

CrossRef Cited-by Linking

■ Who's Citing You?

Wouldn't it be nice to show your authors and readers exactly who and what was citing your content? CrossRef, the organization that brought you publishing's pre-eminent shared digital infrastructure, now allows members to look up and display what cites what.

CrossRef Cited-by Linking allows you to discover how your publications are being cited in other publications and to incorporate CrossRef DOIs® to the citing content into your online publication site. CrossRef Cited-by Linking is free to CrossRef members.

■ What Do You Need To Do?

1. Supply CrossRef with the metadata for reference lists for each article deposited in CrossRef. This data represents the works that your publications cite.
2. For any given article where you wish to show cited-by links, query CrossRef (using its DOI) to retrieve the list of citing articles (as identified by their CrossRef DOIs). Retrieving cited-by DOIs can be as easy as cutting-and-pasting references into CrossRef's simple text query form—no XML required.

Email alerts let you know when a new item cites your content.

■ How Big Is The CrossRef Cited-By Network?

- 15,000 journals
- over 170 million cited-by relationships
- more than 240 publishers
