

F-Secure Internet Gatekeeper

F-Secure® Internet Gatekeeper™ is a high-performance and fully automated antivirus and content filtering solution for e-mail (SMTP) and Web (HTTP) traffic at the Internet gateway. The solution not only improves security, but also improves employee productivity, reduces legal liability concerns and saves network bandwidth.

Virus Protection for E-Mail and Web Traffic

As many companies are already familiar with e-mail borne viruses and are learning how to protect against them, virus writers have started to invent new ways to enter corporate networks. A good example is the "Nimda" virus that spread via both e-mail and Web traffic, surprising even data security experts with its speed and effectiveness. F-Secure Internet Gatekeeper, residing between the corporate network and the Internet, ensures that viruses hidden in e-mail messages and Web downloads are not able to enter or leave the corporate network.

Content Filtering and Access Control

Today, it is not only viruses and other malicious code but also employees' undesirable Web surfing and e-mail exchange that cause financial losses to companies. With F-Secure Internet Gatekeeper, administrators can control the content that is downloaded from the Web or sent and received via e-mail. Blocking movie files, sound files and other non-work related content by file type or size and preventing employees from accessing inappropriate Web sites help companies keep employee productivity at a high level.

KEY FEATURES

Superior Virus Detection.

Provides unmatched virus detection rates with multiple independently developed virus scanning engines.

Content Filtering. Protects against viruses and undesired file types by securely stripping attachments based on file size, extension or name.

Access Control. Allows you to prevent employees from visiting non-work related Web sites or sending private e-mail via free e-mail messaging services on the Web.

Automatic Virus Definition

Updates. Updates virus definition databases fully automatically multiple times per day without any intervention from the administrator.

High Performance and

Reliability. Provides fast and secure scanning, minimizing effects on Web browsing and e-mail transfers.

All-inclusive Compatibility.

Interoperates with any firewall and e-mail system, scanning all HTTP and SMTP traffic passing through the gateway.

Local or Remote User

Interface. Provides an easy-to-use local user interface or alternatively the centralized management tool F-Secure Policy Manager™ to administer all F-Secure Anti-Virus products.

F-Secure

Ease of Use and Deployment

F-Secure Internet Gatekeeper is easy to set up and administer even by companies with limited IT resources. Thanks to the powerful product architecture and management, it also scales up to the needs of larger corporate environments. The administrator can configure and manage the solution either with an easy-to-use local user interface or with the centralized F-Secure Anti-Virus management tool, F-Secure Policy Manager™, which is included free-of-charge in the license.

Automated, Maintenance-free Protection

With F-Secure Internet Gatekeeper, virus protection is always on and automatically updated against the latest threats. Since virus scanning is done in real time already at the Internet gateway, end users cannot bypass or disable scanning and are fully protected with always up-to-date security. In addition to fully automated virus definition updates, the solution provides sophisticated monitoring, reporting and alerting services, keeping the administrator in control of the protection.

Proactive Protection

With F-Secure Internet Gatekeeper, virus protection is proactive and extremely efficient. In addition to known viruses, the product recognizes new, unknown viruses based on typical features of harmful content. The product also enables fast responses to virus outbreaks by allowing the administrator to specify potentially dangerous files to be automatically dropped from e-mail traffic based on file name or extension. Removing .vbs and .pif files from e-mail messages, for instance, could have stopped the "Loveletter", "Sobig" and many other viruses.

The World's Leading Virus Research

Antivirus products are only as good as the research and dedication behind them. That is why F-Secure Anti-Virus consistently ranks at the top when compared to competing products. The F-Secure Anti-Virus Research Team is on call 24-hours a day, responding to new and emerging threats. The research team, staffed with globally recognized virus experts, develops and distributes protection against new viruses within only a few hours of discovery of a new threat, and in many instances well ahead of other antivirus vendors.
