Introduction

This Standard specifies XML Schema Definitions (XSD) for Phase III of Services for Computer Supported Telecommunications Applications (CSTA), ECMA-269 9th edition. This Standard is an alternative to ASN.1 specified in ECMA-285.

"COPYRIGHT NOTICE

This document may be copied, published and distributed to others, and certain derivative works of it may be prepared, copied, published, and distributed, in whole or in part, provided that the above copyright notice and this Copyright Licence and Disclaimer are included on all such copies and derivative works. The only derivative works that are permissible under this Copyright License and Disclaimer are:

(i) works which incorporate all or portion of this document for the purpose of providing commentary or explanation (such as an annotated version of the document),

(ii) works which incorporate all or portion of this document for the purpose of incorporating features that provide accessibility,

(iii) translations of this document into languages other than English and into different formats and

(iv) works by making use of this specification in standard conformant products by implementing (e.g. by copy and paste wholly or partly) the functionality therein.

However, the content of this document itself may not be modified in any way, including by removing the copyright notice or references to Ecma International, except as required to translate it into languages other than English or into a different format.

The official version of an Ecma International document is the English language version on the Ecma International website. In the event of discrepancies between a translated version and the official version, the official version shall govern.

The limited permissions granted above are perpetual and will not be revoked by Ecma International or its successors or assigns.

This document and the information herein is provided on an "AS IS" basis and ECMA INTERNATIONAL DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE."

Adopted as 6th Edition of Standard ECMA-323 by the General Assembly of December 2011.

XML Tools Acknowledgement

XML Schema Definitions (XSD) in this Standard have been verified to be correct according to the XML SPY tool.

© Ecma International 2011

1 Scope

This Standard specifies XML Schema Definitions (XSD) for the services in ECMA-269, Services for Computer Supported Telecommunications Applications (CSTA) Phase III.

Clause 5 to Clause 8 inclusive describes the concepts underlying the request/response model, application association, notation and service, and a description of the template used in this Standard.

Clause 9 to Clause 27 inclusive contains CSTA-specific protocol details and forms the main part of this Standard.

Annex A specifies the PICS for this Standard.

Examples of CSTA XML encodings are provided in Annex E through Annex J.

2 Conformance

Implementations may include any XML Schema Definition part specified in this Standard, as long as it satisfies the minimum conformance requirements as specified in Clause 2 of ECMA-269.

A Protocol Implementation Conformance Statement (PICS) shall be used to specify the operations which are provided by a particular implementation. A PICS shall also specify the parameter options which are used.

2.1 Static Requirements

To conform to this Standard, a system shall support the syntax as defined by the XML 1.0 specification and the structures and data types as defined in the XML Schema Structure and XML Schema Data Types specifications for the purpose of generating and interpreting CSTA protocol information for the operations supported.

2.2 Dynamic Requirements

To conform to this Standard, a system shall:

a. follow the procedures as specified in this Standard, and ECMA-269, relevant to each CSTA operation that the system claims to implement; and

b. satisfy the definitions, as specified in ECMA-269, relevant to each CSTA service that the system claims to implement.

2.3 PICS Requirement

To conform to this Standard, the following shall be stated by the implementer when defining a PICS corresponding to an application or implementation:

a. which CSTA operations, as defined in ECMA-269, are supported by the system for the particular implementation; and

b. which optional parameters are supported by each supported operations.

A PICS proforma is specified in Annex A of this Standard.

2.4 XML Tag Options

To conform to this Standard, a system shall support at least one of the XML tag options listed below.

© Ecma International 2011

2.4.1 ECMA-323 Specified Tags

Instance documents shall include the following URI for the namespace and conform to the schemas as specified in Clause 9 through 27 of this Standard without transformations.

http://www.ecma-international.org/standards/ecma-323/csta/ed6

2.4.2 ECMA-323 Specified Short Tags

Instance documents shall include the following URI for the namespace and conform to the schemas as specified in Clause 9 through 27 of this Standard with transformations as specified in Annex D.

url: www.ecma-international.org/standards/ecma-323/csta/ed6/short_tags

2.4.3 Dynamic Transformations

Implementation claiming conformance to this option shall support XML schema transformations e.g. using <?xml-stylesheet> for the schemas specified in Clause 9 through 27.

2.5 CSTA Over SIP (uaCSTA) Transport Mechanism Option

An implementation that conforms to ECMA-323 can also claim conformance to the "CSTA Over SIP (uaCSTA Transport Mechanism Option" by implementing the SIP and CSTA procedures specified in Annex C.

5 CSTA Service Definition Model

CSTA services specified in ECMA-269 are modeled as a request/response interaction.

Typically, one entity requests that a particular operation be performed; the other entity attempts to perform the operation and responds to the requestor.

5.1 Request/Response Interactions

CSTA services consist of the following types of request/response interactions:

- Services which specify a response in case of success or failure. The protocol description for these services includes a response element that represents the success (i.e. positive acknowledgement). In case of service failure, a fault element is used to provide the failure information (i.e. negative acknowledgement).
- Services which only specify a response in case of failure. The protocol description for these services do not include a response element. A fault element is used to provide the failure information (i.e. negative acknowledgement).

For CSTA event reports, no response is generated.

5.2 Request/Response Protocol Requirements

This Standard specifies CSTA-specific XML-encoded content for messages that are sent across a CSTA Service boundary. Typically this CSTA-specific XML is enveloped by a request/response protocol that provides a mechanism for correlating a CSTA request with a CSTA response, manages faults, defines header information, etc.

This Standard does not mandate that a specific request/response protocol be used. However, this Standard provides examples of how the CSTA-specific XML can be used with several industry request/response protocols and transports such as SOAP (Simple Object Access Protocol), HTTP, and TCP. These examples are provided beginning in Annex H.

5.3 Cross Referencing of Event Reports

The Monitor Cross Reference Identifier in CSTA event reports is used to correlate events to an earlier Monitor Start service request (see 6.7.2.1 of ECMA-269).

5.4 Handling of Private Data

If an entity receives CSTA Private Data in a CSTA message, and it can not recognize the information contained, the CSTA Private Data shall be discarded, and the rest of the message shall be processed.

6 Interconnection service boundary

The protocol in this Standard is an OSI Application Layer protocol that assumes certain services are provided by the underlying layers, and these services are also assumed by the protocol for CSTA.

This protocol also provides a mechanism for secure transmission of CSTA messages as defined in this Standard.

7 Association Management

The protocol in this Standard operates in the context of an application association as specifed in ECMA-269 Clause 7. This application association can be achieved by:

- an implicit association achieved via off-line agreement; or

- an explicit association that is achieved dynamically.

7.1 Implicit association

An a-priori agreement exists between switching and computing functions: the application context is implicit, dynamic negotiation is not possible. See ECMA-269 7.1 and 7.2 for more information.

7.2 Explicit association

An explicit application association is established by a process of exchanging messages that define the application context for the association.

This Standard does not require that a particular standard be used as part of the application association establishment procedure.

When ACSE (ISO/IEC 8649) is used to establish an application association per 7.3 of ECMA-269, the CSTA Association Information includes CSTA Version information that indicates the CSTA protocol versions supported by an implementation.

The protocol defined in this Standard is indicated by setting the following bit in the CSTAVersion parameter of the CSTA Association Information as defined in 8.2.2 of ECMA-285.

- versionSixteen when using the ECMA-323 Specified Tag option (see section 2.4.1)
- versionSeventeen when using the ECMA-323 Specified Short Tag option (see section 2.4.2)
- versionEighteen when using the Dynamic Transformation option (see section 2.4.3)

Note that the ACSE messages are ASN.1 encoded while the CSTA messages are XML encoded as defined by this Standard.

ECMA-354, Application Session Services can also be used to establish an application association per 7.4 of ECMA-269. When this Standard is used with ECMA-354 the following namespace is provided in the requestedProtocolVersions element of the Start Application Session service:

- http://www.ecma-international.org/standards/ecma-323/csta/ed6 when using the ECMA-323 Specified Tag option (see section 2.4.1)
- urn:www.ecma-international.org/standards/ecma-323/csta/ed6/short_tags when using the ECMA-323 Specified Short Tag option (see section 2.4.2)
- http://www.ecma-international.org/standards/ecma-323/csta/ed6/dynamic_transformations when using the Dynamic Transformation option (see section 2.4.3)

8 XML Template Description

This Clause describes the template format used to describe the XML schemas for CSTA services, events, and parameter types as specified in ECMA-269.

The template consists of the following parts:

- XML header - this consists of the text “<?xml version="1.0" encoding="UTF-8"?>” which identifies the XML version used.
- XML Schema header - this identifies the start of an XML schema and provides information such as:
  - the target namespace. In this edition of the Standard the target namespace is defined as “http:// www.ecma-international.org/standards/ecma-323/csta/ed6”.
    Note that this URI uniquely identifies the namespace for the 6th Edition of ECMA-323.

© Ecma International 2011

  - the csta namespace is the same as the target namespace. XML names that refer to names in the CSTA namespace are prefixed with “csta:”.
  - the xsd namespace. This identifies the XML Schema. XML names that refer to names in the XML Schema namespace are prefixed with “xsd:”.
  - the element form default is specified as “qualified” which requires that all element names must be prefixed with a namespace (csta: or xsd:)
- documentation - this provides a comment that indicates the CSTA specific service, event report, or data-type set.
- included schemas - this provides a list of other CSTA schemas that are referenced by the service, event, or data type set.
- CSTA specific XML:
  - for CSTA services, this consists of a service request element and a service response element. (A comment is provided in some cases where a service response is not specified per ECMA-269.). This is followed, in some cases, by service-specific XML types that are referenced in the previous elements.
  - for CSTA event reports, this consists of an event report element followed, in some cases, by event-specific XML type definitions that are referenced in the event report element.
  - for CSTA data types, this consists of the data types that are referenced (included) by other CSTA XML schemas.
- XML Schema end tag - indicates the end of the schema.

Note that in general, each parameter defined in ECMA-269 is represented as an XML element and each parameter type in ECMA-269 is represented as an XML simple or complex type.

Annex A

(normative)

Protocol Implementation Conformance Statement (PICS) Proforma

A.1 Introduction

The Protocol Implementation Conformance Statement (PICS) is a statement of which capabilities and options of the protocol have been implemented. The PICS can have a number of uses, including use:

- by the implementor, as a check-list to reduce the risk of failure to conform to the standard through oversight;
- by the supplier and acquirer (or potential acquirer) of the implementation, as a detailed indication of the capabilities of the implementation, stated relative to the common basis for understanding provided by the standard PICS proforma;
- by the user (or potential user) of the implementation, as a basis for initially checking the possibility of interworking with another implementation (note that, while interworking cannot be guaranteed, failure to interwork can often be predicted from incompatible PICS);
- by a tester, as the basis for selecting appropriate tests against which to assess the claim for conformance of the implementation.

A.2 Conformance

The supplier of a protocol implementation which is claimed to conform to this Standard shall complete a copy of the Protocol Implementation Conformance Statement (PICS) proforma in A.5, “PICS proforma”.

A.3 Instructions for completing the PICS proforma

The first part of the PICS proforma, the Implementation Identification (A.4, “Implementation identification”, on page 406), is to be completed as indicated with the information necessary to identify fully both the supplier and the implementation.

The main part of the PICS proforma, A.5, “PICS proforma”, is a fixed format questionnaire divided into subclauses each containing a group of individual items. These items represent options specified in ECMA-269 (mandatory items are not represented). Answers to the questionnaire items are to be provided in the appropriate columns by marking an answer to indicate a restricted choice (Yes or No), and optionally clarifying this response with a comment.

Where a service or event is not supported, as indicated by entering No for the first entry in a table, any parameters or dependent service components in the rest of that table are not applicable, it is then not necessary to complete items in any subsidiary entries in the table.

Note that ECMA-269 should be used as a reference when completing the PICS proforma.

© Ecma International 2011

A.4 Implementation identification

Supplier	
Protocol Version	XML Schema Definitions (XSD) for CSTA Phase III, 6th Edition
Date of Statement	
Contact point for queries about the PICS	
Implementation Name(s) and Version(s)	
Other information necessary for full identification - e.g. Name(s) and Version(s) for machines and/or operating systems; system name(s)	

The first five items are required for all implementations; other information may be completed as appropriate in meeting the requirement for full identification.

The terms Name and Version should be interpreted appropriately to correspond with a supplier's terminology (e.g. Type, Series, Model).

A.5 PICS proforma

A.5.1 CSTA Profiles

CSTA Profiles group together services and events, where each profile specifies a set of services and events that are supported by the implementation. Switching Function implementors shall indicate support for one or more profiles in the table below. Specifying support for a profile shall be accompanied by specifying support for the services and events encompassed by the profile, as well as any other services and events that the implementation supports.

Refer to ECMA-269 for a description of the CSTA Services and Events that must be supported for a specific CSTA profile.

Description: Profile(s) Supported	**Supported ?**		**Comments**
	Yes	**No**	
Basic Telephony Profile

Annex B

(normative)

Registration Template for application/CSTA+XML MIME Media Type

MIME media type name: application

MIME subtype name: csta+xml

Required parameters: (none)

Optional parameters: (none)

Encoding considerations:

This content type uses XML, employing UTF-8 character encoding.

Security considerations:

This content type is designed to carry information about users involved with communications which may be considered private information. For example, the identity of a calling party in a voice call. This content type is also designed to be used to control communication calls and communication devices such as telephones. Appropriate precautions should be taken to insure that applications observing and controlling communications and communication devices using CSTA are authorized to do so.

Interoperability considerations:

application/csta+xml documents are specified by the XML schemas standardized in ECMA-323.

Published specification:

The published Standard ECMA-323 is available at:

http://www.ecma-international.org/publications/standards/Ecma-323.htm

Applications which use this media type:

The application/csta+xml MIME type can be used to identify CSTA XML (ECMA-323) instance documents.

Additional information:

CSTA XML (ECMA-323) is an application level protocol that enables an application to control and observe communications involving various types of media (voice calls, video calls, instant messages, Email, SMS, Page, etc.) and devices associated with the media.

Person & email address to contact for further information:

Ecma International Helpdesk
Rue du Rhone 114

The ECMA-323 Standard is developed and maintained by the Ecma TC32/TG11 Working Group.

© Ecma International 2011

Annex C

(normative)

CSTA Over SIP (uaCSTA) Transport Mechanism

This Annex specifies how:

- SIP is used to establish a CSTA Association
- CSTA service request, responses and event messages are transported over SIP

The uaCSTA transport mechanism uses the SIP INVITE and INFO methods to transport ECMA-323 messages provided in a SIP message body.

The SIP Content-type shall be application/csta+xml as specified in Annex I.

C.1 Establishing a CSTA Association

Before ECMA-323 service requests are sent to a SIP UA, a CSTA Association must be established between the application and the SIP UA.

ECMA-269 specifies a number of options for establishing a CSTA Association. This mechanism shall use the "Implicit Association created using CSTA Request System Status" option as described in 7.2 of ECMA-269.

The application shall create a CSTA Association by establishing a SIP dialog with the user agent using a SIP INVITE method that includes a Content-Disposition header indicating "signal" and "handling=required" to mandate support for the application/csta+xml MIME type.

The body of the SIP INVITE method shall contain an ECMA-323 Request System Status service request with the Content-Type application/csta+xml.

If the UA supports the application/csta+xml MIME type and can establish this CSTA Association, it shall respond to this SIP Invite with a 200 OK that includes an ECMA-323 Request System Status service response in the message body. The application shall send a SIP ACK to complete the dialog establishment.

If the UA does not support the application/csta+xml MIME type, the SIP UA must provide a 415 (Unsupported Media Type) response as defined in IETF RFC 3261.

When the SIP dialog terminates, the CSTA Association terminates with it.

A SIP BYE method may be used to terminate the dialog.

C.2 Transporting CSTA Service Requests, Responses, and Events

Once a SIP dialog has been created for the CSTA Association, ECMA-323 service requests shall be sent in the body of SIP INFO methods.

SIP INFO methods shall be sent on the SIP dialog created above.

An ECMA-323 (positive or negative) service response shall be provided in the body of a 200 OK method.

© Ecma International 2011

The SIP CSEQ header may be used to correlate CSTA resquests and responses.

ECMA-323 events shall be sent in the body of SIP INFO methods. The responses to these messages shall be SIP 200 OK with empty bodies.

Annex E

(informative)

Examples of Device Identifier Element Encodings

This Annex illustrates how deviceIDs are encoded in the XML protocol.

The CSTA Device Identifiers (deviceIDs) element type is associated with many different parameters in CSTA services and events.

In order to enhance readibility, XML attributes are used to qualify the different possible types of deviceIDs.

E.1 Simple DeviceID (no attributes)

<csta:deviceID>4711</csta:deviceID>

E.2 DeviceID typed as a dialing number

<csta:deviceID typeOfNumber="dialingNumber">4711</csta:deviceID>

E.3 DeviceID typed as a device number

<csta:deviceID typeOfNumber="deviceNumber">100</csta:deviceID>

E.4 DeviceID typed as a explicit national number

<csta:deviceID typeOfNumber="explicitPublic:national">N18005551212</csta:deviceID>

E.5 DeviceID typed as other type of numbering plan

<csta:deviceID typeOfNumber="other">N001</csta:deviceID>

E.6 DeviceID media characteristics

<csta:deviceID mediaClass="voice audio other" switchingSubDomainCCIEType="isdn" bitRate="variable">N4711</csta:deviceID>

E.7 DeviceID including all attributes

<csta:deviceID typeOfNumber="implicitPublic" bitRate="constant" connectionRate="0" delayTolerance="10" mediaClass="voice" switchingSubDomainCCIEType="isdn" switchingSubDomainInformationElements="abcdef==">N123456</csta:deviceID>

E.8 DeviceID with a private number

<csta:deviceID privateNumber="true">N+18005551212</csta:deviceID>

E.9 DeviceID with a private number and a private name

<csta:deviceID privateNumber="true" privateName="true">N<+18005551212>John</csta:deviceID>

Note that the "<" and ">" characters encompassing the DN field of the Switching Function Representation format must be represented using XML escape sequence character strings "<" and ">".

© Ecma International 2011

© Ecma International 2011

Annex F

(informative)

Examples of Connection ID Encodings

This Annex illustrates how connectionIDs are encoded in the XML protocol.

F.1 Fully Specified Connection ID

A CSTA connectionID, unless otherwise specified in ECMA-269, contains a callID and a deviceID portion. This is called a fully specified connectionID.

```
<camponConnection>
  <callID>1</callID>
  <deviceID>22222</deviceID>
</camponConnection>
```

F.2 CallID only ConnectionID

In some cases, as specified in ECMA-269, a callID-only connectionID can be used (e.g., Clear Call service).

```
<callToBeAnswered>
  <callID>1</callID>
</callToBeAnswered>
```

F.3 DeviceID only ConnectionID

In some cases, as specified in ECMA-269, a device-only connectionID can be used (e.g., Answer Call service).

```
<connectionToBeCleared>
  <deviceID>22222</deviceID>
</connectionToBeCleared>
```

Annex G

(informative)

Examples of CSTA-specific XML

This Annex illustrates examples of CSTA-specific information in XML instance documents.

G.1 Make Call service request - with only mandatory elements

This example illustrates a CSTA Make Call service with just the mandatory elements provided.

```
<?xml version="1.0" encoding="UTF-8"?>
<MakeCall xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <callingDevice>22343</callingDevice>
  <calledDirectoryNumber>18005551212</calledDirectoryNumber>
</MakeCall>
```

G.2 Make Call service request - with optional elements

This example illustrates some of the optional elements specified in the Make Call service.

```
<?xml version="1.0" encoding="UTF-8"?>
<MakeCall xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <callingDevice>22343</callingDevice>
  <calledDirectoryNumber>18005551212</calledDirectoryNumber>
  <accountCode>0001</accountCode>
  <authCode>0001</authCode>
  <autoOriginate>prompt</autoOriginate>
  <correlatorData>
    <string>0001</string>
  </correlatorData>
  <userData>
    <string>0001</string>
  </userData>
  <callCharacteristics>
    <priorityCall>true</priorityCall>
  </callCharacteristics>
  <mediaCallCharacteristics>
    <mediaClass>
      <voice>true</voice>
    </mediaClass>
  </mediaCallCharacteristics>
  <callingConnectionInfo>
    <flowDirection>transmitAndReceive</flowDirection>
    <numberOfChannels>2</numberOfChannels>
  </callingConnectionInfo>
  <extensions>
    <security>
      <messageSequenceNumber>123</messageSequenceNumber>
      <securityInfo>
        <string>0001</string>
```

© Ecma International 2011

```
      </securityInfo>
    </security>
    <privateData>
      <string>0001</string>
    </privateData>
  </extensions>
</MakeCall>
```

G.3 Make Call - Positive Acknowledgement

This example illustrates a positive acknowledgement to the Make Call service.

```
<?xml version="1.0" encoding="UTF-8"?>
<MakeCallResponse xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <callingDevice>
    <callID>1</callID>
    <deviceID>22343</deviceID>
  </callingDevice>
</MakeCallResponse>
```

G.4 Make Call - Negative Acknowledgement

This example illustrates a negative acknowledgement to the Make Call service.

```
<?xml version="1.0" encoding="UTF-8"?>
<CSTAErrorCode xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <operation>invalidCallingDeviceID</operation>
</CSTAErrorCode>
```

G.5 Delivered Event

This example illustrates a Delivered event.

```
<?xml version="1.0" encoding="UTF-8"?>
<DeliveredEvent xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <monitorCrossRefID>1<monitorCrossRefID>
  <connection>
    <callID>1</callID>
    <deviceID>33333</deviceID>
  </connection>
  <alertingDevice>
    <deviceIdentifier>33333</deviceIdentifier>
  </alertingDevice>
  <callingDevice>
    <deviceIdentifier>22222</deviceIdentifier>
  </callingDevice>
  <calledDevice>
    <deviceIdentifier>33333</deviceIdentifier>
  </calledDevice>
  <lastRedirectionDevice>
    <notRequired/>
  </lastRedirectionDevice>
  <cause>normal</cause>
</DeliveredEvent>
```

© Ecma International 2011

Annex H

(informative)

CSTA XML with SOAP

This Annex illustrates examples of CSTA XML instance documents using the Simple Object Access Protocol (SOAP). These examples do not assume that HTTP is used as the transport.

This Annex assumes multiple outstanding requests, therefore an invokeID is added to the SOAP Header to provide the necessary correlation information.

The type of invokeID may also be defined as XML Schema xsd:anyURI.

H.1 CSTA service request

This example illustrates a CSTA Make Call service with SOAP. The invokeID is provided in the SOAP header.

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <SOAP-ENV:Header>
   <invokeID xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6/invokeID">1</
invokeID>
  </SOAP-ENV:Header>
  <SOAP-ENV:Body>
    <csta:MakeCall>
      <csta:callingDevice>4711</csta:callingDevice>
      <csta:calledDirectoryNumber>4712</csta:calledDirectoryNumber>
    </csta:MakeCall>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

H.2 CSTA service response (positive acknowledgement)

This example illustrates a positive acknowledgement to the Make Call service. The invokeID in the SOAP header can be used to correlate the response to the request.

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <SOAP-ENV:Header>
   <invokeID xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6/invokeID">1</
invokeID>
  </SOAP-ENV:Header>
  <SOAP-ENV:Body>
    <csta:MakeCallResponse>
      <csta:callingDevice>
```

```
        <csta:callID>1</callID>
        <csta:deviceID>22343</deviceID>
      </csta:callingDevice>
    </csta:MakeCallResponse>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

H.3 CSTA service response (negative acknowledgement)

This example illustrates a negative acknowledgement to the Make Call service. The SOAP FAULT element is used to provide the error information. The invokeID in the SOAP header can be used to correlate the response to the request.

The faultcode indicates that the failure is due to incorrect information provided by the client. The CSTAErrorCode indicates that the error category is "Operation" and the specific error is "Invalid Called DeviceID".

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <SOAP-ENV:Header>
   <invokeID xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6/invokeID">1</
invokeID>
  </SOAP-ENV:Header>
  <SOAP-ENV:Body>
    <SOAP-ENV:Fault>
      <SOAP-ENV:faultcode>Client</SOAP-ENV:faultcode>
      <SOAP-ENV:faultstring>CSTA Error</SOAP-ENV:faultstring>
      <SOAP-ENV:detail>
        <csta:CSTAErrorCode
        xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
          <csta:operation>invalidCalledDeviceID</csta:operation>
        </csta:CSTAErrorCode>
      </SOAP-ENV:detail>
    </SOAP-ENV:Fault>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

H.4 Delivered Event

This example illustrates a Delivered event.

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
 <SOAP-ENV:Body>
    <csta:DeliveredEvent>
      <csta:monitorCrossRefID>1</csta:monitorCrossrefID>
      <csta:connection>
        <csta:callID>1</csta:callID>
        <csta:deviceID>33333</csta:deviceID>
```

© Ecma International 2011

```
      </csta:connection>
      <csta:alertingDevice>
        <csta:deviceIdentifier>33333</csta:deviceIdentifier>
      </csta:alertingDevice>
      <csta:callingDevice>
        <csta:deviceIdentifier>22222</csta:deviceIdentifier>
      </csta:callingDevice>
      <csta:calledDevice>
        <csta:deviceIdentifier>33333</csta:deviceIdentifier>
      </csta:calledDevice>
      <csta:lastRedirectionDevice>
        <csta:notRequired/>
      </csta:lastRedirectionDevice>
      <csta:cause>csta:normal</csta:cause>
    </csta:DeliveredEvent>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

© Ecma International 2011

Annex I

(informative)

CSTA XML with SOAP with HTTP

This Annex illustrates examples of CSTA XML instance documents using the Simple Object Access Protocol (SOAP) with HTTP.

This Annex assumes at most one request is outstanding, therefore header information to correlate requests with responses is not included in the examples.

I.1 CSTA service request

This example illustrates a CSTA Make Call service with SOAP and HTTP. The first group of lines represent the HTTP header information.

```
POST /anyserver HTTP/1.1
Host: anyweb.com
Content-Type: text/xml
Content-Length: nnn
SOAPAction: Makecall

<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
  <SOAP-ENV:Body>
    <csta:MakeCall>
      <csta:callingDevice>4711</csta:callingDevice>
      <csta:calledDirectoryNumber>4712</csta:calledDirectoryNumber>
    </csta:MakeCall>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

I.2 CSTA service response (positive acknowledgement)

This example illustrates a positive acknowledgement to the Make Call service. The first group of lines represent the HTTP header information. The 200 response code indicates a successful response.

```
HTTP/1.1 200 OK
Content-Type: text/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
```

© Ecma International 2011

```
 <SOAP-ENV:Body>
  <csta:MakeCallResponse>
   <csta:callingDevice>
    <csta:callID>1</callID>
    <csta:deviceID>22343</deviceID>
   </csta:callingDevice>
  </csta:MakeCallResponse>
 </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

I.3 CSTA service response (negative acknowledgement)

This example illustrates a negative acknowledgement to the Make Call service. The SOAP FAULT element is used to provide the error information. The 500 response code indicates that the request failed.

```
HTTP/1.1 500 Internal Server Error
Content-Type: text/xml
Content-Length: nnnn

<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">

 <SOAP-ENV:Body>
  <SOAP-ENV:Fault>
   <SOAP-ENV:faultcode>Client</SOAP-ENV:faultcode>
   <SOAP-ENV:faultstring>CSTA Error</SOAP-ENV:faultstring>
   <SOAP-ENV:detail>
    <csta:CSTAErrorCode
    xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
     <csta:operation>invalidCalledDeviceID</csta:operation>
    </csta:CSTAErrorCode>
   </SOAP-ENV:detail>
  </SOAP-ENV:Fault>
 </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

I.4 Delivered Event

This example illustrates a Delivered event. For CSTA events, the SOAP proxy (in the client machine) becomes a type of SOAP server.

```
POST /anyserver HTTP/1.1
Host: anyweb.com
Content-Type: text/xml
Content-Length: nnn
SOAPAction: DeliveredEvent

<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
```

© Ecma International 2011

```
<SOAP-ENV:Body>
  <csta:DeliveredEvent>
    <csta:monitorCrossRefID>1</csta:monitorCrossrefID>
    <csta:connection>
      <csta:callID>1</csta:callID>
      <csta:deviceID>33333</csta:deviceID>
    </csta:connection>
    <csta:alertingDevice>
      <csta:deviceIdentifier>33333</csta:deviceIdentifier>
    </csta:alertingDevice>
    <csta:callingDevice>
      <csta:deviceIdentifier>22222</csta:deviceIdentifier>
    </csta:callingDevice>
    <csta:calledDevice>
      <csta:deviceIdentifier>33333</csta:deviceIdentifier>
    </csta:calledDevice>
    <csta:lastRedirectionDevice>
      <csta:notRequired/>
    </csta:lastRedirectionDevice>
    <csta:cause>csta:normal</csta:cause>
  </csta:DeliveredEvent
 </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

© Ecma International 2011

© Ecma International 2011

Annex J

(informative)

CSTA XML over TCP

This Annex illustrates how CSTA XML instance documents are transported over TCP/IP.

J.1 Message Format

Each XML instance message that is sent across a TCP/IP stream is preceded by a message prefix. This prefix consists of a two byte header and a two byte length component as illustrated below..

0	1	2	3	4 . . .
Header		Length		message body

- the header is two bytes. It indicates the format of the XML instance message. The following header formats are defined:
  - 00 - indicates that the message body consists of a CSTA XML instance message without SOAP. As illustrated in 2, the message body consists of an Invoke ID component followed by an XML instance message.
  - 01 - indicates that the message body consists of a SOAP enveloped CSTA XML instance message as illustrated in 3.
- the length is defined as the length of the full message, i.e., the length of the message body plus the length of the message prefix. The byte ordering is most significant byte first.

There is one XML instance message (CSTA service request, service response, or event) per TCP packet.

The XML instance message is encoded as ASCII text. White space and line feeds are allowed (and ignored) between XML statements.

J.2 TCP without SOAP

When TCP is used to transport a CSTA XML instance message without SOAP, a four byte Invoke ID is provided in order to correlate CSTA service request with response messages. This Invoke ID is provided in the message body that precedes the XML instance message as illustrated in the following figure.

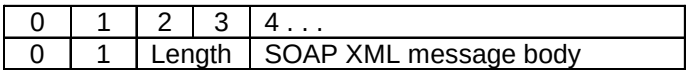
0	1	2	3	4	5	6	7	8 . . .
0	0	Length		Invoke ID				XML message body

© Ecma International 2011

- Invoke ID is four bytes. It is used to correlate a CSTA service request with a service response. It is encoded as four ASCII numerical characters. A new Invoke ID is created in a CSTA service request message and is repeated in the corresponding service (postitive or fault) response message. A value of "9999" is used for CSTA events.
- XML Message Body. Examples of the XML message body content are provided in Annex D.

J.3 TCP with SOAP

When TCP is used to transport a CSTA XML instance message with SOAP, the message body consists of the SOAP enveloped CSTA XML instance message as illustrated in the following figure.



0	1	2	3	4 . . .
0	1	Length		SOAP XML message body

- SOAP XML Message - Examples of the SOAP XML message body content are provided in Annex E. Note that the Invoke ID is contained in the SOAP header as described in Annex E.

© Ecma International 2011

Annex K

(informative)

CSTA Data Type Schema for Encapsulation

This Annex specifies a schema for CSTA data types that can be used to encapulatate CSTA data objects so that they can be carried over various types of network protocols such as SIP.

A specific MIME media type, text/CSTA-type is designed to contain these data objects. The formats of the data types are specified in Clause 9.

K.1 CSTA Data Type Schema

The following is an example of an XML document that contains CSTA Call Linkage Information. This could be carried in the contents of a text/CSTA-type MIME data type in a SIP message, for example.

```
<?xml version="1.0" encoding="UTF-8"?>

<xsd:schema targetNamespace="http://www.ecma-international.org/standards/ecma-323/csta/ed6"

xmlns:xsd="http://www.w3.org/2001/XMLSchema"

xmlns:csta="http://www.ecma-international.org/standards/ecma-323/csta/ed6"

elementFormDefault="qualified" attributeFormDefault="unqualified">

 <xsd:annotation>

  <xsd:documentation>CSTA-objects-for-encapsulation</xsd:documentation>

 </xsd:annotation>

 <xsd:include schemaLocation="call-control.xsd"/>

 <xsd:include schemaLocation="device-feature-types.xsd"/>

 <xsd:element name="CSTAObjectTypes">

  <xsd:complexType>

   <xsd:sequence>

    <xsd:element ref="csta:correlatorData" minOccurs="0"/>

    <xsd:element ref="csta:userData" minOccurs="0"/>

    <xsd:element ref="csta:callLinkageData" minOccurs="0"/>
```

```
    </xsd:sequence>
  </xsd:complexType>
 </xsd:element>
</xsd:schema>
```

K.2 CSTA Data Type Example

The following is an example of an XML document that contains CSTA Call Linkage Information. This could be carried in the contents of a text/CSTA-type MIME data type in a SIP message, for example.

```
<?xml version="1.0" encoding="UTF-8"?>
<CSTAObjectTypes xmlns="http://www.ecma-international.org/standards/ecma-323/csta/ed6">
<callLinkageData>
   <globalCallData>
    <globalCallLinkageID>
      <globallyUniqueCallLinkageID>7652834615269898</globallyUniqueCallLinkageID>
    </globalCallLinkageID>
   </globalCallData>
 </callLinkageData>
</CSTAObjectTypes>
```

© Ecma International 2011

Annex L

(informative)

Registration Template for application/CSTAdata+XML MIME Media Type

MIME media type name: application

MIME subtype name: CSTAdata+XML

Required parameters: (none)

Optional parameters: (none)

Encoding considerations:

This content type uses XML, employing UTF-8 character encoding.

Security considerations:

This content type is designed to carry CSTA data types over network protocols. Appropriate precautions should be taken to insure that applications observing these CSTA objects are authorized to do so.

Interoperability considerations:

text/CSTA-type documents are specified by the XML schemas standardized in ECMA-323.

Published specification:

The published Standard ECMA-323 is available at:

http://www.ecma-international.org/publications/standards/Ecma-323.htm

Applications which use this media type:

The text/CSTA-type MIME type is used to carry CSTA data types specified in CSTA XML (ECMA-323) over various types of network protocols.

Additional information:

CSTA XML (ECMA-323) is an application level protocol that enables an application to control and observe communications involving various types of media (voice calls, video calls, instant messages, Email, SMS, Page, etc.) and devices associated with the media.
