

ATTACK GAPS IN CARE WITH THE MBHR

The MBHR is much more than a QCDR for quality reporting and MIPS submission. Our focus is on helping you drive value based care, ultimately improving patient outcomes. That's why the MBHR is designed to help you attack gaps in care.

HOW WE DO IT

With the MBHR, you can drill into individual patients, providers and MIPS measures. This empowers you to close care gaps by identifying outlier providers, underserved patient populations and incorrect quality measure workflows.

GAPS IN CARE FUNCTIONALITY AT A GLANCE

Access our Visits page and apply various filters to see where you can improve. Filter your visits to show eligible, incomplete, and met/not met instances. Then separate by provider, date of service or measure status to get a more refined look at your data.
