

# Letters of Intent, Preproposals, White Papers, Requests for Information, Abstracts, and Logic Models: The Role of these Short Papers in Successful Grant Applications

Marjorie Piechowski, Ph.D.  
Emerita Director of Research Support  
College of Engineering & Applied Science  
University of Wisconsin-Milwaukee

# What purposes do they serve?

---

- Preliminary screening of potential applicants
- Selecting/eliminating reviewers
- Managing conflict of interest
- Estimating budget requests
- Allocating appropriate staff
- Gauging interest in the topic
- Gathering data for future funding opportunities (sense of the market) or for future budget requests to Congress

# What Agencies Use these Papers

---

- National Science Foundation
- National Institutes of Health
- National Endowment for the Humanities
- NASA
- U.S. Department of Energy
- Environmental Protection Agency
- U.S. Department of the Interior, including Bureau of Land Management
- U.S. Department of Defense and many of its branches
  - DARPA
  - Army Research Lab
  - Office of Naval Research
  - Air Force Office of Scientific Research
  - U.S. Coast Guard

# Other Agencies and Organizations

---

- Private Foundations
- Not-for-profit organizations
- Congressional Offices
- Industries
- Federal laboratories
- State or local grant agencies
- Internal grant programs
- Limited submission grant opportunities

# Letter of Intent

---

- Used for multiple purposes:
  - Find out how many applications are expected so reviewers can be identified and agency staff prepared
  - Determine eligibility of applicant for the full grant application
    - Type of institution/adequate infrastructure
    - Qualifications of PI
    - Appropriate partnerships or cost-sharing
    - Fit of topic with agency program

# Letter of Intent, continued...

---

- May serve as screening document to invite full proposal, especially NSF and DOD
- May or may not receive written, oral or telephone reviews
- May be asked to submit more details before decision
- May request budget total without details or none at all
- Often submitted directly online
  - NSF Fastlane to specific program
  - DOD directly to Program Officer

# Letter of Intent, continued...

---

## ■ Format and Content

- May or may not have required content or length
- Typically 1-2 pages, addressed to the program officer, signed by the PI
- Minimum Content:
  - Number and title of the funding opportunity
  - Title and brief description of the proposed project
  - Name, affiliation, and contact info for all PIs and Co-PIs
  - Participating institutions, if applicable

# NSF's Reasons for Letters of Intent

---

- “Reduce the proposers’ necessary effort in proposal preparation when the chance of success is very small.  
“This is especially true of exploratory initiatives where the community senses that a major new direction is being identified, or competitions will result in a small number of actual awards.” ... and ...
- “Increase the overall quality of the full submission.”
- Reduce program officers’ workload?
- Deter inappropriate applicants from applying?
- Save PI time and grief?

# White Paper

---

- Short document that
  - Answers a funding agency's need
  - Poses a technological problem and solution
  - Helps agency decide to invite/not invite/fund
  - May be confidential to agency
  - May not receive a response or review
  - May or may not lead to a proposal or grant
  - May be used by agency for internal purposes
    - Find reviewers, find consultants, validate their own research or technology, impress Congress

# Typical Format of White Paper

---

- Cover page (may be optional, may include abstract)
- Abstract—one paragraph, high-level overview
- Small sections, clear headings; sections include--
- Introduction/background
  - What is the problem/question to be addressed
  - Why is it important to agency and/or proposer
  - How does proposer know about the problem
- Proposed solution
  - The current or basic solution
  - Your solution or technology
    - several options with varying complexity, sophistication, time, cost, risk

# White Paper Details

---

- Proposed solution, continued...
  - Use graphs, illustrations, sufficient detail to show that the solution and proposer can solve the problem
  - Include examples of previous/other research as proof that the solution can work
    - Case studies, comparisons, success stories, literature of proposer and others
    - Describe risks and risk management
      - What-if scenarios
      - Alternative approaches

# White Paper Details, continued...

---

- Future direction/long-term focus
  - Clarify steps, timelines
  - Overall future of the problem/solution
    - Long-term benefits/outcomes
      - To agency
      - To proposer
      - To society/nation/world
- Recommendations/results/conclusions
  - Prioritize proposed activities
  - Review recommended solution(s) and why
- Biosketches
- References
- Appendices

# Preliminary Proposals-Preproposals

---

- May be the first stage of a grant application or
- May be the second stage after letter of intent
- Often used to screen and then invite at this stage
- May have only internal agency review, not peers
- NSF, DOE, DOD, ED major users of preproposals
- Usually a mini-version of the full proposal
  - Typically 3-5 pages of narrative
  - Often same title, agency number, proposal components, format, order as full proposal
  - May have a full budget
  - May require biosketches
  - May require references

# Pros and Cons of Preproposals

---

- Pro: saves investigator's
  - Time: no need for full proposal unless invited
  - Anxiety: usually short turn-around decision
- Pro: allows risk-taking
  - with new ideas:
  - with new agencies:
    - Reviewer comments can help improve the concept and make a more fundable proposal
- Con:
  - May disclose confidential/proprietary ideas
  - Other problems or issues that you see?

# Request for Information

---

- Purposes:
  - Used by funding agency or specific program to help shape the actual request for proposals
    - Document technical need for the competition
    - Elicit potential solutions to that need
  - Used to gauge applicant interest
  - Used to document need for program to Congress
    - Number of responses, nature of responses, estimated budget needs, type of solutions, benefits to funding agency, industry, research community

# Proposal Abstracts

---

- Immediately shows topic, approach, relevance to program officer
- Helps program officer determine selection of reviewers
- Forms first impression of full proposal for reviewers
- Most-read section of proposal; often in non-technical language
- Entered into permanent electronic database
- Becomes primary identifier of project
- Used by many agencies as press release, notice to politicians, or other publicity purposes
- Can also be called
  - Project Summary
  - Executive Summary
  - Technical Abstract
  - Project Overview

# Abstract Audience/Readers

---

- Agency staff
- Highly technical, scientific peers
- Non-technical but professional peers
- Generalists/lay readers
- Public advisory council/board of directors
- Congress: staff, elected officials
- Local politicians
- Special interest groups
- General public

# Components of Proposal Abstracts

---

- One or two sentences each on:
  - Subject: What is the project about?
  - Purpose and significance:
    - What is to be accomplished?
    - Why is this important—to funder, to discipline, to society?
  - Activities:
    - What will be done?
    - With what methods?

# Components of Abstract, continued

---

- Location of project, if relevant or requested
  - City, state, region
- Target population and location of project
  - Demographics of participants, including beneficiaries or subjects
- Expected outcomes:
  - What results will be produced?
  - How will results advance knowledge/state of the art in the discipline or the profession?
  - What will be long-term benefits?

# Agency Differences in Abstracts

---

- National Science Foundation
- National Institutes of Health
- U.S. Department of Education
- U.S. Department of Defense: DARPA
- National Endowment for the Humanities
- U.S. Environmental Protection Agency
- Private foundations
  - Robert Wood Johnson Foundation
  - The Camille and Henry Dreyfus Foundation

# Agency Differences: NSF

---

- Called a “Proposal Summary”
- Requirements revised in 2013 and 2014
  - 4600 characters, including spaces
  - Three distinct sections, separately uploaded
    - Overview
      - Summarizes research topic, plan and approach
    - Intellectual Merit
      - How the project contributes to scientific knowledge
    - Broader Impact
      - How the project will benefit society

# Agency differences: NIH

---

- Called a “Proposal Summary/Abstract”
- Maximum of 30 lines of text in PDF format
- Requirements include
  - Broad, long-term objectives and specific aims
  - Brief description of research design/methods
  - Target population, if applicable
  - Information on the health-relatedness, significance, and value of the research
  - Relevance to the specific mission of the agency

# Agency differences: ED

---

- U.S. Department of Education
  - Requirements and format vary widely by DED program
  - Usually one page
  - May contain
    - institutional information, contact person, title
    - objectives
    - budget summary
    - project outcomes
    - institutional overview
    - number/demographics of targeted population

# Agency Differences: DARPA, NEH

---

- U.S. Department of Defense: DARPA Young Faculty Award
  - “Write a 1-page executive summary”
- National Endowment for the Humanities Individual Fellowship
  - “Provide a description of your project.”
  - “State the importance of the proposed work to larger issues in the humanities.”
  - “Enter the starting and ending dates for your project.”

# Agency Differences: EPA

---

- Environmental Protection Agency
  - EPA STAR Program: Project Summary (1 page)
    - Definition of technical challenge to sustainability
    - Development of innovative design approach with technical merit to address challenge
    - Discussion of how challenge and proposed design relate to sustainability, including people, prosperity, and the planet (P3)
    - Description of strategy for measuring results, evaluation and demonstration
    - Description of how P3 concepts will be used as an educational tool at the applicant institution
    - Supplemental key words

# Agency Differences: Private Foundations

---

- Robert Wood Johnson Foundation
  - “In no more than 4000 characters (roughly 650 words), please summarize your proposed work in the text box below.”
- Camille and Henry Dreyfus Special Grant Program in the Chemical Sciences
  - “A one-page equivalent of an executive summary that answers the following:
    - What problem does the proposal address?
    - Why is it important?
    - How will what is proposed address the issue?”

# Trends in Related Documents: Logic Models and Quad Charts

---

- Agencies are beginning to require logic models as part of the pre-proposal process
  - Logic model breaks the project into phases
    - Inputs (Resources)
    - Activities (Processes)
    - Outputs (Evidence)
    - Outcomes (Expected changes and benefits)
- Some agencies, especially Defense, are asking for a single Power Point Quad Chart that provides a visual abstract of the project

# Logic Models

---

- Grant agencies are beginning to request a logic model
  - as part of the proposal or
  - as a preliminary screening document to determine whether the idea is a good fit with the agency
- Logic models have many forms and formats, from very simple to very complex
- Logic models may be used as a tool to help an institution decide whether a project is ready to be submitted for funding
- Logic models may serve as a management tool for a funded project

# Information on Logic Models

---

- Introduction to Logic model  
<http://www.youtube.com/watch?v=ILCNfDsdi9I&NR=1&feature=endscreen>
- Logic model analogy (great 3 minute video)  
<http://www.youtube.com/watch?v=JFYQoHvNLQQ>
- If you have not worked with Logic Models, refer to the W.K. Kellogg Foundation's Logic Model Development Guide.  
<http://www.wkkf.org/resource-directory/resource/2006/02/wk-kellogg-foundation-logic-model-development-guide>
- Another excellent source: University of Wisconsin Extension  
<http://www.uwex.edu/ces/pande/evaluation/evallogicmodel.html>

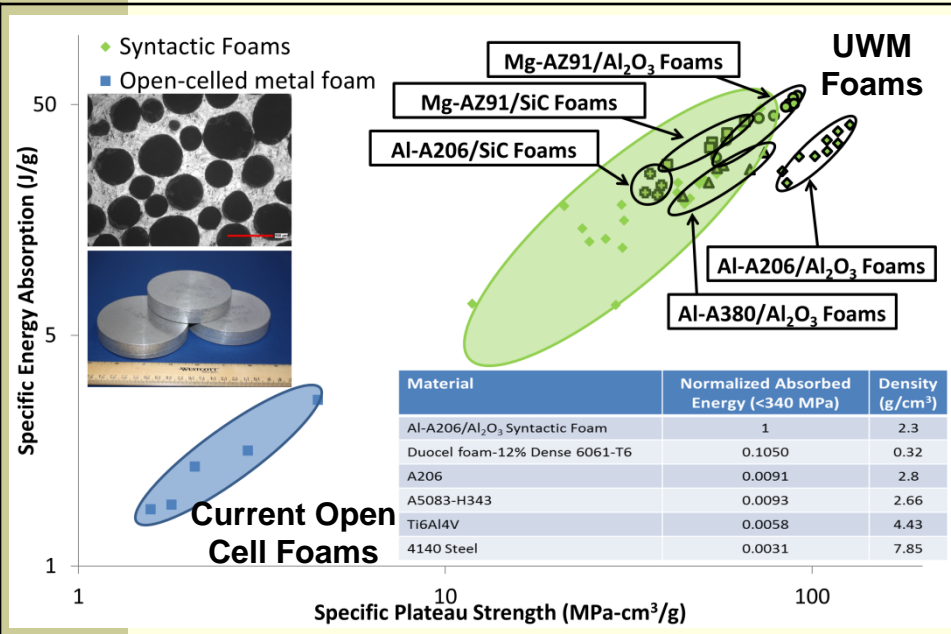

# Examples

---

- Example of Quad Chart required by U.S. Army TACOM
- Examples of Logic Model: being required on U.S. Department of Education and other federal agency programs

# Implementation of Lightweight Metallic Syntactic Foams and Hybrid Structures for Improved Performance and Survivability of U.S. Navy and Marine Corp Vehicles, UW-Milwaukee/Eck Industries/General Dynamics

**Technology Description:**

- New Lightweight Metal Matrix Syntactic Foams and New Low Cost Method of Manufacture have been developed and will be implemented in vehicle components
- Technology Readiness Level (TRL) is currently 6 and will be TRL 9 at the end of Rapid Innovation Fund development

**The "So What":**

- The proposed project addresses Thrust Area 2: Developing, Using and Maintaining Advanced Materials.
- Lightweight, advanced syntactic foams (as shown in the picture at left) will be used with hybrid composites in vehicle floor plates and appliqué armor
- Reduced weight and volume enhance vehicle performance and survivability
- Low cost manufacturing methods reduces initial cost.
- NAVSEA / Development and Acquisition Cost

**Project Objective and Scope:**

- Design, Fabrication, Testing and Implementation of novel lightweight Blast/Ballistic Resistant Floor Protection Plates and Appliqué Armor

**Key Deliverables:**

- 24x24x2inch plates
- Technical Report including results of testing and characterization, qualification, introduction in Navy Vehicles

**Key Subcontractors:**

- General Dynamics, Eck Industries

**Registered with System for Award Management (SAM)?:** NO

**Related SBIR or Other Government Contract:** NONE

**Proposed Funding:** \$3,000,000

**Notional Project Schedule Milestones:**

Activity	Year 1	Year 2	Year 3
Design Of Material and Component			
Prototype Fabrication & Testing			
Component Design Optimization, Testing, and Final Delivery			31

NORDP 2018

# Logic Model Example

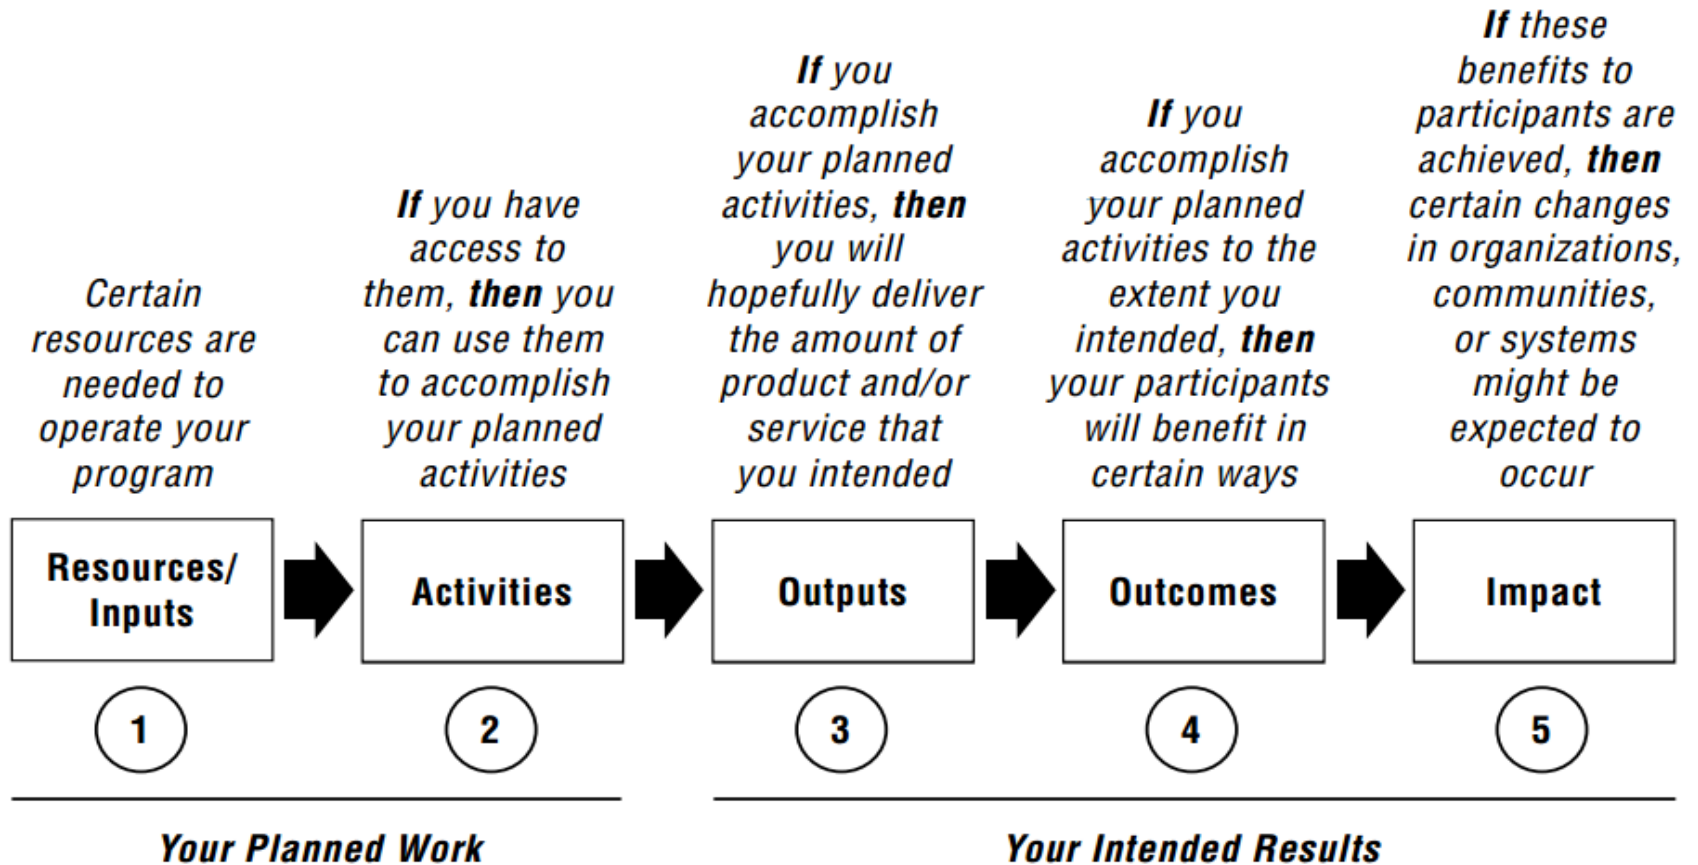

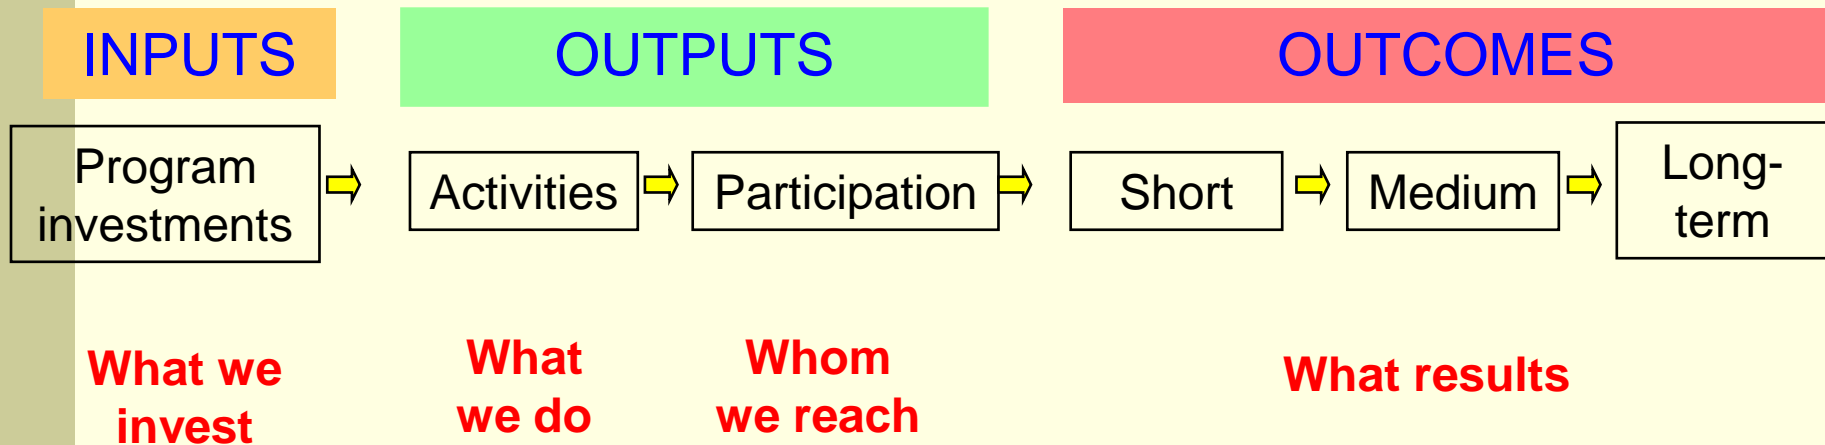

Figure 2. How to Read a Logic Model.

# Logic Model Example: Basic

# Implications for Research Development Professionals

---

- These short documents add a step to the proposal development process
- They can serve as an important planning and organizing tool
- They may be useful for internal competitions for limited submission proposals
- They need to be handled with care and taken seriously
- PIs may need to be educated about the role and value of these short but important documents

# Thanks

---

For Questions and Follow-up

**Marjorie Piechowski, Ph.D.**
