Was beweisbar ist, soll in der Wissenschaft nicht ohne Beweis geglaubt werden. So einleuchtend diese Forderung erscheint, so ist sie doch, wie ich glaube, selbst bei der Begründung der einfachsten Wissenschaft, nämlich desjenigen Teiles der Logik, welcher die Lehre von den Zahlen behandelt, auch nach den neuesten Darstellungen*) noch keineswegs als erfüllt anzusehen. Indem ich die Arithmetik (Algebra, Analysis) nur einen Teil der Logik nenne, spreche ich schon aus, das ich den Zahlbegriff für ganzlich unabhängig von den Vorstellungen oder Anschauungen des Raumes und der Zeit, das ich ihn vielmehr für einen unmittelbaren Ausfluss der reinen Denkgesetze halte. Meine Hauptantwort auf die im Titel dieser Schrift gestellte Frage lautet: die Zahlen sind freie Schöpfungen des menschlichen Geistes, sie dienen als ein Mittel, um die Verschiedenheit der Dinge leichter und scharfer aufzufassen. [Edit](#)

What is provable is not to be believed in science without proof. As plausible as this demand appears, it is, I believe, not to be regarded as satisfying, even in the light of the simplest science, namely that part of the logic which deals with the doctrine of the numbers. By naming arithmetic (algebra, analysis) only a part of the logic, I am already thinking that I am the concept of numbers for completely independent of the ideas or intuitions of space and time, which I regard as a direct escape of the pure laws of thought. Hold My main answer to the question posed in the title of this paper is: the numbers are free creatures of the human mind; they serve as a means to conceive the difference between things more easily and sharply.
