriculture (Veterinary Medicine) University of Tokyo, *Professor, Department of Biological Chemistry*

Hiroshi Yoshioka, M.D., Ph.D. University of Tsukuba, *Professor in Residence, Department of Radiological Sciences*

Robert R. Young, M.D. Harvard University, *Professor in Residence Emeritus, Department of Neurology*

Ronald F. Young, M.D. State University of New York, *Professor Emeritus, Department of Neurological Surgery*

Julie Youssef, D.O. New York College of Osteopathic Medicine, M.P.H. Harvard School of Public Health, *Health Sciences Assistant Clinical Professor, Department of Pediatrics (Behavior and Development)*

Jen Yu, M.D. National Taiwan University, Ph.D. University of Pennsylvania, *Department Chair and Professor, Department of Physical Medicine and Rehabilitation*

Christopher Zachary, M.B.B.S. Royal Free Hospital, University of London, *Department Chair and Health Sciences Clinical Professor, Department of Dermatology*

David P. Zamorano, M.D. University of Southern California, *Health Sciences Associate Clinical Professor, Department of Orthopaedic Surgery*

Michael V. Zaragoza, M.D. Case Western Reserve University, *Assistant Professor, Department of Pediatrics, Division of Genetics and Metabolism, and Department of Biological Chemistry*

Sohila Zarandy, M.D. Tehran University Medical School, *Health Sciences Associate Clinical Professor, Department of Medicine*

Jason A. Zell, D.O. Nova Southeastern University, *Director, Hematology/Oncology Fellowship Program and Assistant Professor, Department of Medicine*

Fan-Gang (Frank) Zeng, Ph.D. Syracuse University, *Director of the Hearing and Speech Laboratory and Professor, Departments of Otolaryngology, Biomedical Engineering, and Anatomy and Neurobiology*

Xiaohui Zhao, M.D. Nanjing Medical University; Ph.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Pathology and Laboratory Medicine*

Qun-Yong Zhou, Ph.D. Oregon Health Sciences University, *Professor, Department of Pharmacology*

Yi-Hong Zhou, Ph.D. Dalhousie University, *Assistant Professor and Assistant Professor in Residence, Departments of Neurological Surgery and Biological Chemistry*

Xiaolin Zi, Ph.D. Shanghai Medical University, *Associate Professor, Departments of Urology, Pharmaceutical Sciences, and Pharmacology*

Argyrios Ziogas, Ph.D. University of Southern California, *Associate Adjunct Professor, Department of Epidemiology*

Albert Zlotnik, Ph.D. University of Colorado, *Professor, Department of Physiology and Biophysics*

The M.D. Program

Admissions

All inquiries regarding the UCI School of Medicine's admission programs and procedures should be directed to:

University of California, Irvine
School of Medicine
Office of Admissions and Outreach
Medical Education Building
Irvine, CA 92697-4089

(949) 824-5388 or (800) UCI-5388
<http://www.meded.uci.edu/admissions/>

The UCI School of Medicine is a member of the American Medical College Application Service (AMCAS). All students who seek entrance to the UCI School of Medicine must complete the AMCAS application. AMCAS application information is available at <http://www.aamc.org/students/amcas/start.htm>. Applications must be submitted between June 1 and November 1 of the year preceding anticipated admission.

Additional information for the following programs is included below: Medical Scientist Training Program (M.D./Ph.D.), the M.D./M.B.A Program, and the Program in Medical Education for the Latino Community (PRIME-LC).

Selection Factors

The UCI School of Medicine seeks to admit students who are highly qualified to be trained in the practice of medicine and whose backgrounds, talents, and experiences contribute to a diverse student body. The Admissions Committee carefully reviews all applicants whose academic record and MCAT scores indicate that they will be able to handle the rigorous medical school curriculum. In addition to scholastic achievement, attributes deemed desirable in prospective students include leadership

ability and participation in extracurricular activities such as clinical and/or medically related research experience, as well as community service. Careful consideration is given to applicants from disadvantaged backgrounds.

Information provided by the AMCAS application is used for preliminary screening. Based on decisions reached by the Admissions Committee, applicants may be sent a secondary application. Applicants receiving a secondary application are requested to submit additional materials which include a minimum of three letters of recommendation, supplemental information forms, and a nonrefundable application fee of \$80. Upon further review by the Admissions Committee, approximately 500 of those applicants receiving a secondary application will be interviewed. Regional interviews are not available. Preference is given to California residents and applicants who are either United States citizens or permanent residents. The UCI School of Medicine does not accept transfer students.

Requirements for Admission

Students can be considered for admission to the School of Medicine if they meet the following requirements:

1. A minimum of three years (90 semester units) of undergraduate course work is required, including a minimum of one full-time year at an accredited U.S. college or university. A baccalaureate degree is strongly recommended but not required. Candidates for admission may submit community college credit only to the extent granted on transfer to a four-year college or university. For purposes of evaluation, letter or numerical grades are preferred for course work, particularly for the required subjects listed below. Final enrollment into the first-year class at the School of Medicine is contingent upon evidence of satisfactory completion of all requirements with a grade of C or higher and of all courses listed as in progress at the time of application. Failure to meet the requirements or falsification of information are grounds for rejection or dismissal.
2. Completion of the following college course requirements prior to matriculation:

Subject	Comments	Semester Units
Biology	Courses must include a minimum of one semester or two quarters of upper-division biology, excluding botany	12
Chemistry	Courses must include inorganic, organic, and biochemistry	16
Physics		8
Math	Courses must include calculus and statistics	6
English Writing/Composition		3

3. Applicants are strongly encouraged to have completed their basic science requirements at the time of application. No specific major is required, however, demonstrated ability in the sciences is of great importance. In addition, applicants are advised to take advantage of the intellectual maturation afforded by a well-rounded liberal arts education. English, the humanities, and the social and behavioral sciences are considered particularly important. The following courses are also recommended but not required: molecular biology, cell biology, genetics, vertebrate embryology, psychology, and Spanish.

4. The Medical College Admission Test (MCAT), <http://www.aamc.org/students/mcat/start.htm>, is required. The MCAT must be taken within three years of application, no later than September of the year prior to matriculation.
5. A criminal background check is conducted on all accepted applicants.
6. All students matriculating to the UCI School of Medicine must be able to meet the Technical Standards available for viewing at <http://www.meded.uci.edu/admissions>.

Outreach

Outreach efforts coordinated by this office are designed to introduce students to the medical profession during their high school and undergraduate education. An additional goal of this office is to build a pipeline of potential candidates for medical school and recruit students from socioeconomically disadvantaged groups who have a desire to serve in the medically under-served communities in California. To reach these goals, programs are developed and implemented for students in high school, community colleges, and four-year undergraduate institutions. Examples of these activities include a Post baccalaureate Program, Premedical Conferences, and Summer Outreach Programs. Outreach staff conduct academic advising related to the medical school admissions process and develop liaisons with UCI undergraduate academic programs and pre-health advisors.

Medical Student Advisor System

The School of Medicine provides a comprehensive academic advising and assistance program that spans the full duration of the students' educational program.

Academic Skills Assessment

All entering students undergo an academic skills assessment during the new student orientation. Students then meet individually with the associate dean for student affairs, the academic skills coordinator, and the School of Medicine psychologist to discuss study skills, early performance, and overall adjustment to medical school. Additional services are provided on an as-needed basis by the academic skills coordinator and the SOM psychologist.

Academic Advisors

Michael Prislín, M.D., Associate Dean Student Affairs; (949) 824-8358

Student academic performance during the first two years is monitored on a monthly basis by the Educational Support Committee. The committee develops specific action plans for each student experiencing academic difficulty. All students are also assigned a faculty advisor beginning early in their first year. This faculty advisor serves as the student's Clinical Foundations course small-group leader during years one and two. For years three and four, academic advisement occurs primarily via continuing interactions with the student's faculty advisor and the associate dean for student affairs. Also during years three and four, the Educational Support Committee consisting of the Clinical Clerkship Directors periodically reviews student performance. The faculty advisor provides semi-annual reviews and formative feedback regarding student performance as well as general counseling relating to emerging career preferences and year-four scheduling. Students also have access to a group of faculty from various departments who have agreed to provide specialty-specific academic advice in their disciplines. Several workshops are conducted during the second half of year three and early in year four to prepare students for the residency application process. All students also meet individually with the associate dean for student affairs to review their Medical Student

Performance Evaluation (dean's letter) and discuss individual residency application strategies. Additional resources are involved on an as-needed basis by the associate dean for student affairs.

Peer Review and Peer Counseling Program

Michael Prislín, M.D., Associate Dean Student Affairs; (949) 824-8358

The School of Medicine has an informal peer review process, aimed at early detection and assistance for medical students who are experiencing difficulty such as professional conduct problems, suspected impairment, violation of the honor code, or violation of any University policy, regulation, or rule. The Peer Review Committee is comprised of two representatives from each class, the student body co-presidents, and two advisory faculty members. The committee operates within guidelines set jointly by the School of Medicine administration and the student body. Cases involving serious professional misconduct are referred to the Dean's Office. The Peer Review Committee conducts hearings and may impose sanctions or provide assistance to the student.

Medical Scientist Training Program (M.D./Ph.D.)

Alan Goldin, M.D., Ph.D., Chair; (949) 824-5264

Exceptionally well-qualified students interested in careers in academic medicine and with demonstrated research accomplishments may be considered for admission to the Medical Scientist Training Program (MSTP). Students in this program pursue a combined curriculum for an M.D. degree from the School of Medicine and a Ph.D. degree from any of the graduate programs at UCI. The normative time for completion of the program is eight years, and students holding either degree are not eligible for MSTP. The maximum time for completion of the program is 10 years. Additional information is available from the MSTP Coordinator's Office, (949) 824-5264; mstp@uci.edu; <http://www.mstp.uci.edu/>.

Applicants must submit a supplementary application (available from the School of Medicine Office of Admissions) to the Medical Scientist Training Program when they are submitting their secondary application information to the School of Medicine. Students accepted into the program have the option of pursuing graduate study in any of the graduate programs at UCI. Although a specific graduate department need not be chosen at the time of admission, students are expected to have selected a field for their graduate studies. Financial support in the form of a fellowship, which includes a stipend as well as tuition and fees, is provided. Applicants not accepted into MSTP may be considered separately for admission to the School of Medicine.

M.D./M.B.A. Degree Program

Maria Chandler, M.D./M.B.A., Faculty Advisor; (949) 824-7133

The M.D./M.B.A. program requires five or six years for completion. It is aimed at individuals who are exceptional in ability and motivation and who seek a career as physicians with major responsibility for administration and management in health care organizations and institutions. Students in this program pursue a combined curriculum for an M.D. degree from the School of Medicine and an M.B.A. degree from The Paul Merage School of Business.

Students must be currently enrolled in the M.D. program in order to apply to the combined M.D./M.B.A. program. During their second or third year of medical school, interested students submit an application to The Paul Merage School of Business Admissions Committee, after review by the School of Medicine. Final acceptance to the program is granted by

The Paul Merage School of Business, and M.B.A. course work begins following completion of the student's third year of medical school. Students should be aware that enrollment in the M.D. program does not guarantee acceptance into the M.B.A. program.

The MCAT, along with the completion of three years of medical school training in good standing and passage of USMLE Step 1, currently serve as a waiver for the GMAT entrance examination usually required for application to the M.B.A. program. The total number of units required to graduate from each program separately are satisfied in the M.D./M.B.A. program.

Program in Medical Education for the Latino Community (PRIME-LC)

Charles Vega, M.D., Director; (949) 824-7136

A carefully selected group of students from diverse backgrounds and with superior academic credentials, proven commitment to service, and solid conversational Spanish will be considered for acceptance to the Program in Medical Education for the Latino Community (PRIME-LC) at the UCI School of Medicine. PRIME-LC responds to the increasing demand for physician-leaders who are culturally and linguistically competent to address the health care delivery, research, and policy needs of underserved Latino communities in California. The program spans all three components of medical training: undergraduate (medical school), graduate (residency program), and continuing medical education (post-residency). Students in PRIME-LC complete additional value-added curriculum in addition to their medical training in order to reach their goals of leading communities, and they also complete a Master's degree program of their choice. The first residency positions in any UC PRIME opened in the UCI Family Medicine program in 2010.

The PRIME-LC supplemental application is part of the UCI School of Medicine secondary application and must be completed to be considered for acceptance. Applicants selected for faculty and student interviews are required to undertake a third interview in Spanish to evaluate conversational skills and commitment to service. All interested applicants, including those who are not currently California residents, are encouraged to complete the PRIME-LC application. Financial support is available in the form of scholarships, loans, and loan repayment programs. Applicants not accepted into PRIME-LC may be considered separately for admission to the regular School of Medicine M.D. program. For more information contact (949) 824-7136; primelc@uci.edu; <http://www.meded.uci.edu/PRIME-LC>.

The M.D. Curriculum

The UCI medical curriculum continues to meet the changing needs of medical education within all four years of instruction. Indeed, the School of Medicine faculty views curriculum development as a continual process and feels that medical education and teaching innovations must be encouraged and supported. The curriculum is designed to encourage medical students to become participants in their education process, to be active rather than passive learners, to become lifelong learners, and to use cooperative and team-learning principles.

UCI is dedicated to the nurturing of humanistic, caring physicians with top-notch clinical expertise and skills. The School strives for this through a curriculum that is not only anchored in the science of medicine but also provides meaningful experiences in the humanistic dimensions of medicine. In this context, the faculty endeavors to provide students with experiences in areas such as communications and empathy, ethics

and professionalism; diversity awareness; and cultural sensitivity and medical humanities. The faculty also feels that the curriculum should strive to integrate basic and clinical sciences by bringing substantial clinical material into the early phases of medical education.

The School has achieved vertical integration of the curriculum with the development of a series of "Clinical Foundations" courses. The courses are longitudinal multidisciplinary experiences broadly designed to prepare students for their future careers in medicine through the application of experiential and self-directed learning principles. First- and second-year students begin to prepare for their clerkships through clinical exposures featuring standardized patients and clinical tag-along experiences. These courses also utilize small group learning sessions to reinforce core concepts of patient-physician interactions and introductory clinical reasoning skill development. During the Clinical Foundations IV course (years three and four) students explore many of the crucial issues first presented during the introductory courses. During this segment greater emphasis is placed on advanced skill acquisition and more mature professional role development.

To satisfy the requirement for the M.D. degree, each medical student must successfully complete the full curriculum. Students must also pass both Step 1 and Step 2 of the United States Medical Licensing Examination (USMLE) and successfully pass a Clinical Practice Examination (CPX) prior to graduation.

An ongoing academic monitoring program is coordinated by the Office of Student Affairs, which identifies students early who might be experiencing academic difficulty and provides them with resources to successfully complete their course work. Faculty advisors are assigned to students during their first and second years. Students have advisory sessions with M.D. faculty prior to the scheduling of their fourth-year course work. A Learning Resources Program is available to provide tutorial assistance and study skills training. USMLE reviews are also provided.

Curricular Policies

The curricular policies of the School of Medicine are the responsibility of the faculty committees on Curriculum and Educational Policy and on Promotions and Honors. A listing of these policies, as well as information regarding registration, rules and regulations, grading procedures, and requirements for academic advancement, are contained in the *School of Medicine Handbook*, which is available at <http://www.meded.uci.edu/Students>.

¹ The sequence of third and fourth years varies.

² Prerequisite: Inpatient and Ambulatory Medicine.

Curricular Description

First-Year Curriculum

Clinical Foundations I

Clinical Foundations I, first of the four-part Clinical Foundations series, serves as the introductory clinical medicine course for first-year medical students. Participating students learn core skills in physician-patient communication, medical interviewing, physical examination, and health promotion. The course is horizontally integrated with the basic science curriculum. The series includes a variety of small and large group sessions taught by three types of faculty: core teachers, content theme coordinators, and community preceptors. Students complete multiple medical interviews, physical examinations, and patient write-ups for which they receive feedback designed to improve proficiency. (*Med Ed 554A-B-C*)

Anatomy and Embryology

The structure of the human body is taught in Anatomy and Embryology. Emphasis is placed on normal structure as it relates to function, with consideration of abnormal structures that may be revealed in a clinical setting. Anatomy is taught through a regional approach, with an emphasis on laboratory dissections and demonstrations, augmented by lectures, radiographic films, discussions, and clinical correlate material. The course includes a detailed consideration of the embryologic aspects of human development. (*Med Ed 500A-B*)

Neuroscience

The objective of this course is to provide students with the fundamental concepts, vocabulary, and learning strategies to attain a level of proficiency in basic integrative neurosciences so that they will develop an understanding in the clinical neurosciences throughout their careers as physicians. The course is integrative in the sense that the underlying knowledge of molecular, cellular, physiological, developmental, and

neuroanatomical organization of the nervous system is brought together in each lecture block with clinical themes and examples in lectures, and which is further reinforced by clinical correlates given by clinicians. The course emphasizes knowledge of the nervous system using lessons from clinical neuroanatomy, systems neurosciences, and regional and developmental neuroanatomy. The course uses the Blumenfeld text, Haines atlas, wet lab handouts, and the Neurosyllabus CD, which are all geared toward mastering this multiple strategy to the study of the human nervous system. (*Med Ed 502A*)

Histology

Histology is designed to provide students with knowledge of the major features of the structural organization of cells, tissues and organs, and how that organization is related to function. Course material consists of lectures, clinical correlate discussions, and group/independent study of images. Emphasis is placed on normal structure and function, with consideration of abnormalities in clinical cases. (*Med Ed 503A-B*)

Medical Genetics

Medical Genetics reviews the basic principles of human genetics related to disease. Assessment of patterns of genetic risk, screening for genetics diseases, and cytogenetics and biochemical diagnosis are presented. Utilization of the human gene map and DNA sequence information for molecular genetic diagnosis are discussed. Students are introduced to the use of genetic databases and bioinformatics. Approaches to treatment of genetic diseases are presented. Legal, ethical, and social aspects of diagnosis and management of genetic disease are discussed. (*Med Ed 511*)

Medical Biochemistry and Molecular Biology

Covers the following topics from a biomedical perspective: protein and nucleic acid biochemistry, carbohydrates, lipids, amino acids, purines and pyrimidines, genome structure, molecular mechanisms of development, and signal transduction. (*Med Ed 522*)

Physiology/Pathophysiology

This course consists of lectures, clinical correlates, hands-on workshops, small group discussions, and exercises in the simulation center covering the classical concepts of medical physiology. Specific topics include hemostasis, blood, neurophysiology, cardiovascular, respiratory, renal, gastrointestinal, endocrine, exercise, temperature regulation, and sexual physiology. Prerequisite: Medical Biochemistry and Molecular Biology. (*Med Ed 543A-B*)

Immunology

Immunology covers the cellular and molecular basis of immune responsiveness and the roles of the immune system in both health and disease. The material is presented in lectures and clinical correlates, as well as in a set of printed core notes. Also included are a number of Patient-Oriented Problem Solving (POPS) sessions in which participation is required. (*Med Ed 544*)

Second-Year Curriculum

Clinical Foundations II

Clinical Foundations II, second of the Clinical Foundations series, builds second-year medical students' clinical skills. Students learn advanced skills in history-taking, physical diagnosis, and clinical reasoning. Clinical didactics sessions synthesize learning in the clinical and basic sciences. The course is comprised mostly of small-group sessions taught primarily by three types of faculty: core clinical teachers, community clinical teachers, and content theme coordinators. With these faculty, students

work on focused, guided practice of clinical skills that integrates basic science course work. About a third of the course is in the form of large group clinical didactic and interactive sessions to synthesize clinical and basic sciences. (*Med Ed 555A-B*)

Medical Microbiology

This course covers the biology of infectious agents, including viruses, bacteria, fungi, and parasites, to provide the foundation in microbiology for the subsequent study of infectious diseases. Lectures, small group sessions with clinicians, and laboratory sessions are used to teach the molecular bases of microbial pathogenesis, diagnostic testing, antimicrobial therapy, and prevention strategies. Prerequisite: first-year curriculum. Graduate students must have approval of the course director and enroll through the Department of Microbiology and Molecular Genetics. (*Med Ed 507A, B*)

General and Systemic Pathology

This course deals with basic causes, mechanisms, and consequences of disease processes and with some applications of these considerations to clinical medicine. After an introduction to general types of disease processes, these processes are studied further as they affect specific organs and organ systems. Prerequisite: first-year curriculum. (*Med Ed 508A-B-C*)

Clinical Pathology

This course consists of lectures and laboratories covering the areas of hematology, blood bank, clinical chemistry, and microbiology. It provides students with a foundation for understanding the pathogenesis of a variety of disease states, as well as a foundation for the proper use of the laboratory for diagnosis and optimum patient management. Prerequisite: first-year curriculum. (*Med Ed 509A-B*)

Medical Pharmacology

This course covers the various classes of drugs that are used in medicine, particularly those used in specific or symptomatic treatment of disease states. Drugs of abuse are also covered. Emphasis is on the mechanisms of action of drugs at the organ and system level and on their use in medicine. The course includes lectures that illustrate pharmacologic principles, supplemented by small group problem-solving sessions. Prerequisites: Biochemistry and Physiology. (*Med Ed 517A-B-C*)

Third- and Fourth-Year Curriculum

Clinical Foundations III

The final part of the Clinical Foundations series is a one-month, full-time block rotation at the beginning of the third year in which all students participate five days per week. Taught by the Clinical Foundations core teachers and selected full-time faculty volunteers, Clinical Foundations III provides comprehensive preparation for third-year clinical rotations. Every morning and afternoon, students participate in hands-on exercises and labs addressing (1) course overview, medical professionalism (large-group session); (2) advanced clinical skills (small groups); and (3) hands-on technical skills (small groups). (*Med Ed 550*)

Obstetrics and Gynecology Clerkship

During this eight-week clerkship, students are taught an introduction to reproductive physiology and clinical obstetrics and gynecology. Practical experience is obtained throughout the rotations of labor and delivery, gynecology, and the outpatient clinic. In addition, students have an elective choice between gynecologic oncology, high-risk obstetrics, and gynecologic surgery. Required third-year rotation. (*Med Ed 524*)

General Surgery Clerkship

The General Surgery clerkship provides students, as members of the surgical team, with an opportunity to study surgical patients in outpatient and hospital settings. Students acquire surgical knowledge, as well as develop skills in taking surgical histories and conducting physical examinations. Emphasis is placed on the clinical evaluation, pathogenesis, diagnosis, and treatment of surgical diseases. Students spend six weeks on general surgery (three weeks each at UC Irvine Medical Center and Veterans Affairs Long Beach Healthcare System) and one week on one of the sub-specialties (urology, ENT, orthopedics, or plastic surgery). (*Med Ed 526*)

Inpatient and Ambulatory Medicine Clerkship

The clerkship occurs in a highly structured clinical environment in both inpatient and ambulatory settings. Students gradually assume responsibility for the care of patients, thereby enhancing their clinical, diagnostic, and procedural skills. Clinical vignettes and bedside teaching serve to round out the experience. Required third-year rotation. (*Med Ed 527A, 527B*)

Pediatrics Clerkship

The pediatrics clerkship serves as an introduction to general pediatrics. Students rotate on the pediatric inpatient service, pediatric ambulatory settings, and the newborn nursery. During the clerkship, students develop their knowledge and skills in conducting age-appropriate patient histories and physical examinations and developing differential diagnoses and management plans. (*Med Ed 528*)

Psychiatry Clerkship

This six-week clinical clerkship provides an opportunity for hands-on experience in the process of recognizing, diagnosing, and treating mental illness using the latest neuropharmacological advances in brain research as well as more traditional psychotherapeutic approaches. Each student participates fully in patient care, clinical teaching, and conferences. There are several choices of clinical settings for the rotation, including adult inpatient psychiatry, adolescent inpatient psychiatry, consultation and emergency psychiatry, adolescent partial hospitalization program, and a variety of substance abuse and ambulatory experiences. The sites include UC Irvine Medical Center and Veterans Affairs Long Beach Healthcare System. A required lecture series is presented on Wednesday afternoons at UC Irvine Medical Center, as well as problem-based learning cases on Friday afternoons. (*Med Ed 529*)

Neuroscience Clerkship

UCI students are required to take a four-week neuroscience clerkship during either their third or fourth year. Students are encouraged to do this in the third year as it will be useful for the USMLE Step 2 examination. Extramural students may take the course as an elective if a slot is available. This clerkship emphasizes the development of skills in taking a neurological history and performing a neurological examination, formulating a differential diagnosis, and proposing a course of management for neurological disorders. (*Med Ed 532*)

Radiology Clerkship

This core clerkship consists of daily clinical film conferences, didactic lectures, and Web-based laboratory. Radiology conferences inter-relate general medicine, surgery, and radiology. Emphasis is given to correlate clinical findings and use the imaging modalities for problem-solving and diagnosis and treatment, including an understanding of risk/cost/benefit ratio involved in daily clinical practice. (*Med Ed 533*)

Clinical Foundations IV

This is a two-week required course that all fourth-year students take during the month of March. The students prepare presentations for their peers and faculty that integrate basic science and clinical science. The course also prepares the students for residency and provides them with an opportunity to obtain ACLS certification. (*Med Ed 535*)

Senior Subinternship

Students spend four weeks as subinterns during which time they carry the full ward responsibility of an intern on one-half the number of patients usually carried by an intern. The subinternship is designed to improve clinical competence and to prepare the students for the challenges and demands of the internship. Students may choose between subinternships in medicine, surgery, or pediatrics. (*Med Ed 536, 537, 538, or 539*)

Family Medicine Clerkship

This clerkship matches students with a family physician for a four-week block. Students are assigned to a UCI-affiliated clinic where the principles of family medicine and primary care are taught. Emphasis is placed upon exposing students to the 25 most common health care problems seen in family medicine. Students are exposed to the principles of community health and epidemiology, as practically applied in an ambulatory care setting. Students develop an awareness of the current health care delivery environment, including issues such as health care costs and the lifestyle of a family physician. Special tracks are available for interested students in geriatrics, integrative medicine, and under-served care. Special teaching sessions on family centered maternity care, health maintenance and nutrition, and musculoskeletal joint exams are part of the experience. A curriculum in ophthalmology is also part of the clerkship. Prerequisites: successful completion of the first- and second-year curriculum. (*Med Ed 597*)

Intensive Care Unit

This is a four-week rotation offered at UC Irvine Medical Center and Veterans Affairs Long Beach Healthcare System. ICU is offered in medicine, surgery, and anesthesiology. Students function as subinterns, becoming integral members of the ICU team, and serve as primary caregivers under supervision. (*Med Ed 605B, 630K, 633M, or 685U*)

Emergency Medicine

The objectives of the Emergency Medicine clerkship are to introduce students to principles of acute care medicine while caring for acutely ill and injured patients. Students have the opportunity to evaluate patients, expand their directed history and physical making skills, create a broad differential diagnosis, and formulate effective testing and treatment strategies. Active participation in patient care through refinement of procedural skills is largely emphasized and encouraged. The course consists of experiences in direct patient care, assigned readings from emergency medicine references, weekly conferences, and an end-of-rotation final examination. (*Med Ed 630D*)

Electives

Depending upon their particular interests, needs, and goals, students may take a variety of elective courses consisting of at least 30 contact-hours per week during the third and fourth years. Electives must be approved by the clinical faculty advisor. Students may take up to 20 weeks of their fourth-year course work (core/electives) at institutions other than UCI.

A listing of elective courses and descriptions can be found online at <http://www.meded.uci.edu/elective>.

All questions regarding the curriculum, electives, or matters of records should be directed to:

University of California, Irvine
School of Medicine
Office of Educational Affairs
Medical Education Building
Irvine, CA 92697-4089

General information/records: (949) 824-6138; scheduling: (714) 456-8462; curriculum: (949) 824-4609.

Office of Educational Affairs

Gerald A. Maguire, M.D., **Senior Associate Dean**; (949) 824-5798

The Senior Associate Dean for Educational Affairs, in cooperation with the Academic Senate faculty, has responsibility for administrative oversight of the educational program leading to the M.D. degree, the postgraduate residency programs, and continuing medical education programs provided for practicing physicians and allied health personnel. The Senior Associate Dean also has administrative oversight responsibility for the Office of Admissions and Outreach. The Office of Undergraduate Medical Education provides services for the M.D. program which include curriculum development, implementation, management, and evaluation. The Office of Student Affairs provides student support services which include academic advisement, learning skills counseling, psychological counseling, career counseling, and student records, and coordinates additional services offered through general University offices which include housing, student health, and disabled student services.

Student Affairs

Michael Prislín, M.D., Associate Dean; (949) 824-8358
 Barbara Lutz, Registrar, Director; (949) 824-5283
 Marianne Ross, Ph.D., Counseling Psychologist; (949) 824-4621
 Geraldine Codd, Academic Skills Coordinator; (949) 824-3415

The mission of the Office of Student Affairs is to create an environment within the School of Medicine community that fosters student attainment of the School of Medicine educational objectives. This is accomplished through assuring that student participation in the educational program occurs in a manner consistent with School of Medicine policies and regulations, and through the provision of support services that facilitate optimal student participation in the educational program. To accomplish the educational assurance mission, the Office of Student Affairs disseminates information regarding academic policies and regulations, provides administrative and executive support for the faculty Committee on Promotions and Honors, and facilitates the institutional recognition of student achievement through the conduct of various School of Medicine events. To accomplish the educational support mission, the Office of Student Affairs provides academic, personal, psychological, career, and financial counseling; academic skills assessment and learning resources support, student wellness programs, student facilities support, initiatives to enhance the learning environment, and support for a variety of student organizations and informal activities.

Financial Aid

Luis Medina, Director; (949) 824-6476

The UCI School of Medicine Financial Aid Office provides financial assistance and financial counseling services to entering and continuing medical students. The office secures, manages, and provides funds in

the form of scholarships, grants, and loans to assist in meeting students' educational expenses.

The office coordinates financial aid application materials; tracks documents needed to complete an application; reviews and evaluates information provided by applicants; awards financial aid programs; and conducts research to determine basic educational expense budgets. It also provides students with information on policies and procedures, cost of attendance, and eligibility criteria.

In providing counseling services, the office advises students, reviews their individual circumstances, and provides financial assistance within financial aid program guidelines. It presents financial aid workshops for prospective and enrolled students to enhance their knowledge about financial aid programs and the application process, provides debt management counseling, and conducts entrance and exit interviews.

Curricular Affairs

Shahram Lotfipour, M.D., M.P.H., Associate Dean, Clinical Science Education; (949) 824-6138

Harry T. Haigler, Ph.D., Associate Dean, Basic Science Education; (949) 824-6304

This office provides support related to curricular issues for the School of Medicine, departments, faculty, and students; initiates curriculum review and innovation to meet the challenges of contemporary medical education; establishes and reviews the objectives of the School of Medicine and ensures individual courses are teaching to meet the objectives; serves as facilitators of new programs and curriculum and supports working committees during curriculum development; facilitates and monitors curriculum content theme integration; and maintains records on course materials and grading policies. This office is responsible for curriculum documentation for review by the Curriculum and Educational Policies committee; the collection of course evaluations by students; maintaining accurate information on core and elective curriculum; and assessing the success of the current programs.

Instructional Technology Group

Warren Wiechmann, M.D., Faculty Director; (949) 824-6138

Armando Gauna, MACC Director; (949) 824-1215

The Medical Academic Computing Center (MACC) was established for the instructional use of computing and to further educational objectives by providing medical instructional software that is integrated into the curriculum for numerous courses, including Histology, Pathology, Medical Genetics, Neurosciences, and Anatomy. The Center, which has extended evening and weekend hours, provides students access to Internet resources and productivity applications. Students benefit by utilizing anatomical visualization software, self-administered practice examinations, as well as by having access to e-mail and many online medical information resources. Students complete much of their course write-ups in the Center, where they have access to word processing programs and printers. MACC offers audiovisual support for course material and Scantron grading services in addition to managing and supporting the computer systems in the Student Training Center.

Continuing Medical Education

Bonnie Carroll, Director; (949) 824-9163

Elena Gilliam, Regularly Scheduled Conference Manager; (949) 824-4220

The Office of Continuing Medical Education provides educational activities to physicians and other health care professionals to reinforce basic medical knowledge, improve competency, and enhance performance-in-

practice and outcomes of patient care. Additionally, these activities impart updated information on clinical practice and health care delivery; introduce new ideas, skills, and technology; and disseminate pertinent research findings. The program encompasses a broad and comprehensive range of topics based on identified gaps in the needs of the communities served. As an academic center of excellence that includes the UC Irvine Medical Center, emphasis is placed on the identification of areas for improvement through the system's Quality Improvement Department for which CME is a change-agent.

Graduate Medical Education

Russell Williams, M.D., Associate Dean; (714) 456-3526

Nancy Koehring, Director, Postgraduate Medical Education and Community Programs; (714) 456-3526

The UCI School of Medicine Graduate Medical Education Training Programs attract medical students from prestigious medical schools nationwide. UCI offers 42 ACGME-approved residency and fellowship training programs. There are approximately 600 residents and fellows in these training programs. UC Irvine Medical Center, Veterans Affairs Long Beach Healthcare System, and Long Beach Memorial Medical Center are the integrated training sites for the residency programs. Other affiliations such as Kaiser Anaheim, Kaiser Riverside, Western Medical Center, City of Hope, Children's Hospital of Orange County, and Children's Hospital Los Angeles offer additional residents training in specialized fields.

Postgraduate Educational Programs

Residency Programs

The School of Medicine and its affiliated hospitals offer approximately 650 residency positions in almost all areas of medicine. Training levels range from first-year residencies through seventh-year-level subspecialty fellowships. Inquiries about specific programs should be directed to the Program Director as listed in the *Directory of Residency Training Programs*, published each year by the American Medical Association, or to the chair of the appropriate School of Medicine department.

All residency programs meet the formal standards of the Accreditation Council for Graduate Medical Education and the appropriate specialty boards. UCI adheres to the Health Professions Educational Assistance Act of 1976, P.L. 94-484, Section 709, regarding shared-schedule residency training positions.

Residents in all programs rotate to UC Irvine Medical Center at some time. Residents in anesthesiology, dermatology, diagnostic radiology, medicine, neurology, ophthalmology, pathology, surgery, physical medicine and rehabilitation, radiation oncology, family medicine subspecialties of medicine, orthopaedics, otolaryngology, urology, and psychiatry also rotate to the Veterans Affairs Long Beach Healthcare System. Residents in medicine, medicine subspecialties, anesthesiology, radiation oncology, psychiatry, obstetrics and gynecology, pathology, pediatrics, physical medicine and rehabilitation, plastic surgery, and surgery also rotate to the Memorial Hospital Medical Center/Miller Children's Hospital in Long Beach. In 2009, UCI established an affiliation with the Children's Hospital of Orange County (CHOC), which will be a major training site for a combined program in pediatrics. Residents may also spend periods of time at other affiliated hospitals and clinics.

Anesthesiology

The Anesthesiology Residency Program is a five-year accredited categorical program. It offers training for residents at the postgraduate

PG-1 to PG-4 levels. The residents spend a PGY-1/Clinical Base Year in intensive medical/surgical training at Long Beach Memorial Medical Center, Veterans Affairs Long Beach Healthcare System, and UC Irvine Medical Center. The PGY-2 through PGY-4 years involve broad clinical training at the UC Irvine Medical Center as well as rotations in affiliates at Children's Hospital of Los Angeles (two months), Cedars-Sinai Medical Center (two months), Long Beach Memorial (two months) and the Veterans Affairs Long Beach Healthcare System (two months). Training is offered in general anesthesia, regional anesthesia, cardiac anesthesia, pediatric anesthesia, trauma anesthesia, neurosurgical anesthesia, ambulatory anesthesia, obstetric anesthesia, intensive care, and pain management. Electives in subspecialty training in obstetrical anesthesia, critical care medicine, pediatric anesthesia, pain management, cardiac anesthesia, or research are offered as part of the PGY-4 year.

Dermatology

The Department of Dermatology offers a three-year accredited residency which has fifteen residents, five for each of three postgraduate years. Residents rotate through clinics at UC Irvine, the Veteran Affairs Long Beach Healthcare System, and Kaiser Permanente and receive extensive training in medical and surgical dermatology and are active in research projects. Residents rotate through specialty clinics which see patients with immunobullous disease, pigmentary disorders, venous disease, vascular birthmarks, pediatric disorders, and melanoma. Residents receive extensive training in Mohs surgery, laser techniques, excisional surgery, performance of flaps and grafts, and administration of cosmetic agents. Residents present at local, national, and international meetings.

Emergency Medicine

The Emergency Medicine residency was established in 1988 and has full accreditation by the Residency Review Committee. The program has 18 residents, six for each of three postgraduate years. The UC Irvine Medical Center Emergency Department is a high-acuity, Level I Trauma Center, treating over 39,000 patients annually. Thirteen board-certified emergency medicine faculty provide 24-hour patient care and supervision of residents and medical students. The Department of Emergency Medicine is active in disaster preparedness and response, emergency uses of ultrasound imaging, public affairs, community service, and research in the areas of prehospital care, instructional methods, trauma, health policy, and infectious disease, among others.

Family Medicine

The mission of the Family Medicine Residency Program is to train family physicians to succeed in a contemporary practice environment and to deliver high-quality medical care to a culturally and socioeconomically diverse patient population. This fully accredited program boasts 27 residents and offers training in a variety of settings. The residents' continuity clinic is located in the largest community clinic in Orange County, and residents participate in a number of community outreach activities. The world-class faculty act as teachers and mentors to the residents and teach them important principles to help them succeed as professionals. The residency program is a leader in a variety of curricular endeavors including school outreach, training residents how to teach, the business of medicine, sports medicine, and much more. The hundreds of successful residency graduates in the local area are a testament to the program's ongoing efforts to train outstanding family doctors.

Geriatrics

The Geriatrics Fellowship is a comprehensive one-year training program that has been accredited since 1991, providing eligibility for Geriatric

Medicine specialization for Internal Medicine and Family Medicine physicians. Fellows receive training at UC Irvine Medical Center as well as affiliated sites, including Veterans Affairs Long Beach Healthcare System, and alternative community care environments for seniors. Fellows have longitudinal experiences in high-quality skilled nursing facilities, assisted living facilities, a comprehensive, multidisciplinary assessment program, and primary care practices. Clinical training in geropsychiatry is provided in a 17-bed geropsychiatry unit located at UC Irvine Medical Center, as well as in an outpatient setting.

Internal Medicine

The internal medicine residency program is a traditional three-year training program and also sponsors a one-year preliminary program. The program focuses on core educational skills of the internist and offers pathways for primary care, hospitalist medicine, and research. Residents rotate through UC Irvine Medical Center, the Veterans Affairs Long Beach Healthcare System, and Long Beach Memorial Medical Center. Core program faculty have a special interest in academic internal medicine and education.

Subspecialty fellowships are offered in basic and clinical immunology, cardiology, endocrinology and metabolic diseases, gastroenterology, hematology/oncology, infectious diseases, nephrology, pulmonary/critical care diseases, and rheumatology.

Interventional Radiology

The Department of Radiological Sciences offers a one-year, clinically oriented fellowship in Interventional Radiology. Training in this discipline involves a broad range of vascular and interventional radiology procedures including interventional CT and Ultrasound. The fellow will also have the opportunity and option to participate in neuroradiological procedures including neurovascular intervention. The fellow is encouraged to participate in ongoing research projects and publications. The Vascular and Interventional Fellowship Program at UCI is ACGME accredited.

Medical Genetics

UCI offers two Medical Genetics residency training programs. The first is a two-year categorical Medical Genetics residency that is straight Medical Genetics and requires prior satisfactory completion of 24 months of the ACGME-accredited residency training in a specialty other than Medical Genetics. At the end of the program a trainee should be eligible to take the American Board of Medical Genetics (ABMG) examinations. The second program is a five-year combined Pediatrics/Medical Genetics training program that devotes two and one-half years each to Pediatrics and to Medical Genetics. Usually, the first year is all Pediatrics, the last year is all Medical Genetics, and the middle three years alternate between Pediatrics and Medical Genetics for periods of three-six months each. After successful completion of the program the trainee will be eligible to take both the Pediatrics boards and the Medical Genetics boards. The number and content of genetics rotations that the combined Pediatrics/Genetics residents do are identical to those of the categorical genetics residents except that there is an additional six months of genetics time that is expected to be devoted to research or to training in a specialized area of genetics in which the resident intends to devote his or her career. This extra is flexible but must be spent in academic pursuit. Training utilizes three teaching hospitals: UC Irvine Medical Center, Children's Hospital of Orange County, and Long Beach Memorial Medical Center/Miller Children's Hospital. Research offices and laboratories are on the UCI main campus.

Neonatal-Perinatal Medicine

UCI offers a three-year fellowship in Neonatal-Perinatal Medicine, accredited by the Accreditation Council for Graduate Medical Education (ACGME). The program provides a well-rounded curriculum that balances between clinical experiences, teaching opportunities, and academic and scientific activities. The program offers variety and depth due to the diversity of the two major training sites—UC Irvine Medical Center and Long Beach Memorial Medical Center/Miller Children's Hospital. The care of newborns seen through the two hospitals represents a cross-section of racial, cultural, and socioeconomic groups from a local population of more than 2.5 million. These two sites represent a broad-spectrum of neonatal practice and offer excellent opportunities to learn and teach. Clinical and basic science research conducted by the faculty in the section gives the fellow the ability to gain skills in scientific investigation. The program's superb physical environment, extraordinary clinical services, and varied research interests permit the faculty to carry out the mission of preparing neonatal fellows for a career in clinical or academic neonatology. In addition, the program collaborates clinically and through research with a superb fellowship training in Maternal-Fetal Medicine that is also based at the two institutions. The Neonatal-Perinatal Medicine Fellowship training consists of 14 months of direct patient care responsibilities, 19 months of research training, and three months of vacation.

Neurology

Neurology residency training focuses on the development of strong clinical skills to competently evaluate and treat the large number of disorders that afflict the nervous system. During three years of training at UCI, residents have the opportunity to see a wide variety of neurological conditions and receive progressively more responsibility. The program provides a rich, intellectually stimulating environment in which to learn. UCI Neurology faculty all have broad experience caring for neurological disorders and have special expertise in different neurological disciplines. Residents have opportunities to work in many different subspecialty areas with the faculty. The neurology residency program is big enough to provide a rich environment to learn about neurological disorders, yet remains small enough for residents to work closely with each faculty member. Residents are encouraged to learn at every opportunity: from patients, peers, the faculty, and visiting experts. There are many formats in which to learn, from bedside discussions, tutorials, to specially prepared lectures. To further stimulate intellectual growth, residents are actively encouraged to pursue research in any topic of their choosing, with the guidance of the faculty.

Neurosurgery

The UCI Residency Program in Neurosurgery is a rigorous training program designed to develop academic neurosurgeons. There are ample opportunities for both clinical and basic research within the Department and in collaboration with other laboratories or departments at UCI. Applicants are expected to have a strong academic record with a strong commitment to neurosurgery. One candidate is selected for each program year. Exact order of clinical rotations may vary slightly subject to the trainee's previous experience and needs as well as the training program circumstances, however, the rotation generally proceeds as follows: the PGY-1 year is a nine-month general surgery rotation with three-months of neurology; PGY-2 is one year of training at UC Irvine Medical Center; PGY-3 is a six-month rotation at Kaiser Permanente, Anaheim, followed by three-months of neuropathology and three-months of neuroradiology at UC Irvine Medical Center; PGY-4 is a six-month rotation at Children's Hospital of Orange County (CHOC) and a six-month rotation at Kaiser Permanente, Anaheim; PGY-5 is a research year; PGY-6 is a three-

month rotation at Hoag Memorial Presbyterian Gamma Knife Center for stereotactic radiosurgery and a three-month elective (Interventional Radiology or Spine) at UC Irvine Medical Center and a six-month rotation at CHOC; PGY-7 is the chief resident year and will be at UC Irvine Medical Center. Invitations to interview for these positions are based on the candidate's academic record, National Board scores, publications, letters of recommendation, and a personal statement.

Obstetrics and Gynecology

This four-year program provides a solid foundation in Obstetrics and Gynecology with emphasis in the reproductive pathophysiology in the many different areas of women's health care. Based on this foundation, training continues with progressive resident responsibility for operative and medical management and surgical techniques. While predominantly clinical in scope, the program is strongly flavored by academic and research exposure. Training is provided in general obstetrics and gynecology with rotations in the subspecialties of perinatology, urogynecology, family planning, gynecologic oncology, and reproductive endocrinology. There are six resident positions available each year in this four-year training program.

Ophthalmology

The three-year Ophthalmology Residency Program provides extensive clinical and surgical experience coupled to an excellent weekly didactic curriculum. The program provides a broad spectrum of ophthalmic disease management with extensive exposure and surgical experience in the full range of ophthalmology subspecialties. Residents have rotations in cornea and refractive surgery, vitreoretinal surgery, oculoplastic and orbital surgery, glaucoma, pediatric ophthalmology and strabismus, ophthalmic pathology, and neuro-ophthalmology, in addition to comprehensive ophthalmology clinics. Residents also receive instruction and practical application in the newest laser surgical techniques as well as the use of state-of-the-art diagnostic equipment.

Orthopaedic Surgery

The Department of Orthopaedic Surgery Residency Program is a four-year training program which follows an internship year in the Department of General Surgery. The program is designed to provide intense exposure and experience in all areas of orthopaedics including trauma, reconstructive and joint replacement surgeries, pediatric orthopaedics, spine surgery, sports medicine, foot surgery, and rehabilitation. It is structured for maximum resident participation with an emphasis on personalized mentorship. The program's teaching hospitals include UC Irvine Medical Center, Veterans Affairs Long Beach Healthcare System, Children's Hospital of Orange County, and Kaiser Permanente Medical Center in Anaheim. There are four resident positions available each year.

Otolaryngology—Head and Neck Surgery

The Department of Otolaryngology—Head and Neck Surgery offers a five-year residency program providing comprehensive training in otolaryngology to prepare trainees to sit for the American Board of Otolaryngology Examinations. The five-year program provides a breadth of training in otological surgery, head and neck surgery, facial plastic surgery, pediatric otolaryngology, and nasal and paranasal sinus surgery. Residents receive an extensive clinical experience at UC Irvine Medical Center, Children's Hospital of Orange County, Veterans Affairs Long Beach Healthcare System, and Kaiser Foundation Hospital-Anaheim. Acceptance is through application and successful matching through the National Residency Matching Program. The program follows requirements set by the Accreditation Council for Graduate Medical Education.

Pain Medicine

The Fellowship Training Program in Pain Medicine at the UC Irvine Medical Center is an intensive one-year ACGME-accredited multidisciplinary training program sponsored by the Department of Anesthesiology and Perioperative Care. The fellowship boasts a multidisciplinary faculty with both Anesthesiology and Physical Medicine and Rehabilitation leadership. The program trains fellows who have completed a residency training program in Anesthesiology, Physical Medicine and Rehabilitation, Neurology or Psychiatry, although applicants from other fields may also apply. Truly interdisciplinary, the fellowship teaches interventional pain management, opioid and adjunctive medication management, as well as non-interventional pain management. Personalized physical and occupational therapy, off-loading therapy, electroacupuncture, electrodiagnostics, psychologic and cognitive therapies, and regional anesthesia are common treatment modalities at UCI that are also taught during the fellowship. The fellows also rotate through rehabilitation medicine, anesthesiology, neuroradiology, palliative care, neurology, and psychiatry.

Pathology

The Department of Pathology and Laboratory Medicine offers a residency training program covering all areas of anatomic and clinical pathology. The program is affiliated with Long Beach Memorial Medical Center and Veterans Affairs Long Beach Healthcare System. The training for the combined anatomic and clinical pathology program consists of four years of training in both anatomic and clinical pathology. The first three years consist of a core program providing exposure to each of the subspecialty areas of clinical pathology as well as surgical pathology, autopsy pathology, and cytopathology. Ample opportunities for research and teaching exist for individuals planning on an academic career. Excellent preparation is also provided for individuals planning on a career in forensic pathology or private practice in a community hospital.

Pediatrics

The Pediatric Residency Program emphasizes the interrelationship of patient care, didactic teaching, and research in the training of the pediatric resident physician. The focus is on the total care of the child from birth through young adulthood. A strong clinical and educational foundation is provided through experiences in a broad spectrum of disease and/or injury as well as training in biosocial pediatrics, preventive health care, and community resources.

The program offers variety and depth due to the diversity of the Department's major teaching hospitals—Children's Hospital of Orange County, Miller Children's Hospital (located at Long Beach Memorial Medical Center), and UC Irvine Medical Center. The faculty at these institutions provides a comprehensive teaching program in general pediatrics and cover the full range of pediatric subspecialties. The care of children seen through the two hospitals represents a cross-section of racial, cultural, and socioeconomic groups from a local population of more than 2.5 million. Thus, pediatric residents are exposed to a wide range of problems presented in settings ranging from intensive care to supervised office-based practice.

Physical Medicine and Rehabilitation

The Department of Physical Medicine and Rehabilitation offers a three-year residency for applicants who have completed a one year internship. The focus is on the diagnosis and comprehensive treatment and care of patients with neuromusculoskeletal or cardiopulmonary disabilities,

from newborns to the elderly. Residents are also involved in research and medical student teaching.

Plastic Surgery

The Aesthetic and Plastic Surgery Institute of UCI has a fully integrated residency program. The program currently accepts two residents for a six-year educational training experience in Plastic Surgery. The goals and objectives of this program are to educate plastic surgeons who are analytical and scholarly in their approach to surgical problem solving, broadly experienced in all fields of the specialty, safe in their application of judgment and technique, and ultimately self-educating in a lifelong continuing medical education process. The goals and teaching philosophy are based on the graduate school model, which emphasizes analytic problem solving, scholarly use of the knowledge base and scientific resources of the field, development of judgment skills, and identification of educational tools that produce the ability to self-direct one's lifelong professional education in a scholarly manner. At the successful completion of this program, candidates will be able to sit for their boards in Plastic Surgery.

Preventive Medicine

This residency program is offered by the Division of Occupational Medicine, Department of Medicine. It is intended for physicians who are seeking certification by the Board of Preventive Medicine. A prerequisite to participation is a minimum of one year of postgraduate clinical training in a primary care discipline. The objective of the program is the training of physicians in the fields of occupational medicine and industrial medical care. The resident is provided an academic foundation in occupational medicine, industrial hygiene, environmental toxicology, and epidemiology, in addition to practical experience in preventive medicine as it is applied to employed persons. This two-year program includes didactic training and clinical and field experience in occupational health and safety. Upon completion of training, the resident is qualified to enter the specialty practice of occupational medicine in an industrial setting, in private practice, in a government agency, or in an academic institution.

Psychiatry

The Psychiatry Residency Training Program is a four-year program that fosters academic excellence and broad clinical experience in general psychiatry. Residents receive extensive supervised training in both psychotherapy and psychopharmacology. The core curriculum includes didactic seminars and supervised clinical experiences in the following areas: adult inpatient and outpatient psychiatry, child psychiatry, geriatric psychiatry, primary care, neurology, emergency psychiatry, consultation and liaison psychiatry, forensic psychiatry, and substance abuse. Residents rotate at the UC Irvine Medical Center, the Veterans Affairs Long Beach Healthcare System, and Orange County Behavioral Health. Elective rotations are also available at the UC Irvine Outreach Clinics, Kaiser Permanente, the Orange County Rescue Mission, and Long Beach Memorial Medical Center. The flexible curriculum allows residents to pursue elective interests in research, teaching, and administrative psychiatry. The program includes a broad array of full-time, part-time, and volunteer clinical and research faculty, and maintains a teaching affiliation with the New Center for Psychoanalysis.

Radiological Sciences (Diagnostic Radiology)

The Department of Radiological Sciences has an ACGME-approved four-year residency program based at UC Irvine Medical Center and integrated with Veterans Affairs Long Beach Healthcare System. There is also a month-long Pediatric Radiology rotation at Children's Hospital

of Los Angeles. The objectives of the program are (1) to train competent radiologists with a solid background in all modalities of imaging and interventional procedures, (2) to provide a conducive atmosphere and to encourage opportunities for residents to participate in translational and basic science research, and (3) to provide elective periods in which residents have the opportunity to increase their clinical radiology expertise or to work on research projects during their residency training. The residency program includes sub-specialized training in interventional, cardiothoracic, abdominal, pediatric, musculoskeletal radiology, as well as breast imaging, neuroradiology, and molecular imaging. Residents are exposed to a variety of modalities including radiography, fluoroscopy, computed tomography (CT), magnetic resonance imaging (MRI), ultrasonography, mammography, nuclear medicine, and spectroscopy. All residents participate in scholarly activities and are encouraged to complete at least one major research project during the program. The program provides a month-long research time. Candidates are accepted for six positions at the PGY-2 level for the four-year program. Fellowships are available for an additional year in specialized areas following the successful completion of the residency. The newest technologies in the field of radiological sciences are available at UC Irvine Medical Center and affiliated institutions.

Radiation Oncology

The Residency Training Program in Radiation Oncology is designed to prepare suitably qualified applicants for academic and clinical practice careers in radiation oncology. Candidates enter a four-year program which includes clinical experience, didactic lectures and integrated research experience. Unique opportunities exist for training in the use of interstitial and intracavitary treatment using radionuclides and specially designed applicators as well as a variety of high-dose external beam technologies such as IMRT, radiosurgery, and VMAT/IMAT. The program includes rotations at three participating hospitals: UC Irvine Medical Center, Veterans Affairs Long Beach Healthcare System, and Long Beach Memorial Medical Center.

Surgery

The philosophy underlying all aspects of surgical training is that surgery is best learned, taught, and practiced as applied clinical physiology. Operative techniques and applied anatomy receive appropriate attention. Major portions of clinical experience, teaching, conferences, research, and patient care are oriented toward understanding and correcting disordered human biology. The surgical specialty involves more years of training than other medical disciplines due to the breadth of diseases and complexity of pathophysiology involved in surgery. The Department offers residencies in general surgery, plastic surgery, and urology.

Urology

The Department of Urology Residency Program is a six-year training program that includes a one-year internship in the Department of Surgery and five years of Urology training. The residency program provides training in all aspects of adult and pediatric urologic diseases. The residents receive extensive training in open and endoscopic procedures, laparoscopy and other minimally invasive techniques, urologic pathology, uro-radiology, and management of non-operative urologic conditions. The program's training hospitals include UC Irvine Medical Center, Veterans Affairs Long Beach Healthcare System, Kaiser Permanente Anaheim, and Children's Hospital of Orange County. The Urology Department encourages and supports both clinical and basic science research.

Graduate Academic Programs

The School of Medicine offers graduate study in a wide variety of fields in both basic science and clinical departments. The basic medical science departments of Anatomy and Neurobiology (p. 682), Biological Chemistry (p. 684), Microbiology and Molecular Genetics (p. 699), Pathology and Laboratory Medicine (p. 694), and Physiology and Biophysics (p. 703) offer graduate instruction leading to the M.S. and Ph.D. degrees in Biomedical Sciences. The Department of Pharmacology (p. 702), in conjunction with the Department of Pharmaceutical Sciences, offers graduate instruction leading to the M.S. and Ph.D. degrees in Pharmaceutical Sciences (p. 624). The Department of Epidemiology (p. 691) offers graduate instruction leading to the M.S. and Ph.D. degrees in Epidemiology. The Department of Medicine offers graduate instruction leading to the M.S. and Ph.D. degrees in Environmental Health Sciences (p. 688). Most graduate students in these programs are admitted for the Doctor of Philosophy (Ph.D.) degree. The Department of Pediatrics offers an M.S. degree in Genetic Counseling (p. 696). The School of Medicine also offers an M.S. degree in Biomedical and Translational Science (p. 686). Each department or program has a graduate advisor whom students may consult for additional details of the individual programs.

The departments evaluate applications for admission to graduate study or program based on letters of recommendation, Graduate Record Examination scores, grades, research experience, and other relevant qualifications of the applicant. Candidates for graduate admission are urged to consult the particular department or program whose faculty and expertise best fit their interests and background.

Application materials may be obtained by contacting the individual graduate programs or:

University of California, Irvine
Graduate Division
120 Aldrich Hall
Irvine, CA 92697-4611
(949) 824-6761
<http://www.grad.uci.edu/>

Master or Science and Doctor of Philosophy in the School of Medicine

The School of Medicine offers both the Master of Science and Doctor of Philosophy degrees, although emphasis at the graduate level is placed on the Ph.D. programs. Most training takes place within one of the departments, although full facilities and curricular offerings are available to all graduate students in all departments of the School of Medicine. Interdisciplinary study and research are encouraged. Students are expected to maintain a B average at all times. The normative time to degree is two years for the master's degree, and five years for the doctoral degree. A master's degree is not a prerequisite for the Ph.D. degree.

Students plan their academic program in consultation with the graduate advisor or a faculty committee. Faculty advisors may be changed to meet the needs and interests of the student. In addition, it is possible for students to transfer to another program in the School, subject to the approval of the Dean of Graduate Studies, and acceptance into that program. Students are encouraged to consult with faculty members with regard to their research and academic interests.

Master of Science in Biomedical Sciences

The Master of Science degree in Biomedical Sciences may be completed by submission of a research thesis (plan I) or by course-work and a comprehensive exam (plan II).

Plan I: Thesis Plan. The student is required to complete at least four didactic graduate courses (16 units) offered by the department, and elective course work with an additional 8 units of graduate or upper-division undergraduate course work. In addition, the student will typically take additional seminar courses during the graduate study. Students in the M.S. program may be employed as teaching assistants, but units earned through enrollment in University Teaching (399) may not be counted toward degree completion. The student engages in thesis research with a faculty thesis advisor, and will prepare and submit a dissertation to the thesis committee. The final examination is an oral presentation of the thesis to the committee. The normative time to degree is two years for the thesis M.S. degree.

Plan II: Comprehensive Examination Plan. The plan II M.S. degree is awarded based on completion of at least 36 units of course work and a satisfactory completion of a comprehensive exam. The student is required to complete at least 16 units (four courses) of didactic graduate course work offered by the department. In addition, the student will take up to 12 units of research. An additional 8 units or more of elective course work will be completed from other graduate courses offered by the department. A maximum of 4 units of upper-division undergraduate courses may be included in the program with the approval of the Associate Dean for Graduate Studies. Students in the M.S. program may be employed as teaching assistants, but units earned through enrollment in University Teaching (399) may not be counted toward degree completion. The comprehensive exam will be administered by a committee of at least three departmental faculty, and may include written and oral sections. The comprehensive exam format will include a research presentation and may include additional portions such as a research proposal, presentation of a project, or other components. The normative time to degree is one year for the M.S. degree by comprehensive exam.

Doctor of Philosophy

Comprehensive Examination-First Year. The student must pass comprehensive oral or written examinations at the discretion of the department. The examination is generally taken at the end of the first year of graduate study.

Advancement to Candidacy. The advancement to candidacy examination is taken before the end of the third year of graduate study. The student is expected to have identified an important and tractable dissertation research topic. A faculty committee for the advancement to candidacy examination is proposed by the faculty mentor in consultation with the student, and approved by the Department Graduate Advisor. A majority of the committee must hold primary or joint appointments in the student's department.

Once this examination is completed, the student is advanced to candidacy for the doctoral degree and is expected to complete the degree within three years. The student must submit a dissertation on this research and defend the thesis in an oral examination during the final year of graduate study. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Graduate-student status or consent of instructor is a prerequisite for all 200–299 courses.

Anatomy and Neurobiology

364 Medical Surge II; (949) 824-6050

anatomy@uci.edu; <http://www.anatomy.uci.edu/>

Ivan Soltesz, **Department Chair**

Martin A. Smith, **Department Vice Chair**

David C. Lyon, **Departmental Graduate Advisor**

Research programs in the Department of Anatomy and Neurobiology in the School of Medicine focus on the neurosciences. Faculty interests range across all areas of basic and clinical research including cellular and molecular neurobiology, mechanisms of development, ion channel physiology, experimental neuroanatomy, structure and function of sensory and motor systems, response to injury and regeneration. The Department maintains facilities for electron microscopy, laser confocal microscopy, and computer-based imaging and informatics. Students performing graduate work in the Department are encouraged to become proficient in multiple areas of study using interdisciplinary techniques.

The Department offers graduate training under the auspices of the School of Medicine in conjunction with the Interdepartmental Neuroscience Program (INP). Students are eligible to enter the Department program after meeting the specific requirements of the INP gateway curriculum or by direct application to the Department. The Department program leads to the M.S. or Ph.D. degree in Biomedical Sciences, awarded after successful completion of all requirements.

In concert with other departments, a combined neuroscience core curriculum has been developed which includes offerings in systems neurobiology, neurophysiology, and cellular, molecular, and developmental neurobiology that may be taken as complete or partial fulfillment of the requirements of the INP. Students admitted into the INP who subsequently select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year. Students may take additional elective courses at their own option, but are strongly encouraged to attend departmental seminars and participate in the Journal Club and an annual "Grad Day" symposium. The research topic for a student's dissertation is chosen by the student in consultation with the research advisor. Students are expected to advance to candidacy by the end of the third year by presenting and defending a proposal for their research dissertation. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Faculty

Aileen J. Anderson: Interactions of transplanted stem cells within the injured niche; role of inflammatory mechanisms in degeneration and regeneration in the injured CNS

Tallie Z. Baram: Mechanisms and consequences of epilepsy and stress; learning/memory, epigenetics

Anne L. Calof: Stem cells in neural development, regeneration, and human genetic disease

Steven C. Cramer: Mapping and treating neurorecovery in humans

Brian Cummings: Human neural stem cells, regeneration and repair, and neurotrauma (spinal cord injury and traumatic brain injury)

James H. Fallon (*Emeritus*): Human and molecular brain imaging, growth factors and adult stem cells in injured brain

Mark Fisher: Mechanisms of stroke

Lisa Flanagan: Neural stem cell fate potential and transplantation for neural repair

Christine M. Gall: Neurotrophic factors, integrins, and synaptic plasticity

Roland A. Giolli (*Emeritus*): Experimental neuroanatomy; visual system

Alan L. Goldin: Ion channels and CNS disease

Ranjan Gupta: Peripheral nerve injury

Leif Havton: Spinal cord injury and repair

Hans S. Keirstead: Axon and myelin regeneration following spinal cord injury

Herbert P. Killackey: Developmental neuroanatomy; somatosensory system

Leonard M. Kitzes (*Emeritus*): Auditory system physiology and development

Frances M. Leslie: Effects of drugs of abuse on central nervous system development

Gary Lynch: Cytoskeletal remodeling; synaptic plasticity, and learning

David C. Lyon: Anatomy and physiology of visual cortex; animal models of autism

Diane K. O'Dowd: Regulation of neuronal excitability; development of functional synaptic connections

Daniele Piomelli: Function of endogenous cannabinoids and other lipid derived messengers

David Reinkensmeyer: Motor control and learning; robot-assisted movement rehabilitation after neurologic injury

Charles E. Ribak (*Emeritus*): Changes in neural circuitry in the epileptic brain

Richard T. Robertson: Developmental neurobiology

Justin T. Schaefer: Comparative biomechanics, functional morphology, and kinesiology

Steven S. Schreiber: Mechanisms of neuronal degeneration in CNS after injury and therapeutic applications

Martin A. Smith: Mechanisms of neuronal excitability and synaptic plasticity

Ana Solodkin: Brain networks associated with neurological illnesses

Ivan Soltesz: Modulation of CNS inhibition

Oswald Steward: Mechanisms of recovery from injury

John H. Weiss: Mechanisms of neural degeneration

Jamie Wikenheiser: Medical education, pediatric cardiology, pediatric and adult urology

Xiangmin Xu: Local cortical circuits

Fan-Gang Zeng: Auditory prostheses

Courses

ANATOMY 200. Research in Anatomy. 2-12 Units.

Individual research supervised by a particular faculty member.

Repeatability: May be repeated for credit unlimited times.

ANATOMY 200R. Research in Anatomy and Neurobiology for First-Year Students. 2-12 Units.

Independent research within the laboratories of graduate training faculty in the Department of Anatomy and Neurobiology for first-year Ph.D. students.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

ANATOMY 201. Human Gross Anatomy. 8 Units.

Study and dissection of the human body, including muscular, skeletal, nervous, and cardiovascular systems. Emphasis on both normal and abnormal structure and function.

Restriction: Graduate students only.

ANATOMY 202B. Human Neuroscience. 4 Units.

Study of the human nervous system at the systems level including the physiology and anatomy of sensory, motor, and integrative functions.

Prerequisite: ANATOMY 202A.

ANATOMY 203A. Human Microscopic Anatomy. 3 Units.

Lecture and laboratory course on human microscopic anatomy. Emphasis is on functional implications of structure of cells and tissues.

Restriction: Graduate students only.

ANATOMY 203B. Human Microscopic Anatomy. 3 Units.

Lecture and laboratory course on human microscopic anatomy. Emphasis is on functional implications of structure of cells and tissues.

Prerequisite: ANATOMY 203A.

Restriction: Graduate students only.

ANATOMY 206. Tutorial in Anatomy. 3 Units.

Series of tutorials on advanced topics in anatomy.

Repeatability: May be repeated for credit unlimited times.

ANATOMY 210A. Systems Neuroscience. 5 Units.

Study of the mammalian nervous system at the systems level. Anatomy and physiology of sensory, motor, and integrative functions.

Repeatability: May be taken for credit 2 times.

Same as NEURBIO 208A.

Restriction: Neurobiology and Behavior graduate students only.

ANATOMY 210B. Systems Neuroscience. 5 Units.

Study of the mammalian nervous system at the systems level. Anatomy and physiology of sensory, motor, and integrative functions.

Prerequisite: NEURBIO 208A.

Repeatability: May be taken for credit 2 times.

Same as NEURBIO 208B.

Restriction: Neurobiology and Behavior graduate students only.

ANATOMY 215. Epilepsy as a Window to Mechanisms of Neuronal Plasticity. 4 Units.

Understanding the mechanisms of brain disorders provides novel insights into the normal function of neurons and circuits. Discusses approaches to studying mechanisms of brain function ranging from imaging, the use of models and others to study epilepsy.

Grading Option: Satisfactory/unsatisfactory only.

ANATOMY 227A. Current Topics in Neuroscience. 1-4 Units.

Focuses on critical reading, presentation, and discussion of current literature in neuroscience research.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

ANATOMY 227B. Current Topics in Neuroscience. 1-4 Units.

Focuses on critical reading, presentation, and discussion of current literature in neuroscience research.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

ANATOMY 227C. Current Topics in Neuroscience. 1-4 Units.

Focuses on critical reading, presentation, and discussion of current literature in neuroscience research.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

ANATOMY 230. Topics in Stem Cells . 2-4 Units.

One-hour seminar presentation by participating faculty or guest lecturer and open to the science community, followed by one-hour student discussion of the lecture topic or related topic. Students are responsible for presentations and readings for the course.

ANATOMY 230A. Molecular, Cellular, & Developmental Neurobiology. 4 Units.

Molecular aspects of the structure and function of neurons and glia including neurotransmission, synaptic modulation, and channels. Neural development at the cellular and molecular level including neurogenesis, pattern formation, trophic factors, axonal growth, and synaptic rearrangement.

Restriction: Graduate students only.

ANATOMY 292A. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

ANATOMY 292B. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

ANATOMY 292C. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Biological Chemistry

Building D, Room 240, Medical Sciences I; (949) 824-6051

<http://www.biochem.uci.edu/>

Eva Y.-H. P. Lee, **Department Chair**

Kyoko Yokomori, **Departmental Graduate Advisor**

The Department of Biological Chemistry provides advanced training to individuals who are interested in understanding the fine regulation of the biological processes, structural basis of the regulation, and the identification of targets for disease managements. Faculty research interests are diverse with emphases on several areas of basic and clinical research: epigenetic regulation of gene expression; chromatin structure and function; DNA repair and DNA damage responses; ubiquitin regulation in metabolism and cell cycle; signal transduction and transcription regulation in development and disease manifestation; molecular mechanisms of stem cell regulation and tumorigenesis; genomic and bioinformatics. Students are trained and exposed to technical expertise in all facets of current biological sciences. Established core research facilities are available in which students have access to a microarray core facility, electron microscopy, atomic force microscopy, confocal imaging center, mass spectroscopy, flow cytometry, transgenic core laboratories, biopolymer sequencing and synthesis laboratories, and other resources. The Department administers a graduate student and postdoctoral training grant on translational research in cancer genomics and medicine.

The Department offers graduate study under the auspices of the School of Medicine and in conjunction with the gateway program in Cellular and Molecular Biosciences (CMB), which is described in the School of Biological Sciences section. Students are eligible to enter the Department program after meeting the specific requirements of the CMB gateway curriculum or by direct application to the department. The Department program leads to the M.S. or Ph.D. degree in Biomedical Sciences, awarded after successful completion of all requirements. Students admitted into the combined program who select a research advisor in the Department begin thesis research in the second year. Students are required to attend and participate in the departmental research seminars. In addition, students are required to complete two advanced-level graduate courses subsequent to entering the Department's Ph.D. concentration. In the third year, students take the advancement-to-

candidacy examination for the Ph.D. degree by presenting and defending a proposal for specific dissertation research. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Faculty

Bogi Andersen (*Joint*): Transcriptional regulation in epithelial tissues

Pierre Baldi (*Joint*): Computation biology, bioinformatics, probabilistic modeling, machine learning

Phang-Lang Chen: Signal transduction in response to DNA damage and tumor genesis

Xing Dai: Transcriptional/chromatin control of epithelial stem cells

Peter Donovan: The mechanisms by which pluripotent stem cells are formed in the embryo and the uses of such stem cells for transplantation therapy of human disease

John P. Fruehauf (*Joint*): Regulatory elements in cancer-related angiogenesis: prognosis and therapeutic targeting

Anand Ganesan (*Joint*): Disorders of pigmentation and melanoma

Sergei Grando (*Joint*): Non-neuronal cholinergic system

Peter Kaiser: Cell cycle regulation by ubiquitin

Eva Y.-H. P. Lee: Breast cancer etiology, regulation of cancer stem cells and DNA damage checkpoint control

Wen-Hwa Lee: Molecular cancer genetics, mainly the mechanism of tumor suppressor gene functions, cancer progression and novel therapy

Ellis R. Levin (*Joint*): The plasma membrane estrogen receptor (ER) and its effects on the biology of estrogen action

Haoping Liu: Signal transduction, cell cycle regulation, hypha development in yeast

Leslie Lock: Mammalian embryonic stem cells in studies of development and human disease

Calvin S. McLaughlin (*Emeritus*)

Frank Meyskens (*Joint*): Carcinogenesis and molecular biology of melanoma and chemoprevention of human cancer

Robert Moyzis (*Emeritus*)

Feng Qiao: Non-coding RNA; telomere and telomerase, structural biology

Daniele Piomelli (*Joint*): Biochemistry and pharmacology of the endogenous cannabinoids and other lipid signaling systems

Suzanne B. Sandmeyer: Retrovirus-like elements in yeast

Paolo Sassone-Corsi: Signal transduction and gene expression; chromatin remodeling and epigenetics; germ cell differentiation; circadian clock and rhythms

Robert E. Steele: Evolution of multicellular animals and their genomes

Leslie M. Thompson (*Joint*): Molecular/biochemical analysis of multiple myeloma and Huntington's disease

Kyoko Yokomori: Chromosome structure organization and its role in genome function and stability

Michael Zaragoza (*Joint*): DNA variation and inherited cardiovascular diseases: cardiomyopathy and heart failure, congenital heart disease, arrhythmia and sudden cardiac death

Yi-Hong Zhou (*Joint*): Tumor suppression pathways and molecular prognosis of brain tumors

Courses

BIOCHEM 200A. Research in Biological Chemistry. 2-12 Units.
Individual research under the supervision of a professor.

Repeatability: Unlimited as topics vary.

BIOCHEM 200B. Research in Biological Chemistry. 2-12 Units.
Individual research under the supervision of a professor.

Repeatability: Unlimited as topics vary.

BIOCHEM 200C. Research in Biological Chemistry. 2-12 Units.
Individual research under the supervision of a professor.

Repeatability: Unlimited as topics vary.

BIOCHEM 200R. Research in Biological Chemistry for First-Year Students. 2-12 Units.

Independent research within the laboratories of graduate training faculty in the Department of Biological Chemistry for first-year Ph.D. students.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

BIOCHEM 202A. Laboratory Seminar Series. 1 Unit.
Study within a laboratory group including research and journal presentations.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

BIOCHEM 202B. Laboratory Seminar Series. 1 Unit.
Study within a laboratory group including research and journal presentations.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

BIOCHEM 202C. Laboratory Seminar Series. 1 Unit.
Study within a laboratory group including research and journal presentations.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

BIOCHEM 207. Advanced Molecular Genetics. 4 Units.

Teaching genetics and genomics approaches in yeast. Covers cell-type determination, MAPK signaling, cell cycle, ubiquitin, genomics, transposons.

Repeatability: May be taken for credit 2 times.

BIOCHEM 210A. Medical Biochemistry and Molecular Biology. 12 Units.

Covers the following topics from a biomedical perspective: protein and nucleic acid biochemistry, carbohydrates, lipids, amino acids, purines and pyrimidines, genome structure, molecular mechanisms of development, and signal transduction.

Restriction: Graduate students only.

BIOCHEM 212. Signal Transduction and Growth Control. 4 Units.

Covers various eukaryotic signaling pathways (tyrosine kinase, ras-raf-MAPK, TGF- β , wnt, JAK-STAT, and FAS) with an emphasis on the experimental underpinnings. The material is covered in lectures and discussions of pertinent papers.

Same as PATH 212.

BIOCHEM 215. Mouse Developmental Genetics. 4 Units.

Introduction to using the mouse in contemporary biomedical research.

The biology and development of the laboratory mouse, methods for manipulation of the mouse genome and embryos, and examples of application of these methods to understand mammalian development and homeostasis.

Same as DEV BIO 207.

Restriction: Graduate students only.

BIOCHEM 217. Human Evolution and Behavior. 4 Units.

Covers theories and empirical research concerning the evolutionary origins of human behaviors and their variations. An interdisciplinary course emphasizing both evolutionary psychology (e.g., mating strategies, kinship, and parenting) and molecular evolution (i.e., evolution of genes for various behaviors).

Same as PSY BEH P271.

Restriction: Graduate students only.

BIOCHEM 225. Chromatin Structure and Function. 4 Units.

Focuses on the role of chromatin/nuclear structure organization in eukaryotic genome regulation. The effects of histone and DNA modification, chromatin remodeling, higher order chromatin structure and nuclear organization on gene regulation, DNA replication and repair will be discussed.

Prerequisite: MOL BIO 203 and MOL BIO 204

Restriction: (Prerequisite required and Grad students only) or Consent of instructor to enroll

BIOCHEM 291. Research Seminar. 2 Units.

Student research-based colloquium covering current topics in gene organization and expression, cell cycle and differentiation, DNA repair, checkpoint control, and the physical, chemical, and biological properties of macromolecules. Students are encouraged to read critically and analyze recent literature.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

BIOCHEM 292A. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

BIOCHEM 292B. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

BIOCHEM 292C. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

BIOCHEM 299. Independent Study. 2-12 Units.

Independent research in biological chemistry.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Open only to students pursuing the Ph.D. degree in the Department of Biological Chemistry.

Biomedical and Translational Science

Master of Science in Biomedical and Translational Science (M.S.-BATS)

School of Medicine, 100 Theory Street, Suite 110
(949) 824-6064; fjeffrey@uci.edu
Sherri H. Kaplan, **Director**

The aim of the M.S.-BATS program is to train students in the conduct of high-quality multidisciplinary clinical research to facilitate the rapid transformation of basic knowledge to clinical medicine. The program is designed for students from varying levels of training, including medical students, residents, fellows, physicians, and others who are interested in conducting clinical research to maximize interdisciplinary communication and understanding sufficient to carry out high-quality clinical research. The program provides training in core competencies required to conduct clinical research including study design reflecting the breadth and complexity of clinical research applications, critical appraisal

of multidisciplinary research literature, conduct and management of clinical research, medical statistics, research ethics, and the leadership of multidisciplinary research teams. Students who successfully complete the program receive the M.S. degree in Biomedical and Translational Science.

The faculty evaluate applicants to the program on the basis of grades, previous course work, letters of recommendation, MCAT or GRE scores, and other relevant qualifications. All graduate students, including those from public health, nursing science, and pharmaceutical science are eligible to apply, but the program has a highly clinical focus and is specifically designed for those with a sufficient background in clinical sciences. Applicants should have successfully completed a B.S. degree or equivalent, and may be current medical students, residents, clinical fellows, faculty, or licensed physicians in the community.

The M.S.-BATS program will initially offer training in Evidence-Based Medicine/Clinical Research, which will focus on the conduct and interpretation of clinical research, synthesis of clinical literature, and the assessment and improvement of quality of healthcare. Additional fields of emphasis will be added, including Molecular Medicine, focusing on the molecular mechanisms and molecular physiology of human disease, and Population Medicine, focusing on the application of epidemiologic research and research methods and findings to clinical practice.

The M.S.-BATS program is a two-year curriculum. First-year students are required to enroll in core courses including Introduction to Clinical Epidemiology, Introduction to Medical Statistics, Design and Analysis of Clinical Trials, and Ethics in Clinical Research, as well as courses in Comparative Effectiveness Research, Health Politics and Policy, Measurement Science, Outcomes Research and Advanced Applied Methods, and Disparities in Health and Health Care. Training during the second year emphasizes research and culminates in a written thesis. Throughout the program, students enroll in the BATS Seminar Series. By exception only, some students entering the program with advanced degrees, clinical research experience, and previous completion of the four core courses may be able to complete the program in less than two years.

Faculty

John Billimek, Ph.D. University of California, Irvine, *Assistant Adjunct Professor, Department of Medicine (General Internal Medicine)*

Sheldon Greenfield, M.D. University of Cincinnati, *Interim Director of the Chao Family Comprehensive Cancer Center, Executive Co-Director of the Center for Health Policy Research, and Donald Bren Professor, Department of Medicine (General Internal Medicine)*

Sherrie Kaplan, M.P.H., Ph.D. University of California, Los Angeles, *Assistant Vice Chancellor, Quality Measurement/Outcomes, Executive Co-Director of the Center for Health Policy Research, and Professor, Department of Medicine (General Internal Medicine)*

Richard Kelly, M.D. Stanford University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Dana Mukamel, Ph.D. University of Rochester, *Professor, Department of Medicine (General Internal Medicine)*

Dara Sorkin, Ph.D. University of California, Irvine, *Associate Professor in Residence, Department of Medicine (General Internal Medicine)*

Lari Wenzel, Ph.D. Arizona State University, *Professor of Medicine (General Internal Medicine) and Program in Public Health*

Courses

BATS 209A. Introduction to Medical Statistics. 4 Units.

Provides understanding of medical statistics for clinicians and clinical researchers to read and interpret literature.

BATS 209B. Introduction to Medical Statistics II. 4 Units.

Provides sufficient understanding of medical statistics to read and interpret medical literature critically, identify appropriate statistics for basic research designs used in medicine, and discriminate between appropriate and inappropriate statistical applications for common research designs.

Prerequisite: BATS 209A.

BATS 210A. Introduction to Clinical Epidemiology. 4 Units.

Introduces principles and practice of clinical epidemiology and the population-based approach to health and disease.

Prerequisite: BATS 209A or STATS 250.

BATS 232. Design and Analysis of Clinical Trials. 4 Units.

Presents history, organization and planning, rationale for methods, limits, and ethics in conducting clinical trials.

Prerequisite: BATS 209A or STATS 250.

BATS 245A. Comparative Effectiveness Research I. 4 Units.

Two-part course designed to provide a comprehensive overview of comparative effectiveness research (CER) with in-depth methodologic clinical practice and policy/dissemination issues related to the conduct, interpretation, and clinical applications of CER.

BATS 245B. Comparative Effectiveness Research II. 4 Units.

Two-part course designed to provide a comprehensive overview of comparative effectiveness research (CER) with in-depth methodologic clinical practice and policy/dissemination issues related to the conduct, interpretation, and clinical applications of CER.

Prerequisite: BATS 245A.

BATS 247. Measurement Science, Outcomes Research and Advanced Applied Methods. 4 Units.

Further the understanding of methodologic issues involved in the conduct of comparative effectiveness research (CER). Topics: risk adjustment, balancing observational study designs, use of outcomes from multiple data sources, innovations clinical trial designs, the conduct of meta-analysis, and psychometric methods.

BATS 251. Quality, Efficiency, and Cost-effectiveness. 4 Units.

Basic concepts and tools of economic analysis applied to health care markets. Topics: demand for medical care and health insurance and supply of health care; behavior of for-profit and not-for-profit providers; financing and impact on costs and quality of care.

BATS 253. Disparities in Health and Health Care. 4 Units.

Review all aspects of culture that influence health status, development of public health policy, and management and practice of health care. Explores how race and ethnicity affect health and health care, including health care services and policies governing these services.

BATS 255. Health Politics and Policy. 4 Units.

Offers political and analytical insights into understanding the U.S. health policymaking and developing strategies that influence health policy outcomes.

BATS 257. Quantitative Data Analysis Methods. 4 Units.

Introduces quantitative research methods, with an emphasis on large surveys and administrative health data sets. Presents the advantages and disadvantages of these data sources and the iterative process of formulating research questions and identifying data sources to answer these questions.

Prerequisite: BATS 209A

Restriction: Biomedical and Translational Science graduate students only.

BATS 280. Biomedical and Translational Science Seminar. 2 Units.

Students present their current research or a topic of interest and are exposed to diverse projects in the biomedical and translational science arena.

Repeatability: May be repeated for credit unlimited times.

BATS 295. Master's Thesis Research and Writing. 2-12 Units.

Master's thesis research and writing with Biomedical and Translational Science faculty.

Repeatability: May be repeated for credit unlimited times.

BATS 296. Ethics in Clinical Research. 4 Units.

Covers major frameworks and concepts of ethics in public health research as well as human subject protection issues.

BATS 299. Independent Directed Research. 2-12 Units.

Independent research with Biomedical and Translational Science faculty.

Repeatability: May be repeated for credit unlimited times.

Environmental Health Sciences

Center for Occupational and Environmental Health (COEH)
100 Theory Drive, Suite 100, Irvine, CA 92617; (949) 824-9013
<http://www.medicine.uci.edu/occupational/graduate.asp>
Alpesh Amin, **Chair, Department of Medicine**
Ulrike Luderer, **Graduate Program Director**

The Division of Occupational and Environmental Medicine in the Department of Medicine provides graduate training in environmental health sciences and offers the M.S. and Ph.D. degrees in Environmental Health Sciences. The Ph.D. program offers tracks in Environmental Toxicology and in Exposure Sciences and Risk Assessment. The program in Environmental Health Sciences provides students with the knowledge and skills necessary and appropriate to teach and/or conduct basic and applied research programs in inhalation/pulmonary toxicology, biochemical neurotoxicology, reproductive and developmental toxicology, chemical pathology, toxicokinetics, radiation toxicology, exposure sciences, and risk assessment.

Environmental Toxicology involves the scientific study of the entry, distribution, biotransformation and mechanism of the action of chemical agents that are harmful to the body. The graduate program interprets environmental toxicology as the study of the effects and mechanisms of action of hazardous chemicals in food, air, water, and soil in the home,

the workplace and the community. It considers experimentally and theoretically such diverse research problems as

- new scientific approaches to toxicological evaluation of environmental chemicals such as air and water pollutants, food additives, industrial wastes, and agricultural adjuvants at the molecular, cellular, and organism levels;
- mechanisms of action in chemical toxicity;
- the molecular pathology of tissue injury in acute and chronic toxicity.

Exposure Sciences involves the study of human exposures to environmental contaminants in different media such as air, water, and food and via multiple routes including inhalation, ingestion, and dermal absorption. Risk Assessment combines knowledge obtained from toxicological and exposure studies to come to conclusions about the risks to human health. Research in the Exposure Sciences and Risk Assessment Track includes

- new approaches to the evaluation of human exposures to environmental chemicals, including exposure modeling and biomonitoring;
- scientific principles involved in evaluating risks to human health from environmental exposures.

Students entering the program have varied backgrounds, including chemistry, biology, and physiology. The curriculum is based on a foundation of basic and health sciences with applications of scientific principles to environmental exposures and their potential health effects. Formal course work is enriched by a strong commitment to student-professor interaction throughout the program. An important and integral part of the learning process is an early and intensive involvement of the student in ongoing original research projects in environmental toxicology, especially inhalation/pulmonary toxicology, reproductive and developmental toxicology, biochemical toxicology, chemical pathology, neurotoxicology, exposure sciences, and risk assessment.

In addition to meeting the general admission requirements set by the Graduate Division, applicants must be admitted by an Admissions Committee composed of faculty members of the program. Candidates are selected on the basis of a balanced evaluation of the following criteria: (1) prior scholastic performance, including a consideration of grade point average, course load, nature of courses taken, and college attended; (2) recommendations by professors and others; (3) scores on the Graduate Record Examination; the Subject Test in either Biology or Chemistry is strongly recommended; (4) an interview by the Admissions Committee, when feasible; and (5) experience in undergraduate research. The applicant must have received a bachelor's degree in a biological, public health, or physical science, in a premedical curriculum, or have an acceptable equivalent. Applicants with a bachelor's degree in engineering may qualify for admission into the program if they have had sufficient training in biology, chemistry, and physical sciences.

Undergraduate preparation of applicants should include six quarter units in general biology, zoology, bacteriology, or anatomy; 12 quarter units in mathematics, including calculus through vector analysis and differential equations; 12 quarter units of chemistry, including four quarter units of organic chemistry; 12 quarter units of physics; and four quarter units in molecular biology or biochemistry. Outstanding applicants who lack one or two of these prerequisites may be given an opportunity to take the required course(s) either before admission or during the first year in the graduate program; in such circumstances, none of these undergraduate courses may be used to satisfy the program elective or core course requirements. Upper-division or graduate science courses may be

considered as substitutes for the above prerequisites by the Admissions Committee.

The graduate core curriculum for the Ph.D. degree includes TOX 206A-TOX 206B, TOX 264, TOX 298A-TOX 298B-TOX 298C, and EPIDEM 200. The core curriculum for the Ph.D. degree track in Environmental Toxicology further includes one of STATS 201, PUBHLTH 207, or EPIDEM 204; TOX 201 and TOX 207, and 16 units from an approved elective pool. This pool includes TOX 202, TOX 204, TOX 212, TOX 220, PHYSIO 206A-PHYSIO 206B, ANATOMY 203A-ANATOMY 203B, MOL BIO 203, MOL BIO 204, DEV BIO 231B, PUBHLTH 276.

The core curriculum for the track in Exposure Sciences and Risk Assessment further includes STATS 201, STATS 202, STATS 203, TOX 275, PUBHLTH 283, and eight units from an approved elective pool. This pool includes TOX 269, TOX 270, EPIDEM 205, PUBHLTH 265, PUBHLTH 276. Ph.D. students must also fulfill comprehensive examination, qualifying examination, teaching, and research dissertation requirements. The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Requirements for the M.S. degree may be satisfied in one of two ways. Under Plan I, students complete the core program (including TOX 206A-TOX 206B, TOX 264, TOX 298A-TOX 298B-TOX 298C, TOX 299A-299B-299C; one of STATS 201, PUBHLTH 207, or EPIDEM 204; and EPIDEM 200) and eight units from the approved elective pool with an average grade of B or better, and, under the direction of a faculty advisor, prepare a thesis that is acceptable to the thesis committee. Under Plan II, students complete the core program (including TOX 206A-TOX 206B, TOX 264, TOX 298A-TOX 298B-TOX 298C, TOX 299A-299B-299C; one of STATS 201, PUBHLTH 207, or EPIDEM 204; EPIDEM 200, and eight units from the approved elective pool) with an average grade of B or better, prepare a scholarly paper based on individual study in an area of toxicology under the supervision of a faculty member, and pass the written comprehensive examination.

Opportunities for individual training and independent research experience exist in inhalation and pulmonary toxicology, atmospheric chemistry and aerosol science, neurochemistry and neurotoxicology, reproductive and developmental toxicology, toxicology of naturally occurring compounds, exposure modeling, risk assessment, chemical pathology, environmental microbiology, and environmental chemistry. Research grants and contracts are available to support qualified doctoral students as research assistants.

Faculty

Dean B. Baker: *Chief, Division of Occupational and Environmental Medicine*; Environmental medicine and clinical toxicology; epidemiology; clinical effects of heavy metals, pesticides, and hazardous waste

Scott M. Bartell: Probabilistic models and statistical methods for exposure assessment, environmental epidemiology, and risk/decision analysis

Stephen C. Bondy: Neurotoxicology; biochemical changes in membranes resulting from toxic exposures

Vincent J. Caiozzo: Structure and function of muscle with emphasis on exercise physiology; special interest in the role of environmental toxicants in modulating physiological responses in human muscle

Jefferson Y. Chan: Chemical pathology of tissue injury with focus on the oxidative stress response in cells exposed to toxic xenobiotics

Ralph J. Delfino: Air pollution health effects and air pollution exposure assessment; environmental epidemiology; gene-environment interactions

Derek Dunn-Rankin: Laser and optical diagnostics in practical systems, optical particle sizing; droplet formation and vaporization and application to human exposures

Rufus D. Edwards: Air pollution, particles, VOC, the developing world, greenhouse gases, European cities, Expolis, and environmental epidemiology

Chenyang (Sunny) Jiang: Application of molecular techniques to detect human pathogenic bacteria and viruses in aquatic environments; coastal water quality microbiology

Michael T. Kleinman: Uptake and distribution of inhaled toxic materials in the respiratory tract; effects of air pollutants on cardiopulmonary function

Virginia Kimonis: Genetics of neuromuscular diseases, inherited muscle disorders that occur in combination with diseases of bone

Ulrike Luderer: *Graduate Program Director*; Reproductive and developmental toxicology; roles of oxidative stress in ovarian toxicity, ovarian aging, and ovarian cancer

Charles Limoli: Mechanisms by which cells perpetuate genomic instability in response to radiation and environmental toxicants and the role of oxidative stress in these processes; how DNA damage and oxidative stress might drive the progression of normal multipotent cells in the CNS to brain tumor stem cell

Oladele Ogunseitan: *Chair, Department of Population Health and Disease Prevention*; Microbial diversity and ecology; environmental pollution; industrial ecology; health and development

Betty H. Olson: Environmental microbiology and water chemistry; public policy issues in environmental toxicology

Kathryn E. Osann: Cancer epidemiology; applied biostatistics

Robert F. Phalen: Biophysics, aerosol science, and inhalation toxicology; toxicity of mixtures of particles and gases, lung defenses, and particle deposition in airways

J. Leslie Redpath (*Emeritus*)

Ronald C. Shank (*Emeritus*)

Veronica Vieira: Geographic information systems, groundwater modeling, cluster detection methods, and persistent environmental contaminants

Jun Wu: Air pollution exposure assessment and air pollution epidemiology

Courses

TOX 201. Principles of Toxicology. 4 Units.

Problem solving to demonstrate principles of toxicology; quantitative dose-response relationship; toxicant-target (receptor) interaction emphasizing interspecies differences in Ah receptor and dioxins; complete in vivo metabolism of xenobiotics by mammalian systems; integration of organ responses to toxic agents.

Prerequisite: TOX 206 and MOL BIO 204 and PHYSIO 206A and PHYSIO 206B.

Restriction: Graduate students only.

TOX 202. Environmental Toxicology. 4 Units.

Analysis of real problems involving toxic chemicals and the human food, air, and water supplies, occupational exposures, and life styles. Formal problems will be considered by small groups of students and discussed by the class.

Prerequisite: TOX 201.

Restriction: Graduate students only.

TOX 204. Neurotoxicology. 4 Units.

The effects of various harmful chemicals upon nervous system function. Emphasis given to the molecular events underlying neurological damage and to the relation of such processes to basic mechanisms of neurobiology.

TOX 206A. Target Organ Toxicology I. 6 Units.

Analysis of responses occurring in 12 organ systems of humans exposed to environmental chemicals at toxic levels; distinctive cellular and tissue structure and physiological function; toxicological responses discussed in terms of phenomena, mechanisms of action, and methods of study.

Same as PUBHLTH 277A.

TOX 206B. Target Organ Toxicology II. 6 Units.

Analysis of responses occurring in 12 organ systems of humans exposed to environmental chemicals at toxic levels; distinctive cellular and tissue structure and physiological function; toxicological responses discussed in terms of phenomena, mechanisms of action, and methods of study.

Prerequisite: PUBHLTH 277A or TOX 206A.

Same as PUBHLTH 277B.

TOX 207. Experimental Design and Interpretation of Toxicology Studies. 2 Units.

Introduction to methods of structuring toxicology experiments and analyzing data including experimental design, data distributions, sample sizes, hypothesis testing, linear regression, analysis of variance, multiple comparison testing, and non-parametric tests.

Restriction: Graduate students only.

TOX 212. Inhalation Toxicology. 4 Units.

The principles and practice of laboratory inhalation toxicology. Topics include aerosols, gases, respiratory tract structure and function, lung defenses, aerosol deposition exposure techniques, characterization of exposure atmospheres, experimental designs, animal models, and regulations and guidelines.

Restriction: Graduate students only.

TOX 220. Industrial Toxicology. 4 Units.

Analysis of responsibilities toxicologists have in industry, including product safety generating material safety, data sheets, animal testing, ecotoxicological testing, risk/hazard communication, and assisting industrial hygienists and occupational physicians; emphasis on interdisciplinary nature of industrial toxicology and communication skills.

Prerequisite: (PUBHLTH 277A or TOX 206A) and (PUBHLTH 277B or TOX 206B).

Same as PUBHLTH 278.

TOX 264. Introduction to Environmental Health Science. 4 Units.

Convergence of agents (chemical, physical, biological or psychosocial) in environment can emerge as diseases influenced by social, political, and economic factors allowing them to become rooted in society. How these agents from various spheres come together and impact human health.

Same as EPIDEM 264, PUBHLTH 264.

Restriction: Graduate students only.

TOX 269. Air Pollution, Climate, and Health. 4 Units.

Emission of air pollutants into the atmosphere, physical and meteorological processes that affect transport, and influence on global warming. Concepts of how and where people are most exposed, and how exposures and health effects differ in developed and developing regions.

Same as EPIDEM 269, PUBHLTH 269.

TOX 270. Human Exposure to Environmental Contaminants. 4 Units.

Introduces founders of conceptual thought that environmental contaminants can impact health. Theory and principles of exposure assessment, the continuum from emissions of a contaminant into the environment to evidence of health effects in a population.

Same as EPIDEM 270, PUBHLTH 270.

TOX 275. Environmental Modeling and Risk Management. 4 Units.

Surveys the general principles, basic mathematical methods, and practices of environmental modeling and human health risk assessment. Topics include advection-dispersion models, risk management, and risk perception. Students conduct an original risk assessment as a final group project.

Prerequisite: MATH 2A and STATS 7.

Same as PUBHLTH 275.

Restriction: Graduate students only.

Concurrent with PUBHLTH 175.

TOX 290. Independent Study in Environmental Toxicology. 4 Units.

With consent from a faculty member who will supervise the program, a student may receive credit for individual study in some area of toxicology, culminating in the completion of a scholarly paper on the subject.

Repeatability: May be repeated for credit unlimited times.

TOX 297. Advanced Topics in Occupational Toxicology. 2 Units.

Discussions with clinical and research faculty in environmental toxicology and occupational medicine on current toxicology problems in the workplace and critical review of current publications in the field.

Repeatability: May be repeated for credit unlimited times.

TOX 298A. Seminar in Toxicology. 2 Units.

Presentation and discussion of current research problems and issues by students, postdoctoral fellows, faculty, and guests, covering the broad research and policy areas of environmental toxicology.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

TOX 298B. Seminar in Toxicology. 2 Units.

Presentation and discussion of current research problems and issues by students, postdoctoral fellows, faculty, and guests, covering the broad research and policy areas of environmental toxicology.

Prerequisite: TOX 298A.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

TOX 298C. Seminar in Toxicology. 2 Units.

Presentation and discussion of current research problems and issues by students, postdoctoral fellows, faculty, and guests, covering the broad research and policy areas of environmental toxicology.

Prerequisite: TOX 298B.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

TOX 299. Research Problems. 1-12 Units.

Research work for the M.S. thesis or Ph.D. dissertation.

Repeatability: May be repeated for credit unlimited times.

Epidemiology

Irvine Hall, Room 224; (949) 824-7401

EpiGrad@uci.edu; <http://www.epi.uci.edu/>

Hoda Anton-Culver, **Department Chair**

Ralph J. Delfino, **Vice Chair for Research and Graduate Studies**

Overview

The Department of Epidemiology faculty researches the genetic and environmental factors affecting the distribution of health and illness in large human populations. This serves as a cornerstone of the graduate program and the medical research program by utilizing highly evidence-based biostatistical methodologies to determine the risk factors leading to disease and optimal treatment approaches for clinical practice and medical interventions essential to preventative medicine and public health. In addition to the medical sciences, the epidemiology faculty has diverse research interests and relies on a number of other basic science disciplines including biological sciences (to understand the disease process), biostatistics (to evaluate large population data and develop research methods), geographic information science (to map disease patterns), and social science (to understand proximate and distal risk factors). The Department maintains facilities for research that include genetic, molecular, and biochemical techniques. The faculty in the Department of Epidemiology has strong, peer-reviewed research portfolios and resources needed to support the Department's postdoctoral and doctoral training programs.

The Department offers a program of study leading to the M.S. and Ph.D. degrees, but not an undergraduate degree. The Department

offers undergraduates the opportunity to gain research experience in epidemiology through the Department's 199 undergraduate research course in epidemiology. This course is available to all upper-division undergraduates irrespective of the individual major they have declared on campus.

Master of Science in Epidemiology

The M.S. degree in Epidemiology requires the student to complete at least four didactic graduate courses (16 units) offered by the department, and elective course work with an additional 8 units of graduate or upper-division undergraduate course work. In addition, the student will typically take additional seminar courses during the graduate study. The student engages in thesis research with a faculty thesis advisor, and will prepare and submit a dissertation to the thesis committee. The final examination is an oral presentation of the thesis to the committee. The normative time to degree is two years for the thesis M.S. degree.

Doctor of Philosophy in Epidemiology

At the end of the first year, students must demonstrate proficiency by passing a preliminary qualifying exam. The purpose of this exam is to verify that the student has completed the required courses of the first-year of the program. The goals of these first-year courses are to establish a foundation of knowledge in the relevant disciplines, to acquire an understanding of research methods including the responsible conduct of research, and to sharpen critical thinking abilities so that students are ready to begin thesis research in which they will take major responsibility for the design, conduct, and publication of Ph.D.-level research projects.

Students must have selected a thesis advisor and joined the advisor's research group by the end of the third quarter of the first year.

Advancement to Candidacy. Following successful completion of the second year of graduate study, the next step in progression toward the doctoral degree is Advancement to Candidacy. The purpose of this process is to ensure that the student has selected an appropriate topic for the dissertation and that the experimental work that has been completed or is contemplated is scientifically rigorous and likely to be completed successfully and within the normal period of graduate study. The advancement to candidacy exam must be taken by the end of the spring quarter of the third year of graduate study.

Once this examination is completed, the student is advanced to candidacy for the doctoral degree and is expected to complete the degree within two to three years. The student must submit a dissertation on this research and defend the thesis in an oral examination during the final year of graduate study. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Students who are interested in these graduate degrees in Epidemiology should apply to the Department of Epidemiology in the School of Medicine. Applications are available at <http://www.grad.uci.edu>. For further questions contact EpiGrad@uci.edu or call (949) 824-7401.

The Department of Epidemiology in the School of Medicine also has a joint doctoral program with the School of Social Ecology leading to a Ph.D. in Social Ecology with a concentration in Epidemiology and Public Health. That program is designed to prepare students to conduct research on questions in epidemiology and public health and on related questions on the formulation of environment and health policy. Students interested in that program should contact the School of Social Ecology for information.

Faculty

Hoda Anton-Culver: Chronic disease epidemiology, genetic epidemiology, and cancer epidemiology; genetics information and resources, especially Cancer Registry programs internationally; community-based epidemiology research

Dean B. Baker: Environmental and occupational epidemiology; occupational medicine; toxicology; children's health; developmental toxicity; exposure, study design; occupational stress; asthma; pesticides; hazardous waste; environmental science; biological markers

Scott M. Bartell: Environmental and occupational epidemiology; probabilistic models and statistical methods, exposure assessment, risk assessment, and decision analysis

B. Dwight Culver (*Emeritus*): Environmental epidemiology; environmental exposure to chemical and physical agents

Ralph J. Delfino: Environmental epidemiology; effects of community air pollutants on respiratory health and disease, especially asthmas and cardiovascular disease

Rufus D. Edwards: Environmental epidemiology; health effects of air pollution, particles, VOC, developing world changes, greenhouse gas, European cities, Expolis project

Chad P. Garner: Biostatistics; theoretical and statistical methods for studying genetic and environmental determinants of common, complex human traits

Daniel L. Gillen: Biostatistics; survival analysis, longitudinal data analysis, clinical trials, sequential testing, and epidemiologic methods

Deborah L. Goodman-Gruen: Cancer and genetic epidemiology, chronic disease prevention, gynecologic oncology, endogenous sex hormones and cardiovascular diseases, replacement therapies

Christine E. McLaren: Biostatistics; analysis of hereditary hemochromatosis

David S. Timberlake: Genetic epidemiology: genetic basis for the use and misuse of licit and illicit substances and the study of genetic predisposition to behavioral disorders, such as antisocial personality disorder

Pathik D. Wadhwa: Behavioral perinatology; biobehavioral processes; stress; pregnancy; fetal development; prematurity; fetal programming of health and disease; psychoneuroendocrinology; psychoneuroimmunology

Nathan D. Wong: Chronic disease epidemiology, coronary calcium, metabolic syndrome, cardiovascular diseases and health prevention

Jun Wu: Environmental epidemiology: air pollution exposure assessment and air pollution epidemiology, maternal, perinatal and infant health

Jason A. Zell: Cancer epidemiology and prevention; focus on gastrointestinal cancers (colon, rectum, and pancreas)

Argyros Ziogas: Biostatistics; development of statistical methodology of doing family studies related to genetic (family-based) data, ascertainment bias, and gene-environment and gene-gene interactions related to cancer etiology

Courses

EPIDEM 199. Undergraduate Research in Epidemiology. 2-4 Units.

Provides disciplinary research participation. Original or existing research options provide undergraduates the opportunity for faculty/mentor interactions including access to appropriate facilities. Medical Epidemiology research areas: Cancer, Genetic/Molecular, Environmental, Occupational, Biostatistics, and Infectious Disease.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

EPIDEM 200. Principles of Epidemiology. 4 Units.

Fundamental principles of epidemiology, biostatistics, and epidemiological research. Topics include research methods of measuring health problems in populations, disease control and prevention in populations, how epidemiology contributes to knowledge of disease etiology, and biostatistical analysis and interpretation of epidemiologic data.

Restriction: Graduate students only.

EPIDEM 202. Genetic Epidemiology. 4 Units.

Concentrates on the role of genetic factors in the etiology of disease in human populations with an objective of disease control and prevention and the role of interactions of genetic factors and environmental exposures in the occurrence of disease.

Prerequisite: PUBHLTH 203 or EPIDEM 203 or PUBHLTH 206.

Restriction: Graduate students only.

EPIDEM 203. Epidemiology. 4 Units.

Presents descriptive and experimental approaches to the recognition of the causal association of disease in the general population, as these approaches apply to populations using different student designs and models free from the literature.

Same as PUBHLTH 203.

Restriction: Graduate students only.

EPIDEM 204. Biostatistics. 4 Units.

Designed to help students develop an appreciation for statistician's view of the research process, emphasizing biomedical research. Instills an understanding of how statistical models are used to yield insights about data that form evidence-based understanding of the world around us.

Same as PUBHLTH 204.

Restriction: Graduate students only.

EPIDEM 205. Environmental Epidemiology. 4 Units.

Concentrates on epidemiological approaches to the assessment of community environmental hazards; issues involved in environmental exposure estimation; interdisciplinary approaches to environmental epidemiology, including the use of biomarkers of exposures and susceptibility; epidemiological studies within the context of risk assessment.

Prerequisite: EPIDEM 200 and EPIDEM 204.

Restriction: Graduate students only.

EPIDEM 215. Introduction to Statistical Genetics. 4 Units.

Provides students with knowledge of the basic principles, concepts, and methods used in statistical genetic research. Topics include principles of population genetics, and statistical methods for family- and population-based studies.

Prerequisite: Two quarters of upper-division or graduate training in statistical methods.

Same as STATS 257.

EPIDEM 217. Advanced Epidemiologic Methods. 4 Units.

Advanced topics in the design and statistical analysis of epidemiologic studies. Topics include simulation methods, counter-matching and multiphase study designs, missing data, and Bayesian analysis. Published simulation studies are discussed and replicated using the R software package.

Prerequisite: PUBHLTH 101B or STATS 111 or STATS 211.

Same as PUBHLTH 205.

Concurrent with PUBHLTH 119.

EPIDEM 232. Chronic Disease Epidemiology & Prevention. 4 Units.

Epidemiological aspects of chronic human diseases. Topics include methodologies for quantifying aspects of prevalent chronic diseases including risk factors, identification of susceptible groups, societal burdens, promising future research; and the intervention, prevention, and control of diseases in populations.

Restriction: Graduate students only.

EPIDEM 244. Toxic Chemicals in Environment. 4 Units.

Industrial ecology of toxicants and their impacts on environmental quality and human health. Explores theoretical basis of toxicity thresholds and regulatory issues. Uses classic and contemporary research articles to understand the legacy of traditional toxicants, and to identify emerging threats.

Same as PUBHLTH 276.

Restriction: Graduate students only.

EPIDEM 264. Introduction to Environmental Health Science. 4 Units.

Convergence of agents (chemical, physical, biological or psychosocial) in environment can emerge as diseases influenced by social, political, and economic factors allowing them to become rooted in society. How these agents from various spheres come together and impact human health.

Same as PUBHLTH 264, TOX 264.

Restriction: Graduate students only.

EPIDEM 265. Advanced Environmental Health Science. 4 Units.

Explores the complex relationships among exposure processes and adverse health effects of environmental toxins focusing on specific chemicals, sources, transport media, exposure pathways, and human behaviors. Techniques of environmental sampling for exposure assessment are discussed.

Same as PUBHLTH 265.

Restriction: Graduate students only.

EPIDEM 269. Air Pollution, Climate, and Health. 4 Units.

Emission of air pollutants into the atmosphere, physical and meteorological processes that affect transport, and influence on global warming. Concepts of how and where people are most exposed, and how exposures and health effects differ in developed and developing regions.

Same as TOX 269, PUBHLTH 269.

EPIDEM 270. Human Exposure to Environmental Contaminants. 4 Units.

Introduces founders of conceptual thought that environmental contaminants can impact health. Theory and principles of exposure assessment, the continuum from emissions of a contaminant into the environment to evidence of health effects in a population.

Same as TOX 270, PUBHLTH 270.

EPIDEM 275. Special Topics in Epidemiology. 1-4 Units.

Presents various topics and latest research in the broad field of epidemiology.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EPIDEM 290. Introduction to Biostatistics and Epidemiology for Medical Fellows. 4 Units.

Prepares medical fellows and other physicians for rotations in research programs. Understanding of basic biostatistics and study design, and interdependencies between the two. Application of principles in evaluation of medical literature for guidance on patient care and public health policy.

Prerequisite: Medical degree.

EPIDEM 296. M.S. Thesis Research and Writing. 1-12 Units.

Individual research and study necessary for a graduate student to prepare and complete the thesis required for the Master of Science (M.S.) degree.

Prerequisite: Advancement to candidacy.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EPIDEM 297. PhD Degree Dissertation Research & Writing. 1-12 Units.

Individual research and study necessary for a graduate student to prepare and complete the dissertation required for the Doctor of Philosophy (Ph.D.) degree.

Prerequisite: Advancement to candidacy.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EPIDEM 298. Directed Study in Epidemiology. 2-4 Units.

Directed study with Epidemiology faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EPIDEM 299. Independent Study in Epidemiology. 2-8 Units.

Independent research with Epidemiology faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EPIDEM 399. University Supervised Teaching. 2-4 Units.

Limited to students with active Teaching Assistant (T.A.) appointments.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Experimental Pathology

Building D, Room D440, Medical Sciences I; (949) 824-5367

<http://www.pathology.uci.edu/>

Edwin S. Monuki, **Acting Department Chair and Graduate Program Director**

The Department of Pathology and Laboratory Medicine offers a Ph.D. in Biomedical Sciences with a concentration in Experimental Pathology. The graduate program emphasizes experimental approaches to better understand the molecular and cellular mechanisms of disease, particularly human disease. Students work in laboratories studying topics ranging from infectious processes such as malaria and the acquired immune deficiency syndrome to innate immunity. The principal areas of research investigated by faculty in the Experimental Pathology concentration range from developmental neurobiology to cancer, including prostate cancer.

The Department offers graduate study under the auspices of the School of Medicine and in conjunction with the program in Cellular and Molecular Biosciences (CMB), which is described in the School of Biological Sciences (p. 196) section. Students are eligible to enter the Department program after meeting the specific requirements of the CMB gateway curriculum or by direct application to the Department. The Department program leads to the M.S. or Ph.D. degree in Biomedical Sciences, awarded after successful completion of all requirements. Students admitted into the program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the start of their second year.

Experimental pathology makes extensive use of both animal models of human disease and studies on human tissues from human subjects. Therefore, the curriculum is heavily weighted on experimental models, including animal models, of human disease. The didactic teaching components of the track are supplemented by a Pathology research conference, in which faculty, postdoctoral fellows, and graduate students present seminars or "research in progress" talks. This seminar series allows trainees the opportunity to gain invaluable experience in presenting their research to other scientists and provides a mentoring process through which students gain insights from diverse scientific viewpoints.

Students should advance to candidacy by the end of their third year. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Faculty

Jefferson Y. Chan: Regulation of genes associated with oxidative stress

K. George Chandy: Molecular biology and structure of ion channels; novel therapeutic agents

Dongbao Chen: Angiogenesis, endothelial, and placental biology

Luis M. de la Maza: Chlamydia trachomatis vaccines and sexually transmitted diseases

Robert A. Edwards: Mucosal immunology, inflammatory bowel disease, G-proteins, prostaglandins, and chemokines

Mark Fisher: Mechanisms of stroke, vascular neurobiology, blood-brain barrier

Anthony A. James: Malaria parasite development; genetic manipulation of insect vectors

J. Lawrence Marsh: Regulation of growth factor signaling in patterning, regeneration and oncogenesis

Dan Mercola: Translational cancer biology

Edwin S. Monuki: Forebrain development and stem cell applications

Ellena M. Peterson: Chlamydia vaccine development

W. Edward Robinson: Pathogenesis of retrovirus infections; molecular mechanisms of integration

Sandor Szabo: Pathogenesis of gastrointestinal ulceration, duodenal ulcer

Andrea J. Tenner: Innate immunity; the roles of complement and phagocytes in health and disease

Ping H. Wang: Molecular hormone actions in the normal and diseased heart

Courses

PATH 200A. Research in Experimental Pathology. 2-12 Units.

Independent research for the Ph.D. program within the laboratories of graduate training faculty in Experimental Pathology.

Corequisite: PATH 203A.

Repeatability: Unlimited as topics vary.

PATH 200B. Research in Experimental Pathology. 2-12 Units.

Independent research for the Ph.D. program within the laboratories of graduate training faculty in Experimental Pathology.

Corequisite: PATH 203B.

Repeatability: Unlimited as topics vary.

PATH 200C. Research in Experimental Pathology. 2-12 Units.

Independent research for the Ph.D. program within the laboratories of graduate training faculty in Experimental Pathology.

Corequisite: PATH 203C.

Repeatability: Unlimited as topics vary.

PATH 200R. Research in Experimental Pathology for First-Year Students. 2-12 Units.

Independent research within the laboratories of graduate training faculty in Experimental Pathology for first-year Ph.D. students.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

PATH 203A. Advanced Studies in Experimental Pathology. 1 Unit.

A tutorial course for Ph.D. students in Experimental Pathology entailing attendance at Departmental seminars and critical reading of the scientific literature.

Corequisite: PATH 200A.

Repeatability: May be repeated for credit unlimited times.

PATH 203B. Advanced Studies in Experimental Pathology. 1 Unit.

A tutorial course for Ph.D. students in Experimental Pathology entailing attendance at Departmental seminars and critical reading of the scientific literature.

Corequisite: PATH 200B.

Repeatability: May be repeated for credit unlimited times.

PATH 203C. Advanced Studies in Experimental Pathology. 1 Unit.

A tutorial course for Ph.D. students in Experimental Pathology entailing attendance at Departmental seminars and critical reading of the scientific literature.

Corequisite: PATH 200C.

Repeatability: May be repeated for credit unlimited times.

PATH 204A. Experimental Pathology Research Seminar. 1 Unit.

Seminar series for graduate students in Experimental Pathology. Students attend seminars and, beginning in their third year of graduate study, present one formal seminar on their graduate research.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PATH 204B. Experimental Pathology Research Seminar. 1 Unit.

Seminar series for graduate students in Experimental Pathology. Students attend seminars and, beginning in their third year of graduate study, present one formal seminar on their graduate research.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PATH 204C. Experimental Pathology Research Seminar. 1 Unit.

Seminar series for graduate students in Experimental Pathology. Students attend seminars and, beginning in their third year of graduate study, present one formal seminar on their graduate research.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PATH 212. Signal Transduction and Growth Control. 4 Units.

Covers various eukaryotic signaling pathways (tyrosine kinase, ras-raf-MAPK, TGF- β , wnt, JAK-STAT, and FAS) with an emphasis on the experimental underpinnings. The material is covered in lectures and discussions of pertinent papers.

Same as BIOCHEM 212.

PATH 221. Immunopathogenic Mechanisms of Disease. 3 Units.

Examination of the mechanisms underlying disease states mediated by immune dysregulation. Topics include innate and adaptive immunity, autoimmunity, immunodeficiency, inflammatory disorders, and certain infectious diseases. Emphasis on biological basis of immunopathologies taught from reports in the original scientific literature.

Prerequisite: M&MG 215.

Same as M&MG 221.

Restriction: Graduate students only.

PATH 225. Molecular Mechanisms of Human Disease. 3 Units.

Provides an overview of the molecular mechanisms of human diseases, including neurologic, hematologic, neoplastic, and infectious diseases. Students gain an understanding of these mechanisms, as well as models of human diseases.

Same as M&MG 225.

PATH 226. Topics in Experimental Pathology. 4 Units.

Select topics related to principles of experimental pathology including normal host responses to disease are presented. Animal models of human disease are emphasized. Material includes both lectures and critical review of the primary literature.

PATH 227. Experimental Pathology Journal Club. 1 Unit.

Graduate-level course, which is open to all years, will involve the reading and discussion of papers, preferably written by the invited seminar speaker. Discussions will cover advanced topics in experimental pathology as related to an understanding of human disease.

Corequisite: PATH 204A and PATH 204B and PATH 204C.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PATH 230D. Principles of Experimental Pathology. 4 Units.

Introduces graduate students to the general pathologic processes that mediate disease. Topics include cell injury and repair, inflammation, immunopathology, neoplasia, and genetic diseases. Combines lecture, small group discussion, and oral presentations.

PATH 231A. Pathology of Cardiovascular Diseases. 2 Units.

For graduate students interested in human cardiovascular disease. Students receive training in physiology, anatomy, and pathologic processes of the heart and blood vessels. Experimental approaches to study such processes are emphasized.

PATH 232A. Pathology of Pulmonary Diseases. 1.5 Unit.

For graduate students interested in pulmonary disease. Students receive training in physiology, anatomy, and pathologic processes of the lungs and airways. Experimental approaches to study such processes are emphasized.

PATH 233A. Pathology of Renal Diseases. 1 Unit.

For graduate students interested in renal disease. Students receive training in physiology, anatomy, and pathologic processes of the kidneys. Experimental approaches to study such processes are emphasized.

PATH 234A. Pathology of Gastrointestinal Diseases. 0 Units.

For graduate students interested in gastrointestinal disease. Students receive training in physiology, anatomy, and pathologic processes of the gastrointestinal tract. Experimental approaches to study such processes are emphasized.

Grading Option: In progress only.

PATH 234B. Pathology of Gastrointestinal Diseases. 2 Units.

For graduate students interested in gastrointestinal disease. Students receive training in physiology, anatomy, and pathologic processes of the gastrointestinal tract. Experimental approaches to study such processes are emphasized.

Prerequisite: PATH 234A.

PATH 235A. Pathology of Genitourinary Tract Disease. 0 Units.

For graduate students interested in genitourinary tract or breast disease. Students receive training in physiology, anatomy, and pathologic processes of the breast and genitourinary tract. Experimental approaches to study such processes are emphasized.

Grading Option: In progress only.

PATH 235B. Pathology of Genitourinary Tract Disease. 2 Units.

For graduate students interested in genitourinary tract or breast disease. Students receive training in physiology, anatomy, and pathologic processes of the breast and genitourinary tract. Experimental approaches to study such processes are emphasized.

Prerequisite: PATH 235A.

PATH 236B. Graduate Neuropathology. 1 Unit.

For graduate students interested in diseases of the nervous system. Students receive training in physiology, anatomy, and pathologic processes of the central and peripheral nervous system. Experimental approaches to study such processes are emphasized.

PATH 292A. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PATH 292B. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PATH 292C. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PATH 299. Dissertation in Experimental Pathology. 1-12 Units.

Provided for the preparation and completion of the dissertation required for the Ph.D. degree.

Repeatability: May be repeated for credit unlimited times.

Genetic Counseling

UC Irvine Medical Center, City Tower, Suite 800; (714) 456-5789

<http://www.pediatrics.uci.edu/gcprogram/>

Pamela Flodman, **Graduate Program Director**

The Division of Human Genetics in the School of Medicine's Department of Pediatrics offers a Master of Science degree program in Genetic Counseling. Many graduates of the program join academic or hospital-based genetics teams providing clinical services, teaching, and research. Others work for local, state, or federal genetics programs, for commercial genetics laboratories, in research studies, or in education. The graduate program is fully accredited by the American Board of Genetic Counseling.

Division faculty and staff are engaged in teaching, research, and patient service. Clinical activities center on diagnostic evaluation, management, and genetic counseling for genetic disorders, including birth defects, developmentally disabling conditions, and hereditary cancers. Faculty research interests include clinical genomics; gene mapping and identification using molecular and quantitative methods; characterization and management of malformation and chromosomal syndromes; counseling for late-onset genetic conditions including familial cancers and neurogenetic disorders; factors causing chromosome abnormalities, genomic disorders, and congenital malformations; cancer genetics and cytogenetics; psychosocial and cultural issues associated with genetic conditions, prenatal diagnosis, genetic screening testing, and genetic services delivery; treatment of genetic disease; and ethical and public policy issues in genetics.

During the six to eight academic quarters of the program, students complete a sequence of core courses covering medical, quantitative, biochemical, molecular, and cancer genetics and genomics; teratology, embryology, and development; cytogenetics; counseling theory and application; research methods; ethical issues; and community resources. All courses are taught by Division faculty specifically for students in the program. Experiential professional training occurs concurrently with formal course work in a variety of clinics at UC Irvine Medical Center and satellite facilities, in the prenatal diagnosis program, in the cytogenetics and molecular genetics laboratories, and in various community agencies. Students participate in these and other divisional and departmental professional and educational activities such as lectures, seminars, and journal club; Pediatrics, Obstetrics, and Oncology Grand Rounds; and various research, counseling, and patient management conferences throughout the program. While not required, some students choose to arrange optional clinical rotations at other academic, private, or commercial genetics units.

Degree requirements include a minimum of 75 quarter units, completion of a research thesis that should be publishable, and demonstration of appropriate professional skills in genetic counseling. The program director serves as faculty advisor to students. Teaching and supervision of professional experiential training are shared by all Division faculty and staff, who frequently review student progress. In the second year, development of professional skills can be individualized according to the trainee's needs and interests. Successful completion of the program

fulfills the curricular and clinical training requirements for eligibility to sit for examination by the American Board of Genetic Counseling.

Recommended undergraduate preparation includes course work in the biological and behavioral sciences—particularly in genetics, biochemistry, molecular biology, psychology, and human anatomy or embryology. Course work in statistics is desirable. Fluency in Spanish or a Southeast Asian language confers a considerable advantage. Extracurricular or employment experiences that provide evidence of the student's maturity, interpersonal skills, and promise as a genetic counselor figure prominently in the admissions decision. References should speak to these qualities as well as to the academic qualifications of the applicant. The GRE General Test is required. Subject Test scores in any area will also be considered if they are available. Since there is no GRE code for the Department of Pediatrics, applicants should use the UCI institution code: R4859.

Applications are accepted for the fall quarter only and must be complete by February 1. Because of keen competition for places in the program, a two-stage admissions process is employed. Following initial review of applications by the faculty admissions committee, approximately one-third of applicants are invited for interviews, which are usually conducted during March and April. If invited, it is greatly to the candidate's advantage to have an on-site interview, although in difficult circumstances it may be possible to arrange an out-of-town interview. Any candidate planning to be in the Southern California area in March or April is encouraged to inquire in advance regarding the likelihood of an interview. Final selection from the interviewed candidates occurs in late April or early May. Five or six students are usually admitted each year.

Faculty

Maureen Bocian: Heterogeneity and variability in genetic diseases; characterization of new syndromes; neurofibromatosis; skeletal dysplasias

José A. Camacho: Genetic metabolic diseases; urea cycle disorders; Hyperornithinemia-Hyperammonemia-Homocitrullinuria (HHH) syndrome

Elizabeth Chao: Clinical genomics, whole exome sequencing, variant classification, cancer genetics

Pamela Flodman: Genetic counseling, risk analysis, and risk perception; genetic epidemiology; human genome informatics

Kathryn Steinhaus French: Prenatal genetic diagnosis; standardization of family pedigree nomenclature

John Jay Gargus: Genetic metabolic diseases; molecular pathophysiology of inborn errors in signal transduction via growth factor receptors and channels; autism

Virginia Kimonis: Genetics of neuromuscular diseases; inherited muscle disorders that occur in combination with diseases of bone; disorders due to mutations in VCP; natural history of Prader Willi syndrome and early onset morbid obesity syndromes; genotype-phenotype correlation in craniosynostosis

Kathryn Singh: Genetic counseling; cystic fibrosis; hereditary cancer counseling

Moyra Smith: Gene linkage and mapping in neurogenetic disorders including autism; mutation analysis and genotype-phenotype correlation in tuberous sclerosis

M. Anne Spence: Genetic epidemiology, quantitative genetics; linkage and mapping

Michael V. Zaragoza: Genetics and genomic analysis of cardiomyopathies in humans and mice

Courses

PED GEN 200A. Introduction to Medical Genetics and Cytogenetics. 4 Units.

Covers current concepts regarding mitosis, meiosis, the cell cycle, and chromosome ultrastructure and function. Clinical disorders caused by chromosomal aneuploidy, duplication, and deletion, and principles of Mendelian, chromosomal, and multifactorial and nontraditional inheritance are presented and illustrated.

Restriction: Graduate students only.

PED GEN 200B. Genetic Screening, Prenatal Development, and Human Teratology. 4 Units.

Principles and techniques of prenatal, neonatal, and carrier screening. Infertility, pregnancy, and delivery. Normal and abnormal prenatal growth and development. Reproductive and fetal effects of drugs, radiation, infections, and other environmental factors.

Prerequisite: PED GEN 200A.

Restriction: Genetic Counseling students only.

PED GEN 200C. Human Genetic Disorders. 4 Units.

Inheritance, diagnosis, natural history, management, and counseling considerations for commonly encountered genetic diseases, birth defects, and dysmorphic syndromes.

Prerequisite: PED GEN 200B.

Restriction: Genetic Counseling students only.

PED GEN 200D. Disorders due to Inborn Errors of Metabolism. 4 Units.

Aspects of biochemistry and metabolism are reviewed with special emphasis on genetic abnormalities which lead to inborn errors of metabolism. Diagnostic procedures, heterozygote detection, treatment, counseling issues, and prenatal diagnosis are reviewed.

Prerequisite: PED GEN 200A.

PED GEN 200E. Molecular Genetics, Gene Mapping, and Genetic Linkage. 4 Units.

Derivation of different types of DNA probes and DNA libraries, restriction endonuclease polymorphisms, assignment of genes to chromosomes, and genetic linkage. Emphasis on the use of recombinant DNA technologies and genetic analysis for diagnosis of human genetic disease.

Prerequisite: PED GEN 200A and PED GEN 200D.

PED GEN 200F. Quantitative Genetics. 2 Units.

Quantitative aspects of human genetics, including population studies, segregation analysis, linkage, mapping, and genetic risk determination.

Prerequisite: Prerequisite or corequisite: PED GEN 200A.

Overlaps with PED GEN 200B.

PED GEN 200G. Hereditary Cancer Counseling. 4 Units.

Issues in genetic counseling for cancer. Cancer biology; genetic mechanisms and environmental influences in carcinogenesis; tumor pathology; cancer gene mapping; epidemiology. Features natural history, diagnosis, prevention, surveillance, and management of hereditary cancers. Psychosocial, ethical, legal aspects of cancer risk assessment.

Prerequisite: PED GEN 200B.

Restriction: Genetic Counseling students only.

PED GEN 200H. Genetic Counselin Research Design. 4 Units.

Quantitative and qualitative methods for genetic counseling research. Reference management; statistics: sample size, power, and data analysis; reliability and validity; surveys, questionnaires, interviews, focus groups; quality of life and genetic epidemiology research; designing a research protocol; IRB issues; grant writing.

PED GEN 200L. Cytogenetics Laboratory. 4 Units.

Practicum introducing methods of specimen collection, short-term lymphocyte and bone marrow culture, long-term fibroblast and amniocyte culture, harvesting and slide preparation, chromosome staining, microphotography, and darkroom techniques. Microscopic chromosome analysis, photographic karyotyping, and appropriate use of cytogenetic nomenclature are emphasized.

Restriction: Graduate students only.

PED GEN 201A. Introduction to Genetic Counseling. 4 Units.

Through directed readings, observing patient evaluations, role-playing, and conducting intake interviews, students are introduced to the process of diagnosis, management, and counseling for genetic disease. Psychosocial issues, interviewing techniques, pedigree construction, clinical photography, and various other skills are addressed.

Restriction: Genetic Counseling students only.

PED GEN 201B. Clinical Rotation I. 4 Units.

Provides extensive supervised experience in history taking, interviewing, and psychosocial assessment in the clinical genetics setting. Students independently perform telephone, office, and home-visit intake interviews, participate in counseling, and present cases at patient management conferences.

Restriction: Genetic Counseling students only.

PED GEN 201C. Clinical Rotation II. 4 Units.

Provides further supervised experience in genetic counseling, case management, clinic administration and organization, and the use of community resources. Emphasis is on sharpening counseling skills and on developing a professional identity and code of ethics.

Restriction: Genetic Counseling students only.

PED GEN 201D. Prenatal Diagnosis Counseling. 4 Units.

A practicum with extensive supervised experience in prenatal diagnosis counseling which provides the student with the opportunity to conduct genetic counseling sessions semi-independently and to further develop clinical skills.

Prerequisite: PED GEN 200A and PED GEN 200B and PED GEN 200C.

Restriction: Genetic Counseling students only.

PED GEN 202A. Counseling in Human Genetics: Theory and Methods. 3 Units.

Theoretical approaches, counseling models and methods, and bio-psychosocial assessment strategies are examined in the context of genetic counseling. Contract-setting, working alliance, the use of self and evaluation methods. Beginning counseling and peer supervision skills are practiced in class.

Restriction: Genetic Counseling students only.

PED GEN 202B. Community Resources. 2 Units.

Lectures, guest speakers, and community visits acquaint genetic counselors with public and private health care and funding agencies, parent support and advocacy groups, and other resources to assist individuals and families confronted with genetic disorders, developmental disabilities, and birth defects.

Restriction: Genetic Counseling students only.

PED GEN 202C. Ethical Issues in Human Genetics. 2 Units.

Explores major social, legal, and ethical issues in genetic counseling including those arising in genetic screening, prenatal diagnosis, informed consent, privacy and confidentiality, rights of the disabled, new genetic and reproductive technologies, treatment, and access to services.

PED GEN 203A. Counseling in Human Genetics: Putting Thought to Practice. 4 Units.

Builds upon the skills learned in previous courses emphasizing advanced counseling methods such as listening, empathy, and collaboration.

The counselor's own self-awareness, ethical behaviors, and limits are explored. Individual, team, and group exercises are performed.

Prerequisite: PED GEN 202A.

Restriction: Genetic Counseling students only.

PED GEN 204A. Professional Skills Development. 4 Units.

Hones and augments existing competencies in genetic counseling through ongoing clinical experiences. Develops skills using computers for genetics applications, provision of community and professional education, and clinic administration. Further experience in genetics laboratories or specialty clinics may be elected.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

PED GEN 204B. Professional Skills Development. 4 Units.

Hones and augments existing competencies in genetic counseling through ongoing clinical experiences. Develops skills using computers for genetics applications, provision of community and professional education, and clinic administration. Further experience in genetics laboratories or specialty clinics may be elected.

Prerequisite: PED GEN 204A.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

PED GEN 204C. Professional Skills Development. 4 Units.

Hones and augments existing competencies in genetic counseling through ongoing clinical experiences. Develops skills using computers for genetics applications, provision of community and professional education, and clinic administration. Further experience in genetics laboratories or specialty clinics may be elected.

Prerequisite: PED GEN 204B.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

PED GEN 295. Master's Thesis and Research Writing. 4-8 Units.

Under the supervision of one or more faculty members, the student designs and conducts a research project or completes a case report. A problem in the cytogenetics, biochemical, clinical, psychosocial, or behavioral areas of medical genetics may be investigated.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

Microbiology and Molecular Genetics

Building B, Room 240, Medical Sciences I; (949) 824-5261

<http://www.microbiology.uci.edu/>

Rozanne M. Sandri-Goldin, **Department Chair**

Marian L. Waterman, **Department Vice Chair**

Klemens J. Hertel, **Departmental Graduate Advisor**

The Department of Microbiology and Molecular Genetics provides advanced training to individuals interested in the regulation of gene expression and the structural and functional properties of proteins encoded by these genes. The research in the Department covers a wide range of topics with special emphasis on bacterial gene expression and pathogenesis; viral gene expression and host interactions; trypanosome molecular biology; vector-borne malaria and dengue fever transmission; nuclear-cytoplasmic transport and intracellular signaling; eukaryotic gene expression; mRNA splicing, editing, and processing; cancer genetics and tumor suppressors; ion channel expression and function; genomics and bioinformatics.

The Department offers graduate study under the auspices of the School of Medicine and in conjunction with the program in Cellular and Molecular Biosciences (CMB) and the program in Mathematical and Computational Biology (MCB), which are described in the School of Biological Sciences (p. 196) section. Students are eligible to enter the Department program after meeting the specific requirements of the CMB gateway curriculum or by direct application to the Department. The Department program leads to the M.S. or Ph.D. degree in Biomedical Sciences, awarded after successful completion of all requirements. Students admitted into the CMB program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

Participation in the Department's seminar series and completion of at least one advanced topics course per year for three years are expected of all students. In their third year, students take the advancement-to-candidacy examination for the Ph.D. degree by presenting and defending an original proposal for specific dissertation research. The normative time

for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Faculty

Alan G. Barbour: Molecular pathogenesis and immunology of vector-borne infections

Emiliana Borrelli: Dopaminergic system and glial cells in CNS development

Paolo Casali (*Joint*): Molecular and cellular immunology, molecular genetics, autoimmunity

K. George Chandy (*Joint*): Role of potassium channels in lymphocyte function and disease

Michael Demetriou (*Joint*): The molecular biology and glycobiology of T cell dysfunction in organ-specific autoimmunity

Alan L. Goldin: Molecular analysis of ion channel function and its roles in human diseases

Klemens J. Hertel: Regulation of gene expression by alternative splicing

Anthony A. James: Methods for controlling the transmission of vector-borne diseases, specifically malaria and dengue fever

Janos K. Lanyi (*Joint*): Bacteriorhodopsin; halorhodopsin; light-driven ion pumps

Manuela Raffatellu: Mechanisms of *Salmonella* interaction with the intestinal mucosa; mucosal barrier function during *Salmonella* infection

W. Edward Robinson, Jr. (*Joint*): Molecular pathogenesis of lentivirus infection and drug discovery against HIV

Suzanne B. Sandmeyer (*Joint*): Molecular genetics of a position-specific yeast retrovirus-like element

Rozanne M. Sandri-Goldin: Structural and functional analysis of a multifunctional herpes virus regulatory protein

Paolo Sassone-Corsi (*Joint*): Signal transduction, gene expression, oncogenesis, circadian clock

Bert L. Semler: Replication and translation of picornaviruses; RNA-protein and protein-protein interactions

Yongsheng Shi: Post-transcriptional gene regulation and its role in human diseases

Ming Tan: Bacterial pathogenesis; gene regulation in Chlamydia

Marian L. Waterman: Wnt signaling in cancer and lymphocytes

Courses

M&MG 200A. Research in Microbiology and Molecular Genetics. 2-12 Units.

Individual research supervised by a particular professor.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

M&MG 200B. Research in Microbiology and Molecular Genetics. 2-12 Units.

Individual research supervised by a particular professor.

Prerequisite: M&MG 200A.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

M&MG 200C. Research in Microbiology and Molecular Genetics. 2-12 Units.

Individual research supervised by a particular professor.

Prerequisite: M&MG 200B.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

M&MG 200R. Research in Microbiology and Molecular Genetics for First-Year Students. 2-12 Units.

Independent research within the laboratories of graduate training faculty in the Department of Microbiology and Molecular Genetics for first-year Ph.D. students.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

M&MG 201A. Research topics in Microbiology and Molecular Genetics. 1 Unit.

Seminars presented by graduate students and faculty of the Department which explore research topics in specialized areas of microbiology and molecular genetics. Opportunity for students to gain experience in the organization, critical evaluation, and oral presentation of current research developments.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

M&MG 201B. Research topics in Microbiology and Molecular Genetics. 1 Unit.

Seminars presented by graduate students and faculty of the Department which explore research topics in specialized areas of microbiology and molecular genetics. Opportunity for students to gain experience in the organization, critical evaluation, and oral presentation of current research developments.

Prerequisite: M&MG 201A.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

M&MG 201C. Research topics in Microbiology and Molecular Genetics. 1 Unit.

Seminars presented by graduate students and faculty of the Department which explore research topics in specialized areas of microbiology and molecular genetics. Opportunity for students to gain experience in the organization, critical evaluation, and oral presentation of current research developments.

Prerequisite: M&MG 201B.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

M&MG 203A. Advanced Studies in Microbiology and Molecular Genetics. 1 Unit.

Organized within each laboratory group, one to four hours. Advanced study in areas related to faculty research interests. Involves small group study based on readings, discussions, and guest speakers. May be conducted as journal clubs.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

M&MG 203B. Advanced Studies in Microbiology and Molecular Genetics. 1 Unit.

Organized within each laboratory group, one to four hours. Advanced study in areas related to faculty research interests. Involves small group study based on readings, discussions, and guest speakers. May be conducted as journal clubs.

Prerequisite: M&MG 203B.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

M&MG 203C. Advanced Studies in Microbiology and Molecular Genetics. 1 Unit.

Organized within each laboratory group, one to four hours. Advanced study in areas related to faculty research interests. Involves small group study based on readings, discussions, and guest speakers. May be conducted as journal clubs.

Prerequisite: M&MG 203B.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

M&MG 205A. Basic Immunology Core Lectures. 1 Unit.

Basic concepts in human immunology including development of the immune system, innate immunity, immunoglobulin structure and genetics, antigen-antibody reactions, the major histocompatibility complex and antigen presentation, T cell and B cell development, initiation of the immune response, effector mechanisms.

Grading Option: Satisfactory/unsatisfactory only.

M&MG 205B. Basic Immunology Core Lectures. 1 Unit.

Basic concepts in human immunology including development of the immune system, innate immunity, immunoglobulin structure and genetics, antigen-antibody reactions, the major histocompatibility complex and antigen presentation, T cell and B cell development, initiation of the immune response, effector mechanisms.

Prerequisite: M&MG 205A.

Grading Option: Satisfactory/unsatisfactory only.

M&MG 205C. Basic Immunology Core Lectures. 1 Unit.

Basic concepts in human immunology including development of the immune system, innate immunity, immunoglobulin structure and genetics, antigen-antibody reactions, the major histocompatibility complex and antigen presentation, T cell and B cell development, initiation of the immune response, effector mechanisms.

Prerequisite: M&MG 205C.

Grading Option: Satisfactory/unsatisfactory only.

M&MG 206. Regulation of Gene Expression. 4 Units.

Aspects of gene expression including organization of the eukaryotic nucleus in terms of protein-nucleic acid interaction; comparisons between prokaryotic and eukaryotic gene expression, enzymology and regulation of RNA transcription in *E. Coli* and other prokaryotes; enzymology of transcription in eukaryotes.

M&MG 210A. Medical Microbiology. 4-6 Units.

Biology of microbial pathogens (viruses, bacteria, fungi, parasites) as foundation for subsequent study of infectious diseases. Topics: molecular basis of microbial pathogenesis; clinical presentation and epidemiology; diagnostic testing; antimicrobial therapy; prevention strategies. Format: lectures, laboratory, clinical cases, liveclasstech interactive questions.

M&MG 210B. Medical Immunology. 6-6 Units.

Cellular and molecular basis of immune response and roles of the immune system in both maintaining health and contributing to disease.

Prerequisite: M&MG 210A.

Restriction: Medical students only.

M&MG 215. Integrative Immunology. 4 Units.

Lectures and student presentations of primary literature. The main goal is to achieve a basic understanding of the cellular and molecular basis of innate and adaptive immunity, and how immune function is coordinated at a systems level.

Same as MOL BIO 215.

M&MG 216. Pathogenic Microbiology. 4 Units.

Biochemical and genetic properties of infectious agents; identification and behavior of pathogens; activities of toxins; the chemotherapy, biochemistry, and genetics of drug resistance; and epidemiology of infectious diseases.

M&MG 219. Medical Virology. 4 Units.

Animal viruses as disease causing agents, including mechanisms of infection at both the cellular and organismic levels. Topics include comparative studies of different groups of viruses, viral transformation, and mechanisms of viral gene expression.

M&MG 221. Immunopathogenic Mechanisms of Disease. 3 Units.

Examination of the mechanisms underlying disease states mediated by immune dysregulation. Topics include innate and adaptive immunity, autoimmunity, immunodeficiency, inflammatory disorders, and certain infectious diseases. Emphasis on biological basis of immunopathologies taught from reports in the original scientific literature.

Prerequisite: M&MG 215.

Same as PATH 221.

Restriction: Graduate students only.

M&MG 222. Molecular Pathogenesis of Viral Infections. 4 Units.

Features lectures by faculty on the molecular aspects of viral pathogenesis, highlighting both viral and cellular functions. Students give oral presentations and write a research proposal on a selected topic.

Prerequisite: MOL BIO 205.

M&MG 225. Molecular Mechanisms of Human Disease. 3 Units.

Provides an overview of the molecular mechanisms of human diseases, including neurologic, hematologic, neoplastic, and infectious diseases. Students gain an understanding of these mechanisms, as well as models of human diseases.

Same as PATH 225.

M&MG 227. Immunology Journal Club. 2 Units.

Advanced topics in immunology as related to an understanding of human disease.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

M&MG 230. Topics in Stem Cells. 2-4 Units.

One-hour seminar presentation by participating faculty or guest lecturer and open to the science community, followed by one-hour discussion of the lecture topic or related topic. Students are responsible for presentations and readings.

M&MG 240. M.D./PH.D. Tutorial. 1 Unit.

Explores a variety of topics that impact careers of medical scientists (M.D./Ph.D students). Topics range from scientific, such as recent advances in particular research areas, to ethical problems brought on by increased technology and intervention in the disease process.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

M&MG 250. Responsible Conduct of Research. 2 Units.

Each session includes a formal presentation by faculty/invited speaker followed by a discussion of case studies related to the topic under consideration.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

M&MG 270. Career Development. 2 Units.

Topics include preparation of papers, grants and fellowships, scientific presentations, and curriculum vitae, and career opportunities.

Repeatability: May be repeated for credit unlimited times.

M&MG 280. Tutorial in Microbiology and Molecular Genetics. 2 Units.

Tutorial in Microbiology and Molecular Genetics. Presented by the department chair; relates current laboratory research to the literature.

Repeatability: May be repeated for credit unlimited times.

M&MG 292A. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

M&MG 292B. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

M&MG 292C. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

M&MG 298. Independent Study. 1-12 Units.

Provided for MSTP students to synthesize the basic science information learned during the basic science years of medical school and learn how to apply that knowledge toward graduate research directed at understanding the basis of human disease.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

M&MG 299. Dissertation—Microbiology and Molecular Genetics . 1-12 Units.

Course provided for Ph.D. students to prepare and complete the dissertation required for a Ph.D. degree.

Repeatability: May be repeated for credit unlimited times.

Pharmacological Sciences

360 Medical Surge II; (949) 824-7651

<http://www.pharmacology.uci.edu/>

Olivier Civelli, **Department Chair**

Geoffrey W. Abbott, **Department Vice Chair and Graduate Program Director/Advisor**

The primary graduate program for the Department of Pharmacology direct-admit students is the interdisciplinary graduate program in Pharmacological Sciences. The Department of Pharmacology joined forces with the Department of Pharmaceutical Sciences to offer an interdisciplinary program leading to the Ph.D. degree in Pharmacological

Sciences. For complete program information, see the Interdisciplinary Studies (p. 624) section of the *Catalogue*.

The Department of Pharmacology also admits students through the following two gateway programs:

Graduate Gateway Program in Medicinal Chemistry and Pharmacology (MCP). The one-year graduate MCP Gateway Program is designed to function in concert with selected department programs, including the Ph.D. in Pharmacological Sciences. Upon successful completion of the MCP curriculum at the end of their first year, students choose a faculty advisor who is affiliated with one of the participating departments, and transition into their "home" department to complete the remaining degree requirements. They will receive their Ph.D. degree from the department of their chosen advisor. Detailed information is available at <http://www.pharmacology.uci.edu>.

The Department also participates in the **Interdepartmental Neuroscience Gateway Program**, described in the School of Biological Sciences section of the *Catalogue*. Students who select a focus in Neuroscience and a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year and will receive their Ph.D. from the department of their chosen advisor. Detailed information is available at http://www.inp.uci.edu/research/facsort_dept_list.cfm?department=15.

Graduate Program Faculty

Geoffrey W. Abbott: Biology and pharmacology of voltage-gated potassium channels, voltage-independent potassium channels, and ion transporters

Emiliana Borrelli (*Joint*): Dopamine signaling and drugs of addiction; mouse models of neurological and neuropsychiatric disorders

Olivier Civelli: Molecular biology of G protein-coupled receptors; discovery of novel neuropeptides; functional characterization of novel neuropeptides, discovery of active components of traditional Chinese medicines

Frederick J. Ehler: Muscarinic receptor coupling mechanisms; functional role of muscarinic receptor subtypes; pharmacological methods of analysis; analysis of drug receptor interactions

Pietro R. Galassetti (*Joint*): Physiological and altered adaptive responses to stress in healthy and dysmetabolic children and adults; non-invasive monitoring of metabolic variables through analysis of exhaled gases

Kelvin W. Gee: Pharmacology of allosteric modulators of the GABA_A receptor, selective modulation of GABA_A receptor subtypes; novel molecular targets for neuropharmacological agents and drug discovery

Naoto Hoshi: Physiological role and regulation of the M-channel, molecular biology, electrophysiology and live cell FRET imaging

Mahtab Jafari (*Joint*): Anti-aging effects of botanicals and pharmaceutical compounds; the impact of botanical extracts on mitochondrial bioenergetics, oxidative stress, and other pathways of aging using cell culture and *Drosophila*

Frances M. Leslie: Addiction, drugs of abuse and brain development

Z. David Luo (*Joint*): Molecular mechanisms of pain transduction; study gene regulation and signaling pathways in chronic pain processing using animal models, and molecular biology techniques

Daniele Piomelli (*Joint*): Lipid-derived signaling, special emphasis on endogenous cannabinoids; role in pain, mental health and inflammation; cellular and system pharmacology and medicinal chemistry used to identify pharmacological agents that interfere with the functions exerted by endocannabinoids and other signaling lipids

Rainer K. Reinscheid (*Joint*): Neuropharmacology of peptide transmitters involved in stress, sleep and memory using cellular and transgenic animal models

Qun-Yong Zhou: Pharmacology and physiology of prokineticins and prokineticin receptors

Xiaolin Zi (*Joint*): Cancer prevention and treatment using novel naturally occurring compounds and the study of their underlying molecular mechanisms; secreted Wnt antagonists in cancer growth and metastasis

Graduate program joint faculty are from Anatomy and Neurobiology, Anesthesiology and Perioperative Care, Microbiology and Molecular Genetics, Pediatrics, Pharmaceutical Sciences, and Urology.

Courses

PHARM 210. Chemical Neuroanatomy. 4 Units.

Organization of the nervous system, especially with respect to chemical identity of elements, for students of pharmacology. Major cell types, methods of study, ultrastructure, synaptic organization of functionally defined systems, localization of chemically defined cells and receptors, and brain development.

Restriction: Graduate students only.

PHARM 241. Advanced Topics in Pharmacology. 2 Units.

Application of pharmacological principles in disease therapy. Advanced pharmacological mechanisms and in-depth study of drug action. Discussion of several major drug classes/therapeutic strategies: molecular mechanisms of action, physiological consequences of administration, and clinical use.

PHARM 241B. Graduate Pharmacology. 6 Units.

Principles of pharmacology and in-depth study of drug action. Pharmacokinetics and pharmacodynamics: absorption, distribution and metabolism, general principles of action and receptor concepts. Discussion of major drug classes: molecular mechanism of action, physiological consequences of administration, and clinical use.

Prerequisite: PHYSIO 206A and PHYSIO 206B and BIOCHEM 210A.

PHARM 252. Neurotransmitter and Drug Receptors. 6 Units.

Ligand gated ion channels, G protein linked receptors, receptor tyrosine kinases, ligand regulated transcription factors, their signaling mechanisms, trafficking and physiological responses. Analysis of receptor properties by pharmacological methods, radioligand binding, and molecular biology.

PHARM 254. Introduction to Pharmacology. 4 Units.

Receptor analysis: bioassay measuring contraction, calcium mobilization, second messenger responses; operant conditioning: whole animal, single neuron; radioligand binding; quantitative autoradiography; immunocytochemistry; in situ hybridization for analysis of mRNA; Western and Northern analysis; transgenic mouse knock in and knock out techniques.

PHARM 255. Chemical Transmission. 4 Units.

Mechanisms underlying chemical signaling processes in the brain and periphery. Molecular biology, signal transduction, transmitter synthesis and inactivation, pharmacology of integrative function and behavior.

PHARM 256. Experimental Design for Pharmacologists. 1 Unit.

Population and sample statistics, hypothesis testing, analysis of variance, nonparametric statistics, experimental design, power, and the use of statistical computer software.

Prerequisite: PHARM 252.

PHARM 257. Ethics in Research. 1 Unit.

Ethical conduct in research including data handling, authorship, conflict of interest, animal rights, handling of misconduct.

Prerequisite: PHARM 299.

Repeatability: May be taken for credit 2 times.

PHARM 298. Seminar. 2 Units.

Presentation and discussion of current problems and methods in teaching and research in pharmacology, toxicology, and therapeutics.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

PHARM 299. Research. 1-12 Units.

Independent research with Pharmacology and Toxicology faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Physiology and Biophysics

Building D, Room D340, Medical Sciences I; (949) 824-5863

<http://www.physiology.uci.edu/>

Michael D. Cahalan, **Department Chair**

Todd C. Holmes, **Department Vice Chair and Departmental Graduate Advisor**

The Department of Physiology and Biophysics offers research opportunities in the molecular biophysics of membranes and proteins, ion channels and signal transduction, endocrinology, molecular and cell biology, developmental neurobiology, and exercise physiology.

The Department offers graduate study under the auspices of the School of Medicine and in conjunction with the graduate program in Cellular and Molecular Biosciences (CMB) and the Interdepartmental Neuroscience Program (INP), which are described in the School of Biological Sciences (p. 196) section. Students are eligible to enter the Department program after meeting the specific requirements of the CMB of INP gateway curriculum or by direct application to the Department. The Department program leads to the M.S. or Ph.D. degree in Biomedical Sciences, awarded after successful completion of all requirements. Students admitted into these combined programs who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

The faculty conducts quarterly reviews of all continuing students to ensure that they are maintaining satisfactory progress within their particular academic program. Students participate in a literature review course designed to strengthen research techniques and presentation skills, and

attend the weekly Department colloquium. Students advance to candidacy during the third year; each student presents a seminar on a topic assigned by the formal candidacy committee. Following the seminar, the committee examines the student's qualifications for the successful conduct of doctoral dissertation research. Each student must submit a written dissertation on an original research project and successfully defend this dissertation in an oral examination. Interdisciplinary dissertation research involving more than one faculty member is encouraged. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Faculty

Kenneth M. Baldwin (*Emeritus*): Developmental, hormonal, and exercise factors regulating striated muscle gene expression

Tallie Z. Baram (*Joint*): Mechanisms and consequences of epilepsy and stress; learning/memory, epigenetics

Michael D. Cahalan: Ion channels and Ca^{2+} signaling in the immune system; imaging of cellular dynamics in lymphoid organs

Vincent J. Caiozzo (*Joint*): Cellular and molecular mechanisms regulating the mechanical properties of skeletal muscle

K. George Chandy: Molecular biology of ion channels and their role in immune cells

John Jay Gargus: Molecular analysis of membrane signaling proteins

Alan L. Goldin (*Joint*): Molecular biology of neural channels and receptors

Harry T. Haigler: Structure, function, and topography of annexin calcium binding proteins on membranes

James E. Hall: Biophysics of membrane channels, gap junctions and water channels

Todd C. Holmes: Ion channels, cellular physiology, neural circuits and behavior; circadian and visual circuits

Naoto Hoshi (*Joint*): Physiological role and regulation of the M-channel; molecular biology; electrophysiology; live-cell FRET imaging

Lan Huang: Developing and employing mass spectrometry-based proteomic approaches for study of signal transduction networks, identification of protein complexes and characterization of their post-translational modifications

Rongsheng Jin: Crystallography and structure-function analysis of synaptic proteins; toxins and receptors

Janos K. Lanyi: Transport, structure, and energy coupling in bacteriorhodopsin and halorhodopsin

John A. Longhurst (*Joint*): Integrative biology and sensory signaling systems important in cardiovascular regulation; central neural regulation of autonomic outflow inactivation of cardiac afferents and the influence of electroacupuncture

Kenneth J. Longmuir: Intracellular metabolism, sorting, and transport of lipid in mammalian cells; membrane fusion

Hartmut Luecke (*Joint*): Protein crystallography; structure and function of membrane-associated proteins

Jogeshwar Mukherjee (*Joint*): Non-invasive imaging of biochemical mechanisms in human disease, including precise assessment of islet cell mass in human diabetes

Ian Parker (*Joint*): Intracellular calcium and cell signaling

Thomas L. Poulos (*Joint*): Protein crystallography; protein engineering; heme enzyme structure and function

Hamid M. Said (*Joint*): Cellular and molecular mechanisms and regulation of intestinal and renal vitamin transporters

Ivan Soltesz (*Joint*): Plasticity and modulation of inhibitory synaptic neurotransmission

Francesco Tombola: Electrical and chemical sensing in excitable cells, VSD-containing ion channels and enzymes

Bruce J. Tromberg (*Joint*): Optical spectroscopy of tissues and cells

Nosratola D. Vaziri (*Emeritus*): Vascular biology and role of nitric oxide and reactive oxygen species in regulation of blood pressure; molecular basis of lipid disorders

Ping H. Wang (*Joint*): Signaling modulation of mitochondria proteome and bioenergetics in cardiac muscle and stem cells

Stephen H. White (*Emeritus*): Protein folding in membranes; peptide-bilayer interactions; membrane structure

Albert Zlotnik: Chemokines, cancer metastasis, gene array analysis of human diseases and bioinformatics in immunology

Courses

PHYSIO 200. Research in Physiology and Biophysics. 2-12 Units.

Individual research directed toward doctoral dissertation and supervised by a particular professor.

Repeatability: May be repeated for credit unlimited times.

PHYSIO 200R. Research in Physiology and Biophysics for First-Year Students. 2-12 Units.

Independent research within the laboratories of graduate training faculty in the Department of Physiology and Biophysics for first-year Ph.D. students.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

PHYSIO 201. Introduction to Physiology Research. 1-4 Units.

Introduction to research in physiology and related sciences. Concentrates on techniques emphasized in the various laboratories of the Department of Physiology and Biophysics.

Repeatability: May be repeated for credit unlimited times.

PHYSIO 204. Concepts of Biophysics. 3 Units.

Principles of crystallography; introduction to time-resolved absorption and fluorescence spectroscopy; the concepts of kinetic order and kinetic rate theory.

Restriction: Graduate students only.

PHYSIO 205. Electronics for Biologists. 4 Units.

Basic principles of electricity; properties and use of discrete components and integrated circuits; circuit analysis and design. Intended for advanced students in the life sciences.

Same as NEURBIO 249.

PHYSIO 206A. Introduction to Medical Physiology. 5 Units.

Vertebrate physiology with emphasis on humans and on the relationship between the function of normal tissues and the processes of disease. Fundamental principles of physiology and the interrelationships which control organ function.

Prerequisite: A biochemistry course.

Restriction: Graduate students only.

PHYSIO 206B. Introduction to Medical Physiology. 6 Units.

Vertebrate physiology with emphasis on humans and on the relationship between the function of normal tissues and the processes of disease. Fundamental principles of physiology and the interrelationships which control organ function.

Prerequisite: PHYSIO 206A.

Restriction: Graduate students only.

PHYSIO 232. The Physiology of Ion Channels. 4 Units.

Discusses how ion channels work (molecular/structural biophysics level) and what ion channels do in diverse cell types (cell physiology level).

Restriction: Graduate students only.

PHYSIO 252. Introduction to Proteomics. 4 Units.

Introduces students to concepts and methods of proteomics including protein identification, expression proteomics, and protein-protein interactions.

Repeatability: May be taken for credit 2 times.

PHYSIO 290. Topics in Physiology. 3 Units.

Contemporary research problems in physiology. Students review papers in the current literature and present ideas contained therein to other students. Students present results of their own research and attend presentations given by other students and departmental researchers.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PHYSIO 292A. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PHYSIO 292B. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PHYSIO 292C. Scientific Communication. 2 Units.

Small group meetings for graduate students to practice scientific writing, debate, and presentation skills.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

PHYSIO 299. Dissertation in Physiology and Biophysics. 2-12 Units.

Preparation and completion of the dissertation required for the Ph.D. or Master of Science degree.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Program in Nursing Science

252 Berk Hall; (949) 824-1514

<http://www.nursing.uci.edu/>; nssao@uci.edu

Ellen F. Olshansky, **Director of the Program in Nursing Science**

Degrees

Nursing Science

B.S., M.S., Ph.D.

Undergraduate Program

Nurse professionals are members of interdisciplinary teams who work with people of all ages, cultural backgrounds, and lifestyles to help them achieve the highest level of wellness possible. The Bachelor of Science degree program in Nursing Science prepares graduates to function as generalists in professional nursing practice and to collaborate with other health care providers in clinics, hospitals, and community health settings. The undergraduate curriculum is designed to provide theory and research-based clinical practice focusing on critical thinking, human caring, and clinical expertise. Students who successfully complete the B.S. degree in Nursing Science are eligible to take the licensure examination to become a registered nurse. The Nursing Science major is approved by the Board of Registered Nursing and the Commission on Collegiate Nursing Education (CCNE).

Most of the courses required for the major require completion of prerequisites. The sample program shown is a preferred sequence that accounts for all prerequisites. Most required courses are offered in sequence and only once a year. New, transfer, and change-of-major students, therefore, ordinarily are admitted to the program once a year prior to the fall quarter. Full-time enrollment is required.

All students interested in the Nursing Science major should be aware that they will be required to do the following: (1) meet the physical and mental requirements necessary to perform nursing practice functions as outlined in Chapter 6, Article 2, Item 2725 of the *Business and Professions Code of California* (<http://www.rn.ca.gov/regulations/bpc.shtml#2725>); (2) complete a criminal background check prior to entering the clinical portion of the major in the junior year as required by health care facilities in which students will have clinical experiences; (3) purchase uniforms and other required equipment such as stethoscopes; (4) have access to transportation for off-campus clinical experiences beginning in the junior year.

Admission to the Major

Meeting the UCI admission criteria does not guarantee admission into the major. The admission process is competitive due to limited enrollment. In addition to meeting the UCI admissions criteria, all eligible applicants are required to submit a supplemental application that includes a personal statement and a résumé detailing experiences in health care. A proctored essay and personal interview may also be required.

Freshmen: Preference will be given to those who rank the highest using the selection criteria as stated in the Admissions (p. 37) section of the *Catalogue*.

Transfer students: Admission to the major is limited and selective. Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for

admission to the Nursing Science major. The following list of prerequisites is required for transfer students applying for fall 2014 entry and beyond. Students wishing to enter before fall 2014 should review the Nursing Science Web site at <http://www.nursing.uci.edu> for those specific requirements. All applicants must complete the following with grades of B or better:

One year of general chemistry equivalent to UCI's:

CHEM 1A- 1B- 1C	General Chemistry and General Chemistry and General Chemistry
-----------------	---

One quarter/semester of organic chemistry equivalent to UCI's:

CHEM 51A	Organic Chemistry
----------	-------------------

One quarter/semester of genetics equivalent to UCI's:

BIO SCI 97	Genetics
------------	----------

One quarter/semester of biochemistry equivalent to UCI's:

BIO SCI 98	Biochemistry
------------	--------------

One quarter/semester of human physiology with laboratory equivalent to UCI's:

BIO SCI E109- E112L	Human Physiology and Physiology Laboratory
---------------------	---

One quarter/semester of microbiology with laboratory equivalent to UCI's:

BIO SCI M122	General Microbiology
BIO SCI M118L	Experimental Microbiology Laboratory
or BIO SCI M122L	Advanced Microbiology Laboratory

One quarter/semester of human anatomy with laboratory equivalent to UCI's:

NUR SCI 100- 100L	Human Anatomy and Human Anatomy Laboratory
-------------------	---

One quarter/semester of philosophy equivalent to UCI's:

PHILOS 4	Introduction to Ethics
or PHILOS 5	Contemporary Moral Problems

One quarter/semester of psychology equivalent to UCI's:

PSYCH 7A/PSY BEH 9	Introduction to Psychology
--------------------	----------------------------

One quarter/semester of public health equivalent to UCI's:

PUBHLTH 1	Principles of Public Health
-----------	-----------------------------

One quarter/semester of sociology equivalent to UCI's:

SOCIOL 1	Introduction to Sociology
----------	---------------------------

One quarter/semester of statistics equivalent to UCI's:

STATS 7	Basic Statistics
or STATS 8	Introduction to Biological Statistics

Applicants must have a cumulative GPA of 3.0 or higher to be considered.

Change of Major: Due to strict limits on the number of students who can be admitted to the program and rigid sequencing of much of the upper-division curriculum, change-of-major students need to apply in the month of November for fall quarter admission for the following year. Students should contact the Nursing Science Student Affairs Office for information regarding admission to the major. Change-of-major students who are intending to apply to the Program in Nursing Science should be aware that the Program in Nursing Science cannot waive course prerequisites for any School of Biological Sciences or School of Physical Sciences courses. As such, change-of-major students must adhere to the course prerequisites that these Schools have established and have published in the course

descriptions that appear in the *Catalogue*. Change-of-major information is also available at <http://www.changeofmajor.uci.edu>.

Honors at Graduation

Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to approximately the top 12 percent of the graduating seniors. To be eligible for honors, a general criterion is that students must have completed at least 72 units in residence at a University of California campus. Other important factors are considered (see Honors Recognition (p. 58)).

Requirements for the B.S. Degree in Nursing Science

NOTE: The following degree requirements are effective for students entering the program in fall 2013 as freshmen and fall 2015 as juniors. Students should be aware that some of the required courses listed here are not yet available and will be phased in over the next three years. Consult the Nursing Science Student Affairs Office for more information.

All students must meet the University Requirements (p. 60).

Major Requirements

Complete the following courses:

CHEM 1A- 1B- 1C	General Chemistry and General Chemistry and General Chemistry
CHEM 51A	Organic Chemistry
BIO SCI 97	Genetics
BIO SCI 98	Biochemistry
BIO SCI E109	Human Physiology
BIO SCI E112L	Physiology Laboratory
BIO SCI M122	General Microbiology
BIO SCI M118L	Experimental Microbiology Laboratory
or BIO SCI M122L	Advanced Microbiology Laboratory
PHILOS 4	Introduction to Ethics
or PHILOS 5	Contemporary Moral Problems

Select one of the following:

PSYCH 7A	Introduction to Psychology
PSYCH 9A	Psychology Fundamentals
PSYCH 9B	Psychology Fundamentals
PSYCH 9C	Psychology Fundamentals
PSYCH 78A	Introduction to Social Psychology
PSY BEH 9	Introduction to Psychology
PSY BEH 11A	Psychology Fundamentals
PSY BEH 11B	Psychology Fundamentals
PSY BEH 11C	Psychology Fundamentals

Select one of the following:

SOCIOL 1	Introduction to Sociology
SOCIOL 2	Global and International Sociology
SOCIOL 3	Introduction to Social Problems
SOCIOL 31	Introduction to Social Psychology
SOCIOL 44	Populations
SOCIOL 62	Marriage and Families
SOCIOL 66	The Life Course
SOC SCI 1A	Principles in the Social Sciences

ANTHRO 2A	Introduction to Sociocultural Anthropology
ANTHRO 2D	Introduction to Language and Culture
ANTHRO 41A	Global Cultures and Society

Select one of the following:

STATS 7	Basic Statistics
STATS 8	Introduction to Biological Statistics
PSYCH 10A	Probability and Statistics in Psychology I
SOC SCI 10A	Probability and Statistics in Social Sciences I
SOCIOL 10A	Probability and Statistics

Complete the following courses:

PUBHLTH 1	Principles of Public Health
PSYCH 120D	Developmental Psychology

Complete the following Nursing Science courses:

NUR SCI 100
 NUR SCI 100L
 NUR SCI 110W
 NURS SCI 112LA-112LB
 NUR SCI 114A
 NUR SCI 114B
 NUR SCI 118A
 NUR SCI 118B
 NUR SCI 120
 NUR SCI 125
 NUR SCI 130
 NUR SCI 132
 NUR SCI 135
 NUR SCI 140
 NUR SCI 150
 NUR SCI 160
 NUR SCI 170
 NUR SCI 175L
 NUR SCI 179A
 NUR SCI 179B

NOTE: Double majors with Nursing Science, Pharmaceutical Sciences, Public Health Sciences, Biomedical Engineering: Premedical, or with any of the School of Biological Sciences majors are not permitted. Students majoring in Nursing Science may not minor in Biological Sciences.

Sample Program — Nursing Science

NOTE: For students entering fall 2013 as freshmen and fall 2015 as juniors. Refer to <http://www.nursing.uci.edu> for the sample program charts for prior years.

Graduate Program

The Program in Nursing Science offers both the M.S. and Ph.D. degrees in Nursing Science. Detailed information about both degree programs follows.

Master of Science in Nursing Science

The Master of Science (M.S.) in Nursing Science at the University of California, Irvine is a professional degree program which will prepare Registered Nurses in selected specialties and in research so they may assume roles as research-based advanced practice clinicians, administrators, or educators. The program course work is designed to prepare nurses with: (1) expertise in a specialized area of advanced nursing practice; (2) role preparation as a nurse practitioner, nurse educator, or nurse administrator; (3) leadership and health policy skills; and (4) research skills. The M.S. degree will also prepare students for future doctoral work.

Admission

Applicants must have earned a bachelor's degree in nursing from an accredited program, currently be licensed as a Registered Nurse in the State of California, and provide proof of licensure by the California Board of Registered Nursing (BRN). In addition, eligible candidates must have a 3.0 cumulative grade point average, have completed a descriptive and inferential statistics course and an upper-division nursing research course at the undergraduate level, and have at least one year direct clinical experience in patient care upon entering the program.

Applicants must meet the general admission requirements of the UCI Graduate Division and the Program in Nursing Science admission requirements, and submit both the Application for Graduate Admission and the Nursing Science Supplemental Application in order to be considered for admission. The GRE is not required. Students are admitted every fall quarter.

M.S. Concentration Areas

Students applying to the M.S. program must select an area of concentration, either the Family Nurse Practitioner track (FNP) or the Adult/Geriatric Nurse Practitioner track (A/GNP). Graduates of the nurse practitioner (NP) tracks will also be eligible for certification by the California Board of Registered Nursing (BRN).

Requirements

Students enrolled in the FNP track will complete 72 units. Students enrolled in the A/GNP track will complete 72 units. Students will complete 720 hours of clinical practice with populations in their area of concentration to be eligible for certification. There is no foreign language requirement; proficiency in a language other than English is desirable but not required.

Required and Elective Courses for Both Tracks

NUR SCI 200	Research Methods and Evaluation for Evidence-Based Practice
NUR SCI 210	Advanced Pathophysiology
NUR SCI 215	Health Promotion/Disease Prevention
NUR SCI 225A	Advanced Pharmacology
NUR SCI 225B	Advanced Pharmacology
NUR SCI 230	Advanced Health and Physical Assessment
NUR SCI 230L	Advanced Health and Physical Assessment Laboratory
NUR SCI 245A- 245B	Primary Care and Primary Care
NUR SCI 250	Primary Care Women's Health
NUR SCI 260A	Primary Care Adult/Geriatric
NUR SCI 281	Frameworks for Advanced Professional Practice in Nursing
NUR SCI 282	Human Behavior and Mental Health Care for Advanced Practice
NUR SCI 283	Primary Care Procedures
NUR SCI 284	Advanced Practice Scholarly Concentration
NUR SCI 285	APN Clinical Practicum I
NUR SCI 286	APN Clinical Practicum II
NUR SCI 287	APN Clinical Practicum III
NUR SCI 288	APN Clinical Practicum IV

NUR SCI 289	APN Clinical Practicum V
Required for FNP Track only:	
NUR SCI 255	Primary Care Obstetrics
NUR SCI 270	Primary Care Pediatrics
Required for A/GNP Track only:	
NUR SCI 260B	Primary Care Adult/Geriatric
NUR SCI 280	Aging and Chronic Illness

There are no qualifying examinations. Successful completion of required course work will advance students to candidacy the quarter prior to scheduled completion of the master's degree program. Instead of a thesis, students complete a Scholarly Concentration in an area of interest over the final two quarters of the program and prepare a major paper. The comprehensive examination will serve as a final examination which will also prepare graduates for certification examinations. Full-time students are expected to complete the program within two years.

Doctor of Philosophy in Nursing Science Admission

To be considered for admission, applicants must have a Bachelor or Master of Science degree in Nursing. Degrees must be from U.S.-accredited programs or international programs with accreditations satisfactory to the Graduate Division and the Program in Nursing Science and equivalent to UC educational requirements.

Applicants are required to submit transcripts showing a minimum grade point average (GPA) of 3.2 for undergraduate work and 3.5 for graduate work from an accredited institution and a scholarship record commensurate with requirements of the Graduate Division and the Program in Nursing Science. Previous education at the undergraduate and/or graduate levels will be evaluated for equivalency of design, theory, and intensity as a means of determining whether the prior degree standards are equivalent to those required by the UC system. Applicants are also required to submit scores from the General Test of the Graduate Record Examination taken within the last five years as required by the Graduate Division. If English is not the applicant's first language, the applicant must demonstrate proficiency in English prior to admission commensurate with that identified by the Graduate Division for the Test of English as a Foreign Language (TOEFL) or TOEFL Internet-Based (TOEFL iBT).

Applicants who did not have a course in descriptive and inferential statistics within the last five years must complete a course similar to STATS 7 prior to admission. Applicants without an undergraduate research course are required to complete both NUR SCI 125 and NUR SCI 200. Applicants who have completed an undergraduate research course but not a graduate-level course in nursing research must complete NUR SCI 200.

In addition, applicants are required to submit:

- A statement of objectives for graduate study, career goals, and personal research goals including ways in which those goals are compatible with the UCI expected outcomes for doctoral education;
- A resume or *Curriculum Vitae* detailing educational background, professional work, previous research, and volunteer work as well as other relevant information such as fluency in another language;
- Examples of scholarly work;

- Three letters of recommendation submitted on the Graduate Division Recommendation Form from persons in a supervisory role who are able to comment on academic abilities, research-related abilities/capabilities, and/or work-related experiences; and
- Evidence of licensure as a registered nurse.

A personal interview will be required of applicants considered for admission. Acceptance is based on materials submitted, research interests related to those of faculty, and results of the interview process.

Areas of Focus

The specific field of emphasis for the Ph.D. program is Nursing Science. Generally, this involves increasing the quality of life for the community that nurses serve. Consistent with faculty research expertise, the Ph.D. program will specifically promote the development of scientific and theoretical expertise that contributes to scholarly endeavors in four key areas: health promotion/disease prevention, health disparities and diversity, disease and symptom management, and health services and health policy. These areas of research emphasis intersect as they contribute to healthy communities. Emphasis will be placed on building expertise in the use of translational science methods in conjunction with traditional models for research. Research emphasis areas are described below.

Health Promotion/Disease Prevention. According to the World Health Organization (2010), health promotion is empowering others to modify and improve their health. This happens at the individual, family, and community level. Health promoting activities often lead to disease prevention. Students choosing this focus may work with UCI faculty (Nursing Science and others) on stress and coping, women's health, and obesity prevention and nutrition, to name a few specific areas.

Health Disparities and Diversity. The focus on Health Disparities acknowledges that there are individuals, families, and communities who are not equally treated in the quest for health. Many do not have equal access to quality health care nor the means to achieve an equal level of desired health outcomes. The emphasis will be to examine these health disparities among diverse populations who encounter differences in treatment and outcomes. Students choosing this focus will have an opportunity to work with diverse community members in Orange County and beyond, and they will be mentored by researchers who study the experiences of these community members.

Disease and Symptom Management. Many individuals face challenges in managing chronic illness. The focus is to aid individuals to be healthy within the context of living with a chronic illness by investigating factors influencing self-management and developing best intervention strategies for symptom management. Students choosing this focus will have an opportunity to study chronic illness demands and the experiences, coping efforts, and challenges that patients face. Research at UCI covers a wide variety of diseases such as asthma, diabetes, congestive heart failure, peripheral vascular disease, mental illness, dementia, cancer, and other illnesses.

Health Services and Health Policy. Health policy and the economics of delivering health care are important issues affecting health outcomes. Students choosing this focus will have an opportunity to examine the implications of a variety of policies and services on health and health system outcomes. There will be opportunities to study with researchers who have expertise in health care system management, law, organizational theory and behavior, and quality of care.

Requirements

Ph.D. students are required to take a minimum of 75 quarter units. Among those, 44 quarter units must be formal course work selected in part by consultation with the faculty advisor, subject to review by a faculty oversight committee. These courses will cover the necessary fundamental and methodological principles, and accommodate cross-disciplinary themes in nursing science. Students will also be required to participate in the educational mission of the Program in Nursing Science as teaching assistants for two quarters.

Students will have two formal examinations along the process toward writing their thesis. First they will write a comprehensive examination at the end of the second year of study and following completion of required course work. The next benchmark will be the qualifying exam, in which students will advance to candidacy upon successful presentation of an original dissertation research proposal and oral defense of the proposal. Ph.D. completion requires submission of an acceptable dissertation and oral defense. The normative time to degree is five years, and the maximum time permitted is seven years.

Required Courses

NUR SCI 212	Philosophy of Science and Theory Development in Nursing Science
NUR SCI 220	Nursing Science and the Ecology of Healthy Communities
NUR SCI 222A- 222B- 222C	Seminar in Clinical Translational Science and Seminar in Clinical Translational Science and Seminar in Clinical Translational Science
NUR SCI 246	Qualitative Research Designs in Nursing Science
NUR SCI 247	Quantitative Research Designs in Nursing Science
NUR SCI 296	Doctoral Dissertation Reading and Writing
NUR SCI 298	Directed Studies in Nursing Science
NUR SCI 299	Independent Study in Nursing Science
NUR SCI 399	University Teaching

and either:

STATS 201- 202	Statistical Methods for Data Analysis I and Statistical Methods for Data Analysis II
----------------	--

or

SOCECOL 264A- 264B	Data Analysis and Data Analysis
--------------------	---------------------------------

Elective Courses

At least eight units of elective courses contributing to the area of proposed research must be taken outside of Nursing Science, and elective methods and statistics courses related to proposed research.

Faculty

Jill P. Berg, Ph.D. University of Pittsburgh, *Associate Professor, Program in Nursing Science*

Sarah Choi, F.N.P., Ph.D. University of California, San Francisco, *Assistant Professor, Program in Nursing Science*

Karen Deck, F.N.P., M.S.N. California State University, Long Beach, *Health Sciences Assistant Clinical Professor, Program in Nursing Science*

Lorraine Evangelista, Ph.D. University of California, Los Angeles, *Associate Professor, Program in Nursing Science*

Camille Fitzpatrick, A.N.P., G.N.P., M.S.N. California State University, Long Beach, *Health Sciences Clinical Professor, Program in Nursing Science*

Yuqing Guo, Ph.D. University of Washington, *Assistant Professor, Program in Nursing Science*

Beth Haney, D.N.P. University of Colorado, *Health Sciences Assistant Clinical Professor, Program in Nursing Science*

E. Alison Holman, F.N.P., Ph.D. University of California, Irvine, *Assistant Professor, Program in Nursing Science*

Jung-Ah Lee, Ph.D. University of Washington, *Assistant Professor, Program in Nursing Science*

Bernadette Milbury, M.S.N. University of California, Los Angeles, *Health Sciences Assistant Clinical Professor, Program in Nursing Science*

Maureen Movius, M.N. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Program in Nursing Science*

Ruth Mulnard, D.N.Sc. University of San Diego, *Associate Professor, Program in Nursing Science*

Ellen F. Olshansky, Ph.D. University of California, San Francisco, *Director of the Program in Nursing Science and Professor, Program in Nursing Science*

Susanne J. Phillips, F.N.P., M.S.N. California State University, Long Beach, *Health Sciences Associate Clinical Professor, Program in Nursing Science*

Julie Rousseau, C.N.M., Ph.D. Columbia University, *Health Sciences Assistant Clinical Professor, Program in Nursing Science*

Kathleen Saunders, M.S.N. California State University, Dominguez Hills, *Health Sciences Associate Clinical Professor, Program in Nursing Science*

Susan Tiso, D.N.P. George Washington University, *Health Sciences Clinical Professor, Program in Nursing Science*

Courses

NUR SCI 40. Introduction to Nursing and Health Care. 2 Units.

Introduction to roles and responsibilities of health care professionals, health care regulations, professional licensure, legal issues, ethics, and cultural competence in health care. Beginning competence in interviewing, communication, and selected physical examination skills. Emphasis on professional role development.

NUR SCI 92. Compassion in Health Care. 1 Unit.

An overview of the importance of compassion in health care, providing examples from a variety of health care professions through lectures and discussion.

Grading Option: Pass/no pass only.

NUR SCI 100. Human Anatomy. 4 Units.

Human microscopic and gross anatomy emphasizing anatomical structure and basic structure-function relationship.

Corequisite: NUR SCI 100L.

Restriction: Nursing Science majors only.

NUR SCI 100L. Human Anatomy Laboratory. 2 Units.

Human microscopic and gross anatomy laboratory that combines virtual internet-based anatomy software with classroom in-person traditional instruction emphasizing anatomical structure and basic structure-function relationships. Course may be offered online.

Corequisite: NUR SCI 100.

Restriction: Nursing Science majors only.

NUR SCI 110W. Frameworks for Professional Nursing Practice. 5 Units.

Conceptual frameworks for professional practice. Scope of professional nursing, jurisprudence and ethics, professional interpersonal relationships, and health care delivery systems in the context of the social, political, and economic environments. Socialization of the student for professional roles in nursing.

Corequisite: NUR SCI 112LA and NUR SCI 114A and NUR SCI 118A.

Prerequisite: NUR SCI 100 and NUR SCI 100L and BIO SCI E109.

Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only. Nursing Science majors only.

(Ib)

NUR SCI 112LA. Foundations of Professional Practice. 3 Units.

Development of skills in communication, interviewing, functional and physical health assessment across the life span, the art and science of human care, and clinical judgment.

Corequisite: NUR SCI 110W and NUR SCI 114A and NUR SCI 118A and NUR SCI 125 and NUR SCI 135.

Prerequisite: NUR SCI 100 and NUR SCI 100L and BIO SCI E109.

Restriction: Nursing Science majors only.

NUR SCI 112LB. Foundations of Professional Practice. 4 Units.

Development of skills in communication, interviewing, functional and physical health assessment across the life span, the art and science of human care, and clinical judgment.

Corequisite: NUR SCI 114B and NUR SCI 118B and NUR SCI 125 and NUR SCI 135.

Prerequisite: NUR SCI 112LA and NUR SCI 110W and NUR SCI 114A and NUR SCI 118A.

Restriction: Nursing Science majors only.

NUR SCI 114A. Applied Pharmacology I. 2 Units.

Presents principles of pharmacology applied to interventions in pathophysiologic states across the life span. Discussion of the major drug groups with implications for monitoring, drug administration, toxicity, and patient education are included.

Corequisite: NUR SCI 110W and NUR SCI 118A and NUR SCI 112LA.

Prerequisite: NUR SCI 100 and NUR SCI 100L and BIO SCI E109.

Restriction: Nursing Science majors only.

NUR SCI 114B. Applied Pharmacology II. 2 Units.

Presents principles of pharmacology applied to interventions in pathophysiologic states across the life span. Discussion of the major drug groups with implications for monitoring, drug administration, toxicity, and patient education are included.

Corequisite: NUR SCI 118B and NUR SCI 112LB and NUR SCI 125 and NUR SCI 135.

Prerequisite: NUR SCI 114A and NUR SCI 118A and NUR SCI 110W and NUR SCI 112LA.

Restriction: Nursing Science majors only.

NUR SCI 118A. Human Health and Disease I. 2 Units.

Presents content on pathologic alterations in physiologic processes in cells, tissues, organs, and systems across the life span. Emphasis on critical thinking, application of concepts to clinical practice, and related research.

Corequisite: NUR SCI 114A and NUR SCI 112LA and NUR SCI 110W.

Prerequisite: NUR SCI 100 and NUR SCI 100L and BIO SCI E109.

Restriction: Nursing Science majors only.

NUR SCI 118B. Human Health and Disease II. 2 Units.

Presents content on pathologic alterations in physiologic processes in cells, tissues, organs, and systems across the life span. Emphasis on critical thinking, application of concepts to clinical practice, and related research.

Corequisite: NUR SCI 114B and NUR SCI 112LB and NUR SCI 125 and NUR SCI 135.

Prerequisite: NUR SCI 112LA and NUR SCI 114A and NUR SCI 118A and NUR SCI 110W.

Restriction: Nursing Science majors only.

NUR SCI 120. Adult Health Care. 8 Units.

Restorative, perioperative, supportive care of adults with acute/chronic alterations in oxygenation, regulation, immune response, elimination, metabolism, mobility, cognition, and substance abuse. Concurrent practicum occurs in inpatient medical-surgical units, perioperative units and outpatient clinics utilizing critical thinking and research skills.

Corequisite: NUR SCI 140.

Prerequisite: NUR SCI 112LB and NUR SCI 114B and NUR SCI 118B and NUR SCI 125 and NUR SCI 135.

Restriction: Nursing Science majors only.

NUR SCI 125. Research Methods and Applications in Health Care. 4 Units.

Foundational concepts of research in health care. Emphasizes critical evaluation and interpretation of research for application in practice.

Corequisite: NUR SCI 112LB and NUR SCI 114B and NUR SCI 118B and NUR SCI 135.

Prerequisite: NUR SCI 110W and NUR SCI 112LA and NUR SCI 114A and NUR SCI 118A and a basic statistics course.

Restriction: Nursing Science majors only.

NUR SCI 130. Family and Child Health Care. 10 Units.

Biopsychosocial and cultural aspects of antepartum, intrapartum, and postpartum care of women and newborns. Restorative, developmentally supportive care of infants/children and families in health, acute and chronic illness, and disability. Concurrent practicum in maternity/pediatric hospital units and outpatient settings.

Corequisite: NUR SCI 150.

Prerequisite: NUR SCI 120 and NUR SCI 120L and NUR SCI 140 and NUR SCI 140L.

Restriction: Nursing Science majors only.

NUR SCI 132. Pediatrics: Care of Children and Families. 4 Units.

Focuses on nursing management of infants, children, and adolescents with acute, chronic and/or life-threatening conditions and the impact on family. Pathophysiology, pharmacology, diagnostics, and therapeutics are integrated, with emphasis placed on critical thinking, application of the nursing process, related research for evidence-based practice, and ethics.

Corequisite: NUR SCI 132L and NUR SCI 130 and NUR SCI 130L

Prerequisite: NUR SCI 120 and NUR SCI 120L and NUR SCI 140 and NUR SCI 140L and PSYCH 120D

Restriction: Prerequisite required and Majors only

NUR SCI 132L. Pediatrics: Care of Children and Families - Practicum. 3 Units.

Provides supervised clinical experience in nursing management of infants, children, and adolescents with acute, chronic and/or life-threatening conditions and the impact on family. Patient care seminars will follow each clinical session and will focus on integration of experiences with content in the corequisite lecture course.

Corequisite: NUR SCI 132 and NUR SCI 130 and NUR SCI 130L

Prerequisite: NUR SCI 120 and NUR SCI 120L and NUR SCI 140 and NUR SCI 140L and PSYCH 120D

Grading Option: Pass/no pass only.

Restriction: Prerequisite required and Majors only and Pass/not-pass option only

NUR SCI 135. Older Adult Health Care. 2 Units.

Theories of aging and application of principles of gerontology in health maintenance of older adults. Concepts and principles of rehabilitation and palliative care.

Corequisite: NUR SCI 112LB and NUR SCI 114B and NUR SCI 118B and NUR SCI 125.

Prerequisite: NUR SCI 112LA and NUR SCI 114A and NUR SCI 118A and NUR SCI 110W.

Restriction: Nursing Science major only.

NUR SCI 140. Human Behavior and Mental Health Care. 8 Units.

Biopsychosocial and cultural influences on promotion and restoration of mental health in adults and adolescents. Assessment, classification, and care of clients with mental health problems and/or substance abuse. Concurrent practicum in adult/adolescent inpatient psychiatric units and outpatient mental health clinics.

Corequisite: NUR SCI 120.

Prerequisite: NUR SCI 112LB and NUR SCI 114B and NUR SCI 118B and NUR SCI 125 and NUR SCI 135.

Restriction: Nursing Science majors only.

NUR SCI 150. Critical and Specialty Health Care. 4 Units.

Restorative, supportive care of individuals with life-threatening alterations in health status utilizing technology and pharmacology for life support. Concurrent practicum in critical care and emergency units applies biological, psychological, and sociocultural aspects of critical illness and injury.

Corequisite: NUR SCI 130.

Prerequisite: NUR SCI 120 and NUR SCI 120L and NUR SCI 140 and NUR SCI 140L.

Restriction: Nursing Science majors only.

NUR SCI 160. Leadership and Management in Health Care. 8 Units.

Principles, concepts, and theories related to organizations, management, leadership, change, decision-making, and group process applied to the delivery of health care. The role of professional nurse as leader and manager of health care teams is incorporated in concurrent practicum.

Corequisite: NUR SCI 135 and NUR SCI 179A and NUR SCI 175LA.

Prerequisite: NUR SCI 130 and NUR SCI 150.

Restriction: Nursing Science majors only.

NUR SCI 170. Community-Based Health Care. 8 Units.

Epidemiology, primary health care promotion, and disease prevention applied to nursing care of individuals, families, groups, and communities. Includes sociocultural, political, economic, and environmental influences. Concepts and methods of assessing populations and communities incorporated in concurrent practicum.

Corequisite: NUR SCI 175LB and NUR SCI 179BW.

Prerequisite: NUR SCI 160 and NUR SCI 175LA and NUR SCI 179A and NUR SCI 135.

Restriction: Nursing Science majors only.

NUR SCI 175LA. Clinical Preceptorship. 2 Units.

Independent study focusing on in-depth clinical nursing practice in a selected area of interest to the student. Students are mentored by a preceptor who is an expert clinician in the area.

Prerequisite: NUR SCI 150.

Restriction: Nursing Science majors only.

NUR SCI 175LB. Clinical Preceptorship. 2 Units.

Independent study focusing on in-depth clinical nursing practice in a selected area of interest to the student. Students are mentored by a preceptor who is an expert clinician in the area.

Prerequisite: NUR SCI 150.

Restriction: Nursing Science majors only.

NUR SCI 179A. Scholarly Concentration I. 2 Units.

Independent study focusing on the research process to provide the evidence basis for a nursing protocol in an area of interest to the student.

Corequisite: NUR SCI 160 and NUR SCI 160L and NUR SCI 150 and NUR SCI 150L.

Prerequisite: NUR SCI 130 and NUR SCI 130L and NUR SCI 132 and NUR SCI 132L.

Restriction: Nursing Science majors only.

NUR SCI 179B. Scholarly Concentration II. 2 Units.

Second of two sequential course focusing on analysis of research as evidence to support a nursing protocol in an area of interest to the student. Emphasizes formal development and dissemination of information to peers in a podium/poster session.

Corequisite: NUR SCI 170L and NUR SCI 175L and NUR SCI 170

Prerequisite: NUR SCI 150 and NUR SCI 150L and NUR SCI 160 and NUR SCI 160L and NUR SCI 179A

Restriction: Prerequisite required and Majors only

NUR SCI 179BW. Scholarly Concentration II. 4 Units.

Continuation of independent research with emphasis on preparation of a paper detailing the research process and findings.

Prerequisite: NUR SCI 179A.

Restriction: Nursing Science majors only.

(Ib)

NUR SCI 199. Independent Study in Nursing Science. 1-4 Units.

Original research with Nursing Science faculty.

Repeatability: May be repeated for credit unlimited times.

NUR SCI 200. Research Methods and Evaluation for Evidence-Based Practice. 3 Units.

Clinical research methods and evaluation procedures relevant to evidence-based advanced nursing practice.

Prerequisite: Undergraduate statistics course; undergraduate nursing research course.

Restriction: Nursing Science graduate students only.

NUR SCI 210. Advanced Pathophysiology. 3 Units.

Principles of normal body functioning and pathophysiologic changes that occur as a result of compensatory mechanisms and disease. Physical and psychological aspects of altered health are explored from the cellular to the level of the total body system.

Restriction: Nursing Science graduate students only.

NUR SCI 212. Philosophy of Science and Theory Development in Nursing Science. 4 Units.

Development of philosophy of science in relation to nursing science, scholarship, and practice; emphasis on inquiry, scientific reasoning, and contemporary philosophical thought; historical and contemporary influences on nursing science theory development; evaluation/analysis of interdisciplinary theory and application to nursing research.

Restriction: Graduate students only.

NUR SCI 215. Health Promotion/Disease Prevention. 3 Units.

Covers the evidence-based national clinical preventive services guidelines for health promotion and disease prevention. Emphasizes counseling about personal health behaviors, screening tests for the early detection of risk factors and disease, immunizations and chemo-prophylaxis.

Restriction: Nursing Science graduate students only.

NUR SCI 220. Nursing Science and the Ecology of Healthy Communities. 4 Units.

Seminar in nursing science research contributionis and opportunities as they pertain to the ecology of health in local, national, and global communities. Emphasis on methodological and ethical issues, research gaps, and clinical translational opportunities.

Restriction: Graduate students only.

NUR SCI 222A. Seminar in Clinical Translational Science. 2 Units.

Discussion of clinical translational science methods in the context of nursing science research. Emphasis placed on interdisciplinary and community participatory research approaches.

Restriction: Graduate students only.

NUR SCI 222B. Seminar in Clinical Translational Science. 2 Units.

Discussion of clinical translational science methods in the context of nursing science research. Emphasis placed on interdisciplinary and community participatory research approaches.

Prerequisite: NUR SCI 222A.

Restriction: Graduate students only.

NUR SCI 222C. Seminar in Clinical Translational Science. 2 Units.

Discussion of clinical translational science methods in the context of nursing science research. Emphasis placed on interdisciplinary and community participatory research approaches.

Prerequisite: NUR SCI 222B.

Restriction: Graduate students only.

NUR SCI 225A. Advanced Pharmacology. 2 Units.

Principles of pharmacology that serve as a foundation for the pharmacotherapeutic management of patients evaluated and treated by advanced practice nurses. Emphasis includes that application of pharmacokinetic and pharmacodynamic principles.

Restriction: Nursing Science graduate students only.

NUR SCI 225B. Advanced Pharmacology. 3 Units.

Principles of pharmacology that serve as a foundation for the pharmacotherapeutic management of patients evaluated and treated by advanced practice nurses. Emphasis includes that application of pharmacokinetic and pharmacodynamic principles.

Prerequisite: NUR SCI 225A.

Restriction: Nursing Science graduate students only.

NUR SCI 230. Advanced Health and Physical Assessment. 3 Units.

Application of theoretical concepts related to comprehensive health assessment of patients across the lifespan. Analysis, synthesis, and application of comprehensive health assessment data.

Corequisite: NUR SCI 230L.

Restriction: Nursing Science graduate students only.

NUR SCI 230L. Advanced Health and Physical Assessment Laboratory. 3 Units.

Clinical laboratory course for the application of concepts related to comprehensive health assessment of patients across the lifespan.

Corequisite: NUR SCI 230.

Restriction: Nursing Science graduate students only.

NUR SCI 245A. Primary Care. 3 Units.

Assessment and management of acute or episodic problems affecting patients and families across the lifespan. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated.

Prerequisite: NUR SCI 210 and NUR SCI 230.

Restriction: Nursing Science graduate students only.

NUR SCI 245B. Primary Care. 3 Units.

Assessment and management of acute or episodic problems affecting patients and families across the lifespan. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated.

Prerequisite: NUR SCI 245A.

Restriction: Nursing Science graduate students only.

NUR SCI 246. Qualitative Research Designs in Nursing Science. 4 Units.

Seminar in qualitative research philosophies, methods and analysis in nursing science clinical research. Consideration of population access and sampling, ethics, data management, analytical approaches, and translational potential.

Corequisite: NUR SCI 212.

NUR SCI 247. Quantitative Research Designs in Nursing Science. 4 Units.

Seminar in experimental and survey research designs, methods, and analysis in nursing science clinical research. Consideration of measurement issues, mixed methods models, population access and sampling, data management, analytical approaches, and translational potential.

Prerequisite: NUR SCI 212.

NUR SCI 250. Primary Care Women's Health. 3 Units.

Primary health care needs of women including adolescent, adult and aging adults. Emphasizes assessment, diagnosis, prevention, management, and education of common gynecologic and family planning health care needs.

Prerequisite: NUR SCI 210 and NUR SCI 230.

Restriction: Nursing Science graduate students only.

NUR SCI 255. Primary Care Obstetrics. 3 Units.

Assessment and management of women during pregnancy. Diagnostics, pharmacology, pathophysiology and therapeutics are integrated. Includes assessment, differential diagnosis, management, patient/family education, & counseling related to normal pregnancy care.

Prerequisite: NUR SCI 245A and NUR SCI 210 and NUR SCI 230 and NUR SCI 230L.

Restriction: Nursing Science graduate students only.

NUR SCI 260A. Primary Care Adult/Geriatric. 3 Units.

Assessment and management of acute or episodic problems affecting adult and geriatric patients and their families. Diagnostics, pharmacology, pathophysiology, and therapeutic are integrated.

Prerequisite: NUR SCI 245A.

Restriction: Nursing Science graduate students only.

NUR SCI 260B. Primary Care Adult/Geriatric. 3 Units.

Assessment and management of acute or episodic problems affecting adult and geriatric patients and their families. Diagnostics, pharmacology, pathophysiology, and therapeutic are integrated.

Prerequisite: NUR SCI 260A.

Restriction: Nursing Science graduate students only.

NUR SCI 270. Primary Care Pediatrics. 3 Units.

Assessment and management of acute or episodic problems affecting pediatric patients and their families. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated.

Prerequisite: NUR SCI 245A and NUR SCI 210 and NUR SCI 230 and NUR SCI 230L.

Restriction: Nursing Science graduate students only.

NUR SCI 280. Aging and Chronic Illness. 3 Units.

Assessment and management of the geriatric patient. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated. Includes assessment, differential diagnosis, management, patient/family education, and counseling related to aging.

Prerequisite: NUR SCI 260B.

Restriction: Nursing Science graduate students only.

NUR SCI 281. Frameworks for Advanced Professional Practice in Nursing. 3 Units.

Provides an orientation to the scope and standards of advanced professional nursing practice. Principles of jurisprudence, ethics, and advocacy are introduced along with conceptual frameworks for nursing practice.

Restriction: Nursing Science graduate students only.

NUR SCI 282. Human Behavior and Mental Health Care for Advanced Practice. 3 Units.

Focuses on theory and research related to the psychiatric illness and sociocultural factors such as race, ethnicity, gender, and class which may impact patients across their life span. Emphasis includes assessment, diagnosis, management, patient/family education, lifestyle modification, and counseling strategies.

Restriction: Nursing Science graduate students only.

NUR SCI 283. Primary Care Procedures. 3 Units.

Introduces the theoretical basis for common procedures performed in primary care clinical practice. Focus includes EKG interpretation, x-ray interpretation, minor surgery and orthopaedic procedures.

Prerequisite: NUR SCI 245A.

Restriction: Nursing Science graduate students only.

NUR SCI 284. Advanced Practice Scholarly Concentration. 3 Units.

Independent study focusing on critique, analysis, and synthesis of research evidence as a basis for advanced practice nursing in an area of interest to the student.

Prerequisite: NUR SCI 200.

Restriction: Nursing Science graduate students only.

NUR SCI 285. APN Clinical Practicum I. 3 Units.

Clinical application of theory and research related to the advanced assessment and health promotion of patients across the lifespan.

Prerequisite: NUR SCI 210 and NUR SCI 230.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Nursing Science graduate students only.

NUR SCI 286. APN Clinical Practicum II. 4 Units.

Clinical field study applying theory, research, and developing clinical skills related to the provision of care to patients and their families in increasingly complex clinical situations.

Prerequisite: NUR SCI 285.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Nursing Science graduate students only.

NUR SCI 287. APN Clinical Practicum III. 5 Units.

Clinical application of theory and research through clinical experiences in selected primary care settings designed to provide students with competencies in the assessment, diagnosis, management, and education/counseling in selected populations.

Prerequisite: NUR SCI 286.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Nursing Science graduate students only.

NUR SCI 288. APN Clinical Practicum IV. 6 Units.

Continued clinical application of theory and research through clinical experiences in selected primary care settings designed to provide students with competencies in the assessment, diagnosis, management, and education/counseling in selected populations.

Prerequisite: NUR SCI 287.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Nursing Science graduate students only.

NUR SCI 289. APN Clinical Practicum V. 6 Units.

Culminating clinical experience serves as a transition from the student role to that of the advanced practice nurse.

Prerequisite: NUR SCI 288.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Nursing Science graduate students only.

NUR SCI 295. Directed Study in Latino Health Care. 2-4 Units.

Independent study in Latino health care.

Prerequisite: NUR SCI 286. Spanish language skills.

Restriction: Nursing Science graduate students only.

NUR SCI 296. Doctoral Dissertation Reading and Writing. 4-12 Units.

Dissertation research with Nursing Sciences faculty.

Prerequisite: Advancement to Candidacy.

Repeatability: May be repeated for credit unlimited times.

NUR SCI 298. Directed Studies in Nursing Science. 1-4 Units.

Directed study with Nursing Science faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

NUR SCI 299. Independent Study in Nursing Science. 1-4 Units.

Independent research with Nursing Science faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

NUR SCI 399. University Teaching. 4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Department of Pharmaceutical Sciences

147 Bison Modular; (949) 824-1239

<http://www.pharmsci.uci.edu>

A. Richard Chamberlin, **Department Chair**

The Department of Pharmaceutical Sciences offers a curriculum focusing on the preparation of students for professional positions in the pharmaceutical production, control, and development sectors of the pharmaceutical and biotechnology industry or for graduate studies in pharmaceuticals, medicinal chemistry, pharmacology, analytical chemistry, medicine, and pharmacy. Collaborative interdisciplinary research will be supported by joint faculty appointments shared with other UCI departments.

Degrees

Pharmaceutical Sciences	B.S.
Pharmacological Sciences *	M.S., Ph.D.

* Offered in conjunction with the Department of Pharmacology.

In addition, the Gateway Program in Medicinal Chemistry and Pharmacology (MCP), established through the joint efforts of the Departments of Chemistry, Pharmacology, Molecular Biology and Biochemistry, and Pharmaceutical Sciences, offers a graduate program of study.

Undergraduate Program

The B.S. degree program in Pharmaceutical Sciences trains students in a multidisciplinary approach so that they can contribute to the advancement of new pharmaceutical technologies such as accelerated chemical synthesis, molecular-based assays using cloned enzymes and cloned metabolizing enzymes, combinatorial chemistry, *in vitro* biopharmaceutical techniques, and gene therapies. Pharmaceutical scientists are rapidly changing the field of drug discovery and development. The graduates of this program may seek employment in public and private sectors or choose to pursue graduate degrees such as a Ph.D., M.D., or Pharm.D.

Undergraduate Honors. Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to approximately the top 12 percent of the graduating seniors. To be eligible for honors, a general criterion is that students must have completed at least 72 units in residence at a University of California campus. Other important factors are considered (See "Honors Recognition (p. 58)" in the Honors Opportunities information in the Division of Undergraduate Education section).

Admission to the Major

Students may be admitted to the Pharmaceutical Sciences major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities.

Information about change-of-major policies is available in the Department of Pharmaceutical Sciences office and at <http://www.changeofmajor.uci.edu>.

Transfer Students: All applicants must have completed the following required courses with a grade of B- or better in all courses: one year of

general chemistry courses with laboratory courses equivalent to UCI's CHEM 1A-CHEM 1B-CHEM 1C and CHEM 1LC-CHEM 1LD and one year of biology courses equivalent to UCI's BIO SCI 93 and BIO SCI 94. In addition, all applicants must have a cumulative GPA of 3.0 or better. Additional courses that are recommended, but not required: one year of calculus, one year of calculus-based physics with laboratory, one year of organic chemistry with laboratory, and additional articulated lower-division biology requirements.

Requirements for the B.S. Degree in Pharmaceutical Sciences

All students must meet the University Requirements (p. 60).

Major Requirements

A. Lower-Division Requirements:

1. Select one of the following sequences:

CHEM 1A- 1B- 1C	General Chemistry and General Chemistry and General Chemistry
-----------------	---

CHEM H2A- H2B- H2C	Honors General Chemistry and Honors General Chemistry and Honors General Chemistry
--------------------	--

and select one of the following lab sequences:

CHEM 1LC- 1LD	General Chemistry Laboratory and General Chemistry Laboratory
---------------	--

CHEM H2LA- H2LB- H2LC	Honors General Chemistry Laboratory and Honors General Chemistry Laboratory and Honors General Chemistry Laboratory
-----------------------	--

CHEM M2LA- M2LB- M3LC	Majors General Chemistry Laboratory and Majors General Chemistry Laboratory and Majors Quantitative Analytical Chemistry Laboratory
-----------------------	--

Select one of the following organic chemistry sequences and accompanying labs:

CHEM 51A- 51B- 51C	Organic Chemistry and Organic Chemistry and Organic Chemistry
--------------------	---

CHEM 51LB- 51LC	Organic Chemistry Laboratory and Organic Chemistry Laboratory
-----------------	--

or

CHEM H52A- H52B- H52C	Honors Organic Chemistry and Honors Organic Chemistry and Honors Organic Chemistry
-----------------------	--

CHEM H52LA- H52LB- H52LC	Honors Organic Chemistry Laboratory and Honors Organic Chemistry Laboratory and Honors Organic Chemistry Laboratory
--------------------------	--

2. Complete:

MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
-------------	--

and select one of the following:

STATS 7	Basic Statistics
STATS 8	Introduction to Biological Statistics
MATH 2D	Multivariable Calculus
MATH 3A	Introduction to Linear Algebra
3. Select one of the following physics sequences and accompanying labs:	
PHYSICS 3A- 3B- 3C	Basic Physics and Basic Physics and Basic Physics
PHYSICS 3LB- 3LC	Basic Physics Laboratory and Basic Physics Laboratory
or	
PHYSICS 7C- 7D- 7E	Classical Physics and Classical Physics and Classical Physics
PHYSICS 7LC- 7LD	Classical Physics Laboratory and Classical Physics Laboratory

4. Complete:

BIO SCI 93	From DNA to Organisms
BIO SCI 94	From Organisms to Ecosystems
BIO SCI 97	Genetics
BIO SCI 98	Biochemistry
BIO SCI 99	Molecular Biology

B. Upper-Division Requirements:

Complete:

BIO SCI 100	Scientific Writing
BIO SCI 194S	Safety and Ethics for Research
PHRMSCI 120- 120L	Human Physiology and Human Physiology Lab
PHRMSCI 170A- 170B	Molecular Pharmacology I and Molecular Pharmacology II
PHRMSCI 171	Physical Biochemistry
PHRMSCI 172	Topics in Pharmaceutical Sciences
PHRMSCI 173	Pharmacotherapy
PHRMSCI 174- 174L	Biopharmaceutics & Nanomedicine and Biopharmaceutics & Nanomedicine Lab
PHRMSCI 176	Ethics Conduct of Research
PHRMSCI 177- 177L	Medicinal Chemistry and Medicinal Chemistry Laboratory

C. Upper-Division Electives (8 units):

1. One course, for students who choose electives that have these courses as prerequisites, selected from the following:

BIO SCI D103	Cell Biology
BIO SCI D104	Developmental Biology
BIO SCI N110	Neurobiology and Behavior

2. The upper-division electives may be selected from the following: ¹

BIO SCI D111L	Developmental and Cell Biology Laboratory
BIO SCI D129	Biotechnology and Plant Breeding
BIO SCI D136	Human Anatomy
BIO SCI D137	Eukaryotic and Human Genetics
BIO SCI D145	Genomics, Development, and Medicine
BIO SCI D148	Development and Disease

BIO SCI D153	Molecular and Cellular Basis of Disease
BIO SCI E136	The Physiology of Human Nutrition
BIO SCI E137	Genetics of Complex Traits
BIO SCI E142W	Writing/Philosophy of Biology
BIO SCI E189	Environmental Ethics
BIO SCI M114	Advanced Biochemistry
BIO SCI M114L	Biochemistry Laboratory
BIO SCI M116L	Molecular Biology Laboratory
BIO SCI M118L	Experimental Microbiology Laboratory
BIO SCI M120	Signal Transduction in Mammalian Cells
BIO SCI M121	Immunology with Hematology
BIO SCI M122	General Microbiology
BIO SCI M122L	Advanced Microbiology Laboratory
BIO SCI M123	Introduction to Computational Biology
BIO SCI M124A	Virology
BIO SCI M124B	Viral Pathogenesis and Immunity
BIO SCI M124L	Virus Engineering Laboratory
BIO SCI M125	Molecular Biology of Cancer
BIO SCI M137	Microbial Genetics
BIO SCI M143	Human Parasitology
BIO SCI M144	Cell Organelles and Membranes
BIO SCI N113L	Neurobiology Laboratory
BIO SCI N153	Neuropharmacology
BIO SCI N154	Molecular Neurobiology
CHEM 107	Inorganic Chemistry
CHEM 107L	Inorganic Chemistry Laboratory
CHEM 125	Advanced Organic Chemistry
CHEM 128	Introduction to Chemical Biology
CHEM 128L	Introduction to Chemical Biology Laboratory Techniques
CHEM 138	Introduction to Computational Organic Chemistry
CHEM 156	Advanced Laboratory in Chemistry and Synthesis of Materials
CHEM 160	Organic Synthesis Laboratory
CHEM 170	Radioisotope Techniques
PUBHLTH 121	Introduction to Complementary and Alternative Medicine

¹ Course may not be used to satisfy more than one requirement.

Upper-Division Writing Requirement: Pharmaceutical Sciences majors satisfy the upper-division writing requirement by completing BIO SCI 100 with a grade of C or better, followed by the completion of PHRMSCI 174L and PHRMSCI 177L. Students must earn a grade of C or better in each of these laboratory courses.

NOTE: Double majors with Pharmaceutical Sciences, Public Health Sciences, Nursing Science, Biomedical Engineering: Premedical, or with any of the School of Biological Sciences majors are not permitted.

Sample Program — Pharmaceutical Sciences

Freshman

Graduate Program

The Department of Pharmaceutical Sciences offers a program that provides a unique opportunity for students interested in any scientific discipline represented by the faculty to have a year of broad, interdisciplinary training followed by focused doctoral research in the Pharmaceutical Sciences research group of their choice. Students complete their first year of graduate study in the Medicinal Chemistry and Pharmacology (MCP) graduate gateway program where they complete course work, lab rotations, and other activities intended to provide a broad foundation in the pharmaceutical sciences. At the end of this first year of interdisciplinary training, they transition from MCP into a research group to begin their more focused doctoral research under the guidance of a Pharmaceutical Sciences faculty member; current areas of study include structural biology; medicinal chemistry; structure-based drug design; high-throughput screening; molecular neuropharmacology; the pharmacology of aging; natural product biosynthesis and synthase engineering; cancer prevention and therapy; gene regulation and intercellular signaling; computational biology and bioinformatics; and nanomedicine for targeted drug and gene delivery, among others. The two-phase integrated curriculum offered in this program gives students a breadth of expertise that is not easily achievable in any single, individual department.

For the Ph.D. degree, the Department of Pharmaceutical Sciences joins forces with the Department of Pharmacology to offer an interdisciplinary program leading to a Ph.D. degree in Pharmacological Sciences. The Ph.D. degree prepares students for careers in academia, research institutions, and the pharmaceutical industry by providing a research-intensive approach to the study of pharmaceutical sciences. Faculty research programs in Pharmaceutical Sciences that are available through this program currently include organic, medicinal, and bioorganic chemistry; structural biology; structure-based drug design; high-throughput screening; molecular neuropharmacology; the pharmacology of aging; natural product biosynthesis and synthase engineering; cancer prevention and therapy; gene regulation and intercellular signaling; computational

biology and bioinformatics; and nanomedicine for targeted drug and gene delivery. For complete program information, see the Graduate Program in Pharmacological Sciences (p. 624) in the Interdisciplinary Studies section of the *Catalogue*.

Faculty

Bruce Blumberg, Ph.D. University of California, Los Angeles, *Professor of Developmental and Cell Biology, Biomedical Engineering, and Pharmaceutical Sciences*

A. Richard Chamberlin, Ph.D. University of California, San Diego, *Department Chair and Professor of Pharmaceutical Sciences, and Professor of Chemistry and Pharmacology*

Olivier Civelli, Ph.D. Swiss Federal Institute of Technology, *Department Chair of Pharmacology and Professor, Departments of Pharmacology, Developmental and Cell Biology, and Pharmaceutical Sciences, and Eric L. and Lila D. Nelson Chair in Neuropharmacology*

John P. Fruehauf, Ph.D. Rush University, *Associate Professor of Clinical Medicine, Pharmaceutical Sciences, Biomedical Engineering, and Biological Chemistry*

Daniel Gil, Ph.D. University of Pennsylvania, *Associate Adjunct Professor of Pharmaceutical Sciences*

Celia Goulding, Ph.D. King's College London, *Associate Professor of Molecular Biology and Biochemistry and of Pharmaceutical Sciences*

Stephen Hanessian, Ph.D. Ohio State University, *Director of the Graduate Gateway Program in Medicinal Chemistry and Pharmacology and Professor of Pharmaceutical Sciences, Chemistry, and Pharmacology*

Mahtab Jafari, Pharm.D. University of California, San Francisco, *Director of the Undergraduate Program in Pharmaceutical Sciences and Associate Professor of Pharmaceutical Sciences, Ecology and Evolutionary Biology, and Pharmacology*

Young Jik Kwon, Ph.D. University of Southern California, *Associate Professor of Pharmaceutical Sciences, Chemical Engineering and Materials Science, Biomedical Engineering, and Molecular Biology and Biochemistry*

Andrej Luptak, Ph.D. Yale University, *Vice Chair of the Graduate Program in Pharmaceutical Sciences and Associate Professor of Pharmaceutical Sciences, Chemistry, and Molecular Biology and Biochemistry*

David L. Mobley, Ph.D. University of California, Davis, *Assistant Professor of Pharmaceutical Sciences and Chemistry*

Lawrence Plon, Pharm.D. University of Southern California, *Assistant Adjunct Professor of Pharmaceutical Sciences*

Thomas L. Poulos, Ph.D. University of California, San Diego, *UCI Chancellor's Professor, Departments of Molecular Biology and Biochemistry, Pharmaceutical Sciences, Physiology and Biophysics, and Chemistry*

Jennifer Prescher, Ph.D. University of California, Berkeley, *Assistant Professor of Chemistry, Molecular Biology and Biochemistry, and Pharmaceutical Sciences*

Rainer K. Reinscheid, Ph.D. Center for Molecular Neurobiology, *Associate Professor of Pharmaceutical Sciences, Pharmacology, and Molecular Biology and Biochemistry*

Paolo Sassone-Corsi, Ph.D. University of Naples, *Director of the Center for Epigenetics and Metabolism, Donald Bren Professor, and UCI Distinguished Professor, Departments of Biological Chemistry and Pharmaceutical Sciences*

Shiou-Chuan (Sheryl) Tsai, Ph.D. University of California, Berkeley, *UCI Chancellor's Fellow and Professor of Molecular Biology and Biochemistry, Chemistry, and Pharmaceutical Sciences*

Sun (Coco) Yang, Pharm.D. Chinese Academy of Medical Science & Peking Union Medical College, *Assistant Adjunct Professor of Pharmaceutical Sciences*

Weian Zhao, Ph.D. McMaster University, *Assistant Professor of Pharmaceutical Sciences and Biomedical Engineering*

Courses

PHRMSCI 1. Introduction to Pharmaceutical Sciences. 1 Unit.

Introduction to the scientific disciplines that comprise the multidisciplinary field of pharmaceutical sciences. Students gain an appreciation of basic concepts in the relevant physical, biological, and clinical sciences and how they fit together in the search for new medicines.

Grading Option: Pass/no pass only.

PHRMSCI 42. Life 101 . 1 Unit.

Covers the latest scientific work on the impact of nutrition, exercise, and lifestyle choices on mental and physical health. The course will motivate students to make positive changes by fostering personal growth.

PHRMSCI 90. Speaking about Science. 4 Units.

Introductory courses in research, composition, organization, and delivery of informative and persuasive speeches for various purposes, including scientific talks. Includes strategies for reducing speaker apprehension.

PHRMSCI 120. Human Physiology. 4 Units.

Focuses on anatomy and physiology—organism structure and function, respectively—as they relate to human diseases and their treatment. Prepares students for more advanced studies in pharmacology, medicinal chemistry, biopharmaceutics, and other disciplines encompassing pharmaceutical sciences.

Prerequisite: BIO SCI 99.

Overlaps with BIO SCI E109.

PHRMSCI 120L. Human Physiology Lab. 3 Units.

Through an active learning environment, provides practical knowledge of topics covered in Human Physiology as they relate to health care professions. Participation in group projects that strengthen basic laboratory skills and teach students to work more efficiently in a team.

Corequisite: PHRMSCI 120

Prerequisite: BIO SCI 194S or BIO SCI E109

Overlaps with BIO SCI E112L.

Restriction: Prerequisite required

PHRMSCI 170A. Molecular Pharmacology I. 4 Units.

Molecular basis of drug-receptor action at the molecular and cellular levels. Structure-function of drug targets emphasizing enzymes, ion channels, and membrane transport proteins. Understanding how the drugs' mechanisms of action contribute to the development of more efficacious and safer drugs.

Corequisite: CHEM 51C or CHEM H52C.

Prerequisite: (CHEM 51C or CHEM H52C) and (PHRMSCI 120 or BIO SCI E109).

Restriction: Pharmaceutical Science majors have first consideration for enrollment.

PHRMSCI 170B. Molecular Pharmacology II. 4 Units.

Mechanism-based overview of pharmacology and therapeutic drugs in the fields of autonomic nervous system, central nervous system, and antimicrobials.

Prerequisite: PHRMSCI 170A.

PHRMSCI 171. Physical Biochemistry. 4 Units.

Thermodynamics and kinetic fundamentals as applied to problems relevant to pharmaceutical sciences such as receptor/enzyme-ligand interactions. Fundamentals of biophysical methods used in the pharmaceutical sciences including structure determination and biomolecular spectroscopy.

Prerequisite: MATH 2B and PHYSICS 3C and (CHEM 1C or CHEM H2C) and BIO SCI 99.

Restriction: Pharmaceutical Sciences majors have first consideration for enrollment.

PHRMSCI 172. Topics in Pharmaceutical Sciences. 2 Units.

Presents information about various fields of research, study, careers, and graduate school opportunities in pharmaceutical sciences. Taught by guest lecturers from various disciplines including 199 research course faculty. Helps Pharmaceutical Sciences students select electives appropriate to their future goals.

Prerequisite: BIO SCI 99 and as a prerequisite or corequisite: CHEM 51C or CHEM H52C.

Grading Option: Pass/no pass only.

PHRMSCI 173. Pharmacotherapy. 4 Units.

An exploration of the clinical application of medications to selected disease states. Focus is on an understanding of underlying principles of pharmacology and how this knowledge can be applied to treatment of diseases.

Prerequisite: Prerequisite or corequisite: PHRMSCI 170B.

PHRMSCI 174. Biopharmaceutics & Nanomedicine. 4 Units.

Introduces theories and tools of new drug formulations. Particularly new novel therapeutics based on biological materials, pathological characteristics utilized to achieve the maximum efficacy and specificity, and drug delivery systems are based on emerging nanotechnology are extensively discussed.

Prerequisite: PHRMSCI 170B

Same as CBEMS 108.

Restriction: Prerequisite required or Consent of instructor to enroll

PHRMSCI 174L. Biopharmaceutics & Nanomedicine Lab. 3 Units.

Introduction to cancer drug screening using cellular models and confirmation of comprehensive therapeutic efficacy using a live animal model. Includes basic cell culture, cytotoxicity assays, cell analysis, drug circulation test, and tumor eradication and imaging experiments.

Prerequisite: PHRMSCI 170B and BIO SCI 100.

PHRMSCI 174LW. Biopharmaceutics Laboratory. 3 Units.

Introduction to cancer drug screening using cellular models and confirmation of comprehensive therapeutic efficacy using a live animal model. Includes basic cell culture, cytotoxicity assays, cell analysis, drug circulation test, and tumor eradication and imaging experiments.

Prerequisite: PHRMSCI 170B. Satisfactory completion of the Lower-Division Writing requirement.

(Ib)

PHRMSCI 176. Ethics Conduct of Research. 2 Units.

Covers the ethical responsibilities of biomedical scientists. Topics include, as discussions and case studies, the high standards of science, the responsible conduct of research, animal experimentation, and clinical trials as they relate to the pharmaceutical sciences.

PHRMSCI 177. Medicinal Chemistry. 4 Units.

An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity.

Prerequisite: CHEM 51A and CHEM 51B and CHEM 51C and (BIO SCI 98 or CHEM 128).

Same as CHEM 177.

Restriction: Pharmaceutical Science majors have first consideration for enrollment.

PHRMSCI 177L. Medicinal Chemistry Laboratory. 2 Units.

An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity.

Corequisite: PHRMSCI 177.

Prerequisite: CHEM 51A and CHEM 51B and CHEM 51C and BIO SCI 100 and (BIO SCI 98 or CHEM 128).

Same as CHEM 177L.

Restriction: Pharmaceutical Science majors have first consideration for enrollment.

PHRMSCI 177LW. Medicinal Chemistry Lab. 2 Units.

An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity.

Corequisite: CHEM 177.

Prerequisite: CHEM 51A and CHEM 51B and CHEM 51C and (BIO SCI 98 or CHEM 128) and BIO SCI 100.

Same as CHEM 177LW.

(Ib)

PHRMSCI 197. Professional Internship. 4 Units.

Provides students with opportunity to develop leadership and professional skills necessary for competitive placement in their chosen industry. Students gain new and field-specific skills outside the classroom environment while participating in a supervised internship for a total of 100 hours.

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Seniors only.

PHRMSCI 198. Independent Study in Pharmaceutical Sciences. 1-4 Units.

Students interested in independent study should arrange with a faculty member to sponsor and supervise such work. A time commitment of three hours per week per unit is expected. A written report is required at the end of each quarter.

Repeatability: May be taken for credit for 4 units.

PHRMSCI 199. Undergraduate Research. 1-4 Units.

Original research in the laboratory of Pharmaceutical Sciences faculty. Attendance at regular research group meetings is also generally expected, and a quarterly written report is required. Strongly recommended for students considering research careers and/or graduate degree programs.

Repeatability: May be repeated for credit unlimited times.

PHRMSCI H199. Honors Research in Pharmaceutical Sciences. 4 Units.

Undergraduate honors research in Pharmaceutical Sciences. A student time commitment of 10-15 hours per week is required.

Repeatability: May be repeated for credit unlimited times.

PHRMSCI 223. Biological Macromolecules. 4 Units.

Introduction to nucleic acid and protein structure, dynamics, and function. Topics include analytical methods, molecular evolution, folding, and catalysis.

Same as CHEM 223.

PHRMSCI 250A. Current Topics in Pharmaceutical Sciences. 1 Unit.

Intended to expose students to the primary literature and current research in the field of Pharmaceutical Sciences. Students analyze and present information for discussion. Guest speakers from academia and industry may participate throughout the quarter.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: MCP Gateway Program students only.

PHRMSCI 250B. Current Topics in Pharmaceutical Sciences. 1 Unit.

Intended to expose students to the primary literature and current research in the field of Pharmaceutical Sciences. Students analyze and present information for discussion. Guest speakers from academia and industry may participate throughout the quarter.

Prerequisite: PHRMSCI 250A.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: MCP Gateway Program students only.

PHRMSCI 250C. Current Topics in Pharmaceutical Sciences. 1 Unit.

Intended to expose students to the primary literature and current research in the field of Pharmaceutical Sciences. Students analyze and present information for discussion. Guest speakers from academia and industry may participate throughout the quarter.

Prerequisite: PHRMSCI 250B.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: MCP Gateway Program students only.

PHRMSCI 270. Advanced Pharmacology. 4 Units.

Provides a mechanism-based overview of pharmacology with strong emphasis on clinical application of pharmacology. Students will learn the most recent advances in pharmacology as they relate to drug discovery, development, and clinical application.

Restriction: Graduate students only.

PHRMSCI 272. Special Topics in Pharmaceutical Sciences. 2-4 Units.

Reserved for current topics of particular interest in areas of pharmaceutical sciences that are not covered by other courses. The subject will vary from year to year, highlighting, for example, significant emerging fields or highly specialized but vital research areas.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

PHRMSCI 274. Nanomedicine . 4 Units.

Students will learn the current challenges in administering drugs to treat highly challenging diseases, the background theories of drug and gene delivery systems, and apply their knowledge in designing innovative forms of therapeutics formulations.

Restriction: Graduate students only.

PHRMSCI 277. Medicinal Chemistry. 4 Units.

Fundamentals of medicinal chemistry covering diverse aspects of drug design, discovery, synthesis, and development. Molecular basis of drug action with an emphasis on the structure-to-function continuum.

PHRMSCI 278. Stem Cell Therapy . 4 Units.

Introduces new paradigms in regenerative medicine particularly those that involve stem cells, and emerging molecular, nano- and micro-engineered tools for in vivo imaging that is critical for studying and monitoring regeneration.

Restriction: Graduate students only.

PHRMSCI 280. Graduate Research. 1-12 Units.

Supervised original research or investigation under the direction of an individual faculty member.

PHRMSCI 399. University Teaching. 1-4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

School of Physical Sciences

Kenneth C. Janda, **Dean**

Undergraduate Counseling: (949) 824-6507

134 Rowland Hall

<http://ps.uci.edu/>

Overview

The School of Physical Sciences offers both professional training and general education in the Departments of Chemistry, Earth System Science, Mathematics, and Physics and Astronomy. The faculty, active in research and graduate education, are at the same time vitally concerned with undergraduate teaching. Curricula of the School are designed to meet the needs of a wide variety of students ranging from those with little technical background who seek insight into the activities and accomplishments of physical scientists to those seeking a comprehensive understanding that will prepare them for creative research in physical science.

Over the course of the past century and a half, physics, chemistry, and mathematics have evolved into interdependent but separate intellectual disciplines. This development is reflected in the departmental structure of the School of Physical Sciences. In the same period, these fundamental disciplines have moved into domains of abstraction unimagined by early scientists. This trend to abstraction with its concomitant increase in understanding of the physical universe provides the major challenge to the student of the physical sciences. Mathematics, physics, and chemistry, while providing the foundation of the technology that dominates contemporary civilization, underlie to an ever-increasing extent the new developments in the biological and social sciences. Earth system science is grounded in the traditional physical sciences while breaking new paths in the quantitative study of changes in the global environment.

Degrees

Chemistry	B.S., M.S., Ph.D.
Earth System Science	B.S., M.S., Ph.D.
Environmental Science	B.A.
Mathematics	B.S., M.S., Ph.D.
Physics	B.S., M.S., Ph.D.

Honors

Criteria used by the School of Physical Sciences in selecting candidates for honors at graduation are as follows: Approximately 1 percent will be awarded *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. Honors are awarded on the basis of a student's performance in research, cumulative grade point average, and performance in upper-division courses in the major. Students considered for honors at graduation must have completed 72 units in residence at the University of California. The student's cumulative record at the end of the final quarter is the basis for all decisions regarding honors at graduation. Other important factors are considered (see **Honors Recognition**). The School of Physical Sciences also grants special honors to students who have distinguished themselves by their work in their major subject.

- Preparation for Teaching Science and Mathematics
- Special Programs

Undergraduate Programs

Each department offers courses that are of value to nonmajors and majors in the sciences. The programs for majors are designed to meet the needs of students planning careers in business, education, or industry; of students planning advanced professional study; and of students planning graduate work that continues their major interest. Students who wish to complete a coordinated set of courses beyond the introductory level in Mathematics and in Earth and Atmospheric Sciences may pursue minors in these areas. Students interested in mathematical and computational biology may complete the Mathematics for Biology minor which prepares them for interdisciplinary graduate studies in this area. Introductory courses in chemistry, mathematics, and physics meet the needs of students majoring in the sciences, mathematics, and engineering and are also appropriate for students in other disciplines who seek a rigorous introduction to the physical sciences. In addition, a number of courses within the School have few or no prerequisites and are directed particularly toward students majoring in areas remote from the sciences.

Planning a Program of Study

Students who choose a major in the School of Physical Sciences have a variety of academic advising and counseling resources available to them. In addition to faculty advisors, there is a Chief Academic Advisor in each department who is responsible for interpreting degree requirements, reviewing student petitions, and assisting with special advising problems. An academic advising and counseling staff, employed in the Associate Dean's Office, is available to serve a broad range of student advising needs. In consultation with their faculty advisor or an academic counselor, students should plan a course of study leading to a major in one of the departments of the School. In carrying out this major, students may often concentrate very heavily in a second department within the School or in some other school. Occasionally students choose to pursue a double major. Permission to do so may be sought by an online application submitted to the Office of the Associate Dean of Physical Sciences.

All initial courses of study for majors include mathematics through calculus, and calculus is a prerequisite for much of the upper-division work in each major. A student interested in any of the physical sciences should continue mathematical training beyond these prerequisite courses. Furthermore, students interested in either physics or chemistry usually will include work in both of these subjects in their undergraduate careers.

Students in the physical sciences are urged to acquire a working knowledge of computer programming at an early stage of their University studies. This can be accomplished by taking one of the following:

I&C SCI 31	Introduction to Programming
CHEM 5	Scientific Computing Skills
EECS 10	Computational Methods in Electrical and Computer
EECS 12	Introduction to Programming
ENGRMAE 10	Introduction to Engineering Computations
PHYSICS 53	Introduction to C and Numerical Analysis

Career Opportunities

Many of the School of Physical Sciences graduates continue their education beyond the Bachelor's degree level. Some pursue advanced academic degrees in preparation for careers in scientific or medical research, engineering, or postsecondary education. Other students will complete a secondary education credential in order to prepare for careers teaching high school mathematics and science. Some students enter professional school in areas such as medicine, dentistry, law, or business administration. Students who choose not to continue their studies beyond the baccalaureate level most frequently find employment in private business or industry. In addition to technical areas directly related to their major fields of study, students often enter careers in less obviously related fields such as computing, systems analysis, engineering, journalism, marketing, or sales.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p.) section for additional information.

Preparation for Teaching Science and Mathematics

Option 1: Earn a Bachelor's Degree, Education Concentration, and Teaching Credential

Physical Sciences students who are interested in pursuing a teaching career should consider the UCI Cal Teach Science and Mathematics Program. This program offers Chemistry, Earth System Science, Environmental Science, Mathematics, and Physics majors an option to earn their bachelor's degree concurrently with a California Preliminary Single Subject Teaching Credential. Individuals who hold this credential are authorized to teach science (chemistry, geosciences, or physics) or math in a middle school or high school.

Students complete the degree requirements for their selected major, the requirements for an optional education concentration offered by the same department, and any additional teacher credentialing course requirements that are not included in the major or the concentration. The following courses are required for the Preliminary Single Subject Teaching Credential:

PHY SCI 5	California Teach 1: Introduction to Science and Mathematics Teaching
PHY SCI 105	California Teach 2: Middle School Science and Mathematics Teaching
PHYSICS 193 or CHEM 193	Research Methods
MATH 8	Explorations in Functions and Modeling (for mathematics credential candidates only)
LPS 60	The Making of Modern Science (for chemistry, geosciences, and physics credential candidates only)
EDUC 55	Knowing and Learning in Mathematics and Science

EDUC 109	Reading and Writing in Secondary Mathematics and Science Classrooms
EDUC 143AW	Classroom Interactions I
EDUC 143BW	Classroom Interactions II
EDUC 148	Complex Pedagogical Design
EDUC 158	Student Teaching Mathematics and Science in Middle/High School (two quarters)

Beyond course work, some additional requirements for teacher certification are described below.

With careful, early planning, it is possible for students to complete their bachelor's degree and teacher certification in four years. This is a more time-efficient and cost-effective route than the traditional five-year teacher preparation model, which usually involves a full academic year of teacher education courses and clinical teaching experience after completion of a bachelor's degree.

After the School of Physical Sciences verifies the completion of all requirements for the bachelor's degree and education concentration, students are awarded their degree from UC Irvine. The Preliminary Single Subject Teaching Credential is awarded by the California Commission on Teacher Credentialing (CTC) upon completion of a bachelor's degree and the state-approved UCI teacher education program, which combines course work, student teaching, and a teaching performance assessment. The UCI School of Education must verify completion of all requirements for the teaching credential and then recommend that the credential be awarded to a candidate by the CTC.

Additional Requirements for Teacher Certification. In addition to the required course work for a California Preliminary Single Subject Teaching Credential, the following additional requirements must be satisfied:

- The School of Physical Sciences requires a *cumulative* GPA of 2.0 (C) to graduate with the bachelor's degree. However, students must earn a grade of C or better in each of the following courses in order to be recommended for the Preliminary Single Subject Credential: PHY SCI 105, EDUC 55, , EDUC 143AW, EDUC 143BW, EDUC 148, and EDUC 158.
- The following must be completed and verified prior to the start of student teaching in EDUC 158:
 - Pass the California Basic Education Skills Test (CBEST), a basic mathematics and literacy skills test. For more information, see <http://www.cbest.nesinc.com/>.
 - Pass the California Subject Exam for Teachers (CSET) in the discipline in which a candidate plans to earn a Preliminary Single Subject Credential (chemistry, geosciences, mathematics, or physics). Although secondary teachers are only required to pass the CSET exam in one discipline, those who pass the CSET exam in more than one disciplinary field (e.g., physics and mathematics) can be authorized to teach classes in each of those disciplines. For more information about the CSET exam, see <http://www.cset.nesinc.com/>. Mathematics majors have an option to waive the CSET exam by completing prescribed course work, referred to as a subject-matter preparation program (SMPP). More information about the Mathematics SMPP is available at http://www.gse.uci.edu/academic_programs/ap_smpp_math.php.

- C. Secondary school science teachers in California are expected to have a broad range of general science knowledge in addition to their discipline of specialization, because their Single Subject Teaching Credential in one of the sciences also authorizes them to teach classes in general or integrated science. The general science subtests of the CSET exam cover foundational topics in astronomy, geodynamics, Earth resources, ecology, genetics and evolution, molecular biology and biochemistry, cell and organismal biology, waves, forces and motion, electricity and magnetism, heat transfer and thermodynamics, and structure and properties of matter. Although students can prepare for the CSET exam's general science subtests through independent study, Physical Sciences students can also prepare themselves by taking lower-division courses that cover this content. Some suggested courses include BIO SCI 1A or BIO SCI 93 and BIO SCI 94; CHEM 1A-CHEM 1B-CHEM 1C; EARTHSS 1 and EARTHSS 7 and PHYSICS 20A.
 - D. Obtain a Certificate of Clearance from the State of California.
 - E. Obtain a TB test with negative results.
3. The following must be completed and verified before the School of Education is able to recommend an individual for the Preliminary Single Subject Credential:
 - A. Complete a college-level course or pass an examination on the U.S. Constitution. POL SCI 21A satisfies this requirement. Contact the UCI School of Education Student Affairs Office for information about the exam.
 - B. Obtain a CPR certificate in adult, child, or infant training.

Declaring Intention to Complete the Concentration and Teacher Certification. Prospective teachers who want to complete their degree and a teaching credential in four years are encouraged to start planning early by reviewing the sample programs for the major and the education concentration that they have selected, and to consult with an academic counselor. Interested students are encouraged to get started on the suggested first- and second-year credentialing course work, including PHY SCI 5 and PHY SCI 105, and can do so without officially declaring their intention to complete the concentration or the credential. However, students must declare their intention to complete the optional education concentration and their intention to earn the Preliminary Single Subject Teaching Credential by the end of their second year at the latest, and prior to enrolling in EDUC 55, which they would typically take in fall of their third year. Forms for declaring a selected education concentration and for declaring an intention to complete the teaching credential are available in the Cal Teach Science and Mathematics Resource and Advising Center (137 Bison Modular).

Option 2: Earn a Bachelor's Degree and Education Concentration or Specialization

A second option for students interested in teaching science and mathematics is to earn a teaching credential in a post-baccalaureate teacher preparation program *after* completing their bachelor's degree. UCI and other universities offer such programs, which typically require one academic year of education course work and clinical teaching experience. The Departments of Chemistry, Mathematics, and Physics and Astronomy offer the concentration in Chemistry Education, the specialization in Mathematics for Education, and the concentration in Physics Education, respectively, which are well suited for undergraduates who plan to pursue a teaching credential after finishing their degree. These programs offer strong grounding in the fundamentals of one discipline, and at the same

time, emphasize the breadth in natural sciences needed by secondary science teachers. Each department's curriculum includes introductory courses on effective methods of science and mathematics teaching and provides opportunities for practical fieldwork experiences in a secondary school classroom. Detailed requirements for each program are provided in the departmental sections.

Special Programs

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

UC Education Abroad Program

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the University's Education Abroad Program (EAP). UCEAP is an overseas study program which operates in cooperation with host universities and colleges throughout the world. See <http://www.studyabroad.uci.edu> for additional information.

Minor in Biomedical Engineering

The minor in Biomedical Engineering is an interdisciplinary curriculum that includes courses from the Schools of Engineering, Physical Sciences, and Biological Sciences. The minor is designed to provide a student in the physical sciences with the introductory skills needed in the quantitative biomedical arena. See The Henry Samueli School of Engineering (p. 331) section of the *Catalogue* for more information.

Minor in Conflict Resolution

The interdisciplinary minor in Conflict Resolution provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. See School of Social Sciences (p. 1013) section of the *Catalogue* for more information.

Minor in Global Sustainability

The interdisciplinary minor in Global Sustainability trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet. See Interdisciplinary Studies (p. 632) section of the *Catalogue* for more information.

Requirements for the Bachelor's Degree

All students must meet the University Requirements (p. 60).

School Requirements: None.

Departmental Requirements: Refer to individual departments.

Graduate Programs

The School offers M.S. and Ph.D. degree programs in the Departments of Chemistry, Earth System Science, Mathematics, and Physics and Astronomy. See the department sections for detailed information.

Courses

PHY SCI 5. California Teach 1: Introduction to Science and Mathematics Teaching. 3 Units.

First in a series for students interested in becoming middle or high school teachers of mathematics or science. Students gain an understanding of effective, research-based teaching strategies. Includes supervised field experience in a K-12 classroom.

Same as BIO SCI 14.

Restriction: School of Physical Sciences, School of Biological Sciences, School of Information and Computer Sciences, and School of Engineering majors have first consideration for enrollment.

PHY SCI 105. California Teach 2: Middle School Science and Mathematics Teaching. 3 Units.

Second in a series for students interested in becoming middle or high school teachers of mathematics or science. Students gain an understanding of effective, research-based teaching strategies for grades 6-8. Includes supervised field experience in a middle school classroom.

Prerequisite: PHY SCI 5.

Same as BIO SCI 101.

Restriction: School of Physical Sciences, School of Biological Sciences, School of Information and Computer Sciences, and School of Engineering majors have first consideration for enrollment.

PHY SCI 106. California Teach 3: High School Science and Mathematics Teaching. 2 Units.

Capstone of a series of three seminars for students interested in becoming secondary mathematics or science teachers. Meets six times for students to understand effective, research-based teaching strategies. Includes an opportunity to experience teaching in a high school.

Prerequisite: (PHY SCI 5 or BIO SCI 14) and (PHY SCI 105 or BIO SCI 101).

Same as BIO SCI 102.

Restriction: School of Physical Sciences, School of Biological Sciences, School of Information and Computer Sciences, and School of Engineering majors have first consideration for enrollment.

PHY SCI 139. Technical Writing and Communication Skills. 4 Units.

Workshop in writing technical reports, journal articles, proposals. Oral presentations. Communicating with the public. May not be used in satisfaction of any School or departmental requirement.

Restriction: Upper-division students only. School of Physical Sciences majors have first consideration for enrollment.

PHY SCI 139W. Technical Writing and Communication Skills. 4 Units.

Workshop in writing technical reports, journal articles, proposals. Oral presentations. Communicating with the public. May not be used in satisfaction of any School or departmental requirement.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only. School of Physical Sciences majors have first consideration for enrollment.

(Ib)

Department of Chemistry

1120 Natural Sciences II; (949) 824-6018

<http://www.chem.uci.edu/>

Scott D. Rychnovsky, **Department Chair**

Undergraduate Program

The major in Chemistry is elected by students planning careers in the chemical sciences and frequently also by those whose interests lie in biology, medicine, earth sciences, secondary education, business, and law. The curriculum of the Department is designed to satisfy the diverse needs of these students and others who may have occasion to study chemistry. The year-long course CHEM 1A-CHEM 1B-CHEM 1C (or the Honors sequence CHEM H2A-CHEM H2B-CHEM H2C) is prerequisite to all study in the Department at more advanced levels. The subject matter of this course serves also as a thorough introduction to the varied aspects of modern chemistry for students who do not wish to pursue their studies beyond the introductory level.

One year of high school chemistry is strongly recommended for enrollment in CHEM 1A. Refer to the Guidelines for General Chemistry course placement located on the Testing Office Web site at <http://www.testingcenter.uci.edu/chemistry.html>. A preparatory course, Chemistry 1P, is offered in summer and fall for those who have not taken a high school chemistry course, or who need additional preparation prior to entering CHEM 1A. A grade of C- or better in CHEM 1P automatically qualifies the student for CHEM 1A.

Completion of a one-year sequence in organic chemistry is required for Chemistry majors and for students of the life sciences. Certain advanced courses required of Chemistry majors may also be of interest to others.

The undergraduate program of the Chemistry Department emphasizes close contact with research. Chemistry majors are urged to engage in research or independent study under the direction of a faculty member. Information describing the procedures for arranging an undergraduate research opportunity is available on the Chemistry Department Web site at <http://www.chem.uci.edu/undergrad>.

Much of the important chemical literature is being and has been printed in foreign languages, principally German, Russian, Japanese, Chinese, and French. Reading competence in one or more of these languages is desirable, and Chemistry majors are encouraged to acquire this competence.

Chemistry majors who are interested in teaching chemistry at the secondary level are urged to consider completing the optional concentration in Chemistry Education. A two-year post-baccalaureate program for the M.S. in Chemistry and a California Secondary Teaching Credential is described in the Chemistry Graduate Program section. Chemistry majors who plan subsequent study in medical, dental, or other professional schools should request information concerning admission requirements directly from the schools which they seek to enter. Counseling about preparation for a career in the health sciences is provided by the health science advisors in the School of Biological Sciences. Those intending to pursue graduate studies in chemistry should discuss their plans with a faculty member no later than the fall quarter of their senior year.

Admission to the Major

Students may be admitted to the Chemistry major upon entering the University as freshmen, via change of major, and as transfer students from

other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of general chemistry with laboratory and one year of approved calculus. Completion of one year of organic chemistry is strongly recommended.

Requirements for the B.S. Degree in Chemistry

All students must meet the University Requirements (p. 60).
School Requirements: None.

Departmental Requirements ¹

Basic Requirements

MATH 2A- 2B- 2D	Single-Variable Calculus and Single-Variable Calculus and Multivariable Calculus
PHYSICS 7C- 7D- 7E	Classical Physics and Classical Physics and Classical Physics
PHYSICS 7LC- 7LD	Classical Physics Laboratory and Classical Physics Laboratory

Select one of the following sequences and accompanying labs:

CHEM 1A- 1B	General Chemistry and General Chemistry
CHEM M3C	Majors Quantitative Analytical Chemistry
CHEM M2LA- M2LB	Majors General Chemistry Laboratory and Majors General Chemistry Laboratory
CHEM M3LC	Majors Quantitative Analytical Chemistry Laboratory

or

CHEM H2A- H2B- H2C	Honors General Chemistry and Honors General Chemistry and Honors General Chemistry
CHEM H2LA- H2LB- H2LC	Honors General Chemistry Laboratory and Honors General Chemistry Laboratory and Honors General Chemistry Laboratory

Select one of the following organic chemistry sequences and accompanying labs:

CHEM 51A- 51B- 51C	Organic Chemistry and Organic Chemistry and Organic Chemistry
CHEM M52LA- M52LB- M52LC	Majors Organic Chemistry Laboratory and Majors Organic Chemistry Laboratory and Majors Organic Chemistry Laboratory

or

CHEM H52A- H52B- H52C	Honors Organic Chemistry and Honors Organic Chemistry and Honors Organic Chemistry
-----------------------	--

CHEM H52LA- H52LB- H52LC	Honors Organic Chemistry Laboratory and Honors Organic Chemistry Laboratory and Honors Organic Chemistry Laboratory
--------------------------	---

Complete:

CHEM 5	Scientific Computing Skills
CHEM 107- 107L	Inorganic Chemistry and Inorganic Chemistry Laboratory

Select one of the following sequences:

CHEM 131A- 131B- 131C	Quantum Principles and Molecular Structure and Elementary Statistical Mechanics and Thermodynamics and Chemical Dynamics
-----------------------	--

or

CHEM 130A- 130B- 130C	Chemical Thermodynamics and Quantum Chemistry, Spectroscopy and Bonding and Structure, Statistical Mechanics, and Chemical Dynamics
-----------------------	---

Elective Requirements ²

Select at least five electives from the following lists, including at least two courses selected from the lecture list and two courses selected from the laboratory list:

Lectures:

CHEM 125	Advanced Organic Chemistry
CHEM 127	Inorganic Chemistry II
CHEM 128	Introduction to Chemical Biology
CHEM 137	Computational Chemistry
CHEM 138	Introduction to Computational Organic Chemistry

CHEM 177 Medicinal Chemistry

Chemistry courses numbered 201–205, 213–249

CHEM 271	Structural X-Ray Crystallography
BIO SCI 98	Biochemistry
BIO SCI 99	Molecular Biology
EARTHSS 122	Atmospheric Dynamics
EARTHSS 142	Atmospheric Chemistry
EARTHSS 144	Marine Geochemistry and Biogeochemistry

PHYSICS 111A- 111B Classical Mechanics and Classical Mechanics

PHYSICS 112A- 112B Electromagnetic Theory and Electromagnetic Theory

CBEMS 110 Reaction Kinetics and Reactor Design

CBEMS 112 Introduction to Biochemical Engineering

CBEMS 130 Separation Processes

CBEMS 135 Chemical Process Control

CBEMS 154 Polymer Science and Engineering

Laboratories:

BIO SCI M114L	Biochemistry Laboratory
BIO SCI M116L	Molecular Biology Laboratory
BIO SCI M118L	Experimental Microbiology Laboratory
CHEM 128L	Introduction to Chemical Biology Laboratory Techniques
CHEM 152	Advanced Analytical Chemistry
CHEM 153	Physical Chemistry Laboratory
CHEM 156	Advanced Laboratory in Chemistry and Synthesis of Materials
CHEM 160	Organic Synthesis Laboratory
CHEM 170	Radioisotope Techniques
CHEM 177L	Medicinal Chemistry Laboratory
CHEM 180	Undergraduate Research ³
CBEMS 140A- 140B	Chemical Engineering Laboratory I and Chemical Engineering Laboratory II
PHYSICS 120- 121W	Electronics for Scientists and Advanced Laboratory

¹ Courses must be taken for a letter grade.

² At least three of the courses used to satisfy the Elective Requirement must be courses offered by the Chemistry Department, including at least one lecture course and one laboratory course.

³ CHEM 180 and CHEM H180 can be counted toward this requirement no more than once.

Optional American Chemical Society Certification

For ACS Certification, the program must include:

CHEM 128	Introduction to Chemical Biology
or BIO SCI 98	Biochemistry

Select two additional laboratory courses from the following list:

CHEM 128L	Introduction to Chemical Biology Laboratory Techniques
CHEM 152	Advanced Analytical Chemistry
CHEM 153	Physical Chemistry Laboratory
CHEM 156	Advanced Laboratory in Chemistry and Synthesis of Materials
CHEM 160	Organic Synthesis Laboratory
CHEM 180	Undergraduate Research (or CHEM H180)

These courses may not overlap with the upper-division laboratory elective requirement. A maximum of one quarter of CHEM 180 or Chemistry H180 may be used. Courses must be taken for a letter grade.

Optional Concentration in Biochemistry

BIO SCI 97	Genetics
BIO SCI 98	Biochemistry
BIO SCI 99	Molecular Biology
CHEM 128	Introduction to Chemical Biology
CHEM 128L	Introduction to Chemical Biology Laboratory Techniques

Select three advanced biology electives from the following:

BIO SCI D103	Cell Biology
BIO SCI D104	Developmental Biology
BIO SCI D111L	Developmental and Cell Biology Laboratory
BIO SCI D137	Eukaryotic and Human Genetics
BIO SCI D153	Molecular and Cellular Basis of Disease
BIO SCI D154	Cell Biology
BIO SCI M114	Advanced Biochemistry
BIO SCI M114L	Biochemistry Laboratory
BIO SCI M116	Advanced Molecular Biology
BIO SCI M116L	Molecular Biology Laboratory
BIO SCI M118L	Experimental Microbiology Laboratory
BIO SCI M121	Immunology with Hematology
BIO SCI M121L	Advanced Immunology Laboratory
BIO SCI M122	General Microbiology
BIO SCI M122L	Advanced Microbiology Laboratory
BIO SCI M123	Introduction to Computational Biology
BIO SCI M124A	Virology
BIO SCI M124B	Viral Pathogenesis and Immunity
BIO SCI M124L	Virus Engineering Laboratory
BIO SCI M125	Molecular Biology of Cancer
BIO SCI M133	High-Resolution Structures: NMR and X-ray
BIO SCI M137	Microbial Genetics
BIO SCI M144	Cell Organelles and Membranes

PHRMSCI 170A	Molecular Pharmacology I
PHRMSCI 170B	Molecular Pharmacology II

Optional Concentration in Chemistry Education

CHEM 193	Research Methods
PHY SCI 5	California Teach 1: Introduction to Science and Mathematics Teaching
PHY SCI 105	California Teach 2: Middle School Science and Mathematics Teaching
EDUC 55	Knowing and Learning in Mathematics and Science

Students interested in teaching at the high school level are encouraged to complete the course PHY SCI 106.

Secondary Teaching Certification Option

With *additional* course work and field experience offered through the UCI Cal Teach program, students who complete the concentration in Chemistry Education can also earn a California Preliminary Single Subject Teaching Credential. Completing the bachelor's degree, concentration, and teacher certification in four years is possible with careful, early planning. Additional courses required for teacher certification are:

LPS 60	The Making of Modern Science
EDUC 109	Reading and Writing in Secondary Mathematics and Science Classrooms
EDUC 143AW- 143BW	Classroom Interactions I and Classroom Interactions II
EDUC 148	Complex Pedagogical Design
EDUC 158	Student Teaching Mathematics and Science in Middle/High School (two quarters)

Successful completion of EDUC 143AW-EDUC 143BW and EDUC 148 will be accepted in lieu of two electives (from the above Elective Requirements list) for students pursuing the concentration in Chemistry Education. For additional information about teacher certification requirements and enrollment procedures, see Preparation for Teaching Science and Mathematics (p. 723). Interested students are strongly encouraged to contact the Cal Teach Resource and Advising Center or the Physical Sciences Student Affairs Office.

Honors Program in Chemistry

The Honors Program in Chemistry is a research-based program offered to selected Chemistry majors during their final year. Applicants to the program must have completed their junior year with a grade point average of at least 3.3 overall and in their Chemistry courses. They must also have demonstrated the potential of carrying out research of honors quality, as judged by the Chemistry faculty member who will supervise their research. Students in this program enroll in Honors Research in Chemistry (CHEM H180A-CHEM H180B-CHEM H180C) throughout their senior year and submit a formal thesis late in the spring quarter. They also enroll in the Honors Seminar in Chemistry (CHEM H181W), in which they receive instruction in scientific writing and present a formal research seminar. Successful completion of CHEM H181W satisfies the UCI upper-division writing requirement. NOTE: Students enrolled in the Honors Research in Chemistry (CHEM H180A-B-C) do not enroll in CHEM 180 (Undergraduate Research).

Students who complete these requirements, whose grade point average remains above the 3.3 standard, and whose research is judged to be of honors quality will graduate with Departmental Honors in Chemistry.

The Department also offers an Honors General Chemistry sequence, CHEM H2A-CHEM H2B-CHEM H2C. This course in general chemistry is designed for members of the Campuswide Honors Program (CHP) and other highly qualified students. It covers the same material as CHEM 1A-CHEM 1B-CHEM 1C, but in greater depth.

Additional information is available from the Chemistry Undergraduate Program Office.

Planning a Program of Study

The departmental requirements leave the student a great deal of latitude in choice of courses; the student can choose to pursue interests ranging from biochemistry on the one hand to chemical physics on the other. Many of the basic requirements above coincide with those of the School of Biological Sciences. For this reason a double major in Chemistry and Biological Sciences is popular. The Department is approved by the American Chemical Society to offer an undergraduate degree certified by the Society as suitable background for a career in chemistry or for graduate study in chemistry. While it is not mandatory, it is desirable for students to pursue a course of study that the Department judges to merit a

certified degree. Specifically, the following courses must be included in the program of study and must be taken for a letter grade:

CHEM 128 or BIO SCI 98	Introduction to Chemical Biology Biochemistry
and two laboratory courses from the list of upper-division laboratory courses that are not already required for the major from the following:	
CHEM 128L	Introduction to Chemical Biology Laboratory Techniques
CHEM 152	Advanced Analytical Chemistry
CHEM 153	Physical Chemistry Laboratory
CHEM 156	Advanced Laboratory in Chemistry and Synthesis of Materials
CHEM 160	Organic Synthesis Laboratory
CHEM 170	Radioisotope Techniques
CHEM 177L	Medicinal Chemistry Laboratory
CHEM 180	Undergraduate Research (or CHEM H180)

Students should consult with their academic advisors on courses of study. A Chemistry major normally takes CHEM 1A-CHEM 1B and CHEM M3C and CHEM M2LA-CHEM M2LB and CHEM M3LC (or CHEM H2A-CHEM H2B-CHEM H2C and CHEM H2LA-CHEM H2LB-CHEM H2LC), MATH 2A-MATH 2B-MATH 2D, and required writing courses during the freshman year. Students are encouraged to enroll in at least one freshman seminar during the freshman year; freshman seminars probe timely scientific topics and allow students to interact with faculty in an intimate environment. The sophomore year should include CHEM 5, CHEM 51A-CHEM 51B-CHEM 51C, and CHEM M52LA-CHEM M52LB-CHEM M52LC (or equivalent) or CHEM H52A-CHEM H52B-CHEM H52C and CHEM H52LA-CHEM H52LB-CHEM H52LC; the Physics 7 sequence should be completed no later than the fall quarter of the junior year. The balance of the freshman and sophomore program can be chosen at the student's discretion with consideration given to progress toward completion of the UCI general education requirement.

In the junior year all Chemistry majors should enroll in a year sequence of physical chemistry (fall), CHEM 107 (fall), and CHEM 107L (winter or spring). CHEM 130A-CHEM 130B-CHEM 130C and CHEM 131A-CHEM 131B-CHEM 131C are equivalent courses in physical chemistry. They have the same prerequisites and expect the same level of chemical and mathematical rigor. Both are acceptable to satisfy the physical chemistry requirement for the major. CHEM 131A-CHEM 131B-CHEM 131C develops the topic beginning from a molecular or microscopic point of view and proceeds to the macroscopic description of matter; applications may address primarily gas phase systems. CHEM 130A-CHEM 130B-CHEM 130C, on the other hand, commences with the macroscopic description; this approach may be of particular interest for applications of physical chemistry in biology, materials science, and engineering. Students should choose between the two courses on the basis of their interests. Because of significant differences in the sequence of topics, students starting in one series may not switch to the other in subsequent quarters.

During the junior and senior years the Chemistry Department electives requirement should be fulfilled, as should other University and departmental requirements.

Sample programs for Chemistry majors, American Chemical Society-certified Chemistry majors, the Biochemistry concentration, the Chemistry Education concentration, and Chemistry-Biological Sciences double majors are shown in the accompanying charts. Sample programs for

Chemistry majors wishing to emphasize chemical physics, computational or theoretical chemistry, chemical synthesis and reactivity, or materials or polymer science in their undergraduate programs are also available. All sample programs can be viewed on the Chemistry Department Web site at <http://www.chem.uci.edu/undergrad>.

The faculty encourages Chemistry majors to enhance their education by studying abroad for one or more quarters, or during the summer. In most cases, the Chemistry EAP advisor can help students plan a program of study that will not extend the time it takes to graduate. Also, study abroad can enhance students' applications for admission to graduate and professional schools. For more information, see <http://www.studyabroad.uci.edu> or visit the Physical Sciences Student Affairs Office.

Sample Program — Chemistry Majors ¹

Graduate Program

The Department offers the M.S. and Ph.D. degrees in Chemistry. The Ph.D. degree is granted in recognition of breadth and depth of knowledge of the facts and theories of modern chemistry and an ability to carry out independent chemical research demonstrated through submission of an acceptable doctoral dissertation. The M.S. degree may be earned either through submission of an acceptable Master's thesis (Plan I) or through an approved program of graduate course work and a comprehensive oral examination (Plan II). A Master's degree is not a prerequisite for admission to the Ph.D. program.

Students in the Ph.D. and M.S. Plan I (Thesis) programs are required to complete a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units), in chemistry. The M.S. Plan II (Non-Thesis) program requires that the student complete 10 graduate-level chemistry courses (or 40 units) and a comprehensive oral examination. Graduate students are expected to attain grades of B or better to remain in good academic standing. The comprehensive oral examination assesses the competence of the candidate in the areas of chemistry covered by the chosen course work, with unanimous agreement among the three examination committee members required for satisfactory completion.

Progress toward the Ph.D. degree during the first year is assessed by a written examination administered after completion of the first year of study. This examination covers either research accomplishments during the first year or comprehensive knowledge acquired in course work. The time and content of the examination depends upon the student's specific area of interest.

Training in teaching is an integral part of each graduate program, and all graduate degree candidates are expected to participate in the teaching program for at least four quarters during their graduate career.

Participants in the Ph.D. program take an oral examination for formal Advancement to Candidacy. This examination consists of an oral defense before a faculty committee of the student's dissertation research project, and an original research proposition conceived, developed, and documented by the student. The committee may examine the student at this time on any subject it deems relevant to the independent pursuit of

chemical research. The normative time for advancement to candidacy is three years.

The most important component of the Ph.D. program is the doctoral dissertation, which must describe the results of original research performed by the student under the supervision of a faculty member of the Department. The criterion for acceptability of the dissertation is that its contents be of a quality suitable for publication in a scientific journal of high editorial standards. Each Ph.D. candidate is expected to present the work described in the completed dissertation in a seminar before the Department, following which the candidate will be examined on the contents of the dissertation by a committee of the faculty. A Master's thesis presented in partial fulfillment of the requirements for the M.S. under Plan I must also describe the results of a student's original research performed under the direction of a faculty member. However, no public oral defense of the Master's thesis is required.

Residency requirements specify a minimum of six quarters in residence at UCI for Ph.D. candidates and three quarters for M.S. candidates.

The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Master of Science in Chemistry with a Teaching Credential

In cooperation with the UCI School of Education, the Chemistry Department sponsors a coordinated two-year program for the M.S. degree in Chemistry and the California Single Subject Teaching Credential. The M.S. degree may be obtained under either Plan I or Plan II described below. Prospective graduate students interested in this program should so indicate on their graduate application and should request a detailed description of the program from the Chemistry Department Graduate Affairs Office or the School of Education.

The following lists specify requirements for each of the graduate programs offered by the Department of Chemistry.

Master of Science in Chemistry Plan I (Thesis Plan)

- Completion of a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units) in chemistry (as specified by the Department and excluding CHEM 280, CHEM 290, CHEM 291, and CHEM 399) with maintenance of an average grade of B or better in all course work undertaken.
- Completion of the teaching requirement.
- Completion of three quarters in residence at UCI.
- Submission of an acceptable Master's thesis.

Master of Science in Chemistry Plan II (Non-Thesis Plan)

- Completion of 10 graduate-level courses (or 40 units) in chemistry (excluding CHEM 290, CHEM 291, and CHEM 399 and counting CHEM 280 no more than once) with an average grade of B or better.
- Maintenance of an average grade of B or better in all course work undertaken.
- Completion of the teaching requirement.
- Completion of three quarters in residence at UCI.
- Satisfactory completion of a comprehensive oral examination.

Doctor of Philosophy in Chemistry

- Completion of a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units) in chemistry (as specified by the Department and excluding CHEM 280, CHEM 290, CHEM 291, and CHEM 399) with maintenance of an average grade of B or better in all course work undertaken.
- Completion of the second-year Examination requirement.
- Completion of the Oral Examination requirement for Advancement to Candidacy.
- Completion of the teaching requirement.
- Completion of six quarters in residence at UCI.
- Submission of an acceptable doctoral dissertation.

Area Requirements

Ph.D. students generally choose from one of seven areas of specialization in the Department which determines course work requirements. Generally, each area requires several core courses and a menu of additional courses from which to choose to reach the required total of seven courses. In addition, all students will be required to take a "Conduct of Research" course.

Analytical Chemistry

Three core courses:

CHEM 243	Advanced Instrumental Analysis
CHEM 246	Separations and Chromatography
CHEM 249	Analytical Spectroscopy

and select four of the following:

CHEM 213	Chemical Kinetics
CHEM 230	Classical Mechanics and Electromagnetic Theory
CHEM 231A	Fundamentals of Quantum Mechanics
CHEM 232A	Thermodynamics and Introduction to Statistical Mechanics
CHEM 233	Nuclear and Radiochemistry
CHEM 234	Advanced Chemical Kinetics
CHEM 247	Current Problems in Analytical Chemistry
CHEM 248	Electrochemistry
CHEM 271	Structural X-Ray Crystallography

Atmospheric Chemistry

Three core courses:

CHEM 213	Chemical Kinetics
CHEM 231A	Fundamentals of Quantum Mechanics
or CHEM 232A	Thermodynamics and Introduction to Statistical Mechanics

CHEM 245	Atmospheric Chemistry of the Natural and Polluted Troposphere
----------	---

and select four of the following:

CHEM 230	Classical Mechanics and Electromagnetic Theory
CHEM 231A	Fundamentals of Quantum Mechanics
CHEM 231B	Applications of Quantum Mechanics

CHEM 232A	Thermodynamics and Introduction to Statistical Mechanics
CHEM 234	Advanced Chemical Kinetics
CHEM 241	Current Issues Related to Tropospheric and Stratospheric Processes (Students must take this biannual course in the first year it is offered.)
CHEM 243	Advanced Instrumental Analysis
CHEM 246	Separations and Chromatography
CHEM 249	Analytical Spectroscopy
EARTHSS 240	Atmospheric Chemistry and Physics

Chemical Biology (Bioinorganic, Bioorganic, Biophysical, and Structural tracks)

Two core courses:

CHEM 219	Chemical Biology
CHEM 223	Biological Macromolecules

and select five elective courses chosen in consultation with the graduate, area, and/or research advisor.

Inorganic Chemistry

Three core courses:

CHEM 215	Inorganic Chemistry I
CHEM 216	Organometallic Chemistry
CHEM 217	Physical Inorganic Chemistry

and select four of the following:

CHEM 201	Organic Reaction Mechanisms I
CHEM 202	Organic Reaction Mechanisms II
CHEM 203	Organic Spectroscopy
CHEM 204	Organic Synthesis I
CHEM 205	Organic Synthesis II
CHEM 225	Polymer Chemistry: Synthesis and Characterization of Polymers
CHEM 249	Analytical Spectroscopy
MOL BIO 203	Nucleic Acid Structure and Function
MOL BIO 204	Protein Structure and Function
BIOCHEM 210A	Medical Biochemistry and Molecular Biology
BIOCHEM 212	Signal Transduction and Growth Control

Organic Chemistry

Three core courses:

CHEM 201	Organic Reaction Mechanisms I
CHEM 203	Organic Spectroscopy
CHEM 204	Organic Synthesis I (or CHEM 220 Bioorganic Chemistry)

and select four of the following:

CHEM 202	Organic Reaction Mechanisms II
CHEM 205	Organic Synthesis II
CHEM 215	Inorganic Chemistry I
CHEM 216	Organometallic Chemistry
CHEM 217	Physical Inorganic Chemistry
CHEM 218	Metallobiochemistry
CHEM 220	Bioorganic Chemistry

CHEM 225	Polymer Chemistry: Synthesis and Characterization of Polymers
MOL BIO 203	Nucleic Acid Structure and Function
MOL BIO 204	Protein Structure and Function
BIOCHEM 210A	Medical Biochemistry and Molecular Biology
BIOCHEM 212	Signal Transduction and Growth Control
PHYSIO 204	Concepts of Biophysics

Physical Chemistry

Three core courses:

CHEM 213	Chemical Kinetics
CHEM 231A	Fundamentals of Quantum Mechanics
CHEM 232A	Thermodynamics and Introduction to Statistical Mechanics

and select four of the following:

CHEM 207	Chemistry for Physicists
CHEM 230	Classical Mechanics and Electromagnetic Theory
CHEM 231B	Applications of Quantum Mechanics
CHEM 231C	Molecular Spectroscopy
CHEM 232B	Advanced Topics in Statistical Mechanics
CHEM 232C	Non-Equilibrium Statistical Mechanics
CHEM 234	Advanced Chemical Kinetics
CHEM 235	Molecular Quantum Mechanics
CHEM 236	Forces Between Molecules
CHEM 248	Electrochemistry
CHEM 249	Analytical Spectroscopy
CHEM 266	Current Topics in Chemical and Materials Physics

Theoretical Chemistry

Five core courses:

CHEM 231A	Fundamentals of Quantum Mechanics
CHEM 231B	Applications of Quantum Mechanics
CHEM 232A	Thermodynamics and Introduction to Statistical Mechanics
CHEM 232B	Advanced Topics in Statistical Mechanics
CHEM 237	Mathematical Methods in Chemistry

and select four of the following:

CHEM 213	Chemical Kinetics
CHEM 228	Electromagnetism
CHEM 229A	Computational Methods
CHEM 229B	Computational Methods
CHEM 230	Classical Mechanics and Electromagnetic Theory
CHEM 231C	Molecular Spectroscopy
CHEM 232C	Non-Equilibrium Statistical Mechanics
CHEM 235	Molecular Quantum Mechanics

CHEM 254	Special Topics in Computational and Theoretical Chemistry
PHYSICS 213C	Modern Optics
PHYSICS 223	Numerical Methods
PHYSICS 238A	Condensed Matter Physics

Concentration in Chemical and Materials Physics

This is an interdisciplinary program between condensed matter physics and physical chemistry, which is designed to eliminate the barrier between these two disciplines. Students with B.S. degrees in Physics, Chemistry, or Materials Science and Engineering, are encouraged to apply to the program. The goal of the concentration in Chemical and Materials Physics (ChaMP) is to provide students with a broad interdisciplinary education in the applied physical sciences that emphasizes modern laboratory and computational skills. The program accepts students for both the M.S. and the Ph.D. degrees. Upon admission to the program, students are assigned two faculty advisors, one from the Department of Physics and Astronomy, and one from the Department of Chemistry, to provide guidance on curriculum and career planning.

The curriculum for the M.S. program includes a summer session to assimilate students with different undergraduate backgrounds; formal shop, laboratory, and computational courses; a sequence on current topics to bridge the gap between fundamental principles and applied technology; and a course to develop communication skills. The required courses include thirteen core courses and three electives (subject to advisor approval) as follows:

Core

CHEM 206	Laboratory Skills
CHEM 208	Mathematics for Chemists
CHEM 229A	Computational Methods
CHEM 231C	Molecular Spectroscopy
CHEM 232A- 232B	Thermodynamics and Introduction to Statistical Mechanics and Advanced Topics in Statistical Mechanics
CHEM 266	Current Topics in Chemical and Materials Physics
PHYSICS 273 or CHEM 273	Technical Communication Skills
CHEM 231A	Fundamentals of Quantum Mechanics
or PHYSICS 215A	Quantum Mechanics
CHEM 231B or PHYSICS 215B	Applications of Quantum Mechanics
or PHYSICS 215B	Quantum Mechanics

Select two of the following:

CHEM 228	Electromagnetism
CHEM 230	Classical Mechanics and Electromagnetic Theory
PHYSICS 211	Classical Mechanics
PHYSICS 222	Continuum Mechanics

Select one of the following:

PHYSICS 133	Introduction to Condensed Matter Physics
PHYSICS 238A	Condensed Matter Physics

CHEM 236	Forces Between Molecules
Electives	
CHEM 213	Chemical Kinetics
CHEM 225	Polymer Chemistry: Synthesis and Characterization of Polymers
CHEM 229B	Computational Methods
CHEM 232C	Non-Equilibrium Statistical Mechanics
CHEM 233	Nuclear and Radiochemistry
CHEM 243	Advanced Instrumental Analysis
CHEM 248	Electrochemistry
CHEM 249	Analytical Spectroscopy
EECS 285B	Lasers and Photonics
ENGRMSE 259	Transmission Electron Microscopy
PHYSICS 134A	Physical and Geometrical Optics
PHYSICS 213C	Modern Optics
PHYSICS 223	Numerical Methods
PHYSICS 229B	Computational Methods
PHYSICS 233A- 233B	Principles of Imaging and Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging
PHYSICS 238A- 238B- 238C	Condensed Matter Physics and Condensed Matter Physics and Condensed Matter Physics

In addition to the required courses, M.S. students complete a master's thesis. Students are required to advance to candidacy for the master's degree at least one quarter prior to filing the master's thesis. There is no examination associated with this advancement, but the thesis committee needs to be selected and appropriate forms need to be filed. The M.S. program prepares students to compete for high-tech jobs or to begin research toward a Ph.D. degree.

Successful completion of the M.S. degree requirements qualifies students for the Ph.D. program. Progress toward the Ph.D. degree is assessed by a written comprehensive examination administered in the summer after completion of the first year of study. This examination covers comprehensive knowledge acquired in course work, and the content of the examination depends upon the student's specific area of interest.

Participants in the Ph.D. program take an examination for formal advancement to candidacy. It is typically taken within one year of successful completion of the comprehensive examination. To satisfy normative progress toward the degree, it must be taken by the end of the student's third year. The examination is comprised of two parts: (a) a written report on a topic to be determined in consultation with the research advisor and (b) an oral report on research accomplished and plans for completion of the Ph.D. dissertation.

Graduate Gateway Program in Medicinal Chemistry and Pharmacology (MCP)

The one-year graduate Gateway Program in Medicinal Chemistry and Pharmacology (MCP) is designed to function in concert with selected department programs, including the Ph.D. in Chemistry. Detailed information is available in the Department of Pharmaceutical Sciences (p. 719) section and online at <http://www.pharmsci.uci.edu/>.

Faculty

Ioan Andricioaei, Ph.D. Boston College, *Associate Professor of Chemistry* (computational, physical, and theoretical chemistry, chemical biology, and chemical physics)

V. Ara Apkarian, Ph.D. Northwestern University, *Professor of Chemistry* (physical chemistry and chemical physics)

Ramesh D. Arasasingham, Ph.D. University of California, Davis, *Senior Lecturer with Security of Employment, Chemistry* (chemical education and inorganic chemistry)

Shane Ardo, Ph.D. Johns Hopkins University, *Assistant Professor of Chemistry* (materials and nanochemistry)

Donald R. Blake, Ph.D. University of California, Irvine, *UCI Distinguished Professor of Chemistry and Earth System Science* (atmospheric, analytical, environmental chemistry, and radiochemistry)

Suzanne A. Blum, Ph.D. University of California, Berkeley, *Associate Professor of Chemistry* (inorganic, organic, and organometallic chemistry)

Andrew S. Borovik, Ph.D. University of North Carolina, Chapel Hill, *Professor of Chemistry* (inorganic, organometallic, organic, polymer, materials and nanoscience chemistry, and chemical biology)

David A. Brant, Ph.D. University of Wisconsin, *Professor Emeritus of Chemistry* (physical chemistry of biological macromolecules)

Amanda J. Brindley, Ph.D. University of California, Irvine, *Lecturer with Potential Security of Employment, Chemistry* (general chemistry)

Kieron Burke, Ph.D. University of California, Santa Barbara, *Professor of Chemistry and Physics* (theoretical and computational chemistry, physical chemistry, and chemical physics)

A. Richard Chamberlin, Ph.D. University of California, San Diego, *Department Chair and Professor of Pharmaceutical Sciences, and Professor of Chemistry and Pharmacology* (organic synthesis and chemical biology)

Robert M. Corn, Ph.D. University of California, Berkeley, *Department Vice Chair and Professor of Chemistry and Biomedical Engineering* (analytical, materials, nanoscience, physical and polymer chemistry, chemical biology, and chemical physics)

Robert J. Doedens, Ph.D. University of Wisconsin, *Professor Emeritus of Chemistry* (structural inorganic and organometallic chemistry)

Vy M. Dong, Ph.D. California Institute of Technology, *Professor of Chemistry* (organic)

Kimberly Edwards, Ph.D. University of California, Irvine, *Lecturer with Security of Employment, Chemistry* (general chemistry)

Aaron Esser-Kahn, Ph.D. University of California, Berkeley, *Assistant Professor of Chemistry* (materials chemistry)

William J. Evans, Ph.D. University of California, Los Angeles, *Professor of Chemistry* (synthetic inorganic and organometallic chemistry)

Barbara J. Finlayson-Pitts, Ph.D. University of California, Riverside, *Director of AirUCI and UCI Distinguished Professor of Chemistry* (atmospheric, analytical, environmental and physical chemistry, and chemical physics)

Fillmore Freeman, Ph.D. Michigan State University, *Professor of Chemistry* (computational, organic, and theoretical chemistry)

Filipp Furche, Ph.D. University of Karlsruhe, *Professor of Chemistry* (computational, materials, nanoscience, physical, polymer and theoretical chemistry, and chemical physics)

Nien-Hui Ge, Ph.D. University of California, Berkeley, *Associate Professor of Chemistry* (analytical and physical chemistry, and chemical physics)

R. Benny Gerber, Ph.D. Oxford University, *Professor of Chemistry* (atmospheric, computational, environmental, physical and theoretical chemistry, and chemical physics)

Alon A. Gorodetsky, Ph.D. California Institute of Technology, *Assistant Professor of Chemical Engineering and Materials Science and of Chemistry*

Zhibin Guan, Ph.D. University of North Carolina at Chapel Hill, *Professor of Chemistry and Biomedical Engineering* (materials, nanoscience, organic and polymer chemistry, and chemical biology)

Stephen Hanessian, Ph.D. Ohio State University, *Director of the Graduate Gateway Program in Medicinal Chemistry and Pharmacology, and Professor of Pharmaceutical Sciences, Pharmacology, and Chemistry* (organic chemistry)

Warren J. Hehre, Ph.D. Carnegie-Mellon University, *Professor Emeritus of Chemistry* (theoretical chemistry)

John C. Hemminger, Ph.D. Harvard University, *Vice Chancellor for Research and Professor of Chemistry* (analytical, atmospheric, environmental, materials, nanoscience, physical, polymer, and surface chemistry, and chemical physics)

Alan F. Heyduk, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Chemistry* (inorganic and organometallic chemistry, and chemical biology)

Wilson Ho, Ph.D. University of Pennsylvania, *Donald Bren Professor of Physics and Chemistry* (experimental condensed matter physics, materials, nanoscience, physical and polymer chemistry)

Allon I. Hochbaum, Ph.D. University of California, Berkeley, *Assistant Professor of Chemical Engineering and Materials Sciences and of Chemistry* (materials science)

Kenneth C. Janda, Ph.D. Harvard University, *Dean of the School of Physical Sciences and Professor of Chemistry* (analytical, atmospheric, environmental and physical chemistry, spectroscopy, and chemical physics)

Elizabeth R. Jarvo, Ph.D. Boston College, *Associate Professor of Chemistry* (inorganic, organic, and organometallic chemistry)

Susan M. King, Ph.D. Massachusetts Institute of Technology, *Senior Lecturer in Chemistry* (organic chemistry)

Matthew Law, Ph.D. University of California, Berkeley, *Assistant Professor of Chemistry* (analytical, inorganic, materials, nanoscience, physical and polymer chemistry, and chemical physics)

Renee D. Link, Ph.D. University of California, Irvine, *Lecturer with Potential Security of Employment, Chemistry* (organic chemistry)

Andrej Luptak, Ph.D. Yale University, *Vice Chair of the Graduate Program in Pharmaceutical Sciences and Associate Professor of Pharmaceutical Sciences, Chemistry, and Molecular Biology and Biochemistry*

Vladimir A. Mandelshtam, Ph.D. Institute of Spectroscopy, Academy of Sciences of the U.S.S.R., *Professor of Chemistry* (computational, physical and theoretical chemistry, and chemical physics)

Craig C. Martens, Ph.D. Cornell University, *Professor of Chemistry* (computational, materials, nanoscience, physical, polymer and theoretical chemistry, and chemical physics)

Rachel W. Martin, Ph.D. Yale University, *Associate Professor of Chemistry and of Molecular Biology and Biochemistry* (analytical and physical chemistry, chemical biology, and chemical physics)

Robert T. McIver, Jr., Ph.D. Stanford University, *Professor Emeritus of Chemistry* (physical and analytical chemistry)

George E. Miller, D. Phil. Oxford University, *Senior Lecturer with Security of Employment Emeritus and Reactor Supervisor* (analytical and radioanalytical chemistry, and chemical education)

David L. Mobley, Ph.D. University of California, Davis, *Assistant Professor of Pharmaceutical Sciences and Chemistry*

Harold W. Moore, Ph.D. University of Illinois, *Professor Emeritus of Chemistry* (organic chemistry and rational drug design)

Shaul Mukamel, Ph.D. Tel-Aviv University, *UCI Chancellor's Professor of Chemistry* (analytical, computational, materials, nanoscience, physical, polymer, and theoretical chemistry, and chemical physics)

Craig Murray, Ph.D. University of Edinburgh, *Assistant Professor of Chemistry* (atmospheric and physical chemistry, and chemical physics)

Serguei A. Nizkorodov, Ph.D. University of Basel, Switzerland, *Associate Professor of Chemistry* (atmospheric, analytical, environmental and physical chemistry, and chemical physics)

James S. Nowick, Ph.D. Massachusetts Institute of Technology, *Professor of Chemistry* (organic, polymer, materials and nanoscience chemistry, and chemical biology)

Larry E. Overman, Ph.D. University of Wisconsin, *UCI Distinguished Professor of Chemistry* (inorganic, organic and organometallic chemistry, and chemical biology)

Reginald M. Penner, Ph.D. Texas A & M University, *Director of the Center for Solar Energy and UCI Chancellor's Professor of Chemistry* (analytical, materials, nanoscience, physical, and polymer chemistry, and chemical physics)

Eric O. Potma, Ph.D. University of Groningen, *Associate Professor of Chemistry* (analytical and physical chemistry, chemical biology, and chemical physics)

Thomas L. Poulos, Ph.D. University of California, San Diego, *UCI Chancellor's Professor of Molecular Biology and Biochemistry, Pharmaceutical Sciences, Physiology and Biophysics, and Chemistry* (inorganic/organic chemistry)

Jennifer Prescher, Ph.D. University of California, Berkeley, *Assistant Professor of Chemistry and Pharmaceutical Sciences* (chemical biology)

Peter M. Rentzepis, Ph.D. Cambridge University, *Professor of Chemistry and of Chemical Engineering and Materials Science, and UC Presidential Chair* (physical chemistry, chemical physics, and picosecond spectroscopy)

Markus W. Ribbe, Ph.D. University of Bayreuth, *Professor of Molecular Biology and Biochemistry and of Chemistry* (inorganic- and organometallic)

Scott D. Rychnovsky, Ph.D. Columbia University, *Department Chair and Professor of Chemistry* (organic chemistry)

A. J. Shaka, Ph.D. Oxford University, *Department Vice Chair and Professor of Chemistry* (analytical and physical chemistry, chemical biology, and chemical physics)

Kenneth J. Shea, Ph.D. Pennsylvania State University, *Professor of Chemistry and of Chemical Engineering and Materials Science* (analytical, materials, nanoscience, organic, and polymer chemistry)

Zuzanna S. Siwy, Ph.D. Silesian University of Technology, *Professor of Physics and Chemistry* (experimental biophysics and condensed matter physics and polymer, materials, nanoscience)

Mare Taagepera, Ph.D. University of Pennsylvania, *Senior Lecturer with Security of Employment Emerita* (physical organic chemistry and chemical education)

Douglas J. Tobias, Ph.D. Carnegie Mellon University, *Department Vice Chair and Professor of Chemistry* (computational biophysical chemistry)

Shiou-Chuan (Sheryl) Tsai, Ph.D. University of California, Berkeley, *UCI Chancellor's Fellow and Professor of Molecular Biology and Biochemistry, Chemistry, and Pharmaceutical Sciences* (organic chemistry and chemical biology)

Christopher D. Vanderwal, Ph.D. Scripps Research Institute, *Professor of Chemistry* (organic chemistry)

David L. Van Vranken, Ph.D. Stanford University, *Professor of Chemistry* (organic chemistry and chemical biology)

Gregory A. Weiss, Ph.D. Harvard University, *Department Vice Chair and Professor of Chemistry and of Molecular Biology and Biochemistry* (organic chemistry and chemical biology)

Max Wolfsberg, Ph.D. Washington University, *Professor Emeritus of Chemistry* (computational, physical and theoretical chemistry, and chemical physics)

Jenny Yang, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Chemistry* (inorganic chemistry)

Albert Yee, Ph.D. University of California, Berkeley, *Professor of Chemical Engineering and Materials Science, Biomedical Engineering, and Chemistry*

Courses

CHEM 1A. General Chemistry. 4 Units.

Atomic structure; general properties of the elements; covalent, ionic, and metallic bonding; intermolecular forces; mass relationships.

Corequisite: Concurrent enrollment in the corresponding laboratory courses.

Prerequisite: Recommended: one year of high school chemistry is strongly recommended.

Overlaps with CHEM H2A.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

(II, Va)

CHEM 1B. General Chemistry. 4 Units.

Properties of gases, liquids, solids; changes of state; properties of solutions; stoichiometry; thermochemistry; and thermodynamics.

Corequisite: CHEM M2LB. CHEM M2LB for Chemistry majors only. No co-requisite for other majors.

Prerequisite: CHEM 1A. CHEM 1A with a grade of C- or better.

Overlaps with CHEM H2B.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

(II, Va)

CHEM 1C. General Chemistry. 4 Units.

Equilibria, aqueous acid-base equilibria, solubility equilibria, oxidation reduction reactions, electrochemistry; kinetics; special topics.

Corequisite: CHEM M2LC or CHEM 1LC. CHEM M2LC for Chemistry Majors only. CHEM 1LC for other majors.

Prerequisite: CHEM 1B. CHEM 1B with a grade of C- or better.

Overlaps with CHEM H2C.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

(II, Va)

CHEM 1LC. General Chemistry Laboratory. 2 Units.

Training and experience in basic laboratory techniques. Chemical practice and principles illustrated through experiments related to lecture topics of CHEM 1A-B-C.

Corequisite: CHEM 1C.

Prerequisite: CHEM 1B. CHEM 1B with a grade of C- or better.

Overlaps with CHEM 1LE, CHEM H2LB, CHEM M2LB.

Restriction: No credit for CHEM 1LC if taken after CHEM H2LB or CHEM M2LB. Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM 1LD. General Chemistry Laboratory. 2 Units.

Training and experience in basic laboratory techniques. Chemical practice and principles illustrated through experiments related to lecture topics in CHEM 1A-B-C.

Prerequisite: CHEM 1C and CHEM 1LC. CHEM 1C with a grade of C- or better. CHEM 1LC with a grade of C- or better.

Overlaps with CHEM H2LB, CHEM M2LB.

Restriction: No credit for CHEM M2LA if taken after CHEM 1LD. Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM 1LE. Accelerated General Chemistry Lab. 3 Units.

Lecture and experiments covering chemical concepts for accelerated students who do not plan to take organic chemistry. Properties of gases, liquids, solutions, and solids; chemical equilibrium, chemical thermodynamics; atomic and molecular structure; chemical kinetics; electrochemistry.

Corequisite: CHEM 1A or CHEM 1B.

Prerequisite: CHEM 1P or High School Chemistry. CHEM 1P with a grade of C- or better.

Overlaps with CHEM 1LC.

Restriction: Majors in the School of Engineering and Biomedical Computing majors have first consideration for enrollment.

CHEM 1P. Preparation for General Chemistry. 4 Units.

Units of measurement, dimensional analysis, significant figures; elementary concepts of volume, mass, force, pressure, energy, density, temperature, heat, work; fundamentals of atomic and molecular structure; the mole concept, stoichiometry; properties of the states of matter; gas laws; solutions concentrations. Course may be offered online.

Prerequisite: Grade of C- or better required for entry in Chem 1A.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Biomedical Computing, Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM H2A. Honors General Chemistry. 4 Units.

Covers the same material as CHEM 1A-B-M3C but in greater depth. Additional topics will also be included as time permits.

Corequisite: CHEM H2LA.

Prerequisite: Membership in the Campuswide Honors Program, or a score of 4 or 5 on the Chemistry Advanced Placement Examination, or a score of 700 or better on the SAT II in Chemistry.

Overlaps with CHEM 1A.

(II, Va)**CHEM H2B. Honors General Chemistry. 4 Units.**

Covers the same material as CHEM 1A-B-M3C but in greater depth. Additional topics will also be included as time permits.

Corequisite: CHEM H2LB.

Prerequisite: CHEM H2A and CHEM H2LA. CHEM H2A with a grade of B or better. CHEM H2LA with a grade of B or better.

Overlaps with CHEM 1B.

(II, Va)**CHEM H2C. Honors General Chemistry. 4 Units.**

Covers the same material as CHEM 1A-B-M3C but in greater depth. Additional topics will also be included as time permits.

Corequisite: CHEM H2LC.

Prerequisite: CHEM H2B and CHEM H2LB. CHEM H2B with a grade of B or better. CHEM H2LB with a grade of B or better.

Overlaps with CHEM 1C.

(II, Va)**CHEM H2LA. Honors General Chemistry Laboratory. 2 Units.**

Training and experience in fundamental and analytical laboratory techniques through experiments related to lecture topics in CHEM H2A-B-C.

Corequisite: CHEM H2A.

Prerequisite: Membership in the Campuswide Honors Program, or a score of 4 or 5 on the Chemistry Advanced Placement Examination, or a score of 700 or better on the SAT II in Chemistry.

Overlaps with CHEM M2LA.

CHEM H2LB. Honors General Chemistry Laboratory. 2 Units.

Training and experience in fundamental and analytical laboratory techniques through experiments related to lecture topics in CHEM H2A-B-C.

Corequisite: CHEM H2B.

Prerequisite: CHEM H2A and CHEM H2LA.

Overlaps with CHEM M2LB.

Restriction: No credit for CHEM 1LC if taken after CHEM H2LB or CHEM M2LB.

CHEM H2LC. Honors General Chemistry Laboratory. 2 Units.

Training and experience in fundamental and analytical laboratory techniques through experiments related to lecture topics in CHEM H2A-B-C.

Corequisite: CHEM H2C.

Prerequisite: CHEM H2B and CHEM H2LB.

Restriction: CHEM M3LC required for students who completed CHEM H2LC in order to fulfill the Analytical Chemistry Requirement.

CHEM M2LA. Majors General Chemistry Laboratory. 2 Units.

Training and experience in basic laboratory techniques through experiments related to lecture topics in CHEM 1A-B-C.

Corequisite: CHEM 1A.

Prerequisite: High school chemistry or CHEM 1P. CHEM 1P with a grade of C- or better.

Overlaps with CHEM H2LA, CHEM 1LD.

Restriction: Chemistry majors only. No credit for CHEM M2LA if taken after CHEM 1LD.

CHEM M2LB. Majors General Chemistry Laboratory. 2 Units.

Training and experience in basic laboratory techniques through experiments related to lecture topics in CHEM 1A-B-C.

Corequisite: CHEM 1B.

Prerequisite: CHEM 1A and CHEM M2LA.

Overlaps with CHEM H2LB.

Restriction: No credit for CHEM 1LC if taken after CHEM H2LB or CHEM M2LB. Chemistry majors only.

CHEM M3C. Majors Quantitative Analytical Chemistry. 3 Units.

Topics covered are equilibria, aqueous acid-base equilibria, solubility equilibria, oxidation reduction reactions, electrochemistry; and kinetics with a special emphasis on the statistical treatment of data and analytical methods of chemical analysis.

Corequisite: CHEM M3LC.

Prerequisite: CHEM 1B and CHEM M2LB. CHEM 1B with a grade of C- or better. CHEM M2LB with a grade of C- or better.

Restriction: Chemistry majors only.

(II, Va)**CHEM M3LC. Majors Quantitative Analytical Chemistry Laboratory. 3 Units.**

Training and experience in analytical laboratory techniques through experiments related to lecture topics in CHEM M3C.

Corequisite: CHEM M3C or CHEM H2C.

Prerequisite: (CHEM 1B or CHEM H2B) and (CHEM M2LB or CHEM H2LB). CHEM 1B or CHEM H2B with a grade of C- or better. CHEM M2LB or CHEM H2LB with a grade of C- or better.

Overlaps with CHEM H2LC, CHEM 1LC.

Restriction: Chemistry majors only.

CHEM 5. Scientific Computing Skills. 4 Units.

Introduces students to the personal computing software used by chemists for managing and processing of data sets, plotting of graphs, symbolic and numerical manipulation of mathematical equations, and representing chemical reactions and chemical formulas.

Corequisite: (CHEM 1C or CHEM H2C or CHEM M3C) and MATH 2D.

Prerequisite: MATH 2A and MATH 2B and CHEM 1A and CHEM 1B.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 12. Chemistry Around Us. 4 Units.

Addresses ways in which chemistry affects everyday life. Topics include pollution, global warming, water supply/demands, biodiesel fuels, foods we eat, natural/synthetic materials, common drugs, drug design. Learn and apply basic chemistry concepts. Use risk/benefit analysis for optimal solutions.

(II, Va)**CHEM 51A. Organic Chemistry. 4 Units.**

Fundamental concepts relating to carbon compounds with emphasis on structural theory and the nature of chemical bonding, stereochemistry, reaction mechanisms, and stereoscopic, physical, and chemical properties of the principal classes of carbon compounds.

Corequisite: CHEM M52LA or CHEM H52LA for Chemistry majors only or completion of or concurrent enrollment in CHEM 1LD for other majors.

Prerequisite: (CHEM 1C and CHEM 1LC) or (CHEM H2C and CHEM H2LC) or (CHEM M3C and CHEM M3LC).

Overlaps with CHEM H52A.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM 51B. Organic Chemistry. 4 Units.

Fundamental concepts relating to carbon compounds with emphasis on structural theory and the nature of chemical bonding, stereochemistry, reaction mechanisms, and stereoscopic, physical, and chemical properties of the principal classes of carbon compounds.

Corequisite: CHEM M52LB for Chemistry majors or CHEM H52LB or CHEM 51LB for other majors.

Prerequisite: (CHEM 51A and CHEM 1LD) and (CHEM M52LA or CHEM H52LA). CHEM 51A with a grade of C- or better. CHEM 1LD with a grade of C- or better.

Overlaps with CHEM H52B.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM 51C. Organic Chemistry. 4 Units.

Fundamental concepts relating to carbon compounds with emphasis on structural theory and the nature of chemical bonding, stereochemistry, reaction mechanisms, and stereoscopic, physical, and chemical properties of the principal classes of carbon compounds.

Corequisite: CHEM M52LC for Chemistry majors or CHEM H52LC or CHEM 51LC for other majors.

Prerequisite: CHEM 51B and (CHEM 51LB or CHEM M52LB or CHEM H52LB). CHEM 51B with a grade of C- or better.

Overlaps with CHEM H52C.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM 51LB. Organic Chemistry Laboratory. 2 Units.

Modern techniques of organic chemistry, using selected experiments to illustrate topics introduced in CHEM 51A-B-C.

Corequisite: CHEM 51B.

Prerequisite: CHEM 51A and CHEM 1LD. CHEM 51A with a grade of C- or better. CHEM 1LD with a grade of C- or better.

Overlaps with CHEM H52LA, CHEM M52LA.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM 51LC. Organic Chemistry Laboratory. 2 Units.

Modern techniques of organic chemistry, using selected experiments to illustrate topics introduced in CHEM 51A-B-C.

Corequisite: CHEM 51C.

Prerequisite: CHEM 51B and CHEM 51LB. CHEM 51B with a grade of C- or better. CHEM 51LB with a grade of C- or better.

Overlaps with CHEM H52LB, CHEM M52LB.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM 51LD. Organic Chemistry Laboratory. 2 Units.

Modern techniques of organic chemistry using selected experiments to illustrate topics introduced in Chemistry 51A-B-C.

Prerequisite: CHEM 51C and CHEM 51LC.

Overlaps with CHEM H52LC.

Restriction: Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.

CHEM H52A. Honors Organic Chemistry. 4 Units.

Fundamental concepts of the chemistry of carbon compounds. Structural, physical, and chemical properties of the principal classes of carbon compounds.

Corequisite: CHEM H52LA.

Prerequisite: (CHEM 1A and CHEM 1B and CHEM 1C) or (CHEM H2A and CHEM H2B and CHEM H2C).

Overlaps with CHEM 51A.

CHEM H52B. Honors Organic Chemistry. 4 Units.

Fundamental concepts of the chemistry of carbon compounds. Structural, physical, and chemical properties of the principal classes of carbon compounds.

Corequisite: CHEM H52LB.

Prerequisite: CHEM H52A. CHEM H52A with a grade of C or better.

Overlaps with CHEM 52B.

CHEM H52C. Honors Organic Chemistry. 4 Units.

Fundamental concepts of the chemistry of carbon compounds. Structural, physical, and chemical properties of the principal classes of carbon compounds.

Corequisite: CHEM H52LC.

Prerequisite: CHEM H52B. CHEM H52B with a grade of C or better.

Overlaps with CHEM 51C.

CHEM H52LA. Honors Organic Chemistry Laboratory. 3 Units.

Fundamental techniques of modern experimental organic chemistry.

Corequisite: CHEM 51A.

Prerequisite: (CHEM 1C or CHEM H2C or CHEM M3C) and (CHEM M3LC or CHEM H2LC or CHEM 1LD).

Overlaps with CHEM M52LA, CHEM 51LB.

CHEM H52LB. Honors Organic Chemistry Laboratory. 3 Units.

Fundamental techniques of modern experimental organic chemistry.

Corequisite: CHEM 51B.

Prerequisite: CHEM 51A and CHEM H52LA. CHEM 51A with a grade of C- or better. CHEM H52LA with a grade of C- or better.

Overlaps with CHEM M52LB, CHEM 51LC.

CHEM H52LC. Honors Organic Chemistry Laboratory. 3 Units.

Fundamental techniques of modern experimental organic chemistry.

Corequisite: CHEM 51C.

Prerequisite: CHEM 51B and CHEM H52LB. CHEM 51B with a grade of C- or better. CHEM H52LB with a grade of C- or better.

Overlaps with CHEM 51LD, CHEM M52LC.

CHEM M52LA. Majors Organic Chemistry Laboratory. 3 Units.

Modern techniques of organic chemistry, using selected experiments to illustrate topics introduced in CHEM 51A-B-C.

Corequisite: CHEM 51A.

Prerequisite: (CHEM 1C or CHEM H2C or CHEM M3C) and (CHEM H2LC or CHEM M3LC or CHEM 1LD).

Overlaps with CHEM H52LA, CHEM 51LB.

Restriction: Chemistry majors only.

CHEM M52LB. Majors Organic Chemistry Laboratory. 3 Units.

Modern techniques of organic chemistry, using selected experiments to illustrate topics introduced in CHEM 51A-B-C.

Corequisite: CHEM 51B.

Prerequisite: CHEM 51A and CHEM M52LA. CHEM 51A with a grade of C- or better. CHEM M52LA with a grade of C- or better.

Overlaps with CHEM H52LB, CHEM 51LC.

Restriction: Chemistry majors only.

CHEM M52LC. Majors Organic Chemistry Laboratory. 3 Units.

Modern techniques of organic chemistry, using selected experiments to illustrate topics introduced in CHEM 51A-B-C.

Corequisite: CHEM 51C.

Prerequisite: CHEM 51B and CHEM M52LB. CHEM 51B with a grade of C- or better. CHEM M52LB with a grade of C- or better.

Overlaps with CHEM H52LC, CHEM 51LD.

Restriction: Chemistry majors only.

CHEM H90. The Idiom and Practice of Science. 4 Units.

A series of fundamental and applied problems in the chemical sciences are addressed. Topics may include the periodic table, electronic structure of atoms, chemical bonding, molecular structure, thermodynamics, and kinetics, with applications to energy and the environment, and/or biochemistry.

Restriction: Campuswide Honors Program students only.

(II, Va)**CHEM 107. Inorganic Chemistry. 4 Units.**

Introduction to modern inorganic chemistry. Principles of structure, bonding, and chemical reactivity with application to compounds of the main group and transition elements, including organometallic chemistry.

Corequisite: CHEM M3LC.

Prerequisite: (CHEM 1C or CHEM H2C or CHEM M3C) and (CHEM 51C or CHEM H52C).

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 107L. Inorganic Chemistry Laboratory. 3 Units.

Modern techniques of inorganic and organometallic chemistry including experience with glove box, Schlenk line, and vacuum line methods.

Prerequisite: CHEM 107.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 125. Advanced Organic Chemistry. 4 Units.

Rapid-paced comprehensive treatment of organic chemistry. Focuses on molecular structure, reactivity, stability, scope and mechanisms of organic reactions. Topics include: structure and bonding; theoretical organic chemistry; acidity and basicity; reactive intermediates; pericyclic reactions; stereochemistry; organic synthesis; natural products; organic photochemistry.

Prerequisite: (CHEM 51A and CHEM 51B and CHEM 51C) or (CHEM H52A and CHEM H52B and CHEM H52C).

CHEM 127. Inorganic Chemistry II. 4 Units.

Advanced treatment of selected fundamental topics in inorganic chemistry, building on material presented in Chemistry 107. Molecular symmetry with applications to electronic structure and spectroscopy. Reaction kinetics and mechanisms; inorganic synthesis and catalysis; bioinorganic chemistry.

Prerequisite: CHEM 107.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 128. Introduction to Chemical Biology. 4 Units.

Introduction to the basic principles of chemical biology: structures and reactivity; chemical mechanisms of enzyme catalysis; chemistry of signalling, biosynthesis, and metabolic pathways.

Prerequisite: (CHEM 1A and CHEM 1B and (CHEM 1C or CHEM M3C)) or (CHEM 51A and CHEM 51B and CHEM 51C) or (CHEM H52A and CHEM H52B and CHEM H52C).

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 128L. Introduction to Chemical Biology Laboratory Techniques. 3 Units.

Introduction to the basic laboratory techniques of chemical biology: electrophoresis, plasmid preparation, PCR, protein expression, isolation, and kinetics.

Corequisite: CHEM 128.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 130A. Chemical Thermodynamics. 4 Units.

Principles of chemical and heterogeneous equilibrium. Multiple chemical equilibrium, electrochemical equilibria, and equilibria at phase boundaries.

Corequisite: (PHYSICS 7E or CBEMS 40A or CBEMS 45A) and CHEM 5.

Prerequisite: (CHEM 1C or CHEM M3C or CHEM H2C) and MATH 2D and PHYSICS 7D.

Overlaps with CHEM 131A.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 130B. Quantum Chemistry, Spectroscopy and Bonding. 4 Units.

Fundamentals of molecular quantum mechanics. Development of the principles of rotational, vibrational, electronic, and magnetic resonance spectroscopy. Chemical bonding. Applications to biological and condensed phase systems.

Prerequisite: (CHEM 130A or CBEMS 45C) and (PHYSICS 7D or PHYSICS 7E)

Overlaps with CHEM 131B.

Restriction: Prerequisite required

CHEM 130C. Structure, Statistical Mechanics, and Chemical Dynamics. 4 Units.

Kinetic theory and statistical mechanics with applications to gases, macromolecules, and condensed phases. Transport phenomena. Chemical kinetics.

Prerequisite: CHEM 130B.

Overlaps with CHEM 131C.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 131A. Quantum Principles. 4 Units.

Principles of quantum chemistry with applications to nuclear motions and the electronic structure of the hydrogen atom.

Corequisite: (PHYSICS 7E or CBEMS 40A or CBEMS 45C) and CHEM 5.

Prerequisite: (CHEM 1C or CHEM M3C or CHEM H2C) and MATH 2D and PHYSICS 7D.

Overlaps with CHEM 130A.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 131B. Molecular Structure and Elementary Statistical Mechanics. 4 Units.

Principles of quantum mechanics with application to the elements of atomic structure and energy levels, diatomic molecular spectroscopy and structure determination, and chemical bonding in simple molecules.

Prerequisite: CHEM 131A and (PHYSICS 7E or CBEMS 45C).

Overlaps with CHEM 130B.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 131C. Thermodynamics and Chemical Dynamics. 4 Units.

Energy, entropy, and the thermodynamic potentials. Chemical equilibrium. Chemical kinetics.

Prerequisite: CHEM 131B.

Overlaps with CHEM 130C.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 137. Computational Chemistry. 4 Units.

Short introduction to programming languages and to representative algorithms employed in chemical research. Students have the opportunity to devise and employ their own codes and also to employ codes which are widely used in various fields of chemistry.

Corequisite: CHEM 130B or CHEM 131B.

Prerequisite: (CHEM 51C or CHEM H52C) and (CHEM 131A or CHEM 130A) and CHEM 51A and CHEM 51B and CHEM H52A and CHEM H52B.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 138. Introduction to Computational Organic Chemistry. 4 Units.

An introduction to the use of computational chemistry to investigate reaction mechanisms, to calculate structures, and to predict properties of molecules. Students have the opportunity to perform calculations employing computational methods which are widely used in various fields of chemistry.

Prerequisite: (CHEM 51A and CHEM 51B and CHEM 51C) or (CHEM H52A and CHEM H52B and CHEM H52C).

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 152. Advanced Analytical Chemistry. 5 Units.

In-depth treatment of modern instrumental methods for quantitative analysis of real samples and basic principles of instrument design. Laboratory experiments using spectroscopic, chromatographic, mass spectrometric, and other instrumental methods.

Prerequisite: (CHEM 1C or CHEM M3C) and CHEM M3LC.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 153. Physical Chemistry Laboratory. 4 Units.

Introduction to the modern experimental approaches and software tools used in spectroscopy, kinetics, electrochemistry, and other physical chemistry experiments. Basics of interfacing with instruments using LabView.

Corequisite: CHEM 130C or CHEM 131C.

Prerequisite: CHEM 1C OR (CHEM M3C and CHEM M3LC) and CHEM 130B or CHEM 131B.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 156. Advanced Laboratory in Chemistry and Synthesis of Materials. 4 Units.

Synthesis and characterization of organic and inorganic materials including polymers and oxides. Techniques include electron and scanning probe microscopy, gel permeation chromatography, X-ray diffraction, porosimetry, and thermal analysis.

(Design units: 0)

Prerequisite: (CHEM 130A and CHEM 130B) or (CHEM 131A and CHEM 131B) or ENGR 54 or PHRMSCI 171.

Same as CBEMS 160.

Restriction: Chemistry majors and Materials Science Engineering majors have first consideration for enrollment.

CHEM 160. Organic Synthesis Laboratory. 4 Units.

Modern experimental techniques in organic synthesis including experience with thin-layer chromatography, liquid chromatography, and gas chromatography. Modern methods of structure elucidation including FT NMR are employed in the characterization of products.

Prerequisite: CHEM 125.

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 170. Radioisotope Techniques. 4 Units.

Basic theory and practice of production, separation, safe handling, counting, applications of radioactive isotopes with emphasis on applications in chemistry, biology, and medicine.

Prerequisite: CHEM 1C or (CHEM M3C and CHEM M3LC).

Restriction: Chemistry majors have first consideration for enrollment.

CHEM 177. Medicinal Chemistry. 4 Units.

An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity.

Prerequisite: CHEM 51A and CHEM 51B and CHEM 51C and (BIO SCI 98 or CHEM 128).

Same as PHRMSCI 177.

Restriction: Pharmaceutical Science majors have first consideration for enrollment.

CHEM 177L. Medicinal Chemistry Laboratory. 2 Units.

An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity.

Corequisite: PHRMSCI 177.

Prerequisite: CHEM 51A and CHEM 51B and CHEM 51C and BIO SCI 100 and (BIO SCI 98 or CHEM 128).

Same as PHRMSCI 177L.

Restriction: Pharmaceutical Science majors have first consideration for enrollment.

CHEM 177LW. Medicinal Chemistry Lab. 2 Units.

An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity.

Corequisite: CHEM 177.

Prerequisite: CHEM 51A and CHEM 51B and CHEM 51C and (BIO SCI 98 or CHEM 128) and BIO SCI 100.

Same as PHRMSCI 177LW.

(Ib)

CHEM 180. Undergraduate Research. 4 Units.

Research for credit arranged with a faculty member to sponsor and supervise work. Student time commitment of 10 to 15 hours per week is expected, and a written research report is required at the end of each quarter of enrollment.

Repeatability: May be repeated for credit unlimited times.

CHEM H180A. Honors Research in Chemistry. 4 Units.

Undergraduate honors research in Chemistry. A student time commitment of 10-15 hours per week is required.

Restriction: Chemistry Honors program students and Chemistry majors participating in the Campuswide Honors Program only.

CHEM H180B. Honors Research in Chemistry. 4 Units.

Undergraduate honors research in Chemistry. A student time commitment of 10-15 hours per week is required.

Prerequisite: CHEM H180A.

Restriction: Campuswide Honors Program students only.

CHEM H180C. Honors Research in Chemistry. 4 Units.

Undergraduate honors research in Chemistry. A student time commitment of 10-15 hours per week is required.

Prerequisite: CHEM H180B.

Restriction: Chemistry majors participating in the Campuswide Honors Program students only. Chemistry Honors Program students only.

CHEM H181W. Honors Seminar in Chemistry. 2 Units.

Students will receive guidance in the preparation of oral and written research presentations. A written thesis will be prepared and a formal research seminar will be presented.

Corequisite: CHEM H180C.

Prerequisite: CHEM H180A and CHEM H180B. Satisfactory completion of the Lower-Division Writing requirement.

(Ib)

CHEM 191. Chemistry Outreach Program. 2 Units.

Involves intensive participation in the UCI Chemistry Outreach Program, which performs Chemistry demonstrations at local high schools.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 6 times.

CHEM 192. Tutoring in Chemistry. 2 Units.

Enrollment limited to participants in the Chemistry Peer Tutoring Program.

Repeatability: May be taken for credit 9 times.

CHEM 193. Research Methods. 4 Units.

Explores tools of inquiry for developing and implementing science research projects. Students undertake independent projects requiring data collection, analysis, and modeling, and the organization and presentation of results. Additional topics include ethical issues and role of scientific literature.

Prerequisite: BIO SCI 14 or PHY SCI 5.

Same as BIO SCI 108, PHYSICS 193.

CHEM 199. Independent Study in Chemistry. 1-4 Units.

Independent research with Chemistry faculty. Student time commitment of three to four hours per week per unit is expected, and a written report on the independent study is required at the end of each quarter of enrollment.

Repeatability: Unlimited as topics vary.

CHEM 201. Organic Reaction Mechanisms I. 4 Units.

Advanced treatment of basic mechanistic principles of modern organic chemistry. Topics include molecular orbital theory, orbital symmetry control of organic reactions, aromaticity, carbonium ion chemistry, free radical chemistry, the chemistry of carbenes and carbanions, photochemistry, electrophilic substitutions, aromatic chemistry.

Prerequisite: (CHEM 130A and CHEM 130B and CHEM 130C) or (CHEM 131A and CHEM 131B and CHEM 131C).

CHEM 202. Organic Reaction Mechanisms II. 4 Units.

Topics include more in-depth treatment of mechanistic concepts, kinetics, conformational analysis, computational methods, stereoelectronics, and both solution and enzymatic catalysis.

Prerequisite: CHEM 201.

CHEM 203. Organic Spectroscopy. 4 Units.

Modern methods used in structure determination of organic molecules. Topics include mass spectrometry; ultraviolet, chiroptical, infrared, and nuclear magnetic resonance spectroscopy.

Prerequisite: (CHEM 51A and CHEM 51B and CHEM 51C) or (CHEM H52A and CHEM H52B and CHEM H52C).

Restriction: Graduate students only.

CHEM 204. Organic Synthesis I. 4 Units.

Fundamentals of modern synthetic organic chemistry will be developed. Major emphasis is on carbon-carbon bond forming methodology. Topics include carbonyl annulations, cycloadditions, sigmatropic rearrangements, and organometallic methods.

Corequisite: CHEM 202.

CHEM 205. Organic Synthesis II. 4 Units.

Fundamentals of modern synthetic organic chemistry will be developed. Major emphasis this quarter is on natural product total synthesis and retrosynthetic (antithetic) analysis.

Prerequisite: CHEM 204.

CHEM 206. Laboratory Skills. 4-6 Units.

Introduces students to a variety of practical laboratory techniques, including lock-in, boxcar, coincidence counting, noise filtering, PID control, properties of common transducers, computer interfacing to instruments, vacuum technology, laboratory safety, basic mechanical design, and shop skills.

Same as PHYSICS 206.

Concurrent with PHYSICS 106.

CHEM 207. Chemistry for Physicists. 4 Units.

Introduction to fundamental concepts in molecular structure and reactivity: theory of bonding, valence and molecular orbitals; structure and reactivity in inorganic chemistry; elements in molecular group theory; nomenclature in organic chemistry; and survey of macromolecules.

Same as PHYSICS 207.

CHEM 208. Mathematics for Chemists. 4 Units.

Applications of mathematics to physical and chemical problems. Calculus of special functions, complex variables and vectors; linear vector spaces and eigenvalue problems. Differential equations.

Same as PHYSICS 208.

CHEM 209. Physics for Chemists. 4 Units.

An introduction to concepts of electrodynamics with special emphasis on applications to chemistry: vector analysis, electrostatics, magnetostatics, electrodynamics, electromagnetic waves, classical radiation theory, special relativity.

CHEM 213. Chemical Kinetics. 4 Units.

Surveys gas phase and organic reaction mechanisms and their relationship to kinetic rate laws; treats the basic theory of elementary reaction rates. A brief presentation of modern cross-sectional kinetics is included.

Prerequisite: (CHEM 130A and CHEM 130B and CHEM 130C) or (CHEM 131A and CHEM 131B and CHEM 131C).

CHEM 215. Inorganic Chemistry I. 4 Units.

Principles of modern inorganic chemistry with applications to chemical systems of current interest. Inorganic phenomena are organized into general patterns which rationalize observed structures, stabilities, and physical properties.

Prerequisite: CHEM 107 and ((CHEM 130A and CHEM 130B and 130C) or (CHEM 131A and CHEM 131B and CHEM 131C)).

Restriction: Graduate students only.

CHEM 216. Organometallic Chemistry. 4 Units.

Synthesis and reactivity of organometallic complexes with an emphasis on mechanisms. Topics include bonding and fluxional properties; metal-carbon single and multiple bonds; metal π -complexes. Applications to homogenous catalysis and organic synthesis are incorporated throughout the course.

Prerequisite: CHEM 107 or CHEM 215.

CHEM 217. Physical Inorganic Chemistry. 4 Units.

General principles of the spectroscopy and magnetism of inorganic compounds. Characterization of inorganic complexes by infrared, near-infrared, visible, ultraviolet, NMR, EPR, EXAFS, and Mossbauer spectroscopies. Some necessary group theory developed.

Prerequisite: CHEM 215.

CHEM 218. Metallobiochemistry. 4 Units.

A review of the biochemistry of metallic elements emphasizing: methods for studying metals in biological systems; the chemical basis for nature's exploitation of specific elements; structures of active sites; mechanisms; solid-state structures and devices; metals in medicine.

Prerequisite: CHEM 130A and CHEM 130B and CHEM 130C.

CHEM 219. Chemical Biology. 4 Units.

A survey of the organic chemistry underlying biological function. Introduction to chemical genetics, receptor-ligand interactions, small molecule agonists and antagonists, combinatorial synthesis, high throughput assays, molecular evolution, protein and small molecule design.

Restriction: Graduate students only.

CHEM 220. Bioorganic Chemistry. 4 Units.

Structure and function of biologically important macromolecules. Introduction to nucleic acid, protein structure, principles of molecular recognition, enzyme function, modelling, and engineering.

Prerequisite: (CHEM 51A and CHEM 51B and CHEM 51C) or (CHEM H52A and CHEM H52B and CHEM H52C).

CHEM 221A. Fundamentals of Molecular Biophysics. 4 Units.

An overview of the principles and concepts in molecular biophysics. Topics covered include energy and entropy in biology, non-equilibrium reaction kinetics, random walks and molecular diffusion, molecular forces in biology.

Prerequisite: Undergraduate courses in physical chemistry and biochemistry.

Repeatability: May be taken for credit 3 times.

CHEM 223. Biological Macromolecules. 4 Units.

Introduction to nucleic acid and protein structure, dynamics, and function. Topics include analytical methods, molecular evolution, folding, and catalysis.

Same as PHRMSCI 223.

CHEM 225. Polymer Chemistry: Synthesis and Characterization of Polymers. 4 Units.

Structure of synthetic and natural polymers. Survey of modern polymer synthetic methods. Molecular weight and molecular weight distribution. Chain conformation and stereochemistry. Introduction to polymer characterization, chain models, and solution behavior.

Prerequisite: Undergraduate courses in organic and physical chemistry.

CHEM 228. Electromagnetism. 4 Units.

Maxwell's equations, electrodynamics, electromagnetic waves and radiation, wave propagation in media, interference and quantum optics, coherent and incoherent radiation, with practical applications in interferometry, lasers, waveguides, and optical instrumentation.

Same as PHYSICS 228.

CHEM 229A. Computational Methods. 4 Units.

Mathematical and numerical analysis using Mathematica and C programming, as applied to problems in physical science.

Same as PHYSICS 229A.

Concurrent with PHYSICS 100.

CHEM 229B. Computational Methods. 4 Units.

Mathematical and numerical analysis using Mathematica and C programming, as applied to problems in physical science.

Same as PHYSICS 229B.

CHEM 230. Classical Mechanics and Electromagnetic Theory. 4 Units.

Fundamentals of classical mechanics and electromagnetic theory are developed with specific application to molecular systems. Newtonian, Lagrangian, and Hamiltonian mechanics are developed. Boundary value problems in electrostatics are investigated. Multipole expansion and macroscopic media are discussed from a molecular viewpoint.

Prerequisite: CHEM 131A and CHEM 131B and CHEM 131C.

CHEM 231A. Fundamentals of Quantum Mechanics. 4 Units.

The postulates of quantum mechanics are discussed and applied to a variety of model problems.

Prerequisite: CHEM 131A and CHEM 131B and CHEM 131C.

CHEM 231B. Applications of Quantum Mechanics. 4 Units.

Approximate methods for solving atomic and molecular structure problems are developed, and the application of quantum mechanics to spectroscopy is introduced.

Prerequisite: CHEM 231A.

CHEM 231C. Molecular Spectroscopy. 4 Units.

Theory and techniques of spectroscopy as used for the study of molecular and condensed phase properties. Coherent time domain spectroscopies are covered.

Prerequisite: CHEM 231B.

CHEM 232A. Thermodynamics and Introduction to Statistical Mechanics. 4 Units.

A detailed discussion from an advanced point of view of the principles of classical thermodynamics. The fundamentals of statistical mechanics. Topics include an introduction to ensemble theory, Boltzmann statistics, classical statistical mechanics, and the statistical mechanics of ideal gas systems.

Prerequisite: (CHEM 130A and CHEM 130B and CHEM 130C) or (CHEM 131A and CHEM 131B and CHEM 131C).

CHEM 232B. Advanced Topics in Statistical Mechanics. 4 Units.

Continued discussion of the principles of statistical mechanics. Applications to topics of chemical interest including imperfect gases, liquids, solutions, and crystals. Modern techniques such as the use of autocorrelation function methods.

Prerequisite: CHEM 232A.

CHEM 232C. Non-Equilibrium Statistical Mechanics. 4 Units.

Phenomenology of material processes, including: kinetic theories of transport and continuum, linear response theory, critical phenomena of phase transition, self-assembly, and nucleation.

CHEM 233. Nuclear and Radiochemistry. 4 Units.

Advanced treatment of nuclear structure, nuclear reactions, and radioactive-decay processes. Introduction to nuclear activation analysis, isotope effects, radiation chemistry, hot-atom chemistry, nuclear age-dating methods, nuclear reactors, and nuclear power.

Prerequisite: CHEM 170.

Same as CBEMS 233.

Concurrent with CBEMS 133.

CHEM 234. Advanced Chemical Kinetics. 4 Units.

Topics and format vary.

Prerequisite: CHEM 213.

Repeatability: Unlimited as topics vary.

CHEM 235. Molecular Quantum Mechanics. 4 Units.

Application of quantum mechanics to calculation of molecular properties. Electronic structure of molecules.

Prerequisite: CHEM 231A.

CHEM 236. Forces Between Molecules. 4 Units.

The nature and effects of non-covalent interactions between molecular systems. The focus is on properties of these interactions in condensed phases: macromolecular systems; particle-surface interactions.

CHEM 237. Mathematical Methods in Chemistry. 4 Units.

Survey of essential math methods in chemistry. Topics may include series and limits, complex analysis, Fourier and Laplace transforms, linear algebra and operators (theory and algorithms), differential equations, and probability concepts for stochastic processes.

CHEM 241. Current Issues Related to Tropospheric and Stratospheric Processes. 4 Units.

Examination of current issues related to the atmosphere, including energy usage; toxicology; effects on humans, forests, plants, and ecosystems; particulate matter (PM10); combustion; modeling and meteorology; airborne toxic chemicals and risk assessment; application of science to development of public policies.

Prerequisite: ENGRMAE 164 or ENGRMAE 261 or CHEM 245 or EARTHSS 240.

Same as ENGRMAE 260.

CHEM 242A. Physical and Geometrical Optics. 4 Units.

Focuses on the practical aspects of optics and optical engineering, starting at the fundamentals. Topics include geometrical optics, ray tracing, polarization optics, interferometers, and diffractive optics.

Same as CBEMS 242A.

Restriction: Graduate students only.

Concurrent with PHYSICS 134A.

CHEM 242B. Applied Optics. 4 Units.

Focuses on the treatment of a wide variety of tools and techniques used in optics, particularly in research. Subjects include an introduction to lasers, optical detection, coherent optics, spectroscopic techniques, and selected topics corresponding to the interest of the students.

Prerequisite: CHEM 242A.

Same as CBEMS 242B.

CHEM 243. Advanced Instrumental Analysis. 4 Units.

Theory and applications of modern advanced instrumental methods of analysis. Includes data acquisition, storage, retrieval and analysis; Fourier transform methods; vacuum technologies; magnetic sector; quadrupole and ion trap mass spectrometry; surface science spectroscopic methods; lasers and optics.

Prerequisite: CHEM 152 and (CHEM 130A and CHEM 130B and CHEM 130C) or (CHEM 131A and CHEM 131B and CHEM 131C).

Restriction: Prerequisite required

CHEM 245. Atmospheric Chemistry of the Natural and Polluted Troposphere. 4 Units.

Kinetics, mechanisms and photochemistry of tropospheric reactions in the gas, liquid, and solid phases, and methods of analysis. Chemistry of photochemical oxidant formation and acid deposition, and applications to control strategies. Chemistry of toxic chemicals and indoor air pollution.

Prerequisite: (CHEM 130A and CHEM 130B and CHEM 130C) or (CHEM 131A and CHEM 131B and CHEM 131C).

CHEM 246. Separations and Chromatography. 4 Units.

Introduction to modern separation techniques such as gas chromatography, high-performance liquid chromatography, supercritical fluid chromatography, capillary electrophoresis, and field flow fractionation. Applications of these separation strategies are discussed.

CHEM 247. Current Problems in Analytical Chemistry. 4 Units.

Surveys current research challenges in analytical chemistry. Topics include electrochemistry, chromatography, spectroscopy, and mass spectrometry.

CHEM 248. Electrochemistry. 4 Units.

Fundamentals of electrochemistry including thermodynamics and the electrochemical potential, charge transfer kinetics, and mass transfer. Methods based on controlled potential and controlled current are described; the effects of slow heterogeneous kinetics and the perturbation caused by homogeneous chemistry are discussed.

CHEM 249. Analytical Spectroscopy. 4 Units.

Advanced treatment of spectroscopic techniques and instrumentation. Atomic and molecular absorption, emission, and scattering processes and their application to quantitative chemical analysis are outlined. Puts different spectroscopic techniques in perspective and demonstrates most appropriate applications to analytical problems.

CHEM 251. Special Topics in Organic Chemistry. 1-4 Units.

Advanced topics in organic chemistry.

Repeatability: Unlimited as topics vary.

CHEM 252. Special Topics in Physical Chemistry. 1-4 Units.

Advanced topics in physical chemistry.

Repeatability: Unlimited as topics vary.

CHEM 253. Special Topics in Inorganic Chemistry. 4 Units.

Advanced topics in inorganic chemistry.

Prerequisite: CHEM 215.

Repeatability: Unlimited as topics vary.

CHEM 254. Special Topics in Computational and Theoretical Chemistry. 4 Units.

Subjects covered vary from year to year.

Repeatability: Unlimited as topics vary.

CHEM 263. Materials Chemistry . 4 Units.

An introduction to crystalline solids, descriptive crystal chemistry, solid-state synthesis and characterization techniques, x-ray and electron diffraction, phase diagrams, electronic band structure of extended solids, semi conductors, and nanoscale inorganic materials.

CHEM 266. Current Topics in Chemical and Materials Physics. 1 Unit.

The subjects covered vary from year to year. Connection between fundamental principles and implementations in practice in science, industry, and technology.

Repeatability: May be repeated for credit unlimited times.

Same as PHYSICS 266.

CHEM 271. Structural X-Ray Crystallography. 4 Units.

The principles and practice of the determination of structures by single crystal X-Ray diffraction techniques. Crystal symmetry, diffraction, structure solution and refinement. Opportunities for hands-on experience in structure determination.

Prerequisite: (CHEM 130A and CHEM 130B and CHEM 130C) or (CHEM 131A and CHEM 131B and CHEM 131C).

CHEM 273. Technical Communication Skills. 2 Units.

Development of effective communication skills, oral and written presentations, through examples and practice.

Grading Option: Satisfactory/unsatisfactory only.

Same as PHYSICS 273.

CHEM 280. Research. 2-12 Units.

Supervised original research toward the preparation of a Ph.D dissertation or M.S. thesis.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

CHEM 290. Seminar. 1 Unit.

Weekly seminars and discussions on general and varied topics of current interest in chemistry.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

CHEM 291. Research Seminar. 4 Units.

Detailed discussion of research problems of current interest in the Department. Format, content, and frequency of the course are variable.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

CHEM 292. Graduate Symposium. 2 Units.

Students present public seminars on literature-based research topics in contemporary chemistry. Topics to be chosen by student and approved by instructor.

Repeatability: May be repeated for credit unlimited times.

CHEM 299. Independent Study. 1-4 Units.

Independent research with Chemistry faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

CHEM 399. University Teaching. 1-4 Units.

Required of and limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Department of Earth System Science

3200 Croul Hall; (949) 824-8794

<http://www.ess.uci.edu/>

Michael L. Goulden, **Chair**

Understanding global environmental issues such as global warming, stratospheric ozone depletion, and worldwide air pollution requires the cooperation of scientists across many fields. Global change is projected to accelerate through the twenty-first century and will impact the ecosystems that preserve the habitability of the planet. The Department of Earth System Science focuses on the atmosphere, land, and oceans, how these interact as a system, and how the Earth will change over a human lifetime. Earth System Science (ESS) is inherently interdisciplinary in scope, linking oceanography, atmospheric and terrestrial sciences, climatology, hydrology, biology, physics, and chemistry to understand the environment. ESS faculty includes chemists, biologists, ecologists, physicists, hydrologists, geologists, meteorologists, engineers, applied mathematicians, and oceanographers. The wide-ranging expertise of ESS faculty and teaching assistants allows students to learn valuable scientific skills in the classroom, laboratory, and field experiences.

Degrees. The Department offers the B.S., M.S.*, and Ph.D. degrees in Earth System Science, and the B.A. degree in Environmental Science. (*The M.S. is awarded only to students admitted to the Ph.D. program.)

Undergraduate Programs

Bachelor of Science Major in Earth System Science

<http://ess.uci.edu/undergrad/bs>

Earth System Science is an interdisciplinary field of study that combines oceanography, atmospheric science, meteorology, geography, geology, hydrology, and environmental science. ESS students gain an understanding of how individual aspects of the environment interact, including the influence of humans on this complex system.

Examples of important questions in Earth System Science include, but are not limited to, the influence of atmospheric chemistry on climate and air

quality, biological controls on the chemistry of the oceans, and physical controls on atmosphere and ocean circulation.

The Earth System Science (B.S.) program provides students with a fundamental understanding of the oceanographic, atmospheric, and terrestrial sciences. This program of study prepares students for careers in science, research, or technical fields. Students learn to apply basic sciences (physics, chemistry, mathematics, and biology) to understand the major processes and systems governing the Earth's climate, biogeochemical cycles, and global change. Central to the B.S. program is an understanding of relevant scientific literature, methods to collect/analyze data, and interpret results in the context of scientific theory. Students will learn to work collaboratively to understand and address complex problems and communicate scientific knowledge.

Through the core course work, students will learn to explain the current and projected future state of the Earth system in the context of past climate change and current human activities. Once the core course work is complete, students are encouraged to focus on a particular area within Earth System Science and to choose electives that build a coherent core of knowledge. Focus areas include but are not limited to climatology, biogeochemical cycles, oceanography, hydrology, terrestrial sciences, and atmospheric sciences. Optional specializations are available in Atmospheric Science, Hydrology and Terrestrial Ecosystems, and Oceanography.

Earth System Science students are encouraged to become directly involved in research. The Department provides excellent opportunities to learn from and work with recognized experts in the field, while fulfilling degree requirements. EARTHSS 198 may satisfy Department and UCI upper-division writing requirements.

Careers for the Earth System Science Major

Some students go on to graduate school in physical sciences, engineering, or related areas. Others begin careers as research scientists in academic, public, or private institutions (may require a graduate-level degree). Options that may be available are scientist positions in the following roles: environmental policy and planning, environmental consulting, air quality monitoring and assessment, laboratory analysis, scientific research, science education, natural resource management, wildlife management, conservation and environmental protection, and water resource management.

Special Programs

Earth System Science Honors Program. In the year-long honors course sequence, students admitted into the ESS Honors Program pursue research with faculty in the Department, and prepare a written thesis of their work. See <http://ess.uci.edu/undergrad/honors> for more information.

Teaching Certification. Earth System Science students interested in teaching careers can earn a bachelor's degree concurrently with a California Preliminary Single Subject Teaching Credential. See the Concentration in Geosciences Education with Secondary Teaching Certification section below for more information.

Admission to the Earth System Science Major

Students may be admitted to the Earth System Science major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the

highest grades overall, and who have satisfactorily completed the following required courses: one year of approved calculus and one year of *either* general chemistry with laboratory (preferred) or one-year of calculus-based physics with laboratory.

NOTE: The major is open to all students except Environmental Science majors and Earth and Atmospheric Sciences minors.

Requirements for the B.S. Degree in Earth System Science

All students must meet the University Requirements (p. 60). School Requirements: None.

Major Requirements

A. Complete:

EARTHSS 1	Introduction to Earth System Science
or EARTHSS 3	Oceanography
or EARTHSS 5	The Atmosphere
EARTHSS 51	Land Interactions
EARTHSS 53	Ocean Biogeochemistry
EARTHSS 55	Earth's Atmosphere
EARTHSS 114	Earth System Science Laboratory and Field Methods
EARTHSS 116	Data Analysis for Earth Sciences
EARTHSS 191	Title Introduction to Research in Earth System Science
EARTHSS 192	Careers in Earth System Science
MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
MATH 2D	Multivariable Calculus
or MATH 3A	Introduction to Linear Algebra
Select one of the following sequences and accompanying labs:	
CHEM 1A- 1B- 1C	General Chemistry and General Chemistry and General Chemistry
CHEM 1LC- 1LD	General Chemistry Laboratory and General Chemistry Laboratory
or	
CHEM H2A- H2B- H2C	Honors General Chemistry and Honors General Chemistry and Honors General Chemistry
CHEM H2LA- H2LB- H2LC	Honors General Chemistry Laboratory and Honors General Chemistry Laboratory and Honors General Chemistry Laboratory
Select one of the following sequences and accompanying labs:	
PHYSICS 3A- 3B- 3C	Basic Physics and Basic Physics and Basic Physics
PHYSICS 3LB- 3LC	Basic Physics Laboratory and Basic Physics Laboratory
or	
PHYSICS 7C- 7E	Classical Physics and Classical Physics

PHYSICS 7LC Classical Physics Laboratory

B. Select seven electives from the following (at least four must be Earth System Science courses):

All 4-unit upper-division EARTHSS courses except 114, 116, 190C, and 198 or H198 (199 or one quarter of H199A-B-C may count only once toward the elective requirement)

CHEM 51A	Organic Chemistry
CHEM 51B- 51LB	Organic Chemistry and Organic Chemistry Laboratory
CHEM 51C- 51LC	Organic Chemistry and Organic Chemistry Laboratory
CHEM H52A- H52LA	Honors Organic Chemistry and Honors Organic Chemistry Laboratory
CHEM H52B- H52LB	Honors Organic Chemistry and Honors Organic Chemistry Laboratory
CHEM H52C	Honors Organic Chemistry
CHEM 130A	Chemical Thermodynamics
CHEM 130B	Quantum Chemistry, Spectroscopy and Bonding
CHEM 130C	Structure, Statistical Mechanics, and Chemical Dynamics
CHEM 131A	Quantum Principles
CHEM 131B	Molecular Structure and Elementary Statistical Mechanics
CHEM 131C	Thermodynamics and Chemical Dynamics
PHYSICS 51A	Modern Physics
PHYSICS 51B	Modern Physics
PHYSICS 115A	Statistical Physics
PHYSICS 120	Electronics for Scientists
PHYSICS 134A	Physical and Geometrical Optics
PHYSICS 137	Introduction to Cosmology
PHYSICS 144	Stellar Astrophysics
PHYSICS 145	High-Energy Astrophysics
MATH 2D	Multivariable Calculus (may be counted only once; or MATH 3A, may be counted only once)
MATH 3D	Elementary Differential Equations
MATH 105A	Numerical Analysis
MATH 112A	Introduction to Partial Differential Equations and Applications
MATH 115	Mathematical Modeling
MATH 131A	Introduction to Probability and Statistics
MATH 131B	Introduction to Probability and Statistics
MATH 131C	Introduction to Probability and Statistics
ENGRMAE 60	Electric Circuits
ENGRMAE 91	Introduction to Thermodynamics
ENGRMAE 130A	Introduction to Fluid Mechanics
ENGRMAE 164	Air Pollution and Control

ENGRMAE 185	Numerical Analysis in Mechanical Engineering
ENGRCEE 156	Foundation Design
ENGRCEE 162	Introduction to Environmental Chemistry
ENGRCEE 171	Water Resources Engineering
ENGRCEE 172	Groundwater Hydrology
ENGRCEE 176	Hydrology
ENGRCEE 178	Fluid Mechanics of Open Channels
BIO SCI 93	From DNA to Organisms
BIO SCI 94	From Organisms to Ecosystems
BIO SCI 98	Biochemistry
BIO SCI D105	Cell, Developmental, and Molecular Biology of Plants
BIO SCI E106	Processes in Ecology and Evolution
BIO SCI E178	Ocean Ecology
BIO SCI E179	Limnology and Freshwater Biology
BIO SCI E179L	Field Freshwater Ecology
BIO SCI E186	Population and Community Ecology
BIO SCI E189	Environmental Ethics
BIO SCI M133	High-Resolution Structures: NMR and X-ray
CRM/LAW C148	Geographic Information Systems
PP&D 136	Global Environmental Issues
PP&D 139	Water Resource Policy
PUBHLTH 161	Environmental Geology
Computing Skills (one of the following may be counted toward degree): I&C SCI 31, EECS 10, ENGRMAE 10, PHYSICS 53, or an approved programming course.	

Optional Specializations

Three optional specializations are available: Atmospheric Science, Hydrology and Terrestrial Ecosystems, and Oceanography. The specializations require the completion of at least five courses from the following lists (four science courses plus one advanced tools course).

Specialization in Atmospheric Science**Requirements**

Four courses selected from the following:

EARTHSS 101	Paleoclimatology
EARTHSS 112	Global Climate Change and Impacts
EARTHSS 122	Atmospheric Dynamics
EARTHSS 124	Weather Analysis
EARTHSS 142	Atmospheric Chemistry
EARTHSS 199	Undergraduate Research (one 4-unit course focused on atmospheric research selected from EARTHSS 199, 198, H198, H199A-H199B-H199C)

One advanced tools courses selected from the following:

EARTHSS 118	Advanced Data Analysis and Modeling
EARTHSS 138	Satellite Remote Sensing for Earth System Science

EARTHSS 150	Laboratory Methods in Earth Systems Science
(These courses may overlap in Major Requirements, Section B.)	

Specialization in Hydrology and Terrestrial Ecosystems

Requirements

Four courses selected from the following:

EARTHSS 132	Terrestrial Hydrology
EARTHSS 140	Advanced Geology
EARTHSS 164	Ecosystem Ecology
EARTHSS 168	Physiological Plant Ecology
EARTHSS 199	Undergraduate Research (one 4-unit course focused on terrestrial research selected from EARTHSS 199, 198, H198, H199A-H199B-H199C)

One advanced tools course selected from the following:

EARTHSS 118	Advanced Data Analysis and Modeling
EARTHSS 134	Fundamentals of GIS for Environmental Sciences
EARTHSS 138	Satellite Remote Sensing for Earth System Science
EARTHSS 150	Laboratory Methods in Earth Systems Science

(These courses may overlap in Major Requirements, Section B.)

Specialization in Oceanography

Requirements

Four courses selected from the following:

EARTHSS 101	Paleoclimatology
EARTHSS 112	Global Climate Change and Impacts
EARTHSS 130	Physical Oceanography
EARTHSS 144	Marine Geochemistry and Biogeochemistry
EARTHSS 170	Environmental Microbiology
EARTHSS 199	Undergraduate Research (one 4-unit course focused on oceanographic research selected from EARTHSS 199, 198, H198, H199A-H199B-H199C)

One advanced tools course selected from the following:

EARTHSS 118	Advanced Data Analysis and Modeling
EARTHSS 138	Satellite Remote Sensing for Earth System Science
EARTHSS 150	Laboratory Methods in Earth Systems Science

(These courses may overlap in Major Requirements, Section B.)

Sample Program — Earth System Science

Freshman		
Fall	Winter	Spring
MATH 2A	MATH 2B	MATH 2D or 3A
CHEM 1A	CHEM 1B	CHEM 1C- 1LC
EARTHSS 1	Gen. Ed./Elective	Gen. Ed./Elective

Gen. Ed./Elective	Gen. Ed./Elective	Gen. Ed./Elective
Sophomore		
Fall	Winter	Spring
EARTHSS 51	EARTHSS 53	EARTHSS 55
PHYSICS 3A	PHYSICS 3B- 3LB	PHYSICS 3C- 3LC
Gen. Ed./Elective	Gen. Ed./Elective	Gen. Ed./Elective
CHEM 1LD	Gen. Ed./Elective	Gen. Ed./Elective
Junior		
Fall	Winter	Spring

Elective	Elective	Elective

Some students (particularly transfer students) take EARTHSS 51, EARTHSS 53, and EARTHSS 55 in the junior year.

Concentration in Geosciences Education with Secondary Teaching Certification

This concentration allows students pursuing the B.S. in Earth System Science to earn a bachelor's degree and complete the required course work and field experience for a California Preliminary Single Subject Teaching Credential at the same time. In addition to the requirements listed above, students must complete the following courses:

PHY SCI 5	California Teach 1: Introduction to Science and Mathematics Teaching
PHY SCI 105	California Teach 2: Middle School Science and Mathematics Teaching
CHEM 193	Research Methods
or PHYSICS 193	Research Methods
LPS 60	The Making of Modern Science
EDUC 55	Knowing and Learning in Mathematics and Science
EDUC 109	Reading and Writing in Secondary Mathematics and Science Classrooms
EDUC 143AW	Classroom Interactions I
EDUC 143BW	Classroom Interactions II
EDUC 148	Complex Pedagogical Design
EDUC 158	Student Teaching Mathematics and Science in Middle/High School (two quarters)

With careful, early planning, it is possible for students to complete the bachelor's degree and the secondary teaching certification in four years.

For additional information about teacher certification requirements and enrollment procedures, see <http://gse.uci.edu/calteach>. Interested students are strongly encouraged to contact the Cal Teach Resource and Advising Center or the Physical Sciences Student Affairs Office.

Bachelor of Arts Major in Environmental Science

<http://ess.uci.edu/undergrad/ba>

The Gulf Oil Spill. Global Climate Change. Drought and Water Supply. Each of these topics illustrates the continuing need for environmental professionals with training in the natural sciences, social sciences, economics, and public policy. The Environmental Science B.A. degree program prepares students interested in environmental problem solving by linking an understanding of natural science with socioeconomic factors and public policy. The curriculum combines a quantitative understanding of environmental science, chemistry, and biology with studies of social science, policy, and macro- and microeconomics to provide a foundation for careers in environmental policy, resource management, education, environmental law, and related fields.

The Environmental Science program provides students with a solid foundation to recognize the impacts of human activities on the environment, and in turn the impacts of environmental change on society. Students will understand the mechanisms by which key institutions, policies, and regulations impact ecosystems and the physical environment. Once the core course work is complete, students are encouraged to focus on a particular area within Environmental Science and to choose electives that build a coherent core of knowledge. Focus areas include, but are not limited to planning, policy and design, sociology, economics, climatology, water resources, water quality, air pollution, resource management, and atmospheric sciences.

Careers for the Environmental Science Major

Some students may find career opportunities in roles such as policy advisor, data analyst (may require a graduate-level degree), scientific journalist, or technical writer. Other options that may be available are scientist positions in the following roles: environmental policy and planning, environmental consulting, air quality monitoring and assessment,

natural resource management, wildlife management, conservation and environmental protection.

Special Programs

Environmental Science Honors Program. In the year-long honors course sequence, Environmental Science students admitted into the ESS Honors Program pursue research with faculty in the Department, and prepare a written thesis of their work. See <http://ess.uci.edu/undergrad/honors> for more information.

Teaching Certification. Environmental Science students interested in teaching careers can earn a bachelor's degree concurrently with a California Preliminary Single Subject Teaching Credential. See the Concentration in Geosciences Education with Secondary Teaching Certification section below for more information.

Admission to the Environmental Science Major

Students may be admitted to the Environmental Science major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed one year of *either* general chemistry with laboratory (preferred) or one year of biology with laboratory. One year of economics or sociology is recommended.

NOTE: The major is open to all students except Earth System Science B.S. majors and Earth and Atmospheric Sciences minors.

Requirements for the B.A. Degree in Environmental Science

All students must meet the University Requirements (p. 60). School Requirements: None.

Major Requirements

A. Select one of the following:

EARTHSS 1	Introduction to Earth System Science
EARTHSS 3	Oceanography
EARTHSS 5	The Atmosphere
EARTHSS 7	Physical Geology
EARTHSS 11	Climate Change and Policy
EARTHSS 13	Global-Change Biology
EARTHSS 15	Introduction to Global Climate Change
EARTHSS 17	Hurricanes, Tsunamis, and other Catastrophes
EARTHSS 21	On Thin Ice: Climate Change and the Cryosphere
EARTHSS 23	Air Pollution: From Urban Smog to Global Change

Complete:

EARTHSS 60A- 60B- 60C	Fundamental Processes in Earth and Environmental Studies and Local and Regional Environmental Issues and Global Environmental Issues
-----------------------	--

EARTHSS 114	Earth System Science Laboratory and Field Methods
EARTHSS 180	Environmental Sustainability I
EARTHSS 182	Environmental Sustainability II
EARTHSS 192	Careers in Earth System Science

B. Select one of the following sequences and accompanying labs:

CHEM 1A- 1B- 1C	General Chemistry and General Chemistry and General Chemistry
CHEM 1LC- 1LD	General Chemistry Laboratory and General Chemistry Laboratory
or	
CHEM H2A- H2B- H2C	Honors General Chemistry and Honors General Chemistry and Honors General Chemistry
CHEM H2LA- H2LB- H2LC	Honors General Chemistry Laboratory and Honors General Chemistry Laboratory and Honors General Chemistry Laboratory

Complete:

BIO SCI 93	From DNA to Organisms
BIO SCI 94	From Organisms to Ecosystems

C. Select three courses from the following:

MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
MATH 4	Mathematics for Economists
STATS 7	Basic Statistics
SOC SCI 9A- 9B- 9C	General Statistics and Probability I and General Statistics and Probability II and General Statistics and Probability III
SOC SCI 10A- 10B- 10C	Probability and Statistics in Social Sciences I and Probability & Statistics in Social Sciences II and Probability & Statistics in Social Sciences III
ECON 15A- 15B	Probability and Statistics in Economics I and Probability and Statistics in Economics II
EARTHSS 19	Introduction to Modeling the Earth System
EARTHSS 116	Data Analysis for Earth Sciences
EARTHSS 134	Fundamentals of GIS for Environmental Sciences

D. Select four courses from the following:

SOCIOL 1	Introduction to Sociology
SOCIOL 2	Global and International Sociology
SOCIOL 3	Introduction to Social Problems
ECON 13	Global Economy
ECON 20A- 20B	Basic Economics I and Basic Economics II

PP&D 4	Introduction to Urban Studies
PP&D 134	Human Ecology
PP&D 139	Water Resource Policy
PP&D 140	Ethics and International Relations
PP&D 151	Environmental Psychology
BIO SCI E189	Environmental Ethics
EARTHSS 110	Environmental Controversies
EARTHSS 178	Solving the Energy-Carbon-Climate Problem
LPS 60	The Making of Modern Science

E. Select two electives each from the following three categories:

1. Select any upper-division, 4-unit course in EARTHSS (199/H199 may count only once; the combination of 190A and 190B may be used as one elective requirement); courses may not be used as electives if counted toward degree requirements.

2.	
CHEM 51A	Organic Chemistry
CHEM 51B- 51LB	Organic Chemistry and Organic Chemistry Laboratory
CHEM 51C- 51LC	Organic Chemistry and Organic Chemistry Laboratory
CHEM H52A- H52LA	Honors Organic Chemistry and Honors Organic Chemistry Laboratory
CHEM H52B- H52LB	Honors Organic Chemistry and Honors Organic Chemistry Laboratory
CHEM H52C	Honors Organic Chemistry
BIO SCI 20	California Natural History
BIO SCI 55	Introduction to Ecology
BIO SCI 65	Biodiversity & Conservation
BIO SCI 97	Genetics
BIO SCI 98	Biochemistry
BIO SCI 99	Molecular Biology
BIO SCI E106	Processes in Ecology and Evolution
BIO SCI E138	Comparative Animal Physiology
BIO SCI E140	Evolution and the Environment
BIO SCI E150	Conservation Biology
BIO SCI E151	Population Dynamics in Ecology, Epidemiology, and Medicine
BIO SCI E160	Biology of Birds
BIO SCI E161L	Biology of Birds Lab
BIO SCI E166W	Field Methods in Ecology
BIO SCI E172	Plant Diversity in a Changing World
BIO SCI E174	Behavioral Ecology
BIO SCI E175	Restoration Ecology
BIO SCI E176	Evolution of Infectious Disease
BIO SCI E178	Ocean Ecology
BIO SCI E179	Limnology and Freshwater Biology
BIO SCI E179L	Field Freshwater Ecology
BIO SCI E181	Conservation in the American West
BIO SCI E182	Mediterranean Ecosystems: Biodiversity and Conservation
BIO SCI E184	Ecology and Diversity of Insects

BIO SCI E186	Population and Community Ecology
BIO SCI E189	Environmental Ethics
PHYSICS 3A	Basic Physics
PHYSICS 3B	Basic Physics
PHYSICS 3C	Basic Physics
PHYSICS 7C	Classical Physics
PHYSICS 14	Physics of Energy and the Environment
PHYSICS 20A	Introduction to Astronomy
PHYSICS 20B	Cosmology: Man's Place in the Universe
PHYSICS 20C	Observational Astronomy
PHYSICS 20D	Space Science

3.	
ECON 100A- 100B- 100C	Intermediate Economics I and Intermediate Economic II and Intermediate Economic III
ECON 142A- 142B- 142CW	Industrial Organization I and Industrial Organization II and Industrial Organization III
ECON 144A- 144B- 144CW	Urban Economics I and Urban Economics II and Urban Economics III
ECON 145E	Economics of the Environment
ECON 145L	Economics of Law
SOCIOL 31	Introduction to Social Psychology
SOCIOL 43	Urban Sociology
SOCIOL 44	Populations
SOCIOL 110	Research Methods
SOCIOL 141	Organizations
SOCIOL 147A	Cities and Social Change
SOCIOL 171	Environmental Sociology

Other courses may be substituted for approved electives by petition.

Concentration in Geosciences Education with Secondary Teaching Certification

This concentration allows students pursuing the B.A. in Environmental Science to earn a bachelor's degree and complete the required course work and field experience for a California Preliminary Single Subject Teaching Credential at the same time. With careful, early planning, it is possible for students to complete the bachelor's degree and the secondary teaching certification in four years.

For additional information about teacher certification requirements and enrollment procedures, see <http://gse.uci.edu/calteach>. Interested students are strongly encouraged to contact the Cal Teach Resource and Advising Center or the Physical Sciences Student Affairs Office.

Departmental Requirements

A. Select one of the following:

EARTHSS 1	Introduction to Earth System Science
EARTHSS 3	Oceanography
EARTHSS 5	The Atmosphere
EARTHSS 7	Physical Geology
EARTHSS 11	Climate Change and Policy
EARTHSS 13	Global-Change Biology
EARTHSS 15	Introduction to Global Climate Change
EARTHSS 17	Hurricanes, Tsunamis, and other Catastrophes
EARTHSS 21	On Thin Ice: Climate Change and the Cryosphere
EARTHSS 23	Air Pollution: From Urban Smog to Global Change

Complete:

EARTHSS 60A- 60B- 60C	Fundamental Processes in Earth and Environmental Studies and Local and Regional Environmental Issues and Global Environmental Issues
EARTHSS 114	Earth System Science Laboratory and Field Methods
EARTHSS 180	Environmental Sustainability I
EARTHSS 182	Environmental Sustainability II
EARTHSS 192	Careers in Earth System Science

B. Select one of the following sequences and accompanying labs:

CHEM 1A- 1B- 1C	General Chemistry and General Chemistry and General Chemistry
CHEM 1LC- 1LD	General Chemistry Laboratory and General Chemistry Laboratory
or	
CHEM H2A- H2B- H2C	Honors General Chemistry and Honors General Chemistry and Honors General Chemistry

CHEM H2LA- H2LB- H2LC	Honors General Chemistry Laboratory and Honors General Chemistry Laboratory and Honors General Chemistry Laboratory
-----------------------	---

Complete:

BIO SCI 93	From DNA to Organisms
BIO SCI 94	From Organisms to Ecosystems

C. Select three courses from the following:

MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
MATH 4	Mathematics for Economists
STATS 7	Basic Statistics
SOC SCI 9A- 9B- 9C	General Statistics and Probability I and General Statistics and Probability II and General Statistics and Probability III
SOC SCI 10A- 10B- 10C	Probability and Statistics in Social Sciences I and Probability & Statistics in Social Sciences II and Probability & Statistics in Social Sciences III
ECON 15A- 15B	Probability and Statistics in Economics I and Probability and Statistics in Economics II
EARTHSS 19	Introduction to Modeling the Earth System
EARTHSS 116	Data Analysis for Earth Sciences
EARTHSS 134	Fundamentals of GIS for Environmental Sciences

D. Select two courses from the following:

SOCIOL 1	Introduction to Sociology
SOCIOL 2	Global and International Sociology
SOCIOL 3	Introduction to Social Problems
ECON 13	Global Economy
ECON 20A- 20B	Basic Economics I and Basic Economics II
PP&D 4	Introduction to Urban Studies
PP&D 134	Human Ecology

Honors Program in Earth System Science

The Department of Earth System Science awards honors to students who have completed a customized year-long research program in their senior year. ESS honors students engage in advanced research, alongside faculty, research staff, and graduate students within well-equipped laboratories in Earth System Science. The program involves both conducting original research and communicating scientific findings.

The Honors Program in Earth System Science provides an opportunity for selected students majoring in Earth System Science or Environmental Science to pursue research with faculty in the Department during their senior year. Admission to the program is based on an application normally submitted by the sixth week of the spring quarter during the junior year.

To be considered for Departmental Honors, a student must have satisfied the following requirements:

1. Completion of all mathematics, chemistry, and physics requirements for the major;
2. Completion of EARTHSS 51-EARTHSS 53-EARTHSS 55 or EARTHSS 60A-EARTHSS 60B-EARTHSS 60C.
3. Achievement of an overall GPA at UCI of at least 3.3; and
4. Achievement of a GPA in Earth System Science courses of 3.4.

Students must also demonstrate potential for carrying out research of honors quality, as judged by the Earth System Science faculty member who will supervise their research. Application materials are available at <http://ess.uci.edu/undergrad/honors>.

Once admitted to the program, students will enroll in:

EARTHSS H199A- H199B- H199C	Honors Research in Earth System Science and Honors Research in Earth System Science and Honors Research in Earth System Science
EARTHSS H198	Honors Thesis in Earth System Science

In the Honors Research series, students will commit 10–15 hours a week to conduct research with an ESS faculty. At the end of each quarter, a written report is required.

In the Honors Thesis course, students will prepare and submit a seminar, poster, and written thesis describing their research. The thesis will be written in the style of a scientific manuscript, with separate abstract, introduction, methods, results and discussion sections. If the thesis is deemed honors quality by the ESS faculty and the student's final accumulative GPA is above 3.3, the student will graduate with Departmental Honors.

Minor in Earth and Atmospheric Sciences

The science of the Earth as a system has implications for many fields of study. Students interested in understanding how the Earth's systems work can complete the requirements for a minor in Earth and Atmospheric Sciences. The program is primarily designed for students in the natural sciences and engineering who wish to explore interdisciplinary problems and broaden their studies to include the application of their fields to understanding the Earth system.

NOTE: This minor is not available to students in the Earth System Science (B.S.) or Environmental Science (B.A.) majors.

Requirements for the Minor

Select one of the following series:

EARTHSS 51- 53- 55	Land Interactions and Ocean Biogeochemistry and Earth's Atmosphere
or	
EARTHSS 60A- 60B- 60C	Fundamental Processes in Earth and Environmental Studies and Local and Regional Environmental Issues and Global Environmental Issues

and select four electives from the approved elective list for the B.S. in Earth System Science major, at least two of which must be Earth System Science courses.

Graduate Program

The Earth, as a coupled system of atmosphere, ocean, land, and cryosphere, has changed in our lifetime. The observed depletion of stratospheric ozone at high latitudes has been attributed directly to industrial use of halocarbons. Global warming is likely to result from increases in the atmospheric concentrations of greenhouse gases, such as carbon dioxide and methane, which are released by the use of fossil fuel and agricultural practices. These examples illustrate the ability of humans to alter the global environment on the time-scale of decades. Understanding the sensitivity of the Earth's climate system requires a broad base of scientific knowledge, which includes detection, quantification, and prediction of the rates of change of chemical, physical, and biological variables.

The Department's doctoral program is aimed at training new research scientists in the field of Earth System Science. The graduate education provides a comprehensive curriculum, along with opportunities to conduct groundbreaking research. The Department's doctoral-level students are expected to become researchers with a global perspective and broad research skills as well as a high level of expertise in specific areas. Active programs of research are underway in atmospheric chemistry, biogeochemical cycles, and physical climate.

NOTE: Students are admitted to the Ph.D. program only; the master's degree is awarded upon progress to the Ph.D.

Course Requirements. Students must complete a minimum of 10 approved graduate-level courses, including the core curriculum, with an average grade of B or better. All courses must be approved by the student's advisor.

Core Curriculum

EARTHSS 202	Climate Change
EARTHSS 212	Geoscience Modeling and Data Analysis
EARTHSS 224	Ocean Processes
EARTHSS 226	Land Surface Processes
EARTHSS 228	Geophysical Fluid Dynamics
EARTHSS 240	Atmospheric Chemistry and Physics
EARTHSS 266	Global Biogeochemical Cycles
EARTHSS 298	Practicum in Earth System Science

Residency. Academic Senate regulations specify a minimum period of residence of six quarters for Ph.D. candidates. Enrollment in a minimum of 12 units of graduate/upper-division course work per quarter is required. Registration in every regular academic session is necessary until all requirements for the degree have been completed, unless a formal Leave of Absence is granted by the Graduate Division. All Ph.D. requirements must be completed within 15 quarters in residence (five years), excluding summer quarters. Exceptions must be put to a vote of the Earth System Science faculty. The maximum time permitted is seven years.

Comprehensive Examination. Progress toward the degree and readiness to begin research is assessed by a comprehensive examination covering breadth, general knowledge, and the ability to integrate and use information covered in the core curriculum and other course work. At the end of the spring quarter, the ESS Comprehensive Examination Committee administers the written and oral examinations. The oral comprehensive examination is offered after the written examination and provides an opportunity to clarify questions that arise from the student's performance on the written examination.

Teaching and Seminar. Students are required to complete a teaching assistant training program and to have a minimum of two quarters of experience as a teaching assistant, provided opportunities are available. Students can enroll in EARTHSS 399 while serving as a teaching assistant. Students are also expected to participate in the Earth System Science seminar.

Advance to Ph.D. Candidacy. Following completion of the Comprehensive Examination, those students who receive a recommendation to continue Ph.D. work will pursue research on a potential dissertation topic and then take the Advancement to Candidacy Examination. This oral examination is given by a faculty committee, including extra-departmental faculty. The normative time for advancement for candidacy is two years.

Dissertation. After advancing to candidacy, students are expected to be fully involved in research toward writing their Ph.D. dissertation. Students should keep in steady contact/interaction with their Doctoral Committee. A dissertation based on original research and demonstrating critical judgment, intellectual synthesis, creativity, and clarity in written communication is required for the Ph.D. degree. The dissertation must summarize the results of original research performed by the student under the supervision of a faculty member of the Department. The dissertation will be evaluated by the Dissertation Committee, based on suitability for publication in a peer-reviewed journal of high editorial standards. The dissertation may be a compilation of published papers or manuscripts accepted for publication, so long as the candidate has produced a major proportion of the material independently. The Dissertation Committee approves the format and content, which must meet University requirements for style, format, and appearance.

Doctor of Philosophy in Earth System Science

1. Completion of course work (10 courses, including core courses)
2. Six quarters in residence at UCI
3. Completion of the Comprehensive Examination, with recommendation to continue for the Ph.D.
4. Completion of the teaching and seminar requirements
5. Pass the Advancement to Candidacy Examination
6. Presentation of an open research seminar
7. Submission of an acceptable doctoral dissertation and formal defense.

Master of Science in Earth System Science

1. Completion of course work (8 courses, including core courses)
2. Three quarters in residence at UCI
3. Completion of the Comprehensive Examination.

Faculty

Ralph J. Cicerone, Ph.D. University of Illinois, *Chancellor Emeritus and Professor Emeritus of Earth System Science* (atmospheric and analytical chemistry)

Claudia Czimczik, Ph.D. Max-Planck Institute for Biogeochemistry and Friedrich Schiller University Jena, *Assistant Professor of Earth System Science* (terrestrial biogeochemistry)

Steven J. Davis, J.D. University of Virginia; Ph.D. Stanford University, *Assistant Professor of Earth System Science* (human dimensions of climate change)

Ellen R. M. Druffel, Ph.D. University of California, San Diego, *Professor of Earth System Science* (chemical oceanography and biogeochemistry)

Todd K. Dupont, Ph.D. Pennsylvania State University, *Assistant Professor of Earth System Science* (cryospheric change, glaciology, ice sheet dynamics)

James S. Famiglietti, Ph.D. Princeton University, *Director of the UC Center for Hydrologic Modeling and Professor of Earth System Science and of Civil and Environmental Engineering* (hydrology and climate)

Julie E. Ferguson, Ph.D. University of Oxford, *Lecturer with Potential Security of Employment, Earth System Science* (paleoclimatology)

Michael L. Goulden, Ph.D. Stanford University, *Department Chair and Professor of Earth System Science, and Professor of Ecology and Evolutionary Biology* (terrestrial ecology)

Kathleen R. Johnson, Ph.D. University of California, Berkeley, *Assistant Professor of Earth System Science* (paleoclimatology)

Saewung Kim, Ph.D. Georgia Institute of Technology, *Assistant Professor of Earth System Science* (atmospheric chemistry)

Gudrun Magnusdottir, Ph.D. Colorado State University, *Professor of Earth System Science* (atmospheric dynamics)

Adam C. Martiny, Ph.D. Technical University of Denmark, *Associate Professor of Earth System Science and of Ecology and Evolutionary Biology* (microbial oceanography)

J. Keith Moore, Ph.D. Oregon State University, *Associate Professor of Earth System Science* (biogeochemistry)

Michael Prather, Ph.D. Yale University, *Director of the UCI Environment Institute, Professor of Earth System Science, and Fred Kavli Chair in Earth System Science* (atmospheric chemistry)

Francois W. Primeau, Ph.D. Massachusetts Institute of Technology/Woods Hole Oceanographic Institution, *Associate Professor of Earth System Science* (physical oceanography)

Michael S. Pritchard, Ph.D. University of California, San Diego, Scripps Institution of Oceanography, *Assistant Professor of Earth System Science* (atmospheric sciences)

James T. Randerson, Ph.D. Stanford University, *UCI Chancellor's Professor of Earth System Science and of Ecology and Evolutionary Biology* (biogeochemistry)

William S. Reece, Ph.D. The Johns Hopkins University, *Professor Emeritus of Earth System Science* (biogeochemistry)

Eric Rignot, Ph.D. University of Southern California, *Professor of Earth System Science* (glaciology)

Eric S. Saltzman, Ph.D. University of Miami, *Professor of Earth System Science* (atmospheric chemistry)

Susan E. Trumbore, Ph.D. Columbia University, *Professor of Earth System Science* (isotope biogeochemistry)

Isabella Velicogna, Ph.D. University of Trieste, *Associate Professor of Earth System Science* (geodesy, glaciology, hydrology)

Laurel L. Wilkening, Ph.D. University of California, San Diego, *Chancellor Emerita and Professor Emerita of Earth System Science* (planetary science)

Jin-Yi Yu, Ph.D. University of Washington, *Professor of Earth System Science* (climate dynamics)

Charles S. Zender, Ph.D. University of Colorado, *Professor of Earth System Science* (atmospheric physics and radiation)

Affiliated Faculty

Steven D. Allison, Ph.D. Stanford University, *Assistant Professor of Ecology and Evolutionary Biology and of Earth System Science* (microbial biogeochemistry)

Donald R. Blake, Ph.D. University of California, Irvine, *UCI Distinguished Professor of Chemistry and Earth System Science* (atmospheric chemistry)

Kristen A. Davis, Ph.D. Stanford University, *Assistant Professor of Civil and Environmental Engineering* (coastal oceanography)

Soroosh Sorooshian, Ph.D. University of California, Los Angeles, *Director of the Center for Hydrometeorology and Remote Sensing (CHRS) and UCI Distinguished Professor of Civil and Environmental Engineering and of Earth System Science* (hydrology)

Kathleen K. Treseder, Ph.D. Stanford University, *UCI Chancellor's Fellow and Professor of Ecology and Evolutionary Biology and of Earth System Science* (microbial biogeochemistry)

Jasper A. Vrugt, Ph.D. University of Amsterdam, Assistant Professor of Civil and Environmental Engineering and of Earth System Science (environmental systems modeling)

Courses

EARTHSS 1. Introduction to Earth System Science. 4 Units.

Covers the origin and evolution of the Earth, its atmosphere, and oceans, from the perspective of biogeochemical cycles, energy use, and human impacts on the Earth system.

Overlaps with EARTHSS 25.

(II, Va)

EARTHSS 3. Oceanography. 4 Units.

Examines circulation of the world oceans and ocean chemistry as it relates to river, hydrothermal vent, and atmospheric inputs. Geological features, the wide variety of biological organisms, and global climate changes, such as greenhouse warming, are also studied.

(II, Va)

EARTHSS 5. The Atmosphere. 4 Units.

The composition and circulation of the atmosphere with a focus on explaining the fundamentals of weather and climate. Topics include solar and terrestrial radiation, clouds, and weather patterns.

(II, Va)

EARTHSS 7. Physical Geology. 4 Units.

Introduction to Earth materials and processes. Topics include rocks and minerals, plate tectonics, volcanoes, earthquakes, Earth surface processes, Earth resources, geologic time, and Earth history. Laboratory work involves hands-on study of geologic materials, maps, and exercises pertaining to geologic processes.

(II, Va)

EARTHSS 11. Climate Change and Policy. 4 Units.

Develops an understanding of the physical basis behind global climate change; examines how human activities cause it, looks to future rates and impacts of global warming, and reviews the international conventions, protocols, and scientific assessments of climate change.

(II)

EARTHSS 13. Global-Change Biology. 4 Units.

Addresses ways in which humans are altering the global environment, with consequences for the ecology of animals, plants, and microbes. Discussion on how these biologically oriented questions relate to human society, politics, and the economy.

Same as BIO SCI 9K.

(II)

EARTHSS 15. Introduction to Global Climate Change. 4 Units.

Introduction of scientific, technological, environmental, economic, and social aspects underlying the threat and understanding of global climate change. Human and natural drivers of climate. Impacts of climate on natural, managed, and human systems, including their vulnerability and ability to adapt.

(II and (VA or VIII).)

EARTHSS 17. Hurricanes, Tsunamis, and other Catastrophes. 4 Units.

Introduction to the basic science and state of predictability of various natural catastrophic events including earthquakes, volcanic eruptions, tsunamis, landslides, floods, hurricanes, fires, and asteroid impacts and their interactions and implications with human society in the U.S. and globally.

(II and (VA or VIII).)

EARTHSS 19. Introduction to Modeling the Earth System. 4 Units.

Simulate the Earth's system using computer models. Covers the interaction of the air, land, and ocean, and explores how changes to one part of the environment affect the complete Earth system. Utilizes technological tools to understand scientific principles.

(II, Vb)

EARTHSS 21. On Thin Ice: Climate Change and the Cryosphere. 4 Units.

Introduction of the basic science that governs the cryosphere and its interaction with the climate system. Covers some of the significant economic, sociological, and political consequences of the recent melting of the cryosphere driven by anthropogenic climate change.

(II and (VA or VIII).)

EARTHSS 23. Air Pollution: From Urban Smog to Global Change . 4 Units.

Air pollution occurs on regional to global scales. A wide range of air pollution sources and physical, chemical, and meteorological sciences behind air pollution are introduced. The consequences of air pollution to our society are also discussed.

(II and (VA or VIII).)

EARTHSS 51. Land Interactions. 4 Units.

The role of terrestrial processes in the Earth system. Provides an introduction to ecosystem processes that regulate the cycling of energy, water, carbon, and nutrients. Analysis of the impact of human activities.

Prerequisite: CHEM 1C.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 53. Ocean Biogeochemistry. 4 Units.

Overview of oceanography for those interested in earth system science. Focus is on physical, chemical, and biological processes that drive biogeochemical cycling in the oceans. Coastal systems also reviewed, with emphasis on California waters.

Prerequisite: CHEM 1C. Prerequisite or corequisite: MATH 2B or AP Calculus BC exam with a minimum score of 4.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 55. Earth's Atmosphere. 4 Units.

Composition, physics, and circulation of Earth's atmosphere with an emphasis on explaining the role of atmospheric processes in shaping the climate system. Topics include: atmospheric composition, the global energy balance, radiative transfer and climate, atmospheric circulation and climate sensitivity.

Corequisite: MATH 2B or PHYSICS 3B or PHYSICS 7B.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 60A. Fundamental Processes in Earth and Environmental Studies. 4 Units.

An introduction to the physical environment, biological systems, and human-environment interactions. Explores physical principles such as fluid transport and reaction rates using environmental examples as well as principles of populations, ecosystems, carrying capacity, and sustainable use of resources.

Corequisite: EARTHSS 1 or EARTHSS 25 or UNI STU 13A.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 60B. Local and Regional Environmental Issues. 4 Units.

An introduction to common environmental issues using case studies from Orange County and California. Studies natural hazards as well as human-caused problems with air quality, water quality, coastal pollution, ecosystem degradation, and urban climate.

Prerequisite: (EARTHSS 60A or EARTHSS 25) and (CHEM 1B or CHEM H2B).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 60C. Global Environmental Issues. 4 Units.

An overview of global environmental changes including climate change, sea level rise, biodiversity loss, land and ocean degradation, and resource depletion. Discusses scientific, cultural, historical, and policy dimensions of these issues as well as possible solutions.

Prerequisite: (EARTHSS 60A or EARTHSS 25) and (CHEM 1B or CHEM H2B).

EARTHSS H90. The Idiom and Practice of Science. 4 Units.

A series of fundamental and applied scientific problems are addressed, illustrating the pervasive role of mathematical analysis. Topics may include energy utilization, the climate system, the "greenhouse effect," zone depletion and air pollution, ecological consequences of water pollution, nutrient cycles.

Restriction: Campuswide Honors Program students only.

(II, Va)**EARTHSS 101. Paleoclimatology. 4 Units.**

Explores past changes in Earth's climate. Topics include tools and techniques used to reconstruct past climate from natural archives; records and mechanisms of past climate changes throughout Earth history; and lessons learned from the paleo-record for predication of future climate.

Prerequisite: (EARTHSS 60A and EARTHSS 60B and EARTHSS 60C) or (EARTHSS 51 and EARTHSS 53 and EARTHSS 55).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 110. Environmental Controversies. 4 Units.

Examines the roles and strategies of advocacy groups, scientists, lobbyists, celebrities, pundits, politicians, and other opinion-makers in creating and shaping public opinion on controversial environmental issues. Use and misuse of science to influence public opinion is elicited.

Prerequisite: (EARTHSS 60A and EARTHSS 60B and EARTHSS 60C) or (EARTHSS 51 or EARTHSS 53 or EARTHSS 55).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 112. Global Climate Change and Impacts. 4 Units.

Observations over the 20th century show extensive changes in atmospheric composition, climate and weather, and biological systems that have paralleled industrial growth. Evidence of globally driven changes in these biogeochemical systems is studied, including projected impacts over the 21st century.

Prerequisite: (EARTHSS 51 and EARTHSS 53 and EARTHSS 55) or (EARTHSS 60A and EARTHSS 60B and EARTHSS 60C).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

Concurrent with EARTHSS 222.

EARTHSS 114. Earth System Science Laboratory and Field Methods. 4 Units.

Introduction to methods used to measure exchange of gases and energy between the atmosphere and terrestrial ecosystems. Laboratories include data acquisition and isotopic and chromatographic analysis. Field measurements at UCI's Marsh Reserve include microclimate, hydrology, trace-gas exchange, and plant growth.

Prerequisite: EARTHSS 51 or EARTHSS 60A.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 116. Data Analysis for Earth Sciences. 4 Units.

Analysis and interpretation of geophysical data, including functional fitting, probability density functions, and multidimensional time-series methods, with applications in atmospheric, oceanic, and biogeochemical sciences.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 118. Advanced Data Analysis and Modeling. 4 Units.

Covers advanced data analysis and modeling techniques for applications within Earth system science. These applications will come from variety of Earth science (writ large) problems. Students will gain programming proficiency by implementing computational methods in MATLAB.

Prerequisite: EARTHSS 116 and (MATH 2B or AP Calculus BC exam with a minimum score of 4).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 122. Atmospheric Dynamics. 4 Units.

Fluid dynamical processes that determine the large-scale flow of the atmosphere and ocean. Most important are interactions between the density stratification and the Coriolis force associated with Earth's rotation. Topics include circulation, vorticity, planetary waves and their role in climate.

Prerequisite: EARTHSS 55 and MATH 2D and (PHYSICS 7B or PHYSICS 7C).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 124. Weather Analysis. 4 Units.

Provides an overview of weather systems in midlatitudes and tropics. The fundamental dynamics possible for these weather systems are described. Elementary weather analysis and forecasting techniques are introduced.

Prerequisite: EARTHSS 55 or EARTHSS 60A.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 130. Physical Oceanography. 4 Units.

Physical processes that determine the distribution of water properties such as salt and temperature. Fluid-dynamical underpinnings of physical oceanography. Wave motions. The wind-driven and thermohaline circulation. Similarities and differences between ocean and atmosphere dynamics.

Prerequisite: MATH 2D and (PHYSICS 7B or PHYSICS 7C).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 132. Terrestrial Hydrology. 4 Units.

Comprehensive treatment of modern conceptual and methodological approaches to hydrological science. Combines qualitative understanding of hydrological processes with quantitative representation, approaches to measurement, and treatment of uncertainty. Components of the hydrological cycle and their linkages within the coupled Earth system.

Prerequisite: EARTHSS 60A or EARTHSS 51.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

Concurrent with EARTHSS 232

EARTHSS 134. Fundamentals of GIS for Environmental Sciences. 4 Units.

Introduction to Geographic Information Systems (GIS). Topics include fundamentals of cartography, creating/editing GIS data, linking spatial and tabular data, georeferencing, map projections, geospatial analysis, spatial statistics and the development of GIS models. Examples from hydrology, ecology, and geology.

Prerequisite: EARTHSS 60A or EARTHSS 60C or EARTHSS 51 or EARTHSS 53.

Overlaps with CRM/LAW C148.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 138. Satellite Remote Sensing for Earth System Science. 4 Units.

Satellite remote sensing data are increasingly used to study the Earth system. Provides an overview of the principles behind remote sensing, and the types of satellite data available for study of the oceans, land, and atmosphere.

Prerequisite: EARTHSS 51 or EARTHSS 53 or EARTHSS 60A or EARTHSS 60C.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 140. Advanced Geology. 4 Units.

Introduces students to the geological processes which have formed and continue to shape the Earth. Topics will include geological time, minerals and the rock cycle, plate tectonics and associated geological hazards, earth resources, and earth surface processes.

Prerequisite: EARTHSS 51 or EARTHSS 60A.

Overlaps with EARTHSS 7.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 142. Atmospheric Chemistry. 4 Units.

Chemistry of the troposphere and stratosphere. Topics include: processes controlling the lifetime and reaction pathways of chemicals in the atmosphere, the role of the atmosphere in biogeochemical cycles, and interactions between atmospheric chemistry and the physical climate system.

Prerequisite: (CHEM 1C or CHEM H2C) and (MATH 2B or AP Calculus BC exam with a minimum score of 4).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 144. Marine Geochemistry and Biogeochemistry. 4 Units.

Processes controlling the major and minor element composition of seawater and element distributions in the ocean. Gas exchange, carbon dioxide system, stable isotopes, radionuclides as tracers and chronometers, particle fluxes, organic geochemistry, sediment geochemistry, global cycles of biogeochemically important elements.

Prerequisite: (EARTHSS 53 or EARTHSS 60A) and EARTHSS 60C.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 146. Consequences of Air Pollution. 4 Units.

From public health to the global climate system this course will explore the impacts of air pollution from the beginning of human history to current and emerging issues. Scientific concepts behind air pollution and solutions will be discussed.

Prerequisite: (EARTHSS 60A and EARTHSS 60B and EARTHSS 60C) or (EARTHSS 51 and EARTHSS 53 and EARTHSS 55).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 150. Laboratory Methods in Earth Systems Science. 4 Units.

Introduction to analytical methods used in Earth science research. Lectures cover theory and applications of each method. Laboratories cover sample preparation, experimental design, standardization and calibration, operation of analytical instruments (mass spectrometers, gas chromatographs, and spectrophotometers), and analysis of data.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

Concurrent with EARTHSS 250.

EARTHSS 164. Ecosystem Ecology. 4 Units.

A mechanistic perspective on ecosystem processes. Covers ecosystem development, element cycling, and interactions with plants and microbes. The role of ecosystems in environmental change is also addressed.

Prerequisite: CHEM 51C.

Same as BIO SCI E118.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

Concurrent with EARTHSS 264.

EARTHSS 168. Physiological Plant Ecology. 4 Units.

An examination of the interactions between plants and their environment. Emphasis on the underlying physiological mechanisms of plant function, adaptations and responses to stress, and the basis of the distribution of plants and plant assemblages across the landscape.

Prerequisite: (EARTHSS 51 or EARTHSS 60A) and (EARTHSS 60C or BIO SCI E106).

Same as BIO SCI E127.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

Concurrent with EARTHSS 268.

EARTHSS 170. Environmental Microbiology. 4 Units.

Establishes a fundamental understanding of microbes living in the environment, including their distribution, diversity, and biochemistry, and discusses how they attribute to global biogeochemical cycles.

Prerequisite: (EARTHSS 53 or EARTHSS 60A) and (EARTHSS 60C or BIO SCI E106).

Same as BIO SCI E163.

Concurrent with EARTHSS 270.

EARTHSS 172. Science Communication and Outreach. 2 Units.

Students learn and practice effective science communication skills useful in public and educational outreach. Topics include research explication, language scaffolding, educational psychology, oral presentation techniques, K-12 science standards, and effective writing styles for op-eds, blogs, and Web sites.

Prerequisite: EARTHSS 51 or EARTHSS 60A.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

Concurrent with EARTHSS 272.

EARTHSS 174. Ice in the Climate System. 4 Units.

Examines the major components of the Earth's cryosphere. Characteristics, volume, extent, remote sensing observations, long-term trends, mass balance, key physical processes, relevance and importance to the climate system, responses and feedbacks, future evolution, and key uncertainties will be discussed.

Prerequisite: (EARTHSS 60A and EARTHSS 60B and EARTHSS 60C) or (EARTHSS 51 and EARTHSS 53 and EARTHSS 55).

Restriction: Earth System Science and Environmental Science majors have first consideration for enrollment.

Concurrent with EARTHSS 274.

EARTHSS 178. Solving the Energy-Carbon-Climate Problem. 4 Units.

Why is climate change such a difficult problem? What can we do about it? The course will introduce the global politics of energy and climate, assess options for decreasing energy demand, generating low-carbon energy, sequestering carbon, geoengineering, and adaptation.

Prerequisite: (EARTHSS 60A and EARTHSS 60B and EARTHSS 60C) or (EARTHSS 51 and EARTHSS 53 and EARTHSS 55).

Restriction: Earth System Science majors and Environmental Science majors have first consideration for enrollment.

EARTHSS 180. Environmental Sustainability I. 4 Units.

Provides an introduction to sustainability from different points of view; historical, scientific, political, ethical, and economic.

Same as PP&D 131.

Restriction: Urban Studies and Social Ecology majors have first consideration for enrollment.

EARTHSS 182. Environmental Sustainability II. 4 Units.

Investigates how sustainability can be implemented in a variety of contexts including water, energy, non-renewable resources, biodiversity, and urban policy, and also how it could be measured.

Same as PP&D 132.

Restriction: Urban Studies, Social Ecology, Earth System Science, and Environmental Science majors have first consideration for enrollment.

EARTHSS 190A. Senior Seminar on Global Sustainability I. 2 Units.

Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations. Prepare bibliography.

Prerequisite: BIO SCI 65 and ENVIRON E20 and EARTHSS 10.

Grading Option: In progress only.

Same as BIO SCI 191A, SOCECOL 186A.

Restriction: Seniors only.

EARTHSS 190B. Senior Seminar on Global Sustainability II. 2 Units.

Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations. Prepare research proposal.

Prerequisite: BIO SCI 191A or SOCECOL 186A or EARTHSS 190A.

Grading Option: In progress only.

Same as BIO SCI 191B, SOCECOL 186B.

Restriction: Seniors only.

EARTHSS 190C. Senior Seminar on Global Sustainability III. 4 Units.

Weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations and to prepare senior research paper. Prepare/write research paper under the direction of a faculty member.

Prerequisite: BIO SCI 191B or EARTHSS 190B or SOCECOL 186B.

Same as BIO SCI 191C, SOCECOL 186C.

Restriction: Seniors only.

EARTHSS 190CW. Writing/Senior Seminar on Global Sustainability III. 4 Units.

Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze Forum presentations and to prepare senior research paper. Prepare/write research paper under direction of faculty member.

Prerequisite: BIO SCI 191B or EARTHSS 190B or SOCECOL 186B.

Satisfactory completion of the Lower-Division Writing requirement.

Same as BIO SCI 191CW, SOCECOL 186CW.

Restriction: Seniors only.

(Ib)**EARTHSS 191. Title Introduction to Research in Earth System Science. 1 Unit.**

Weekly presentations by Earth System Science faculty describing ongoing research in their laboratories. The goals are to introduce students to the range of research topics and methods in Earth System Science and to the research opportunities available within the Department.

Grading Option: Pass/no pass only.

Restriction: Upper-division students only. Earth System Science and Environmental Science majors have first consideration for enrollment. Earth and Atmospheric Sciences minors have first consideration for enrollment.

EARTHSS 192. Careers in Earth System Science. 1 Unit.

A weekly seminar course designed to help students transition to post-graduation career paths. Topics include designing effective resumes, applying to graduate school, and seeking employment. Also includes presentations by faculty, business, and government leaders describing potential environmental science career trajectories.

Grading Option: Pass/no pass only.

Restriction: Seniors only. Earth System Science and Environmental Science majors have first consideration for enrollment.

EARTHSS 197. Independent Study in Earth System Science. 1-4 Units.

Field study, educational outreach, or other independent projects under faculty direction. Interested students should arrange with an ESS faculty member to supervise and support an independent study project. A written summary is required at the end of each quarter.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit for 12 units.

EARTHSS 198. Senior Thesis in Earth System Science. 4 Units.

Students receive guidance on the effective oral and written communication of research results. Students prepare and present a seminar, a poster, and a written thesis describing their research in Earth System Science.

Prerequisite: Two quarters of EARTHSS 199.

Overlaps with EARTHSS H198.

EARTHSS 198W. Senior Thesis in Earth System Science. 4 Units.

Students receive guidance on the effective oral and written communication of research results. Students prepare and present a seminar, a poster, and a written thesis describing their research in Earth System Science.

Prerequisite: Two quarters of EARTHSS 199. Satisfactory completion of the Lower-Division Writing requirement.

Overlaps with EARTHSS H198.

(Ib)

EARTHSS H198. Honors Thesis in Earth System Science. 4 Units.

Students receive guidance on effective written and oral communication of research results. Students prepare and present a seminar, poster, and written thesis describing their honors research in Earth System Science. Submission of the thesis and successful completion of this course will also satisfy the UCI upper-division writing requirement.

Prerequisite: EARTHSS 199A and EARTHSS 199B

Restriction: Consent of instructor to enroll and Prerequisite required

(Ib)

EARTHSS 199. Undergraduate Research. 1-4 Units.

For junior and senior undergraduates, preferably with majors in science or engineering. Interested students should arrange with an ESS faculty member to supervise and support a research project. A written summary is required at the end of each quarter.

Repeatability: May be taken for credit for 12 units.

Restriction: Juniors and Seniors only.

EARTHSS H199A. Honors Research in Earth System Science. 4 Units.

Undergraduate honors research in Earth System Science. A student commitment of 10-15 hours a week is expected, and a written report is required at the end of the quarter.

Restriction: Earth System Science Honors Program students only. Earth System Science majors only. Campuswide Honors Program students only.

EARTHSS H199B. Honors Research in Earth System Science. 4 Units.

Undergraduate honors research in Earth System Science. A student commitment of 10-15 hours a week is expected, and a written report is required at the end of the quarter.

Restriction: Earth System Science Honors Program students only. Earth System Science majors only. Campuswide Honors Program students only.

EARTHSS H199C. Honors Research in Earth System Science. 4 Units.

Undergraduate honors research in Earth System Science. A student commitment of 10-15 hours a week is expected, and a written report is required at the end of the quarter.

Restriction: Earth System Science Honors Program students only. Earth System Science majors only. Campuswide Honors Program students only.

EARTHSS 202. Climate Change. 4 Units.

Explores past, present, and projected changes in Earth's climate. Topics include paleoclimate records and mechanisms of natural climate variability at a range of timescales (orbital to seasonal); General Circulation Models; and IPCC observations and projections of future climate change.

Restriction: Graduate students only.

EARTHSS 208B. Global Biogeochemical Cycles. 2 Units.

Global biogeochemical cycling of the elements. Topics include: global cycling of carbon, nitrogen, oxygen, and sulfur; impact of human activities on biogeochemical processes.

EARTHSS 212. Geoscience Modeling and Data Analysis. 4 Units.

Computer-based course. Fundamental statistical techniques needed to analyze Earth system data and models. Basic numerical techniques to solve Earth system models. Focuses on linear and non-linear ordinary differential equations, as well as simple partial differential equations.

Restriction: Graduate students only.

EARTHSS 222. Global Climate Change and Impacts. 4 Units.

Observations over the 20th century show extensive changes in atmospheric composition, climate and weather, and biological systems that have paralleled industrial growth. Evidence of globally driven changes in these biogeochemical systems is studied, including projected impacts over the 21st century.

Concurrent with EARTHSS 112.

EARTHSS 224. Ocean Processes. 4 Units.

Introduction to the physics, chemistry, and biology of the oceans. Offers a mechanistic perspective of the structure and functioning of marine ecosystems, nutrient cycles, and role of ecosystem dynamics in local and global biogeochemistry.

Restriction: Graduate students only.

EARTHSS 226. Land Surface Processes. 4 Units.

Introduction to the physics, chemistry, and biology of the oceans. Offers a mechanistic perspective of the structure and functioning of marine ecosystems, nutrient cycles, and role of ecosystem dynamics in local and global biogeochemistry.

Restriction: Graduate students only.

EARTHSS 228. Geophysical Fluid Dynamics. 4 Units.

Introduces fluid dynamical processes that determine the large-scale flow of the atmosphere and ocean, with particular emphasis on the interactions between the stable density stratification and the Coriolis force associated with Earth's rotation.

Restriction: Graduate students only.

EARTHSS 232. Terrestrial Hydrology. 4 Units.

Comprehensive treatment of modern conceptual and methodological approaches to hydrological science. Combines qualitative understanding of hydrological processes with quantitative representation, approaches to measurement, and treatment of uncertainty. Components of the hydrological cycle and their linkages within the coupled Earth system.

Prerequisite: EARTHSS 60A or EARTHSS 51.

Concurrent with EARTHSS 132

EARTHSS 236. Radiative Processes and Remote Sensing. 4 Units.

Solar and terrestrial radiation and Earth system interaction. Radiative transfer theory. Principles, applications of remote sensing of environment. Planck's law, radiative transfer equation, radiative properties of trace gasses and aerosols, remote sensing techniques, global trends in radiative forcing.

Prerequisite: MATH 2D and PHYSICS 7A and PHYSICS 7B and PHYSICS 7D.

EARTHSS 240. Atmospheric Chemistry and Physics. 4 Units.

Examines the physical/chemical processes which determine the structure and composition of Earth's atmosphere and its role in the climate system.

Restriction: Graduate students only.

EARTHSS 250. Laboratory Methods in Earth System Science. 4 Units.

Introduction to analytical methods used in Earth science research. Lectures cover theory and applications of each method. Laboratories cover sample preparation, experimental design, standardization and calibration, operation of analytical instruments (mass spectrometers, gas chromatographs, and spectrophotometers), and analysis of data.

Concurrent with EARTHSS 150.

EARTHSS 264. Ecosystem Ecology . 4 Units.

A mechanistic perspective on ecosystem processes. Covers ecosystem development, element cycling, and interactions with plants and microbes. The role of ecosystems in environmental change is also addressed.

Prerequisite: CHEM 51C.

Concurrent with EARTHSS 164 and BIO SCI E118.

EARTHSS 266. Global Biogeochemical Cycles. 4 Units.

Global biogeochemical cycling of the elements. Topics include global cycling of carbon, nitrogen, oxygen, and sulfur; impact of human activities on biogeochemical processes.

Restriction: Graduate students only.

EARTHSS 268. Physiological Plant Ecology. 4 Units.

An examination of the interactions between plants and their environment. Emphasis on the underlying physiological mechanisms of plant function, adaptations and responses to stress, and the basis of the distribution of plants and plant assemblages across the landscape.

Prerequisite: (EARTHSS 51 or EARTHSS 60A) and (EARTHSS 60C or BIO SCI E106).

Concurrent with EARTHSS 168 AND BIO SCI E127.

EARTHSS 270. Environmental Microbiology. 4 Units.

Establishes a fundamental understanding of microbes living in the environment, including their distribution, diversity, and biochemistry, and discusses how they attribute to global biogeochemical cycles.

Prerequisite: (EARTHSS 53 or EARTHSS 60A) and (EARTHSS 60C or BIO SCI E106).

Concurrent with EARTHSS 170 and BIO SCI E163.

EARTHSS 272. Science Communication and Outreach. 2 Units.

Students learn and practice effective science communication skills useful in public and educational outreach. Topics include research explication, language scaffolding, educational psychology, oral presentation techniques, K-12 science standards, and effective writing styles for op-eds, blogs, and Web sites.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Concurrent with EARTHSS 172.

EARTHSS 280A. Special Topics in Earth System Science. 1-4 Units.

Each quarter is devoted to current topics in the field of Earth System Science. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

EARTHSS 280B. Special Topics in Earth System Science. 1-4 Units.

Each quarter is devoted to current topics in the field of Earth System Science. Topics addressed vary each quarter.

Prerequisite: EARTHSS 280A.

Repeatability: Unlimited as topics vary.

EARTHSS 280C. Special Topics in Earth System Science. 1-4 Units.

Each quarter is devoted to current topics in the field of Earth System Science. Topics addressed vary each quarter.

Prerequisite: EARTHSS 280B.

Repeatability: Unlimited as topics vary.

EARTHSS 282A. Special Topics in Climate. 1-4 Units.

Each quarter is devoted to in-depth analysis of an important and rapidly developing area in the field of climate dynamics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EARTHSS 282B. Special Topics in Climate. 1-4 Units.

Each quarter is devoted to in-depth analysis of an important and rapidly developing area in the field of climate dynamics. Topics addressed vary each quarter.

Prerequisite: EARTHSS 282A.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EARTHSS 282C. Special Topics in Climate. 1-4 Units.

Each quarter is devoted to in-depth analysis of an important and rapidly developing area in the field of climate dynamics. Topics addressed vary each quarter.

Prerequisite: EARTHSS 282B.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EARTHSS 284A. Special Topics in Atmospheric Chemistry. 1-4 Units.

Each quarter is devoted to current topics in the field of Atmospheric Chemistry. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

EARTHSS 284B. Special Topics in Atmospheric Chemistry. 1-4 Units.

Each quarter is devoted to current topics in the field of Atmospheric Chemistry. Topics addressed vary each quarter.

Prerequisite: EARTHSS 284A.

Repeatability: Unlimited as topics vary.

EARTHSS 284C. Special Topics in Atmospheric Chemistry. 1-4 Units.

Each quarter is devoted to current topics in the field of Atmospheric Chemistry. Topics addressed vary each quarter.

Prerequisite: EARTHSS 284B.

Repeatability: Unlimited as topics vary.

EARTHSS 286A. Special Topics in Biogeochemistry. 1-4 Units.

Each quarter is devoted to in-depth analysis of a subarea in biogeochemistry which is undergoing rapid development. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EARTHSS 286B. Special Topics in Biogeochemistry. 1-4 Units.

Each quarter is devoted to in-depth analysis of a subarea in biogeochemistry which is undergoing rapid development. Topics addressed vary each quarter.

Prerequisite: EARTHSS 286A.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EARTHSS 286C. Special Topics in Biogeochemistry. 1-4 Units.

Each quarter is devoted to in-depth analysis of a subarea in biogeochemistry which is undergoing rapid development. Topics addressed vary each quarter.

Prerequisite: EARTHSS 286B.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EARTHSS 288A. Special Topics in Ecosystems. 1-4 Units.

Each quarter is devoted to current topics relating to Ecosystems. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

EARTHSS 288B. Special Topics in Ecosystems. 1-4 Units.

Each quarter is devoted to current topics relating to Ecosystems. Topics addressed vary each quarter.

Prerequisite: EARTHSS 288A.

Repeatability: Unlimited as topics vary.

EARTHSS 288C. Special Topics in Ecosystems. 1-4 Units.

Each quarter is devoted to current topics relating to Ecosystems. Topics addressed vary each quarter.

Prerequisite: EARTHSS 288B.

Repeatability: Unlimited as topics vary.

EARTHSS 290. Seminar. 1 Unit.

Weekly seminars and discussions on topics of general and current interest in Earth System Science. Topics addressed vary each quarter.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EARTHSS 291. Research Seminar. 1-4 Units.

Detailed discussions of ongoing research in earth system science. Format, content, and frequency of the course are variable.

Repeatability: May be repeated for credit unlimited times.

EARTHSS 298. Practicum in Earth System Science. 4 Units.

Designed to introduce first-year graduate students to research. Students explore research opportunities and develop a proposal for a summer research project under the direction of a faculty mentor.

Restriction: Graduate students only.

EARTHSS 299. Research. 2-12 Units.

Supervised original research in areas of Earth System Science.

Repeatability: May be repeated for credit unlimited times.

EARTHSS 399. University Teaching. 1-4 Units.

Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Department of Mathematics

340 Rowland Hall; (949) 824-5503

<http://www.math.uci.edu/>

Hong-Kai Zhao, **Department Chair**

The Department of Mathematics is engaged in teaching and in fundamental research in a wide variety of basic mathematical disciplines, and offers undergraduate and graduate students the opportunity to fashion

a thorough program of study leading to professional competence in mathematical research or in an area of application.

The curriculum in mathematics includes opportunities for supervised individual study and research and is augmented by seminars and colloquia. It is designed to be compatible with curricular structures at other collegiate institutions in California in order to enable students transferring to UCI to continue their programs of mathematics study.

Undergraduate Program

The Department offers a B.S. degree in Mathematics. Within this program there are six tracks; besides the standard track, there are five specializations or concentrations (in Mathematical Biology, Mathematical Finance, Applied and Computational Mathematics, Mathematics for Education, and Mathematics for Education/Secondary Teaching Certification). In addition, the Department offers minors in Mathematics and Mathematics for Biology.

Undergraduate mathematics courses are of several kinds: courses preparatory to advanced work in mathematics, the exact sciences, and engineering; courses for students of the social and biological sciences; and courses for liberal arts students and those planning to enter the teaching field.

Admission to the Major

Students may be admitted to the Mathematics major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall and who have satisfactorily completed the required course work of one year of approved calculus. Additional course work in multivariable calculus, linear algebra, and differential equations is strongly recommended.

Requirements for the B.S. Degree in Mathematics

All students must meet the University Requirements (p. 60). School Requirements: None.

Core Requirements for all Mathematics Majors

Lower-Division Requirements:

A. Complete:

MATH 2A- 2B	Single-Variable Calculus and Single-Variable Calculus
MATH 2D or MATH H2D	Multivariable Calculus Honors Multivariable Calculus
MATH 3A	Introduction to Linear Algebra
MATH 3D	Elementary Differential Equations
MATH 13	Introduction to Abstract Mathematics

B. Computing skills attained through one of the following:

I&C SCI 31	Introduction to Programming
ENGR 10	
EECS 10	Computational Methods in Electrical and Computer
EECS 12	Introduction to Programming
ENGRMAE 10	Introduction to Engineering Computations

PHYSICS 53	Introduction to C and Numerical Analysis
------------	--

C. Select one three-quarter lecture course sequence from the following:

CHEM 1A- 1B- 1C	General Chemistry and General Chemistry and General Chemistry
PHYSICS 2- 7C- 7D	Introduction to Mathematical Methods for Physics and Classical Physics and Classical Physics
PHYSICS 2- 7C- 7E	Introduction to Mathematical Methods for Physics and Classical Physics and Classical Physics
PHYSICS 7C- 7D- 7E	Classical Physics and Classical Physics and Classical Physics

Upper-Division Requirements:

A. Complete:

MATH 120A	Introduction to Abstract Algebra: Groups
MATH 121A	Linear Algebra
MATH 130A	Probability and Stochastic Processes
MATH 140A- 140B	Elementary Analysis and Elementary Analysis

Requirements for the Pure Mathematics Major

Core requirements for all Mathematics majors plus:

Lower-Division Requirements:

A. Complete:

MATH 2E or MATH H2E	Multivariable Calculus Honors Multivariable Calculus
------------------------	---

Upper-Division Requirements:

A. Complete:

MATH 120A	Introduction to Abstract Algebra: Groups
MATH 121B	Linear Algebra
MATH 147	Complex Analysis

B. Five additional four-unit MATH lecture courses numbered 100–189.

The Department offers two concentrations and three specializations. Note that all require the completion of an application and an interview with the faculty advisor for that concentration or specialization. Students must complete the basic "Core" requirements for the B.S. in Mathematics along with the lower- and upper-division requirements specified for each concentration and specialization.

Requirements for Mathematics Major with a Concentration in Mathematical Finance

Admission to this concentration requires approval in advance by the Mathematics Department. The admissions process begins with completing a form at the Department office and includes an interview with the Department's advisor for the concentration. This approval should be applied for after the student has completed ECON 20A-ECON 20B, but no later than the end of the junior year.

Core requirements for all Mathematics majors plus:**Lower-Division Requirements:**

A. Complete:

MATH 2E	Multivariable Calculus
or MATH H2E	Honors Multivariable Calculus

Upper-Division Requirements:

A. Complete:

MATH 130B	Probability and Stochastic Processes
MATH 133A	Statistical Methods with Applications to Finance
MATH 176	Mathematics of Finance

B. Select three elective lecture courses from the following:

MATH 105A- 105B	Numerical Analysis and Numerical Analysis (plus MATH 105LA-105LB)
MATH 107	Numerical Differential Equations (plus MATH 107L)
MATH 112A- 112B- 112C	Introduction to Partial Differential Equations and Applications and Introduction to Partial Differential Equations and Applications and Introduction to Partial Differential Equations and Applications
MATH 115	Mathematical Modeling
MATH 117	Dynamical Systems
MATH 118	The Theory of Differential Equations
MATH 119	Boundary Value Problems
MATH 121B	Linear Algebra
MATH 130C	Probability and Stochastic Processes
MATH 133B	Statistical Methods with Applications to Finance
MATH 140C	Analysis in Several Variables
C. Complete the following eight required Economics courses:	
ECON 20A- 20B	Basic Economics I and Basic Economics II
ECON 105A- 105B- 105C	Intermediate Quantitative Microeconomics and Macroeconomics I and Intermediate Quantitative Microeconomics and Macroeconomics II and Intermediate Quantitative Microeconomics and Macroeconomics III
ECON 122A or ECON 123A	Applied Econometrics I Econometrics I
ECON 132A	Introduction to Financial Investments
ECON 134A	Corporate Finance

Requirements for Mathematics Major with a Specialization in Applied and Computational Mathematics

Admission to this specialization requires approval in advance by the Mathematics Department. The admissions process begins with completing a form at the Department office, and includes an interview with the Department's advisor for the specialization. This approval should be applied for no later than the end of the junior year.

Core requirements for all Mathematics majors plus:**Lower-Division Requirements:**

A. Complete:

MATH 2E	Multivariable Calculus
or MATH H2E	Honors Multivariable Calculus

Upper-Division Requirements:

A. Six required lecture courses:

MATH 105A- 105B	Numerical Analysis and Numerical Analysis (plus MATH 105LA-LB)
MATH 112A- 112B	Introduction to Partial Differential Equations and Applications and Introduction to Partial Differential Equations and Applications
MATH 115	Mathematical Modeling
MATH 121B	Linear Algebra

B. Select three additional Mathematics courses from the following:

MATH 107	Numerical Differential Equations (plus MATH 107L)
MATH 112C	Introduction to Partial Differential Equations and Applications
MATH 117	Dynamical Systems
MATH 118	The Theory of Differential Equations
MATH 130B- 130C	Probability and Stochastic Processes and Probability and Stochastic Processes
MATH 133A- 133B	Statistical Methods with Applications to Finance and Statistical Methods with Applications to Finance
MATH 140C	Analysis in Several Variables
MATH 176	Mathematics of Finance

C. Two approved upper-division courses in an area of application outside of Mathematics. Approval must be obtained in advance from the advisor for this specialization. The student is responsible for satisfying any prerequisites for these courses.

Requirements for Mathematics Major with a Specialization in Mathematical Biology

Admission to this specialization requires approval in advance by the Mathematics Department. The admissions process begins with completing a form at the Department Office, and includes an interview with the Department's advisor for the specialization. This approval should be applied for no later than the end of the junior year.

Core requirements for all Mathematics majors plus:**Lower-Division Requirements:**

A. Complete:

MATH 2E	Multivariable Calculus
or MATH H2E	Honors Multivariable Calculus

B. Replace item C in the Core Requirements with the following:

BIO SCI 93	From DNA to Organisms
BIO SCI 94	From Organisms to Ecosystems

and two courses selected from the following:

CHEM 1A	General Chemistry
CHEM 1B	General Chemistry
PHYSICS 2	Introduction to Mathematical Methods for Physics
PHYSICS 7C	Classical Physics
PHYSICS 7D	Classical Physics
BIO SCI 97	Genetics

Upper-Division Requirements:

A. Complete the following seven required upper-division lecture courses:

MATH 105A- 105B	Numerical Analysis and Numerical Analysis (plus MATH 105LA-LB)
MATH 112A- 112B	Introduction to Partial Differential Equations and Applications and Introduction to Partial Differential Equations and Applications
MATH 113A- 113B	Mathematical Modeling in Biology and Mathematical Modeling in Biology
MATH 113C or MATH 115	Mathematical Modeling in Biology Mathematical Modeling

B. Two additional elective courses, at least one from MATH courses numbered 100–189. The second elective may be either an upper-division MATH course or a four-unit upper-division Biological Sciences course with the advanced approval by the advisor for this specialization.

Requirements for Mathematics Major with a Specialization in Mathematics for Education

Admission to this specialization requires approval in advance by the Mathematics Department. The admission process begins with completing a form at the Department office, and includes an interview with the Department's advisor for the specialization. This approval should be applied for no later than the end of the junior year.

This specialization is designed to help prepare students for teaching mathematics. Students wishing to go on and teach at the intermediate and high school levels should also consult with an academic advisor in the School of Education. A Commission on Teacher Credentialing (CTC)-approved subject-matter program (SMP) in Mathematics can be easily satisfied in tandem with this specialization, and enables students to waive a subject matter exam for teachers. Specific SMP requirements and enrollment procedures are available from the School of Education. Students interested in teaching at the high school level are encouraged to complete the course PHY SCI 106 in addition to the requirements listed below.

Core requirements for all Mathematics majors plus:**Lower-Division Requirements:**

A. Complete:

MATH 8	Explorations in Functions and Modeling
--------	--

Upper-Division Requirements:

A. Complete:

MATH 105A- 105LA	Numerical Analysis and Numerical Analysis Laboratory
MATH 120B	Introduction to Abstract Algebra: Rings and Fields
MATH 130B	Probability and Stochastic Processes
MATH 150	Introduction to Mathematical Logic
MATH 161	Modern Geometry
MATH 180A	Number Theory
MATH 184- 184L	History of Mathematics and History of Mathematics Lesson Lab

Plus one additional four-unit MATH course numbered 100–189.

B. Complete:

EDUC 172B	Teaching and Learning Secondary Mathematics
PHY SCI 5	California Teach 1: Introduction to Science and Mathematics Teaching
PHY SCI 105	California Teach 2: Middle School Science and Mathematics Teaching

Requirements for Mathematics Major with a Concentration in Mathematics for Education/ Secondary Teaching Certification

Admission to this concentration requires approval in advance. The admission process begins with completing an Intent form at the Cal Teach Resource and Advising Center.

Following completion of the Intent form, students must complete an application in the Mathematics Department office and an interview with the Department's advisor for the concentration. These approvals should be applied for no later than the end of the sophomore year.

This concentration allows students pursuing the B.S. in Mathematics to earn a bachelor's degree and complete the required course work and field experience for a California Preliminary Single Subject Teaching Credential at the same time. With careful, early planning, it is possible for students to complete both in four years. For additional information about teacher certification requirements and enrollment procedures, see Preparation for Teaching Science and Mathematics (p. 723) or contact the Cal Teach Resource and Advising Center. A Commission on Teacher Credentialing (CTC)-approved subject-matter program (SMP) in Mathematics can be satisfied in tandem with this concentration, and enables students to waive a subject matter exam for teachers. Specific SMP requirements and enrollment procedures are available from the Cal Teach Resource and Advising Center or the School of Education. Students interested in teaching at the high school level are encouraged to complete the course PHY SCI 106 in addition to the requirements listed below.

Core requirements for all Mathematics majors plus:**Lower-Division Requirements:**

A. Complete:

MATH 8	Explorations in Functions and Modeling
--------	--

Upper-Division Requirements:

A. Complete:

MATH 105A- 105LA	Numerical Analysis and Numerical Analysis Laboratory
MATH 120B	Introduction to Abstract Algebra: Rings and Fields
MATH 130B	Probability and Stochastic Processes
MATH 150	Introduction to Mathematical Logic
MATH 161	Modern Geometry
MATH 180A	Number Theory
MATH 184- 184L	History of Mathematics and History of Mathematics Lesson Lab

Plus one additional four-unit MATH course numbered 100–189.

B. Complete:

PHY SCI 5	California Teach 1: Introduction to Science and Mathematics Teaching
PHY SCI 105	California Teach 2: Middle School Science and Mathematics Teaching
CHEM 193 or PHYSICS 193	Research Methods
EDUC 55	Knowing and Learning in Mathematics and Science
EDUC 109	Reading and Writing in Secondary Mathematics and Science Classrooms
EDUC 143AW	Classroom Interactions I
EDUC 143BW	Classroom Interactions II
EDUC 148	Complex Pedagogical Design
EDUC 158	Student Teaching Mathematics and Science in Middle/High School (two quarters)

NOTE: Students may pursue either the concentration in Mathematics for Education/Secondary Teaching Certification or the specialization in Mathematics for Education, but not both.

Honors Program in Mathematics

The Honors Program in Mathematics is designed for students contemplating graduate work in mathematics. The program is open to junior and senior Mathematics majors who meet the minimum academic qualifications of a 3.5 GPA in Mathematics courses and a 3.2 GPA overall. It is highly recommended that students meet with the Honor's advisor by the beginning of their junior year to begin planning courses. Students should officially apply for the Honors Program no later than the fall quarter of their senior year. Recognition for completing the program is conferred upon graduation.

In addition to completing the requirements for the major in Mathematics (in any one of its tracks), participants must meet the following requirements:

A. Select one of the following series:

MATH 205A- 205B- 205C	Introduction to Graduate Analysis and Introduction to Graduate Analysis
or	
MATH 206A- 206B- 206C	Introduction to Graduate Algebra and Introduction to Graduate Algebra

B. Complete the Honors Seminar, MATH H195A-B, or two quarters of MATH 199. One quarter of MATH 199 may be replaced by other research experience with the approval of the Honor's Program advisor.

In order to prepare for independent study/independent research, it is highly recommended that students take at least one course sequence in the field they are interested in studying. The following list contains the major mathematical disciplines and the course work suggested for completion prior to doing independent study in that field:

- Applied Mathematics: MATH 117 and MATH 118
- Algebra: MATH 120A-MATH 120B-MATH 120C
- Probability and Statistics: MATH 130A-MATH 130B-MATH 130C, MATH 131A-MATH 131B
- Analysis: MATH 140A-MATH 140B-MATH 140C
- Logic: MATH 150 and MATH 151
- Geometry: MATH 162A-MATH 162B
- Number Theory: MATH 180A-MATH 180B

NOTE: These requirements are in addition to the math major requirements or requirements for any specialization/concentration. However, Math 206A-B-C in item A may be used to satisfy upper-division electives or taken in place of MATH 120A-B-C and 121A-B, and MATH 205A-B-C may be used to satisfy upper-division electives or taken in place of MATH 140A-B-C requirements as described in the major.

If all requirements are completed and the student's work and final GPA satisfies the program restrictions, the student will graduate with Honors in Mathematics, and this distinction is noted on the transcript.

Requirements for the Minor in Mathematics

A. Complete:

MATH 13	Introduction to Abstract Mathematics
MATH 120A	Introduction to Abstract Algebra: Groups
or MATH 140A	Elementary Analysis

B. Select five additional four-unit courses in MATH (plus the associated lab, where applicable) numbered 77–189.

NOTE: Nearly all upper-division courses in Mathematics have MATH 2A-MATH 2B as prerequisites, and many courses have additional prerequisites such as MATH 2D, MATH 2E, MATH 3A, and/or MATH 3D. Only one course from MATH 77A-MATH 77B-MATH 77C-MATH 77D (same as I&C SCI 77A-I&C SCI 77B-I&C SCI 77C-I&C SCI 77D) can be used toward the minor.

Requirements for the Minor in Mathematics for Biology

A. Complete:

MATH 13	Introduction to Abstract Mathematics
MATH 113A- 113B- 113C	Mathematical Modeling in Biology and Mathematical Modeling in Biology and Mathematical Modeling in Biology

B. Select two of the following:

MATH 105A	Numerical Analysis (plus MATH 105A)
MATH 112A	Introduction to Partial Differential Equations and Applications
MATH 117	Dynamical Systems
MATH 118	The Theory of Differential Equations
MATH 119	Boundary Value Problems
MATH 121A	Linear Algebra
MATH 131A	Introduction to Probability and Statistics
MATH 140A	Elementary Analysis

C. One additional four-unit upper-division lecture course in MATH numbered 100–189.

NOTE: Nearly all upper-division courses in Mathematics have MATH 2A-MATH 2B as prerequisites, and many courses have additional prerequisites such as MATH 2D, MATH 2E, MATH 3A, and/or MATH 3D.

Planning a Program of Study

For all Mathematics majors, or prospective majors, assistance in planning a program of study is available from the Mathematics Department Undergraduate Advisor and the advisors for the various tracks, as well as from the academic counselors for the School of Physical Sciences. The application process for the specializations and concentrations requires students to plan a program of study with the assistance of a faculty advisor. The following sample programs are only examples.

Those in the specialization for Education should note that MATH 184 may not be offered more than once every other year and thus should be taken when offered.

Sample Program — Pure Mathematics

Freshman

Graduate Program

Graduate courses are designed to meet the needs of students doing graduate work in mathematics and in those disciplines that require graduate-level mathematics for their study. Among the fields covered are analysis, algebra, applied and computational mathematics, mathematical biology, geometry and topology, probability, ordinary and partial differential equations, and mathematical logic.

In addition to formal courses, there are seminars for advanced study toward the Ph.D. in various fields of mathematics. Topics will vary from year to year. Each seminar is conducted by a faculty member specializing in the subject studied. Enrollment will be subject to the approval of the instructor in charge.

Master of Science in Mathematics

To earn the Master of Science degree, the student must satisfy course and residency requirements, and achieve two passes at the M.S. level among three exams in Real Analysis, Complex Analysis, and Algebra prior to the beginning of the second year.

The total number of required courses for the M.S. degree is 12, completed with satisfactory performance, that is, with a grade of B or better. Students are required to complete at least one series of the following courses:

MATH 210A- 210B- 210C	Real Analysis and Real Analysis and Real Analysis
or	
MATH 220A- 220B- 220C	Analytic Function Theory and Analytic Function Theory and Analytic Function Theory
or	
MATH 230A- 230B- 230C	Algebra and Algebra and Algebra

At most one undergraduate course may count as an elective course, provided it is sponsored by rank faculty and approved by the Graduate Advisor. At most one elective course (at least three units) is allowed outside the Department.

To satisfy exam requirements, students may take the Core Assessment Exam (offered in the spring of every year), the Comprehensive Exams (offered in the spring of every year), or the Qualifying Exams (offered before the start of each fall quarter) in Real Analysis, Complex Analysis, and Algebra. Students may not attempt to pass an exam in any particular area more than three times. Some students may require additional background before entering MATH 210 or MATH 230. This will be determined by assessment prior to the start of the students' first year by the Vice Chair of Graduate Studies, upon consultation with the Graduate Studies Committee. Such students will be directed into MATH 205 and/or MATH 206 during their first year. They may pass one Comprehensive Exam in the areas of Analysis or Algebra in lieu of achieving an M.S. pass in one of the Core Assessment or Qualifying Exams that must be obtained prior to the start of their second year.

Students who fail to pass the required examinations satisfactorily within the period specified will be recommended for academic disqualification by the Graduate Dean.

MATH 199, MATH 297, MATH 298, MATH 299, and MATH 399 may not be used to fulfill course requirements.

The residency requirement ordinarily is satisfied by full-time enrollment for three quarters immediately preceding the award of the M.S. degree. When appropriate, a leave of absence may be granted between matriculation and the final quarters of study.

If the candidate is not advanced before the beginning of the quarter in which all requirements are completed, the degree will not be conferred until the end of the following quarter. Deadlines for submission of the

Application for Advancement to Candidacy are published on the Graduate Division Web site under filing fees and deadlines.

Master of Science in Mathematics with a Teaching Credential

In cooperation with the UCI School of Education, the Department of Mathematics sponsors a coordinated program for the M.S. degree in Mathematics and the California Single Subject Teaching Credential. The requirements for this option are the same as the Master of Science in Mathematics requirements listed above.

The student will complete the requirements for the Master's degree with the Mathematics Department (generally a two-year commitment) and then will petition with the UCI School of Education to take the School of Education's credential courses (generally a one-year commitment). The student must meet the requirements of the School of Education for the CBEST, CSET, TB test, and Certificate of Clearance. Prospective graduate students interested in this program should so indicate on their applications. A detailed description of the program can be requested from the School of Education.

Advancement to M.S. Candidacy

All Master's students must be advanced to candidacy for the degree prior to the beginning of their final quarter of enrollment. An application for Advancement to Candidacy must be completed by the student and submitted for approval to the Department. The approved application must be submitted to the Graduate Division by the deadline published on the Graduate Division (<http://www.grad.uci.edu>) Web site. Advancement to M.S. Candidacy must occur one quarter prior to the degree conferral quarter.

Filing fee information can be located on the Graduate Division (<http://www.grad.uci.edu>) Web site.

Doctor of Philosophy in Mathematics

When accepted into the doctoral program, the student embarks on a program of formal courses, seminars, and individual study courses to prepare for the Ph.D. written examinations, Advancement to Candidacy examination, and dissertation.

Upon entering the program, students are expected to take MATH 210, MATH 220, and MATH 230, which must be passed with a grade of B or better. Students must complete these sequences by the end of the second year.

By the start of the second year, students must achieve at least two passes at the M.S. level among three exams in Real Analysis, Complex Analysis, and Algebra. By the start of the third year, students must achieve two Ph.D. level passes among three exams in Real Analysis, Complex Analysis, and Algebra.

To satisfy the exam requirements, students may take the Core Assessment Exams (offered in spring of every year) or the Qualifying Exams (offered before the start of the fall quarter) in these areas. Students may not attempt to take an exam in a particular subject area more than three times. A student who passes a Qualifying Examination at the Ph.D. level prior to taking the corresponding course will be exempted from taking the course.

Some students may require additional background prior to entering MATH 210 and MATH 230. This will be determined by assessment prior to the start of the students' first year by the Vice Chair for Graduate Studies,

upon consultation with the Graduate Studies Committee. Such students will be directed into MATH 205 and/or MATH 206, or equivalent, during their first year. These students may pass one Comprehensive Exam in the areas of Algebra or Analysis in lieu of achieving an M.S. pass on one Core Assessment or Qualifying Exam that must be obtained prior to the start of the students' second year. Comprehensive Exams in Analysis and Algebra will be offered once per year in the spring quarter.

By the end of their second year, students must declare a major specialization from the following areas: Algebra, Analysis, Applied and Computational Mathematics, Geometry and Topology, Logic, or Probability. Students are required to take two series of courses from their chosen area. (Students who later decide to change their area must also take two series of courses from the new area.) Additionally, all students must take two series outside their declared major area of specialization. Special topics courses within certain areas of specialization and courses counted toward the M.S. degree, other than MATH 205A-MATH 205B-MATH 205C and MATH 206A-MATH 206B-MATH 206C, will count toward the fulfillment of the major specialization requirement.

By the beginning of their third year, students must have an advisor specializing in their major area. With the advisor's aid, the student forms a committee for the Advancement to Candidacy oral examination. This committee will be approved by the Department on behalf of the Dean of the Graduate Division and the Graduate Council and will consist of five faculty members. At least one, and at most two, of the members must be faculty from outside the Department. Before the end of the third year, students must have a written proposal, approved by their committee, for the Advancement to Candidacy examination. The proposal should explain the role of at least two series of courses from the student's major area of specialization that will be used to satisfy the Advancement to Candidacy requirements. The proposal should also explain the role of additional research reading material as well as providing a plan for investigating specific topics under the direction of the student's advisor(s). Only one of the courses MATH 210A-MATH 210B-MATH 210C, MATH 220A-MATH 220B-MATH 220C, and MATH 230A-MATH 230B-MATH 230C may count for the course requirement for Advancement to Candidacy Examinations. After the student meets the requirements, the Graduate Studies Committee recommends to the Dean of the Graduate Division the advancement to candidacy for the Ph.D. degree. Students should advance to candidacy by the beginning of their fourth year.

After advancing to candidacy, students are expected to be fully involved in research toward writing their Ph.D. dissertation. Ideally, students should keep in steady contact/interaction with their Doctoral Committee.

Teaching experience and training is an integral part of the Ph.D. program. All doctoral students are expected to participate in the Department's teaching program.

The candidate must demonstrate independent, creative research in Mathematics by writing and defending a dissertation that makes a new and valuable contribution to mathematics in the candidate's area of concentration. Upon Advancement to Candidacy a student must form a Thesis Committee, a subcommittee of the Advancement Examination Committee, consisting of at least three faculty members and chaired by the student's advisor. The committee guides and supervises the candidate's research, study, and writing of the dissertation; conducts an oral defense of the dissertation; and recommends that the Ph.D. be conferred upon approval of the Doctoral Dissertation. The normative time for completion of the Ph.D. is five years, and the maximum time permitted

is seven years. Completion of the Ph.D. degree must occur within nine quarters of Advancement to Ph.D. candidacy.

Examinations

Ph.D. examinations are given in Algebra, Complex Analysis, and Real Analysis. All students seeking the Ph.D. degree must successfully complete two examinations before the end of the third year of entering the graduate program. Only two attempts are allowed for a Ph.D. student on each exam.

Area Requirements

Ph.D. students will choose from one of six areas of specialization in the Mathematics Department, which determines course work requirements. Each area of specialization will have a core course, which the Department will do its best to offer each year. The Department will offer other courses every other year, or more frequently depending on student demands and other Department priorities.

Algebra

MATH 230A- 230B- 230C	Algebra and Algebra and Algebra (core)
MATH 232A- 232B- 232C	Algebraic Number Theory and Algebraic Number Theory and Algebraic Number Theory
MATH 233A- 233B- 233C	Algebraic Geometry and Algebraic Geometry and Algebraic Geometry
MATH 234B- 234C	Topics in Algebra and Topics in Algebra
MATH 235A- 235B- 235C	Mathematics of Cryptography and Mathematics of Cryptography and Mathematics of Cryptography
MATH 239A- 239B- 239C	Analytic Methods in Arithmetic Geometry and Analytic Methods in Arithmetic Geometry and Analytic Methods in Arithmetic Geometry

Analysis

MATH 210A- 210B- 210C	Real Analysis and Real Analysis and Real Analysis (core)
MATH 211A- 211B- 211C	Topics in Analysis and Topics in Analysis and Topics in Analysis
MATH 220A- 220B- 220C	Analytic Function Theory and Analytic Function Theory and Analytic Function Theory (core)
MATH 260A- 260B- 260C	Functional Analysis and Functional Analysis and Functional Analysis
MATH 295A- 295B- 295C	Partial Differential Equations and Partial Differential Equations and Partial Differential Equations
MATH 296	Topics in Partial Differential Equations

Applied and Computational Mathematics

MATH 290A- 290B- 290C	Methods in Applied Mathematics and Methods in Applied Mathematics and Methods in Applied Mathematics (core)
MATH 225A- 225B- 225C	Introduction to Numerical Analysis and Scientific Computing and Introduction to Numerical Analysis and Scientific Computing and Introduction to Numerical Analysis and Scientific Computing
MATH 226A- 226B- 226C	Computational Differential Equations and Computational Differential Equations and Computational Differential Equations
MATH 227A- 227B	Mathematical and Computational Biology and Mathematical and Computational Biology
MATH 291C	Topics in Applied and Computational Math
MATH 295A- 295B- 295C	Partial Differential Equations and Partial Differential Equations and Partial Differential Equations
Geometry and Topology	
MATH 218A- 218B- 218C	Introduction to Manifolds and Geometry and Introduction to Manifolds and Geometry and Introduction to Manifolds and Geometry (core)
MATH 222A- 222B- 222C	Several Complex Variables and Complex Geometry and Several Complex Variables and Complex Geometry and Several Complex Variables and Complex Geometry
MATH 240A- 240B- 240C	Differential Geometry and Differential Geometry and Differential Geometry
MATH 245A- 245C- 245C	Topics in Differential Geometry and Topics in Differential Geometry and Topics in Differential Geometry
MATH 250A- 250B- 250C	Algebraic Topology and Algebraic Topology and Algebraic Topology
Logic	
MATH 280A- 280B- 280C	Mathematical Logic and Mathematical Logic and Mathematical Logic (core)
MATH 281A- 281B- 281C	Set Theory and Set Theory and Set Theory
MATH 282A- 282B- 282C	Model Theory and Model Theory and Model Theory

MATH 285A- 285B- 285C	Topics in Mathematical Logic and Topics in Mathematical Logic and Topics in Mathematical Logic
Probability	
MATH 210A- 210B- 210C	Real Analysis and Real Analysis and Real Analysis
MATH 211A- 211B- 211C	Topics in Analysis and Topics in Analysis and Topics in Analysis
MATH 270A- 270B- 270C	Probability and Probability and Probability (core)
MATH 271A- 271B- 271C	Stochastic Processes and Stochastic Processes and Stochastic Processes (core)
MATH 272A- 272B- 272C	Probability Models and Probability Models and Probability Models (core)
MATH 274	Topics in Probability

Graduate Program in Mathematical and Computational Biology

The graduate program in Mathematical and Computational Biology (MCB) is a one-year "gateway" program designed to function in concert with selected department programs, including the Ph.D. in Mathematics. Detailed information is available online at <http://mcsb.bio.uci.edu/> and in the School of Biological Sciences (p. 196) section of the *Catalogue*.

Faculty

Takeo Akasaki, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (ring theory)

Vladimir Baranovsky, Ph.D. University of Chicago, *Associate Professor of Mathematics* (algebraic geometry, representation theory)

Frank B. Cannonito, Ph.D. Adelphi University, *Professor Emeritus of Mathematics* (group theory)

Long Chen, Ph.D. Pennsylvania State University, *Associate Professor of Mathematics* (numerical analysis, scientific computing, finite element methods, computational geometry)

Michael C. Cranston, Ph.D. University of Minnesota, *Professor of Mathematics* (probability)

Donald Darling, Ph.D. California Institute of Technology, *Professor Emeritus of Mathematics*

Sarah Eichhorn, Ph.D. University of Arizona, *Assistant Vice Chair of Undergraduate Studies and Lecturer with Potential Security of Employment, Department of Mathematics* (applied mathematics, mathematics education)

Paul C. Eklof, Ph.D. Cornell University, *Professor Emeritus of Mathematics* (logic and algebra)

Germán A. Enciso Ruiz, Ph.D. Rutgers University, *Assistant Professor of Mathematics* (dynamical systems, mathematical and computational biology)

Catherine Famiglietti, Ph.D. Princeton University, *Lecturer in Mathematics* (calculus, numerical methods)

Aleksandr Figotin, Ph.D. Tashkent University, *Professor of Mathematics* (applied mathematics, photonic crystals, foundations of electromagnetism)

Mark Finkelstein, Ph.D. Stanford University, *Professor Emeritus of Mathematics* (analysis)

Matthew D. Foreman, Ph.D. University of California, Berkeley, *Professor of Mathematics and of Logic and Philosophy of Science* (logic, ergodic theory)

Michael D. Fried, Ph.D. University of Michigan, *Professor Emeritus of Mathematics* (arithmetic geometry, complex variables)

Anton Gorodetski, Ph.D. Moscow State University, *Associate Professor of Mathematics* (dynamical systems)

Patrick Guidotti, Ph.D. University of Zürich, *Department Vice Chair for Graduate Studies and Professor of Mathematics* (partial differential equations, applied mathematics)

Hamid Hezari, Ph.D. Johns Hopkins University, *Assistant Professor of Mathematics* (analysis, partial differential equations, inverse problems)

Svetlana Jitomirskaya, Ph.D. Moscow State University, *UCI Chancellor's Fellow and Professor of Mathematics* (mathematical physics, dynamical systems)

Abel Klein, Ph.D. Massachusetts Institute of Technology, *Professor of Mathematics* (mathematical physics, random Schrödinger operators)

Natalia L. Komarova, Ph.D. University of Arizona, *Professor of Mathematics and of Ecology and Evolutionary Biology* (applied mathematics, mathematical biology)

Rachel Lehman, Ph.D. University of California, Irvine, *Lecturer in Mathematics* (mathematics education, probability)

Peter Li, Ph.D. University of California, Berkeley, *UCI Chancellor's Professor Emeritus of Mathematics* (differential geometry)

Song-Ying Li, Ph.D. University of Pittsburgh, *Professor of Mathematics* (several complex variables, nonlinear partial differential equations, harmonic analysis)

John S. Lowengrub, Ph.D. New York University, *UCI Chancellor's Professor of Mathematics, Biomedical Engineering, and Chemical Engineering and Materials Science* (mathematical materials science, mathematical fluid dynamics, mathematical biology, computational mathematics, cancer modeling, nanomaterials, quantum dots, complex fluids)

Zhiqin Lu, Ph.D. New York University, *Department Vice Chair for Undergraduate Studies and Professor of Mathematics* (differential geometry)

Penelope Maddy, Ph.D. Princeton University, *UCI Distinguished Professor of Logic and Philosophy of Science and of Mathematics* (philosophy of mathematics and logic, meta-philosophy)

Caryl Margulies, Ph.D. University of California, Irvine, *Lecturer in Mathematics* (cryptography, graph theory, partial differential equations, linear algebra)

Eric D. Mjolsness, Ph.D. California Institute of Technology, *Professor of Computer Science and Mathematics* (applied mathematics, mathematical biology, modeling languages)

Charles Newman, Ph.D. Princeton University, *UCI Distinguished Professor of Mathematics* (probability, mathematical physics, statistical physics)

Qing Nie, Ph.D. Ohio State University, *Professor of Mathematics and Biomedical Engineering* (computational mathematics, systems biology, cell signaling and stem cell)

Alessandra Pantano, Ph.D. Princeton University, *Lecturer with Potential Security of Employment, Department of Mathematics* (representation theory, mathematical education)

David L. Rector, Ph.D. Massachusetts Institute of Technology, *Professor Emeritus of Mathematics* (algebraic topology, computer algebra)

Robert C. Reilly, Ph.D. University of California, Berkeley, *Professor Emeritus of Mathematics* (differential geometry)

Karl C. Rubin, Ph.D. Harvard University, *Professor of Mathematics and Edward and Vivian Thorp Chair in Mathematics* (number theory)

Bernard Russo, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (functional analysis)

Donald G. Saari, Ph.D. Purdue University, *Director of the Institute for Mathematical Behavioral Sciences and UCI Distinguished Professor of Economics and Mathematics* (dynamical systems with an emphasis on the Newtonian N-body problem and issues coming from the mathematical social and behavioral sciences)

Martin Schechter, Ph.D. New York University, *Professor of Mathematics* (partial differential equations, functional analysis, critical point theory)

Stephen Scheinberg, Ph.D. Princeton University; M.D. University of California, Irvine, *Professor Emeritus of Mathematics* (analysis)

Alice Silverberg, Ph.D. Princeton University, *Professor of Mathematics* (number theory, arithmetic algebraic geometry, cryptography)

William H. Smoke, Ph.D. University of California, Berkeley, *Professor Emeritus of Mathematics* (homological algebra)

Knut Solna, Ph.D. Stanford University, *Professor of Mathematics* (applied mathematics, mathematical finance)

Ronald J. Stern, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (geometry and topology)

Jeffrey Streets, Ph.D. Duke University, *Assistant Professor of Mathematics* (geometric analysis)

Chuu-Lian Terng, Ph.D. Brandeis University, *Professor of Mathematics* (differential geometry, integrable systems)

Edriss S. Titi, Ph.D. Indiana University, *Professor of Mathematics and of Mechanical and Aerospace Engineering* (applied and computational mathematics, nonlinear partial differential equations)

Li-Sheng Tseng, Ph.D. University of Chicago, *Assistant Professor of Mathematics* (symplectic topology, mathematical physics and geometry)

Howard G. Tucker, Ph.D. University of California, Berkeley, *Professor Emeritus of Mathematics* (probability and statistics)

Daqing Wan, Ph.D. University of Washington, *Professor of Mathematics* (number theory, coding theory and computational complexity)

Frederic Yui-Ming Wan, Ph.D. Massachusetts Institute of Technology, *Professor of Mathematics and of Mechanical and Aerospace Engineering* (applied mathematics, mathematical biology; plate, shell, and elasticity theory; resource economics)

Robert W. West, Ph.D. University of Michigan, *Professor Emeritus of Mathematics* (algebraic topology)

Joel J. Westman, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (analysis)

Robert J. Whitley, Ph.D. New Mexico State University, *Professor Emeritus of Mathematics* (analysis)

Janet L. Williams, Ph.D. Brandeis University, *Professor Emerita of Mathematics* (probability and statistics)

Dominik Wodarz, Ph.D. University of Oxford, *Professor of Ecology and Evolutionary Biology and of Mathematics* (mathematical biology; infectious disease and cancer)

Liang Xiao, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Mathematics* (arithmetic geometry, number theory)

Jack Xin, Ph.D. New York University, *Professor of Mathematics* (applied mathematics, signal processing)

James J. Yeh, Ph.D. University of Minnesota, *Professor Emeritus of Mathematics* (real analysis, stochastic analysis)

Yifeng Yu, Ph.D. University of California, Berkeley, *Associate Professor of Mathematics* (nonlinear partial differential equations)

Martin Zeman, Ph.D. Humboldt University, *Associate Professor of Mathematics* (logic, set theory)

Hong-Kai Zhao, Ph.D. University of California, Los Angeles, *Department Chair and Professor of Mathematics* (computational and applied mathematics)

Weian Zheng, Ph.D. Université de Strasbourg, *Professor Emeritus of Mathematics* (probability theory and financial engineering)

Courses

MATH 1A. Pre-Calculus. 0 Units.

Basic equations and inequalities, linear and quadratic functions, and systems of simultaneous equations. Course may be offered online.

MATH 1B. Pre-Calculus. 4 Units.

Preparation for calculus and other mathematics courses. Exponentials, logarithms, trigonometry, polynomials, and rational functions. Satisfies no requirements other than contribution to the 180 units required for graduation. Course may be offered online.

Prerequisite: MATH 1A or placement into MATH 1B via the Calculus Placement exam, or a score of 450 or higher on the Mathematics section of the SAT Reasoning Test.

MATH 2A. Single-Variable Calculus. 4 Units.

Introduction to derivatives, calculation of derivatives of algebraic and trigonometric functions; applications including curve sketching, related rates, and optimization. Exponential and logarithm functions.

Prerequisite: MATH 1B or placement into MATH 2A via the Calculus Placement exam (fee required), or a score of 3 on the AP Calculus AB exam, or a score of 600 or higher on the Mathematics section of the SAT Reasoning Test. MATH 1B with a grade of C or better.

Restriction: School of Physical Sciences, School of Engineering, and School of Information and Computer Sciences majors have first consideration for enrollment.

(Vb)

MATH 2B. Single-Variable Calculus. 4 Units.

Definite integrals; the fundamental theorem of calculus. Applications of integration including finding areas and volumes. Techniques of integration. Infinite sequences and series. Parametric and polar equations.

Prerequisite: MATH 2A.

Restriction: School of Physical Sciences, School of Engineering, and School of Information and Computer Sciences majors have first consideration for enrollment.

(Vb)

MATH 2D. Multivariable Calculus. 4 Units.

Differential and integral calculus of real-valued functions of several real variables, including applications. Polar coordinates.

Prerequisite: MATH 2A and MATH 2B.

Overlaps with MATH H2D.

Restriction: School of Physical Sciences, School of Engineering, and School of Information and Computer Sciences majors have first consideration for enrollment.

(Vb)

MATH 2E. Multivariable Calculus. 4 Units.

The differential and integral calculus of vector-valued functions. Implicit and inverse function theorems. Line and surface integrals, divergence and curl, theorems of Greens, Gauss, and Stokes.

Prerequisite: MATH 2D.

Overlaps with MATH H2E.

Restriction: School of Physical Sciences and School of Engineering majors have first consideration for enrollment.

MATH 2J. Infinite Series and Basic Linear Algebra. 4 Units.

Systems of linear equations: matrix operations; determinants; eigenvalues, and eigenvectors. Infinite sequences and series. Complex numbers.

Prerequisite: MATH 2A and MATH 2B.

Overlaps with MATH 2C.

Restriction: Schools of Physical Sciences and School of Engineering majors have first consideration for enrollment.

(Vb)

MATH H2D. Honors Multivariable Calculus. 4 Units.

Differential and integral calculus of real-valued functions of several real variables, including applications. Polar coordinates. Covers the same material as MATH 2D-E, but with a greater emphasis on the theoretical structure of the subject matter.

Prerequisite: MATH 2B or a score of 4 or 5 on the AP Calculus BC exam. MATH 2B with a grade of B or better.

Overlaps with MATH 2D.

(Vb)

MATH H2E. Honors Multivariable Calculus. 4 Units.

Differential and integral calculus of real-valued functions of several real variables, including applications. Polar coordinates. Covers the same material as MATH 2D-E, but with a greater emphasis on the theoretical structure of the subject matter.

Prerequisite: MATH H2D. MATH H2D with a grade of C or better.

Overlaps with MATH 2E.

MATH 3A. Introduction to Linear Algebra. 4 Units.

Systems of linear equations, matrix operations, determinants, eigenvalues and eigenvectors, vector spaces, subspaces and dimension.

Prerequisite: MATH 2B.

Overlaps with MATH 6G, I&C SCI 6N.

Restriction: School of Physical Sciences and School of Engineering majors have first consideration for enrollment.

MATH 3D. Elementary Differential Equations. 4 Units.

Linear differential equations, variation of parameters, constant coefficient cookbook, systems of equations, Laplace transforms, series solutions.

Prerequisite: MATH 2D and MATH 3A.

Restriction: School of Physical Sciences and School of Engineering majors have first consideration for enrollment.

MATH 4. Mathematics for Economists. 4 Units.

Topics in linear algebra and multivariable differential calculus suitable for economic applications.

Prerequisite: MATH 2B.

Overlaps with MATH 2D, MATH 2J, MATH 3A.

Restriction: MATH 4 may not be taken for credit if taken after MATH 2D or MATH 2J or MATH 3A.

(Vb)

MATH 6G. Linear Algebra. 4 Units.

Linear equations, vector spaces and subspaces, linear functions and matrices, linear codes, determinants, scalar products.

Prerequisite: High school mathematics through trigonometry.

Overlaps with MATH 3A, I&C SCI 6N.

(Vb)

MATH 8. Explorations in Functions and Modeling. 4 Units.

Explorations of applications and connections in topics in algebra, geometry, calculus, and statistics for future secondary math educators. Emphasis on nonstandard modeling problems.

Corequisite: MATH 2A.

MATH 13. Introduction to Abstract Mathematics. 4 Units.

Introduction to formal definition and rigorous proof writing in mathematics. Topics include basic logic, set theory, equivalence relations, and various proof techniques such as direct, induction, contradiction, contrapositive, and exhaustion.

Prerequisite: MATH 2A or I&C SCI 6D.

Restriction: Mathematics majors have first consideration for enrollment.

MATH 77A. Topics in Mathematics and Computation in the Digital Age. 4 Units.

Signals in Matlab; blurring, filtering; elements of linear algebra, statistics, optimization; blind matrix inversion; de-correlation method, stochastic gradient descent method, applications to sounds and images.

Corequisite: MATH 2J or MATH 6G

Prerequisite: MATH 2A and MATH 2B and (I&C SCI 21 or CSE 21 or IN4MATX 41)

Same as I&C SCI 77A.

Restriction: Prerequisite required and Lower division only

(II, Va)

MATH 77B. Topics in Mathematics and Computation in the Digital Age. 4 Units.

Basic concepts of collaborative filtering; Clustering; Matrix factorization & Principal Components Analysis; Regression; Classification: naive Bayes classifier, decision trees, Perceptron (neural networks).

Corequisite: MATH 2J or MATH 6G

Prerequisite: MATH 2A and MATH 2B and (I&C SCI 21 or CSE 21 or IN4MATX 41)

Same as I&C SCI 77B.

Restriction: Prerequisite required and Lower division only

(II, Va)

MATH 77C. Topics in Mathematics and Computation in the Digital Age. 4 Units.

Image de-noising, de-blurring, low pass filtering; image segmentation and classification; Sparse representation; visualization.

Corequisite: MATH 2J or MATH 6G

Prerequisite: MATH 2A and MATH 2B and (I&C SCI 21 or CSE 21 or IN4MATX 41)

Same as I&C SCI 77C.

Restriction: Prerequisite required and Lower division only

(II, Va)

MATH 77D. Topics in Mathematics and Computation in the Digital Age. 4 Units.

Combinatorial Game Theory - game classification, tree graphs, strategy analysis, Sprague Grundy functions, Bouton's Theorem; Zero-Sum and General-Sum Game Theory - pay off matrices, Minimax Theorem, Nash equilibrium; Machine learning - Search algorithms.

Corequisite: MATH 2J or MATH 6G

Prerequisite: MATH 2A and MATH 2B and (I&C SCI 21 or CSE 21 or IN4MATX 41)

Same as I&C SCI 77D.

Restriction: Prerequisite required and Lower division only

(II, Va)

MATH 105A. Numerical Analysis. 4 Units.

Introduction to the theory and practice of numerical computation. Floating point arithmetic, roundoff; solving transcendental equations; quadrature; linear systems, eigenvalues, power method.

Corequisite: MATH 105LA.

Prerequisite: MATH 3A. Some acquaintance with computer programming.

Overlaps with ENGRMAE 185.

MATH 105B. Numerical Analysis. 4 Units.

Introduction to the theory and practice of numerical computation. Lagrange interpolation, finite differences, splines, Padé approximations; Gaussian quadrature; Fourier series and transforms.

Corequisite: MATH 105LB.

Prerequisite: MATH 105A.

MATH 105LA. Numerical Analysis Laboratory. 1 Unit.

Provides practical experience to complement the theory developed in Mathematics 105A.

Corequisite: MATH 105A.

MATH 105LB. Numerical Analysis Laboratory. 1 Unit.

Provides practical experience to complement the theory developed in Mathematics 105B.

Corequisite: MATH 105B.

MATH 107. Numerical Differential Equations. 4 Units.

Theory and applications of numerical methods to initial and boundary-value problems for ordinary and partial differential equations.

Corequisite: MATH 107L.

Prerequisite: MATH 3D and MATH 105A and MATH 105B.

MATH 107L. Numerical Differential Equations Laboratory. 1 Unit.

Provides practical experience to complement the theory developed in Mathematics 107.

Corequisite: MATH 107.

MATH 112A. Introduction to Partial Differential Equations and Applications. 4 Units.

Introduction to ordinary and partial differential equations and their applications in engineering and science. Basic methods for classical PDEs (potential, heat, and wave equations). Classification of PDEs, separation of variables and series expansions, special functions, eigenvalue problems.

Prerequisite: MATH 2D and MATH 3D.

MATH 112B. Introduction to Partial Differential Equations and Applications. 4 Units.

Introduction to partial differential equations and their applications in engineering and science. Basic methods for classical PDEs (potential, heat, and wave equations). Green functions and integral representations, method of characteristics.

Prerequisite: MATH 2E and MATH 112A.

MATH 112C. Introduction to Partial Differential Equations and Applications. 4 Units.

Nonhomogeneous problems and Green's functions, Sturm-Liouville theory, general Fourier expansions, applications of partial differential equations in different areas of science.

Prerequisite: MATH 3D and MATH 2D and MATH 3A.

MATH 113A. Mathematical Modeling in Biology. 4 Units.

Discrete mathematical and statistical models; difference equations, population dynamics, Markov chains, and statistical models in biology.

Prerequisite: MATH 2B.

MATH 113B. Mathematical Modeling in Biology. 4 Units.

Linear algebra; differential equations models; dynamical systems; stability; hysteresis; phase plane analysis; applications to cell biology, viral dynamics, and infectious diseases.

Prerequisite: MATH 113A.

MATH 113C. Mathematical Modeling in Biology. 4 Units.

Partial differential equations models in biology such as one dimensional blood flow, morphogen gradients, and tumor growth; stochastic models in cancer and epidemiology.

Prerequisite: MATH 113B.

MATH 114A. Applied Complex Analysis. 4 Units.

Introduction to complex functions and their applications to engineering and science. Complex numbers, elementary functions; analytic functions; complex integration; power series; residue theory; conformal maps; applications.

Prerequisite: MATH 2D and MATH 3A.

Overlaps with MATH 147.

MATH 115. Mathematical Modeling. 4 Units.

Mathematical modeling and analysis of phenomena that arise in engineering physical sciences, biology, economics, or social sciences.

Prerequisite: Corequisite or prerequisite: MATH 112A or ENGRMAE 140. MATH 2D and (MATH 3A or MATH 6G) and MATH 3D.

MATH 117. Dynamical Systems. 4 Units.

Introduction to the modern theory of dynamical systems including contraction mapping principle, fractals and chaos, conservative systems, Kepler problem, billiard models, expanding maps, Smale's horseshoe, topological entropy.

Prerequisite: MATH 3D and MATH 140A.

Overlaps with MATH 118B.

MATH 118. The Theory of Differential Equations. 4 Units.

Existence and uniqueness of solutions, continuous dependence of solutions on initial conditions and parameters, Lyapunov and asymptotic stability, Floquet theory, nonlinear systems, and bifurcations.

Prerequisite: MATH 3D and MATH 140A.

MATH 119. Boundary Value Problems. 4 Units.

Introduction to boundary value problems including Green's function representations, maximum principle, variational formulations, Sturm-Liouville problems, eigenfunction expansions, existence and uniqueness for nonlinear problems, method of shooting, finite difference methods.

Prerequisite: MATH 3D and MATH 140A.

MATH 120A. Introduction to Abstract Algebra: Groups. 4 Units.

Axioms for group theory; permutation groups, matrix groups. Isomorphisms, homomorphisms, quotient groups. Advanced topics as time permits. Special emphasis on doing proofs.

Prerequisite: (MATH 3A OR MATH 6G) AND MATH 13. MATH 13 with a grade of C- or better.

Restriction: Mathematics majors have first consideration for enrollment.

MATH 120B. Introduction to Abstract Algebra: Rings and Fields. 4 Units.

Basic properties of rings; ideals, quotient rings; polynomial and matrix rings. Elements of field theory.

Prerequisite: MATH 120A.

Restriction: Mathematics majors have first consideration for enrollment.

MATH 120C. Introduction to Abstract Algebra: Galois Theory. 4 Units.

Galois Theory: proof of the impossibility of certain ruler-and-compass constructions (squaring the circle, trisecting angles); nonexistence of analogues to the "quadratic formula" for polynomial equations of degree 5 or higher.

Prerequisite: MATH 120B.

Restriction: Mathematics majors have first consideration for enrollment.

MATH 121A. Linear Algebra. 4 Units.

Introduction to modern abstract linear algebra. Special emphasis on students doing proofs. Vector spaces, linear independence, bases, dimension. Linear transformations and their matrix representations. Theory of determinants.

Prerequisite: (MATH 3A OR MATH 6G) AND MATH 13. MATH 13 with a grade of C- or better.

Restriction: Mathematics majors have first consideration for enrollment.

MATH 121B. Linear Algebra. 4 Units.

Introduction to modern abstract linear algebra. Special emphasis on students doing proofs. Canonical forms; inner products; similarity of matrices.

Prerequisite: MATH 121A.

Restriction: Mathematics majors have first consideration for enrollment.

MATH 130. Probability and Stochastic Processes. 4 Units.

Introductory course emphasizing applications.

Prerequisite: MATH 2A and MATH 2B and MATH 2C

Restriction: Prerequisite required

MATH 130A. Probability and Stochastic Processes. 4 Units.

Basic concepts of random variables, distributions, independence, correlations, moments, limit theorems, conditional probability, Markov chains, gambler's ruin, branching process, birth and death processes, numerical simulations in Matlab.

Prerequisite: MATH 2A and MATH 2B and (MATH 3A or MATH 6G).

Overlaps with MATH 131A, MATH 132A, STATS 120A.

MATH 130B. Probability and Stochastic Processes. 4 Units.

Exponential distributions, Poisson processes, continuous time Markov chains, renewal theory, insurance ruin and claim problems, numerical simulations in Matlab.

Prerequisite: MATH 130A OR MATH 131A or STATS 120A.

MATH 130C. Probability and Stochastic Processes. 4 Units.

Martingales, Invariance Principle, Brownian motions and applications in option pricing, stationary processes and applications in Wiener filter, numerical simulations in Matlab.

Prerequisite: MATH 130B.

MATH 131A. Introduction to Probability and Statistics. 4 Units.

Introductory course covering basic principles of probability and statistical inference. Axiomatic definition of probability, random variables, probability distributions, expectation.

Prerequisite: MATH 2A and MATH 2B and (MATH 2D or MATH 4).

Same as STATS 120A.

Overlaps with MATH 130A, MATH 132A.

MATH 131B. Introduction to Probability and Statistics. 4 Units.

Introductory course covering basic principles of probability and statistical inference. Point estimation, interval estimating, and testing hypotheses, Bayesian approaches to inference.

Prerequisite: (MATH 131A or STATS 120A) and (MATH 3A or MATH 6G or MATH 4).

Same as STATS 120B.

MATH 131C. Introduction to Probability and Statistics. 4 Units.

Introductory course covering basic principles of probability and statistical inference. Linear regression, analysis of variance, model checking.

Prerequisite: MATH 131B or STATS 120B.

Same as STATS 120C.

MATH 133A. Statistical Methods with Applications to Finance. 4 Units.

Introduction to Monte Carlo (MC) methods. Overview of probability, statistics, financial concepts; linear and logistic regressions; time series models; Brownian motion; MC simulations.

Prerequisite: MATH 130A or MATH 131A or STATS 120A or MATH 2D or MATH 4.

MATH 133B. Statistical Methods with Applications to Finance. 4 Units.

Introduction to Monte Carlo (MC) methods. Elliptic and parabolic partial differential equations; MC methods; vanilla and exotic derivatives; Greeks, portfolio management, and value-at-risk.

Prerequisite: MATH 133A.

MATH 140A. Elementary Analysis. 4 Units.

Introduction to real analysis, including: convergence of sequence, infinite series, differentiation and integration, and sequences of functions. Students are expected to do proofs.

Prerequisite: MATH 2D and MATH 3A and MATH 13. MATH 13 with a grade of C- or better.

Restriction: Math majors have first consideration for enrollment.

MATH 140B. Elementary Analysis. 4 Units.

Introduction to real analysis including convergence of sequences, infinite series, differentiation and integration, and sequences of functions. Students are expected to do proofs.

Prerequisite: MATH 140A.

Restriction: Mathematics majors have first consideration for enrollment.

MATH 140C. Analysis in Several Variables . 4 Units.

Rigorous treatment of multivariable differential calculus. Jacobians, Inverse and Implicit Function theorems.

Prerequisite: MATH 140B.

MATH 141. Introduction to Topology. 4 Units.

The elements of naive set theory and the basic properties of metric spaces. Introduction to topological properties.

Prerequisite: MATH 140A.

MATH 146. Fourier Analysis. 4 Units.

Rigorous introduction to the theory of Fourier series and orthogonal expansions. Fourier transform.

Prerequisite: MATH 3D and MATH 140A and MATH 140B.
Recommended: MATH 112A.

MATH 147. Complex Analysis. 4 Units.

Rigorous treatment of basic complex analysis: analytic functions, Cauchy integral theory and its consequences, power series, residue calculus, harmonic functions, conformal mapping. Students are expected to do proofs.

Corequisite: MATH 140B.

Prerequisite: MATH 140A.

Overlaps with MATH 114A.

Restriction: MATH 114A may not be taken for credit after MATH 147.

MATH 150. Introduction to Mathematical Logic. 4 Units.

First order logic through the Completeness Theorem for predicate logic.

Prerequisite: MATH 13 or (I&C SCI 6B and I&C SCI 6D). MATH 13 with a grade of C- or better.

Overlaps with LPS 105B, PHILOS 105B.

MATH 151. Set Theory. 4 Units.

Axiomatic development; infinite sets; cardinal and ordinal numbers.

Prerequisite: MATH 150.

Overlaps with SOC SCI 105A, LPS 105A.

MATH 152. Computability. 4 Units.

Computable functions; undecidability; Gödel's Incompleteness Theorem.

Prerequisite: MATH 150.

Overlaps with PHILOS 105C, LPS 105C.

MATH 161. Modern Geometry. 4 Units.

Euclidean Geometry; Hilbert's Axioms; Absolute Geometry; Hyperbolic Geometry; the Poincare Models; and Geometric Transformations.

Prerequisite: MATH 13 or (I&C SCI 6B and I&C SCI 6D). MATH 13 with a C- or better.

Restriction: Math majors have first consideration for enrollment.

MATH 162A. Introduction to Differential Geometry. 4 Units.

Applications of advanced calculus and linear algebra to the geometry of curves and surfaces in space.

Prerequisite: MATH 2E and MATH 3A and MATH 3D.

MATH 162B. Introduction to Differential Geometry. 4 Units.

Applications of advanced calculus and linear algebra to the geometry of curves and surfaces in space.

Prerequisite: MATH 162A.

MATH 171A. Mathematical Methods in Operations Research Linear Programming. 4 Units.

Simplex algorithm, duality, optimization in networks.

Prerequisite: MATH 3A or MATH 6G.

MATH 171B. Mathematical Methods in Operations Research Nonlinear Programming. 4 Units.

Conditions for optimality, quadratic and convex programming, search methods, geometric programming.

Prerequisite: MATH 2D and (MATH 3A or MATH 6G).

MATH 173A. Introduction to Cryptology. 4 Units.

Introduction to some of the mathematics used in the making and breaking of codes, with applications to classical ciphers and public key systems. The mathematics which is covered includes topics from number theory, probability, and abstract algebra.

Prerequisite: MATH 2B and (MATH 3A or MATH 6G) and (MATH 13 or (I&C SCI 6B and I&C SCI 6D)). MATH 13 with a grade of C- or better.

MATH 173B. Introduction to Cryptology. 4 Units.

Introduction to some of the mathematics used in the making and breaking of codes, with applications to classical ciphers and public key systems. The mathematics which is covered includes topics from number theory, probability, and abstract algebra.

Prerequisite: MATH 173A.

MATH 174A. Modern Graph Theory. 4 Units.

An introductory course emphasizing the fundamental concepts of graph theory by developing abilities to produce examples, following and devising simple proofs, and current applications of graph theory. Topics include: Graph Types; Matching in Graphs; Menger's Theorem; Kuratowski's Theorem.

Prerequisite: MATH 2B and (MATH 3A or MATH 6G) and (MATH 13 or (I&C SCI 6B and I&C SCI 6D)). MATH 13 with a grade of C- or better.

MATH 174B. Modern Graph Theory II. 4 Units.

An introduction to fundamental concepts of graph theory by developing abilities to produce examples, following and devising simple proofs, and current applications of graph theory. Topics include coloring maps, plane graphs, vertices, and edges; Hadwiger's Conjecture; Hamilton Cycles; Ramsey Theory.

Prerequisite: MATH 174A.

MATH 175. Combinatorics. 4 Units.

Introduction to combinatorics including basic counting principles, permutations, combinations, binomial coefficients, inclusion-exclusion, derangements, ordinary and exponential generating functions, recurrence relations, Catalan numbers, Stirling numbers, and partition numbers.

Prerequisite: MATH 2B and MATH 13. MATH 13 with a grade of C- or better.

MATH 176. Mathematics of Finance. 4 Units.

After reviewing tools from probability, statistics, and elementary differential and partial differential equations, concepts such as hedging, arbitrage, Puts, Calls, the design of portfolios, the derivation and solution of the Black-Scholes, and other equations are discussed.

Prerequisite: MATH 3A.

Same as ECON 135.

Restriction: Mathematics, Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.

MATH 180A. Number Theory. 4 Units.

Introduction to number theory and applications. Divisibility, prime numbers, factorization. Arithmetic functions. Congruences. Quadratic residue. Diophantine equations. Introduction to cryptography.

Prerequisite: MATH 3A and MATH 13. MATH 13 with a grade of C- or better.

Restriction: Math majors have first consideration for enrollment.

MATH 180B. Number Theory. 4 Units.

Introduction to number theory and applications. Analytic number theory, character sums, finite fields, discrete logarithm, computational complexity. Introduction to coding theory. Other topics as time permits.

Prerequisite: MATH 180A.

Restriction: Mathematics majors have first consideration for enrollment.

MATH 184. History of Mathematics. 4 Units.

Topics vary from year to year. Some possible topics: mathematics in ancient times; the development of modern analysis; the evolution of geometric ideas. Students will be assigned individual topics for term papers.

Prerequisite: MATH 120A and MATH 140A.

Restriction: Math majors have first consideration for enrollment.

MATH 184L. History of Mathematics Lesson Lab. 1 Unit.

Aspiring math teachers research, design, present, and peer review middle school or high school math lessons that draw from history of mathematics topics.

Corequisite: MATH 184.

Prerequisite: PHY SCI 5.

MATH 189. Special Topics in Mathematics. 4 Units.

Offered from time to time, but not on a regular basis. Content and prerequisites vary with the instructor.

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

MATH 191. Mathematical Modeling Seminar. 2 Units.

Developing, testing, and presenting mathematical models for real world problems. Students will prepare for and participate in the Mathematical Contest in Modeling (MCM) in late February. Separate contest registration fee required.

Prerequisite: MATH 3D.

Repeatability: May be taken for credit 2 times.

MATH 192. Studies in the Learning and Teaching of Secondary Mathematics. 2 Units.

Focus is on historic and current mathematical concepts related to student learning and effective math pedagogy, with fieldwork in grades 6-14.

Prerequisite: MATH 2D and MATH 2J and MATH 3D and (MATH 13 or MATH 120A or MATH 140A).

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 2 times.

Restriction: Upper-division students only. Math majors with specialization in Mathematics for Education only.

MATH 193. SMPP Capstone. 2 Units.

Capstone course for the Mathematics Subject-Matter Preparation (SMP) program. Engages students in reviewing and conducting current research on significant issues related to the teaching and learning of mathematics in the secondary classroom.

Corequisite: Recommended: MATH 192.

Repeatability: May be taken for credit 2 times.

MATH 194. Problem Solving Seminar. 2 Units.

Develops ability in analytical thinking and problem solving, using problems of the type found in the Mathematics Olympiad and the Putnam Mathematical Competition. Students taking the course in fall will prepare for and take the Putnam examination in December.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 2 times.

MATH H195A. Honors Seminar. 4 Units.

Topics vary from year to year. Provides an integrative experience, including problem-solving and oral and written presentations. Required for the Honors Program in Mathematics and open to others with consent of instructor.

Restriction: Mathematics Honors Program students only.

MATH H195B. Honors Seminar. 4 Units.

Topics vary from year to year. Provides an integrative experience, including problem-solving and oral and written presentations. Required for the Honors Program in Mathematics and open to others with consent of instructor.

Restriction: Mathematics Honors Program students only.

MATH 199A. Special Studies in Mathematics. 2-4 Units.

Supervised reading. For outstanding undergraduate Mathematics majors in supervised but independent reading or research of mathematical topics.

Repeatability: Unlimited as topics vary.

MATH 199B. Special Studies in Mathematics. 2-4 Units.

Supervised reading. For outstanding undergraduate Mathematics majors in supervised but independent reading or research of mathematical topics.

Repeatability: Unlimited as topics vary.

MATH 199C. Special Studies in Mathematics. 2-4 Units.

Supervised reading. For outstanding undergraduate Mathematics majors in supervised but independent reading or research of mathematical topics.

Repeatability: Unlimited as topics vary.

MATH 205A. Introduction to Graduate Analysis. 5 Units.

Construction of the real number system, topology of the real line, concepts of continuity, differential and integral calculus, sequences and series of functions, equicontinuity, metric spaces, multivariable differential and integral calculus, implicit functions, curves and surfaces.

Prerequisite: MATH 2E and MATH 3A and MATH 13.

MATH 205B. Introduction to Graduate Analysis. 5 Units.

Construction of the real number system, topology of the real line, concepts of continuity, differential and integral calculus, sequences and series of functions, equicontinuity, metric spaces, multivariable differential and integral calculus, implicit functions, curves and surfaces.

Prerequisite: MATH 205A.

MATH 205C. Introduction to Graduate Analysis. 5 Units.

Construction of the real number system, topology of the real line, concepts of continuity, differential and integral calculus, sequences and series of functions, equicontinuity, metric spaces, multivariable differential and integral calculus, implicit functions, curves and surfaces.

Prerequisite: MATH 205B.

MATH 206A. Introduction to Graduate Algebra. 5 Units.

Introduction to abstract linear algebra, including bases, linear transformation, eigenvectors, canonical forms, inner products, symmetric operators. Introduction to groups, rings, and fields including examples of groups, group actions, Sylow theorems, modules over principal ideal domains, polynomials and Galois groups.

Prerequisite: MATH 3A.

MATH 206B. Introduction to Graduate Algebra. 5 Units.

Introduction to abstract linear algebra, including bases, linear transformation, eigenvectors, canonical forms, inner products, symmetric operators. Introduction to groups, rings, and fields including examples of groups, group actions, Sylow theorems, modules over principal ideal domains, polynomials and Galois groups.

Prerequisite: MATH 206A.

MATH 206C. Introduction to Graduate Algebra. 5 Units.

Introduction to abstract linear algebra, including bases, linear transformation, eigenvectors, canonical forms, inner products, symmetric operators. Introduction to groups, rings, and fields including examples of groups, group actions, Sylow theorems, modules over principal ideal domains, polynomials and Galois groups.

Prerequisite: MATH 206B.

MATH 210A. Real Analysis. 4 Units.

Measure theory, Lebesgue integral, signed measures, Radon-Nikodym theorem, functions of bounded variation and absolutely continuous functions, classical Banach spaces, L_p spaces, integration on locally compact spaces and the Riesz-Markov theorem, measure and outer measure, product measure spaces.

Prerequisite: MATH 140C.

MATH 210B. Real Analysis. 4 Units.

Measure theory, Lebesgue integral, signed measures, Radon-Nikodym theorem, functions of bounded variation and absolutely continuous functions, classical Banach spaces, L_p spaces, integration on locally compact spaces and the Riesz-Markov theorem, measure and outer measure, product measure spaces.

Prerequisite: MATH 210A.

MATH 210C. Real Analysis. 4 Units.

Measure theory, Lebesgue integral, signed measures, Radon-Nikodym theorem, functions of bounded variation and absolutely continuous functions, classical Banach spaces, L_p spaces, integration on locally compact spaces and the Riesz-Markov theorem, measure and outer measure, product measure spaces.

Prerequisite: MATH 210B.

MATH 211A. Topics in Analysis . 4 Units.

Studies in selected areas of Real Analysis, a continuation of MATH 210A-B-C. Topics addressed vary each quarter.

Prerequisite: MATH 210C.

MATH 211B. Topics in Analysis . 4 Units.

Studies in selected areas of Real Analysis, a continuation of MATH 210A-B-C. Topics addressed vary each quarter.

Prerequisite: MATH 211A.

MATH 211C. Topics in Analysis . 4 Units.

Studies in selected areas of Real Analysis, a continuation of MATH 210A-B-C. Topics addressed vary each quarter.

Prerequisite: MATH 211B.

MATH 218A. Introduction to Manifolds and Geometry. 4 Units.

General topology and fundamental groups, covering space; Stokes theorem on manifolds, selected topics on abstract manifold theory.

Prerequisite: MATH 205C.

MATH 218B. Introduction to Manifolds and Geometry. 4 Units.

General topology and fundamental groups, covering space; Stokes theorem on manifolds, selected topics on abstract manifold theory.

Prerequisite: MATH 218A.

MATH 218C. Introduction to Manifolds and Geometry. 4 Units.

General topology and fundamental groups, covering space; Stokes theorem on manifolds, selected topics on abstract manifold theory.

Prerequisite: MATH 218B.

MATH 220A. Analytic Function Theory. 4 Units.

Standard theorems about analytic functions. Harmonic functions. Normal families. Conformal mapping.

Prerequisite: MATH 140C.

MATH 220B. Analytic Function Theory. 4 Units.

Standard theorems about analytic functions. Harmonic functions. Normal families. Conformal mapping.

Prerequisite: MATH 220A.

MATH 220C. Analytic Function Theory. 4 Units.

Standard theorems about analytic functions. Harmonic functions. Normal families. Conformal mapping.

Prerequisite: MATH 220B.

MATH 222A. Several Complex Variables and Complex Geometry. 4 Units.

Several Complex variables, $\bar{\partial}$ -bar problems, mappings, Kaehler geometry, de Rham and Dolbeault Theorems, Chern Classes, Hodge Theorems, Calabi conjecture, Kahler-Einstein geometry, Monge-Ampere.

Prerequisite: MATH 218C and MATH 220C.

MATH 222B. Several Complex Variables and Complex Geometry. 4 Units.

Several Complex variables, $\bar{\partial}$ -bar problems, mappings, Kaehler geometry, Le Rham and Dolbeault Theorems, Chern Classes, Hodge Theorems, Calabi conjecture, Kahler-Einstein geometry, Monge-Ampere.

Prerequisite: MATH 222A.

MATH 222C. Several Complex Variables and Complex Geometry. 4 Units.

Several Complex variables, $\bar{\partial}$ -bar problems, mappings, Kaehler geometry, Le Rham and Dolbeault Theorems, Chern Classes, Hodge Theorems, Calabi conjecture, Kahler-Einstein geometry, Monge-Ampere.

Prerequisite: MATH 222B.

MATH 225A. Introduction to Numerical Analysis and Scientific Computing. 4 Units.

Introduction to fundamentals of numerical analysis from an advanced viewpoint. Error analysis, approximation of functions, nonlinear equations.

Prerequisite: MATH 3D and ((MATH 105A and MATH 105B) or (MATH 140A and MATH 140B)) and MATH 121A and (MATH 112A or ENGRMAE 140).

Restriction: Graduate students only.

MATH 225B. Introduction to Numerical Analysis and Scientific Computing. 4 Units.

Introduction to fundamentals of numerical analysis from an advanced viewpoint. Numerical linear algebra, numerical solutions of differential equations; stability.

Prerequisite: MATH 225A.

Restriction: Graduate students only.

MATH 225C. Introduction to Numerical Analysis and Scientific Computing. 4 Units.

Introduction to fundamentals of numerical analysis from an advanced viewpoint. Numerical linear algebra, numerical solutions of differential equations; stability.

Prerequisite: MATH 225B.

Restriction: Graduate students only.

MATH 226A. Computational Differential Equations. 4 Units.

Finite difference and finite element methods. Quick treatment of functional and nonlinear analysis background: weak solution, L_p spaces, Sobolev spaces. Approximation theory. Fourier and Petrov-Galerkin methods; mesh generation. Elliptic, parabolic, hyperbolic cases in 226A-B-C, respectively.

Prerequisite: MATH 3D and (MATH 112A or ENGRMAE 140) and (MATH 140B or MATH 105B).

MATH 226B. Computational Differential Equations. 4 Units.

Finite difference and finite element methods. Quick treatment of functional and nonlinear analysis background: weak solution, L_p spaces, Sobolev spaces. Approximation theory. Fourier and Petrov-Galerkin methods; mesh generation. Elliptic, parabolic, hyperbolic cases in 226A-B-C, respectively.

Prerequisite: MATH 226A.

MATH 226C. Computational Differential Equations. 4 Units.

Finite difference and finite element methods. Quick treatment of functional and nonlinear analysis background: weak solution, L_p spaces, Sobolev spaces. Approximation theory. Fourier and Petrov-Galerkin methods; mesh generation. Elliptic, parabolic, hyperbolic cases in 226A-B-C, respectively.

Prerequisite: MATH 226B.

MATH 227A. Mathematical and Computational Biology. 4 Units.

Analytical and numerical methods for dynamical systems, temporal-spatial dynamics, steady state, stability, stochasticity. Application to life sciences: genetics, tissue growth and patterning, cancers, ion channels gating, signaling networks, morphogen gradients. Analytical methods.

Prerequisite: MATH 2A and MATH 2B and MATH 3A.

MATH 227B. Mathematical and Computational Biology. 4 Units.

Analytical and numerical methods for dynamical systems, temporal-spatial dynamics, steady state, stability, stochasticity. Application to life sciences: genetics, tissue growth and patterning, cancers, ion channels gating, signaling networks, morphogen gradients. Numerical simulations.

Prerequisite: MATH 227A.

MATH 227C. Mathematical and Computational Biology. 4 Units.

Analytical and numerical methods for dynamical systems, temporal-spatial dynamics, steady state, stability, stochasticity. Application to life sciences: genetics, tissue growth and patterning, cancers, ion channels gating, signaling networks, morphogen gradients. Probabilistic methods.

Prerequisite: MATH 227A.

Same as COMPSCI 285.

MATH 230A. Algebra. 4 Units.

Elements of the theories of groups, rings, fields, modules. Galois theory. Modules over principal ideal domains. Artinian, Noetherian, and semisimple rings and modules.

Prerequisite: MATH 120A and MATH 121A and MATH 121B.

MATH 230B. Algebra. 4 Units.

Elements of the theories of groups, rings, fields, modules. Galois theory. Modules over principal ideal domains. Artinian, Noetherian, and semisimple rings and modules.

Prerequisite: MATH 230A.

MATH 230C. Algebra. 4 Units.

Elements of the theories of groups, rings, fields, modules. Galois theory. Modules over principal ideal domains. Artinian, Noetherian, and semisimple rings and modules.

Prerequisite: MATH 230B.

MATH 232A. Algebraic Number Theory. 4 Units.

Algebraic integers, prime ideals, class groups, Dirichlet unit theorem, localization, completion, Cebotarev density theorem, L-functions, Gauss sums, diophantine equations, zeta functions over finite fields. Introduction to class field theory.

Prerequisite: MATH 230C.

MATH 232B. Algebraic Number Theory. 4 Units.

Algebraic integers, prime ideals, class groups, Dirichlet unit theorem, localization, completion, Cebotarev density theorem, L-functions, Gauss sums, diophantine equations, zeta functions over finite fields. Introduction to class field theory.

Prerequisite: MATH 232A.

MATH 232C. Algebraic Number Theory. 4 Units.

Algebraic integers, prime ideals, class groups, Dirichlet unit theorem, localization, completion, Cebotarev density theorem, L-functions, Gauss sums, diophantine equations, zeta functions over finite fields. Introduction to class field theory.

Prerequisite: MATH 232B.

MATH 233A. Algebraic Geometry. 4 Units.

Basic commutative algebra and classical algebraic geometry. Algebraic varieties, morphisms, rational maps, blow ups. Theory of schemes, sheaves, divisors, cohomology. Algebraic curves and surfaces, Riemann-Roch theorem, Jacobian classification of curves and surfaces.

Prerequisite: MATH 230C.

MATH 233B. Algebraic Geometry. 4 Units.

Basic commutative algebra and classical algebraic geometry. Algebraic varieties, morphisms, rational maps, blow ups. Theory of schemes, sheaves, divisors, cohomology. Algebraic curves and surfaces, Riemann-Roch theorem, Jacobian classification of curves and surfaces.

Prerequisite: MATH 233A.

MATH 233C. Algebraic Geometry. 4 Units.

Basic commutative algebra and classical algebraic geometry. Algebraic varieties, morphisms, rational maps, blow ups. Theory of schemes, sheaves, divisors, cohomology. Algebraic curves and surfaces, Riemann-Roch theorem, Jacobian classification of curves and surfaces.

Prerequisite: MATH 22B.

MATH 234B. Topics in Algebra. 4 Units.

Group theory, homological algebra, and other selected topics.

Prerequisite: MATH 230C.

Repeatability: May be repeated for credit unlimited times.

MATH 234C. Topics in Algebra. 4 Units.

Group theory, homological algebra, and other selected topics.

Prerequisite: MATH 234B.

Repeatability: May be repeated for credit unlimited times.

MATH 235A. Mathematics of Cryptography. 4 Units.

Mathematics of public key cryptography: encryption and signature schemes; RSA; factoring; primality testing; discrete log based cryptosystems, elliptic and hyperelliptic curve cryptography and additional topics as determined by the instructor.

Prerequisite: MATH 230C.

MATH 235B. Mathematics of Cryptography. 4 Units.

Mathematics of public key cryptography: encryption and signature schemes; RSA; factoring; primality testing; discrete log based cryptosystems, elliptic and hyperelliptic curve cryptography and additional topics as determined by the instructor.

Prerequisite: MATH 235A.

MATH 235C. Mathematics of Cryptography. 4 Units.

Mathematics of public key cryptography: encryption and signature schemes; RSA; factoring; primality testing; discrete log based cryptosystems, elliptic and hyperelliptic curve cryptography and additional topics as determined by the instructor.

Prerequisite: MATH 235B.

MATH 239A. Analytic Methods in Arithmetic Geometry. 4 Units.

Riemann zeta function, Dirichlet L-functions, prime number theorem, zeta functions over finite fields, sieve methods, zeta functions of algebraic curves, algebraic coding theory, L-Functions over number fields, L-functions of modular forms, Eisenstein series.

Prerequisite: MATH 220C and MATH 230C.

MATH 239B. Analytic Methods in Arithmetic Geometry. 4 Units.

Riemann zeta function, Dirichlet L-functions, prime number theorem, zeta functions over finite fields, sieve methods, zeta functions of algebraic curves, algebraic coding theory, L-Functions over number fields, L-functions of modular forms, Eisenstein series.

Prerequisite: MATH 239A.

MATH 239C. Analytic Methods in Arithmetic Geometry. 4 Units.

Riemann zeta function, Dirichlet L-functions, prime number theorem, zeta functions over finite fields, sieve methods, zeta functions of algebraic curves, algebraic coding theory, L-Functions over number fields, L-functions of modular forms, Eisenstein series.

Prerequisite: MATH 239B.

MATH 240A. Differential Geometry. 4 Units.

Riemannian manifolds, connections, curvature and torsion. Submanifolds, mean curvature, Gauss curvature equation. Geodesics, minimal submanifolds, first and second fundamental forms, variational formulas. Comparison theorems and their geometric applications. Hodge theory applications to geometry and topology.

MATH 240B. Differential Geometry. 4 Units.

Riemannian manifolds, connections, curvature and torsion. Submanifolds, mean curvature, Gauss curvature equation. Geodesics, minimal submanifolds, first and second fundamental forms, variational formulas. Comparison theorems and their geometric applications. Hodge theory applications to geometry and topology.

Prerequisite: MATH 240A.

MATH 240C. Differential Geometry. 4 Units.

Riemannian manifolds, connections, curvature and torsion. Submanifolds, mean curvature, Gauss curvature equation. Geodesics, minimal submanifolds, first and second fundamental forms, variational formulas. Comparison theorems and their geometric applications. Hodge theory applications to geometry and topology.

Prerequisite: MATH 240B.

MATH 245A. Topics in Differential Geometry. 4 Units.

Studies in selected areas of differential geometry, a continuation of MATH 240A-B-C. Topics addressed vary each quarter.

Prerequisite: MATH 240C.

Repeatability: Unlimited as topics vary.

MATH 245B. Topics in Differential Geometry. 4 Units.

Studies in selected areas of differential geometry, a continuation of MATH 240A-B-C. Topics addressed vary each quarter.

Prerequisite: MATH 245A.

Repeatability: Unlimited as topics vary.

MATH 245C. Topics in Differential Geometry. 4 Units.

Studies in selected areas of differential geometry, a continuation of MATH 240A-B-C. Topics addressed vary each quarter.

Prerequisite: MATH 245B.

Repeatability: Unlimited as topics vary.

MATH 250A. Algebraic Topology. 4 Units.

Provides fundamental materials in algebraic topology: fundamental group and covering space, homology and cohomology theory, and homotopy group.

Prerequisite: MATH 230A.

MATH 250B. Algebraic Topology. 4 Units.

Provides fundamental materials in algebraic topology: fundamental group and covering space, homology and cohomology theory, and homotopy group.

Prerequisite: MATH 250A.

MATH 250C. Algebraic Topology. 4 Units.

Provides fundamental materials in algebraic topology: fundamental group and covering space, homology and cohomology theory, and homotopy group.

Prerequisite: MATH 250B.

MATH 260A. Functional Analysis. 4 Units.

Normed linear spaces, Hilbert spaces, Banach spaces, Stone-Weierstrass Theorem, locally convex spaces, bounded operators on Banach and Hilbert spaces, the Gelfand-Neumark Theorem for commutative C^* -algebras, the spectral theorem for bounded self-adjoint operators, unbounded operators on Hilbert spaces.

Prerequisite: MATH 210C and MATH 220C.

MATH 260B. Functional Analysis. 4 Units.

Normed linear spaces, Hilbert spaces, Banach spaces, Stone-Weierstrass Theorem, locally convex spaces, bounded operators on Banach and Hilbert spaces, the Gelfand-Neumark Theorem for commutative C^* -algebras, the spectral theorem for bounded self-adjoint operators, unbounded operators on Hilbert spaces.

Prerequisite: MATH 260A.

MATH 260C. Functional Analysis. 4 Units.

Normed linear spaces, Hilbert spaces, Banach spaces, Stone-Weierstrass Theorem, locally convex spaces, bounded operators on Banach and Hilbert spaces, the Gelfand-Neumark Theorem for commutative C^* -algebras, the spectral theorem for bounded self-adjoint operators, unbounded operators on Hilbert spaces.

Prerequisite: MATH 260B.

MATH 270A. Probability. 4 Units.

Probability spaces, distribution and characteristic functions. Strong limit theorems. Limit distributions for sums of independent random variables. Conditional expectation and martingale theory. Stochastic processes.

Prerequisite: MATH 130C and MATH 210C.

MATH 270B. Probability. 4 Units.

Probability spaces, distribution and characteristic functions. Strong limit theorems. Limit distributions for sums of independent random variables. Conditional expectation and martingale theory. Stochastic processes.

Prerequisite: MATH 270A.

MATH 270C. Probability. 4 Units.

Probability spaces, distribution and characteristic functions. Strong limit theorems. Limit distributions for sums of independent random variables. Conditional expectation and martingale theory. Stochastic processes.

Prerequisite: MATH 270B.

MATH 271A. Stochastic Processes. 4 Units.

Processes with independent increments, Wiener and Gaussian processes, function space integrals, stationary processes, Markov processes.

Prerequisite: MATH 210C.

Overlaps with STATS 270.

MATH 271B. Stochastic Processes. 4 Units.

Processes with independent increments, Wiener and Gaussian processes, function space integrals, stationary processes, Markov processes.

Prerequisite: MATH 271A.

Overlaps with STATS 270.

MATH 271C. Stochastic Processes. 4 Units.

Processes with independent increments, Wiener and Gaussian processes, function space integrals, stationary processes, Markov processes.

Prerequisite: MATH 271B.

Overlaps with STATS 270.

MATH 272A. Probability Models. 4 Units.

Spin systems, Ising models, contact process, exclusion process, percolation, increasing events, critical probabilities, sub- and super-critical phases, scaling theory, oriented percolation, concentration of measure, Gaussian fields, Borell's inequality, chaining, entropy.

Prerequisite: MATH 271C.

MATH 272B. Probability Models. 4 Units.

Spin systems, Ising models, contact process, exclusion process, percolation, increasing events, critical probabilities, sub- and super-critical phases, scaling theory, oriented percolation, concentration of measure, Gaussian fields, Borell's inequality, chaining, entropy.

Prerequisite: MATH 272A.

MATH 272C. Probability Models. 4 Units.

Spin systems, Ising models, contact process, exclusion process, percolation, increasing events, critical probabilities, sub- and super-critical phases, scaling theory, oriented percolation, concentration of measure, Gaussian fields, Borell's inequality, chaining, entropy.

Prerequisite: MATH 272B.

MATH 274. Topics in Probability. 4 Units.

Selected topics, such as theory of stochastic processes, martingale theory, stochastic integrals, stochastic differential equations.

Prerequisite: MATH 270C.

Repeatability: Unlimited as topics vary.

MATH 277A. Topics in Mathematical Physics . 4 Units.

Studies in selected areas of mathematical physics. Topics addressed vary each quarter.

Repeatability: May be repeated for credit unlimited times.

MATH 277B. Topics in Mathematical Physics . 4 Units.

Studies in selected areas of mathematical physics. Topics addressed vary each quarter.

Prerequisite: MATH 277A.

Repeatability: May be repeated for credit unlimited times.

MATH 277C. Topics in Mathematical Physics . 4 Units.

Studies in selected areas of mathematical physics. Topics addressed vary each quarter.

Prerequisite: MATH 277B.

Repeatability: May be repeated for credit unlimited times.

MATH 280A. Mathematical Logic. 4 Units.

Basic set theory; models, compactness, and completeness; basic model theory; Incompleteness and Gödel's Theorems; basic recursion theory; constructible sets.

MATH 280B. Mathematical Logic. 4 Units.

Basic set theory; models, compactness, and completeness; basic model theory; Incompleteness and Gödel's Theorems; basic recursion theory; constructible sets.

Prerequisite: MATH 280A.

MATH 280C. Mathematical Logic. 4 Units.

Basic set theory; models, compactness, and completeness; basic model theory; Incompleteness and Gödel's Theorems; basic recursion theory; constructible sets.

Prerequisite: MATH 280B.

MATH 281A. Set Theory. 4 Units.

Ordinals, cardinals, cardinal arithmetic, combinatorial set theory, models of set theory, Gödel's constructible universe, forcing, large cardinals, iterate forcing, inner model theory, fine structure.

Prerequisite: MATH 280C.

MATH 281B. Set Theory. 4 Units.

Ordinals, cardinals, cardinal arithmetic, combinatorial set theory, models of set theory, Gödel's constructible universe, forcing, large cardinals, iterate forcing, inner model theory, fine structure.

Prerequisite: MATH 281A.

MATH 281C. Set Theory. 4 Units.

Ordinals, cardinals, cardinal arithmetic, combinatorial set theory, models of set theory, Gödel's constructible universe, forcing, large cardinals, iterate forcing, inner model theory, fine structure.

Prerequisite: MATH 281B.

MATH 282A. Model Theory. 4 Units.

Languages, structures, compactness and completeness. Model-theoretic constructions. Omitting types theorems. Morley's theorem. Ranks, forking. Model completeness. O-minimality. Applications to algebra.

Prerequisite: MATH 280C.

MATH 282B. Model Theory. 4 Units.

Languages, structures, compactness and completeness. Model-theoretic constructions. Omitting types theorems. Morley's theorem. Ranks, forking. Model completeness. O-minimality. Applications to algebra.

Prerequisite: MATH 282A.

MATH 282C. Model Theory. 4 Units.

Languages, structures, compactness and completeness. Model-theoretic constructions. Omitting types theorems. Morley's theorem. Ranks, forking. Model completeness. O-minimality. Applications to algebra.

Prerequisite: MATH 282B.

MATH 285A. Topics in Mathematical Logic. 4 Units.

Studies in selected areas of mathematical logic, a continuation of MATH 280A-B-C. Topics addressed vary each quarter.

Prerequisite: MATH 280C.

Repeatability: Unlimited as topics vary.

MATH 285B. Topics in Mathematical Logic. 4 Units.

Studies in selected areas of mathematical logic, a continuation of MATH 280A-B-C. Topics addressed vary each quarter.

Prerequisite: MATH 285A.

Repeatability: Unlimited as topics vary.

MATH 285C. Topics in Mathematical Logic. 4 Units.
