Here are some (loosely categorized) references on the general subject of phonological and phonetic acquisition. The list can be used as a stimulus for project topics, and as a place to go for background reading when presenting an assigned paper. It is very far from being complete, but it should be enough to get started with.

Collecting new child data is very difficult. Fortunately, there are many published corpora, some consisting of transcriptions, others of audio or video recordings. A central brokerage is at the CHILDES project, <http://childe.s.psy.cmu.edu>, where you will find bibliographies of published corpora, as well as audio recordings. The following list is taken from the CHILDES website:
