

Installing & Registering MATHEMATICA at the University of Colorado Colorado Springs

1. Go to sitelic.colorado.edu/mathematica/ and start the registration process by using the appropriate Univ. Colorado site license #:
L3230-4152 (students only)
L2437-5121 (faculty & staff)
You will be prompted for a MathID on the second page of registration.

Assuming that YOU DON'T HAVE Mathematica on your machine, then continue as follows....

2. Download the Mathematica software from the sitelic.colorado.edu/mathematica/ (website). Install for a single user on personal machine. As you finish getting the software unzipped, etc., your MathID will be generated automatically --save this sequence of numbers.
3. Go back and finish the registration process that you already started by filling in this MathID into the appropriate field (the name of the computer is not a controlled parameter so make something up...)
4. Finally, a password for the registration process will be generated in an email, so, after picking the password up in email, the registration may be completed. Note: the registration window told me that the email was sent to the Colorado site license administrator, but I received the password and other data in my Inbox within a minute or so.

Please direct questions via email to: sitelic@colorado.edu
