PREFACE

The Museum of Broadcast Communications (MBC) is proud to present the *Encyclopedia of Television*. Since the founding of the MBC in 1987, one of our primary concerns has been the role of the Museum in the field of media education. We are convinced that all forms of mass communication—first broadcast and now cable, satellite, and computerized interactivity—have been central to both public and private life throughout the world. An educated citizenry is essential to the best use of these media.

Our commitment in this arena has led the MBC to sponsor a wide variety of programs. We have invited broadcasters and critics, media professionals, and historians to our discussions, lectures, and seminars. These programs are open to the public, and those who have attended often take part in lively discussions, demonstrating a vast concern for the role of mass media in our society. Topics such as the representation of women in television programming, the images of blacks and Hispanics in programs and commercials, or the impact of television on presidential politics have drawn special interest and have shown that the users of mass media—the audiences—are deeply involved with such matters. Moreover, these public programs have made it clear that audience members are good critics of what they see on television screens.

The MBC's collection of artifacts related to the history of radio and television enables these same viewers and others to see "behind the scenes" of many of their favorite programs, to be more aware of the technologies of broadcasting and of the history of those technologies. Our facilities allow MBC visitors to produce their own "newscast" or to sit in the audience of a live radio broadcast, thus helping to make mass media less mysterious and more immediate.

At the center of all these activities is the MBC Radio and Television Archive in our A.C. Nielsen Jr. Research Center, a collection comprising thousands of hours of programming, commercials, newscasts, and special events. These materials are available to anyone who wishes to listen to, or view the past of, broadcast communication. They are readily accessible by computer catalogue and easily used in private listening or viewing facilities. It was the presence and the constant expansion and use of the Archive that led to the idea of the *Encyclopedia of Television*.

For too long television—one of the most crucial aspects of contemporary life—has been neglected by scholars, considered too common, too trivial to merit serious attention. And even though a growing body of study devoted to television has begun to take the medium far more seriously, students, scholars, teachers,

critics, historians, and others committed to understanding more about this complex topic have been hampered by a lack of adequate research tools. Collections of programming at the MBC and other facilities have begun to remedy one part of that problem, making their holdings available for scholarly research as well as for public use. The *Encyclopedia of Television*, a joint venture between the MBC and Fitzroy Dearborn Publishers, was commissioned as a logical step in making even more material available to all those groups. The MBC undertook to set up the editorial team and to make the resources of the Museum available to them; Fitzroy Dearborn undertook to prepare the manuscript for publication and to publish it throughout the world.

To prepare the *Encyclopedia* the MBC chose Dr. Horace Newcomb, Heyne Professor of Communication at the University of Texas at Austin as curator and editor. Professor Newcomb, one of the first scholars to examine the content and history of television, then assembled an advisory committee and with their assistance reduced the vast array of possible "television topics" to around 1,000. An early decision was made to focus the majority of the work on major English-speaking, television producing countries, and for that reason the bulk of the material presented here deals with television programs, people, and topics drawn from the United States, Britain, Canada, and Australia. Concerns for the international scope and influence of television led to the inclusion of entries discussing the history and current status of television in a number of other countries.

The *Encyclopedia* has been three years in the making, and more than 300 authors from around the world have contributed to this work. They write from different perspectives and ask different questions. But their entries are thoughtful descriptions and analyses. Some deal with the significance of television programs and events. Some focus on the actions and roles of individuals who have contributed in important ways to the medium. Still others explore topics and issues that have been central to the actual practices of television.

All of us who have participated in the design of this work recognize that it could be still larger—much larger—but practical considerations are always present in such projects. This first edition of the *Encyclopedia*, then, is selective, but it is, we believe, the most useful, the most thorough work of its kind. Our aim is for this collection to be the reference work of first record, the beginning point for anyone interested in exploring and understanding the significance of television in our time. The editor, the authors, and the staff of the MBC and Fitzroy Dearborn also recognize, however, that television continues to change even while we try to provide this guide. So the *Encyclopedia of Television* can also be used to look forward, to examine new developments in the medium.

The Museum of Broadcast Communications also looks forward. The *Encyclopedia of Television* has now become our "map" for future exhibitions and public programs. With a stronger knowledge of television's past our aim is for those projects to continue our role as an important participant in media education. We

will continue to assist scholars and teachers, students and critics—all citizens—to know more about this medium and therefore, to understand and use it well as part of their personal and social experience.

The Museum of Broadcast Communications is most grateful for the continuing assistance and enthusiastic support of the Robert R. McCormick Tribune Foundation in this project. We are also grateful to Fitzroy Dearborn Publishers where professional experience and expertise in the specialized area of reference book publications has been crucial to the success of this project. Special mention must be made of Noelle Watson, the Fitzroy Dearborn commissioning editor who took the *Encyclopedia* through the arduous process of final editing to publication. Cary O'Dell, director of the MBC Archives, also deserves special recognition for his passion and professionalism. Cary loves television and his dogged research and photo acquisition was vital to the *Encyclopedia's* success. His research was done while continuing to expand our collections and directing his staff to meet our public mission. I also wish to thank personally the entire staff of the Museum for their assistance in the preparation of the *Encyclopedia of Television*. Their constant efforts, often in the midst of many other activities, have made it a richer, more complex and valuable work.

—Bruce DuMont, Founder and President
Museum of Broadcast Communications
Chicago Cultural Center

ACKNOWLEDGMENTS

A great many people have contributed mightily to the creation of the *Encyclopedia of Television*. First, I am deeply grateful to Bruce DuMont, Founder and President of the Museum of Broadcast Communications, for his confidence in my ability to guide such a project. Bruce DuMont's vision for the book was central to its creation and his support for the project has been unwavering. The *Encyclopedia* would not exist without that support, or without the Museum of Broadcast Communications. Assisting in the preparation of such a significant work is a rare opportunity, an experience for which I will remain forever appreciative.

Equal thanks must go to George Walsh and Noelle Watson of Fitzroy Dearborn Publishers. Their guidance and instruction was detailed, concise, and effective. With their help I have learned much about the making of encyclopedias and without that help—and most especially their patience—this work would still be in process, groping toward completion.

For the outstanding photographs that enrich the entries in the *Encyclopedia of Television* I am completely indebted to the tireless efforts of Cary O'Dell, Archives Director of the Museum of Broadcast Communications, who secured every one of them. His administrative skills, institutional and industrial contacts, and knowledge of television history have added immensely to the project. Moreover, his keen eye for the interesting and unusual, the truly illustrative as opposed to the conventional, will enlighten readers and researchers for years to come.

I also wish to thank my colleagues at the University of Texas at Austin who permitted me a two-year leave of absence in order to prepare the *Encyclopedia*. I am most especially grateful to John D.H. Downing, Chair of the Department of Radio-Television-Film, and to Ellen A. Wartella, Dean of the College of Communication, for their support of this arrangement and their encouragement of this project.

A large group of individuals have assisted with basic research and preparation of supporting materials for the entries in the *Encyclopedia*. I list them here in alphabetical order and rank all efforts, large and small, of equal significance, for each contribution is major in its own way:

Adam Beechen, Steven Blackburn, Sue Brower, Kathryn Burger, Paula Feldstein, Thomas Field, Rodney Gibbs, Lisa Lewis, Sue Murray, Kate Newcomb, and Annette Petrusso in Austin. For international information I would have been lost without the assistance of Martin Allor, Monica Guddat, and Manon Lamontagne in Canada, Chris Keating and Albert Moran in Australia, and David Pickering in England.

Cary O'Dell also wishes to express his appreciation to those individuals who provided special assistance in the collection of photographs:

Holly Mensing, at the Public Broadcasting Service; Helicia Glucksman, at the Canadian Broadcasting Corporation; Doris Kelly, at *Broadcasting and Cable* magazine; Bobbi Mitchell at the British Broadcasting Corporation; Mandy Rowsan at the British Film Institute; Ann Wilkins, at the Wisconsin Center for Film and Theater Research; Geoff Harris, at the Australian Broadcasting Corporation; Katrina Ray, at Grundy Television Australia.

It could—but must not—go without saying that the *Encyclopedia of Television* would not exist without the contributions of its more than 300 authors. In many cases I have made special requests on short deadline. In other cases I have depended on authors who secured the services of their colleagues. In every instance I have relied on those who knew more about their specific topics than did I. I have made new friends and established new collegial relationships around the world and count myself fortunate to be part of a community of scholars so committed to so important a subject.

Finally, I wish to express my deepest and continuing gratitude to Sara Newcomb. She has contributed enormously to this project, offering her administrative assistance, her own interest in and knowledge of television, her ongoing encouragement, her gentle patience, her sound advice, and her unfailing sense of proper perspective in the face of what seemed at times an endless project that consumed space of many sorts within our household. The *Encyclopedia of Television* is, in this regard, one of our finest collaborations.

—Horace Newcomb
Austin, Texas
September 1996

INTRODUCTION

The second half of the 20th century may well come to be known as the television era. In the years following World War II various individuals, groups, institutions, and governments in the developed nations financed and built the infrastructure of the television industry—the broadcasting technologies, industrial organizations, financial support systems, and policy environment—that led to the presence of television in the everyday life of citizens. Those same individuals, groups, institutions, and governments drew upon earlier forms of expression, information, and instruction to create broadcasting schedules that expanded to fill every hour of the day with televised “content.” In pubs, classrooms, and, most significantly, in homes, citizens took the new medium into their lives and routines, their lessons and sermons, their dreams and fears.

In many ways television was merely an extension of other forms of communication and art—the stage, the movie screen, the newspaper, the lecture hall, and most significantly in many cases, the radio broadcast. Yet, in other ways it was a new thing, presenting forms of common language where there had been dialect, shared experience where there had been difference, routinized patterns of address where there had been surprise. It brought connection where there had been isolation, newness where there had been repetition, alternatives where there had been only the accepted—and acceptable—expectations for a future. This medium has shattered prior notions of political behavior and of politics, remodeled minute patterns of daily behavior, shifted relations within and among families, transformed fundamental notions of play and sport, and mutated entire industrial structures. By the final years of the century television was insinuated into every country and any search for community, village, tribal group—even individual—unfamiliar, at least in some rudimentary way, with the medium might have proved futile. Yet by that time even the term “television” was approaching obsolescence. What had seemed so monolithic, so pervasive and powerful, so established, was in a process of massive reconfiguration, its core characteristics intact, but rapidly changing, its broad outlines blurred.

Satellites, videocassette recorders, cable systems, and computers had all but obviated any necessity for the locally familiar transmitting tower, the antenna, even conventional forms of tuners and receivers. Regularized program schedules had given way in most cases to an array of choices, even in regions where official agencies still attempted to control access to televised content. Moreover, the shifts in technology, with consequent alterations in economic underpinnings, and the power alignments accompanying them, showed up new failures—shortcomings,

really—in policies and legal arrangements designed to monitor and rationalize the systems of broadcasting commonly thought of as “television.”

What these changes, these newer technologies, made clear, however, was that the single term had never encompassed, described, or explained anything like the complexities it obscured. “Television” has never been a thing, neither a set of technologies, a pattern of economic support, a cluster of policies, a collection of programs and stories, nor a system of information. It is and has been, of course, all these things and many more, but it is in the complex interrelationships within and among categories that the medium has achieved its primary significance.

During a brief half-century television has been a site, perhaps the principle site, on and over which social forces struggled for various forms of ascendance—for profit, for cultural dominance, for personal expression, for the control of intellectual, spiritual, emotional, and political power. Television, then, is perhaps best described as an intersection, a switchboard of sorts, through which has passed every major issue, every cultural shift, every event deemed—by someone at some switcher (mechanical or conceptual) at some level—significant. And each of these issues, shifts, and events has been necessarily altered by moving into and through the television matrix. The struggle to control that alteration, to dominate the patterns of expression, the amount and nature of information, the styles and levels of learning, even the form and model of moral and ethical tone, has been a central struggle in these times.

Significantly, though perhaps predictably, these matters have become clearer as the “age of television” ends, gives way to a different set of technologies, forms, meanings, arrangements, policies, and patterns. What is most evident at this juncture is that all those who thought themselves to have finally arrived at “the definition” of “television” were in fact operating from specific stages, perceiving in particular ways, organizing their thoughts, strategies, policies, and institutional arrangements in sometimes well-considered, but constantly—inevitably—skewed and limited fashion.

Nowhere are these limited approaches more visible than in the broad questions related to the problem of “national” television systems. The bulk of details—topics, programs, individuals—presented in this collection, for example, come from four countries, the United States, Britain, Canada, and Australia—major countries in the “English-speaking” world. A huge range of difference emerges in this most general description. Certainly it is likely that most television users in the United States assume that “television” is organized throughout the world as it is in their own national context. Yet every careful student of the history of the medium recognizes that until the last quarter of the 20th century, the U.S. model of television has been the anomaly. Far more countries organized their television systems along lines of state-supported, public service patterns than as commercial, advertising supported systems in which audiences—made available to advertisers—are the true unit of exchange.

But such a qualification, based on comparison of basic policies, masks as much as it explains. Canada and Australia, for example, along with many other countries, have built television systems drawing on elements of both models and have shaped them according to special concerns for matters of language, geography, and relations to other regional powers. Moreover, in recent years the cases of Britain, Canada, and Australia have become more and more “mixed” as technologies have increased distribution channels, which have led to increased and varied forms of “competition” for state as well as private funds, and as individuals and transnational corporations have sought to consolidate power in order to control media industries. And as other essays presented here, focused on other national television systems, make even more evident, there is no predictable pattern, no systematic, rational explanation that can account for the range of national variation in the organization of “television.” In point of fact, the ability to transmit television signals across national borders has made the very concept of “national” systems of broadcasting problematic, not only for students of television, but for policy makers, production industries, cultural guardians, and audiences.

Still, the primary focus of the collection is on these four major English-speaking countries, each with highly-developed television systems. Advisers from each country helped shape a list comprised of significant individuals, programs, and topics related to television. The individuals may be actors and performers, producers, directors, or writers, policy makers, broadcasting executives, or media moguls. But they may also be commentators who discuss television from outside these professional arenas, or critics and historians who have sought to construct explanations and descriptions with which others might better understand the medium. The programs presented here are, in most cases, familiar at least to audiences within national contexts, and in some cases to audiences throughout the world. Some are important because they are critically acclaimed. Some, perhaps critically scorned, are significant because huge audiences affirmed and enjoyed them, bestowed upon them “cult” status. Still others are included because they contributed to greater understanding of a particular social problem or became test cases involving the rights of producers and broadcasters and the concerns of regulators and legislators. Topical entries deal with the widest range of subjects. Some explain particular technical aspects of television. Others deal with institutions, agencies, or organizations. Still others focus on continuing “problem” areas related to the experience of television such as the special questions surrounding “children and television,” “violence and television,” or “history and television.” Entries dealing with numerous countries other than the four major English-speaking nations have been added to the collection in order to demonstrate the increasingly international character of television.

And while the latest changes in conceptions of “television” illustrated in this collection may seem particularly dramatic, they should not obscure the fact that change and conflict have been at the core of any understanding, organization, or

use of the medium since its invention, development, and application. The shifts in technological, institutional, organizational, financial, and policy arrangements have been constant, always ebbing and flowing as economic, political, and cultural power have been used to varying advantages in struggles among individuals, groups, and institutions. Many of the contests have been for the right to claim “television” as a prized object, a means of concentrating and displaying particular ideologies, theories, explanations, moralities, and policies. The only constant has been the perception that control and use of this medium are essential aspects of contemporary social and cultural life.

Add to this mix the participation of artists and craftspersons who wish to use “television” as a means of presenting their work to audiences. Or consider the positions of those audiences, once thought to be simple (perhaps simple-minded), passive, uniform in response—but now recognized as varied, complex, critical and analytical at times, active interpreters comparing what they take from the medium with what they experience in other realms and arenas of their lives. Both artists and audiences have learned from the history of a medium with which many have spent most of their lives. Both groups can make comparisons, cite precedents and predecessors, and call upon members of their communities for discussion. Even “last night’s favorite show,” then (or last night’s game or speech or announcement or even commercial advertisement), can become the topic of conversation, subject to formal and informal critique, dissection, celebration.

How then should one study such a complex arrangement of such distinct but interrelated phenomena? How is sense to be made of systems in constant flux? How is an encyclopedia to be organized? Put another way, what knowledge about “television” is most worth having? The *Encyclopedia of Television* does not pretend to final answers for these questions. It offers no definition of its own for “television.” Instead, it offers a multitude of beginning points from which to trace the intersections, conflicts, struggles, and convergences that can be applied, used as partial explanations for particular events, policies, developments, even for the existence of particular television “shows.” To perhaps predict a future development of the project, and certainly to rely on the increasingly common term that has been central in the planning this collection of entries, the *Encyclopedia of Television* is best used “interactively.” Connections are pervasive. Cross-references are crucial. Multiple explanations are essential. Comparisons are to be expected. Contradictions are inevitable. In every case the connections, cross-references, explanations, comparisons, and contradictions should be sought out and used to understand any particular item presented here.

No attempt to “organize knowledge” related to television, however, can escape or avoid the kinds of interrelated issues—the struggles surrounding the medium—outlined above. This is made most clear by the fact that individuals, programs, and topics related to television in the United States form the single largest sub-category in the collection. This fact reflects an industrial reality—the

U.S. industry is the largest, richest, and most industrially powerful television enterprise in the world.

Recognition of size, however, provides no explanation. It too easily obscures the fact that the U.S. television industry is also the *dominant* television industry in the world, and that dominance is fought for and won on various fronts—economic, cultural, technological, political. It is true that the U.S. industry has achieved international success. It is true that U.S. television programs have been accepted and in some cases become popular throughout the world. It is the case that U.S. models of industrial organization, technological application, and narrative strategies have often been adopted in other regions.

But it is also the case that in the aftermath of World War II, the United States was the only major industrialized nation where previously developed media industries remained intact. It is also the case that the U.S. film industry had long maintained organized international distribution systems throughout the world. And, significantly, the United States is the largest single-language market in the world served by a fully developed television industry, a fact that makes possible the recovery of production and distribution expenses in the domestic arena. And this fact in turn makes it possible for U.S. production and distribution companies to sell U.S. television programs in every other country at a price far below the costs incurred in producing indigenous materials. In short, the U.S. advantage has, in many cases, slowed the development of television systems in other countries, other regions, often blocking or retarding the fullest possible production of indigenous forms of expression, instruction, and information.

None of these observations should be taken to mean that the U.S. individuals, programs, and topics present in this encyclopedia are somehow undeserving of inclusion. All are significant to the full understanding of the medium. What must be recognized, however, is that there are always multiple, interacting, sometimes contradictory conditions determining matters of “significance.”

U.S. dominance in the realm of television has clearly affected the organization of this encyclopedia in ways that extend beyond the numbers of subjects. One sub-category of topical entries, for example, approaches the history of television programs as the history of genres: the Situation Comedy, the Detective Program, the Police Program, and so on. These entries, however, focus on U.S. versions of these genres. Canadian, Australian, and British examples are discussed in overview entries combining discussions of all programming in the television history of those countries. The same approach holds for other topical entries. The large entry on “Children and Television” is focused on issues, policies, and studies in the United States, but the topic may be discussed as a sub-category in other “national” essays. For countries other than the four organizing nations, all subjects, including the history of the medium, the policies governing it, the financial arrangements supporting it, the programs, issues, and controversies encountered, are dealt with in single entries.

Still, in spite of what might be thought of as unbalanced organizational factors, national, regional, and systemic differences are highly visible in the entries presented here. They are most prominent in formal analyses of economic and regulatory policy and in explicit discussion of how various national systems have dealt with international flows of television content. But they are also evident even in the presentation of data.

Each program discussed in the *Encyclopedia of Television* is accompanied by information considered necessary for a complete description. The cast of players and the roles they play, the producers of the program, the distribution service on which the program appeared, and the schedule of delivery are all listed as supplementary data. For the U.S. programs most of the data related to the schedule shows that they were broadcast by one of three major networks, that they appeared in either 30-minute or 60-minute units programmed at specific times on specific days, during certain periods of the year. In the vast majority of cases these programs run for a number of years and then disappear from the schedule.

For programs produced and programmed in Britain, however, other patterns apply. There is less sense of a television "season" that begins at one point in the year and ends at another. Clusters of episodes—called series—of a particular program may be produced at varying times throughout the years. Even more commonly, these clusters of episodes may be produced in one year, disappear from the schedule for a year or for several years, then reappear.

Such differences in programming strategy are reflected in the supporting data provided with essays discussing these programs. But the differences indicate far more extensive relationships to other aspects of television than merely two different industrial strategies. The regularized programming schedule in the United States is fundamentally linked to the advertising industry which encourages regularized viewing, predictable viewing, familiar viewing that will bring audiences into a similar familiar relationship with commercials. Similarly, corporate decisions linking certain types of programs, even specific programs, to certain periods in the schedule, are indicative of assumptions about appropriate content, appropriate behavior, the organization of the domestic sphere, the gendered organization of labor, child-rearing practices and a host of other social and cultural categories. Moreover, these decisions are designed not merely in acknowledgment of these categories, but also as a means of regulating and enforcing them.

The British pattern makes similar assumptions, enforces similar categories of behavior and attitude. The difference in programming strategy does, of course, demonstrate certain parallel social distinctions. The fact that programs can be off the air, then return months or years later, suggests an assumption that the relation of audiences to programs is less a matter of routinized behavior than of an affinity for characters and narratives.

But even these possible differences are complicated by U.S. audience attention to favorite programs in reruns, and even more to the rise of nostalgia

channels and various forms of “re-framing” television programs with irony (in the case of Nick at Nite and TV Land), or with specifically religious sentiment (in the case of the Family Channel). And as new technologies such as the videocassette recorder and the remote control device have altered patterns of regularized viewing, as the proliferation of distribution channels via satellite and cable have created more viewing choices, programmers, producers, and policy makers in every country, and every cultural context, have been forced to re-examine their assumptions about the role of television in daily life, in cultural experience, in social context.

These alterations are acknowledged throughout the *Encyclopedia of Television*. While it is true that this medium has always been in a constant state of transformation, the changes currently in process are among the most significant in its history. The very term may become less and less useful as a description, a name, for a set of interrelated communication phenomena now replacing what we have known as “television.” Consequently, this encyclopedia does not look exclusively to the past, to the history that has led to the current situation. While a significant portion of the entries are historical in focus, while most of the programs discussed here are no longer in production, many of those same entries draw conclusions and suggest implications for what may yet occur. Others are specifically forward looking. And almost all recognize process, change, and interrelatedness as fundamental components of their subjects. Future editions and versions of the *Encyclopedia of Television* will undoubtedly revise some of the predictions and implications offered here. But at the same time they will risk their own best analysis of “television” as it is formed at the time of their writing. Short of massive disaster, there is no way to look at this medium and say “this is what it was; this is what it is.” “Television” has been and is always becoming.

ABBENSETTS, MICHAEL

British Writer

Michael Abbensetts is considered by many to be the best black playwright to emerge from his generation. He has been presented with many awards for his lifetime achievements in television drama writing and, in 1979, received an award for an "Outstanding Contribution To Literature" by a black writer resident in England. His work emerged alongside, and as part of, the larger development of black British television drama.

Abbensetts was born in Guyana in 1938. He began his writing career with short stories, but decided to turn to playwriting after seeing a performance of John Osborne's *Look Back in Anger*. He was further inspired when he came to England and visited the Royal Court Theatre, Britain's premier theatre of new writing, where he became resident dramatist in 1974. *Sweet Talk*, Abbensett's first play, was performed there in 1973.

In the same year, *The Museum Attendant*, his first television play, was broadcast on BBC2. Directed by Stephen Frears, the drama was, Abbensetts says, based on his own early experiences as a security guard at the Tower of London. After these two early successes Abbensetts, unlike most black writers in Britain at the time, was being offered more and more work. He wrote *Black Christmas*, which was broadcast on the BBC in 1977 and featured Carimen Munroe and Norman Beaton. Like *The Museum Attendant*, *Black Christmas* was based on actual experience and was shot on location for television.

During the 1970s and 1980s, a number of Abbensetts' plays were produced for the London theater. *Alterations* appeared in 1978, followed by *Samba* (1980), *In the Mood* (1981), *Outlaw* (1983) and *Eldorado* (1983). *Inner City Blues*, *Crime and Passion*, *Roadrunner*, and *Fallen Angel* were produced for television.

Abbensetts' success led to participation in British television's first black soap opera, *Empire Road* (1978–79), for which he wrote two series. Horace Ove was brought in to direct the second series, establishing a production unit with a black director, black writer and black actors. The television series was unique in that it was the first soap opera to be conceived and written by a black writer for a black cast, but also because it was specifically about the British-Caribbean experience. Set in Handsworth, Birmingham, it featured Norman Beaton as Everton Bennett and Corinne Skinner-Carter as his long-suffering screen wife. Although

Empire Road was a landmark programme on British television, it managed to survive only two series before it was axed. The late Norman Beaton said of the programme, "It is perhaps the best TV series I have been in."

Norman Beaton continued to star in many of Abbensett's television productions including *Easy Money* (1981) and *Big George Is Dead* and *Little Napoleons* (1994/Channel 4). *Little Napoleons* is a four-part comic-drama depicting the rivalry between two solicitors, played by Saeed Jaffrey and Norman Beaton, who become Labour councillors. The work focuses on a number of themes including the price of power, the relationship between West Indian and Asian communities in Britain and the internal workings of political institutions.

Much of Abbensetts' drama has focused on issues of race and power, but he has always been reluctant to be seen as restricted to issue-based drama. His dialogue is concerned

Michael Abbensetts

with the development and growth of character and he is fundamentally aware of the methods and contexts for his actors. Abbensetts has always actively involved himself in the production process and his dramatic works have provided outstanding roles for established black actors in Britain—Carmen Munroe, Rudolph Walker and Norman Beaton—giving them the chance to play interesting and realistic roles as well as creating stories about the everyday experiences of black people. Abbensetts' work thrived at a time when there was very little drama on television which represented the lives of Black British people and his television plays have created new perspectives for all his viewers.

—Sarita Malik

MICHAEL ABBENSETTS. Born in British Guiana (now Guyana), 8 June 1938; took British citizenship, 1974. Attended Queen's College, Guyana, 1952–56; Stanstead College, Quebec, Canada; Sir George Williams University, Montreal, 1960–61. Security attendant, Tower of London, 1963–67; staff member, Sir John Soane Museum, London, 1968–71; resident playwright, Royal Court Theatre, London, 1974; visiting professor of drama, Carnegie Mellon University, Pittsburgh, Pennsylvania, U.S.A., 1981. Recipient: George Devine Award, 1973; Arts Council bursary, 1977; Afro-Caribbean Award, 1979. Address: Heinemann Educational Books Ltd, Halley Court, Jordan Hill, Oxford OX2 8EJ, England.

TELEVISION SERIES

1978–79 *Empire Road*
1994 *Little Napoleons*

ABSOLUTELY FABULOUS

British Situation Comedy

The half-hour BBC sitcom with a large and growing cult following, *Absolutely Fabulous*, debuted in 1992 with six episodes. Six additional episodes appeared in 1994, and a final six in 1995. The American cable channel Comedy Central began running the series in 1994.

Ab Fab, as fans call it, is about idle-rich Edina Monsoon (Jennifer Saunders), a 40-year-old spoiled brat who owns her own PR business but works at it only rarely (and incompetently). Stuck in the self-indulgences of the 1960s, but showing no sign of that decade's political awareness, Edina refuses to grow up. Her principal talent is making a spectacle of herself. This she achieves by dressing gaudily, speaking loudly and rudely, and lurching frantically from one exaggerated crisis to the next. All the while, she overindulges—in smoking, drinking, drugs, shopping, and fads (Buddhism, colonic irrigation, various unsuccessful attempts at slimming down). She lives extravagantly off the alimony provided by two ex-husbands.

Edina's best friend, Patsy Stone (Joanna Lumley), is equally a caricature. Employed as fashion director of a trendy

magazine, she almost never works (she has the job because she slept with the publisher). She is even more of a substance abuser than Edina, and trashier in appearance with an absurdly tall, blond hairdo, and far too much lipstick. Most disturbingly, Patsy is overly dependent upon Edina for money, transportation, and especially companionship.

Patsy often behaves like an unruly daughter, thereby displacing Edina's real daughter Saffron (Julia Sawalha), of whom Patsy is extremely jealous. Edina humors Patsy's excesses and seems parental only by virtue of her money and domineering personality. The real "mother" of the house is Saffron, a young adult who, in being almost irritatingly virtuous, is both a moral counterweight to the evil Patsy and a comic foil for the two childlike adults.

Thus Saffron represents conscience and serves a function similar to that of Meathead in *All in the Family*, except that in *Ab Fab* the generational conflict is not one of conservative vs. liberal so much as bad vs. good liberalism. Neither Saffron nor Edina is conservative. Although Saffron is some-

what nerdy in the manner of Alex Keaton in *Family Ties*, she lacks his predatory materialism and serves as a reassuring model of youth. While Patsy and Edina illustrate a pathological mutation of 1960s youth culture, Saffron provides hope that liberalism (or at least youth) is redeemable.

Ab Fab's focus on generational issues also plays out in Edina's disrespect for her mother (June Whitfield). The relationship between the four main characters, all women, is all the more interesting because of the absence of men. Edina's father puts in only one appearance in the series—as a corpse, and only Saffron cares that he has died. Similarly, Edina's son is never seen in the first twelve episodes and is only mentioned a few times. It is not that men are bad—rather, they are irrelevant.

This allows *Ab Fab* to have a feminist flavor even as it portrays women in mostly unflattering terms. Edina and Patsy are certainly not intended as role models, and in presenting them as buffoonish and often despicable, series creator-writer Saunders ridicules not only bourgeois notions of motherhood and family life, but also media images of women's liberation. For example, Edina and Patsy, although "working women," actually depend upon the largesse of men to maintain their station in life. Edina's business and Patsy's job are a joke. This cynical vision of professionalism may seem regressive, but at the same time it is a refreshing critique of advertising and fashion, two industries invariably depicted by TV as—absolutely fabulous.

Ab Fab developed from a sketch on the *French and Saunders* show and is a fine example of the flowering of alternative comedy, the post-*Monty Python* movement that also produced *The Young Ones*. Rejecting what has been referred to as the "erudite middle-class approach" of the *Python* generation, the new British comics of the 1980s approached their material with a rude, working-class, rock-and-roll sensibility. *Ab Fab*, while focusing on the concerns of middle age, nonetheless has a youthful energy and eschews sentimentality. Flashbacks and dream sequences contribute to this energy and give the show a mildly anarchic structure. A smash hit in Britain, *Ab Fab* has won two International Emmy awards and has given the somewhat obscure Comedy Central cable channel a significant publicity boost.

A.C.NIELSEN COMPANY

U.S. Media Market Research Firm

Under the banner of Nielsen Media Research, the A. C. Nielsen Company measures and compiles statistics on television audiences. It sells this data in various formats to advertisers, advertising agencies, program syndicators, television networks, local stations, and cable program and system operators. Nielsen Marketing Research is the larger part of the company, providing a variety of standard market analysis reports and engaging in other market research. By some reports only 10% of Nielsen's total business relates to the television audience, though they are very well known to the general public for that work. This is due, of course, to the ubiquitous reporting and discussion of program and network ratings produced by Nielsen.

The company was started in 1923 by A. C. Nielsen, an engineer, and bought by Dun and Bradstreet in 1984 for \$1.3 billion. They first became involved in audience studies in the 1930s as an extension of Nielsen's studies tracking retail food and drug purchase. In 1936 Nielsen bought the Audimeter from its designers, Robert Elder and Louis F. Woodruff, two Massachusetts Institute of Technology professors. The Audimeter (and a previous design for a similar device patented in 1929 by Claude E. Robinson, then sold to RCA, who never developed it), was intended to automatically record two aspects of radio listening which would be of interest to programmers and advertisers. The device recorded which frequencies a radio set was tuned to when it was on and the length of time the set was on. This technique had an obvious problem—it could not assure who, if anyone, was listening to the radio. But compared to the use of telephone surveys and diaries used by competing ratings companies, it had important advantages as well. The other ratings methods depended to a much greater degree on audience members' active cooperation, memories, honesty, and availability.

After a period of redesign and a four-year pilot study, the Nielsen Audimeter was introduced commercially in 1942 with an 800-home sample in the Eastern United States. The number of Audimeters and the sample size and coverage were expanded after World War II, eventually, by 1949, to represent 97% of U.S. radio homes. The Cooperative Analysis of Broadcasting had ceased providing ratings in 1946; in 1950 the A. C. Nielsen Company bought Hooper's national radio and television ratings services and thus became the single national radio rating service. This allowed the company to increase rates and the new capital was used to increase sample size. As the television industry grew, Nielsen's attention to television grew with it; they left the radio field in 1964.

In 1973 Nielsen began using the Storage Instantaneous Audimeter, a new and more sophisticated design for the same purposes as the original (surely not the only modification over the years; this one was much publicized). Set in a closet, designed with battery backup for power outages, and hooked

to a dedicated telephone line for daily data reports to a central office, the device kept track of turn-on, turn-off, and channel-setting for every television in a household, including battery operated and portable units (through radio transmitter).

While the Audimeter, widely known as the Nielsen black box, was their most famous device, it was used only for household television ratings. For ratings by people and demographic descriptions of the audience, Nielsen required supplementary studies of audience composition based on a separate sample using the diary technique. This separate sample was smaller and there was concern in the industry that the people who cooperated with the diaries were not representative of people in general.

In the 1970s Nielsen experimented with Peoplemeters, a system for measuring the viewing of individuals without diaries, but brought no new services to market. In 1983 AGB Research of Great Britain proposed a commercial Peoplemeter service in the United States similar to the system they were using in other countries. This proposal attracted funding from a group of networks, advertising agencies, and others for an evaluation study in Boston. In 1985, in response to this competitive threat, Nielsen initiated their own Peoplemeter sample, as a supplement to their existing samples. Reports became available beginning in January 1986. The system depends on a box sitting atop the television set that keeps track, in the usual way, of what channel is tuned in. But the meter is also programmed with demographic descriptions of individual viewers in the household and their visitors. Viewers are asked to push a button indicating when they begin or end viewing the television, even if the set is left on when they leave. The data then indicate which (if any) viewers are present as well as set tuning. (There have also been experiments with passive meters that use infra-red sensing rather than requiring viewers to cooperate by pressing buttons; but so far these devices have not been sufficiently reliable.)

Because the Peoplemeters produced different numbers than diaries, they generated controversy in the industry. Ratings points are the reference for negotiations in the purchase of advertising time, in deciding which programs are syndicated, and other issues vital to the television industry. Thus, when different measurement techniques produce different ratings, normal business negotiations become complicated and less predictable. For this reason many participants in the television business actually prefer one company to have a monopoly on the ratings business, even if it does allow them to charge higher rates for their services. Even if this service provides inaccurate numbers, those numbers become agreed upon currency for purposes of negotiation. Eventually the most recent controversies were settled and Nielsen's Peoplemeter system now dominates the production of national television ratings.

The Audimeter was originally conceived as a means to the testing of advertising effectiveness. To at least some

extent Nielsen's own interest in broadcast audiences was originally motivated by his marketing and advertising clients. But the ratings have grown to be an end in themselves, a product sold to parties interested in the composition of audiences for broadcasting.

Among the ratings reports provided by Nielsen were, until 1964, the Nielsen Radio Index (NRI) for network radio audiences. Currently the company provides the Nielsen Television Index (NTI) for network television audiences, the Station Index (NSI) for local stations and Designated Market Areas (DMA's), the Syndication Service (NSS) for the audiences of syndicated television shows, and the Homevideo Index (NHI) for the audiences of cable networks, superstations, and homevideo. They periodically produce reports on special topics as well, such as video-cassette recorder usage, viewership of sports programming, or television viewing in presidential election years.

ACADEMY OF TELEVISION ARTS AND SCIENCES

The Academy of Television Arts and Sciences (ATAS) is known primarily for bestowing Emmys, the top awards for television. These are peer awards, selected by vote of members of the academy—the people who work in the television industry. In addition to presenting this most public face of the television industry in an annual award ceremony, the academy also engages in a number of other educational and public functions.

The academy was founded in 1946 in Los Angeles by Syd Cassyd, a trade journal writer who recognized the need for a television organization similar to the Academy of Motion Picture Arts and Sciences. Cassyd and a group of associates held several exploratory meetings, then decided they needed a major television industry figure to support

the project. They succeeded in interesting ventriloquist Edgar Bergen, who became the academy's first president in 1947.

One of the earliest activities of the new academy was to establish a creative identity (and a degree of publicity and prestige) for the developing television industry by presenting awards—the Emmys—in recognition for outstanding work in the medium. Originally, the awards were to be called "Ikes," an abbreviation for the television iconoscope tube. Because "Ike" was so closely associated with Dwight D. Eisenhower, however, the group decided on "Emmy," a feminine form of "Immy," nickname for the television camera image orthicon tube. A contest was held for the design of the statuette and the winner was Louis McManus, an

The Emmy Award

engineer, who used his wife as the model for the winged woman holding up the symbol of the electron.

In the first year of the award Emmys were presented in only five categories. And because television did not yet have a coast-to-coast hookup, they were given only to Los Angeles programs and personalities. Shirley Dinsdale (and her puppet Judy Splinters) was the Most Outstanding Television Personality and *Pantomime Quiz* the Most Popular Television Program. By the second year any show *seen* in Los Angeles could receive an award and New York-based personalities such as Milton Berle and Ed Wynn were winners.

At this point there was more backstage intrigue in the academy than on-stage. In 1950, Ed Sullivan, host of *Toast of the Town*, produced in New York, initiated a rival TV awards program, but these lasted only until 1953. No awards were presented in 1954 (the only year there have been no Emmys), because the Los Angeles group had decided the show had become too expensive. By 1955, however, the television networks were interested and the Emmys were broadcast nationally for the first time. Sullivan, realizing the Hollywood-based Emmys were a success, became upset and called together New York's television leaders. They demanded and were granted a New York chapter of the academy. They then asked for another academy, with equal "founding chapters" in both New York and Hollywood. Thus, in 1957 a newly-formed and newly-named National Academy of Television Arts and Sciences (NATAS) was created with Sullivan as the first president.

The animosity between the East and West coasts continued. In the early years, New York had the upper hand because the networks were based there and much early live dramatic programming, as well as news and documentaries, emanated from the east-coast city. From 1955 to 1971, the Emmys were simulcast with cameras cutting between New York and Los Angeles, often creating technical blunders that left screens blank for several minutes.

By 1971, however, Hollywood was firmly established as the predominant site for television program production. New York was no longer producing the live drama, and, although the east coast city was still the seat of news and documentaries, the audiences tuned in to the Emmys to see Hollywood stars. In addition, the Emmys were growing in number and the telecast in length, so in 1973 and 1974 the news and documentary categories were removed from the regular show (now produced totally in Hollywood) and given their own telecast. Ratings were low, however, and the show was dropped.

During this period, other cities such as Atlanta, Chicago, and Cincinnati organized academy chapters. Hollywood producers resented the fact that academy members, scattered throughout the country, all had equal votes in determining the Emmy awards. From their beginning, the Emmys were conceived as peer awards, and the powerful Hollywood community hardly considered a camera person in Cincinnati to be a peer. New York, however, sided with the smaller chapters.

In 1976, the Hollywood chapter of NATAS decided to split from that organization. A year of lawsuits followed but the end result was two academies—the National Academy of Television Arts and Sciences (NATAS) comprised of New York and outlying cities and the Hollywood-based Academy of Television Arts and Sciences (ATAS). NATAS would bestow daytime, sports, news, and documentary Emmys and ATAS would oversee prime-time awards, using its Hollywood member base as voters.

The two academies remain separate, although from time to time they hold talks regarding reunification, and ATAS has indeed helped NATAS produce the Daytime Emmy Awards. When those prizes first aired nationally in 1991, they achieved higher ratings than the primetime awards. During this period, ATAS was having its own problems with the primetime show. For many years the telecast rotated sequentially among ABC, CBS, and NBC. When the upstart FOX network went on the air, it offered the academy more money for the telecasts than the other networks had been paying, and from 1987 to 1992 the Emmys were shown exclusively on the new network. Ratings plummeted, largely because FOX programming did not appear on local stations throughout the entire country. Eventually the academy returned to the "wheel" concept with FOX as one of the participants.

ATAS's membership is based on peer groups—writers, art directors, performers, sound editors, production executives, etc. Each peer group establishes its own requirement

for membership, usually defined in terms of the number of shows or number of hours of television the person has to his or her credit. The Board of Governors is composed of two members from each peer group.

Voting for primetime Emmys is also conducted on the peer group basis so that only members of the music peer group vote for awards involving music, directors vote for directing awards, etc. Some "Best Program" awards can be voted on by much of the membership. Individuals may nominate themselves for awards and producers may nominate individuals or programs. All nominated material is then judged by panels of peers who come together to watch all the nominations in a particular category. Their votes are tabulated and the winners are announced, either during the on-air telecast or at a luncheon ceremony. In general, the awards that the public is most likely to find interesting (performers, outstanding shows, directors) are presented during the prime time telecast.

While the Emmy Awards are the most visible of its projects, the academy undertakes many other activities including.

- sponsoring a paid student internship program through which outstanding students from around the country spend eight weeks working with Hollywood professionals.
- conducting a contest for student TV productions with the winners receiving cash sums.
- inducting outstanding industry professionals into a Hall of Fame.
- holding an annual Faculty Seminar in which college teachers come to Hollywood and are introduced to people and ideas related to TV programming.
- hosting luncheons and meetings at which people from within and without the industry share ideas and information.
- participating, with UCLA, in overseeing a television archives.
- publishing *Emmy*, a magazine devoted to articles about the TV industry.

In 1991 the Academy of Television Arts and Sciences moved into new headquarters containing office and library space as well as a state of the art theater in which to screen television materials and hold large meetings.

ACTION ADVENTURE SHOWS

In 1961 Newton Minow, the newly-appointed chief of the United States Federal Communications Commission, told a stunned audience of broadcasters that television had become "a vast wasteland." He asked them to watch their own television stations where they would find "a procession of game shows, violence, audience participation shows, formula comedies about totally unbelievable families, blood and thunder, mayhem, violence, sadism, murder, western badmen, western good men, private eyes, gangsters, more violence, and cartoons." Outside of his complaints about quizzes and comedies, much of Minow's anger was directed against the sudden dominance of a new style of drama called action-adventure in the primetime offerings of all three networks.

Action-adventure is a style and a quantity that has characterized shows drawn from the genres of crime stories (both police and detective), westerns and science fiction, spy thrillers, war drama, and simple adventure. The style offers viewers a spectacle: lots of jolts, conflict, movement, jeopardy, and thrill. Its importance has waxed and waned over the years, in part because it has been the target of severe public criticisms about the "pornography of violence" on American television. John Fiske has borrowed the terms

"carnival" and "carnavalesque" from the cultural critic Mikhail Bakhtin to highlight the physical excesses, the emphasis on the body, the grotesqueries and the immoralities, the offensiveness which characterize examples of action-adventure. A show that boasts a great deal of action-adventure is less thoughtful and less complicated than its compatriots: the quantity of action-adventure, for example, was usually low in such hits as the later *Gunsmoke* (1960s) or *The Rockford Files* (1970s). It is the lack of "action" (the moving body) and the significance of "thinking" (the reasoning mind) that sets apart *Columbo* (1971–), the story of a brilliant police lieutenant, from other crime dramas, indeed which makes it more of a mystery. Action-adventure can be traced back to crime shows (notably *Dragnet*) and kids westerns (*The Lone Ranger*) on television in the early 1950s, to film noir and the cowboy movies, and to all sorts of pulp fiction. But its growth in American television, the growth to which Minow seemed to be responding, was a response to the needs of ABC. This third-ranked network sought to improve its finances and stature by scheduling telefilms with more punch than previous efforts. An alliance with Warner Brothers brought to television such adult westerns as *Cheyenne* (1955–63) and *Maverick* (1957–62) as well as glamor-

ous detective programs like *77 Sunset Strip* (1958–64) and *Hawaiian Eye* (1959–63). The most violent of the shows, *The Untouchables* (1959–63), came from Desilu where the initial work was supervised by Quinn Martin, who would later produce *The Fugitive*, *The FBI*, and *The Streets of San Francisco*, though none so full of gun play. *The Untouchables*, a police drama about Eliot Ness, the Capone gang, and Chicago in the Prohibition Years, was stuffed with bullets, blood, and death, a style which won the attention of younger viewers and provoked much criticism, even in Congress.

ABC's rivals responded with their own brand of mayhem: in the 1958–59 and 1959–60 Nielsen rankings, the three top programs were all westerns (CBS' *Gunsmoke*, NBC's *Wagon Train*, and CBS' *Have Gun, Will Travel*) and thirteen of the top twenty-five programs were westerns or detective dramas. Such a glut led to burnout, and the wave of westerns receded, eventually disappearing from TV in the next decade. Even so the networks did experiment with new kinds of action-adventure: war dramas (notably ABC's *Combat*), the cult hit *Star Trek* (1966–69), and spy stories like *I Spy*.

Never again would action-adventure dominate the schedule as it had in the years around 1960. But the popularity of action-adventure did revive, especially in the early 1970s when crime shows became all the rage. The Nielsen rankings of 1974–75 had nine in the top twenty-five, although only CBS' *Hawaii Five-O* was in the top ten. Some of the most graphic violence appeared on this series (1968–80) in which a stern Steve McGarrett led a highly competent team of detectives against local crime and international intrigue. Paramount TV produced for CBS what was considered the most violent detective show, *Mannix* (1967–75), about a private eye who loved to brawl. The true exemplar of this kind of excess, though, was ABC's briefly popular *S.W.A.T.* (1975–76), produced by Aaron Spelling and Leonard Goldberg, which brought heavy weapons to bear on the problem of urban crime. ABC eventually ordered the quantity of violence reduced on another, more successful Spelling-Goldberg creation, *Starsky and Hutch* (1975–79) which featured two buddies who tackled crime with zest and wit, California-style. All of which provoked a new public outcry plus demands that the networks both reduce violence and banish what was left to the hours after 9:00 P.M. Nearly all of the violent crime-fighters had left the air by 1980.

Producers had turned from the excess of violence to seek other ways of stimulating the audience. First off the mark was Universal TV: it created ABC's *The Six Million Dollar Man* (1974–78), about the cyborg, Colonel Steve Austin, who could perform incredible feats of strength and speed. Realism gave way to fantasy here. Its success spawned imitators like *The Bionic Woman*, *Wonder Woman*, *Spiderman*, and *The Incredible Hulk*, all of which downplayed violence for displays of muscles and gimmicks. (In its defense *The Incredible Hulk* was also reminiscent of *The Fugitive*, complete with the anthology-like approach to emotional, psychological, and social problems.) Stephen Cannell, a veteran of action-adventure who had been involved in *Adam 12*,

Baretta, and *The Rockford Files*, finally spoofed the superhero genre with *The Greatest American Hero* (1981–83) for ABC. Special effects were even more central to the expensive science-fiction thriller, *Battlestar Galactica* (1978–80) which followed the travails of a huge space fortress and its fleet of beaten-up spacecraft as they struggled toward Earth under constant attack from the Cylons. It was not only reminiscent of the movie *Star Wars* but of many a western as well (read Indians for Cylons), except that the warfare was somehow sterile and bloodless.

Spelling-Goldberg substituted sexual titillation, and blatant sexism, to make *Charlie's Angels* (1976–81) a smash hit for ABC. The "Angels" were three very attractive female detectives, ordered on missions by an unseen male; they rushed around, often in peril, sometimes in abbreviated clothing, all to please the voyeur. The show was a sudden, raging hit that propelled one angel, Farrah Fawcett-Majors, to celebrity status. In 1980 an otherwise ordinary private-eye show, *Magnum, P.I.*, turned the tables by starring a male "hunk," Tom Selleck.

In CBS' *The Dukes of Hazzard* (1979–85), a Warner Brothers product, realism lost out to comedy: two fun-loving cousins sped all over Hazzard County in their Dodge Charger, outwitting the sheriff, doing good, but above all winning chases and surviving crashes. A few years later, Cannell produced *The A-Team* (1983–87) for NBC which registered in the top ten Niensens three years in a row. The story of four unjustly persecuted Vietnam veterans featured lots of firepower, scenes of massive destruction, but very little blood or death. Its African-American star, the physically impressive Mr. T., who played B.A. Baracus, became a youth hero. But the show itself was almost as much a parody as had been *The Greatest American Hero*, except now the target was this whole style of action-adventure.

The 1980s saw a revival of crime drama. Cannell himself created *Hunter* (1984–91) for NBC, a police drama about a rebellious and tough cop, reminiscent of Clint Eastwood's "Dirty Harry" role in the movies. Barbara Corday and Barbara Avedon shaped the first successful female "buddy" show, CBS' *Cagney and Lacey* (1982–88), about two female cops fighting crime and managing life in the big city. That show was saved by its fans in 1983 who wrote in protesting its cancellation. But aside from the novelty of using women as the stars, the show added little to the style of action-adventure. Much the same could be said of ABC's imaginative version of the detective drama, *Moonlighting* (1985–89), in which action-adventure usually played second-fiddle to romance, comedy, or even fantasy. Still it launched the career of Bruce Willis who would become one of the great stars of action-adventure in the movies. More novel was the police documentary *COPS* that FOX began to air in 1989: the camera followed real police as they tracked down ordinary criminals, offering viewers a spectacle of sleaze and decay in the unsavory parts of America.

There were two experiments with the drama of crime on NBC during the 1980s. The most interesting was Mi-

Tarzan

Wonder Woman

MacGyver

Sea Hunt

chael Mann's product, *Miami Vice* (1984–89). In part it represented a return to convention: a buddy show with two policemen, albeit one white and the other black, plus lots of speed and doses of violence. Indeed the taste for glamour even evoked the memory of *77 Sunset Strip*. But Mann, another veteran of action-adventure (he had written for *Starsky and Hutch* as well as the anthology *Police Story* in the 1970s), made *Vice* unusual by appropriating the look and feel of MTV's videos. He gave the show special colors, "an impressionist way of working with vibrating pastels" (see Winship), dressed his stars in hip clothes, presented them in both glamorous and tawdry surroundings, and featured rock music backgrounds. In short *Miami Vice* offered viewers an extravaganza of sights and sounds. Such effort cost money, up to \$1.5 million per episode, which made *Vice* one of the most expensive series of the period. Although a cult favorite, it only broke into the top twenty-five Niensens once, in 1985-86. Perhaps that is why *Vice* had no real successors.

This was not true of the other experiment, MTM Enterprises' *Hill Street Blues* (1981–87), although that program challenged the conventions of action-adventure. The two creators, Steven Bochco and Michael Kozoll, drew upon the techniques of both comedy and soap opera to fashion a different kind of police story, a serialized version of the everyday life of the men and women in a particular precinct. The result won much critical acclaim, not the least because *Hill Street* boasted excellent scripts and well-drawn characters. The transformed police drama proved a model for some hits of the mid-1990s such as NBC's *Homicide* and ABC's *NYPD Blue*, another Bochco product. This last program became notorious for its use of both nudity and violence, sufficient to spark protests from the religious right—even before it aired. Still, the most imaginative addition to the list of action-adventure shows lately has been a hybrid of the horror and the police drama offered by FOX, *The X-Files* (1993–). The occult had rarely won much of an audience on mainstream TV, even though movies had demonstrated its potential as an audience grabber many times over. But the inquiring male-female duo, the motif of a hidden government conspiracy, and the focus on visible evil seemed to give *The X-Files* a special appeal to the so-called "Generation X," viewers in their late teens and their twenties.

If comedy surpassed the appeal of action-adventure after the late sixties, that style nonetheless remained a staple of American television, popular abroad as well as at home. The action telefilms pioneered the expansion of American programming overseas in the late 1950s and early 1960s. Producers in other countries developed their own varieties, of course. English Canadians fashioned some mild versions for children, notably *The Littlest Hobo* (akin to *Lassie*) and *Beachcombers*, both of which have been seen around the world. According to Tom O'Regan, the success of *The Untouchables* on Australian TV inspired the creation of the local hit *Homicide* that launched homegrown drama in the 1960s. Francis When has explained that Japanese television

at the end of the 1970s replaced Hollywood police stories with samurai dramas, both historical and modern, which were full of murder, revenge, and executions. Over the years the British have designed a modest collection of action shows, such as the three spy thrillers fashioned for Patrick McGoochan in the 1960s, *Danger Man*, *Secret Agent*, and *The Prisoner*, as well as such police dramas as the grim *Z Cars* or *The Sweeney*. Still, in the end, the masters of action-adventure, on television and in the movies, have remained the Hollywood community of writers and producers.

Action-adventure shows have never represented what critics consider the best in television drama. Epithets such as "mindless," "unrealistic," "demeaning," "intolerant," or "immoral" have often been thrown at this brand of entertainment. These shows have been the source of much of the violence, sometimes sex as well, which has distressed a large number of viewers. Action-adventure cannot claim the same sort of defenders who have lauded soap operas and sitcoms as sources of worthwhile entertainment. Perhaps that is because these shows are obviously escapist, their moral tales trite, so lacking in the redeeming qualities of tolerance or female empowerment or studied ambiguity which appeal to critics. When a police drama has won praise, as in the case *Hill Street Blues*, it was despite of any lingering evidence of a taste for action.

Even so, action-adventure fulfills a special cultural role in North America. The significance of the style lies in the way it deals with the properties and the problems of masculinity. Action-adventure has brought men to their television sets more often than any other form of programming, excepting sport. It amounts to a special stage where they can see their fears and hopes embodied. Overwhelmingly, the stars of action adventure drama have been male, and until very recently the few female stars have remained exotics, or objects, (consider Angie Dickinson's role in *Police Woman*, 1974–78) in this masculine world. Viewers have been offered a range of masculine types: leaders (McGarrett), the he-man (Baracus), the sex symbol (Crockett, *Miami Vice*), the loner (Paladin, *Have Gun, Will Travel*), the rebel (Mannix), the anxious male (Mulder, *The X-Files*), and on and on. Whatever the role, these characters find satisfaction through acts of command and aggression. Typically action-adventure offers a resolution, achieves a closure, in which the male star triumphs over his environment and his enemies. The heroes exercise power over villains, bureaucracy, machines, even friends and helpers, and normally they relish that exercise. In the end the power manifests itself through the expression of the body rather than the mind, a body freed of personal, social, and sometimes, in the superhero mode, of natural restraints. Strike first, think later—that would be a good motto for action-adventure.

This is why the appeal of action-adventure is rooted in excess, particularly visual excess whether fights and killings, explosions and crashes, chases, horrifying images, or awesome displays. Perhaps that is a demonstration of the continuing authority of masculinity in a North America where

the gendered definitions of maleness have come under increasing scrutiny and criticism. More important it constitutes a continuing source of pleasure to viewers of both sexes and all ages who share a taste for the traditions of heterosexual masculinity and its generalized form, the Macho.

—Paul Rutherford

ACTION FOR CHILDREN'S TELEVISION

U.S. Citizens' Activist Group

A "grass-roots" activist group, Action for Children's Television (A.C.T.) was founded by Peggy Charren and a group of "housewives and mothers" in her home in Newton, Massachusetts in 1968. The members of A.C.T. were initially concerned with the lack of quality television programming offered to children. In 1970 A.C.T. petitioned the Federal Communications Commission (FCC) asking that television stations be required to provide more programming for the child viewer. In that year the organization also received its first funding from the John and Mary R. Markle Foundation. A.C.T. later received funding from the Ford and Carnegie foundations as well, grants which allowed the group to expand from volunteers to between 12 and 15 staff members at the height of its activity.

A.C.T. was not generally viewed as a "radical right-wing group" advocating censorship. According to Charren, "too many people who worry about children's media want to do it in. A.C.T. was violently opposed to censorship." Partially due to this attitude, the group was able to gain support from members of the public and from many politicians.

A.C.T. also became concerned with issues of advertising within children's programming. Of particular concern was their finding that one-third of all commercials aimed at

Peggy Charren

Photo courtesy of Peggy Charren

children were for vitamins. Partially due to their efforts, the FCC enacted rules pertaining to program length commercials, host selling, and the placement of separation devices between commercials and children's programming.

A.C.T. was responsible for many cases brought before the courts in regard to the FCC and its policies concerning children's television. These cases include a major case in media law, *Action for Children's Television, et al. v. Federal Communications Commission and the United States of America* (821 F. 2d 741, D.C. Cir. 1987).

One of the major successes of A.C.T. was the passage of the Children's Television Act of 1990. Shortly after the passage of this act, Charren announced the closing of Action for Children's Television, suggesting that it was now up to individual citizens' groups to police the airwaves. In recent years Charren, a strong supporter of the

First Amendment, has fought against FCC regulations limiting "safe harbor" hours.

ACTIVIST TELEVISION

Artists and activists outlined their plan to decentralize television so that the medium could be made by as well as for the people, in the pages of *Radical Software* and in the alternative movement's 1971 manifesto, *Guerrilla Television*, written by Michael Shambert and Raindance Corporation. These "alternative media guerrillas" were determined to use video to create an alternative to what they deemed the aesthetically bankrupt and commercially corrupt broadcast medium.

Earlier in the 1960s, various versions of "the underground"—alternative political movements, cultural revolutionaries, artists—began to search for new ways of reaching their audience. Cable television and the videocassette seemed to offer an answer. The movement was assisted, perhaps inadvertently, by federal rules mandating local origination programming and public access channels for most cable systems. These channels provided a forum for broadcasting community-driven production. The newly developed videocassette allowed independent media producers to create an informal distribution system in which they could "bicycle" their tapes—carrying them by hand or delivering them by mail—to other outlets throughout the country, or even the world.

These new forms of exhibition and distribution were accompanied by the development of a portable consumer-grade taping system. In 1965 the Sony Corporation decided to launch its first major effort at marketing consumer video equipment in the United States. The first machines were quite cumbersome, but in 1968 Sony introduced the first truly portable video rig—the half-inch, reel-to-reel CV Porta-Pak. Prior to this, videotape equipment was cumbersome, stationary, complex, and expensive, even though it had been used commercially since 1956. With the new international standard for half-inch videotape, tapes made with one manufacturer's portable video equipment could be

played back on competing manufacturer's equipment. In the hands of media activists these technological innovations were used to realize radical changes in program form and content.

Underground video groups appeared throughout the United States, but New York City served as the hub of the 1960s underground scene. Prominent early groups included the Videofreex, People's Video Theater, Global Village, and Raindance Corporation. Self-described as "an innovative group concerned with the uses of video," Videofreex was the most production-oriented of the video groups and developed a high expertise with television hardware. In 1973 the Videofreex published a user-friendly guide to use, repair and maintain equipment entitled *The Spaghetti City Video Manual*. The People's Video Theater made significant breakthroughs in community media; members used live and taped

feedback of embattled community groups to create mini-documentaries that “spoke back to the news.” The Global Village was perhaps the most commercial of the original groups, and initiated the first closed-circuit video theater to showcase their work. Raindance Corporation functioned as the counter-culture’s research and development arm; Shamberg described it as an “analogue to the Rand Corporation—a think tank that would use videotape instead of print.” Raindance chronicled the movement by publishing *Radical Software*, underground video’s chief information source and networking tool.

Top Value Television (T VTV), one of the earliest *ad hoc* group of video makers, assembled in 1972 to cover political conventions for cable TV. Equipped with portapak, T VTV produced hour-long documentary tapes of the Democratic and Republican national conventions, providing national viewers with an alternative vision of the American political process and the media that cover it. *Four More Years* (1972), a tape covering the Republican National Convention, was produced with a crew of 19, and featured footage of delegate caucuses, Young Republican rallies, cocktail parties, antiwar demonstrations, and interviews with the press from the convention floor. T VTV’s success with its first two documentaries for cable television attracted the interest of public television and it became the first group commissioned to produce work for national broadcast on public TV. In 1974, shortly after T VTV introduced national audiences to guerrilla TV, the first all-color portable video documentary was produced by the Downtown Community Television Center (DCTV) and aired on PBS.

In 1981, the Paper Tiger Television Collective formed—a changing group of people that came together to produce cable programming for the public access channel in New York City. Drawing upon the traditions of radical video, Paper Tiger Television invented its own home-grown studio aesthetic using rather modest resources to make rev-

olutionary television. Many of Paper Tiger’s half-hour programs are live studio “events,” faintly reminiscent of 1960s video “happenings.” The show’s hosts are articulate critics of mainstream American media who examine the corporate ownership, hidden agendas, and information biases of the communications industry via the media in all forms.

In 1986, Paper Tiger organized Deep Dish TV, the country’s first alternative satellite network, to distribute its public access series to participating cable systems and public television stations around the country. The successful syndication of this anthology of community-made programs on issues such as labor, housing, the farming crisis, and racism promised a new era for alternative documentary production.

With a similar agenda, the 90’s Channel first began “shattering the limits of conventional TV” in 1989 as a PBS television show, and has since established an “independent cable network” carrying blocks of activist programming on leased access over a number of cable systems owned by Telecommunications, Inc. (TCI), while also bicycling its programs to public access channels and universities around the country. The 90’s Channel programming (now known as Free Speech TV) is a compilation of activist, community-based and experimental media produced by independent film and video makers.

Activist media are oriented towards action, not contemplation—towards the present, not tradition. Politically integrated opposition against mainstream broadcast television by marginalized groups has considered the form, content, and regulatory structures of the medium. As a mode of activism, television may be used as a occasion for media analysis and intervention, as a pathway for the exchange of information, as well as a vehicle for securing representation for those groups otherwise marginalized from the media. The ultimate goal of committed alternative video groups, however, is to secure universal access to the tools of production and the channels for distribution and exhibition. For

these reasons, community-based programming has not simply followed the lead of network television, but rather served as a forum for envisioning the future of the medium.

ADAPTATIONS

Adaptations have become a mainstay of commercial television, and have been since programming began in the 1940s. All manner of pre-existing, written properties have been turned into adapted teleplays—short stories, novels, plays, poems, even comic books have been altered for presentation on television. They appear in formats ranging from half-hour shows, as in some episodes of *The Twilight Zone*, to 30-hour epic miniseries, as in 1988's *War and Remembrance*.

Adaptations are attractive to producers for a variety of reasons. In many cases, audiences for such fare are “presold,” having purchased or read the original text, or having heard of the work through word-of-mouth. Sources for adapted works may come from public domain materials drawn from classical literary sources, or, more frequently from hotly-pursued novels from best-selling writers. Authors like Judith Krantz, John Jakes, Alex Haley, and Stephen King have solid book sales and loyal audiences; adaptations of their works generate good ratings and audience share. Synergy between book publishers and networks may also be a factor in the purchasing or optioning of works for adaptation—a successful miniseries can prolong the life of a book currently in print, and may resurrect older books which are out-of-print or no longer readily available in the mass market. When *War and Remembrance* was adapted in 1988, not only were its sales improved, but an unexpected million copies of the first book in the series, *The Winds of War*, were ordered.

Another reason for television's reliance on adaptations, especially in the form of miniseries, is the lack of good scripts, along with television's voracious need for sponsor-attractive, time-slot filling product. Few miniseries are produced from wholly original concepts; experts estimate that 75 to 90% of all miniseries use novels for source material. Novels have overcome basic, yet essential dilemmas in constructing narratives: they have well-defined characters, interwoven subplots filled with ideas and events which can be rearranged, highlighted, or deleted by scriptwriters, and enough story for at least two hours of product. A producer holding something complete and tangible, in the form of a pre-written story, can feel more confident when searching

for financing; in turn, sponsors and networks are more likely to commit money and resources to a finished property, even one that is not yet a bestseller. Consequently, producers option many books which are never produced, in the belief that some of these unknown and untried works may become popular.

What producers see as a “sure thing,” however, professional screenwriters often view as a challenge. Adaptation is far more than slavishly reproducing a previously constructed story in a different format—the requirements of the two forms are significantly different. From the perspective of screenwriters, novels take characters and subplots and let them careen willy-nilly into unstructured chaos. Screenwriters rearrange and augment material to stress the visual and storytelling requirements of the television medium. They purge the script of unnecessary characters, or combine the traits and experiences of several characters into one. They try to structure the script so it moves from crisis to crisis, keeping in mind the constraints imposed by the presence of commercial breaks. They find opportunities to make the internal world of thoughts and feelings more external, through dialogue and action. The process of adaptation requires a level of creativity which may be equal to that expended in the writing of the source material, as writers hone and pare and expand and modify concepts from one medium to the other.

Because novels frequently include dozens of characters interacting over vast periods of time, screenwriters often find the miniseries format essential in marshaling the scope and flavor of the original text. PBS, considered the “godfather” of the miniseries, introduced America to the concept of long-form sagas with its imports of British productions and presented the aegis of *Masterpiece Theatre*, *Mystery*, and *Great Performances*. The audience for upscale adaptations of *The Forsyte Saga*, *Brideshead Revisited*, and *The First Churchill* was small, but the form was successful enough to encourage the adaptation of more popular, less highbrow novels such as Irwin Shaw's *Rich Man, Poor Man* (ABC, televised 1976-1977). It was the phenomenal success of Alex Haley's *Roots*, a 12-hour adaptation broadcast over eight consecutive evenings in 1977, however, which cemented this

Little Lord Fauntleroy

Photo courtesy of Rosemont Productions, Ltd.

form of adaptation and established it as a staple of television production.

Most genres of television have had their adaptations: children's programming (Showtime's 1982–1987 *Faerie Tale Theater*, NBC's 1996 *Gulliver's Travels*); the western (CBS' 1989 *Lonesome Dove*); historical romance (NBC's 1980 *Shogun*; ABC's 1985–86 *North and South*); science fiction (episodes of CBS' 1959–1964 *The Twilight Zone*) are a few of the seemingly endless number of outstanding adaptations produced for television. The adaptation continues to be popular, lucrative, and entertaining; as long as the form holds an audience, this narrative form will remain an essential element in broadcasting.

ADVANCED TELEVISION SYSTEMS COMMITTEE

The Advanced Television Systems Committee (ATSC) was formed in 1982 by representatives of the Joint Committee on Inter-Society Coordination (JCIC). The purpose of the ATSC is to facilitate and develop voluntary technical standards for an advanced television system to replace the aging American NTSC television standard. The ATSC is also charged with making recommendations to the United States Department of State to assist the U.S. in developing positions on various standards issues that are raised in front of the International Radio Consultative Committee (CCIR). Advanced Television Systems Committee membership consists of 53 organizations including representatives from the National Association of Broadcasters, the National Cable Television Association, the Institute of Electrical and Electronics Engineers, the Electronic Industries Association and the Society of Motion Picture and Television Engineers.

The ATSC is involved in various efforts to improve the quality of the television picture and audio signal. In 1993, the Advanced Television Systems Committee recommended adoption of a ghost-canceling reference signal which is expected to dramatically improve the quality of television reception suffering from multipath interference in large metropolitan areas. ATSC has been actively involved in advocating adoption of a unified production and transmission standard for high definition television (HDTV). In 1981, Japan's NHK broadcasting organization demonstrated a working HDTV system called MUSE, which produced startling clear, rich color images of exceptional resolution. The MUSE system utilized analog technology that was incompatible with the American NTSC color television standard. The MUSE system also required substantially larger spectrum allocations than current NTSC signals. The ATSC accepted the recommendations of the Society of Motion Picture and Television Engineers (SMPTE) by calling for the American and world-wide acceptance of Japan's 1,125/60 standard for high definition television production. In 1986, the CCIR refused to accept the standard, claiming that adoption would be detrimental to the interest of many of its members and participants. Renewed recommendations by the ATSC in 1988 for adoption of the 1,125/60 Japanese standard met with opposition from U.S. network broadcasts because the system requirements were not easily convertible for NTSC usage.

In 1987, the Federal Communications Commission (FCC) invited proponents of HDTV to propose a system that would provide terrestrial high definition television to the United States. By 1990, several American entrants proposed all digital transmission systems that proved preferable to the analog MUSE system. Perhaps the biggest advantage

Courtesy of ATSC

of these digital systems was the potential for scaling HDTV signals into a 6 MHz bandwidth allowing transmission by terrestrial broadcasters. Later various proponents of digital systems merged their proposals into a compromise hybrid digital system. The ATSC reevaluated its recommendation and is now working with various FCC committees, including the Advisory Committee on Advanced Television Services, to promote an all digital television standard.

THE ADVENTURES OF OZZIE AND HARRIET

U.S. Domestic Comedy

The *Adventures of Ozzie and Harriet* was one of the most enduring family-based situation comedies in American television. Ozzie and Harriet Nelson and their sons David and Ricky (ages 16 and 13 respectively at the time of the program’s debut) portrayed fictional versions of themselves on the program. The Nelsons embodied wholesome, “normal” American existence so conscientiously (if blandly) that their name epitomized upright, happy family life for decades.

Ozzie and Harriet started out on radio, a medium to which bandleader Ozzie Nelson and his singer/actress wife Harriet Hilliard had gravitated in the late 1930s, hoping to spend more time together than their conflicting careers would permit. In 1941 they found a permanent spot providing music for Red Skelton’s program, a position that foundered when Skelton was drafted in 1944. In that year, the energetic Ozzie Nelson proposed a show of his own to network CBS and sponsor International Silver—a show in which the Nelsons would play themselves. Early in its run, the radio *Adventures of Ozzie and Harriet* jettisoned music for situation comedy. Ozzie Nelson himself directed and co-wrote all the episodes, as he would most of the video shows.

The Nelsons signed a long-term contract with ABC in 1949 that gave that network the option to move their program to television. The struggling network needed proven talent that was not about to defect to the more established—and wealthier—CBS or NBC.

The television program premiered in 1952. Like its radio predecessor, it focused on the Nelson family at home, chronicling the growing pains of the boys and their parents and dealing with mundane issues like hobbies, rivalries, schoolwork, club membership, and girlfriends. Eventually the on-screen David and Ricky (although never the off-screen David and Ricky) graduated from college and became lawyers. When the real David and Rick got married, to June Blair and Kristin Harmon respectively, their wives joined the cast of *Ozzie and Harriet* on television as well as in real life.

Ozzie and Harriet lasted 14 years on American television, remaining on the air until 1966. Although never in the top ten of rated programs, it did well throughout its run, appealing to the family viewing base targeted by ABC. The program picked up additional fans in April 1957, when Rick sang Fats Domino’s “I’m Walkin’” on an episode titled “Ricky the Drummer.”

As soon as the Nelsons realized how popular their singing son was going to be, the televisual Rick was given every opportunity to croon over the airwaves by his father/director/manager. Sometimes his songs fitted into the narrative of an episode. Sometimes they were just tacked onto the end—early music videos of Rick Nelson in performance.

Despite this emphasis on Rick’s vocal performances, and despite the legion of young fans the program picked up because of its teenage emphasis, the character of Ozzie dominated the program. The genial, bumbling Ozzie was

the narrative linchpin of *Ozzie and Harriet*, attempting to steer his young sons into the proper paths (usually rather ineffectually) and attempting to assert his ego in a household in which he was often ill at ease.

That ego, and that household, were held together by wise homemaker Harriet. Although she may have seemed something of a cipher to many viewers, clad in the elegant dresses that defined the housewife on 1950s television, Harriet represented the voice of reason on *Ozzie and Harriet*, rescuing Ozzie—and occasionally David and Rick—from the consequences of over-impulsive behavior.

Ironically, in view of the weakness of paterfamilias Ozzie’s character, the program was viewed, during its lengthy run as now, as an idealized portrait of the American nuclear family of the postwar years. The Nelsons eventually shifted their program into color and into the 1960s. Nevertheless, in spirit, and in the popular imagination, they remained black-and-white denizens of the 1950s.

ADVERTISING

During ABC's broadcast of Super Bowl XXIX in 1995 advertisers were willing to pay roughly \$1 million to secure 30 seconds of airtime. Pepsi-Cola purchased four game slots, three of them a minute long, to launch its "NOTHING ELSE IS A PEPSI" campaign. The \$8 million investment was deemed justifiable because Pepsi executives expected the Superbowl to fulfill its projections: to attract the largest television audience of the entire year. The example is merely one indication of advertising's central role in the story of television.

In the beginning the numbers were hardly extraordinary. In 1941, for example, Bulova Watches spent \$9 to buy time on the first advertising spot offered by NBC's fledgling New York station. Soon, however, success stories such as the case of Hazel Bishop cosmetics, whose jump into TV produced a sales explosion, convinced advertisers that it was worthwhile to pay much more to reach the expanding TV audience. Ad revenue fueled the television boom in the United States during the 1950s, and by 1960 TV had become the chief medium of national advertising, earning \$1.5 billion as a result. Rating agencies, notably A.C. Nielsen Company, played a crucial role by measuring the audience size and estimating the audience composition of particular shows. Advertising shaped both programming and the schedule to maximize hits, at that time, largely sports and entertainment offerings. Indeed, ad agencies controlled the actual production of many shows, securing writers, technical personnel, and talent, and overseeing scripts and production design. It was not until the quiz

scandals at the end of the decade led the networks to take control of their programming that the advertising agencies focused their work primarily on brokering air time and producing commercial spots.

The success of commercial television as a medium linked to the selling of products provoked an outcry. Vance Packard's 1957 exposé, *The Hidden Persuaders*, identified television as one of the chief villains in the effort to manipulate the American consumer. In 1961 the new FCC chair Newton Minow told a stunned audience of broadcast executives that television was "a vast wasteland," funded by a seemingly endless supply of commercials.

Initially few countries followed the American example of supporting their new broadcast media with a commercial, advertiser supported financial base. Britain, Canada, and much of western Europe organized television as public service systems. Program development and production, as well as the technical aspects of broadcasting, were funded in part by taxes. But the expenses of television broadcasting were so high and the private demand for commercial airtime so great that some services accommodated advertising: the Canadian Broadcasting Corporation used ad revenues to finance indigenous programming. Both Japan and Australia launched separate commercial and public services in 1953. A year later ad agencies, now fully international in scope and influence (notably the American-based J. Walter Thompson agency) played a part in convincing the British government to end the BBC monopoly and allow a new channel, a commercial service to be placed on the air.

Even so, television commercials, the visible artifacts of advertising in their familiar 30 or 60—and later their 15—second versions, long retained the imprint of their American birth. Canadian advertisers hired American talent in New York. Young and Rubicam, an American agency, created *Ice Mountain* for Gibbs toothpaste, the first British television commercial ever aired (September 1955).

The prevalent strategy of American advertising in the 1950s was the 60-second hard sell: hit the viewer with bits of information, explain how the product was unique, repeat this argument to drive home the message. The earnest enthusiasm might please the advertisers but it disturbed its victims. If American viewers were largely satisfied with their television fare, according to a 1960 survey, they were upset by the frequency, the timing, the loudness, and the style of commercials. Still, few were ready to pay for noncommercial television through their taxes or a license fee on the television receivers that sat in their living rooms.

Television advertising grew more sophisticated and extravagant during the 1960s. The advent of color TV accentuated the visual dimension of advertising. The increasing cost of air time fostered a move toward 30-second commercials which relied on metaphor even more than logic. Just as important was the “Creative Revolution” which swept over Madison Avenue, led by newcomers and new agencies who experimented with the soft sell. Their emblem was the funny and imaginative Volkswagen cam-

paign that was widely credited with making the “Beetle” an American icon. In fact commercials were more important to Marlboro: sales doubled in the late 1960s, reaching 51.4 billion units, launching the brand on a trajectory that would make it the American leader. One by-product of the “revolution” was the appearance of spots which pleased viewers: the bouncy tune and happy images of Coca-Cola’s famous *Hilltop* (1971) may not have taught the world to sing, but it led enthusiastic viewers to phone television stations requesting more showings of the ad.

After the mid-1960s, television advertising also became a significant tool of public power. The free public service announcement (PSA) won favor as a way of convincing people to donate moneys, to stop smoking or drinking and driving, to fight drugs.

Political advertising was transformed by *Daisy*, a miniature horror movie which used visuals to link Republican candidate Barry Goldwater to a nuclear holocaust. Shown only once (on CBS, 7 September 1964), the outcry it provoked amply demonstrated how the political spot could be an emotional bomb. By 1988 half of the \$92.1 million expended by George Bush and Michael Dukakis went to advertising, mostly on television. Even if these sums were much smaller than Coca-Cola or Procter and Gamble might spend in any given year, political advertising now challenged the news as the chief source of election discourse, evidenced by the attention paid to the “Willie

Horton" attack ads which smeared Dukakis in 1988. By Campaign '94, not only had total ad spending approached \$1 billion but negative advertising had exploded in what *Advertising Age* (November 14, 1994) called "the season of sleaze." Meanwhile the partial repeal of the Fairness Doctrine in 1987 had opened the airwaves to advocacy advertising. In 1993 the Health Insurance Association of America managed to catalyze public suspicion of the Clinton Health Initiative with its "Harry and Louise" spots, which eventually contributed to the defeat of health reform.

Americans have remained the masters of political and advocacy advertising. Not so in other realms, however. The inventiveness declined in part because the "Creative Revolution" waned in the 1970s. American advertisers came to favor once more the hard sell. Another reason lay in the victory of private over public television in country after country, thereby creating new channels for advertising. In the Third World, ad revenues were crucial to the expansion of television, though a fear of excessive commercialism justified Indonesia's ban on television ads in 1981. First in Italy (mid-1970s), then in France (mid-1980s), and soon everywhere, the airwaves of western Europe were opened to private television. Following the collapse of the Soviet empire, ads swiftly appeared in eastern Europe and Russia—the Marlboro cowboy, banned from American screens after 1970, could be found riding proudly on Russian television in the summer of 1993. The spread of satellite TV in Europe after 1990 offered even more time for marketing.

The British were the first to break free from American tutelage. There, ad-makers refined the ironic sell—one of the first major successes was the ongoing Heineken "Refreshes" campaign launched in 1974—which became a key marketing strategy in Europe and America during the late 1980s. Also in the 1970s, the British government sponsored social ads to shape public behavior, an initiative that was pursued in Canada as well, where the state often proved the largest single advertiser. British ad-makers soon developed the shock-style of social advertising which used brutal images of misery, death, and horror to jolt people out of their complacency. This too became commonplace in the late 1980s and early 1990s, during the global war against AIDS, drugs, drinking and driving, racism, hunger, and other ills.

Worldwide, the best of television commercials had become works of art that reflected the tastes, the fears, and the hopes of their communities. The sums of money spent on making commercials were enormous: it was estimated that the ads for Pepsi-Cola's "New Generation" campaign of the mid-1980s cost about \$20,000 a second to produce, far more than regular TV programming. European ad-makers usually eschewed the American passion for the hard sell and comparative advertising. Many ads acquired a kind of national signature: bizarre imagery (France), a humorous emphasis (Britain), gentleness (Canada), sensuality (Brazil and France), exposé (Germany), or beauty (Japan). Run-of-the-mill advertising might still irritate. But in the 1980s television networks offered up collections of old and new

ads, movie houses showed the world's best (the Cannes award winners), newspapers and magazines reviewed ads and advertising trends. There was some truth to the claim by Marshall McLuhan—cited once again by *Time* in 1990—that advertising was "the greatest art form of the twentieth century."

It would, of course, be an exaggeration to apply that label to every form of television advertising. Consider the infomercial. American ad-makers pioneered this form during the late 1980s. Typically the infomercial is a sponsored message, 30 minutes long, which masquerades as a regular program, often as a talk or interview show complete with commercial inserts. The form has been used to hype hair restorers, diet plans, memory expanders, real estate techniques, living aids, gym equipment, and so on. The earnest enthusiasm of the infomercial harks back to the ad style of the 1950s, while the element of direct response (the insistence on phoning now to purchase the brand) looks forward to the future of interactive television. The infomercial proved so successful by the mid-1990s that it had spread into Britain and western Europe. In the United States and Canada major national marketers such as Ford or Philips were experimenting with this long-form advertising. It was estimated that infomercials were generating around a billion dollars worth of ad business a year.

That figure nevertheless remains modest by comparison with the scale of conventional television advertising. Altogether, television attracted over \$34 billion of the total \$150 billion of U.S. advertising volume in 1994, which put the medium roughly on a par with newspapers. Indeed TV beat out all other media in Japan, Germany, Britain, France, Italy, Brazil, and Spain. Only in South Korea and Canada were newspapers ahead, and in Canada that was because advertisers could reach so many customers via American television.

Yet such success was little comfort to an industry worried by the future of pay or subscriber-based television. The record of television advertising as a marketing tool is not spectacular: people avoid, discount, or disdain most commercials they see. The enormous clutter of ads on television has made recent campaigns much less memorable than ten or twenty years ago, or so surveys suggest. In 1994 Edwin Artzt, then chair of Procter and Gamble, the largest single TV advertiser in the United States (spending \$1,051.2 million in 1993), frightened listeners at the American Association of Advertising Agencies with his warning that ad-supported television could soon disappear.

Many people would find that welcome, though they would be less impressed with Artzt's proposed remedy, a return to the days of sponsor-controlled programming. The laments of a Packard or a Minow have been echoed by an assortment of critics around the world who have blamed advertising for vulgarizing TV, degrading politics, and emphasizing materialism. Indeed, television advertising is often viewed as the most potent agent of a gospel of consumption. A central tenet of that gospel preaches that satisfaction is for sale. "What advertising has done is to seep out beyond

its proper sphere," asserted Mark Crispin Miller in a NBC documentary *Sex, Buys, and Advertising* (aired July 31, 1990), "and to kind of take over the culture."

Ultimately such claims rest upon a presumption of the awesome cultural power of advertising. Advertising has conditioned the character of television programming, sometimes even inspired a program: Coca-Cola's *Mean Joe Greene* (1979) was the model for a later NBC movie. Ad slogans have entered the common language: "Where's the beef?" (Wendy's) found a place in the 1984 presidential campaign. Ad critters, notably Kellogg's Tony the Tiger, have become kids' favorites. Ad stars have become famous: the appearance of Nick Kamen in a Levi's 501 ad in Britain in the mid-1980s made him a symbol of male sensuality.

Such examples demonstrate that commercials are another source of popular culture, a vast collection of meanings and pleasures created by the public to understand and enrich their ordinary experience. The appropriation, creation, and manipulation of these meanings and pleasures by those who assume that they help to sell products continues to be a source of intense cultural and social scrutiny and debate. All the while, the variety of effects of TV advertising on our lives remain contested and unproven.

ADVERTISING, COMPANY VOICE

Company voice advertising typically presents its sponsors as good corporate citizens, forward-thinking providers of products, jobs and services, and as active supporters of causes such as environmentalism. Historically a staple of magazines, radio and sponsored motion pictures, company voice advertising helped shape sponsorships of dramatic anthology, spectacular, news and documentary programs. After 1970, the practice helped shape Public Broadcasting Service program underwriting.

Alternately known as "public relations," "institutional" or "advocacy advertising," company voice advertis-

ing seeks a favorable political climate for the expansion of its sponsors' commercial activities and interests. One of the earliest campaigns of its kind dating to 1908, for example, promoted the "universal service" of the AT and T Bell System telephone monopoly. By the late 1920s public-minded "progress" had become the highly advertised hallmark of General Electric (GE), General Motors and other center firms. The practice picked up political significance during the New Deal and later during World War II, when all manner of advertising promoted business's patriotic sacrifice and struggle on the production front.

After the war, business leaders remained suspicious of centralized government, confiscatory taxation, politically powerful labor, and what many believed to be the public's outmoded fear of big business. In bringing postwar public and employee relations to television, business invested in programs whose objectives ranged from economic education to outright entertainment. Factory processes and free enterprise rhetoric appeared regularly. The National Association of Manufacturers, for example, launched *Industry on Parade*, a syndicated telefilm series that toured the nation's industrial centers. Initially produced by the NBC News film unit, the series ran from 1951 to 1958. Business and trade groups worked television into training and employee relations. Drexel Institute of Technology's *University of the Air*, for example, took advantage of marginal television time in the Philadelphia area for noon-hour panel discussions of labor-management issues. Designed for in-plant reception by audiences of supervisory trainees and managers, the scenes attracted spouses in the home viewing audience, who, one publicist proudly noted, had become the new fans of industrial human relations.

Entering television for the first time, major corporations predicated their public and employee relations activities upon the experience of entertainment. General Electric and DuPont, both active in economic education, favored the editorial control of dramatic anthology programs. The company voice specialists of the *General Electric Theater* ruled out the sponsorship of panel discussions such as *Meet the Press* and *Youth Wants to Know*, because the format posed the threat of comment inimical to business. DuPont continued its investment in tightly controlled drama with the transfer of radio's *Cavalcade of America* to television in 1952. DuPont specialists justified their television investment with projected declining costs per-thousand, that by 1954 would equal radio's peak year of 1948. Further delineating the audience for company voice messages, specialists anticipated the maturity of a generation with no first hand knowledge of the Depression—or as GE's Chester H. Lang put it, “no adult exposure to the violent anti-business propaganda of the ‘depression’ years. The opinions the young people form now, as they grow up,” Lang explained, “will determine the climate in which we will operate in the decades of their maturity.” “Television offers us the most effective medium ever created by man for the communication of ideas and attitudes.” DuPont's F. Lyman Dewey suggested that his company's investment in television affirmed its executives' appreciation of the fact that there was no longer a question of “shall we as DuPont representatives use these powerful tools of communication—but shall we use them well.”

Recoiling from television's expense and unproved effect, other company voice advertisers hesitantly incorporated the new medium into their plans. More than a few invested in alternating-week sponsorships that further divided commercial breaks between product sales and company voice messages. U.S. Steel predicated its television plans in part upon a tax code that allowed deductions for

product sales and company voice advertising as a business expense. Its first telecast Christmas night 1952 presented Dickens' *A Christmas Carol*. The *U.S. Steel Hour* later apportioned commercial breaks between company voice messages read by “Voice of U.S. Steel” announcer George Hicks, and industry-wide product sales promotions acted out by U.S. Steel's “family team” Mary Kay and Johnny.

Spectacular programs built around light entertainment, sports and special events presented sponsors as adjuncts of national life and culture. General Motors, reminiscent of its massive investments in wartime institutional advertising, entered television in the 1952/53 season with a weekly schedule of *NCAA Football*, followed by the Eisenhower Inauguration and the Coronation of Elizabeth II. Ford Motor Company and the electrical industry each invested in light entertainment. The success of the *Ford 50th Anniversary Show* simultaneously telecast on NBC and CBS led to similarly conceived “horizontal saturation” for the 1954 television season. *Light's Diamond Jubilee*, for example, a two-hour spectacular celebrating the 75th anniversary of Thomas Edison's invention of the electric light, appeared on four networks. The David O. Selznick production featured a filmed talk by President Eisenhower, narration by Joseph Cotten and sketches and musical numbers with Walter Brennan, Kim Novak, Helen Hayes, Lauren Bacall, David Niven, Judith Anderson and Eddie Fisher.

By the mid-1950s nearly every major American corporation had entered television to build audiences for company voice advertising. The Aluminum Company of America sponsored Edward R. Murrow's *See It Now* to boost its name recognition with the public and with manufacturers using aluminum. Reynolds Aluminum sponsored *Mr. Peepers*, while the Aluminum Company of Canada with others sponsored *Omnibus*. Underwritten by the Ford Foundation as a demonstration of “television at its best,” the Sunday afternoon series presented diverse entertainments hosted by Alistair Cooke. Not averse to commercial sponsorship, *Omnibus* anticipated the “making possible” program environment of the Public Broadcasting Service.

While politically active corporations embraced the prestigious possibilities of drama, light entertainment and special events, by 1960 many had become willing sponsors of science, news and documentary programs. The promotion of scientific and technological competence took on special urgency after the Soviet launch of the Sputnik spacecraft in 1958. The corporate-cool television presence of the Bell System exemplified the trend. In 1956 Bell entered television with half-hour dramas entitled *Telephone Time*. 110 episodes ran until 1958 dramatizing the success stories of “little people.” In 1959 Bell returned to the air with four musical specials that evolved into the *Bell Telephone Hour*. Light orchestral music, musical numbers and ballet sequences accompanied “Of time and space” company voice messages. Bell also developed preemptive documentary programs on weather, genetics, circulation of the blood and cosmic rays, and the *Threshold* series treating the American space program. Bell also purchased related CBS documentaries such as

“Why Man in Space?” Adopting a similar strategy, Texaco, Gulf and Westinghouse each televised network news and special events laden with scientific and technological news value. Texaco became an early sponsor of NBC’s *Huntley-Brinkley Report*. The “unassuming authenticity and easy informality” of co-anchors Chet Huntley and David Brinkley were thought to complement Texaco’s “dependability” message. Gulf raised its institutional profile with “instant specials” featuring NBC correspondent Frank McGee, who covered the events of the 1960 presidential campaign and the U.S. space program. Documentary films such as “The Tunnel” rounded out the schedule. *Westinghouse Presents* featured documentary specials “Our Man in Vienna” with David Brinkley, “The Land” with Chet Huntley and “The Wacky World of Jerry Lewis.” Company voice messages promoted Westinghouse’s “scientific achievements, dedication and sincere interest in people,” qualities thought to mitigate the negative public relations impact of 641 civil damage suits stemming from charges of price-fixing.

The multinational aspirations of Xerox Corporation sought complementary qualities of excellence. Not unlike the program strategies pursued by steel, automotive and electrical producers, Xerox embarked upon an aggressive public relations campaign by purchasing programs that “get talked about”: *Huntley-Brinkley Reports* treating the Kremlin, Communism, Jimmy Hoffa, Cuba and Korea, the making of the president, 1960 and 1964, and a series of 90-minute specials dramatizing the work of United Nations social agencies. Broadcast without commercial interruption on NBC and ABC, the U.N. series targeted the international community identified as key to the expansion of the office copier market. A model of corporate underwriting, Xerox’s U.N. dramas won critical acclaim that helped justify the series’ \$4 million expense to stockholders who questioned its value. The series’ most celebrated program, “Carol for Another Christmas,” featured a Rod Serling script that revisited the horrors of Hiroshima, the millions unavailable to Western abundance, and the bleakest of futures prefigured by the hydrogen bomb. Xerox later sponsored *Civilisation* with Kenneth Clark. Thirteen one-hour programs presented “leading social issues and advanced art forms” reviewing “1600 years of Western man’s great art and ideas. . . man at his finest on television at its finest.”

While company voice advertisers of the early 1950s anticipated the maturity of a television generation with no direct knowledge of the Depression, the company voice advertisers of the early 1960s bemoaned that generation’s expectation that business extend its interests beyond the balance sheet to include social goals in the areas of minority employment, consumer protection and environmentalism. Public opinion pollster Louis Harris described the public image of U.S. business as “bight, but flawed.” Specialists set out to narrow the distance between corporate claim and performance said to be as great as the so-called generation gap. Not only had society become more impersonal and complex, they argued, but increasingly polarized and problematic. Hoping to erase lingering doubts about advertising’s impact and effect, specialists sharpened claims for

advocacy advertising as “the one remaining tool with which business can apply counter pressure in an adversary society.”

John E. O’Toole, the thoughtful president of the Madison Avenue agency Foote, Cone and Belding, suggested that business leaders learn to emulate the “adversary culture” of intellectual and academic pursuits, political activists and consumer groups “who seek basic changes in the system.” O’Toole noted that while each “culture” had necessary and legitimate functions, the adversary culture dominated the media. In complex times, O’Toole argued, business should make certain that its unique claims of social leadership rose above the dissident clutter.

Led by the oil industry, the 1970s witnessed significant investment in company voice television. Reeling from the public relations fallout of rising energy prices, American-based petroleum producers became a presence on the Public Broadcasting Service. Mobil’s *Masterpiece Theatre* with one-time *Omnibus* host Alistair Cooke debuted in January 1971. As historian Laurence Jarvik notes, Mobil soon displaced the Ford Foundation as the single largest contributor to public television, raising its initial program grant of \$390,000 to \$12 million by 1990. *Masterpiece Theatre*, *Mystery!* and *Upstairs, Downstairs* provided cultural cover for a heavy schedule of combative advocacy ads published in the op-ed sections of *The New York Times* and the *Washington Post*. In the late 1970s the ad campaign came to television: elaborately costumed “A Fable for Now” spots featuring mimes Shields and Yarnell, the Pilobolus Dance Theatre, the Louis Falco Dance Company, the Richard Morris Dance Theatre and members of the American Ballet Theatre enlivened Mobil’s anti-regulatory rhetoric in parables of scarcity and abundance drawn from the animal kingdom. “Mobil Information Center” spots aired locally before network newscasts employed an anchorman-correspondent simulation to tout “the freedom of the press,” along with the pro-growth logic of offshore drilling, nuclear power plant construction, deregulation of natural gas and the restriction of environmental regulation.

While sympathetic critics wondered if Mobil could have carried out its advocacy campaign without the expense of television drama, others suggested that big oil’s enthusiastic underwriting of public television had turned PBS into the “Petroleum Broadcasting Service.” PBS president Lawrence K. Grossman urged perspective on the funding issue. In 1977 Grossman explained that though oil company funding had increased tenfold since the early 1970s, oil company moneys represented less than 3% of system income. “What conclusion,” asked Grossman, “do we in public television draw from these numbers? Not that oil companies should contribute *less* but rather that corporations of all other types should be asked to contribute more!”

By 1983 corporate support for PBS had flattened out at \$38 million for the two previous years, presaging a decade of declining Federal appropriations that left PBS ever more dependent upon the market for support. In 1981 network officials won congressional approval for an

18-month experiment in "enhanced underwriting." Two-minute credits at the beginning and conclusion of programs telecast by nine PBS affiliates allowed mention of brand names, slogans and institutional messages beyond previously restricted verbal mentions and static displays of logos. The discussion of corporate mascots, animated logos, product demonstrations and superlatives to tap a new class of advertising revenue alarmed established underwriters. In an effort to conserve PBS' uncluttered institutional character, national program underwriters Mobil, the Chubb Group of Insurance Companies, Chevron, AT and T, Exxon, Ford, General Electric, IBM, GTE, J.C. Penny, Morgan Guaranty Trust, Owens-Corning and others formed the Corporations in Support of Public Television (CSPT). The CSPT promoted the concept of "quality demographics" among potential corporate underwriters who desired to advertise "excellence," social cause identification and the occasional product.

AT and T, for example, had recently provided \$9 million for expanded one-hour coverage of the *MacNeill/Lehrer Report* (later *News Hour*). Emphasizing performance and communication, specialists expected the buy to enhance AT and T's image as an information provider after of its breakup into regional "Baby Bells" by the U.S. Justice Department.

Reviewing their company voice accounts, specialists themselves perhaps wondered just what effect their long-term advertising campaigns had bought. Increasingly business found itself the subject of critical television news stories treating the environment, the OPEC oil shock, inflation and recession. Corporate critics charged that public television had become a prime example of what Alan Wolfe described as "logo America," in which "the only price a company will charge for its public service activities is the right to display its logo." Near the opposite end of the political spectrum, critic David Horowitz described PBS' broadcast schedule as a "monotonous diet of left-wing politics," though it would have been hard to find such programs equaling the possibilities, much less access, available to the company voice advertiser. Mobil, for example, financed an hour-long PBS documentary program criticizing the anti-business thrust of prime time network television drama. Hosted by writer Benjamin Stein, *Hollywood's Favorite Heavy: Businessmen on Prime Time TV* used clips from *Dallas*, *Dynasty* and *Falcon Crest* to contend that television had destroyed youth's outlook upon business and business ethics. A peculiar assumption, wrote critic Jay Rosen in *Channels* magazine, since television itself was a business, and advertisements had made consumption "the nearest thing to religion for most Americans." Mobil, however, had decided that it could not countenance Blake Carrington, J.R. Ewing and other stereotypes of rapacious businessman in prime time. Interestingly, General Electric declined to join Mobil as a *Hollywood's Favorite Heavy* underwriter, preferring instead to stick with its "We Bring Good Things to Life" spot campaign. Having rethought its aversion to panel discussions, GE aired its "Good

Things" campaign on ABC's *This Week with David Brinkley* and *The McLaughlin Group*. The latter appeared commercially on NBC's five owned and operated stations, and publicly on a 230 station PBS network.

As the century draws to a close and funding for all forms of television continues to be squeezed by new outlets and new technologies such as computer access to the Internet, corporations continue to seek new connections to media. The trend that began with the origins of mass media shows no sign of abating.

ADVERTISING AGENCY

In the early years of U.S. broadcasting it did not take long for advertising agencies to embrace new media. Fortunately for advertisers, the ability to reach a mass audience with radio intersected with an expansion of the American economy in the 1920s. The techniques of mass production championed by Henry Ford, the rise of Taylorism, and an increase in disposable income in the years following World War I sustained an ideology of consumption that advertising both reflected and nurtured. NBC President Merlin H. Aylesworth proclaimed that radio was "an open gateway to national markets, to millions of consumers, and to thousands upon thousands of retailers."

The vision of eager consumers gathered around this remarkable appliance was irresistible to potential sponsors. The expansion of commercial broadcasting came with such astonishing speed that by 1931 radio was an enormous industry, accounting for \$36 million in time sales on the networks alone. Larger agencies such as N.W. Ayer, BBDO, and J. Walter Thompson set up broadcasting departments and actively encouraged clients to pursue the medium.

The emergence of radio as an economic force was reflected in a crucial change regarding program development at the agency level. Through the 1920s most commercial programming originated with networks or local stations, with the agency serving as broker, casting about for clients willing to purchase the rights to a broadcaster-produced show. By the early 1930s, however, the agencies had reversed the equation—they were developing shows in-house for clients, then purchasing air time from the broadcasters. The key function for the agency thus became to analyze a client's particular needs and design an entire program around it, an enormously complex and financially risky undertaking, yet

one in which Madison Avenue was entirely successful. By the end of the 1930s, agencies produced more than 80% of all network commercial programming.

With the advent of commercial television in 1946, there was considerable sentiment within the networks that program creation and execution would best be left in their hands, although the personnel demands and expense of video production made it impossible for any network to produce all its programming in-house. Thus, as in radio, agencies assumed a major role in the evolution of the television schedule. There was not, however, a wholesale rush of sponsors begging to enter the medium, and the networks were compelled to offer time slots at bargain rates to attract customers. Companies such as Thompson, and Young and Rubicam, had already developed some television expertise, but the vast majority of agencies found themselves at the bottom of a very steep learning curve. Still, Madison Avenue produced some of the most enduring programs of the "golden age" of television, including *Texaco Star Theater*, *Kraft Television Theatre*, and *The Goldbergs*.

As more stations began operation—particularly after 1952—the cost of purchasing air time on the networks and local stations increased dramatically, as did production budgets. Most agencies accepted as an economic fact that they could no longer afford to create and produce their own shows as they had in radio, and the recognition on Madison Avenue that complete control of television production was unprofitable to the agencies themselves contributed to the evolution in programming hegemony away from the agencies to the networks. Thus, agencies never assumed the kind of production control in television they enjoyed in radio; they could never put into play the same economies of scale

as the networks and independent producers. The 15% commission that served as the source of agency revenue simply was not enough to cover the ever-increasing expenses associated with television production. Many agencies subsequently shifted their emphasis to the production of commercial spots, while others moved aggressively into syndication, forming partnerships with Hollywood producers to create filmed series that could be sold to a variety of sponsors.

As costs rose during the 1950s, the gap between agency income and expenses narrowed considerably, forcing a reconsideration of organizational structure, leading to the emergence of what was termed the “all-media strategy,” which remains the dominant paradigm. Most agencies had relied on specialists in a strict division of labor such that a client’s advertising might be divided up between three or four different departments. The all-media approach rejected this diffusion of responsibility, placing a single person or team in charge of a client’s overall needs. By eliminating specialists and fostering cooperation between divisions, agencies could streamline personnel, coordinate functions, improve efficiency and thereby reduce overhead.

Advertising agencies had an agenda distinct from that of their clients. Although publicly they represented the clients’ interests, many Madison Avenue executives also promoted network control of programming in the trade press. Because of their concerns over the increasing costs and complexities of program production, and their frustration with mediating disputes between advertisers and networks, many hoped television would not continue the radio model of sponsor ownership of time slots. Concerned that the expense of television programming far outstripped that of radio production, agency executives sought ways to develop television as a mass advertising medium while also seeking to avoid draining agency revenues with television program costs. In this sense, the evolution of the all-media strategy is illustrative of how the

economic pressures brought to bear on agencies during the 1950s changed the way Madison Avenue approached programming, from an advertising vehicle to one (albeit primary) component of a marketing plan.

Today, the advertising agency is primarily responsible for the production of commercial spots as well as the purchasing of air time on behalf of clients. The situation has become murkier in recent years, however, as some large companies (Coca-Cola, for example) have begun producing much of their own advertising in-house, bypassing Madison Avenue. Further, the networks now frequently approach potential advertisers directly rather than going through the client’s agency. In an era when even large shops such as Chiat/Day are acquired by enormous multinational holding companies, the role of the agency is now focused more on using powers of persuasion in many different media than merely in creating a single great advertisement.

ADVOCACY GROUPS

Advocacy groups—also called public interest groups, citizen groups, consumer activist groups, and media reform groups—have existed in the United States since the 1930s as consumer checks on a broadcast industry where decisions quite often have been based not on public interest standards but rather on economic incentives and regulatory mandates. Advocacy groups have carved a niche for themselves in the broadcast industry’s policy-making apparatus by first defining key public interest issues and then by advocating ways by which broadcasters may address these issues.

Advocacy group characteristics have varied widely. Some have operated nationally with or without local chapters, and some have operated only locally. Some have remained active for many years, whereas the life span of others

has been brief. Some advocacy groups have been well-financed, often receiving substantial foundation funding, while others have operated with little financial support. Practically all advocacy groups have relied on newsletter subscriptions, video purchases, and lectures as means of raising money. Finally, some advocacy groups have devoted exclusive attention to the broadcast industry, whereas other groups with a more varied menu of concerns have developed subsidiary units to deal with broadcast-related issues.

The total number of advocacy groups, past or present, is difficult to determine, given their ephemeral nature. However, a 1980 publication listed some 60 national and 140 local advocacy groups. Some of the more prominent groups have included the National Association for Better Broadcasting, the

National Citizens Committee for Broadcasting, Action for Children's Television, Accuracy in Media, the National Black Media Coalition, and the Coalition for Better Television. Besides these, the Office of Communication of the United Church of Christ has been a particularly effective advocacy group as have the Media Task Force of the National Organization for Women and the National Parent Teachers Association. Assisting these groups in legal, regulatory, and legislative matters have been pro bono public interest law firms such as the Citizens Communication Center.

Early advocacy groups such as the Radio Council on Children's Programming and the Women's National Radio Committee, both formed in the 1930s, were concerned with program content. Group members monitored radio programs, reported their opinions on acceptable and unacceptable content in newsletters, and gave awards to radio stations and networks airing exceptional programs. That practice and mode of consumer/broadcaster interaction continued until the 1960s when the broadcast industry became caught-up in a sweeping consumers' movement. During the latter part of the 1960s, advocacy groups, led most effectively by the United Church of Christ, began challenging television station license renewals through a legal instrument called a "petition to deny." Such petitions were aimed at denying license renewal for television stations whose programming or employment practices were considered discriminatory. Advocacy groups also were successful in forcing broadcasters to accede to programming and minority employment demands contained in "citizen agreements." When such unprecedented public access into the regulatory and station decision-making process won approval of both the federal courts and the Federal Communications Commission (FCC), advocacy groups blossomed.

The most common targets of advocacy groups during the 1970s continued to be minority programming and employment practices. However, violent program content, children's programming, and general public access to the airwaves also took on significance. Advocacy group tactics during this period included the petitions to deny and citizens agreements noted above as well as participation in FCC rule making and congressional hearings, actual or threatened program sponsor boycotts, and publicity. Advocacy group achievements during the 1970s usually came in small doses, but major successes included the improvement in broadcast station employment opportunities for women and minorities, greater public participation in the broadcast regulatory process, improvement in children's programming, and the banishment of cigarette advertising from the airwaves.

The nature of advocacy groups began to change during the 1980s. A more conservative political agenda derailed the consumers' movement that had bolstered the more liberal-minded advocacy groups of the 1970s. Moreover, public interest law firms and foundations that had funded many of the more prominent advocacy groups during the 1970s began either disappearing or turning their attention elsewhere. Changes in the broadcast industry itself—

deregulation, the rise of cable television, and changing station/network ownership patterns—also reversed many of the early advocacy group achievements and left the leadership as well as membership of many of the groups in disarray.

Advocacy groups did not disappear; rather their issue emphasis took a decidedly conservative turn. Groups such as Accuracy in Media and the Coalition for Better Television gained momentum in the 1980s with a large constituency, substantial funding, and a focus on ridding the airwaves of programs that either were biased in news reporting or contained an excess of sex and violence. Extensive mailing lists also helped these groups to quickly galvanize public support for their causes.

Advocacy groups promoting a liberal agenda and with sights set on molding public opinion on a more tightly focused set of special interests than in the past also began appearing in the 1990s. These interests included gun control, AIDS awareness and prevention, abortion rights, world hunger, and the environment. Led by Amnesty International, the Environmental Media Association, and Center for Population Options, these advocacy groups succeeded to some extent by convincing a number of television network producers to insert messages in prime-time entertainment programs that addressed the advocacy groups' concerns.

The role of advocacy groups through the years has engendered a mixture of praise and criticism. While the objectives, methods and zealotry of some groups have met with scorn, the efforts of others have been viewed as beneficial for, at the very least, making the broadcast industry sensitive to public needs and concerns.

AILES, ROGER

U.S. Media Consultant/Producer/Executive

Roger Eugene Ailes is one of television's most versatile, outspoken, and successful producers and consultants. He has been described as "the amusingly ferocious Republican media genius" and a "pit-bull Republican media strategist turned television tycoon." He has had a variety of careers, including producer of television shows, Shakespearean plays, and Off-Broadway, and president of the cable television channels CNBC and America's Talking.

Ailes' career in television began in Cleveland, Ohio, where he was a producer and director for KYW-TV, for a then-locally produced talk-variety show, *The Mike Douglas Show*. He later became executive producer for *The Mike Douglas Show*, which syndicated nationally. He received two Emmy Awards for *The Mike Douglas Show* (1967, 1968). It was in this position, in 1967, that he had a spirited discussion about television in politics with one of the show's guests, Richard Nixon, who took the view that television was a gimmick. Later, Nixon called on Ailes to serve as his executive producer of TV. Nixon's election victory was only Ailes' first venture into presidential television.

Ailes founded Ailes Communications, Inc., in New York in 1969, and consulted for various businesses and politicians, including WCBS-TV in New York. He also tried his hand in theater production with the Broadway musical *Mother Earth* (1972) and the off-Broadway hit play *Hot-L Baltimore* (1973-76), for which Ailes received 4 Obie Awards. He was executive producer for a television special *The Last Frontier* in 1974. He produced and directed a television special, *Fellini: Wizards, Clowns and Honest Liars*, for which he received an Emmy Award nomination in 1977.

Ailes carried out political consulting for many candidates during the 1970s and 1980s, but returned to presidential campaigning as a consultant to Ronald Reagan in 1984. He is widely credited with having coached Ronald Reagan to victory in the second presidential debate with Walter Mondale after Reagan had disappointed his partisans with a lackluster effort in the first debate. In 1984, Ailes won an Emmy Award as executive producer and director of a television special, *Television and the Presidency*. In 1988, Ailes wrote a book with Jon Kraushar, *You Are the Message: Secrets*

of the Master Communicators, in which he discusses some of his philosophies and strategies for successful performance in the public media eye.

Ailes also won acclaim for his work in the 1988 presidential election, in which he helped guide George Bush to a come-from-behind victory over Michael Dukakis. He did not work on the losing 1992 Bush campaign against Bill Clinton. In 1991, Ailes convinced a syndicator to bring Rush Limbaugh from radio to television and became executive producer of the late-night show. He announced his withdrawal from political consulting in 1992.

In 1993, Ailes became president of NBC's cable channel CNBC and began planning another NBC cable channel, America's Talking. The new channel debuted on 4 July 1994. Ailes also hosts his own nightly show, *Straight Forward*. Since Ailes took over at CNBC, ratings have increased 50% and profits have tripled.

THE ALCOA HOUR

U.S. Anthology Drama

The *Alcoa Hour* was a 60-minute live anthology drama which replaced *The Philco Television Playhouse* and began alternating broadcasts with *The Goodyear Theatre* in the fall of 1955. (For a few months *Philco*, *Alcoa*, and *Goodyear* shared a three-way alternation of the Sunday evening 9:00 to 10:00 P.M. slot on NBC. *Philco* withdrew sponsorship in early 1956.) The program was sponsored by the Aluminum Corporation of America and was produced by Herbert Brodtkin, formerly of ABC-TV. Among the program's directors, many of whom went on to distinguished careers in television and film, were Dan Petrie, Robert Mulligan, Sidney Lumet, and Ralph Nelson. Coming near the end of the "golden age" of live television anthology drama, *The Alcoa Hour* had a relatively short run of just under two years, but this was despite generally high quality programs and mostly favorable reviews.

The first broadcast of *The Alcoa Hour* was on 16 October 1955. An original teleplay by Joseph Schull entitled "The Black Wings," the production starred Wendell Corey and Ann Todd and was directed by Norman Felton. Both *Variety*

and *The New York Times* praised the high quality of acting and the attractive sets but criticized the script. *Times* reviewer J.P. Shanley went so far as to say that the story was "melodramatic hogwash." Schull's narrative dealt with a German physician (Corey) who had been a Luftwaffe pilot during World War II. He secretly endows a clinic for the treatment of victims of a bombing raid he led over England, then falls in love with an English girl (Todd) who was crippled by the bombing. In spite of the script's weaknesses, the program was deemed a success because of the excellent performances and fine directing, and critics felt that *The Alcoa Hour* would become a worthy successor to the famous *Philco Television Playhouse*.

During its two years, *The Alcoa Hour* broadcast a wide variety of dramas, including the sixth consecutive Christmas season airing of Gian Carlo Menotti's television opera *Amahl and the Night Visitors* on 25 December 1955. During the Christmas season of 1956, *The Alcoa Hour* broadcast a musical version of Charles Dickens' *A Christmas Carol* entitled "The Stingiest Man in Town." The adaptation featured

Basil Rathbone in a singing role, crooner Vic Damone, songwriter Johnny Desmond, opera singer Patrice Munsel, and the Four Lads, a popular singing group.

Typical programs were "Thunder in Washington" (27 November 1955), and "Mrs. Gilling and the Skyscraper" (9 June 1957). "Thunder in Washington" was an original script by David Davidson, directed by Robert Mulligan. The broadcast featured Melvyn Douglas and Ed Begley in a story about a competent business executive, Charles Turner, who answers a call from the president of the United States to introduce efficiency into numerous sprawling governmental agencies. Turner's efforts at reform offend almost everyone and he finds himself defending his actions before a House Appropriations Committee. The program ends with Turner vowing to continue his crusade to clean up Washington and the committee chair promising to stop him. *New York Times* reviewer Jack Gould praised the broadcast by saying that it was "a play of uncommon timeliness, power, and controversy. With one more scene, it could have been a genuine *tour de force* of contemporary political drama." Actor Luis van Rooten, hired to play the part of the president of the United States, spent hours studying the voice and mannerisms of then President Dwight D. Eisenhower to make sure his performance was authentic, even though the president was to be seen only in a head and shoulders shot from behind.

"Mrs. Gilling and the Skyscraper" was a very different sort of play. An original script by Sumner Locke Elliot, it was a vehicle for distinguished actress Helen Hayes who played the part of an elderly lady who tries to save her apartment from the owners of her building who intend to demolish it to make way for a skyscraper. The script was noted for how it dealt with the generational clashes between the old lady and new tenants in her building. Confrontations between the old and new were becoming increasingly common during the 1950s as large stretches of turn-of-the-century dwellings were leveled to make way for modern buildings. The plight of Mrs. Gillings was a familiar one for many older Americans and their families.

Perhaps the most noteworthy *Alcoa Hour* was the broadcast of 19 February 1956 entitled "Tragedy in a Temporary Town." The script by Reginald Rose told the story of a vigilante group formed after a girl is assaulted at a construction camp. According to Jack Gould, "Mr. Rose's final scene—the mob descending on an innocent Puerto Rican victim—did make the viewer's flesh creep. And the raw vigor of the hero's denunciation of the mob—the man's language had uncommon pungency—was extraordinarily vivid video drama." Directed by Sidney Lumet and starring Lloyd Bridges as the man who opposed the mob, "Tragedy in a Temporary Town" won a Robert E. Sherwood Television Award and a citation from the Anti Defamation League of B'nai B'rith as the best dramatic program of the year dealing with intergroup relations.

The 1956–57 season saw the networks shifting away from live broadcasts and turning more to the use of film.

Faced with this change and competition from a new crop of popular programs, *The Alcoa Hour* went off the air after its 22 September 1957 broadcast of "Night" starring Franchot Tone, Jason Robards, Jr., and E. G. Marshall. As of 30 September 1957, both *The Alcoa Hour* and its companion program *The Goodyear Theatre* became thirty-minute filmed programs and were moved to Monday nights at 9:30 P.M. Other Alcoa shows followed in the late 1950s and early 1960s: *Alcoa Premiere*, *Alcoa Presents*, and *Alcoa Theatre*.

ALDA, ALAN

U.S. Actor

Alan Alda is a television and film star best known for his work in the long-running CBS television series *M*A*S*H*. He has been well honored for that role, having garnered twenty-eight Emmy nominations, two Writers Guild Awards, three Directors Guild Awards, six Golden Globes from the Hollywood Foreign Press Association, and seven People's Choice Awards. Alda is the only person to have been honored by the Television Academy as top performer, writer and director.

The son of actor Robert Alda, he traveled with his father on the vaudeville circuit, and began performing in summer stock theater as a teenager. During his junior year at Fordham University, Alda studied in Europe where he performed on the stage in Rome and on television in Amsterdam with his father. After college he acted at the Cleveland Playhouse on a Ford Foundation grant. Upon returning to New York, Alda worked on Broadway, off-Broadway and on television. He later acquired improvisational training with Second City and Compass in Hyannis Port, and that background in political and social satire led to his work as a regular on television's *That Was the Week That Was*.

Alda found fame on *M*A*S*H*, where his depiction of sensitive surgeon Hawkeye Pierce won him five Emmy Awards. Set in the Korean War of the 1950s, and broadcast in part during the Vietnam War in the 1970s, *M*A*S*H* won acclaim for its broad and irreverent humor, its ability to effectively combine drama with comedy, and its overall liberal humanist stance. In adapting the show from the 1970 Robert Altman film, producer and director Gene Reynolds and writer Larry Gelbart used distinctive telefilm aesthetics and a complex narrative structure that set the show apart from the proscenium style series that dominated television in the 1960s. The show's influence was broad—traceable perhaps most directly in the large number of multi-character “dramedies” (such as *Hill Street Blues* and *St. Elsewhere*) in the 1980s whose narratives also centered around a tightly knit workplace group who became like family to one another.

Alda, who also wrote and directed many episodes of the show, has become indelibly associated with *M*A*S*H*, which continues to be watched as one of the most successful comedies in syndication. His “sensitive male” persona, derived in large part from his characterization on *M*A*S*H*, has lingered into the 1990s and continues to be sustained by public awareness of his efforts on behalf of women's rights.

An ardent feminist, Alda campaigned extensively for ten years for the passage of the Equal Rights Amendment, and in 1976, was appointed by President Ford to serve on the National Commission for the Observance of International Women's Year. Alda's status as a feminist led a writer in *The Boston Globe* to dub him “the quintessential Honorary Woman: a feminist icon.” Despite such associations, Alda's most acclaimed recent performance was his portrayal of a conniving producer in the 1989 Woody Allen film *Crimes and Misdemeanors*. Alda won the D.W. Griffith Award, the New York Film Critics Award, and was nominated for a BAFTA award as Best Supporting Actor for his work in the film. Perhaps Alda seeks to alter, or at least add other dimensions to his “character type” following this success. He has more recently continued this exploration of a “darker side” with his portrayal of a driven corporate executive in the HBO original production, *White Mile*. The more familiar, inquisitive, humorous Alda is currently host of the series

ALL CHANNEL LEGISLATION

U.S. Communications Policy Legislation

In July 1962 President John F. Kennedy signed into law legislation that required all television receiving sets shipped across state lines be able to adequately receive all UHF as well as VHF frequencies. The goal of this law was to put UHF channels (channels 14 through 83) on a more equal technological footing with the VHF channels (2 through 13). Until this time, virtually all sets manufactured in or imported into the United States were equipped to receive the VHF channels only. Viewers interested in watching UHF channels were required to purchase a cumbersome

UHF converter and attach it to their sets. These converters, which resembled metal bow ties and sat atop the receiver, did not allow viewers to “click in” the desired channel. The tuning dial operated fluidly, like a radio tuning knob, and viewers had to literally “tune in” the desired channel. With the commercial networks occupying the VHF channels and viewers disadvantaged in receiving the UHF frequencies, the UHF channels (primarily independent commercial and educational or non-commercial stations) were in danger of extinction. The immediate goal, then, of all-channel legisla-

tion was the preservation of these channels. The longer-term goal was the encouragement of diversity (or the creation of "a multitude of tongues") which was a guiding force behind much Federal Communications Commission (FCC) rule-making at the time.

Therefore, on 12 September 1962, the commission proposed that any set manufactured in or imported into the United States after 30 April 1964 be all-channel equipped. The proposal became an official FCC order on 21 Novem-

ber 1962. Later amendments to FCC rules and regulations specified performance standards for the UHF circuit in the new receivers relating to sound and picture quality.

ALL IN THE FAMILY

U.S. Situation Comedy

For five years, *All in the Family*, which aired on CBS from 1971 to 1983 (in its last four seasons under the title *Archie Bunker's Place*), was the top-rated show on American television, and the winner of four consecutive Emmy Awards as Outstanding Comedy Series. *All in the Family* was not only one of the most successful sitcoms in history, it was also one of the most important and influential series ever to air, for it ushered in a new era in American television characterized by programs that did not shy away from addressing controversial or socially relevant subject matters.

All in the Family's storylines centered on the domestic concerns of the Bunker household in Queens, New York. Family patriarch and breadwinner Archie Bunker (Carroll O'Connor) was a bigoted loading dock worker disturbed by the changes occurring in the American society he once knew. To Archie, gains by the "Spades," "Spics," or "Hebes" of America (as he referred to Blacks, Hispanics, and Jews, respectively), came at his expense and that of other lower-middle-class whites. Countering Archie's harsh demeanor was his sweet but flighty "dingbat" wife, Edith. Played by Jean Stapleton, Edith usually endured Archie's tirades in a manner meant to avoid confrontation. But that was hardly the case with Archie's live-in son-in-law Mike Stivic (Rob Reiner), a liberal college student who was married to the Bunkers' daughter, Gloria (Sally Struthers). The confrontations between Archie and Mike ("Meat-head") served as the basis for much of *All in the Family's* comedy. As surely as Archie could be counted upon to be politically conservative and socially misguided, Mike was equally liberal and sensitive to the concerns of minorities and the oppressed, and, because both characters were extremely vocal in their viewpoints, heated conflict between the two was assured.

Producers Norman Lear and Alan (Bud) Yorkin brought *All in the Family* into being by obtaining the U.S. rights to the hit British comedy series, *Till Death Us Do Part*, which aired on the BBC in the mid-1960s and featured the character of bigoted dock worker Alf Garnett. Lear developed two pilots based on the concept for ABC, with O'Connor (Mickey Rooney had been Lear's first choice to play Archie) and Stapleton in the lead roles. But

when ABC turned down the series, then known as *Those Were the Days*, it appeared that it would never get off the ground. Luckily for Lear and Yorkin, CBS President Robert D. Wood was in the market for new shows that would appeal to the more affluent, urban audience the network's entrenched lineup of top-rated but aging series failed to attract. As a result, CBS jettisoned highly rated programs like *The Red Skelton Show* and *Green Acres* in an effort to improve the demographic profile of its audiences, and *All in the Family* seemed a perfect, though risky, vehicle to put in their place. CBS therefore made a 13-episode commitment to air the series beginning in January 1971, as a midseason replacement.

The network had good reason to be wary of reaction to its new show. *All in the Family* seemed to revel in breaking prime time's previously unbreakable taboos. Archie's frequent diatribes laced with degrading racial and ethnic epithets, Mike and Gloria's obviously active sex life, the sounds of Archie's belching and of flushing toilets—all broke with sitcom convention. They also made people sit up and take notice of the new CBS series. In fact, its unconventionality caused *All in the Family's* pilot episode to consistently rate below average in research tests conducted by both ABC and CBS. Nevertheless, CBS went ahead and debuted the show on 12 January 1971, though with relatively little fanfare or network promotion.

Viewer response to *All in the Family* was at first tepid. CBS' switchboards were prepared for an avalanche of calls in response to the show's initial airing, but this onslaught never materialized, in part because of the poor 15% audience share garnered by the first episode, which put it a distant third in its time period behind movies on NBC and ABC. But while the show continued to languish in the Nielsen ratings in its first few months, TV critics began to take notice. Despite the negative reviews of a small number of critics, such as *Life's* John Leonard ("a wretched program"), the critical response was generally positive. Combined with strong word-of-mouth among viewers these evaluations helped the show's audience to slowly grow. The May 1971 Emmy Awards helped to cap *All in the Family's* climb. The midseason replacement was featured

All in the Family

in the opening skit of the Emmy telecast, and earned awards in three categories, including Outstanding Comedy Series. *All in the Family* shortly thereafter became the top-rated show in prime time, and held onto that position for each of the following five seasons.

The program was able to keep an especially sharp edge over its first half dozen years thanks to the evolving character development of the series' primary cast members and the infusion of strong supporting characters. Both the Bunkers' African American next-door neighbors, the Jeffersons, and Edith's visiting cousin, Maude Findlay, eventually went on to star in successful spin-off series of their own. *All in the Family* also benefited from an occasional one-shot guest appearance, the most memorable of which featured entertainer Sammy Davis, Jr.

All in the Family's impact went beyond the world of television. The show became the focus of a heated national debate on whether the use of comedy was an appropriate means by which to combat prejudice and social inequality. In addition, the character of Archie Bunker became nothing

short of an American icon. While *Till Death Us Do Part*'s Alf Garnett was generally unlikable, producer Lear chose to soften the character for American TV, patterning him in many ways after his own father. As a result, Carroll O'Connor's characterization of Archie contained notable sympathetic qualities, allowing many viewers to see Archie in a favorable light despite his obvious foibles.

By the late 1970s, however, it was becoming clear that the show had lost much of its earlier spark. Major cast changes occurred in 1978, when Struthers and Reiner left the series, and again in 1980, when Stapleton departed. (The fact that this contractual arrangement was written into the show as Edith's death allowed Lear and company to show once again what had made this series truly memorable.) Archie quit his job in 1977 to buy and run a neighborhood tavern, and the series was retitled *Archie Bunker's Place* in 1979 to reflect the changed nature of the program. By that point, however, though still highly rated, the show no longer stood out as unique, and had become what seemed to many a rather conventional sitcom.

All in the Family's lasting impact on American television is difficult to overestimate. It helped to usher in a new generation of comedic programs that abandoned the light domestic plotlines of television's early years in favor of topical themes with important social significance. In this sense, its influence on prime time programming continues to be felt decades later.

—David Gunzerath

ALLEN, DEBBIE

U.S. Actor/Director/Producer/Choreographer

Debbie Allen began her show business career on Broadway in the 1970s. Her debut in the chorus of *Purlie* and her performance in *A Raisin in the Sun* were noted by stage critics, and in a 1979 production of *West Side Story* her performance as Anita earned her a Tony Award nomination and a Drama Desk Award. Allen later returned to Broadway as a star, and garnered her second Tony nomination, with a 1986–87 performance in *Sweet Charity*. In 1988, she choreographed *Carrie*, a newly composed American musical, with the Royal Shakespeare Company.

Allen's stage presence and choreography quickly moved her from the Broadway stage to the larger venue of television. Through the 1970s she made guest appearances on popular programs such as *Good Times*, *The Love Boat* and *The Jim Stafford Show*. Her roles in the miniseries *Roots: The Next Generation* and the special *Ben Vereen—His Roots* allowed her to work with some of the most prominent African-American performers in show business and to demonstrate her dramatic and comedic acting range. She also appeared in the short-lived 1977 NBC series *3 Girls 3*. Her latest television role was in the NBC situation comedy, *In the House*. In this series, which first aired in April 1995, Allen played a newly divorced mother of two who shares her house with a former football star, played by rap artist L.L. Cool J.

In the early 1980s, a portrayal of a dance instructor, Lydia Grant, on the hit series *Fame* brought Debbie Allen to international prominence. Although the NBC show was canceled after one season, the program went on to first-run syndication for four more years. Its popularity in Britain prompted a special cast tour there and spurred a "Fame-mania" fan phenomena.

Allen's success as a dancer and actor allowed her to move behind the camera to direct and produce. While still a cast member of *Fame* she became the first African-American woman hired by a television network as a director in prime time. In 1989, after directing episodes of *Fame*, she co-wrote, produced, directed, choreographed and starred in *The Debbie Allen Special* for ABC. She received two Emmy nominations, for direction and choreography, of this variety show.

In 1988, Allen solidified her reputation as a television director and producer by turning a flawed television series, *A Different World*, into a long-running popular program. Under her leadership the program addressed political issues such as apartheid, date rape, the war in the Persian Gulf, economic discrimination, and the 1992 Los Angeles riot. The highest rated episode focused on sexual maturity and AIDS and guest starred Whoopi Goldberg, who was nominated for an Emmy award. Allen was awarded the first Responsibility in Television award from the Los Angeles Film Teachers Association for consistently representing important social issues on *A Different World*.

In 1989, Allen made her debut as a director of made-for-television movies with a remake of the 1960 film,

Pollyanna. The telefilm, titled *Polly*, starred two players from *The Cosby Show*, Phylicia Rashad and Keshia Knight Pullman. Set in 1955, *Polly* is a musical tale of an orphan who brings happiness to a tyrannical aunt and a small Alabama town. The film was produced by Disney and NBC. Television critics hailed the display of Allen's keen sense of innovative camera work, stemming from her ability to choreograph. The film is also notable for its all-black cast and for succeeding in a genre, the musical film, rarely popular on television. Allen followed *Polly* with a sequel which aired in November 1990.

In the 1990–91 season, Allen directed the pilot and debut episode of *Fresh Prince of Bel-Air*, a series which had high ratings on NBC. That same season, she directed a highly rated episode of *Quantum Leap* in which she co-starred. In October 1991, Allen received her star on the Hollywood Walk of Fame for her achievements in television.

In 1992, Allen directed *Stompin' at the Savoy* for the CBS network. This program included a cast of prominent African-American performers: Lynn Whitfield, Vanessa Williams, Jasmine Guy, Vanessa Bell Calloway and Mario Van Peebles.

Complementing Allen's versatility as a television actor is a repertoire of critically acclaimed film roles. In 1986 she played Richard Pryor's feisty wife in his semi-autobiograph-

Debbie Allen

ical film *Jo Jo Dancer, Your Life Is Calling*, and she co-starred with Howard E. Rollins and James Cagney in Milos Foreman's *Ragtime* in 1981. Allen's debut as a feature film director will be the upcoming film *Out of Sync* starring L.L. Cool J, Victoria Dillard, and Yaphet Kotto.

Allen is one of the few African-American women working as a director and producer in television and film. Her success in TV and film production has not deterred her from her love of dance and she continues to dazzle television viewers with her choreography. In 1982, she choreographed the dance numbers for the Academy Awards and for the past consecutive five years, her unique style of choreography has been featured on the worldwide broadcast of the award ceremony. For over twenty years, Allen's contributions to television, on the three major networks and in syndicated programming, have highlighted the maturity of a performer and artistic producer with an impressive spectrum of talents in the performing arts.

—Marla L. Shelton

DEBBIE ALLEN. Born in Houston, Texas, U.S.A., 16 January 1950. Educated at Howard University, Washington, D.C., BFA (with honors) 1971; studied with Ballet Nacional and Ballet Folklorico (Mexico); Houston Ballet Foundation, Houston, Texas; New York School of Ballet. Married: 1) Wim Wilford (divorced); 2) Norm Nixon; children: Vivian Nicole and Norm, Jr. Began career as dancer with George Faison Universal Dance Experience; AMAS Repertory Theatre; taught dance, Duke Ellington School of Performing Arts; actor in television, from 1973; actor/producer/director/choreographer of various television shows, miniseries, and specials. Recipient: three Emmy Awards; one Golden Globe Award; Ford Foundation Grant; Black Filmmakers Hall of Fame Clarence Muse Youth Award, 1978; Drama Desk Award, 1979; Out Critics Circle Award, 1980.

ALLEN, FRED

U.S. Comedian

Fred Allen hated television. Allen was a radio comedian for nearly two decades who, as early as 1936, had a weekly radio audience of about 20 million. When he visited *The Jack Benny Show* to continue their long running comedy feud, they had the largest audience in the history of radio, only to be later outdone by President

Franklin Roosevelt during a *Fireside Chat*. The writer Herman Wouk said that Allen was the best comic writer in radio. His humor was literate, urbane, intelligent, and contemporary. Allen came to radio from vaudeville where he performed as a juggler. He was primarily self-educated and was extraordinarily well read.

Allen began his network radio career in 1932 after working vaudeville and Broadway with such comedy icons as Al Jolson, Ed Wynn, George Jessel, and Jack Benny. This was a time when the United States was in a deep economic depression, and radio in its infancy. In his autobiography *Treadmill to Oblivion*, Allen wrote that he thought radio should provide complete stories, series of episodes, and comedy situations instead of monotonous unrelated jokes then popular on vaudeville. With this idea in hand, he began his first radio program on NBC called *The Linit Bath Club Review* (named after the sponsor).

Allen's world of radio was highly competitive and commercial, just as TV would be many years later. He wrote most of the material for his weekly shows himself, usually working 12-hour days, 6 days a week. Most comedians, like Bob Hope, had an office filled with writers, but Allen used only a few assistants in writing his comedy. And some of these assistants went on to have successful careers in literature and comedy, such as Herman Wouk, author of *The Caine Mutiny* and *The Winds of War*, and Nat Hiken, who created Phil Silver's *The Phil Silvers Show* for TV. Allen's program was imbued with literate, verbal slapstick. He had ethnic comedy routines in *Allen's Alley*, appearances by celebrities such as Alfred Hitchcock, musical numbers with talent from the likes of Richard Rodgers and Oscar Hammerstein, and social commentaries on every conceivable subject, especially criticisms of the advertising and radio industry. His radio producer, Sylvester "Pat" Weaver (later to become head of NBC-TV programming), observed that Allen's humor was so popular that three out of four homes in the country were listening to Allen at the zenith of his popularity. In writing his comedy scripts, Allen compiled a personal library of over 4,000 books of humor, and read 9 newspapers (plus magazines) daily. According to the scholar Alan Havig, Allen's style of comedy had more in common with literary giants like Robert Benchley and James Thurber than with media comedians like Jack Benny and Bob Hope.

In the 1946–47 season Allen was ranked the number one show on network radio. World War II was over, Americans were beginning a new era of consumerism. And a very few consumers had recently purchased a new entertainment device called television. When Fred Allen was asked what he thought of television, he said he didn't like furniture that talked. He also said television was called a medium because "nothing on it is ever well done." Allen dismissed TV as permitting "people who haven't anything to do to watch people who can't do anything." But, after nearly two decades on radio, he fell in the ratings from number 1 to number 38 in just a few months. Such a sudden loss of audience was due to a new ABC radio give-away show called *Name That Tune*, starring Bert Parks, as well as a general decline in listeners for all of radio. Listeners of radio were rapidly becoming viewers of TV. And where the audience went, so went the advertisers. In a few short years the bottom fell out of radio. Fred Allen quickly, but not quietly, left radio in 1949.

Fred Allen

Allen was first to leave radio, but Bob Hope, Jack Benny, George Burns and Gracie Allen soon followed. They all went to star in their own TV shows. All but Fred Allen. He made a few attempts at TV, but nothing more. He first appeared on the *Colgate Comedy Theater*, where he attempted to bring to TV his *Allen's Alley* from radio. For example, the characters of the Alley were performed with puppets. Such attempts seldom successfully made the transition to the new medium. On the quiz show *Judge for Yourself* (1953–54), he was supposed to carry on witty ad-libbed conversations with guests. But as Havig states, Allen's "ad libbing was lost in the confusion of a half hour filled with too many people and too much activity". In short, Allen's humor needed more time and more language than TV allowed. He then was on a short-lived *Fred Allen's Sketchbook* (1954), and finally became a panelist on *What's My Line?* in 1955 until his death in 1956.

Fred Allen's contributions to TV has taken two forms. First, he became one of the true critics of TV. He has remained, many decades after his death, the intellectual conscience of TV. His barbs at network TV censorship still hit at the heart of contemporary media (Allen: "Heck...is a place invented by [NBC]. NBC does not recognize hell or [CBS]"). Second, his comedy style has become part of the institution of TV comedy. His *Allen's Alley* created the character Titus Moody who turned up on TV as the Pepperidge Farm cookie man. His Senator Claghorn, also of the Alley, was transfigured into Warner Brothers TV cartoon

character Foghorn Leghorn the rooster. And later, the “Senator” appeared on the Kentucky Fried Chicken TV commercial. A variety of TV comedians have done direct take-offs of Allen’s performances. For example, Red Skelton’s “Gussler’s Gin” routine and Johnny Carson’s “Mighty Carson Art Players” can be traced back to Fred Allen. And Allen’s “People You Didn’t Expect to Meet” is an idea that has worked for David Letterman. And of course, radio’s Garrison Keeler’s “Lake Wobegon” is a throw-back to Allen’s style of comedy.

Allen wrote in *Treadmill to Oblivion*, “Ability, merit and talent were not requirements of writers and actors working in the industry. Audiences had to be attracted, for advertising purposes, at any cost and by any artifice. Standards were gradually lowered. A medium that demands entertainment eighteen hours a day, seven days every week, has to exhaust the conscientious craftsman and performer.” He was talking about radio, but his remarks could apply just as well to television many decades later.

—Clayland H. Waite

FRED ALLEN (Fred St. James, Fred James, Freddie James). Born John Florence Sullivan in Cambridge, Massachusetts, U.S.A., 31 May 1894. Married: Portland Hoffa, 1928. Served in Army, World War I. Began performing on stage as an amateur teenage juggler, eventually adding patter and turning pro with the billing of the “World’s Worst Juggler”; for ten years as humorist toured the vaudeville circuit, including 14 months in Australia, Tasmania, New Zealand and Honolulu, 1914–15; dropped juggling, settled on the professional name of “Fred Allen,” and moved up from

vaudeville to Broadway revues, early 1920s; worked on radio, notably *Allen’s Alley* and *Texaco Star Theatre*, from 1932; a panel regular on the television quiz show *What’s My Line?*, 1955–56. Died in New York City, 17 March 1956.

ALLEN, GRACIE

U.S. Comedienne

Gracie Allen transferred her popular fictional persona from vaudeville, film, and radio, to American television in the 1950s. Allen had performed with her husband and partner, George Burns, for nearly 30 years when the pair debuted in *The George Burns and Gracie Allen Show* on CBS in October 1950. They had enjoyed particular success in radio, popularizing their audio program with a series of stunts that involved Allen in fictitious man hunts, art exhibits, and even a candidacy for the presidency of the United States. The transfer of their program to the small screen both extended their career (the couple were becoming too expensive for radio) and helped to legitimate the new medium.

The Burns and Allen act, a classic vaudeville routine involving a “Dumb Dora” and a “straight man,” proved infinitely malleable. Initially a flirtation act, by the time it was transferred to television, it was housed in a standard situation-comedy frame: Burns and Allen played themselves, a celebrity couple, enduring various matrimonial mix-ups.

The impetus to comedy within the program was the character portrayed by Allen. Her humor was almost entirely linguistic. Often an entire episode hinged on her confusion of antecedents in a sentence, as when the couple’s announcer (who also took part in the program’s narrative) informed her that Burns had worked with another performer until he (meaning the other performer) had married, moved to San Diego, and had two sons—at which point she concluded that her husband was a bigamist.

The onscreen Gracie’s reinterpretations of the television world proved extremely disruptive to people and events around her, although the disruptions were generally playful rather than serious, and were quickly settled (usually by her husband, the straight man) at the end of each episode. Allen’s character thus challenged the rational order of things without ever actually threatening it.

The character’s success on the program, and popularity with the viewing public, depended in large part on her total unawareness of the comic effects of her “zaniness.” The

onscreen Gracie was a sweet soul who on the surface embodied many of the feminine norms of the day—domesticity, reliance on her man, gentleness—even as she took symbolic pot shots at the gender order by subverting her husband’s logical, masculine world.

The program, and Allen’s character, were always framed by audience knowledge about the “real” George Burns and Gracie Allen. Audience members were aware, partly from well orchestrated publicity for the show and partly from observation, that only a talented and intelligent actress could manage to seem as dumb as Allen did onscreen.

The offscreen Burns and Allen were sometimes also invoked explicitly within episodes, when characters reminded the fictional George that he was financially dependent upon his co-star/spouse, who had always been the greater star of the two.

The strongest link between on- and offscreen Burns and Allen, however, was the marital bond both pairs shared—and the affection they displayed as actors and as people. Burns’ first autobiography, *I Love Her, That’s Why!*, placed the couple’s relationship at the center of his life, reflecting its centrality to the program in which the two starred.

Burns and Allen went off the air upon Allen’s retirement in 1958. Burns tried for a number of years to sustain programs and acts of his own, but it took him almost a decade to emerge as a performer in his own right. Much of his stage act for the rest of his life featured numerous jokes and stories about his wife, perpetuating the memory of her comedic energy even for those who had never seen her perform.

—Tinky “Dakota” Weisblat

GRACIE ALLEN. Born in San Francisco, California, U.S.A., 26 July 1895. Attended Star of the Sea Convent School. Married: George Burns, 1926; children: Sandra Jean and Ronald John. Joined sister Bessie in vaudeville act, Chicago, Illinois, 1909; played vaudeville as “single” act, from 1911; teamed with George Burns, 1922; toured Orpheum vaudeville circuit; toured United States and Europe in the Keith theater circuit, from 1926; played BBC radio for twenty weeks, 1926; first United States radio appearance, with Burns, on *The Rudy Vallee Show*, 1930; premiered as star of *The Adventures of Gracie* on CBS radio, 15 February 1932; starred, with Burns, in *The Burns and Allen Show* on NBC radio, 1945–50; performed in movies, 1930s; starred, with Burns, in *The George Burns and Gracie Allen Show*, CBS television, 1950–58; retired from show business in 1958. Died in Los Angeles, California, 27 August 1964.

ALLEN, STEVE

U.S. Comedian/Host/Composer/Writer

Steve Allen has appropriately been termed television's renaissance man. He has hosted numerous television programs, appeared in several motion pictures, written more than forty books, and composed several thousand songs. He once won a \$1,000 bet that he couldn't compose fifty songs a day for a week.

Allen began his career as a radio announcer in 1942. In 1946 he joined the Mutual Broadcasting System as a comedian and two years later signed with CBS as a late-night disc jockey on KNX in Hollywood. He first gained national attention when his program was booked as a thirteen-week substitute for *Our Miss Brooks* during the summer of 1950. This led to his first television program, *The Steve Allen Show* which debuted on Christmas Day 1950 on CBS. The show was later moved to Thursday nights where it alternated with the popular *Amos 'n' Andy*.

In 1954 Allen began hosting a daily late-night show on NBC, *The Tonight Show*. During the next three years, he introduced many television innovations continued by his successors. Most of these involved his audience. Using a hand microphone, he went into the audience to talk with individuals; he answered questions submitted by the audience; members of the audience would attempt to "stump the band" by requesting songs the band couldn't play. Allen involved his announcer Gene Rayburn in nightly chit chat and he spoke with the band leaders, Skitch Henderson and Bobby Byrne. These techniques epitomized Allen's belief that "people will laugh at things that happen before their eyes much more readily than they will at incidents they're merely told about."

In 1956 Allen became a part-time host on *Tonight* because he was appearing in a new version of *The Steve Allen Show*. Still on NBC, he was now programmed on Sunday nights—opposite *The Ed Sullivan Show* on CBS. Thus began one of the most famous ratings wars in television history. Steve Allen and Ed Sullivan were perhaps as distinct from one another as two men could be. Allen was a witty, innovative performer, willing to try virtually anything. Sullivan was a stiff master of ceremonies who compelled his guests to conform to rigid standards of decorum. Although Allen occasionally received higher ratings, Sullivan eventually won the war and after the 1960 season NBC moved *The Steve Allen Show* to Mondays. A year later Allen took the show into syndication and continued for three more years. From 1964 to 1967 he hosted the highly successful game show *I've Got a Secret* on CBS.

Steve Allen's most innovative television offering was *Meeting of Minds*. The format was an hour-long dramatized discussion of social issues. Allen would act as the moderator accompanied by his "guests" in this imaginative exercise, historical characters such as Galileo, Attila the Hun, Charles Darwin, Aristotle, Hegel or Dostoevski. The idea for this program came in 1960, following Allen's reading of Mortimer

Adler's *The Syntopicon*. Rejected by the major networks, the series was accepted by the Public Broadcasting Service in 1977 and ran until 1981.

Through his long career as an entertainer Allen also developed a reputation as a social activist. He considered running for Congress as a Democrat from California; he actively opposed capital punishment; he openly supported the controversial comedian Lenny Bruce. He wrote about the plight of migrant farm workers in *The Ground is Our Table* (1966) and what he considered the collapse of ethics in America in *Ripoff* (1979). Allen still occasionally appears on television but spends most of his time operating Meadowlane Music and Rosemeadow Publishing, located in Van Nuys, California.

—Lindsay E. Pack

STEPHEN (VALENTINE PATRICK WILLIAM) ALLEN. Born in New York City, U.S.A., 26 December 1921. Attended Drake University, 1941; Arizona State Teacher's College, 1942. Married: 1) Dorothy Goodman, 1943 (divorced, 1952); children: Stephen, Brian, and David; 2) Jayne Meadows, 1954; child: William Christopher. Worked as radio announcer at stations KOY, Phoenix, 1942; KFAC and KMTR, Los Angeles, 1944; entertainer-comedian, Mutual Network, 1946–47; entertainer-comedian and disc jockey, CBS television, 1948–50; created and hosted *The Tonight Show*, NBC television, 1954–56; created and hosted *Meeting of Minds*, Public Broadcasting Service, 1977–81; continued television guest appearances,

ALLISON, FRAN

U.S. Television Personality

Fran Allison is perhaps best known for playing the warm-hearted human foil to the Kuklapolitan Players, a troupe of puppets familiar to almost every viewer in the early days of U.S. television. Allison appeared with the puppets on the children's program *Kukla, Fran and Ollie*, which aired regularly from 1948 to 1957, and in subsequent reunions in the late 1960s and mid-1970s.

Born in Iowa, Allison began working as a songstress on local Waterloo, Iowa, radio programs and eventually moved

to Chicago in 1937, where she was hired as a staff singer and personality on NBC-Radio. Audiences became familiar with her from numerous radio appearances, first as a singer on such programs as *Smile Parade*, and *Uncle Ezra's Radio Station* (also known as *Station EZRA*), and later on *The Breakfast Club* as the gossipy spinster Aunt Fanny—who loved to dish gossip about such fictitious townfolk as Bert Beerbower, Orphie Hackett and Ott Ort—based on a character she first created for a local Iowa radio program. Allison

appeared on both the radio and television versions of *Don McNeill's The Breakfast Club* for more than 25 years. The Aunt Fanny character was briefly spun off on her own 30-minute radio program in 1939, *Sunday Dinner at Aunt Fanny's*. But it was on *Kukla, Fran and Ollie* that Allison became the "First Lady of Chicago Broadcasting."

While her husband, Archie Levington, was serving in the army, Allison worked on bond-selling tours, during which she met and became good friends with puppeteer Burr Tillstrom. When the time came to choose an appropriate sidekick for his new television series, Tillstrom wanted to work with "a pretty girl, someone who preferably could sing," someone who could improvise along with Tillstrom and with the show's informal structure. According to Tillstrom, when he and Allison met four days later, she was so enthusiastic about the show and working with her friend that she never asked how much the job paid. With only a handshake, they went on the air live for the first time that very afternoon.

Shortly before his death in 1985, Tillstrom tried to capture the nature of the unique relationship that Allison had with his puppets: "She laughed, she sympathized, loved them, sang songs to them. She became their big sister, favorite teacher, babysitter, girlfriend, mother." More than just the "girl who talks to Burr [Tillstrom]'s puppets," Allison treated each character as an individual personality, considered each her friend, and, by expressing genuine warmth and affection for them, made the audience feel the same way. She once remarked that she believed in them so implicitly that it would take a few days to become accustomed to a new version of one of the puppets.

It was through Allison that the *Kuklapolitans* came to life as individual personalities with life histories. Each show was entirely improvised. The only prior planning was a basic storyline. Characters discussed their backgrounds, where they attended school, and their relatives. Allison was the first to mention Ollie's mother Olivia and niece Dolores, and Tillstrom added them to their growing number of *Kuklapolitans*. In addition to prompting the characters to talk about themselves, Allison herself invented some of the characters' histories, such as announcing that Buelah Witch's alma mater was Witch Normal.

Allison's radio and television work continued after the initial run of *Kukla, Fran and Ollie*. In the late-1950s, Allison hosted *The Fran Allison Show*, a panel discussion program on local Chicago television, telecast in color and considered, at that time, "the most ambitious show in Chicago's decade of television." She also continued to appear on television musical specials over the years, including *Many Moons* (1954), *Pinocchio* (with Mickey Rooney in 1957), *Damn Yankees* (1967) and *Miss Pickerell* (1972). Allison was reunited with Burr Tillstrom and the *Kuklapolitans* for the series' return in 1969 on Public Broadcasting and as the hosts of the *CBS Children's Film Festival* on Saturday afternoons from 1971 to 1979. In the 1980s, Allison hosted a local Los Angeles (KHJ-TV) program, *Prime Time*, a show for senior citizens.

Fran Allison

Allison was nominated once for an Emmy Award as "Most Outstanding Kinescope Personality" in 1949, but lost to Milton Berle. In 1988, she was inducted into Miami Children's Hospital's Ambassador David M. Walters International Pediatrics Hall of Fame, which honors men and women of medicine and laypersons who have made a significant contribution to the health and happiness of children everywhere.

ALLOCATION

U.S. Broadcast Policy

The Federal Communications Commission's (FCC) methods of allocating broadcasting frequencies in the United States have long been a subject of debate and controversy. The key issues have been: first, whether television should be controlled by the few strongest networks; second, whether the FCC is responsible for setting aside frequencies for non-commercial or educational broadcasters, even though the media operate within a privately held system; and third, whether spectrum allocations should change when new technologies, requiring use of the airwaves, are introduced. The Communication Act of 1934 provides for a way to maintain federal control over all channels of interstate and foreign radio transmission, and to provide for the use of such channels, but not their ownership.

The act outlines a four-step process for allocating frequencies. An entity that applies for a construction permit (the right to build a broadcast station) must seek a specific channel, antenna location, coverage area, times of operation and power level of preference. If that applicant is selected for an allocation, the FCC then issues the construction permit. When the station is built, the owners must prove their transmitter and antenna can perform to FCC standards. The aspirant can then apply for a station license. Usually, applicants must also prove U.S. citizenship, good character free of criminal records, sufficient financial resources and proof of expert technical abilities.

When a few experimenters first put voice over wireless telegraphy at the turn of the century, there was no immediate need for a system of allocation. Many "broadcasters" were amateurs working with low-power systems. Even so, other uses were apparent and growth of radio use was rapid. It was interrupted, however, by World War I, when the government chose to take over all domestic frequencies to insure control of airwave communication. After the war, when the British government chose to retain political power of its broadcast frequencies and form a public broadcasting system, the U.S. government instead decided to rely upon the entrepreneurial spirit and allow private profit from broad-

casting. The technology and the industry were regulated under the provisions of the Radio Act of 1912 which placed control in the U.S. Department of Commerce, then administered by Secretary Herbert Hoover.

The Second National Radio Conference, 20 March 1923, addressed problems associated with increasing the number of signals on the broadcast spectrum. The Conference recommendations included the equitable distribution of frequencies to local areas and discussed wavelengths, power, time of operation and apparatus. More importantly, the Conference suggested three concepts that have not changed with time and technology. The first recognized that broadcasting usually covers a limited area and sanctioned local community involvement in the licensing process. The second concept acknowledged the limited amount of frequency space in the electromagnetic spectrum and supported the assignment of one consistent wavelength to broadcasters. The third concept proposed that once a broadcasting organization was assigned a certain frequency, it should not have to move that placement due to new regulation.

These recommendations died in the U.S. House Committee on the Merchant Marine and Fisheries and in Senate committee. No action was taken. Commerce Secretary Hoover believed government control had no place in American broadcasting; those using the airwaves should join together and regulate themselves.

Congress reflected the conflicting views. Though litigation against the government rendered the Radio Act of 1912 virtually inoperable, 50 separate bills failed in Congress before the federal legislature passed the Radio Act of 1927. Cases such as *Hoover v. Intercity Radio* (1923) held that the government could not refuse a license to an interested party, but could designate a frequency and police interferences. In the next major case, *United States vs. Zenith Radio Corporation* (1926), a federal judge ruled the Commerce Department had no jurisdiction to regulate radio. Other rulings by the U.S. Attorney General completely nullified Department of Commerce control.

Yet more radio broadcasters wanted frequencies and with 716 radio stations on the air, national regulation was

more and more necessary. With the Radio Act of 1927, the federal government decided to retain ownership of the airwaves but allow private interests to hold continuing licenses. The licenses were renewable after three years, depending on the holder's ability to serve the "public interest, convenience, and necessity."

Networks had grown substantially after 1926. Religious, educational, cultural, civil liberties and labor organizations also sought a voice amidst the privately held, commercially supported licensees. Yet the 1927 Act did not successfully regulate the system. It was replaced seven years later by the Communications Act of 1934.

The two acts had many similarities and neither altered the allocations already in place for the burgeoning broadcast networks CBS and NBC. Among existing non-profit broadcasters, many educational institutions were still forced to share frequencies and in the end most educators dropped their partial licenses and chose to be silent. Yet the lobbying efforts of Paulist Priest John B. Harney made Congress realize the airwaves could be used for social good by non-profit interests and the 1934 Act included a provision to study such allocations. Still, the conflict was not resolved until 1945 when 20 FM channels between 88 and 92 MHz were reserved for non-commercial and educational broadcasting. These frequencies represented 20 percent of the broadcast band.

Among the commercial networks, each had considerable power over its affiliate stations until an FCC ruling limited the degree of contractual control over affiliate operations. But practical authority over the dependent affiliates persisted since networks supplied most programming.

By 1938 NBC and CBS commanded the great majority of licensed wattage through owned stations or affiliates. In 1941 the FCC's Report on Chain Broadcasting was accepted by the Supreme Court in *NBC v. U.S.* (1943). The ruling led to a separation of NBC into two radio networks, one of which was later sold and became ABC. Four way network competition began in the radio marketplace among Mutual, the fledgling ABC, and the dominators, CBS and NBC.

As of 1941, six television stations had been approved and two were in operation; CBS and RCA stepped in early to receive construction permits and licenses. The major networks were joined by receiver maker Allen B. DuMont and each ventured into television as network programmers in the 1940s. The three networks divided the week, each programming two or three nights without competition.

The FCC settled the placement of the radio bandwidth in 1945, but allocation problems did not end. Television's impending maturity created more spectrum confusion. As it had done with radio, the government had issued experimental and early frequency allocations for television on the VHF and UHF spectrums. Large broadcasting corporations obtained early signal assignments both to monopolize the new medium and to sell a new product, television receivers.

The problem with television allocations was the limited amount of bandwidth compared to radio signal space. The

FCC had planned eighteen channels, each six megacycles wide between 50 and 294 megacycles. In the VHF spectrum space, only 13 channels existed which could support television signals. Cities 150 miles apart could share a channel; towns 75 miles apart could have consecutively placed station signals. When the commission considered rules in September of 1945, it was decided that 140 metropolitan districts would be allocated VHF broadcasting channels.

The Television Broadcast Association supported shorter distances between localities using the same spectrum space for signal transmission. ABC and CBS believed the future of television existed in the more generous UHF spectrum space. Several network leaders argued either to transfer all television delivery to the more capacious UHF or to allow existing stations to slowly move to UHF. Instead, the FCC approved a VHF delivery plan in November 1945. 500 stations would be allocated to the 140 communities, with no allocations planned for channel 1. The FCC plan did not move any previously granted station frequencies. It did, however, allow shorter distances between eastern U.S. station assignments. New York City was given seven channels; smaller towns were allocated limited coverage and lower powered television signals.

By 1948, the FCC realized the November 1945 plan would not work and advocated moving all television to UHF. By then fifteen stations were on the air. While a final plan could be developed, the FCC added some VHF signal restrictions and completely eliminated use of channel one. Also that year, the FCC again held further allocation hearings. The resulting ruling increased the number of stations but questioned the use of UHF for television delivery. The new plan now placed 900 stations in more than 500 communities, still utilizing only the VHF band. Confusion, conflict, and controversy continued and on 29 September 1948 the FCC halted further allocation of station licenses. Only 108 stations were on the air. This action became known as the Freeze of 1948.

Construction of the stations previously approved, but not built, continued and more VHF stations did begin broadcasting between 1948 and the end of the freeze in April 1952. Many television industry interests still supported UHF utilization, but manufacturers had not yet developed transmission equipment for UHF. Television sets were not being built to receive the higher signals. Potential problems with UHF included signal strength and interference. Nevertheless, the FCC decided to begin UHF television without additional testing.

With regard to station allocations, the FCC's Sixth Report and Order was a most salient document. There the Commission decided to maintain placement of the existing VHF stations, though a few were ordered to change bandwidth within the VHF spectrum. The new plan created 2,053 allotments in 1,291 communities.

The FCC aggressively assigned UHF stations to smaller towns and left VHF for large cities. The number of stations per community depended upon population. For example, a com-

munity with 250,000 to one million people received four to six stations. Except for Los Angeles and New York which secured seven stations in the VHF spectrum, the FCC allocated no more than four VHF stations per locality. Spacing of the same channel between communities depended on such factors as geographical location, population density, and tropospheric interference. Cities at least 170 miles apart could have received allotment of the same channel.

The FCC made a historically significant ruling when it chose to enter UHF broadcasting without materially altering existing allocations. Since many sets had no UHF equipment, the stations with VHF station assignments had the upper hand over new UHF stations. It would be years before any large population could receive UHF. More importantly, the decision created a situation of the early bird catching the worm. The companies with the first granted allocations, namely NBC and CBS, also had the best signal positions. The FCC chose to maintain network dominance of television and essentially gave the large networks control over the future of the new medium. For most viewers, it was easier to tune to the broadcasting giants than to new networks or independent stations.

Allocation of non-commercial stations was another important provision of the Sixth Report and Order. FCC Commissioner Frieda Hennock, a New York attorney, argued for spectrum space for educational television. She established her place in broadcasting history when the FCC decided to make 252 non-commercial assignments, including 68 VHF and 174 UHF stations. This was one tenth of all stations assigned. Any community with one or two VHF stations in operation won a VHF educational television frequency. The first non-commercial station reached the airwaves in 1954.

Television station allocations moved slowly until the middle 1970s. ABC, operating largely on UHF stations, jockeyed for positioning against the stronger networks, CBS and NBC. In 1975, in a period of government deregulation, the FCC liberalized both frequency allocations and methods of television delivery. The large fees required for satellite receiving stations had diminished, enhancing the possibilities for both satellite and cable delivery of television to homes and businesses.

The FCC again began an aggressive period of television station allocations between 1975 and 1988, primarily assigning UHF spectrum licenses. During this period, more than 300 stations began telecasting. In 1975, 513 VHF and 198 UHF stations were on the air. By 1988, 543 VHF and 501 UHF stations broadcasted shows. The advent of cable somewhat leveled the competitive lead of lower-numbered VHF stations; the reception of each station was equal when provided through the wire and many homes now subscribed to cable systems. The added popularity of remote controlled, hundred-plus channel, cable-ready receivers made any signal a finger-press away.

Deregulation also created still more television signal competition, all governed through FCC allocations. Low

power television, or short range signals serving communities within cities and smaller towns in rural areas, grew as additional licenses were granted in the 1980s. Though these stations were originally expected to handle either home shopping or community access programs, many low power stations became competitive with other television stations by becoming cable carriers.

Because the major networks already held affiliate contracts in most markets, these new UHF and LPTV stations were largely independently owned. The existence of more and more unaffiliated stations opened a door for the creation of new television networks and new program providers. In 1985, the FOX Broadcasting Network was created as a fourth network by linking a number of the new, largely independent stations. Specialty networks, such as the Spanish-language Univision and Telemundo networks, and broadcast-cable hybrid networks such as Home Shopping Network and Trinity Broadcast Network (religious) developed in the late 1980s. In 1994, Paramount and Warner Brothers Studios entered the arena with networks of broadcast stations airing new programming. The shows presented on these alternative networks have most often been outside the scope of the large networks. Some have challenged traditional network notions of "taste" or programming standards and have presented new types of shows. Others have focused on a selected audience such as Spanish-speakers or home shoppers.

In 1994, FOX Broadcasting Company became concerned with the signal power, and resulting audience reach, of its affiliates. The network made a series of contract changes, in essence trading several of its UHF outlets for stronger VHF stations. In those deals, many independent broadcasters were pushed aside for stations owned by broadcast groups such as New World Entertainment. The end result was an increase in VHF placements for FOX shows without resort to issues or problems related to allocation.

The future of station allocation is unclear. In the early 1990s, when High Definition Television (HDTV) was expected to overtake U.S. television, skeptics pointed to the history of U.S. television allocations. HDTV could have required more extensive bandwidth, and therefore, the reordering of spectrum allocations. But in the past, except for the shifting of some VHF stations required by the Sixth Report and Order, the FCC has not changed a previously granted allocation no matter how compelling or leveling the reason. The dominance of the major networks has always been preserved. The channel positions have never changed materially, and audiences have remained comfortable with familiar placements. It is unlikely that the FCC will dabble with allocations in the future. Yet, as viewers grow increasingly dependent on cable as their television provider, the role of station placement may decrease in importance. Future station assignments and changes will hardly affect either cable channel placement or the social routines of the television viewer.

—Joan Stuller-giglione

ALMOND, PAUL

Canadian Producer/Director

Paul Almond is the producer and director of more than 100 television dramas in Toronto, London, and Los Angeles between 1954 and 1967. Almond has produced and directed dramas for such Canadian Broadcasting Corporation (CBC) shows as *Folio*, *The Unforeseen*, and *Wojeck*.

Among his many accomplishments in "live" or "live to tape" television are the early experimental religious drama *The Hill*, which used simple wooden platforms, a cyclorama and improvisation; Arthur Hailey's realistic early drama about the threats of nuclear technology, *Seeds of Power*; the fascinating, televisual adaptation of Dylan Thomas' radio piece *Under Milk Wood*, which alternated between stylized shots of elements of the set with realistic shots of the actors; Harold Pinter's controversial *Birthday Party*; *A Close Prisoner*, the self-reflexive and chilling satire by Clive Exton; and television versions of Christopher Fry's *Sleep of Prisoners*, *Venus Observed*, and *A Phoenix too Frequent*, and Jean Anouilh's *Antigone*. He also produced and directed a chilling adaptation of *Crime and Punishment*, called *The Murderer*; the dark, anti-war comedy *The Neutron and the Olive* and his creative partner, designer Rudy Dorn's drama about World War II from the point

Paul Almond

of view of a German soldier, *The Broken Sky*. Other successful adaptations included *Macbeth*, with Sean Connery and Zoe Caldwell, using only a flight of steps and a huge throne, and *Julius Caesar*, using one 12-foot decorative column. At the time of these "experimental" productions Dorn and Almond shared a theory that the "only real thing was the emotion expressed on the face of a really good actor".

Almond directed for the most successful series in CBC television history, *Wojeck*, including the prescient episode on drug abuse ("All Aboard for Candyland"), at a time when such subjects were rarely seen on television.

Two of his 1960s dramas were censored by the CBC: Anouilh's *Point of Departure*, which showed two unmarried people in bed together, and *Shadow of a Pale Horse*, a vivid anti-war drama which depicted, according to the broadcaster, a too explicit hanging in one scene. In instances such as these, when the CBC management threatened to cancel a programme (which became easier when tape came into use), the corporation, under pressure from its creative staff, sometimes compromised by scheduling the drama at 11:30 P.M. when it was hoped that everyone likely to complain was in bed. In the case of Michael Tait's *Fellowship* the CBC canceled the show altogether, but relented and broadcast it at a later date. In a rare return to television in 1978 Almond directed the award-winning docudrama *Every Person Is Guilty*, on the anthology *For the Record*.

Television critics and colleagues said of Paul Almond that he was "the mystic", "the romantic", "the man with an eye for symbolic levels of meaning", an "actor's director". Camera-man and well-known television writer Grahame Woods said, "he's very responsive and creates a lot of energy. He had a passion for what he was doing and it's infectious." The actor and director David Gardner characterised Almond's work as "moody... The camera moved a great deal. He was a very volatile director. But once you get to know Paul it was terrific."

Paul Almond himself has said that in some ways he preferred live television to any other form, because it had not only an excitement but a flow of action. In his view, live television allowed both the camera-man and the director more freedom to respond to the performance itself and literally "call the shots" in unforeseen patterns and rhythms. Early television did not require three people to run a camera. Almond was one of the most influential of the generation of producers and directors in the 1950s and 1960s who were discovering what could be done with the huge, clumsy and unreliable cameras of live television. He and his co-conspirators took "live-to-tape" drama, which was supposed to be taped with minimum interruption because it was very difficult to edit into territory which demanded many pauses for change of scene, costume, or special effects. From those early experiments and the eventual discovery of cleaner easier ways to edit tape came true electronic drama.

With limited CBC experience of filmed TV drama, Almond adapted to film so well that his first full-length feature film *Isabel* in 1968 (shown on the CBC in 1969) was a critical success and was followed by such films as *The Act of the Heart*, *Final Assignment*, and *Captive Hearts*. He is still producing and directing feature films.

AMEN

U.S. Situation Comedy

From 1986 to 1991, *Amen* aired on NBC. Set around a Philadelphia parish, this was the first hit situation-comedy to focus upon religion, an African-American church in particular, depicting, as a *Jet* magazine article put it, “the political as well as humorous side of [this] centuries-old institution.” Emphasizing the relationship between the church’s virtuous minister, played by Clifton Davis, and its shrewd, quick witted deacon, played by Sherman Hemsley, this comedy highlighted the continuous conflicts between these contrasting principals. By centralizing these characters’ comedic struggles, *Amen* proved a successful parody, satirizing as well as exploring the everyday workings of their church, from service to choir to congregation. Produced by Carson Productions, *Amen* gained top-ratings throughout much of its prime-time life.

Focusing primarily on the apparently endless conflict between Deacon Ernest Frye and the Reverend Reuben Gregory, *Amen* was able to capitalize on the humorous dissimilarities separating these perpetually arguing characters. Frye, played expertly by Hemsley, was not unlike George Jefferson, Hemsley’s arrogant, determined character for eleven seasons on *The Jeffersons*. The deacon was stubborn, aggressive and extremely vocal. He had taken over the church from his father, the founder of the First Community Church of Philadelphia, and resisted giving up his control and decision making power, especially to Reverend Gregory. Ironically, however, Deacon Frye’s melodramatic antics usually lost more control than they gained, leaving a situation Reverend Gregory was often forced to resolve, and opening Frye to the sarcastic ridicule of the congregation.

Gregory, on the other hand, was a kind-hearted, ethical pastor with the church’s best interests at heart. Mild-mannered in action and even-toned in voice, Reverend Gregory was a distinct contrast to the boisterous, authoritarian Deacon Frye. Played by Davis (star of the 1974 series *That’s My Mama*), who was an established real-life minister, Reverend Reuben Gregory slowly and patiently established an influence over the church, the deacon, of course, fighting him throughout. A rational voice amid the deacon’s fiery outbursts, Reverend Gregory helped to temper Frye’s melodramatic excitement, aiding in the resolution of the program’s various episodes.

Thelma Frye, the deacon’s adult, socially awkward daughter, also played an important role in many episodes of *Amen*. Thelma, a romantically distraught thirty-year-old who still lived with her “Daddy,” provided a constant source of humor, her own childlike naiveté a comical contrast to the clever, often scheming Deacon Frye. Later episodes focused on the developing romantic relationship, and eventual marriage between Thelma and the Reverend Gregory, a marriage which signaled Thelma’s coming into adulthood as well as lessened the distance between the reverend and Deacon Frye. Additional characters included

Rolly Forbes, the church’s spunky elder church board member and sisters Casietta and Amelia Hetebrink, all adult church members who frequently made humorous and sarcastic contributions to the show, most often at the expense of Deacon Frye.

Throughout its five years, *Amen* offered a light-hearted look at an African-American church, playfully satirizing its day to day activities. Focusing humorously on this everyday conflict between Reverend Gregory and Deacon Frye, as well as these other familiar characters, *Amen* proved a satiric, yet human, portrait of ordinary church life and people.

AMERICAN BANDSTAND

U.S. Music Program

Like the soap opera, *American Bandstand* represents the transference of a successful radio format to burgeoning arena of American television. Unlike the soap opera, however, the radio broadcast format of playing recorded music developed as popular entertainers from radio migrated to the newer medium of television. Initially located in the margins of broadcast schedules, the format of a live disk jockey spinning records targeted toward and embraced by teenagers soon evolved into the economic salvation of many radio stations. For one thing, the programs were relatively inexpensive to produce. In addition, the increased spending power of American teenagers in the 1950s attracted advertisers and companies marketing products specifically targeting that social group. Not the least of these were the recording companies who supplied the records without cost to stations, often including economic incentives to disk jockeys to play their products. In effect, the recorded music was a commercial for itself. Given the convergence of these factors, the teen record party became entrenched as a radio format during the 1950s and throughout the 1960s, eventually developing into Top Forty Radio.

For these same reasons, this format became highly lucrative for local television stations to produce as well. While the three networks provided the majority of prime-time programming and some early afternoon soap operas, local television stations had to fill marginal broadcast periods themselves. Since the primary audience for television viewing in the late afternoons included teenagers just out of school for the day, the teen record party apparently made sense to station managers as a way to generate advertising revenue during that broadcast period. As a result, a number of teen dance party programs found their way into television schedules during the early 1950s.

Bandstand, one of these, appeared on WFIL-TV in Philadelphia during September 1952. Hosted by Bob

Horn, a popular local disk jockey, the show was presented "live" and included teenagers dancing to the records that were played. As the success of the televised *Bandstand* grew, Dick Clark took over the disk jockey duties of the radio program while Bob Horn was broadcasting in front of the cameras. In 1956, Horn was arrested for driving under the influence of alcohol, in the middle of an anti-

Dick Clark

Photo courtesy of Dick Clark Productions, Inc.

drunk driving campaign by WFIL. Soon thereafter, Dick Clark replaced him as the host of the televised program. Clark's clean-cut boy-next-door image seemed to offset any unsavory fallout from Horn's arrest, because the show increased in its popularity. By the fall of 1957, Clark, who had been shepherding kinescopes of the show to New York, convinced the programmers at ABC to include the show in its network lineup.

Adapting the name of the program to its new stature (and the network identity), *American Bandstand* first aired on the ABC network on Monday, 5 August 1957, becoming one of a handful of local origination programs to broadcast nationally. Initially, the program ran Monday through Friday from 3:00 to 4:30 P.M., EST. Almost immediately, the show became a hit for the struggling network. In retrospect, *American Bandstand* fit in nicely with the programming strategy that evolved at ABC during the 1950s. As the third television network, ABC could not afford the high-priced radio celebrity talent or live dramatic programming that generated the predominantly adult viewership of NBC and CBS. Therefore, ABC counterprogrammed its scheduled with shows that appealed to a younger audience. Along with programs such as *The Mickey Mouse Club*, ABC used *American Bandstand* to build a loyal audience base in the 1950s that would catapult the network to the top of the prime-time ratings in the mid-1970s.

From a cultural and social standpoint, the impact of *American Bandstand* should not be underrated. Even if the show diffused some of the more raucous elements of rock 'n' roll music, it helped to solidify the growing youth culture which centered around this phenomenon. But the show was important in another way as well. Once Clark took over the helm of *Bandstand* in 1956, he insisted on racially integrating the show, since much of the music was performed by black recording artists. When the show moved to the network schedule, it maintained its racially mixed image, thus providing American television broadcasting with its most visible ongoing image of ethnic diversity until the 1970s.

In 1964, Clark moved the production of *American Bandstand* to California, cutting broadcasts to once a week. In part, the move was made to facilitate Clark's expansion into other program production. Additionally, it became easier to tap into the American recording industry, the center of which had shifted to Los Angeles by that time. The show's popularity with teenagers continued until the late 1960s.

At that point, white, middle-class American youth culture moved away from the rock 'n' roll dance music that had become the staple of *American Bandstand*, opting instead for the drug-influenced psychedelia of the Vietnam War era. As a response to the specialized tastes of perceived diverse target audiences, radio formats began to fragment at this time, segregating popular music into distinct categories. While *American Bandstand* attempted to integrate many of these styles into its format throughout the 1970s,

the show relied heavily on disco, the emerging alternative to psychedelic art rock. Though often denigrated at the time because of disco's emergence in working class and ethnic communities, the musical style was the logical focus for the show, given its historic reliance on presenting teenagers dancing. Consequently, *American Bandstand* became even more ethnically mixed at a time when the predominant face of the aging youth culture in the United States acquired a social pallor.

The foundation of *American Bandstand's* success rested with its ability to adapt to shifting musical trends while maintaining the basic format developed in the 1950s. As a result, Dick Clark helmed the longest running broadcast program aimed at mainstream youth to air on American network broadcast television. After thirty years of broadcasting, ABC finally dropped the show from its network schedule in 1987. In its later years, *American Bandstand* was often preempted by various sporting events. Given the commercial profits generated from sports presentations, apparently it was only a matter of time before the network replaced the dance party entirely. Additionally, the rise of MTV and other music video channels in the 1980s also helped to seal *American Bandstand's* fate. The show began to look like an anachronism when compared to the slick production values of expensively produced music videos. Nevertheless, the music video channels owe a debt of gratitude to *American Bandstand*, the network prototype that shaped the format which they have exploited so well.

AMERICAN BROADCASTING COMPANY

U.S. Network

The American Broadcasting Company, more commonly referred to as ABC, has been a forerunner in the evolution of television network history. Although often recognized as the third-place network in ratings, behind CBS and NBC, ABC has several times been a “first,” with bold decisions and changes that often served as catalysts to its competitors.

The following headline from the *Los Angeles Times* describes ABC’s most memorable “first”: “Merger of Top TV Network and Media Giant with Premier Movie Producer to Create One-Of-A-Kind Global Powerhouse.” This notice referred to the Walt Disney Company’s surprising purchase of Capital Cities/ABC for \$19 billion in cash and stock in August 1995. While the merger is recognized by media executives and Wall Street investors as a landmark in network television, historians tell of ABC’s beginnings more than four decades ago as much less dramatic.

ABC grew out of a Federal Communications Commission (FCC) “monopoly” probe. The 1938–41 radio-network investigation resulted in a highly publicized and controversial report which included specific proposals for reform. The FCC reported cited several problems with CBS and NBC, the two then-existing radio networks. The first problem cited was that NBC owned two networks, NBC-Blue and NBC-Red. The report proposed “divorcement,” and on 12 October 1943, ABC was born, the offspring of the separation of NBC. As a result of the FCC report RCA sold the Blue Network Company, Inc., for \$8,000,000. The buyer was the American Broadcasting System, Inc., owned by Edward J. Noble, who had made his fortune with Life-savers candy.

By the mid-1940s, it was clear that the struggle for power in the broadcasting arena was now a three-network battle involving ABC, CBS and NBC. All had substantial radio earnings, but television technology developments loomed before them, threatening to change the face of the radio landscape forever.

By 1948, the FCC had issued approximately a hundred television-station licenses. By 1952, with sponsorship declining, death seemed imminent for network radio. The years between 1948 and 1955 for network television were a period of industry transition comparable to the mid-1920s for network radio. The FCC needed to develop a comprehensive plan for allocating TV frequencies and until it was completed the transition from radio would be incomplete.

As networks focused on the transition into television, a battle to takeover ABC, the weak sister of the Big Three, ensued. Noble’s network was overextended and nearly bankrupt. And in 1951, Leonard Goldenson and United Paramount Theaters bought ABC for \$25 million. Goldenson had begun his career at Paramount Pictures in 1933 as a 27-year-old Harvard Law School graduate. Eventually, however, he gave up law and became chief executive of United

Courtesy of ABC

Paramount Theaters and after spending the first half of his career at Paramount, he gambled his way to the top of ABC.

A new era in American broadcasting, another “first”, began with that merger. With the help of the television industry the silver screen entered the home. In 1954, Walt and Roy Disney approached Goldenson with the idea of building a new theme park in California. The brothers needed financing and they offered to supply Goldenson with new programming. He lent them \$15 million in return for 35% of Disneyland. ABC also agreed to pay \$35 million in license fees over seven years for a new Walt Disney TV series. *Disneyland*, which premiered in the fall of 1954 was the network’s first Nielsen Top Ten Hit. A year later in the fall of 1955, ABC had another successful “first.” *Cheyenne*, the first prime-time series produced by a major studio, Warner Brothers, aired on ABC the show and also became a network hit.

Still, it took nearly another decade for ABC to be Number One in the Nielsen ratings. But in 1964, ABC won the ratings race in the fifty largest U.S. markets with such successful series as *Peyton Place*, *Bewitched*, *The Addams Family*, *McHale’s Navy*, *Combat*, and *My Three Sons*. But this success was short-lived and lasted a few weeks. Seven years later during the 1970–71 season, ABC had its first Number One show in all of television with *Marcus Welby, M.D.*

Even with this success, however, there were still many problems with ABC’s programming that season, starting and ending with *All in the Family*. After financing the development of two pilot shows of *All in the Family*, Goldenson decided, in what has been hailed as the worst programming decision of his career, to turn down the Norman Lear show. He was worried that this new brand of realistic comedy would offend conservative affiliates.

All in the Family went to CBS—replacing *The Beverly Hillbillies* as American’s leading comedy. To make matters worse, CBS’ chief programmer, Fred Silverman, developed such spinoffs as *Maude* and *The Jefferson* for the network.

The effects on ABC's ratings were disastrous. *Welby* dropped from first to thirteenth place in one year.

ABC wooed Fred Silverman away from CBS in the mid-1970s. Six months after Silverman's arrival at ABC, two events took ABC to first place in the ratings: Roone Arledge's Winter Olympics in Innsbruck and a mini-series, a twelve-hour TV adaptation of Irwin Shaw's *Rich Man, Poor Man*. It was network TV's first big miniseries.

At the end of the 1975–76 season, ABC's Silverman scheduled a new show, *Charlie's Angels*. On the edge of a new programming wave in which sex would replace violence as the preferred "quick fix" for American television audiences, *Charlie's Angels* and other similarly cast ABC series came to be known as the "jiggle" shows. CBS and NBC executives labeled them "tits and ass" programming. These shows were Silverman's specialty and the cornerstone of a new entertainment creed.

The new programming resulted in a flood of advertising demand and surging Nielsen ratings for ABC. ABC's profits in 1975 totaled more than \$29 million; in 1976, they were \$83 million; and in 1977, \$165. Not all the successes fell into the more exploitative categories, however. ABC aired another miniseries in 1977. A twelve-hour adaptation of Alex Haley's *Roots* attracted 130 million viewers, scored the largest Nielsen ratings in broadcast history, solidified the role of the miniseries in network programming, opened a national discussion of the history of American race relations, and garnered high praise for the network.

But the bulk of ABC programming was still highly conventional. During the 1977–78 season, ABC's successful lineup included *The Six Million Dollar Man*, *The ABC Sunday Night Movie*, NFL games, *Happy Days*, *Laverne and Shirley*, *Three's Company*, *Soap*, *Eight Is Enough*, *Charlie's Angels*, *Baretta*, *Welcome Back, Kotter*, *Barney Miller*, *The Love Boat*, and *Operation Petticoat*. The network had twelve programs in the Nielsen Top Twenty.

Taxi, *Mork and Mindy*, and *Happy Days* headlined ABC's 1978–79 season of fourteen Top Twenty shows including the best five shows of the season. ABC made history again. It was the first time that a TV network had broken the billion-dollar revenue mark. But it was the last year of ABC's success streak. That year, Fred Silverman left the programming empire he had built at ABC and took over NBC. For the first time since 1975, ABC finished second in the November sweeps.

A year later, ABC was a "first" again. This time, as the first network to hire a woman as its evening anchor, bringing the network an avalanche of publicity. ABC hired Barbara Walters from NBC with a contract worth \$1 million in 1976. Hired to co-anchor the *ABC Evening News* with Harry Reasoner, Walters, then forty-six, was the most celebrated woman in television news. The Reasoner and Walters merger was not successful, however, and Walters went on to her highly acclaimed series of interview programs and a regular spot on the ABC news magazine, *20/20*.

The mid-to-late 1970s also saw the era of satellite television developing strength with such newcomers to the television industry as cable networks HBO, CNN and

WTBS. Taking advantage of this trend in the early 1980s, ABC purchased ESPN, a cable sports network, with hopes that it would give the network a window on pay-per-view sports and help it bid for big sporting events.

Innovative programming in the early 1980s was not in prime-time series but made-for-TV movie programming, daytime shows, long-form miniseries and news. The most lucrative part of the ABC schedule in 1981 was daytime television which generated almost three-fourths of its profit. ABC, unlike CBS and NBC, owned most of its soap operas so the high daytime ratings of shows such as *General Hospital*, *All My Children*, and *Ryan's Hope* could be converted directly into profit. But the profits were matched by the network's burden of high expenses and sagging ratings. Once again ABC found itself lagging its competitors at NBC and CBS.

In 1986, Capital Cities Communication engineered the first television network takeover since Leonard Goldenson's merger of United Paramount Theaters and ABC. The \$3.5 billion merger signaled the start of the purchase of all major networks in 1980s, but the resulting Capital Cities/ABC Inc. became what was widely considered by investors as one of the best run of media companies. Capital Cities cut costs dramatically while continuing to invest in news and entertainment programming. ABC rebounded to become Number One in the ratings.

A decade later, ABC was in the forefront of network financial news once more setting the way for a flurry of media corporate buyouts that would make network history. In 1995 Walt Disney Company acquired Capital Cities/ABC for \$19 billion, the second-highest price ever paid for a U.S. Company in U.S. history. The biggest media merger in history, touted as one of the best-kept secrets in the industry, "sparked a flurry of buying activity in other entertainment stocks," said the *Los Angeles Times*. Shortly after the Disney/Capital Cities/ABC merger, Westinghouse merged with CBS and Time Warner with Ted Turner's cable network empire including CNN, TBS, TNT, and Turner Classic Movies.

The future of Disney/Capital Cities/ABC will be closely watched by media observers and critics. In many ways, the conglomerate suggests a model for a new era in media industries, an era in which global communication and economic strategies may override national and local concerns.

—Gayle Noyes

AMERICAN MOVIE CLASSICS

U.S. Cable Network

During the final sixth of the 20th century the television cable channel American Movie Classics (AMC), quietly became one of the fastest growing television networks in the United States. Half owned by Cablevision Systems and mammoth TeleCommunications, Inc., AMC is one of the great success stories in the emergence of cable TV in the United States. Film fans loved AMC for showing classic, uncut, uncolored Hollywood films of the 1930s, 1940s, and 1950s, with no interruptions for advertisements.

Over-the-air television had already served as the principle second run showcase for Hollywood films from the mid-1950s into the 1970s. But the number of over-the-air TV stations in any one market limited the possible showcases for classic Hollywood films. Film buffs in major markets did have independent television stations which frequently counter-programmed with Hollywood movies, but they hated the ways in which stations sanitized the presentations of theatrical films, cut them to fit them into prescribed time slots, and interrupted moving moments with blaring advertisements. With the emergence of cable television in the 1980s, AMC offered a niche for these fans, who sometimes referred to the channel as the "Metropolitan Museum of classic movies." Indeed, AMC created a "reperitory" cinema easily operated by a remote control.

AMC began in October 1984 as a pay service, but switched onto cable's "basic tier" in 1987 when it had grown to seven million subscribers in one thousand systems across the United States. This growth curve continued and by the end of 1989 AMC had doubled its subscriber base. Two years later it could count 39 million subscribers.

No cable service in the United States ever received more favorable reviews. Critics raved at AMC's around-the-clock presentation of Hollywood favorites and undiscovered gems, a stark relief from the sensory overload of MTV. AMC bragged about its sedate pseudo-PBS pacing.

AMC also has created first run documentaries that focus on some part of the movie business, such as a corporate profile of Republic Studios, a compilation history entitled "Stars and Stripes: Hollywood and World War II," and a history of boxing movies labeled "Knockout: Hollywood's Love Affair with Boxing." AMC regularly features interviews by Richard Brown, professor at the New School of Social Research, as part of its on-going series "Reflections on the Silver Screen," and also cablecasts Ralph Edwards' *This Is Your Life* episodes from the 1950s.

American Movie Classics regularly fills slots between films with old 20th-Century-Fox Movietone Newsreels. Fans can once again watch as a bored John Barrymore puts his profile into the cement in front of Grauman's Chinese Theatre or Shirley Temple accepts her special Oscar, then asks her mother if it is time to go home. In short here is the perfect nostalgia mix for anyone who lived through (or wished they had) the "simpler" time of the 1930s and 1940s.

AMC unabashedly promotes its nostalgic escape. Consider a typical stunt. The room, painted black and white (the purity of American Movie Classics), is filled with the sounds of Gordy Kilgore's big band playing Glenn Miller's "In the Mood" as more than two hundred couples spin, remembering a better time. The celebration of the fiftieth anniversary of Pearl Harbor? No, this was a late 1980s marketing device by American Movie Classics and the local cable system (owned by Time Warner), in Wichita Falls, Texas, a moment designed to launch AMC in that market.

By June 1988 American Movie Classics was successful enough to begin a colorful magazine. An old time classic star graces the cover of each issue; the first featured Katharine Hepburn, later came James Stewart, Marilyn Monroe, Gregory Peck, John Wayne, and Henry Fonda. Inside the cover comes a short, picture laden piece about a classic movie palace. Then comes a table of contents filled with articles about the stars of the Golden Age of Hollywood (keyed to American Movie Classic showings). The core of the magazine is the listings of that month's American Movie Classics offerings, highlighting festivals constructed around stars, series (such as Charlie Chan) and themes ("Super Sleuths," for example).

But there are limitations to the successes and benefits of AMC. Unless a new preservation print has been made (as was the case with the silent 1927 classic *Wings*), American Movie Classics runs television prints. These versions of the films are often incomplete, having been edited during the 1950s and 1960s to eliminate possibly offensive languages and images. Often TV prints have been cut to run a standard 88 minutes, timed to fit into two hour slots, with advertisements. American Movie Classics runs these incomplete prints, deciding not to spend the necessary moneys to create a complete version.

Fans rarely complain about the TV prints, however, and cable operators herald American Movie Classics as what is

Courtesy of American Movie Classics

best about cable television. The channel has replaced the repertory cinemas which used to dot America's largest cities and college towns and serves as a fine example of specialized niche programming in cable TV of the 1990s.

AMERICAN WOMEN IN RADIO AND TELEVISION

American Women in Radio and Television (AWRT) is a nonprofit organization headquartered in Washington, D.C. Originally conceived as the women's division of the National Association of Broadcasters, AWRT became an independent entity in 1950. At its first convention, AWRT had 282 women members. Today, the group maintains more than 2,300 men and women members, largely employed by television and radio stations nationwide.

Although people of both genders can join and serve as officers, the organization's mission is to advance the impact of women's careers in broadcasting and related fields. The group furthers community service, member employment and education. The organization also has a definite social consciousness. AWRT produces an award-winning series of public service announcements which have focused upon preventing sexual harassment in the workplace. Its agenda has also included, as an issue for study, a concern for indecency in broadcast content.

The organization serves many functions for its members. Its nearly 50 local chapters provide a place for social and professional networking. Some chapters are an important force in their local broadcast communities; others are merely meeting places for people in similar professions. Local activities vary, but often include "Soaring Spirits" benefits to help children's hospitals, scholarship fundraising for area college students, awards for local media professionals, educational seminars, career development and job listing dispersal. Local chapter members also mentor meetings of the affiliated College Students in Broadcasting, a club composed of dues paying students organized at university campus chapters.

On the national level, the organization provides many services. The main office is helmed by full-time employees and directed by both nationally elected officers and an advisory board. Within the organization, the most essential activity is an annual convention held each spring. Convention activities have included lobbying in Washington, recreation in Phoenix and education in Florida. The organization also houses the AWRT Foundation, which is designed to help fund research, publication, institutes, lectures and the general advancement of the electronic media and allied fields. The Washington office sponsors AWRT's annual Star

Courtesy of American Women in Radio and Television, Inc.

Awards which recognize media professionals or companies facilitating women's issues and concerns, and the Silver Satellite and the Achievement Awards commend success or advancements in electronic media fields.

The chapters differ greatly from each other. For example, the Austin, Texas chapter's monthly luncheon serves as the primary local meeting place for executives and managers in cable, broadcasting and advertising. Its activities include speakers with the latest news on industry developments, a preview night for each network's new fall programs in September, a Soaring Spirits 5K run, sponsorship of student scholarships and the definitive Austin media Christmas party.

In contrast, the Southern California chapter has a large sampling of television producers, on-air talent, network executives, educators, screenwriters and actresses in its ranks. Its main annual fundraising event is the Genii Awards luncheon, which honors an outstanding broadcast executive and a performer. Past winners have included producers Marian Rees and Linda Bloodworth Thomason and actresses Tyne Daly and Candace Bergen. Other activities include a "Meeting of the Minds" seminar updating the legal and technical knowledge in communication operations, a "Boot Camp" night where teams wearing military gear attempt to rearrange network programming schedules to maximize competition, and the more typical mixers and guest speakers. The chapter gives more than five scholarships annually, each awarded to a College Students in Broadcasting member.

Though different in membership, clout and structure, each local chapter uses the services of the national office to

disseminate industry knowledge and job information. American Women in Radio and Television helps keep its members up to date in a rapidly changing industrial setting.

AMERICANIZATION

During a nightly newscast of *CBC (Canadian Broadcasting Corporation) Prime Time News*, the anchorman, in the last news item before the public affairs portion of the program, presented words to this effect: How would you like to have a house that would cost next to nothing to build and to maintain, no electrical, and no heating bills? Viewers were then shown four young Inuit adults building an igloo. They were born in the Arctic region, said the spokeswoman of the group, but had not learned the ancestral skills of carving (literally) a human shelter out of this harsh environment (-35 Celsius at night). It was a broad hint that the spin on this story would be “Young Aboriginals in search of their past.” The real twist, however, was that their instructors, a middle-aged man and woman, were Caucasian and that the man was born in Detroit. The American had studied something which sounded like environmental architecture and was teaching this particular technique to the young Inuits.

When asked if they were embarrassed by this arrangement, the spokeswoman answered, “No. If he teaches us what we need to know then that’s all right.” When asked if he found the situation a bit strange, the Detroit born man also answered in the negative, “I was born in Detroit but I do not know how to build a car.” In fact it was one of the Inuit hunters who had taught him how to repair his snowmobile. So why shouldn’t he teach young Inuits to build igloos? In the last scene the igloo builders lay out their seal rugs and light a small fire using seal oil, enabling the heat to ice the inside walls, thus insulating the dwelling from the outside cold and creating warmth within. A final shot shows the lighted igloos against the black night sky.

Many things can be read into this short narrative. First, the typical, white, Canadian anchorman, by referring to concerns of Southern Canadians (low building and maintenance costs, no taxes, clear air and quiet neighborhoods), trivializes a technology which, over thousands of years, has allowed populations to survive and create specific societies and cultures in this particular environment. Secondly, we are made aware of the benefits of international trade: an Inuit teaches a Detroit born American how to repair a motor vehicle and, in return learns how to build an igloo. Thirdly, we are led to understand that what the students expect from the teacher is basic working skills.

The temptation to build a case denouncing cultural imperialism, bemoaning the alienation of aboriginal cultures and the shredding of their social fabric, is strong here. On the basis of this one example, however, the argument would at best be flawed, at worst biased. But for students of popular culture, national identity, and cultural industries this is but one of the many thousand daily occurrences which exemplify the dynamic complexity of the concept of “americanization.”

Embedded within it are at least two notions; the American presence and the presence of an American. In this news story, both notions are at work. On the one hand, the viewer is made aware of the American presence, the influence of American technology on this remote society, through the reference to the snowmobile. (Although the inventor lived and worked in Quebec, Canada, the fact that the Detroit born American puts the snowmobile on the same footing as the automobile implicitly makes it an American invention.) On the other hand, the viewer sees and hears the American instructor.

It is the first form of presence that usually defines the concept of americanization. It usually refers to the presence of American products and technology and it is against this presence that most critics argue. Surprisingly, few argue against the presence of Americans. As individuals, Americans are well liked and friendly; it is the presence of their way of life, of their culture, that makes americanization such an ugly word. Others like them but do not want to be like them; this is the basic attitude in opposition to americanization.

One is led to believe that s/he will become an American, will be americanized, not by interacting with citizens of the United States but by using American products, eating American (fast) food, and enjoying American cultural artifacts. One can go so far as to live and work in the United States while remaining staunchly Canadian or Australian or British, as many artists who have succeeded in the American music and film industries remind us. The danger of becoming americanized seems greater, however, if one stays in the comfort of home enjoying American cultural products such as magazines, novels, movies, music, comics, television shows and news, or computer software and games.

While these two embedded notions, the presence of Americans and the American presence, make for a fascinat-

ing debate, the concept of americanization conceals the parallel dual notion of "the host." Hosting the American presence seems to be more prevalent and more americanizing than hosting Americans themselves. To be a host is to make the visitor feel welcome, to make the visitor seem familiar, non-threatening, at home. In this case, to be a host is to be a consumer, to be a friendly user. To become americanized it is presumed not only that one consumes a steady diet of readily accessible made-in-the-U.S. products, but also consumes these cultural products with ease, i.e. as would any American.

American products are distributed internationally but are not made for international markets: they are made for the U.S. market, by, for, and about Americans. Thus, one can conclude, to enjoy these easily accessible products one must be or become American and the more one consumes, the more one becomes American, thereby enabling increasing pleasure and ease in this consumption. Americanization is a case in point of a basic process of acculturation. It results in sounding the alarms of cultural imperialism and cultural alienation: you become what you consume, because in order to consume you must become the targeted consumer. This is the equivalent of saying: because science (as we believe we know it) is a product of Western European civilization, then to become a scientist one must become westernized, i.e. adopt Western mores, values, and ways of thinking.

In most host countries in the world there is an overwhelming presence of American products. The pull and pressure of those products must not be underestimated. Still, the news story of the Inuit mechanic and the Detroit igloo builder serves as a reminder that culture, or at least certain types of culture, are less bound by the economics of their technological environment and modes of production than was once assumed and theorized.

The fact that the Inuit travel on snowmobiles, live in suburban dwellings, watch a great deal of television, and have forgotten how to build igloos does not necessarily make them more americanized when compared with the Detroit born teacher, who is made no less American by his ability to build an igloo. Skills, products, and ideas take root in historically given contexts: they bear witness to their times. When they travel, they bring with them elements of their place of origin. To use these ideas and products, one must have an understanding of their historical background or context, of their original intent and of their mode of operation. If the invention and the corresponding mode of production of goods and ideas are context bound, so too are their uses and in many cases these have an impact on the very nature of products and ideas. This perspective leads to a better understanding of americanization.

Undoubtedly American composers, playwrights, and various other artists have affected the popular arts of the world. With the same degree of certitude, one can proclaim that American entrepreneurs and American entrepreneurship have affected the cultural industries the world over. But perhaps the most profound impact of this particular

historical culture and its modes of production, is found in the social uses American society has made of these cultural products. If one wishes to speak of americanization in the realm of popular (or mass) culture, one must focus on the social uses of industrially produced and commercially distributed sounds and images. To show American-made movies in local theaters, to watch American sitcoms on the television set, to listen to American music on the radio—or to use copycat versions of any of these materials—is not, necessarily, to become americanized. To build into the local social fabric a permanent presence of these sounds and images, *is* to become americanized but not necessarily American.

To have a *permanent* background of American images and sounds (for example, television sets turned on all day, ads overflowing in print, on buses, on T-shirts, talk radio, Walkmans, etc.) means to live and work and play in a permanent kaleidoscope world plugged into a never ending soundtrack. *This*, it can be argued, is to become americanized.

The *Dallas* imperialism syndrome, and its legitimate heir, the O.J. Simpson Trial, are good illustrations of this. The debate surrounding *Dallas* rekindles the debate which greeted the American penny press and Hollywood cinema. Its central question: is communication technology a threat to basic (Western) values, local cultures, and the human psyche? *Dallas* symbolized this ongoing debate, a debate central to Western culture. But *Dallas* also symbolized a social evolution which has not received the attention it deserves. The worldwide popularity of *Dallas* revived the paradigm of the "magic bullet" theory of direct media effects, a theory suggesting that media content and style can be "injected" into the cultural life system, infecting and contaminating the "healthy" cultural body. It also revived discussions of cultural imperialism, but in a more sophisticated fashion and on a much grander scale. And it also raised the counter paradigm of the uses and gratifications model in communication studies.

Many researchers were eager to publish their claims that *Dallas* did not magically turn all its viewers into Americans, but that the program signified many things to many viewers. Moreover, they pointed out that, on the whole, national cultural products (including television programs) still out-sold imported American ones. And if they did not, they certainly enjoyed more popular support and provided more enjoyment.

Forgotten in this foray was the fact that *Dallas* symbolized the popularization and the banalization of television viewing, its normal integration within the activities of everyday life, its quiet nestling in the central foyer of the household environment. Television viewing, a remarkable new social practice in many locations, quickly and quietly became, inside and outside academia, a major source of everyday conversation, the measuring stick of many moral debates, the epitome of modern living. In so doing television viewing displaced the boundaries of centuries-old institutions such as family, work, school and religion. The *Dallas* syndrome symbolized the fact that in a

large number of host countries, communication technology had become a permanent part of the everyday social environment, that its messages had become a permanent part of the social fabric and that its spokespersons had joined the public club of opinion makers.

While one can debate the pros and cons of this social fact, one can also speculate that television is not the revolution that many of its critics as well as admirers had hoped or feared. It did not destroy a sacred treasure of Western values based on the technology of the written word. Rather it revealed a blind spot among many social thinkers: the constructed centrality of the spoken word in modern societies. Television possibly revealed to the most industrialized society of the postwar era, the United States, that it was and still is, by and large, an oral society.

Communication technology did not trigger a revolution, social, moral, or sexual; it became part of the establishment in every way, shape, and form. And just as U.S. cultural industries have become an American institution, a part of the social order and a sustainer of culture in American society, so too have cultural industries in many other societies. In this sense, other societies have become americanized. Americanization is not to be found in the consumption of American cultural products. It lies in the establishment of a particular social formation. This formation is, to be sure, defined in part by the use of the products of national cultural industries. But it is also defined by alterations in patterns of everyday life and by the emergence of "new" voices that take their place among existing relations and structures of power. The uses of television throughout the world are both cause and effect within these cultural and social shifts.

Thus americanization is neither a boon nor a threat—it is a cultural and economic fact of life in most (Western) countries. The debate then, is not over whether to stop or to hasten the consumption of American cultural products. It should instead be centered on the impact of specific social uses of industrially mass-produced cultural products, whether foreign or national. For better or worse, the socialization of sounds and images, and socialization *through* sounds and images, have made more visible, and more mainstream, the oral traditions and the tradition of orality not only in American society but also in all (Western) americanized societies.

It matters little whether television, and other technologically based cultural industries, were invented by the Americans or not. What they invented was a particular social use of these technologies: the massification of pro-

duction, distribution, and consumption and the modification of industrially produced cultural products. In return, this particular social use revealed to American society, and to other industrialized societies which followed suit, the forgotten presence of traditional, non-national, oral cultures. Cultural industries, and television in particular, revealed that print technology (the written word) had not subverted oral technology (the spoken word); it had only partially silenced it by making it less "visible." Television made words and sound once again "visible" and "audible" to the eyes and ears of the mind. In doing so it also revealed to the heavily industrialized, print oriented, Western societies that they were blinded by their most popular visual aid, television.

AMERICA'S FUNNIEST HOME VIDEOS

U.S. Reality Program/Comedy

A peculiar variant of reality-based television programming, *America's Funniest Home Videos* (AFHV), first aired as a Thanksgiving special in 1989, and later debuted on 14 January

1990 as a regular series on ABC. The show still maintains respectable ratings in its sixth season and is due for syndication in 1995 by MTM Television Distribution. The program's

simple premise—to solicit and exhibit a series of humorous video clips shot by amateurs who compete for cash prizes—has had a surprisingly enduring run in its half-hour slot at 7:00 P.M. in the Sunday night schedule.

Rooted generally in the sub-genre of its comical, voyeuristic predecessors, such as *Candid Camera*, *TV's Bloopers and Practical Jokes*, and *Life's Most Embarrassing Moments*, *AFHV* more particularly owes its genesis to a weekly variety show produced by the Tokyo Broadcasting Company, *Fun with Ken and Kato Chan*, which featured a segment in which viewers were invited to mail in their home video clips. Vin Di Bona, who had earlier success with other TBC properties, eventually purchased U.S. rights to the Japanese concept. As executive producer, Di Bona expanded the segment into a half-hour hybrid of home video, variety show, stand up comedy, and audience participation synthesized to fit the ABC profile of family viewing.

Although indebted to a prevalence of reality-based programs when it debuted, *AFHV* had a far greater and more immediate impact on weekly ratings than any of its predecessors or imitators. Cracking the Nielsen Top 5 after only six episodes, by March 1990 it had become the number one ranked series, temporarily unseating CBS' *60 Minutes*, a feat no other ABC program had been able to achieve in twelve years. Since then, it has regularly won its time period among children, teenagers, and women and men ages 18 to 34.

At the series' peak of popularity, producers reported receiving close to 2,000 video submissions a day. These tapes, eventually sorted out by screeners for broadcast approval, must meet criteria that render them suitable for family audiences. First and foremost, qualifying videos should portray funny, amazing, or unexpected events in everyday life, such as animal antics, blunders at birthday parties, bloopers during wedding ceremonies, and fouled plays at sporting events. Because the series emphasizes the supposed universality and spontaneity of slapstick humor, tapes that depict extreme violence, offensive conduct, and serious physical injury, or that encourage imitative behavior, are strictly forbidden. Deliberately staged videos, such as parodies of advertisements or lip-synching of popular songs, may be accepted, but in general events rigged to look accidental or spontaneous are disqualified (or were reserved for Di Bona's follow-up program, *America's Funniest People*, now defunct, but created especially to accommodate staged video performances).

Once a clip is approved, its creators and performers must sign releases for broadcast authorization. Then follows a process during which clips are adjusted for uniform quality and matched in terms of production values; are embellished with sound effects and wisecracking voice-overs by host Bob Saget; are organized as a montage related to a loose theme (e.g. dogs, talent shows, skiing); and finally, are nestled into the format of the program. Each episode is first taped before a live studio audience, during which the clips are broadcast upon studio monitors so that the series' producers can gauge audience reaction. After subsequent reviews of the taping, producers pass on their recommendations to the staff, who edit out the less successful moments before the program is broadcast nationwide. Although labor-intensive, this

Bob Saget

Photo courtesy of Vin Di Bona Productions

method of television production is a relative bargain, costing less per episode than the average sitcom, and of course was soon imitated (for example, by FOX's *Totally Hidden Video*).

Television critics have been somewhat puzzled by the continued success of *AFHV*, many having panned the series as yet another illustration of the American public's increasing willingness to broadcast their most private and embarrassing moments. Several hypotheses for the series' popularity have been cited: the urge of the viewing public to get on television in order to secure their fifteen minutes of fame; the possibility of winning a \$10,000 cash prize; the all expenses paid weekend trip to Hollywood to attend studio tapings; the charisma of host Bob Saget, the first performer since Arthur Godfrey to star in two concurrent, high-rated series (the other being *Full House*); the universal identification with everyday life fundamental to home movies and home video; and the sheer fun of producing television about and for oneself. The series' producers, however, cite the program's humor as the key to its success. Taking the "Bullwinkle approach" that provokes different kinds of laughter from both children and their parents, *AFHV* not only seeks to attract a wide demographic, but self-consciously mocks itself as insignificant, harmless fun.

Despite its overt lack of pretension, *AFHV* remains significant on several accounts, especially its international origins and appeal. Banking upon the perceived cross-cultural universality of home video productions, Di Bona had conceived of the series as international from its inception.

AFHV can be seen in at least 70 countries and in more than a dozen languages (it is rumored to be the favorite show of the sultan of Brunei). Di Bona has subsequently sold the format rights to producers in other nations, at least 16 of which have created their own versions, while others merely replace Saget with indigenous hosts. Most international affiliates also have clip trade agreements; *AFHV* itself liberally blends domestic and imported clips (blurring the title's emphasis on "America" and pointing to television's partnership in global capitalism).

Also significant is the series' premise that the typical consumers of television may become its producers—that the modes of television reception and production are more dialogic than unidirectional. This inversion, as well as the format's unique hybridization of genres, results in peculiar effects worthy of investigation: the professional's commissioning of the amateur for commercial exploitation; the home video's simultaneous status as folk art and mass media; the promise of reward through competition that re-reflects the home mode of production's typical naiveté and non-commercial motivation with formal contrivance and financial incentives; the stress on comedy which excludes the banal everyday activities most typical of home video; and, finally, the format's allowance for a studio audience to vote for and reward their favorite video clip, maintaining the illusion of home video's folksy character, while the ten thousand dollar first prize reifies the slapstick conventions which the producers seek and that keep home viewers tuning in.

AMERICA'S MOST WANTED

U.S. Reality Program/Public Service

First aired on the seven FOX Stations in February 1988, *America's Most Wanted* is a U.S. reality program featuring segments which reenact crimes of wanted fugitives. Two months later, the show moved to the FOX Broadcasting Corporation and its affiliates. Produced by FOX Television

Stations Productions (a unit of FOX Television Stations, Inc.), *America's Most Wanted* may be cited as the first example of the "manhunt" type of reality shows. Consistently winning solid ratings throughout its history, it has also been credited as a television show which doubles as both enter-

tainment and “public-service.” Through the use of a toll-free “hotline,” it elicits the participation of viewers in helping to capture known suspects depicted on the programme, thus garnering praise and cooperation from law enforcement officials.

As a reality program, the style and content of *America's Most Wanted* closely follows that of other programme types gathered under this broad industry label (e.g., “tabloid” newsmagazines, video-verite and reenacted crime, rescue and manhunt shows, and family amateur video programmes). Central to each of these genres is a visible reference to, or dramatization of, real events and occupations. Thus, while the stories told on *America's Most Wanted* stem from “real life” incidents, they are not comprised of “actual” live footage (with the exception of recorded testimony from the “real” people involved). Rather, incidents of criminality and victimization are reenacted, and in an often intense and involving manner. This dramatic component, particularly as it entails a subjective appeal, is a dominant feature of reality program, which tend to accentuate the emotional for their effectivity. Viewers are thus asked to empathize and identify with the experiences of the people represented on the show, especially insofar as these experiences involve social or moral dilemmas.

Relying upon a structure similar to that used by television newsmagazines—which move back and forth from promotional trailer to anchor to report—each episode of *America's Most Wanted* is divided into a number of segments which retell and reenact a particular crime. Beginning with an up-date on how many viewers’ tips have thus far led to the capture of fugitives featured on the show, the program then moves to the host or “anchor,” who introduces the program and the first story segment. Using both actors and live footage of the “real people” involved, these story segments are highly dramatized, making liberal use of quick edits, rock music underscoring, sophisticated camera effects and voice-overs. In addition to supplying a narrative function, the voice-overs also include actual testimony of the event from police, victims and the criminals involved, thus emphasizing and appealing to the subjective.

The program resembles the tabloid newsmagazine genre in its often exaggerated language, also used in promotional trailers and by the host to describe the crimes depicted on the show (e.g., “Next, a tragic tale of obsession”). Additionally, and again paralleling qualities of tabloid TV, there are noticeable efforts towards self-promotion or congratulation; the host, law enforcement officials, and even captured fugitives repeatedly hype the policing and surveillance functions of the show. And yet, despite these consistencies with a denigrated tabloid TV genre, *America's Most Wanted* is distinct in its appeal to and affiliation with both “the public” and the police.

The program is hosted by John Walsh, who “anchors” *America's Most Wanted* from Washington, D.C. Given the show’s cooperation with federal law agencies, such as the FBI and the U.S. Marshall Service, its broadcast from this loca-

John Walsh
Photo courtesy of John Walsh

tion acts to further associate it with law enforcement institutions. Walsh, whose son was abducted and murdered in 1981, is a nationally-known advocate for missing and exploited children. As part of its program format, *America's Most Wanted* airs a weekly feature on missing children, and has created “The Missing Child Alert,” a series of public service bulletins which are made available to all television stations, regardless of network affiliation.

Through its toll-free hotline (1-800-CRIME-TV), which operates seven days and averages 2,500 calls a week, the program has assisted in the apprehension of hundreds of fugitives, and thus earned the appreciation of law enforcement agencies. Additionally, *America's Most Wanted* sees itself as enabling a cathartic process, offering not only legal justice, but psychological resolution to victims of crime. In both these respects, *America's Most Wanted* may be said to move away from much of the fixed voyeurism of reality shows, towards a more active “public” function. And yet, do manhunt shows such as *America's Most Wanted* simply temper the tabloid’s spectacle into a new form of “vigilante voyeurism?” Do such shows not only feed into, but actively promote, a public’s fears regarding an ever present criminal threat? Such questions, regarding the aims, the intended audience and the effectivity of *America's Most Wanted's* public function, must be addressed.

AMERIKA

U.S. Miniseries

Broadcast on ABC over the course of seven nights in the middle of February 1987, *Amerika* was a controversial 14-and-1/2 hour miniseries. Tom Shales of *The Washington Post* wrote in December 1986 that *Amerika* "could be the hottest political potato in the history of television." It was produced by ABC Circle Films, and written and directed by Donald Wrye, who was also executive producer. This series depicted life as imagined in the United States in the late 1990s, ten years after the Soviet Union took control of America employing a Russian controlled U.N. peace-keeping force.

Some have contended that *Amerika* was produced to provide a television counter to the controversial ABC movie *The Day After*, which depicted nuclear holocaust between the United States and Russia in 1983. The ABC executive responsible for both programs denied this view. Brandon Stoddard, president of ABC Circle films, said on 16 October 1986 at a press tour at the U.N. Plaza Hotel in New York that the idea for *Amerika* "never occurred during the controversy of *The Day After*, had nothing to do with *The Day After*. It happened...the birth of this idea happened substantially later." Stoddard went on to say that a critic of *The Day After*, Ben Stein from the *Herald Examiner* had written something, "at a much later point, a line...that had to do with what would life be like in America in a Russian occupation." Stoddard was stuck, however, thinking about how to do such a television program without getting caught up in the actual struggle of the takeover. Some time later, Stoddard's spouse suggested doing the project at a point in time ten years after the takeover.

At the time, *Amerika* was the most controversial television event ever broadcast by ABC. The network received more mail and phone calls about *Amerika* before it was on

Amerika

Photo courtesy of BBC

the air than the total pre- and post-broadcast viewer reaction of any other program in the history of ABC, including the end-of-the-world story, *The Day After*.

The critics of *Amerika* came from all sides of the political spectrum. Liberals feared the program would antagonize the Kremlin, jeopardize arms control and détente. The right thought the miniseries inadequately portrayed the brutality of the U.S.S.R. The United Nations thought the movie would erode its image.

Despite the pre-broadcast level of controversy, most of the public did not object to the miniseries. Research conducted by ABC before the broadcast indicated that 96% of the population over 18 years old did not object to the program. Most Americans felt strongly that they should have the right to decide for themselves whether they would watch the program.

While almost half the country watched *The Day After* (46.0 rating), *Amerika* was seen in 19% of all TV households. Despite lots of publicity, controversy and viewers, research conducted by Professor William Adams at George Washington University showed that attitudes about the things most critics thought would be influenced by *Amerika* did not change. What Americans thought about the Soviet Union, the United Nations, or U.S.-Soviet relations did not change in before and after surveys.

AMOS 'N' ANDY SHOW

U.S. Domestic Comedy

Like many of its early television counterparts, the *Amos 'n' Andy* television program was a direct descendent of the radio show that originated on WMAQ in Chicago on 19 March 1928, and eventually became the longest-running radio program in broadcast history. *Amos 'n' Andy* was conceived by Freeman Gosden and Charles Correll, two white actors who portrayed the characters Amos Jones and Andy Brown by mimicking so-called Negro dialect.

The significance of *Amos 'n' Andy*, with its almost thirty-year history as a highly successful radio show, its brief, contentious years on network television, its banishment from prime-time and subsequent years in syndication, and its reappearance in video cassette format is difficult to summarize in a few paragraphs. The position of the *Amos 'n' Andy* show in television history is still debated by media scholars in recent books on the cultural history of American television.

Amos 'n' Andy, was first broadcast on CBS television in June 1951, and lasted some two years before the program was canceled in the midst of growing protest by the black community in 1953. It was the first television series with an all-black cast (the only one of its kind to appear on prime-time, network television for nearly another twenty years).

The adventures of *Amos 'n' Andy* presented the antics of Amos Jones, an Uncle Tom-like conservative; Andy Brown, his zany business associate; Kingfish Stevens, a scheming smoothie; Lawyer Calhoun, an underhanded crook that no

one trusted; Lightnin', a slow-moving janitor; Sapphire Stevens, a nosey loud-mouth; Mama, a domineering mother-in-law; and the infamous Madame Queen. The basis for these characters was derived largely from the stereotypic caricatures of African-Americans that had been communicated through several decades of popular American culture, most notably, motion pictures.

The program's portrayal of black life and culture was deemed by the black community of the period as an insulting return to the days of blackface and minstrelsy. Eventually, the controversy surrounding the television version of *Amos 'n' Andy* would almost equal that of the popularity of the radio version.

Contemporary television viewers might find it difficult to understand what all the clamor was about. Why did the *Amos 'n' Andy* show go on to become one of the most protested of television programs?

Media historian Donald Bogel notes, "Neither CBS nor the programs' creators were prepared for the change in national temperament after the Second World War.... Within black America, a new political consciousness and a new awareness of the importance of image had emerged." Though hardly void of the cruel insults and disparaging imagery of the past, Hollywood of the post-World War II period ushered in an era of better roles and improved images for African-American performers in Hollywood. American motion pictures presented its first

Amos 'n' Andy

glimpses of black soldiers fighting alongside their white comrades; black entertainers appeared in sequined gowns and tuxedos instead of bandannas and calico dresses. Black characters could be lawyers, teachers and contributing members of society.

Post World War II African-Americans looked upon the new medium of television with hopeful excitement. To them, the medium could nullify the decades of offensive caricatures and ethnic stereotyping so prevalent throughout decades of motion picture history. The frequent appearance of black stars on early television variety shows was met with approval from black leadership.

African-Americans were still exuberant over recent important gains in civil rights brought on by World War II. They were determined to realize improved images of themselves in popular culture. To some, the characters in *Amos 'n' Andy*, including rude, aggressive women and weak black men were offensive. Neither the Kingfish nor Sapphire Stevens could engage in a conversation without peppering their speech with faulty grammar and mispronunciations.

Especially abhorred was the portrayal of black professionals. The NAACP, bolstered by its 1951 summer convention, mandated an official protest of the program. The organization outlined a list of specific items it felt were objectionable, for example, how "every character is either a clown or a crook," "Negro doctors are shown as quacks," and "Negro lawyers are shown as crooks." As the series appeared in June 1951, the NAACP appeared in federal court seeking an injunction against its premiere. To network executives, the show was harmless, not much different from *Life with Luigi*, *The Goldbergs*, or any other ethnically oriented show.

Moreover, the denunciation of *Amos 'n' Andy* was not universal. With its good writing and talented cast, the show was good comedy, and soon became a commercial success. The reaction of the black community over this well produced and funny program remained divided. Even the *Pittsburgh Courier*, one of the black community's most influential publications, which had earlier led in the protest against the motion picture *Gone With the Wind*, defended the show in an article appearing in June 1951.

In 1953, CBS reluctantly removed the program from the air, but not solely because of the efforts of the NAACP. As mentioned, the period featured a swiftly changing climate for race relations in the United States. Consideration for the southern market was of great concern to major advertisers. In an era when African Americans were becoming increasingly vocal in the fight against racial discrimination, large advertisers were reluctant to have their products too closely associated with black people. Fear of white economic backlash was of special concern to advertisers and television producers. The idea of "organized consumer resistance" caused advertisers and television executives to avoid appearing pro-Negro rights. One advertising agency executive, referring to blacks on television, noted in *Variety*, "the word has gone out, 'No Negro performers allowed.'"

Even with so much contention looming, the *Amos 'n' Andy* show remained in syndication well into the 1960s. Currently, video tape cassettes of the episodes are widely available.

ANCHOR

In U.S. television the chief news presenter(s) for network, local, cable and satellite news programming is known as the Anchor. The term distinguishes the presenter-journalist at the newsdesk in the television studio (or above the convention floor, etc.) from the reporter in the field. All news stories in a program are funneled through the anchor as he or she mediates between the public, the network or and other news reporters.

The most commonly cited source of the term is the television news coverage of the 1952 Republican presidential conventions; the metaphor is borrowed, not as one might expect, from the nautical realm, but from the strongest runner of a relay team, the anchorman, who runs the final leg of the race. In the conventional format of broadcast news, when the anchor is not personally delivering a story by directly addressing the viewing audience, or speaking over

June 1951–June 1953 Thursday 8:30-9:00
 Widely Syndicated thereafter until 1966

symbols and visual images of the news, he or she is introducing and calling upon reporters to deliver stories from the field or announcing a commercial break. Moreover, an anchor represents the public and its need to know whenever he or she interrogates and listens to the subject of an interview. National news anchors represent their respective networks and are held accountable for the ratings success of their respective news programs in attracting viewers. In keeping with this serious representational function, the anchor's style of delivery is reserved and his or her appearance is designed to convey credibility. In other words, the anchor is a television host at the top of a hierarchical chain of command with special reportorial credentials and responsibilities centered around "hard" or serious news of the day; celebrity interview and tabloid news shows have hosts, not anchors, even when they are organized similarly in format

to network evening news. Journalists in other television news formats without a similar division of labor between studio and field are not anchors strictly speaking.

Being delegated with the daily, prestigious responsibility for presenting national news has brought public exposure that has made some network television news anchors into household names. During his tenure as anchor of the CBS evening news, Walter Cronkite transcended the domain of broadcast news into becoming a widely-admired and "most trusted" national figure, eclipsing the fame of his cohorts, including the NBC newsteam Chet Huntley and David Brinkley; contemporary network anchors ABC's Peter Jennings, CBS' Dan Rather, and NBC's Tom Brokaw are national celebrities and highly-paid television stars. However, the role of the network anchor appears to be declining in cultural significance as the broadcast networks lose their dominance over the industry. The sheer numbers of anchors, for instance, the singles and pairs CNN rotates over its twenty-four hours of news programming, dilutes their potential star power.

Aside from abortive attempts to team Barbara Walters with Harry Reasoner and more recently, Connie Chung with Dan Rather, national news presenting has been a white male preserve. However, local anchor teams have long represented diversity in the community through a news couple of different race and gender, supplemented by reporters on the sports and weather beat and in the field. Even in the local context, however, gender distinctions are vital. The highly publicized case of Christine Kraft, anchor of KMBC-TV in Kansas City, Kansas, illustrates the willingness of executives to dismiss women considered "too old" or "too unattractive" to fill this highly visible role. Such judgments are rarely, if ever, made in cases involving male anchors, who are seen to develop "authority" and "gravity" as their physical glamour fades.

A secondary meaning of anchor comes out of semiology, or the study of signs and meaning. Roland Barthes' "The Rhetoric of the Image" also uses the anchor and relay metaphor to describe two different functions of the caption in relation to a still image: a caption anchors the image when it selectively elucidates its meaning; when it sets out meanings not found in the image itself, it acts as a relay. The television news anchor may be said to function similarly as an "anchor" in this extended sense, by presenting a selection of events as news stories and by providing a

framework for the interpretation of their social and cultural meaning.

ANCILLARY MARKETS

In the American television industry the term "ancillary markets" generally refers to markets for feature films created by new television technologies. Before television, American films played only in motion picture theaters, and the only ancillary markets were found in theaters in international markets around the world. But the rise of com-

mercial television in the 1950s and of pay cable and home video in the 1980s created additional venues for Hollywood product. Today, a feature film first opens in motion picture theaters to establish its box-office value and critical reputation. It is then released to ancillary markets in the following order: (1) home video (videocassette rental); (2)

pay cable (premium cable services such as HBO, Showtime, and Cinemax); (3) network television; (4) cable television; and (5) television syndication. This distribution pattern is designed to maximize the full economic potential of each market, or "window" as it is called in the trade. With the exception of home video, which has a window that remains open almost indefinitely, a new feature is exploited in one market at a time. In each window, the price paid by the consumer to view the picture drops. Economists call this process price tiering: a film is first released to theaters where it is viewed for a period of months at top prices by "high value" consumers, i.e., to those who are most anxious to see the film and are willing to pay \$7 and more for a ticket. The film is then released at contractually specified intervals to "lower value" consumers at prices that decline with time. A consumer willing to wait two to three years to view a film can finally receive it "free" over network television. Thus, the distribution pattern taps every segment of the market in an orderly way and at a price commensurate with its demand.

Historically, the first domestic ancillary market for feature films was created in the early 1960s when television networks first scheduled recent vintage Hollywood features in prime time. NBC began this practice on 23 September 1961 by programming "NBC Saturday Night at the Movies." Envious of NBC's successful strategy, ABC became the second network to program a prime time series of features. In 1962 the network launched "Hollywood Special" to bolster its Sunday night ratings with a package of films from United Artists. CBS, the television industry's leading network in this period, did not add a prime time feature film program until 1965 when it moved to strengthen a weak Thursday night.

Feature films had, of course, been a programming staple on television from the early days of the medium. Most of these movies were of pre-1948 vintage, however, and were used mainly to fill fringe time slots, particularly the afternoon and late evening. The first features came from Poverty Row studios, independent producers, and foreign film distributors. But Hollywood soon felt the effects of television's huge popularity. Strapped for cash as a result of the inroads TV had made on motion picture audiences many of the major studios began in 1955 either to sell off their libraries of old films to television syndicators or to create their own separate departments to handle distribution of films to television.

The majors were free to dispose of the pre-1948 films because they controlled television performance rights and all ancillary rights to their pictures. But the Hollywood talent unions, or guilds as they are called, demanded residual compensation to guild members who appeared in features made after 1 August 1948 and subsequently rented to television. Anticipating a boost in demand for recent vintage films when the networks converted to color television, the studios reached a settlement with the guilds in 1960 and began supplying the networks with a steady flow of product

the year round. By the 1960s, the distribution pattern for feature films had thus become, theaters first, then eighteen months after the close of the theatrical run, network television, and then syndicated television.

Pay television and home video opened up still other new opportunities for filmed programming. Pay television came into its own in 1975, when Home Box Office, a venture of Time Inc., offered to cable subscribers, via satellite, the first of the so-called "premium services" consisting of recent, uncut, and uninterrupted films, sports events, and other specially-produced programming. After court battles in which HBO successfully challenged the right of the Federal Communications Commission to protect broadcast television, other premium services such as Showtime, the Movie Channel, and Cinemax entered the business. The distribution pattern in ancillary markets was therefore altered to accommodate these pay-TV services. The premium cable services became the second programming "window," following theatrical release and preceding broadcast network programming.

Although video tape recorders hit the market on the heels of HBO, home video did not become a significant force until the 1980s when Hollywood devised a way to accommodate the new technology. In response to pay-TV's ability to finance its own productions or to form alliances with independent producers, thereby circumventing the established studios, the Hollywood majors decided to release new films to home video prior to their availability on pay-TV. At the same time the studios made thousands of older movie titles available on videocassette. These strategies provided the necessary product diversity to differentiate home video from both the theatrical and pay-TV markets and to enable home video to become Hollywood's premier revenue source.

THE ANDY GRIFFITH SHOW

U.S. Situation Comedy

The *Andy Griffith Show* was one of the most popular and memorable comedy series of the 1960s. In its eight years on the air, from 1960 to 1968, it never dropped below seventh place in the seasonal Nielsen rankings, and it was number one the year it ceased production. The series pilot originally aired as an episode of *Make Room For Daddy*, a popular sitcom starring Danny Thomas. Sheldon Leonard produced both shows for Danny Thomas Productions.

An early example of television's "rural revolution," *The Andy Griffith Show* was part of a programming trend which saw the development of comedies featuring naïve but noble "rubes" from deep in the American heartland. The trend began when ABC debuted *The Real McCoys* in 1957, but CBS became the network most associated with it. The success CBS achieved with *The Andy Griffith Show* provided the inspiration for a string of hits such as *The Beverly Hillbillies*, *Green Acres*, *Petticoat Junction*, and *Hee Haw*. Genial and comparatively innocuous, these shows were just right for a time when TV was under frequent attack by the Federal Communications Commission (FCC) and Congressional committees for its violent content.

Sheldon Leonard and Danny Thomas designed *The Andy Griffith Show* to fit the image of its star. Griffith's homespun characterizations were already well-known to audiences who'd seen his hayseed interpretations of Shakespeare on *The Ed Sullivan Show* and his starring roles in the films *A Face in the Crowd* (1957) and *No Time for Sergeants* (1958). On *The Andy Griffith Show*, he played Sheriff Andy Taylor, the fair-minded and easygoing head lawman of the Edenic small town of Mayberry, North Carolina. Neither sophisticated nor worldly-wise, Andy drew from a deep well of unpretentious folk wisdom that allowed him to settle domestic disputes and outwit the arrogant city folk who occasionally passed through town. When he wasn't at the sheriff's office, Andy, a widower, was applying his old-fashioned horse sense to the raising of his young son Opie (Ronny Howard), a task he shared with his Aunt Bee (Frances Bavier).

Mayberry was based upon Andy Griffith's real hometown, and perhaps this was partially responsible for the strong sense many viewers got that Mayberry was a real place. Over the years the writers fleshed out the geography and character of the town with a degree of detail unusual for series television. The directorial style of the series was also strikingly distinct, employing a relaxed, almost lethargic tone appropriate to the nostalgic settings of front porch, sidewalk, and barber shop. The townspeople, and the ensemble of actors who portrayed them, were crucial to the success of the show. Most of these characters were "hicks," playing comic foils to the sagacious Andy. Gomer Pyle (Jim Nabors) and his cousin Goober (George Lindsey) came right out of the "bumpkin" tradition that had been developed years ago in films, popular literature, and comic strips. Town barber Floyd Lawson (Howard McNear) was a font of

misinformation and the forerunner of *Cheers*' Cliff Clavin. Otis (Hal Smith), the unrepentant town drunk, was trained to let himself into his jail cell after a Saturday night bender and to let himself out on Sunday morning. Without much real police work to attend to, Andy's true job was protecting these and other citizens of Mayberry from their own hubris, intemperance, and stupidity.

Most of Andy's time, however, was spent controlling his earnest but over-zealous deputy, Barney Fife. Self-important, romantic, and nearly always wrong, Barney dreamed of the day he could use the one bullet Andy had issued to him. While Barney was forever frustrated that Mayberry was too small for the delusional ideas he had of himself, viewers got the sense that he couldn't have survived anywhere else. Don Knotts played the comic and pathetic sides of the character with equal aplomb and was given four Emmy Awards for doing so. He left the show in 1965 and was replaced by Jack Burns in the role of Deputy Warren Furguson.

The Andy Griffith Show engendered two spin-offs. *Gomer Pyle, U.S.M.C.* was a military sitcom featuring Gomer in the Marines. *Mayberry, R.F.D.* was a reworking of *The Andy Griffith Show* made necessary by Griffith's departure in 1968. Like the parent show, the spin-offs celebrated the honesty, the strong sense of community, and the solid family values supposedly inherent in small town life.

The Andy Griffith Show

By the late 1960s, however, many viewers, especially young ones, were rejecting these shows as irrelevant to modern times. *Mayberry's* total isolation from contemporary problems was part of its appeal, but more than a decade of media coverage of the civil rights movement had brought about a change in the popular image of the small Southern town. *Gomer Pyle, U.S.M.C.* was set on a U.S. Marine base between 1964 and 1969, but neither Gomer nor any of his fellow soldiers ever mentioned the war in Vietnam. CBS executives, afraid of losing the lucrative youth demographic, purged their schedule of hit shows that were drawing huge but older audiences. *Gomer Pyle, U.S.M.C.* was in second place when it was canceled in 1969. *Mayberry, R.F.D.*, and the rest of the rural comedies, met a similar fate within the next two seasons. They were replaced by such "relevant" new sitcoms as *All in the Family* and *M*A*S*H*.

The Andy Griffith Show remains an enduring favorite in syndicated reruns. New fan books about the program, including a cookbook of favorite dishes mentioned in specific episodes, continued to appear nearly thirty years after the end of the original network run. In 1986, a reunion show brought together most of the original cast and production team. *Return To Mayberry* was the highest-rated telefilm of the season.

ANNENBERG, WALTER

U.S. Media Executive/Publisher/Diplomat

As a media magnate Walter Annenberg controlled important properties in the newspaper, television, and magazine industries. Perhaps most significantly, he was responsible for the creation of *TV Guide*, the largest circulation weekly magazine in the world, a magazine central to understanding television in America. He was also very active in the arena of American politics, and served as U.S. ambassador to the Court of St. James. In his later life, Annenberg became renowned for his substantial philanthropic activities, which included significant donations to educational institutions and public television.

When his father was imprisoned for tax evasion, Annenberg took over the family publishing business. Triangle Publications, particularly *The Daily Racing Form*, proved to

Howard Sprague (1966–68) Jack Dodson
Emmett Clark (1967–68) Paul Hartman
Thelma Lou (1960–65) Betty Lynn
Warren Ferguson (1965–66) Jack Burns
Mayor Stoner (1962–63) Parley Baer
Jud Crowley (1961–66) Burt Mustin

PRODUCERS Louis Edelman, Sheldon Leonard

be extremely profitable, and Annenberg looked for ways to expand his company at the time television was beginning to emerge as America's communications medium of the future. Inspired by a Philadelphia-area television magazine called *TV Digest*, Annenberg conceived the idea of publishing a national television feature magazine, which he would then wrap around local television listings. The idea came to fruition when Annenberg purchased *TV Digest*, along with the similar publications *TV Forecast* from Chicago, and *TV Guide* from New York. He combined their operations to form *TV Guide* in 1953, and quickly expanded the magazine by creating new regional editions and purchasing existing television listings publications in other markets.

Annenberg and his aide, Merrill Panitt (who would go on to become *TV Guide*'s editorial director), realized that in order to achieve the circulation necessary to make their publication a truly mass medium, they needed to go beyond the fan magazine approach that had been typical of most earlier television and radio periodicals. Because of this desire, they created a magazine that was both a staunch booster of the American system of television, and one of the most visible critics of the medium's more egregious perceived shortcomings. *TV Guide*'s editors often encouraged the magazine's readers to support quality television programs struggling to gain an audience. In fact, *TV Guide*'s greatest accomplishment under Annenberg may have been the magazine's success in walking the fine line between encouraging and prodding the medium to achieve its full potential without becoming too far removed from the prevailing tastes of the mass viewing public. As a consequence, *TV Guide* became extremely popular and widely read, and very influential among those in the television industry. A large number of distinguished authors wrote articles for the magazine over the years, including such names as Margaret Mead, Betty Friedan, John Updike, Gore Vidal, and Arthur Schlesinger, Jr. Many of these writers were attracted by the lure of reaching *TV Guide*'s huge audience; at its peak in the late 1970s, *TV Guide* had a paid circulation of nearly 20 million copies per week.

Annenberg remained supportive of conservative political causes through the years, and his efforts on behalf of Republicans were rewarded with his designation by President Richard Nixon as U.S. ambassador to Great Britain in 1969. The appointment led Annenberg to sell his newspapers and television stations, but he retained *TV Guide* and remained active in managing the publication throughout his five-year tenure as ambassador.

Shortly after the election of his close friend, Ronald Reagan, as president in 1980 (he would endorse Reagan's re-election campaign in 1984 in *TV Guide*, the only such political endorsement ever to appear in the magazine), Annenberg announced a plan to provide the Corporation for Public Broadcasting with \$150 million in funds over a fifteen-year period to produce educational television programs through which viewers could obtain college credits. Annenberg's sympathy for educational causes had already been evidenced by his financial support of the Annenberg Schools of Communication at both the University of Pennsylvania and at the University of Southern California. His activities in this regard would grow even more pronounced in the years to come, particularly after his sale of *TV Guide* and Triangle Publications to Rupert Murdoch's News Corporation in 1988 for approximately \$3 billion—at the time, the largest price ever commanded for a publishing property.

Annenberg continued to make news after his sale of Triangle because of his many substantial donations to educational causes. In addition, Annenberg was also one of the country's foremost collectors of art, and in 1991, he be-

Walter Annenberg

queathed his extensive collection—valued at more than \$1 billion—to New York's Metropolitan Museum of Art. His post-Triangle era of charitable activities in the areas of education, art, and television served to further assure Annenberg's lasting legacy to a wide spectrum of American culture.

ANTHOLOGY DRAMA

Anthology drama was an early American television series format or genre in which each episode was a discrete story/play rather than a weekly return to the same setting, characters, and stars. In the history of American television the anthology dramas that were broadcast live from New York are often considered the epitome of the genre and of television's "golden age" of the 1950s. While television was otherwise maligned as low-brow and crassly commercial, live anthology dramas represented, at least to some observers, the best of 1950s television. There were, however, several variations on the anthology drama series, and not all were critically acclaimed. A staple of late 1940s and 1950s programming, the last anthology dramas left the airwaves by the mid-1960s.

In 1946–47, a series of monthly dramas were presented on NBC's New York station as *Television Theatre*. However, its schedule was erratic, and it was NBC's *Kraft Television Theatre* that became not only the first weekly anthology drama but the first network television series in 1947. It was followed by several other series in 1948, including *The Ford Television Theater*, *Studio One*, *Philco Television Playhouse*,

and *Actors' Studio*. These were hour-long dramas broadcast live from New York. Over the next several years, numerous such series appeared on the airwaves, among them, for example, *Robert Montgomery Presents*, *Celanese Theater*, and *The U.S. Steel Hour*. Critics praised the live, hour-long dramas for their presentations of adapted literary classics, serious dramas, and social relevance. The evocation of Broadway created prestige.

Live half-hour series appeared by 1950, such as *Colgate Theater*, *Lights Out*, *Danger*, and *Lux Video Theatre*. Some were thematic, creating continuity and programming niches. For instance, *Danger* and *Lights Out* specialized in suspense. With a few exceptions, these half-hour series were not critically acclaimed. Critics complained of dramas squeezed into half-hours.

The half-hour format quickly became the province of filmed anthology dramas produced in Hollywood. Critics liked these even less. In contrast to the high-brow, Broadway play connotations of the live New York series, critics associated filmed dramas with Hollywood, with low-brow entertainment. But there were all kinds of filmed anthologies just

Playhouse 90: Requiem for a Heavyweight

Photo courtesy of Wisconsin Center for Film and Theater Research

as there were all kinds of live anthologies. The first filmed anthology series was *Your Show Time* in 1949. Lasting only a few months, it was followed that same year by the first successful filmed anthology drama, *Fireside Theatre*. Other network filmed anthology dramas were *Four Star Playhouse*, *The Loretta Young Show*, and *Hollywood Opening Night*. Like some of the live productions, filmed anthologies sometimes also programmed for special interests. *The Loretta Young Show*, for example, was targeted to women. Some filmed anthology dramas were produced specifically for syndication. Examples include *Douglas Fairbanks Presents*, *Death Valley Days*, and *Crown Theatre Starring Gloria Swanson*. *Death Valley Days* was one of the few anthology dramas with a Western theme.

In the earliest years, literary works in the public domain provided the stories for the anthology dramas. There were no experienced television writers and the early industry could not afford experienced writers from other fields. Tele-

vision writers and original television dramas soon appeared, however, and writers as well as critics and audiences recognized the potential power of small-scale, intimate drama created for the new medium. Writers like Rod Serling and Paddy Chayefsky helped refine the form and found critical success writing anthology dramas. Serling would go on to host his own filmed anthology series, *The Twilight Zone*. By the mid-1950s, original television dramas were providing material for feature films. *Marty*, *12 Angry Men*, *No Time for Sergeants*, *Requiem for a Heavyweight*, and other original television plays were made into motion pictures.

Actors and directors also found opportunities on anthology dramas. At a time when the Hollywood studio system was disappearing, television offered jobs and public exposure. Little-known actors and actresses like Charlton Heston and Grace Kelly, as well as older Hollywood stars like Lillian Gish and Bette Davis, acted in anthology dramas. Some stars of Old Hollywood, such as Loretta Young,

Douglas Fairbanks, and Barbara Stanwyck, had their own anthology series. Directors who would go on to motion picture work include Sidney Lumet and Arthur Penn.

By the later 1950s, competition from the increasingly successful continuing character series filmed in Hollywood led to other innovations in the anthology drama format. *Playhouse 90* presented 90-minute plays. *Matinee Theater* presented live, color dramas five days a week. *Lux Video Theater* and some others switched from live to filmed dramas. Production moved to Hollywood. During its final season in 1957–58, *Kraft Television Theatre* was the last anthology drama broadcast live from New York.

By the end of the decade, the anthology drama was on its way out. A number of factors led to its demise. Coming up with new, quality dramas and characters every week became increasingly difficult. Some anthology dramas had presented controversial episodes, with well-publicized battles with sponsors who wanted to stick with what they considered middle-of-the-road, non-controversial entertainment. Their attitudes, combined with their ultimate power, discouraged some writers and directors from working in the genre. The days of the glamorous Hollywood star as host were also numbered, and anthology dramas like *The Loretta Young Show* and *The Barbara Stanwyck Show* were canceled. Filmed programming, with its possibilities for an economic afterlife in syndication, had greater profit potential than live production. With television production shifting to Hollywood, more action-oriented genres could now be cranked out. And it seemed that audiences (comprising over 90% of American homes by the end of the 1950s) preferred them.

ARBITRON

U.S. Ratings Service

Arbitron is the name for a media research product developed by the American Research Bureau (ARB), a company which became a major institution in developing television ratings. The company's founders were Jim Seiler and Roger Cooper. Prior to 1950 when about 10% of U.S. homes had television, Seiler was experimenting on the East coast to develop a satisfactory method for measuring television audiences. Around the same time, Cooper was also testing methods to develop audience data for TV station and advertiser use in the Los Angeles area.

At the time television viewing was being measured by several different groups using varied techniques such as telephone coincidentals (calls made to viewers during television broadcasts), recalls (telephone calls made on days subsequent to broadcasts), and even door-to-door questionnaires. The common element that brought Cooper and Seiler together was that each found that distributing a viewing diary had distinct advantages in developing audience ratings for this new medium. View-

Few examples of the live productions from anthology dramas remain today. Most were not preserved on film and the few that are available were preserved by filming them off of TV screens (kinescopes). Even many of the filmed programs have disappeared. Perhaps the anthology drama legacy remains today in the made-for-TV movie.

—Madelyn Ritrosky-Winslow

ers could be measured from early morning to late night without being bothered by telephone. Moreover, audience composition, as well as household ratings, could be developed. Audiences outside normal dialing areas could be measured and net weekly cumulative audiences could be produced.

The two researchers joined forces, incorporated and established headquarters in Washington, D.C. At about the same time, John Landreth formed a company called Television National Audience Measurement Service. In 1951 he

was directed to ARB and after a meeting with Seiler and Cooper, became the third partner in the research endeavor.

ARB developed its own methodology for audience measurement. First, a random sample of homes was drawn from telephone directories of the area surveyed. These households were then contacted to determine whether or not a TV was present. One diary, with an explanatory letter, was mailed to the chosen respondents. Each television set in the house was monitored with a separate diary. The diary keeper in the home would record television viewing at fifteen minute periods day-by-day for seven days and then return the diary. It was determined that four weekly samples would be the basis for each market research report. Diaries were tabulated manually and a simple report was prepared on a program-by-program basis during prime time. A Monday-Friday combination report was prepared for daytime programming.

In the early 1950s ARB was ready to expand its operation. The Federal Communications Commission (FCC) lifted its 1948 freeze on new station license allocations in July 1952 and many new stations began telecasting. Advertising agencies needed a service to measure viewing in the increasing number of rapidly developing television markets. In 1952 ARB was measuring 15 TV markets. In order to position itself as the industry leader, the organization took a quantum leap and expanded to 35 markets. Ad agency support and useage of the company's TV market reports followed and enabled ARB to be a pioneering leader in the exciting new field of audience measurement.

By the late 1950s, it became obvious that a better way had to be found to develop the diary data. Manual tabulation of the data from diaries was impossibly slow. ARB moved its headquarters to Beltsville, Maryland and installed a UNIVAC tabulation method and report preparation. The newly utilized system almost put the company out of business.

The first reports produced by the system were woefully late; in some markets the reports made no sense. Gradually the company worked its way out of its dilemma. By the 1961-62 television year, ARB was on a better footing and had generally solved the problems it had endured. The new computer equipment gave the company the capability to expand its market reports to include needed data on specific demographic groups, making them invaluable tools for advertisers and their agencies to buy and sell spot television time.

By the early 1960s, homes owning a TV set had increased dramatically and hundreds of additional television stations had begun telecasting. Hundreds of thousands of diaries were being placed in American homes each year. By 1967 ARB had clearly defined 225 television markets. It produced television market reports called "sweeps" twice per year for every television market, and from four to seven times a year for the larger major markets. The sweeps provided comparative cumulative data for an entire week. TV's advantage as an advertising medium was thus well documented

and appreciated; hundreds of millions of dollars were pouring into station and network coffers.

At this time, as a result of demands from advertising agencies, a new and exclusive market definition was introduced in ARB reports called the "Area of Dominant Influence." The ADI was a collection of counties in which the viewing of particular stations in the market was dominant. Some station executives violently objected complaining the new ratings did not reflect the true size of their station's reach. To counter this, ARB continued to report total homes viewing the station and demographic characteristics of the total audience.

From its inception, ARB's major competitor was the A.C. Nielsen Company. In the local market field, ARB was usually considered the innovative force, normally reacting quickly to what the ad agencies needed in the report. Although many advertising agencies subscribed to both rating services, ARB usually had a larger list of user agencies. In the larger TV markets a majority of stations were subscribers to both rating services.

During the decade of the 1980s, the two services were caught up in a rapidly changing electronic media market place. Arbitron delivered reports on cable penetration and cable viewing within specific markets. A large investment was made in ScanAmerica, a unique service that combined viewing estimates with product purchase surveys. Additional investments were made to change methods of measurement. In larger markets diary surveys were converted to an automated system that used a sample in which special equipment was attached to the television set. Viewing data from the meter was carried through telephone lines to an electronic data center. In the larger TV markets metered research provided reports on a more timely basis; indeed, even overnight program ratings were now available.

These very sophisticated research methods were not only costly to install but also expensive to maintain. This resulted in substantial increases in the cost of market reports. TV stations had always borne most of the cost for the audience research. Both Arbitron and the Nielsen Company charged agencies a token amount for the complete package of all market reports produced.

In the competition Arbitron began losing market share. By the end of the decade it had 19 metered markets, to Nielsen's 29 and ARB had a declining number of TV stations subscribing to market reports based on the viewing diary.

Finally, in the fall of 1993, Arbitron president Stephen Morris declared that his company was out of the television measuring business citing a marketplace that would not support, as in the past, two rating services. It was revealed that approximately 275 stations subscribed to both Arbitron and Nielsen local market reports. But Arbitron's lists of exclusive station subscribers had dwindled to 180 clients while Nielsen could claim 359 exclusive subscribers.

As a company, Arbitron is still in existence. It continues to successfully measure radio listening audiences, using the personal diary, and its research reports are widely used

in the radio industry. According to Mr. Morris, Arbitron would continue to provide specialized TV audience research for television stations and advertising agencies. But for the first time in nearly forty years, the sales offices of TV stations and the research departments of ad agencies were dependent on a single source of local market research reports.

—C.A. Kellner

ARCHIVES FOR TELEVISION MATERIALS

The study of television has long been hampered by the lack of sufficient archival resources, and this difficulty is indicative of larger social and cultural attitudes toward the medium. Long seen as culturally suspect if not defined outright as "inferior," television was considered unworthy of preservation. This situation has been most acute in the United States, where the identification of TV with commercial culture led to the notion that the material could simply be thrown away with no loss. Indeed, when television networks found themselves short of vault and storage space, the destruction of television on videotape or film was seen as profitable.

In those countries whose television systems were grounded in notions of public service circumstances have been somewhat different. The National Film and Television Archive in the United Kingdom has been more active in preserving television materials, for instance. Even in these countries, however, the lack of full sets of programs, the difficulties encountered in funding storage and preservation, and an almost complete disregard for such ancillary materials as corporate records and production notes, make it difficult to study television, prepare its histories, or understand its development and change.

This situation is changing, however, throughout the world. More and more producers, companies, distributors and exhibitors are coming to value the works they create and disseminate. Scholarly and critical attention to the medium—as well as the economic usefulness of "vintage" television has led to more and more attention to the TV past. Collectors and archivists alike have now begun to gather and make available more television material, some thought lost.

U.S. television material is archived at a number of government, private, corporate, and university sites. The Library of Congress in Washington, D.C., contains within its Division of Motion Pictures, Broadcasting and Recorded

Sound approximately 80,000 television programs, with a particular emphasis on prime-time entertainment series. The NBC Collection at the Library of Congress is made up

*The archives of the Museum of Broadcast Communications
Photo courtesy of the Museum of Broadcast Communications*

of programming from 1948 to 1977 in a wide variety of genres including sports, game shows, children's programs and daytime television, excluding news. The NET (National Educational Television) Collection is a repository of over 10,000 titles from early non-commercial U.S. television.

The Film and Television Archives at the University of California at Los Angeles (UCLA) houses one of the nation's preeminent collections of media materials. The television collections, which date from 1947, are particularly focused on drama, and include episodes of *The Jack Benny Show*, *Texaco Star Theatre*, *The Colgate Comedy Hour*, and *The Smothers Brothers Comedy Hour*. The Paramount Television collection is made up of programs from the early 1960s to the present. Most national and local Emmy Award-winning programs can be found in the UCLA Archives.

The Academy of Television Arts and Sciences in North Hollywood, California, a co-sponsor of the UCLA archives, also houses an archive of tapes, kinescopes, and films from the earliest days of television to the present. The academy also provides information about Emmy Awards, prime-time credits and biographies of performers, directors, producers and agents. Most services are available only to academy members.

The Archives of Performing Arts at the University of Southern California, also in Los Angeles, contain numerous programs and scripts from the "golden age" of U.S. television, as well as more contemporary materials.

The Wisconsin Center for Film and Theatre Research in Madison, Wisconsin, was one of the pioneer collections in television, and has extensive holdings of original kinescopes, scripts, still photographs, and production information. The ZIV Television Collection contains nearly 2,000 shows produced between 1948 and 1962 by one of the most successful producers of dramatic programs for first-run syndication use in early television. The Fred Coe collection contains copies of successful anthology dramas such as *Playhouse 90* and *Goodyear Playhouse*. There are prints of many of the Ed Sullivan variety programs and MTM Enterprises shows such as *The Mary Tyler Moore Show* and *Bob Newhart*.

The Museum of Television and Radio (MTR) in New York City houses approximately 25,000 programs from network, cable, and local broadcasts. The collection is made up of material from 1939 to the present. Users of the MTR are able to access a computerized database to select programs they wish to view, then screen them in individual carrels without ever handling the videotape. A separate area is set aside for scholars and researchers.

The Museum of Broadcast Communications (MBC) in Chicago works in a similar manner, providing a computerized database, individual viewing arrangements and a staff available for questions or special requests. The MBC collections include extensive materials related to local Chicago programming and the "Chicago School" of television with shows by Studs Terkel, Dave Garroway, and Burr Tillstrom. Other special features include collections of ABC-TV programs such as *Wide World of Sports*, episodes of American

Bandstand found in the Dick Clark collection, the Steve Allen Collection focusing on Allen's work, the Chicago Television News Archive, and special collections of award-winning children's programming. Documentaries, television westerns such as *Gunsmoke* and *Bonanza*, and popular comedy programs from the 1950s to the 1990s can be found in the collection.

The Vanderbilt University Television News Archive in Nashville, Tennessee, was founded in 1968 to systematically preserve the most widely-viewed television newscasts, and contains news material from ABC, CBS, NBC, and CNN. The archive also maintains an on-line database.

The George Foster Peabody Collection at the University of Georgia in Athens contains copies of all submissions to the annual competition for the prestigious Peabody Awards for Excellence in Broadcasting. Documentary, entertainment, news, public service, children's, and educational television programs are held in the collection and represent not only United States, but international entries.

The WGBH Educational Foundation Archives in Boston were organized in 1979 to store and preserve program materials produced by the Boston PBS affiliate. The archives represent one of the largest collections of public television programming in the country.

The ABC Library News Information Department in New York maintains a collection of television news material produced by the network. Particular emphasis is given to broadcasting during World War II, the Cold War, and the Vietnam War era. Similarly, the NBC News Archival Services in New York provide scholarly access to news and documentary material from 1940 to the present. In addition, Worldwide Television News (WNT) in New York maintains the film and videotape libraries of British Pathe News (1896-1966), United Press International (UPI) News Films (1963-67), and UPITN (WTN, 1967-present).

In the United Kingdom, the National Film and Television Archive in London houses the most prominent collection of television archival material and receives particular funding for the preservation of ITV and Channel 4 programs.

In Canada, television archives are maintained at the Canadian Broadcasting Corporation Program Archives in Toronto, and the Public Archives in Ottawa, which contain over 30,000 Canadian film and television programs.

Australian materials may be found in two major locations. For historical material from the 1950s to around 1980, the best collection of video material is housed at the National Film and Sound Archives, McCoy Circuit, Acton, Australian Capital Territory. For television documentaries, telemovies, drama series and serials from 1980 onwards, the Library of the Australian Film, Television and Radio School in North Ryde, New South Wales holds the primary collection.

As more and more scholars and researchers recognize that television has been central to the social and cultural history of this century, it is likely to be the case that more careful attention will be given to the preservation of television materials. Fortunately, newer technologies, such as dig-

ital recording offer advantages both in matters of storage space and longevity and ease of access for the materials. While it is unlikely that the record of television content can ever be reconstructed with the degree of thoroughness long available for the written record, it is likely that a more complete accounting will be available in the future.

—Diane M. Negra

ARGENTINA

Argentina is one of the most important television and cable markets in Latin America. After Brazil and Mexico, it has the largest number of television receivers in the region (7,165,000 receivers/4.6 persons per receiver, according to the *Britannica Book of the Year*, 1994). Its cable penetration is the highest in Latin America (52%, according to *Producción and Distribución*, 1995). Domestic programmes actively compete with foreign productions, and popular genres include variety shows, sitcoms, telenovelas, and sports and children's programs. The history of television in this country is characterized by cyclical patterns of state and private media ownership which parallel the changes occurring in the political and economic arena.

Argentine television began its transmissions in 1951 through channel 7, during the presidency of Juan Domingo Perón. Jaime Yankelevitch, a pioneer of the medium in the country, was a local radio entrepreneur who traveled to the United States to buy the equipment needed for television broadcasting. Initially, the transmitters were operated by the Ministry of Public Works, and the legal framework established the state as the owner of the broadcasting service. During this time, the government had absolute control over television, even though advertising spots were sold to commercial advertisers from its inception.

The military government of Pedro Eugenio Aramburu that overthrew Perón instituted private television in 1957 through the enactment of the decree 15,460. With the intention of controlling the dissemination of messages, this decree-law also prohibited the existence of broadcasting networks in the country. The stations in Buenos Aires could not send signals to the rest of the country, and as a result many independent stations with limited coverage emerged throughout the country. The first pay-TV systems were founded in 1962–63. They used CATV technology, coaxial cables, and inexpensive equipment, and bought most of their programming from the broadcast stations in Buenos Aires. Ironically, the pay-TV stations that resulted from the 1957 prohibition stand at the root of the high cable penetration and the economic boom in the Argentine cable business today.

The first private channels in the capital city of Buenos Aires started operating in 1960—channels 9, 13, and 11. Though Argentine law prohibited foreign ownership of TV channels, at first the American networks managed to make “back-door” deals with the local stations by creating parallel production companies. Foreign investment could flow to these companies because they were not limited in terms of ownership. Thus the American television corporation NBC invested in channel 9 through the production company Telecenter, ABC invested in channel 11 through Telerama, and CBS and Time-Life invested in channel 13 through Proartel. In this way the American networks became partners of the private Argentine channels.

The founder of channel 13 was Goar Mestre, a famous Cuban broadcasting entrepreneur who left Cuba when Fidel Castro came to power in 1959 and emigrated to Argentina. Because Mestre was married to an Argentine, his wife was able to become the owner of the license for channel 13. At the same time, Mestre established a financial arrangement with CBS and Time-Life in which he owned 60% of Proartel (Producciones Argentinas de Televisión), channel 13's production company. As Elizabeth Fox argues in *Media and Politics in Latin America* (1988), the entrance of foreign capital had a strong impact on national broadcasting, by exposing Argentina to large investments in advertising and driving the development of mass consumption markets.

In the mid-1960s national entrepreneurs invested in the majority stocks of the three private channels, and the American networks withdrew from the market. In 1965, Alejandro Romay bought channel 9. In the early 1970s, the Vigil family, owner of the publisher Editorial Atlántida, invested in channel 13, and Héctor Ricardo García, from the publisher Editorial Sarmiento, invested in channel 11. In *Quién te ha visto y quién* (1988), Argentine television expert Pablo Sirvén considers the sixties the best years of private television, a period characterized by the high competition between the stations, and the success of their programming.

Yet this golden period came to an end in 1974 when the third Peronist government decided that the private

licenses should return to the state and expropriated the major television stations. Silvio Waisbord indicates that the rationale for deciding not to renew their commercial licenses was based on the defense of the national interest, the elimination of commercialism, and the advancement of cultural goals. However, the state's appropriation of private channels brought no major changes because the stations continued to be supported by advertising and the programming was produced by the same production companies as before. The government did not fulfill its promise to support the national industry and no cultural programming was produced. As re-runs of old programs and movies became commonplace, both audiences and advertising declined and the stations needed additional state support to continue operating.

The fact that all television channels were state-owned played directly into the hands of the military dictatorship during the period from 1976 to 1983. The military exercised tight ideological control over the content of all programming, and there were "black lists" with the names of prestigious producers, scriptwriters, and actors who could not work in television. The 22,285 broadcasting law enacted during this period dealt extensively with the content of the programming. Any appeal to violence, eroticism, vice, or crime was prohibited, as well as any content that challenged the ethical, social, or political norms of the country. During this period, in 1980, the first color transmissions began for the national market.

During the dictatorship, all state units, including all television stations, were allocated one-third to the army, one-third to the navy, and one-third to the air-force. Channel 9 went to the army, channel 11 to the air force, channel 13 to the navy, and channel 7 to the Presidency. While the military government managed to keep an intense ideological control over the content of the programs, their poor administration of the stations indebted them to the point of bankruptcy. For instance, in order to compete with each other, each of the three branches of the armed forces paid enormous sums of money to hire famous stars. Yet the revenues generated by advertising were not enough to cover these expenses.

The military regime was in principle against any kind of state intervention in the economy. Unlike previous governments that had tried to promote the national industry, the last military government eliminated all tariffs and protectionistic measures impeding the free flow of goods in the marketplace. However, in the area of communication their free-market policies were not so clear. Oscar Landi writes in *Devórame Otra Vez* (1988) that the military intended to privatize the channels while keeping them under their ideological control at the same time. Given this ambivalence, the process of privatization undertaken during this period with the enactment of the 1980 Broadcasting Law was intentionally slow, and started with the smaller stations in the provinces. Only in 1984, during the democratically elected government of Raúl Alfonsón, did the wave of privatization reach Buenos Aires. It was at this point that channel 9 returned to its previous owner, Alejandro Romay.

Notwithstanding the elimination of all censorship and "black lists," the communication sector inherited by Alfonsón still operated under the legal legacy of the military regime and was highly inefficient. As a result, cable television, particularly in the interior of the country, developed without regulation, and television channels continued to violate the legal limit of advertising time. Despite many attempts, the Alfonsón administration did not succeed in reforming the broadcast sector. This failure is generally attributed to the gridlock resulting from the strong economic and political pressures that operated during the transition to democracy.

President Menem learned his lesson from Alfonsón's experience, and early in his administration implemented by decree the "Law of State Reform" which included, among other state enterprises, the privatization of channel 11 and channel 13 in December 1989. At this point the deregulation of broadcasting acquired full force. Today there are five superstations in Buenos Aires, four of them are privately owned (channels 2, 9, 11, and 13) and one remains public (channel 7/Argentina Televisora Color).

The loosening of cross-media ownership allowed for the emergence of national media conglomerates. Publishers had extensively lobbied for this measure. Channel 13 was licensed to the conglomerate Clarón, the owner of the largest circulation newspaper in the country; ARTEAR, a film and television production company; two radio stations, Radio Mitre and FM100; a publishing company, Editorial Aguilar; an expanding MSO, Multicanal (400,000 subscribers); three satellite-delivered channels; and one of the partners of a newsprint factory, Papel Prensa, and the national news agency, Diarios y Noticias (DyN). Channel 11 was licensed to Telefé, a consortium integrated by the publisher Editorial Atlántida which also owns Produfé, a program production and distribution company, and at present controls 15 cable systems (200,000 subscribers). ARTEAR and Telefé are the channels that dominate the broadcast landscape and fiercely compete for top ratings.

Towards the end of the 1980s, the number of cable operators in the country reached about 2000. The main players were Video Cable Comunicación (VCC) and CableVisión. In the early 1990s new operators linked to Clar'n and Telefé entered the market and gradually began to buy up cable franchises from smaller operators across the country. At present cable ownership is concentrated in the following four groups: Video Cable Comunicación, CableVisión, Clarón, and Telefé. These companies are also investing in fiber optic cable and are implementing Multi-Channel Multipoint Distribution Services (MMDS) to distribute their signals across areas that cannot be reached by cable. Another player in the cable business is Imagen Satelital, a company that supplies Argentine cable systems with five in-house channels (Space, I-Sat, Infinito, Universo, and Jupiter), and distributes nine additional signals, among them Televisa's Eco Noticias, Bandeirantes from Brazil, and Much Music from Canada. Argentine signal distributors and programmers have grown rapidly since the launching of the domestic satellite

Nahuel in 1992. This satellite's footprint covers the northern part of Argentina, the Western part of Brazil, and most of the territory of Chile, Paraguay, and Uruguay.

During the years following the privatization of television channels, advertising expenditures have more than quadrupled. Television and cable operators pay an 8% tax on advertising revenues to the National Broadcasting Committee (COMFER), which supports the government channel 7/Argentina Televisora Color. Currently the COMFER also directs 25% of this income to the National Film Institute for the subsidy of local film production.

Further trends toward deregulation of communications resulted in the signing of a bilateral accord between Argentina and the United States in September 1994 which allows for American investment in Argentine broadcast and cable operations. American capital entered the market soon afterwards, when TCI Inc. and Continental Cable invested in the two largest cable system operators in Argentina, CableVisión and Video Cable Comunicación (VCC) respectively.

For about U.S. \$35 a month, cable subscribers in Argentina receive a varied menu of about 65 channels, which includes (in addition to the domestic superstations): European channels (e.g. RAI from Italy, TV5 from France, TVE from Spain, and Deutsche Welle from Germany); Latin American channels (e.g. Globo TV, Manchete, and Bandeirantes from Brazil, Invisión from Colombia, ECO from Mexico, and Venevisión from Venezuela); and American channels (FOX, USA, CNN, ESPN, The Discovery Channel, Cartoon Network, MTV, Nickelodeon, HBO Olé, etc.). At present no premium cable channels are offered in Argentina, and all the services are included in the basic subscription package.

Variety shows are among the most popular programs. They are scheduled at different times throughout the day, often in the early afternoon (1:00 to 2:00 P.M.) or during the peak of prime-time (8:00 to 9:00 P.M.). The Argentine version of a variety show features a combination of musicals, interviews, comic skits, and games in which the audience participates by calling the host of the program, who frequently is a famous national actor or actress. An example of a daily variety show that has reached top ratings since 1984 is *Hola Susana*, hosted by actress Susana Giménez. Another popular variety show is *Videomatch*, hosted by Marcelo Tinelli. His program starts at midnight, targets a young, 15 to 30-year-old audience, and includes video-clips, bloopers, and sports.

In general, *telenovelas* are shown from Monday through Fridays in the afternoon (1:00 to 4:00 P.M., depending on the channel) and early prime-time (6:00 to 8:00 P.M.). The former are targeted at women, while the latter are targeted at a young adult audience. Weekly drama series broadcast after 10:00 P.M. are also popular. These attempt to reach an adult audience by dealing with socially controversial themes such as corruption, drugs, homosexuality, etc.

A typical TV prime-time evening starts at 6:00 P.M. with light *telenovelas*, variety-shows, or game-shows. These programs precede the one-hour newscasts that are scheduled in different time-slots in each channel. Channel 11 and ATC/channel 7

broadcast their evening news programs at 7:00 P.M., channel 2 at 9:00 P.M., and channel 9 and channel 13 compete on the news front at 8:00 P.M. From 10:00 P.M. to midnight viewers may opt for movies (which are usually imported), weekly drama series, or public affairs programs led by well-known national journalists and political pundits.

Sports programs are generally scheduled during weekends. They cover different matches and report on the result of national, regional, or world championships. Soccer is the sport followed by the largest audience; the broadcast of a soccer cup final never fails to reach top ratings. But popular sports programs also include tennis, box, motoring, and rugby.

Unfortunately, there is no recent data on the proportion of imported programs available in this country. Early studies on the world flow of television programs conducted by Tapio Varis (1974) show that in 1971 channel 9 and channel 11 respectively imported 10% and 30% of their programming. A decade later, Varis (1984) found that channel 9 imported 49% of its programming. Considering the changes in the Argentine television landscape since 1989 (i.e. privatization, liberalization, the growth of cable, etc.), those partial figures cannot be considered a reliable estimate of the proportion of the current imported/domestic programming. Nevertheless, rating figures show that in general the Argentine audience prefers domestic productions. For instance, in August 1994, according to data from the market research company IBOPE (TV International, 1994), the five programs with the highest ratings were: soccer championship *Copa Libertadores* (13.0 of rating); variety show *Hola Susana* (12.6); family sitcom *Grande Pá!* (12.6); movie cycle *Cine ATP* (11.3); and *The Simpsons* (11.2).

ARLEDGE, ROONE

U.S. Media Producer/Executive

Roone Arledge, president of ABC News, has had a more profound impact on the development of television news and sports programming and presentation than any other individual. In fact, a 1994 *Sports Illustrated* magazine ranking placed Arledge third, behind Muhammad Ali and Michael Jordan, in a list of 40 individuals who have had the greatest impact on the world of sports in the last four decades. In addition, a 1990 *Life* magazine poll listed Arledge as among the "100 Most Important Americans of the 20th Century."

In 1960, Arledge defected from NBC to join a struggling ABC. Later, in his role as vice president of ABC Sports, Arledge created what would become the longest running and most successful sports program ever, *ABC's Wide World Sports*. He brought his production specialty to ABC, and overhauled sports programming, including introduction of such techniques as slow motion and instant replays. These production techniques enabled Arledge to create a more exciting and dramatic sports event. He combined his production skills with "up close and personal" athlete features, which changed the way the world viewed competing athletes. He was one of the first users of the Atlantic satellite, enabling him to produce live sporting events from around the world.

Arledge's success in sports resulted in his promotion to president of the sports division in 1968, where he served until 1986. Shortly after his promotion, he again elevated ABC's sports prominence with *NFL Monday Night Football*. This prime-time sports program gave ABC the lock on ratings during its time slot, and earned Arledge even greater respect.

Under Arledge's lead, ABC Sports became the unchallenged leader in network sports programming. Arledge's innovations on *Wide World* were also successful for the ten Olympic games he produced. Inducted into the Olympic Hall of Fame for his commitment to excellence, Arledge was later bestowed the Medal of Olympic Order by the International Olympic Committee, making him the first television executive and one of a select group of Americans to receive this prestigious award.

Despite his successful transformation of ABC Sports, his promotion to president of ABC News came as a surprise to many individuals because Arledge had no formal journalistic training. He was president of ABC Sports and ABC News for nearly ten years.

With the development of shows such as *20/20*, *World News Tonight*, and *Nightline*, ABC was soon on the top of the network news battle. Among his greatest skills is identification of potential stars. Arledge successfully recruited the strongest and most promising journalists for his news team, including *World News Tonight* star Peter Jennings. Arledge recognized Jennings' talent and cast this once-defeated *ABC Evening News* anchor in the spotlight, and it worked. Arledge's team includes

Roone Arledge
Photo courtesy of ABC

David Brinkley, Diane Sawyer, Sam Donaldson, Ted Koppel, Barbara Walters and Hugh Downs.

Arledge put news on the air in non-traditional formats and at non-traditional times, and received high ratings. In its 15 years, *Nightline* has battled entertainment personalities such as Johnny Carson, David Letterman and Jay Leno for ratings, and in 1995 it was the highest rated late-night program. From its first show with Ali Agah, Iranian affairs leader, and Dorothea Morefield, wife of American hostage Richard Morefield, *Nightline* has been the leader in international affairs reporting.

Arledge's other news show creations include *PrimeTime Live*, with Diane Sawyer and Sam Donaldson; *This Week with David Brinkley*; *World News Now*, a 2:00 to 6:00 A.M. Monday through Friday overnight news program; and numerous *ABC News Presents* specials, such as *Turning Point* and *Viewpoint*. Arledge also designed inventive news broadcasts such as *Capital to Capital*, the first satellite news series to promote discussion between the United States and Soviet legislators.

His shows have received virtually every broadcasting honor possible. In 1995, ABC News was the first news organization to receive the Alfred I. duPont-Columbia University Award, given for the network's overall commitment to excellence.

In a speech following his appointment at ABC, Arledge declared, "We (ABC) will be setting the standards that

everyone will be talking about and that others in the industry will spend years trying to equal." It is clear, based on the success of ABC Sports and ABC News, that Arledge lived up to his immodest words.

—John C. Tedesco

ROONE ARLEDGE. Born in Forest Hills, New York, U.S.A., 8 July 1931. Educated at Mepham High School, Merrick, New York; Columbia College, New York, B.A. 1952. Married: Joan Heise, 1953 (divorced, 1971); children: Elizabeth Ann, Susan Lee, Patricia Lu, and Roone Pinckney. Served in United States Army, 1953–1955. Production assistant, DuMont Television Network, 1952; producer-director, Radio Public Relations Spots for U.S. Army, 1953–55; stage manager, director, and producer, NBC Television, 1955–60; joined ABC Television, field producer, NCAA Television, 1960; producer, *ABC's Wide World of Sports*, 1961; vice president, ABC Sports, 1965, president, 1968; created *NFL Monday Night Football*, 1969; president, ABC News, 1977; group president, ABC News and Sports, 1985–90; president, ABC News, since 1987. Recipient: 36 Emmy Awards; four George Foster Peabody Awards; two Christopher Awards; Broadcast Pioneers Award; Gold Medal, International Radio and Television Society; Distinguished Service to Journalism Honor Medal, University of Missouri; John Jay Distinguished Professional Service Award, Columbia University; Distinguished Achievement Award, University of Southern California Journalism Association; Founders Award, Academy of Television Arts and Sciences; Grand Prix, Montreaux Television Festival; Olympic Order, Medal of the International Olympic Committee; Grand Prize, Cannes Film Festival; Man of the Year, National Association of Television Program Executives; Academy of Television Arts and Sciences Hall of Fame, 1990; U.S. Olympic Hall of Fame, 1989; duPont-Columbia Award, 1995.

ARMED FORCES RADIO AND TELEVISION SERVICE

Armed Forces Radio and Television Service (AFRTS) comprises the primary communication media of the American Forces Information Service (AFIS), a unit of the Department of Defense (DOD). AFRTS provides radio and television news, information, sports and entertainment programming to U.S. military personnel and their families stationed at U.S. military installations and seacraft worldwide.

AFRTS programming, acquired and distributed by the AFRTS Broadcast Center in Los Angeles, is selected from popular commercial and public programming found in the United States (though commercials are replaced by DOD information and spot announcements). Most AFRTS pro-

gramming is acquired with little or no charge thanks to industry cooperation dating back to the AFRTS's beginnings during World War II.

Radio news programming is transmitted by the International Satellite (INTELSAT) and International Maritime Satellite (INMARSAT), which replaced AFRTS's previous short-wave broadcast service in 1988. Programming includes news and commentary from the major U.S. networks and syndicators. Music and entertainment programming is mailed in weekly program units for use by outlets in producing local programming. Television news, information, sports, and other timely programming is distributed by the AFRTS Satellite Network (SATNET). Most entertainment

programming, however, is provided by mail, and normally includes over 90% of the top rated programs in the United States. About 63% of AFRTS programming comes from the commercial networks, comprised largely of news and sports. The balance comes from the major entertainment distributors and producers in the United States. Unlike AFRS during its formative years, AFRTS does not produce its own entertainment shows for television.

As of 1992, according to AFIS sources, AFRTS uses nine satellites in providing service to over 450 outlets in more than 130 countries and U.S. territories worldwide. Over 300 military ships at sea also receive programming. By 1985, the AFRTS had become the largest radio and television network in the world.

AFRTS broadcasts also reach a substantial “shadow” audience of U.S. citizens living abroad and citizens of host nations who view or listen to the programming. Though no official figures exist for the size of the “shadow” audience worldwide, one study of the audience in Japan found that 21% of the local population (approximately 25 million people) listened to AFRTS radio at least once a week. One could safely conclude that the enormous presence of AFRTS broadcasts has probably played an important role in informal English language instruction and, relatedly, fostering a general acceptance of U.S. cultural products worldwide—currently the number one export of the United States.

AFRTS’s history can be traced to several small radio stations established by servicemen in Panama, Alaska, and the Philippines near the start of World War II. Following the success and popularity of these small operations, the Armed Forces Radio Service (AFRS) was established by the War Department on 26 May 1942, with the expressed intent of improving troop morale by giving service members a “touch of home.” The military also sought to provide a source of information to U.S. servicemen that would counter enemy propaganda (such as that found in the broadcasts of Axis Sally and Tokyo Rose), though it denied the move was an attempt at counter-propaganda.

AFRS programs during the war proved enormously popular with the troops, and were made financially possible largely through the contributions of radio and film stars who donated their time regularly without charge. Two of the more popular programs included *Command Performance* and *Mail Call*, which presented such stars as Bob Hope, Jack Benny, Clark Gable, Red Skelton, Bing Crosby, Dinah Shore, and the Andrews Sisters, among many others. Though these stars unselfishly gave of their time to contribute to the patriotic war effort, their careers most certainly didn’t suffer from the exposure of a somewhat captive audience. By the end of the war, there were nearly 300 AFRS radio stations operating worldwide (though that number had decreased to only sixty some four years later). Since that time, the number of stations continues to increase and decrease, depending on the level of U.S. military commitments worldwide.

Courtesy of Armed Forces Radio and Television Service

Television came relatively late to the AFRS, considering the enormous impact it was having on American society. The impetus to introduce television, in fact, came from the need to address serious morale problems in the Strategic Air Command. Armed Forces Television (AFT) got its start at Limestone Air Force Base, Maine, in 1953, and after much success in helping to reduce AWOLs, court martials, and the divorce rate at this military installation, AFT was officially joined with the AFRS in 1954 to become the AFRTS—the Armed Forces Radio and Television Service. AFRTS introduced color television in the early 1970s and was one of the first broadcasters to begin using satellites for live news and sports as early as 1968.

The AFRTS maintains that its programming is provided “without censorship, propagandizing, or manipulation.” The first notable exceptions to that claim surfaced during the Vietnam War period. From 1963 to 1967, AFRTS was instructed by Defense Secretary Robert McNamara to broadcast United States Information Agency (USIA)-produced news analysis programs—material that was widely recognized as propaganda. The more serious challenge to AFRTS’s non-interference claims came from broadcast outlets and journalists in Vietnam itself. Though AFRTS and various military policy makers maintained that censorship of programming was prohibited, numerous controversies arose (both public and internal) over news, quotes, and specific words and phrases that were kept off the air due to AFRTS guidelines. According to a history of the AFRTS commissioned by the service for its fiftieth anniversary, such restrictions even included “the editing of President Johnson’s comments that the command believed were inaccurate.” Justifications for such restrictions most often included the desire to avoid injuring troop morale, helping the enemy, or offending the host nation’s sensitivities.

Though AFRTS still maintains its claim to no censorship, it also adamantly defends the altering of programming that might offend the sensitivities of host nations. The direct broadcasting of American news programming via SATNET has increased the problems for AFRTS

broadcasters in nations that are particularly sensitive to criticism (such as Korea and the Philippines, in recent years). AFRTS also defends its review of music lyrics and feature films for similar reasons.

—Jeffrey P. Jones

ARMSTRONG CIRCLE THEATRE

U.S. Dramatic Anthology

Armstrong Circle Theatre, which premiered in the summer of 1950, joined thirteen other anthology programs already on the air, but went on to become one of the longest-running anthology series in television history. It aired for fourteen seasons, first in a one-half hour format and later expanding to one-hour. *Armstrong Circle Theatre* was produced by Talent Associates, Ltd., the agency formed by David Susskind and Alfred Levy, which also produced the *Kaiser Aluminum Hour* and individual productions for the *DuPont Show of the Month*, *Kraft Television Theatre*, and the *Philco Television Playhouse*.

What differentiated the *Armstrong Circle Theatre* from other anthology series was the show's change in focus after its first few seasons. Initially, *Armstrong Circle Theatre* presented typical, formula dramas, with little to distinguish it from other anthologies. In 1952, producers decided to change their approach. With the aid of an advertising agency that gathered scripts from all sources, including first-time writers, producers opted for "quality dramas" that emphasized characterization over pure plot devices. The new stories presented on *Armstrong Circle* attempted a continuity of mood, theme, and style from production to production without presenting the same type of protagonist in varying situations. Some critics described the stories as sentimental with a "pleasantly related moral" as their thematic approach. One example of this "family type" dramatic style was *The Rocking Horse*, a tender story about a reunion between mother and son.

In 1955, when *Armstrong Circle Theatre* expanded to one hour, the series continued its emphasis on the story and presented the earliest form of the docudrama (fact-based dramatizations). Executive Producer David Susskind and producer Robert Costello de-emphasized the role of actors and made the story the "star". According to Costello, their aim was "to combine fact and drama—to arouse interest, even controversy, on important and topical subjects." Using a news story or idea was not enough: the series also had to "be able to present some potential solution, some hope for your citizens to consider, to think about." Examples of these fact-based dramas include *S.O.S. from the Andrea Doria* and *Lost: \$2,000,000*, a drama about the effect of Hurricane Diane on a small town in Connecticut.

The docudrama format was enhanced by having a news anchor serve as the host/narrator for the program, and, for

this task, NBC hired news anchorman John Cameron Swayze. When the series switched from NBC to CBS in 1957, Swayze was replaced by CBS news anchor Douglas Edwards. Edwards was subsequently removed by CBS when network executives felt his credibility as a news anchor would be diminished by hosting a non-news program. He was replaced by reporter Ron Cochran, formerly of ABC.

At the time its format was lengthened to one hour, *Armstrong Circle Theatre* alternated with *Playwrights '56*. Problems arose between the two series because each was sponsored by a different company with different advertising aims. Pontiac, sponsor of *Playwrights '56*, wanted a very distinct sales message aimed at a large audience. *Armstrong Circle* desired strong sponsor identification with its special type of programming. Although *Playwrights '56* produced a number of distinctive dramas, they were not as critically

Armstrong Circle Theatre: Battle of Hearts

successful as other anthologies. Pontiac considered the ratings for the show too low and withdrew its sponsorship at the end of the season. The next season, *Armstrong Circle* alternated with *The Kaiser Aluminum Hour*, also produced by David Susskind's Talent Associates, Ltd. In 1957, *Armstrong Circle Theatre* switched to CBS and alternated with *The U.S. Steel Hour* until the end of its television run.

ARMY-MCCARTHY HEARINGS

U.S. Congressional Inquiry

Broadcast “gavel to gavel” on the ABC and DuMont networks from 22 April to 17 June 1954, the Army-McCarthy hearings were the first nationally televised congressional inquiry and a landmark in the emergent nexus between television and American politics. Although the Kefauver Crime Committee hearings of March 1951 can claim priority as a congressional TV show, and subsequent political spectacles (the Watergate hearings, the Iran Contra hearings, the Thomas-Hill hearings) would rivet the attention of later generations of viewers, the Army-McCarthy hearings remain the genre prototype for sheer theatricality and narrative unity.

Ostensibly, the Army-McCarthy hearings convened to investigate a convoluted series of charges leveled by the junior Republican senator from Wisconsin, Joseph R. McCarthy, at the U.S. Army and vice versa. In November 1953, a consultant on McCarthy's staff named G. David Schine was drafted into the Army. Even before Schine's formal induction, Roy M. Cohn, McCarthy's chief counsel, had begun a personal campaign to pressure military officials—from the secretary of the Army on down to Schine's company commander—into giving Private Schine special privileges. When on 11 March 1954 the Army issued a detailed chronology documenting Cohn's improper intrusions into Schine's military career, McCarthy responded by claiming the Army was holding Schine “hostage” to deter his committee from exposing communists within the mili-

tary ranks. To resolve the dispute, the Senate Permanent Subcommittee on Investigations, of which McCarthy was chair, voted to investigate and to allow live television coverage of the inquiry. McCarthy relinquished the chairship to Karl Mundt (Republican, South Dakota) to become, with Cohn, contestant and witness in a widely anticipated live television drama.

Throughout the thirty-six days of hearings, 188 hours of broadcast time were given over to telecasts originating from the Senate Caucus Room. The network “feed” came courtesy of the facilities of ABC's Washington, D.C., affiliate, WMAL-TV. Initially, all four networks were expected to carry the complete hearings live, but NBC and CBS balked at the loss of revenues from commercial programming. With an eye to its profitable daytime soap opera line-up, CBS opted out before the hearings began, leaving NBC, ABC, and DuMont formally committed to coverage. On the second day of hearings, however, after a particularly tedious afternoon session, NBC announced it was bailing out. Henceforth NBC, like CBS, broadcast nightly round-ups edited from kinescopes of the daytime ABC telecasts. CBS broadcast from 11:30 P.M. to 12:15 A.M., so when NBC followed suit, it counter-programmed its recaps from 11:15 P.M. to 12:00 midnight. Looking for a way to put his third-string news division on the map, ABC's president Robert E. Kintner stuck with his decision to broadcast the entire event live, jettisoning the network's daytime program-

*Senator Joe McCarthy and Roy Cohn
Photo courtesy of AP/ World Wide*

ming for continuous coverage, gavel to gavel. Even so, some major markets in the United States (Los Angeles for one) were deprived of live coverage when local affiliates chose not to take the network feed.

In televisual terms, the hearings pitted a boorish McCarthy and a bleary-eyed Cohn against a coolly avuncular Joseph N. Welch of the Boston law firm of Hale and Dorr, whom the Army had hired as its special counsel. Welch's calm patrician manner served as an appealing contrast to Cohn's unctuous posturing and McCarthy's rude outbursts (the senator's nasal interjection "Point of order!" became a national catchphrase). Senators, military men, and obscure staffers on the McCarthy Committee became household names and faces, among them chain-smoking committee counsel Ray H. Jenkins, Secretary of the Army Robert T. Stevens, and, hovering in the background, a young lawyer for the committee Democrats named Robert F. Kennedy. Along with an often partisan gallery in the

packed, smoke-filled hearing room, an audience of some twenty million Americans watched the complicated testimony, a crossfire of mutual recriminations over monitored telephone conversations, doctored photographs, and fabricated memoranda.

The afternoon of 9 June 1954 brought the emotional climax of the hearings, an exchange replayed in myriad Cold War documentaries. Ignoring a pre-hearing agreement between Welch and Cohn, McCarthy insinuated that Fred Fischer, a young lawyer at Hale and Dorr, harbored communist sympathies. Welch responded with a righteous outburst that hit all the hot buttons: "Until this moment, senator, I think I never gauged your cruelty or recklessness....Have you no sense of decency, sir, at long last? Have you left no sense of decency?" When McCarthy tried to strike back, Welch cut him off and demanded the chair "call the next witness." Pausing just a beat, the hushed gallery erupted in applause. The uncomprehending McCarthy, shot

dead on live TV, turned to Cohn and stammered, "What happened?"

What happened was that television, whose coverage of McCarthy's news conferences and addresses to the nation had earlier lent him legitimacy and power, had now precipitated his downfall. Prolonged exposure to McCarthy's odious character and ill-mannered interruptions was a textbook demonstration of how a hot personality wilted under the glare of a cool medium. Toward the close of the hearings, Senator Stuart Symington (Democrat, Missouri) underscored the lesson in media politics during a sharp exchange with McCarthy: "The American people have had a look at you for six weeks. You are not fooling anyone."

The Army-McCarthy hearings were a television milestone not only because of the inherent significance of the

event covered but because television coverage itself was crucial to the meaning, and unfolding, of events. Moreover, unlike many historic television moments from the 1950s, the hearings have remained alive in popular memory, mainly due to filmmaker Emile de Antonio, who in 1962 culled from extant kinescopes the landmark compilation film *Point of Order!*, the definitive documentary record of America's first great made-for-TV political spectacle.

—Thomas Doherty

ARNAZ, DESI

U.S. Actor/Media Executive

Desi Arnaz is best known for his role as Ricky Ricardo in the early television situation comedy, *I Love Lucy*. The series, which starred his wife, Lucille Ball as his fictional wife, Lucy Ricardo, appeared weekly on CBS. The show originally ran from the fall of 1951 through the 1957 season, and during this time ranked consistently among the top three national programs. In addition to this recognition of Arnaz as perfect comic straight-man for Ball's genius, however, he was one of Hollywood's most perceptive and powerful producers in television's early years. His shrewd business skills and his realization of particular combinations of the television's technological and cultural connections enabled him to develop aspects of the medium that remain central to its economic and cultural force.

Arnaz began his show business career in 1935. After singing and playing guitar with the Xavier Cugat orchestra, Desi toured with his own rumba band, but his big break was being cast in the Broadway show, *Too Many Girls*, in 1939. He met Lucille Ball in Hollywood the next year when both had roles in the movie version of the play. They were married in 1940 and continued their careers, Ball in motion pictures and radio, and Arnaz in music.

Ball had also gained success with her CBS radio program, *My Favorite Husband*, in which she starred as the wife of a banker, played by Richard Denning. CBS was interested in creating a television version of the show, but when Ball insisted that Arnaz play her husband, the network felt that viewers would not be attracted to a show not easily related to their own lives. Executives at CBS were skeptical about whether Arnaz, a Cuban band leader, would be believable and readily accepted by viewers as Ball's husband. In order to prove the network wrong, the couple set out on a nationwide stage tour to gauge public reaction to their working together in a comedy act. CBS was impressed with

the positive public response to the couple as well as with a sample script for a TV series developed by the writers from *My Favorite Husband*.

The basics were there, including Arnaz as Ricky Ricardo, a struggling band leader, and Ball as Lucy, a housewife with little talent but a giant yearning to break into show

Desi Arnaz with Lucille Ball

business. This homey battle-of-the-sexes premise for the show convinced the network that viewers could relate, and a pilot version of the program impressed the Philip Morris Company, which agreed to sponsor thirty-nine programs for the 1951–52 season on the CBS network Monday nights at 9:00 P.M. Arnaz and Ball insisted on producing the show in California so they could work together and live at home, an arrangement which had been impossible with Ball acting in films and on radio while Arnaz toured with his band, a situation which had strained their marriage. The idea of recording *I Love Lucy* on film was directly related to the couple's desire to work together in show business as a family and to live in their home in California.

In 1951, before the perfection of video tape, nearly all television shows were live productions, fed from the East Coast because of time-zone differences. Philip Morris approved the idea of filming *I Love Lucy*, but the sponsor wanted a live audience, which had been effective on radio. Arnaz and cinematographer Karl Freund, a veteran of pre-World War II German expressionist cinema working in Hollywood, devised a plan for staging the show as a play, performing each act before an audience, and simultaneously filming with three or four cameras stationed in different locations. Because this technique increased network production costs, CBS asked that Arnaz and Ball take a cut in salary to compensate for the increase. In negotiation, Arnaz agreed, providing Desilu, a company he and Ball had created, would then own the shows after the broadcasts. A few years later the couple sold the films back to CBS for more than four million dollars, a sum that provided the economic base for building what became the Desilu empire. The practice of filming television episodes also paved the way to TV re-runs and syndication. After *I Love Lucy* was established as a hit, Desilu applied its multi-camera film technique to the production of other shows, such as *Our Miss Brooks*, *December Bride*, and *The Lineup*. By 1957, Desilu was so successful that additional facilities were needed and it bought RKO Studios from the General Tire and Rubber Company.

Desilu had become the world's largest studio. But as the business grew ever larger, Arnaz and Ball drifted apart, ending their 20-year marriage in 1960, and splitting their interests in Desilu. In 1962, Ball bought Arnaz's share in the company, and he retired for a short time to his horse-breeding farm. Both later married others, and Arnaz returned to television, forming an independent production company and making occasional guest appearances. Desilu was purchased by Gulf Western Industries in 1967. Arnaz died in 1986 and Lucille Ball in 1989. *I Love Lucy* is still popular with television audiences today, thanks to the pioneering production techniques of Desilu.

—B. R. Smith

DESI (DESIDERIO ALBERTO, III) ARNAZ (Y DE ACHA). Born in Santiago, Cuba, 2 March 1917. Attended Colegio Delores, Jesuit Preparatory School, Santiago, Cuba. Moved with family to the United States, 1930s. United States Medical

Corps., 1943–45. Married: 1) Lucille Ball, 1940 (divorced, 1960); children: Lucie Désirée and Desiderio Alberto, IV (Desi, Jr.); 2) Edith Mack Hirsch. Began entertainment career as singer, with Xavier Cugat Band, 1935–36; formed own band at the Conga Club, Miami, Florida, 1938, height of the "conga craze"; Broadway musical debut, *Too Many Girls*, 1939; RKO film version of the musical, 1940; music director, the Bob Hope radio show, 1946–47; performed with Ball in radio show, *My Favorite Husband*, 1947–50; produced pilot for *I Love Lucy* with own funds, 1951; performed as Ricky Ricardo, *I Love Lucy*, 1951–57; president and co-founder, Desilu Productions, 1951–62. Recipient: Best Performance of the Month, *Photoplay Magazine*, 1943. Died in Del Mar, California, 2 December 1986.

THE ARSENIO HALL SHOW

U.S. Talk Show

The *Arsenio Hall Show*, a syndicated late-night talk show starring African American stand-up comedian Arsenio Hall, ran from January 1989 to May 1994. Paramount Domestic Television's syndicated division produced and distributed the show which aired primarily on stations affiliated with FOX Broadcasting. During its five-year run, the show peaked at a 3.9 national rating in February 1990, an amazing feat for a syndicated show that had access to fewer TV stations than network programs and did not have a specific airing time across the nation (though it usually aired sometime between 11:00 P.M. and 1:00 A.M.).

Hall had his first break in late-night television when he became a guest host on FOX's *The Late Show with Joan Rivers*. After Rivers departed in May 1987, the show had a rotating series of guest hosts which included Hall. After fronting the show for several nights, Hall was invited to stay for thirteen weeks. That time permitted Hall to develop as a talk-show host while solidifying his position as a well-known popular entertainer. Although both Hall and the show were doing moderately well, FOX decided to cancel *The Late Show* and replaced it with *The Wilton North Report*. During that time, when Hall was without a regular television job, Paramount approached him with a multi-film deal, a deal eventually re-negotiated to include a talk show. Yet, Hall was still under contract with FOX. In order to prevent a legal suit against both Hall and Paramount, FOX affiliates were used as the main venue for Hall's talk show.

The format of *The Arsenio Hall Show* followed traditional structures set by other late-night talk shows—entrance and rapport with the band and the studio audience, the host's initial monologue at the center of the stage, interviews with guests (usually two to three) in the sitting area, and a musical number by an invited artist. Hall nevertheless brought some changes (sometimes quite subtle), in order to provide a more informal mood for his show. There was no desk in the sitting area where interviews were conducted, so he could be closer to his guests. Hall did not have a sidekick on the show. The set had an area at the stage left of the band designated as the "dog pound" where a group of guests would sit and cheer Hall with barks ("Woof, Woof, Woof!") while moving their right fists in circles above their heads. These more informal elements of the show were attuned with Hall's agenda of providing an alternative kind of entertainment to the traditional late night scene.

From the outset, *The Arsenio Hall Show* distinguished itself by targeting audiences that have been largely ignored by other late-night talk shows: African Americans, and Latinos, as well as the younger generation of television viewers which he identified on several occasions as the "MTV generation." Hall reached these audiences through a hip and casual approach to the show, strongly informed by his talent as a stand-up comedian as well as by tales of

Arsenio Hall

his childhood experiences in a Cleveland lower-middle-class community. In fact, Hall constantly invoked stories about being someone who left the ghetto for another type of life but who was still emotionally and politically connected to it. The strategy kept his television persona grounded at a level closer to audiences.

Another technique Hall used to reach a multi-ethnic younger audience was showcasing a wide variety of artists, comedians, and performers, especially those who were less mainstream and, thus, not usually invited to participate on other talk-shows. In terms of entertainment, some of the *Arsenio Hall Show's* highlights included a whole night dedicated exclusively to musical performances by the reclusive artist Prince, a surprise visit in 1992 by (then) presidential candidate Bill Clinton (who performed two songs on the saxophone), and the taping of his thousandth show at the Hollywood Bowl and starring Madonna.

Although entertainment was a priority for Hall, he also conceived of his show as a space where audiences, especially youth, could be educated. For example, he had a special show with Jesse Jackson as well as a night dedicated to commemorating the figure of Martin Luther King Jr. Furthermore, Hall became a spokesperson for "Safer Sex/AIDS Awareness" mainly due to his close friendship with basket-

ball star Magic Johnson. In fact, Johnson chose *The Arsenio Hall Show* as the venue for his first public discussion about AIDS after announcing that he was HIV positive.

The Arsenio Hall Show also had its moments of controversy. Twice, for example, Hall invited the infamous comedian Andrew Dice Clay, notorious for his sexist, racist, and homophobic jokes. On the second visit, members of the gay and lesbian groups Queer Nation and ACT UP showed up on the program in order to voice their disapproval of the guest as well as of Hall for having him. In fact, these organizations had already confronted Hall during an earlier show, both for not having gay and/or lesbian guests as well as for ridiculing homosexuals through one of his recurring impersonations. The visit of the Nation of Islam's leader, Louis Farrakahn, created another controversial moment for the show and Hall was severely criticized for not being aggressive in his interview. In fact, Hall's laudatory attitude towards most of his guests was constantly criticized by the popular press.

The Arsenio Hall Show can be regarded as an example of a syndicated show which was able to succeed temporarily by targeting an audience largely ignored by other late-night shows, the multi-ethnic youth. In fact, in its most

popular days, *The Arsenio Hall Show* was able to rank second in the late night rating race, just behind *The Tonight Show Starring Johnny Carson*.

—Gilberto M. Blasini

ARTHUR, BEATRICE

U.S. Actor

Bea Arthur stands five-foot-nine-and-a-half inches tall in her stocking feet, and has a voice that one reviewer characterized as "deep as a pothole." Her formidable stature and booming vocal register made her an unlikely leading lady in an industry driven by a narrow regime of feminine beauty. But as character traits for Maude Finley, they proved to be the perfect foil for the sexist bravado of Archie Bunker in Norman Lear's 1970s sitcom, *All in the Family*, in which Arthur first appeared in the role. The spin-off series *Maude* was created for her virtually overnight. As opinionated and caustic in her own way as Archie, Maude Finley was, a crusader for women's liberation, the woman in charge. And in the nascent gender consciousness of the 1970s, the women's movement's fictional spokeswoman had to be big and booming.

Television viewers' love affair with the character Arthur created in *Maude* has resulted in a struggle with the actors' nemesis—typecasting. She was a recognized actress on Broadway before making the move to television, appearing in, among others, *Fiddler on the Roof*, *The Threepenny Opera*, and *Mame*, for which she won a Tony Award, but Arthur is nevertheless most remembered as the bombastic caricature of a liberated woman on the small screen. Upon leaving *Maude* in 1978, Arthur took a four-year hiatus before accepting another television series, in hopes the Finley character would fade in the public mind. When she reappeared on the short-lived *Amanda's* in 1983, playing the owner of a seaside hotel, it was as a physically thinner person. Yet

Beatrice Arthur

despite the actress' attempt at transformation, audiences and reviewers alike found it hard to shake their favorite character. "Bea has shed so many pounds she is scarcely recognizable as the imposing, flotilla-like Maude," wrote one reviewer. Arthur responded to the evocation of her prior character, "what can you do? I'm still five feet nine and my voice is still deep. But I'm not going to cut off my legs or change my voice." Arthur's typecasting continued on the hit series, *Golden Girls*, first aired in 1985. Playing alongside well-established actresses, Rue McClanahan, Betty White, and Estelle Getty, only Arthur seemed rooted in a past performance. Her character, Dorothy Zbornak, was a continuation of the Maude character—loud, worldly, flippant—a Maude approaching old age.

Whether as Maude, breaking television's mold of female beauty, or as Dorothy, challenging the omnipotent image of youth, Arthur's roles on the two hit series were instrumental in broadening television representation. She has been recognized for her work in television with two Emmys, for *Maude* and *Golden Girls*, and has five times been nominated for an American Comedy Award's "Lifetime Achievement Award."

ARTHUR GODFREY SHOWS (VARIOUS)

U.S. Variety/Talent/Talk

Arthur Godfrey's shows helped define the first decade and half of TV history in the United States. While there were a number of television shows on which Godfrey appeared, his fame, fortune, and pioneering activities centered on two variety shows presented on the CBS-TV network: *Arthur Godfrey's Talent Scouts* and *Arthur Godfrey and His Friends*. These two proved so popular that during the 1950s they served as a cornerstone of the CBS-TV network's programming strategies.

In December 1948, after more than a decade on radio, principally for CBS, Arthur Godfrey ventured onto prime-time TV by simply permitting the televising of his radio hit *Arthur Godfrey's Talent Scouts*. On TV *Arthur Godfrey's*

Talent Scouts ran until July 1958 on Monday nights at 8:30 P.M. for a half hour and proved Godfrey's best venue on television. Fans embraced this amateur showcase, and during the 1951-52 TV season it reached number one in the ratings. Next season *I Love Lucy* vaulted into first place, but thereafter through most of the 1950s *Arthur Godfrey's Talent Scouts* regularly finished in TV's primetime top ten.

The formula for *Arthur Godfrey's Talent Scouts* was simple enough. "Scouts" brought on their discoveries to a converted New York theater to perform before a live studio audience. Most of these "discoveries" were in fact struggling professionals looking for a break, and so the quality of the talent was quite high. At the program's conclusion, the

studio audience selected the winner by way of an applause meter.

In his day Godfrey significantly assisted the careers of Pat Boone, Tony Bennett, Eddie Fisher, Connie Francis, Leslie Uggams, Lenny Bruce, Steve Lawrence, Connie Francis, Roy Clark, and Patsy Cline. His "discovery" of Patsy Cline on 21 January 1957 was typical. Her scout, actually her mother Hilda Hensley, presented Patsy, who sang her recent recording *Walkin' After Midnight*. Though this was heralded as a country song, and recorded in Nashville, Godfrey's staff insisted Cline not wear one of her mother's hand, crafted cowgirl outfits but appear in a cocktail dress. The audience's ovations stopped the meter at its apex, and for a couple of months thereafter Cline appeared regularly on Godfrey's radio program. In short although Cline had been performing for nearly a decade, and had been recording and appearing on local Washington, D.C., TV for more than two years, it is Godfrey, because of the great ratings and fame *Arthur Godfrey's Talent Scouts*, who is heralded as making Patsy Cline a star. Yet Godfrey proved fallible. He turned down both Elvis Presley and Buddy Holly!

His other top ten TV hit was *Arthur Godfrey and His Friends*, which premiered in January 1949. On Wednesday nights Godfrey hosted this traditional variety show, employing a resident cast of singers which over the years included Julius La Rosa, Frank Parker, Lu Ann Simms, Pat Boone, and the Cordettes. Tony Marvin, as he was on *Arthur Godfrey's Talent Scouts*, served as both announcer and Godfrey's "second banana." The appeal of the hour long *Arthur Godfrey and His Friends* rested on the popularity of the assembled company of singers, all clean cut young people, and guest stars. Godfrey played host and pitchman.

Indeed to industry insiders, Godfrey ranked as television's first great salesman. He blended a Southern folksiness with enough sophistication to sell almost anything. As he had long done on radio, Godfrey frequently kidded his sponsors, but always "sold from the heart," only hawking products he had actually tried and/or regularly used. Godfrey made it sound like he was confiding to you and to you alone, and early television viewers listened to Godfrey's rich, warm, resonant descriptions and went out and purchased what he endorsed.

During the early 1950s Godfrey seemed unable to do anything wrong, despite a press that could find little reason for his vast popularity. He began a fall from grace began in October 1953 when he fired the then popular La Rosa—on the air. Because of the negative fallout, Godfrey thereafter regularly feuded with a host of powerful newspaper columnists including Dorothy Kilgallen and John Crosby.

By the end of the 1950s Godfrey's ratings were falling and his brand of variety show was giving way to action and comedy series made in Hollywood. Still, through the 1960s CBS unsuccessfully sought new ways to showcase Godfrey. He flopped on *Candid Camera*, but out came regular specials: *Arthur Godfrey in Hollywood* which aired on 11 October 1963, *Arthur Godfrey Loves Animals* on 18 March 1963,

Arthur Godfrey

and so on once or twice a season. His final television special came on 28 March 1973.

Television in the United States is most dependent on the star system, and Arthur Godfrey, despite common sense declarations that he had "no talent," must be counted as one of television's greatest stars. Prior to 1959 there was no bigger TV draw than this freckled-face, ukulele-playing host. There was something about Godfrey's wide grin, his infectious chuckle, his unruly shock of red hair that made millions tune in not just once, but again and again.

THE ASCENT OF MAN

British Documentary Series

Born in Poland in 1908, Jacob Bronowski belongs as much to the scattering of central Europe in the wake of pogroms, revolutions and nazism as he did to the easy learning and liberal and humane socialism of the post-war consensus in Britain. A mathematician turned biologist, with several literary critical works to his name, he was a clear choice to provide David Attenborough's BBC2 with the follow-up to the international success of Kenneth Clarke's *Civilisation*.

By Bronowski's testimony, work began on the program in 1969, though the 13-part series only arrived on screen in 1973. Intended as a digest of the history of science for general viewers, and to match the claims of the Clarke series, it actually ranged further afield than the eurocentric *Civilisation*, although Bronowski retained a rather odd dismissal of pre-Colombian science and technology in the New World. The series faced, however, perhaps a greater challenge than its predecessor, in that the conceptual apparatus of science is less obviously telegenic than the achievements of culture. Nonetheless, the device of the "personal view" which underpinned BBC2's series of televisual essays gave the ostensibly dry materials a human warmth that allied them successfully with the presenter-led documentaries already familiar on British screens.

The Ascent of Man covers, not in strict chronological order but according to the strongly evolutionary model suggested in the title, the emergence of humanity, the agri-

cultural revolution, architecture and engineering, metallurgy and chemistry, mathematics, astronomy, Newtonian and relativistic mechanics, the industrial revolution, Darwinism, atomic physics, quantum physics, DNA and, in the final program, what we would now call neurobiology and cognitive science and artificial intelligence. As well as a generous use of locations, the series boasted what were then extremely advanced computer graphics, largely refilmed from computer monitors, and an appropriate delight in the most recent as well as the most ancient tools, skills, crafts and technologies.

Bronowski's scripts, reprinted almost verbatim as the chapters of the eponymous book accompanying the series, display his gift for inspired and visual analogies. Few have managed to communicate the essence of the special theory of relativity with such eloquence as Bronowski aboard a tram in Berne, or of Pythagorean geometry by means of the mosaics in the Alhambra. A decision made early in the filming process, to use sites which the presenter was unfamiliar with, perhaps explains some of the air of spontaneity and freshness which other presenter-led blockbuster documentaries buried beneath the modulated accents of expertise. Though sometimes gratuitous, the use of locations assured more than the visual interest of the series: it at least began the process of drawing great links between the apparently disparate cultures contributing to the development of the modern world view, from hominid skulls in

the Olduvai gorge, by way of Japanese swordsmiths and Inca buildings to the splitting of the atom and the unravelling of DNA.

That profound belief in progress which informs the series, its humanism and its faith in the future, seem now to date it. But Bronowski's facility in moving between social, technological and scientific history makes his case compelling even now. His account of the industrialisation of the West, for example, centres on the contributions of artisans and inventors, emphasising the emergence of a new mutuality in society as it emerges from the rural past. On the other hand, the attempt to give scientific advance a human face has a double drawback. First, it privileges the role of individuals, despite Bronowski's attempts to tie his account to the greater impact of social trends. And second, as a result, the series title is again accurate in its gendering: not even Marie Curie breaks into the pantheon.

But it is also the case that *The Ascent of Man*, in some of its most moving and most intellectually satisfying moments, confronts the possibility that there is something profoundly amiss with the technocratic society. For many viewers, the most vivid memory of the series is of Bronowski at Auschwitz, where several members of his family had died. For Bronowski, this is not the apogee of the destructive bent of a dehumanising secularism, but its opposite, the triumph of dogma over the modesty and even awe with which true science confronts the oceanic spaces of the unknown.

In some ways, *The Ascent of Man* stands diametrically opposed to the patrician elegance of Clarke's *Civilisation*. The elegy to Josiah Wedgwood, for example, is based not on his aristocratic commissions but on the simple creamware which transformed the kitchens of the emergent working classes. For all his praise of genius, from Galileo to von Neuman, Bronowski remains committed to what he calls a democracy of the intellect, the responsibility which knowledge brings, and which cannot be assigned unmonitored into the hands of the rich and powerful. Such a commitment, and such a faith in the future, may today ring hollow, especially given Bronowski's time-bound blindness to the contributions of women and land-based cultures. Yet it still offers, in the accents of joy and decency, an inspiration which a less optimistic and more authoritarian society needs perhaps more than ever.

Bronowski, Jacob. *The Ascent of Man*. Boston, Massachusetts: Little, Brown, 1974.

ASNER, ED

U.S. Actor

Ed Asner is one of U.S. television's most acclaimed and most controversial actors. Through the miracle of the spin-off, Asner became the only actor to win Emmy Awards for playing the same character in both a comedy and dramatic series. A former president of the Screen Actors Guild (SAG), Asner's mix of politics and acting have not always set well with network executives, corporate sponsors, or the viewing public.

While Asner is best known for his *Mary Tyler Moore Show* supporting character Lou Grant, the role was a departure from his dramatic roots. Asner began his professional career with the Chicago Playwright's Theatre Company, graduating later to off-Broadway productions. Asner came to Hollywood in 1961, where he received a steady stream of roles, including his first episodic work in the series *Slattery's People*, which ran on CBS in the 1964-65 season.

Asner's big break came when he was spotted by MTM Enterprises co-founder Grant Tinker in an ABC made-for-TV movie; Tinker asked *Mary Tyler Moore Show* creators James L. Brooks and Alan Burns to consider Asner for the role of Mary's boss, the gruff-yet-lovable Lou Grant. Accord-

ing to Brooks, Asner gave a terrible first reading; however, Brooks agreed that Asner had a special quality that made him the clear choice for the role.

Although Asner had previously shied away from comedy, he felt that *The Mary Tyler Moore Show* script was the finest piece of writing he had ever seen. The series paid off for Asner, MTM, and the audience. Lou Grant not only became one of the most successful supporting roles in a comedy series, but the prototype for such characters as *Taxi's* Louie DePalma, whose comedy depends on superb timing in the delivery of well-crafted, trick-expectancy dialogue.

After *The Mary Tyler Moore Show* voluntarily retired, Asner became part of another historic TV event when he starred as Captain Davies, a brutal slave trader, in the epic miniseries *Roots*. Meanwhile, James L. Brooks, Allan Burns and *M*A*S*H* executive producer Gene Reynolds began adapting the Lou Grant character to a dramatic role for CBS, in which Asner would star as the crusading editor of the fictional *L.A. Tribune*. Despite a shaky start, the beloved comic character gradually became accepted in this new venue. More than just moving to the big city and losing his

sense of humor, however, Asner's more serious Grant became a fictional spokesperson for issues ignored by other mass media venues, including the mainstream press. At the same time, the dramatic narrative offered opportunities for exploring the character more deeply, revealing his strained domestic relationships and his own complex emotional struggles. These revelations, in turn, complicated the professional persona of Lou Grant, the editor.

Like his character, Asner could also be outspoken. His first brush with politics occurred when he became a labor rights activist during the 1980 strike by the Screen Actors Guild (SAG), which delayed the 1980–81 TV season. Asner's work on behalf of the actors helped make him a viable candidate for the SAG presidency, which he received in 1981. Asner's political agenda widened, and, in the face of a growing right-wing national sentiment highlighted by the 1980 presidential election of Ronald Reagan, Asner became increasingly vocal against U.S. public policy, including that affecting U.S. involvement in Latin America.

Through *Lou Grant*, Asner's own popularity was growing, leading to appearances in the 1980 film *Fort Apache, The Bronx*, and the 1981 TV movie *A Small Killing*. This level of success was soon to crumble, however, when Asner took part in a fund raiser to send medical aid to El Salvador rebels who were fighting against the Reagan-supported regime. Most disturbing to conservative minds was Asner's direct-mail letter on behalf of the aid organization, which began with, "My name is Ed Asner. I play Lou Grant on television." Conservative SAG members, including Charlton Heston, rose up in arms over Asner using his character to support his own political agenda (of course, one can argue that Heston is so closely associated with his own on-screen persona that his links to conservative causes are just as manipulative).

In his essay on MTM drama, Paul Kerr quoted Allan Burn's assessment of the ensuing anti-Asner onslaught: "I've never seen anybody transformed so quickly from being everyone's favorite uncle to a communist swine." Within weeks, *Lou Grant* was canceled. While CBS maintains the cancellation was based on dwindling ratings, Asner, and others on the *Lou Grant* production team, feel this was swift punishment for Asner's political beliefs. Interestingly enough, Howard Hesseman, star of *WKRP in Cincinnati*, was also involved with the Asner-supported El Salvador rally; *WKRP* and *Lou Grant* were canceled the same day.

It was not until 1985—the year Asner resigned as SAG president—that he obtained another episodic role on TV, this time playing the grouchy co-owner of a L.A. garment factory in the ABC series *Off the Rack*. After 12 years of quality scripts from his MTM days, Asner's *Off the Rack* experience can be viewed as paying penance for his perceived crimes. In 1988, however, he was back in a more serious role in the short-lived NBC series *The Bronx Zoo*, which focused on the problems faced by an inner-city high school. Ironically, Asner later landed the role of a conservative ex-cop who often confronted the liberal heroine in *The Trials of*

Ed Asner

Rosie O'Neill, which starred Sharon Gless as a crusading public defender. Asner has since continued to play a variety of supporting roles in various sitcoms, yet none as weighty or as important as *Lou Grant*.

—Michael B. Kassel

EDWARD ASNER. Born in Kansas City, Missouri, U.S.A., 15 November 1929. Attended University of Chicago, Illinois, 1947–49. Married: Nancy Lou Sikes, 1959; children: Matthew, Liza, Kathryn, and Charles. U. S. Army Signal Corps, 1951–53. Professional debut, Playwright's Theatre, Chicago, 1953; Broadway and off-Broadway productions and television guest appearances, 1950s and 1960s; prominent as Lou Grant in *The Mary Tyler Moore Show*, 1970–77, and as the title character in *Lou Grant*, 1977–82. President, Screen Actors Guild, 1981–85. Recipient: five Golden Globe Awards; seven Emmy Awards; Fund for Higher Education Flame of Truth Award, 1981.

ASPER, IZZY

Canadian Media Executive

Izzy Asper is chair and chief executive officer of CanWest Global Communications Corporation, a western-based Canadian programming service which supplies an informal "network" of independent stations with originally-produced and syndicated international content. CanWest Global intends to become the third English-language Canadian television network and is developing a growing international presence.

Asper's career began in law and politics. In 1964, he was called to the Manitoba bar and established himself as an expert on tax law. From 1966 to 1977, Asper wrote a nationally-syndicated newspaper column on taxation and in 1970 authored a book critical of the federal government's tax reform proposals. He remains legal counsel to the firm of Buchwald, Asper, and Henteleff, and was named Queen's Counsel in 1975. Asper also pursued a political career. From

1970 to 1975, he was leader of the Manitoba Liberal Party and from 1972 to 1975 sat in opposition as a member of the Manitoba Legislative Assembly.

In the early 1970s, Asper turned to broadcasting as he and partner Paul Morton set up Winnipeg independent television station CKND. In 1974, Asper became involved in a financial package to salvage a Toronto-based station, Global Television. As Global's fortunes rose during the late 1970s, so did Asper's financial stake. He extended his broadcast holdings in Western Canada. Asper and his partners were successful in building a string of Western independent stations.

Global Television, located in the Toronto-Hamilton corridor, Canada's richest media market, soon became the flagship of a new programming service. Global's originally-produced content was sold to the string of independents

controlled by Asper and his partners. Global also acquired top-rated U.S. shows which it syndicated across Canada. The profits from this were reinvested in original production. Global also sought to reduce its reliance on expensive U.S. shows by developing Canadian content capable of gaining a following. Finally, Global increasingly sought to market its content and expertise internationally.

By 1986, however, disputes had erupted between Asper and his partners, and these in turn led to lawsuits. The disputes were resolved in 1989 when the Manitoba Court of Queen's Bench ordered that the contentious partnerships be dissolved and the assets auctioned to the former partners. Asper emerged victorious from this "corporate shoot-out" as head of a new entity called CanWest Global Communications Corporation.

Since assuming control of CanWest Global, Asper has acquired international interests. CanWest Global now owns 57.5% of the Australian Ten Network, exercises operational control of New Zealand's TV3 (despite owning only 20%), and controls 50% of Chile's La Red network. CanWest Globalis also currently the leading bidder for Britain's fifth television network. CanWest seeks to extend its reach into Quebec and the Maritime provinces.

Asper's broadcasting career has been characterized by two major tendencies. The first is the attempt to move the overall broadcasting system away from Central Canada (Toronto and Montreal) towards the west. This is achieved in the structure of CanWest Global, whose main station and facilities are located in Toronto but whose command centre

lies in Winnipeg. The second has been the belief that Canadian content can profitably replace much American content which is over-valued for the Canadian market because of competitive network bidding and regulatory distortions. To that end, CanWest Global has produced and co-produced content which has achieved a degree of success: the highly rated *Global News*, the weekly comedy/drama *Ready or Not*, the weekly "reality" series *Missing Treasures: The Search For Our Lost Children*, and several TV movies. These tendencies, however, are tempered by market realism. Hence, like Canadian broadcasters generally, CanWest Global also uses U.S. shows to subsidize Canadian production, seeks out the largest population centres, and attempts to develop international markets.

—Paul Attallah

IZZY ASPER (Israel Harold Asper). Born in Minnedosa, Manitoba, Canada, 11 August 1932. Educated at the University of Manitoba, B.A. 1953; LL.B. 1957, LL.M. 1964. Married: Ruth Bernstein, 1956; children: David, Leonard, and Gail. Newspaper columnist on taxation, 1966-77; leader of the Liberal Party in Manitoba, 1970-75; sat in Manitoba Legislative Assembly, 1972-75; counsel to the law firm of Buchwald, Asper, and Henteleff; named Queen's Counsel, 1975; acquired ownership of a string of independent stations, 1970s; partner, Global Television programming service; head of CanWest Global Communications Corporation and CanWest Capital Group Inc., since 1989. Address: 1063 Wellington Crescent, Winnipeg, Manitoba, Canada R3N 0A1.

ASSOCIATION OF INDEPENDENT TELEVISION STATIONS

The Association of Independent Television Stations, known as INTV, began 10 November 1972. Its purpose was to promote the needs of local telecasters throughout the United States that had no network affiliation. At first, the organization served about 70 stations, mostly located in large markets, and worked primarily to solve the economic problems encountered by small stations trying to buy costly shows to fill their programming schedules. One special effort involved attempts to both lower the cost and simplify transmission of programs to non-network stations by means of AT and T's "longlines." When the Federal Communications Commission (FCC) deregulated satellite access to national programming in 1975 this problem was eliminated, and much of the recent increase in the profitability of independent television stations can be attributed to reliance on satellite technology. In this same period the FCC also began to allow more station licenses and frequencies per market.

One area of FCC regulation supported by INTV involved the Financial Interest and Syndication rules. These rules restricted network ownership and future syndication rights to the programs they broadcast and gave

those rights to the shows' producers. The restrictions created an aftermarket for network shows which could not be controlled by ABC, CBS or NBC. With access to satellite distribution independent stations had easier ways to purchase and receive shows and to reach new markets. Due to these changes, INTV's number of member stations—and its power—grew.

Independent
Television

Courtesy of INTV

In the context of American broadcasting, largely defined by networked stations, independent stations had three obstacles to overcome. The first was the ability to obtain programming at a reasonable cost and in spite of competition from richer affiliate stations in the same local market. INTV eventually advocated support of the Primetime Access Rule (PTAR), which strengthened the syndication industry and made more shows available for independent stations. The PTAR required an hour each day for local programming and succeeded partially because of INTV lobbying efforts. With the implementation of this rule, every type of station, whether network affiliate or independent, had a scheduling space in which independent producers could place shows.

The second obstacle was related to advertising, lifeblood of the American broadcasting industries. Independent stations generally provided advertisers with a "spot" market based on demographics rather than on audience size. But the advertisers had routinely placed national commercials with the national programmers who delivered the huge mass audience. Sponsors were unaware, in some ways, of the profit available from wooing audience segments defined by shared age, wealth or product purchasing characteristics. This obstacle was exacerbated in 1970 when Congress banned cigarette advertising on television. This greatly reduced the advertising revenue available to electronic media and remaining dollars were keenly sought by all operating stations.

The third obstacle was the audience itself. Independent stations had to provide viewers with shows as compelling as network programs. In addition, UHF stations had to make audiences aware of their very existence and their program schedules. In 1978, only 91 independent stations aired programming, but this mushroomed to 321 by the close of 1988. Most of these stations telecast on newly allocated UHF frequencies with less signal strength and poorer picture quality than the network affiliates making their identity problems even more difficult. At first, many independents schedules followed a similar format: movies each night during primetime, network reruns during the day, strong news hours at primetime access and religious programming on weekends.

By 1980, INTV's members looked toward the burgeoning cable television industry as a way to increase both viewership reach and advertising revenues. Instead, however, cable providers offered new options for the viewer and actually hurt independent stations in local markets. Independent stations began legal battles, seeking to require local cable operators to carry their signal on local systems, an issue not resolved until 1992.

The entire landscape for independent television stations in the United States changed in 1985 when Rupert Murdoch purchased 20th Century-Fox Studios from Marvin Davis. Murdoch appointed Barry Diller, formerly of ABC Television and Paramount Studios, to head the venture. Diller believed enough unaffiliated stations existed to support a

fourth television network. Murdoch then purchased the Metromedia Corporation with its owned independent stations in the largest U.S. cities, a foundation of that allowed Diller and Murdoch to begin the FOX Broadcasting Company.

The new FOX network satisfied INTV stations' needs for regular access to relatively inexpensive programming from Hollywood suppliers. This programming also attracted national advertisements and appealed to the local audience. In signing its new affiliates FOX recruited heavily from INTV member stations, and for the next few years, INTV held its annual conventions in tandem with FOX affiliate meetings in Los Angeles. These meetings had a profound impact upon the burgeoning fourth network. At the 1988 meeting, the INTV/FOX affiliates made FOX change its operations strategy. Instead of seeking the best producers, who would design programs according to their own tastes and interests, the network now sought to satisfy its member stations. The first result was the cancellation of FOX's short-lived late night replacement show, *The Wilton North Report*. INTV's leader, Preston Padden, worked closely with FOX executives to institute the pro-affiliate change.

But INTV made a philosophical break from FOX and began focusing its service on non-FOX members. As FOX's early a-few-days-a-week schedule increased, the organization showed signs of becoming a network as defined by the FCC rather than a conglomeration of truly independent stations. In 1990, when 30% fewer station members attended the annual INTV meeting, syndicators began curtailing their presence at the organization's conventions. As a result, INTV began holding its conventions in conjunction with NATPE (National Association of Television Programming Executives), a meeting that attracted far more syndicators than did the FOX affiliate's meeting. FOX hired Padden away from INTV to become its senior vice president for affiliate relations and later, vice president of government relations.

Presently, INTV has welcomed the advent of still more new-network-start-up programming services from Warner Brothers and Paramount studios. The new arrangements have once again provided greater advertising revenue and easier program acquisition for the INTV members affiliated with the new networks. But these affiliations have not lessened the power or interests of INTV. Currently, association leaders are looking toward telephone companies for video dialtone possibilities and as a means for greater audience access to television programming.

As of March 1995, only 84 stations in the United States had no program provider affiliation, according to David Donovan, vice president of legal and legislative affairs for INTV. Of the other 301 stations considered independent, FOX Broadcasting Company had 150 as affiliates, United Paramount Network had 96, Warner Brothers had 45 and 10 stations have combined alliances with both FOX and UPN.

ATKINSON, ROWAN

British Actor

By the mid-1990s Rowan Atkinson had achieved a certain ubiquity in British popular-cultural life, with comedy series (and their reruns) on television, character roles in leading films, and even life-size cutouts placed in branches of a major bank—a consequence of his advertisements for the bank. Yet, despite Atkinson's high profile, his career has been one of cautious progressions, refining and modestly extending his repertoire of comic *personae*. As one of his regular writers, Ben Elton, has commented, Atkinson is content to await the roles and vehicles that will suit him rather than constantly seek the limelight.

After revue work at the Edinburgh Fringe Festival and London's Hampstead Theatre in the 1970s, Atkinson first achieved prominence as one quarter of the team in the BBC's satirical review *Not the Nine O'Clock News* (broadcast on BBC2 while the *Nine O'Clock News* occupied BBC1). After a decade in which British satire had diminished, in the wake of the expiration of the *Monty Python* series, a "second wave" was thereby ushered in just as a new Conservative Government took power in 1979. The four performers—also including Mel Smith and Griff Rhys Jones, who later formed a successful production company together, and talented comedienne Pamela Stephenson—had similar university backgrounds to those of the earlier generations of British television satire since *Beyond the Fringe*. But the show's rapid-sketch format, often accompanied by a driving soundtrack, was less concerned with elaborate deflations of British political and social institutions or *Pythonesque* surreal narratives; instead, it was rather more a combination of guerilla sniping and playful parody, loosely held together by fake news announcements (the most political and topical parts of the programme). Though the quality of the writing varied hugely, Atkinson succeeded most clearly in developing an individual presence through what were to become his comic trademarks—the gawky physicality, the abundance of comic facial expressions from sneering distaste to sublime idiocy, his shifting mood changes and vocal registers from nerdish obsequiousness to bombast, and his ability to create bizarre characterisations, such as his ranting audience member (planted among the show's actual studio audience) or his nonsense-speaker of biblical passages.

From being the "first among equals" in *Not the Nine O'Clock News* Atkinson moved centre stage to play Edmund

Blackadder in the highly innovative *Blackadder* (also for the BBC), co-written by Elton and Richard Curtis, the latter a writer of Atkinson's stage shows. The first series was set in a medieval English court, with Edmund Blackadder as a hapless prince in waiting; subsequent series travelled forwards in time to portray successive generations of Blackadders, in which Edmund became courtier in Elizabethan England, then courtier during the Regency period, and finally Captain Blackadder in the trenches of World War I. With a regular core cast, who constantly refined their performances as the writers honed their scripts, the series combined, with increasing success, a sharpening satirical thrust with an escapist, schoolboyish sense of the absurd. The format served Atkinson extremely well in allowing him to play out variations on a character-theme, balancing consistency with change. While all the incarnations of Edmund Blackadder

Rowan Atkinson

Photo courtesy of the British Film Institute

pitted the rational, frustrated, and much put-upon—though intellectually superior—individual against environments in which the insane, tyrannical, and psychopathic vied for dominance, the youthful, gawky Prince of the first series evolved through the wishful, self-aggrandising courtier of the 1800s, to the older, moustachioed, world-weary soldier attempting merely to stay alive amid the mayhem of war. While the *Blackadder* series undoubtedly took time to find its feet, the attention to detail in all matters, from script to opening credits and period pastiche music, produced in the World War I series a highly successful blend of brilliantly conceived and executed characterisations, a situation combining historical absurdity and tragedy, and a poignant narrative trajectory towards final disaster: in the last episode, Blackadder and his entourage finally did go “over the top” into no man’s land and to their deaths, as in one last trick of time the trenches dissolved into the eerily silent fields that they are today. In his portrayal of the cynical yet basically decent Captain Blackadder, Atkinson created a kind of English middle-class version of Hasek’s Schweik, whose attempts to evade pointless self-sacrifice turn him unwittingly into a “little-man” hero in a world of pathological generals and power brokers. Atkinson’s own career write-up describes *Blackadder* as a “situation tragedy”, and though the comment may be meant humorously, the phrase neatly summarises the series’ genre-transgressing qualities.

If *Blackadder* exploited Atkinson’s skills at very English forms of witty verbal comedy and one-upmanship, his persona in the *Mr. Bean* series linked him with another tradition—that of silent film comics, notably Buster Keaton. Though silent-comedy “specials” have made occasional appearances on British television, this was an innovative attempt to pursue the mode throughout a string of episodes. Inevitably, Atkinson also became, to a much greater extent than previously, conceiver and creator of a character, though Curtis again had writing credits. In *Mr. Bean* Atkinson portrays a kind of small-minded, nerdish bachelor, simultaneously appallingly innocent of the ways of the world, yet, in his solipsistic lifestyle, deeply selfish and mean-spirited: the pathetic and the contemptible are here closely allied. It is a comedy of ineptitude, as Bean’s attempts to meet women, decorate his flat, host a New Year’s Eve party, and so on, all become calamitous, his incapacibilities compounded by a seemingly malevolent fate. With its sources in some of his earlier characterisations, Atkinson has been able to exploit his physical gawkiness and plunder his repertoire of expressions in the role. While *Blackadder*’s university wit achieved popularity with mainly younger audiences, the *Mr. Bean* format of eccentric protagonist in perpetual conflict with his intractable world took Atkinson fully into the mainstream, with its appeal to all ages. And, though having some specific resonances for British audiences in its ambience of drab bed-sitter life, its deliberate and almost Beckettian reductionism—man versus the world (and the word) and its objects—has meant the series has translated to other cultures, and has been commercially successful around the

world. At the time of writing, a feature-film version is in the making by Atkinson’s own production company.

Atkinson’s latest television role has been a kind of merging of the otherworldliness of *Mr. Bean* with the witty barbs of *Blackadder*. He plays a middle-ranking, idealistic, uniformed policeman, with an absolute respect for the values of the law and the job, often ridiculed by his more cynical colleagues. This new series, widely seen as writer Ben Elton’s attempt to create a character-based comedy in similar vein to the classic *Dad’s Army* (much-adored by Elton and many others), has thus far received mixed reviews. Since the gentler, insinuating humour of such comedy by its nature takes time to have its effects, as audiences need to build up sufficient familiarity with the characters and their traits and foibles, it is at present too early to tell whether this bold attempt to reinvigorate an older formula will succeed in terms of ratings or critical estimation. For Atkinson, though, it is something of a logical progression—a variation not a revolution, and a further integration into the comic mainstream.

So far Atkinson has given no sign of any desire to break out of the character portrayals for which he is renowned. Though his film work has included some strongly defined subsidiary roles (such as his bumbling *ingénu* vicar in *Four Weddings and a Funeral*), he has not attempted to make the move into serious drama, and has never had call to portray genuine and serious emotions. (Indeed, almost all of his comic characters exude a separateness from other human beings—Blackadder is generally uninterested in women, Bean cannot make contact with prospective partners or friends, and Atkinson’s policeman has a fragile relationship with a female colleague constantly undermined by his feebleness and passionlessness.) This apparent avoidance of roles demanding emotional display may indicate limitations in his acting range. But Atkinson himself may well regard it more as a choice to concentrate on a steady perfection and crafting of the kind of comic characterisation now so closely identified with him.

ATTENBOROUGH, DAVID

British Producer/Host/Media Executive

David Attenborough joined the BBC's fledgling television service in 1952, fronting *Zoo Quest*, the breakthrough wildlife series that established the international reputation of the BBC Natural History Unit at Bristol. The first of these, *Zoo Quest for a Dragon*, established Attenborough as an intuitive performer, so preoccupied by his fascination with the subject at hand and unconcerned for his own dignity in front of the camera that he seemed to sweat integrity. A sense of daring has always surrounded him: even in this early outing, the massive Komodo Dragon, object of the quest through Borneo, looked as ferocious as its name portends, and Attenborough's presence seemed to prove not only the reality and size of his specimens, but a kind of guarantee that we too were part of this far-flung scientific endeavour, the last credible adventure in the period which witnessed the demise of the British Empire. Moreover, *Zoo Quest* engaged, albeit in an entertainment format, a far higher level of scientific seriousness than more child-oriented and anthropomorphic competitors from Europe and the United States. Perhaps only Jacques Cousteau was so resistant to the temptation to cuteness.

Despite this rare skill, shared only by a handful of his fellow scientists, mainly in weather reporting, Attenborough was promoted to senior management at the BBC, where he served for 15 years. As controller of BBC2, he oversaw (and introduced on screen) the arrival of colour on British screens on 1 July 1967. He is credited with turning BBC2 around to an attractive, varied and increasingly popular alternative to the main channels. His skill as scheduler was evidenced in the "common junctions" scheduling policy, which allowed announcers on the two BBC channels to introduce a choice of viewing, a practice which opened the corporation up to charges of unfair advantage from the commercial broadcasters and contributed indirectly to the pressure for a

fourth, commercial channel. Attenborough introduced popular sports like snooker as well as *The Forsyte Saga*, and he pioneered the blockbuster, personality-presenter documentaries like Kenneth Clark's *Civilisation*, Jacob Bronowski's *The Ascent of Man*, Alistair Cooke's *America*, J.K. Galbraith's *The Age of Uncertainty* and his own *Life on Earth*. Common

David Attenborough

to these expensive and risky projects was a faith in television as a medium for quite complex historical, cultural and scientific ideas. Even those series which were less popular achieved the talismanic status of the kind of programmes license fees should be used to make. Promoted to deputy controller of programmes for the whole network, third in the BBC's hierarchy, he was hotly tipped for the post of director general. But he abandoned management because, he said, "I haven't even seen the Galapagos Islands". However, he continued to speak passionately in defence of the public service ethos in many public fora.

Life on Earth, for which over 1.25 million feet of film were shot in over thirty countries, subsequently sold in 100 territories and was seen by an estimated 500 million people worldwide. Though Attenborough has always claimed modestly that photographing animals will always bring in an audience, the accumulated skills of naturalists and wildlife cinematographers, as well as enormous planning, are required to reach remote places just in time for the great wildebeest migration, the laying of turtle eggs, or the blooming of desert cacti, scenes which have achieved almost mythic status in the popular history of British television. The multimillion pound sequels to *Life*, *The Living Planet* and *The Trials of Life* created, through a blend of accessible scholarship and schoolboyish enthusiasm, the archetypal middlebrow mix of entertainment and education that marked the public service ethos of the mature BBC. Throughout the trilogy, the developing techniques of nature photography, allied with a sensitive use of computer-generated simulations, produced a spectacular intellectual montage, driven by the desire to communicate scientific theories as well as a sense of awe in the face of natural complexity and diversity. Though it is possible to be irritated by the lack of concern for the human populations of exotic countries (for example, the absence of local musics from the soundtrack), Attenborough's combination of charm and amazement has been profoundly influential on a generation of ecologically-aware viewers.

The Private Life of Plants, devoted to the evolution and adaptation of flora worldwide, was another spectacular success in the old mould, involving Attenborough popping up beside the world's oldest tree, hanging precariously in the jungle canopy, or seeking out the largest flower in existence by sense of smell. Honoured by the academy, respected by his peers and loved by audiences, Attenborough's retirement leaves the BBC with a major problem in finding a replacement. Since the pioneering work of Brian Moser on Anglia TV's *Disappearing World*, competitors have dispensed with onscreen presentation entirely, and in Moser's case opted for subtitled translations from local people rather than Western experts. Attenborough may be not only the first, but the last of a disappearing species.

—Sean Cubitt

DAVID (FREDERICK) ATTENBOROUGH. Born in London, England, 8 May 1926, brother of actor Sir Richard Attenborough. Attended Wyggeston Grammar School for Boys, Leicester; Clare College, Cambridge. Married Jane

Elizabeth Ebsworth Oriel, 1950; one son and one daughter. Served in Royal Navy, 1947–49. Worked for educational publishers, 1949–52, joined BBC as trainee producer, 1952; host, long-running *Zoo Quest*, 1954–64; controller, BBC, 1965–68; director of programmes, BBC, 1969–72; returned to documentary-making in 1979 with *Life on Earth* wildlife series; has since made several more similarly acclaimed nature series. AUBREY, JAMES T.

U.S. Media Executive

James T. Aubrey was president of CBS from 1959 until 1965. He later headed MGM studios, from 1969 to 1973, under studio owner Kirk Kerkorian, then finished his career as an independent producer. While he is remembered in some circles as the man who oversaw the dismantling of much of MGM's heritage in an effort to save the failing studio from financial ruin, it was his tenure at CBS that earned him his place in the annals of entertainment history.

Aubrey began his broadcasting career as a salesman for CBS' Los Angeles radio station, KNX, in 1948. Aubrey also worked with CBS' new television station, KNXT, and soon advanced into the ranks of the network's West Coast programmers, where he was largely responsible for the development of the offbeat Western series *Have Gun, Will Travel*. Aubrey left CBS in 1956 to join ABC, where he was made head of programming, and while there was responsible for scheduling such shows as *77 Sunset Strip*, *The Real McCoys*, *The Rifleman*, *Maverick*, and *The Donna Reed Show*. He was lured back to CBS in 1958, and shortly thereafter was named president of the network, succeeding Lou Cowan.

In this position Aubrey's star shined. He assumed complete control over the network's programming decisions, and added shows to the CBS schedule that would become staples for the next decade, including CBS' famed lineup of "rural comedies." Among the programs for which Aubrey can be credited as the overseer of development were *The Beverly Hillbillies*, *The Andy Griffith Show*, *The Dick Van Dyke Show*, *Mr. Ed*, *Petticoat Junction*, and *The Munsters*. He also unsuccessfully urged CBS Chairman William S. Paley to purchase a Paramount Pictures package of theatrical films to air on the network; the decision to stay away from theatricals returned to haunt CBS, for it allowed NBC to enjoy a substantial advantage in programming feature films throughout the 1960s.

While many critics saw Aubrey's lowbrow programming tastes as tarnish on CBS' "Tiffany" reputation for quality programs, no one could question his knack for

finding shows that met with enormous commercial success. By the 1963-64 season, CBS had 14 of the 15 highest-rated programs in prime time, and dominated the daytime ratings in a similar fashion. CBS' net profits doubled in kind during Aubrey's tenure, from \$25 million a year in 1959 to \$49 million in 1964.

Aubrey's downfall at CBS came quickly, and for a number of reasons. CBS started the 1964-65 season slowly, and its once seemingly insurmountable lead over NBC and ABC was in danger. Aubrey likely would have been given

James T. Aubrey

more time to correct the situation had it not been for other factors weighing against him in the minds of Paley and his right-hand man, Frank Stanton. For one, Aubrey's brusque and sometimes ruthless style often alienated his allies as well as his foes, and earned him the nickname, "The Smiling Cobra." His abrupt and arrogant manner in dealing with people proved especially troublesome when he treated CBS talent in the same way. At various times, he had run-ins with stars such as Jack Benny (whose long-running program was cancelled by Aubrey), Lucille Ball, Garry Moore, and others. Also contributing to Aubrey's demise at CBS were questions of improprieties in the handling of his business and personal affairs, including allegations that he gave special consideration to certain program producers in exchange for personal favors and gifts. These factors combined with the downturn in CBS' programming fortunes and led Paley and Stanton to fire Aubrey from his post in February 1965. Evidence of Aubrey's impact on CBS, at least in the minds of Wall Street financial executives, came in the immediate nine-point drop in CBS' stock price that followed his dismissal.

Aubrey's reputation as a hard-fighting, hard-living executive would follow him for the rest of his life, thanks in part to his immortalization as a leading character in a number of non-fiction and fiction books. He was featured prominently and unflatteringly in Merle Miller's best seller about the television industry, *Only You, Dick Daring!*, while Jacqueline Susann acknowledged patterning the ruthless character of Robin Stone after Aubrey in her 1969 novel, *The Love Machine*. Among Aubrey's credits in his later career as an independent producer was that of co-executive producer of the highly rated and critically blasted 1979 ABC made-for-television movie, *The Dallas Cowboys Cheerleaders*.

—David Gunzerath

JAMES AUBREY, JR. Born James Thomas Aubrey, Jr., 14 December 1918, in La Salle, Illinois, U.S.A. Graduated from Princeton, New Jersey, B.A. cum laude 1941. Married Phyllis Thaxter, 1944 (divorced, 1963); children: Schuyler and James Watson. Served in U.S. Air Force as test pilot, 1941–45. Started post-war career selling advertising space, Street and Smith and Condé Nast publications, 1946–48; account executive, CBS affiliate KNX, Los Angeles, 1948, and KNXT, 1951; sales manager, then general manager, KNXT and CTPN, 1952–55; manager, CBS television's West Coast network programming (where he and Hunt Stromberg, Jr., wrote the outline, based on an idea by other writers, originating the hit television series *Have Gun, Will Travel*), 1956; vice-president in charge of programs and talent, ABC, 1956–58; with ABC president Oliver Treyz, initiated *The Real McCoys*, *Maverick*, *The Donna Reed Show*, *77 Sunset Strip*, and *The Rifleman*; vice-president in charge of creative services, CBS television, 1958; appointed executive vice-president

of the CBS television network, 1959; CBS network president, December 1959; launched many successful series, notably *The Beverly Hillbillies*, *Mr. Ed*, *Gomer Pyle*, *The Munsters*, *My Favorite Martian*, *Route 66*, and *The Defenders*, and *The Dick Van Dyke Show*; abruptly dismissed by Dr. Frank Stanton, president of CBS, Inc., and William S. Paley, chair of the board, 27 February 1965; headed Aubrey Productions, 1965–69; president, MGM, 1969–73; independent producer, from 1973–94. Died in Los Angeles, California, 3 September 1994.

TELEVISION SERIES

1956 *Have Gun, Will Travel*

MADE-FOR-TELEVISION MOVIES

1979 *The Dallas Cowboys Cheerleaders*

AUDIENCE RESEARCH

The history of media audience studies can be seen as a series of oscillations between perspectives which have stressed the power of the text (or message) over its audiences and perspectives which have stressed the barriers “protecting” the audience from the potential effects of the message. The first position is most obviously represented by the whole tradition of effects studies, mobilising a “hypodermic” model of media influence, in which the media are seen to have the power to “inject” their audiences with particular “messages”, which will cause them to behave in particular ways. This has involved, from the Right, perspectives which see the media as causing the breakdown of “traditional values” and, from the Left, perspectives which see the media causing their audience to remain quiescent in political terms, inculcating consumerist values, or causing them to inhabit some form of false consciousness.

One of the most influential versions of this kind of “hypodermic” theory of media effects was that advanced by Theodor Adorno and Max Horkheimer, along with other members of the Frankfurt School of Social Research. Their “pessimistic mass society thesis” reflected the authors’ experience of the breakdown of modern Germany into fascism during the 1930s, a breakdown which was attributed, in part, to the loosening of traditional ties and structures—which were seen as then leaving people more “atomised” and exposed to external influences, and especially to the pressure of the mass propaganda of powerful leaders, the most effective agency of which was the mass media. This “pessimistic mass society thesis” stressed the conservative and reconciliatory role of “mass culture” for the audience. Mass culture was seen to suppress “potentialities”, and to deny awareness of contradictions in a “one-dimensional world”; only art, in fictional and dramatic form, could preserve the qualities of negation and transcendence. Implicit here, was a “hypodermic” model of the media which were seen as having the power to “inject” a repressive ideology directly into the consciousness of the masses.

However, against this overly pessimistic backdrop, the emigration of the leading members of the Frankfurt School (Adorno, Marcuse, Horkheimer) to America, during the 1930s, led to the development of specifically “American” school of research in the forties and fifties. The Frankfurt School’s “pessimistic” thesis, of the link between “mass society” and fascism, and the role of the media in cementing it, proved unacceptable to American researchers. The “pessimistic” thesis proposed, they argued, too direct and unmediated an impact by the media on its audiences; it took too far the thesis that all intermediary social structures between leaders/media and the masses had broken down; it didn’t accurately reflect the pluralistic nature of American society; it was—to put it shortly—sociologically naive. Clearly, the media had social effects; these must be examined and researched, but, equally clearly, these effects were neither all-powerful, simple, nor even necessarily direct. The nature

of this complexity and indirectness also needed to be demonstrated and researched. Thus, in reaction to the Frankfurt School’s predilection for critical social theory and qualitative and philosophical analysis, American researchers, such as Herta Herzog, Robert Merton, Paul Lazarsfeld and, later, Elihu Katz began to develop a quantitative and positivistic methodology for empirical audience research into the “Sociology of Mass Persuasion”.

Over the next twenty years, throughout the 1950s and 1960s, the overall effect of this empirically grounded “Sociology of Mass Persuasion” was to produce a much more qualified notion of “media power”, in which, media consumers were increasingly recognized to not be completely passive “victims” of the culture industry.

Among the major landmarks here were Merton’s *Mass Persuasion* and Katz and Lazarsfeld’s *Personal Influence*, in which they developed the concept of “two step flow” communication, in which the influence of the media was seen as crucially mediated by “gatekeepers” and “opinion leaders”, within the audience community.

Looking back at these developments, in the early 1970s, Counihan notes the increasing significance of a new perspective on media consumption—the “uses and gratifications” approach, largely associated in the United States with the work of Elihu Katz and, in Britain, with the work of Jay Blumler, James Halloran and the work of the Leicester Centre for Mass Communications Research, during the 1960s. Within that perspective, the viewer came to be credited with an active role, so that there was then a question, as Halloran (1970) put it, of looking at what people do with the media, rather than what the media do to them. This argument was obviously of great significance in moving the debate forward—to begin to look to the active engagement of the audience with the medium and with the particular television programmes that they might be watching. One key advance which was developed by the uses and gratifications perspective, was that of the variability of response and interpretation. From this perspective, one can no longer talk about the “effects” of a message on a homogenous mass audience, who are all expected to be affected in the same way. Clearly, uses and gratifications did represent a significant advance on effects theory, in so far as it opens up the question of differential interpretations. However, critics argue that the limitation is that the perspective remains individualistic, in so far as differences of response or interpretation are ultimately attributed solely to individual differences of personality or psychology. From this point of view the approach remains severely limited by its insufficiently sociological or cultural perspective.

It was against this background that Stuart Hall’s “encoding/decoding” model of communication was developed at the Centre for Contemporary Cultural Studies, as an attempt to take forward insights which had emerged within each of these other perspectives. In subsequent years, this

model has come to be widely influential in audience studies. It took, from the effects theorists, the notion that mass communication is a structured activity, in which the institutions which produce the messages do have the power to set agendas, and to define issues. This is to move away from the idea of the power of the medium to make a person behave in a certain way (as a direct effect, which is caused by a simple stimulus, provided by the medium), but it is to hold onto a notion of the role of the media in setting agendas (cf. the work Bachrach and Baratz on the media's agenda-setting functions) and providing cultural categories and frameworks within which members of the culture will tend to operate. The model also attempted to incorporate, from the uses and gratifications perspective, the idea of the active viewer, making meaning from the signs and symbols which the media provide. However, it was also designed to take on board concerns with the ways in which responses and interpretations are socially structured and culturally patterned at a level beyond that of individual psychologies. The model was also, critically, informed by semiological perspectives, focusing on the question of how communication works drawing on Umberto Eco's early work on the decoding of TV as a form of "semiological guerrilla warfare". The key focus was on the realisation that we are, of course, dealing with signs and symbols, which only have meaning within the terms of reference supplied by codes (of one sort or another) which the audience shares, to some greater or lesser extent, with the producers of messages. In this respect, Hall's model was also influenced by Roland Barthes' attempts to update Ferdinand de Saussure's ideas of semiology—as "a science of signs at the heart of social life" by developing an analysis the role of "mythologies" in contemporary cultures.

The premises of Hall's encoding/decoding model were:

- The same event can be encoded in more than one way.
- The message always contains more than one potential "reading". Messages propose and "prefer" certain readings over others, but they can never become wholly closed around one reading: they remain polysemic (i.e. capable, in principle, of a variety of interpretations).
- Understanding the message is also a problematic practice, however transparent and "natural" it may seem. Messages encoded one way can always be decoded in a different way.

The television message is treated here as a complex sign, in which a "preferred reading" has been inscribed, but which retains the potential, if decoded in a manner different from the way in which it has been encoded, of communicating a different meaning. The message is thus a structured polysemy. It is central to the argument that all meanings do not exist "equally" in the message: which is seen to have been structured in dominance, despite the impossibility of a "total closure" of meaning. Further, the "preferred reading" is itself

part of the message, and can be identified within its linguistic and communicative structure. Thus, when analysis shifts to the "moment" of the encoded message itself, the communicative form and structure can be analysed in terms of what the mechanisms are which prefer one, dominant reading over the other readings; what are the means which the encoder uses to try to "win the assent of the audience" to his preferred reading of the message.

Hall assumes that there will be no necessary "fit" or transparency between the encoding and decoding ends of the communication chain. It is precisely this lack of transparency, and its consequences for communication which we need to investigate, Hall claims. Having established that there is always a possibility of disjunction between the codes of those sending and those receiving through the circuit of mass communications, the problem of the "effects" of communication could now be reformulated, as that of the *extent* to which decodings take place within the limits of the preferred (or dominant) manner in which the message has been initially encoded. However, the complementary aspect of this problem, is that of the extent to which these interpretations, or decodings, also reflect, and are inflected by, the code and discourses which different sections of the audience inhabit, and the ways in which this is determined by the socially governed distribution of cultural codes between and across different sections of the audience; that is, the range of different decoding strategies and competencies in the audience. In this connection, the model draws both on Frank Parkin's work on "meaning systems" and on Pierre Bourdieu's work on the social distribution of forms of cultural competence.

In parallel with Hall's development of the encoding/decoding model at the course for contemporary cultural studies, in Birmingham, England, the growing influence of feminism during the 1970s led, among other effects, to a revitalisation of interest in psychoanalytic theory, given the centrality of the concern with issues of gender, within psychoanalysis. Within media studies, this interest in psychoanalytic theories of the construction of gendered identities, within the field of language and representation, was one of the informing principles behind the development of the particular approach to the analysis of the media (predominantly the cinema) and its effects on its spectator, developed by the journal *Screen*, which was, for a time in the late 1970s, heavily influential in this field, particularly in Britain, within film studies, in particular.

Screen theory was centrally concerned with the analysis the effects of cinema (and especially, the regressive effects of mainstream, commercial, Hollywood cinema) in "positioning" the spectator (or subject) of the film, through the way in which the text (by means of camera placement, editing and other formal characteristics) "fixed" the spectator into a particular kind of "subject-position", which it was argued, "guaranteed" the transmission of a certain kind of "bourgeois ideology" of naturalism, realism and verisimilitude.

Screen theory was largely constituted by a mixing of Lacan's rereading of Freud, stressing the importance of language in the unconscious, and Althusser's early formulation of the "media" as an "Ideological State Apparatus" (even if operating in the private sphere) which had the principal function of securing the reproduction of the conditions of production by "interpellating" its subjects (spectators, audiences) within the terms of the "dominant ideology". Part of the appeal of this approach to media scholars rested in the weight which the theory gave to the ("relatively autonomous") effectivity of language—and of "texts" (such as films and media products), as having real effects in society. To this extent, the approach was argued to represent a significant advance on previous theories of the media (including traditional Marxism), which had stressed the determination of all superstructural phenomena (such as the media) by the "real" economic "base" of the society—thus allowing no space for the conceptualisation of the media themselves as having independent (or at least, in Althusser's terms "relatively autonomous") effects of their own.

Undoubtedly, one of screen theory's great achievements, drawing as it did on psychoanalysis, Marxism and the formal semiotics of Christian Metz, was to restore an emphasis to the analysis of texts which had been absent in much previous work. In particular, the insights of psychoanalysis were extremely influential in the development of later feminist work on the role of the media in the construction of gendered identities and gendered forms of spectatorship (see, *inter alia*, Mulvey, 1981; Brunson, 1981; Kuhn, 1982; Modleski, 1984; Mattelart, 1984; Gledhill, 1988; Byars, 1991).

Proponents of screen theory argued that previous approaches had neglected the analysis of the textual forms and patterns of media products, concentrating instead on the analysis of patterns of ownership and control—on the assumption, crudely put, that once the capitalist ownership of the industry was demonstrated, there was no real need to examine the texts (programmes or films) themselves in detail, as all they would display would be minor variations within the narrow limits dictated by their capitalist owners. Conversely, screen theory focused precisely on the text, and emphasised the need for close analysis of textual/formal patterns—hardly suprisingly, given the background of its major figures (MacCabe, 1974; Heath, 1977-78) in English studies. However, their arguments, in effect, merely inverted the terms of the sociological/economic forms of determinist theory which they critiqued. In screen theory, it was the text itself which was the central (if not exclusive) focus of the analysis, on the assumption that, since the text "positioned" the spectator, all that was necessary was the close analysis of texts, from which their "effects" on their spectators could be automatically deduced, as spectators were bound to take up the "positions" constructed for them by the text (film).

The textual determination of screen theory, with its constant emphasis on the "suturing" (cf. Heath) of the spectator, into the predetermined subject position con-

structed for him or her by the text, thus allocated central place in media analysis to the analysis of the text. As Moores puts it, "the aim was to uncover the symbolic mechanisms through which cinematic texts confer subjectivity upon readers, sewing them into the film narrative, through the production of subject positions" on the assumption that the spectator (or reading subject) is left with no other option but, as Heath suggests, to "make...the meanings the film makes for him/her."

Although the psychoanalytic model has continued to be influential in film studies (which has been usefully developed by Valerie Walkerdine, in a way that attempts to make it less universalist/determinist), within communication and media studies, Hall's encoding/decoding model has continued to set the basic conceptual framework for the notable boom in studies of media consumption and the media audiences which occurred during the 1980s. To take only the best-known examples, the body of work produced in that period included Morley's study of the "Nationwide" audience, Hobson's study of *Crossroads* viewers, Modleski's work on women viewers of soap opera, Radway's study of readers of romance fiction, Ang's study of *Dallas* viewers, Fiske's study of *Television Culture*, Philo and Lewis' studies of the audience for television news, Jhally and Lewis' study of American audiences for *The Cosby Show*, and the work of Schroder, and Liebes and Katz on the consumption of American TV fiction in other cultures. Towards the end of the decade, much of the most important new material on media consumption was collected together in the published proceedings of two major conferences on audience studies—Drummond and Paterson's collection *Television and its Audience*, bringing together work on audiences presented at the International Television Studies Conference in London in 1986, and Seiter's collection *Remote Control: Television, Audience's and Cultural Power*, based on the influential conference of that name held in Tubingen, Germany, in 1987.

During the late 1980s, a further new strand of work developed in audience studies, focusing on the domestic context of television's reception within the household, often using a broadly ethnographic methodology and characteristically focusing on gender differences within the household or family in TV viewing habits. The major studies in this respect are Morley's *Family Television*, James Lull's *Inside Family Viewing*, Ann Gray's *Video Playtime*, Roger Silverstone's *Television and Everyday Life*, and, from a historical perspective, Lynn Spigel's *Make Room for TV*. Much of this work can be situated within the broad framework of reception analysis research as discussed in the "Analysis Research" entry.

AUDIENCE RESEARCH: CULTIVATION ANALYSIS

The stories of a culture reflect and cultivate its most basic and fundamental assumptions, ideologies, and values. Mass communication is the mass production, distribution, and consumption of cultural stories. Cultivation analysis, developed by George Gerbner and his colleagues, explores the extent to which television viewers' beliefs about the "real world" are shaped by heavy exposure to the most stable, repetitive, and pervasive patterns that television presents, especially in its dramatic entertainment programs.

Cultivation analysis is one component of a long-term, ongoing research program, called cultural indicators, which follows a three-pronged research strategy. The first, called "institutional process analysis," investigates the pressures and constraints that affect how media messages are selected, produced, and distributed. The second, called "message system analysis," quantifies and tracks the most common and recurrent images in television content. The third, cultivation analysis, studies whether and how television contributes to viewers' conceptions of social reality.

First implemented in the late 1960s, by the mid-1990s the bibliography of studies relating to the cultural indicators project included over 300 scholarly publications. Although early cultivation research was especially concerned with the issue of television violence, over the years the investigation has been expanded to include sex roles, images of aging, political orientations, environmental attitudes, science, health, religion, minorities, occupations, and other topics. Replications have been carried out in Argentina, Australia, Brazil, Canada, England, Germany, Hungary, Israel, the Netherlands, Russia, South Korea, Sweden, Taiwan, and other countries.

The methods and assumptions of cultivation analysis were designed to correct for certain blind spots in traditional mass communication research. Most earlier studies looked at whether individual messages or genres could produce some kind of change in audience attitudes and behaviors; in contrast, cultivation sees the totality of television's programs as a coherent *system* of messages, and asks whether that system might promote stability (or generational shifts) rather than immediate change in individuals. Whereas most research and debate on, for example, television violence has been concerned with whether violent portrayals make viewers more aggressive, Gerbner and his colleagues claimed that heavy exposure to television was associated with exaggerated beliefs about the amount of violence in society.

Cultivation analysis is not concerned with the impact of any particular program, genre, or episode. It does not address questions of style, artistic quality, aesthetic categories, high vs. low culture, or specific, selective "readings" or interpretations of media messages. Rather, cultivation researchers are interested in the aggregate patterns of images and representations to which entire communities are exposed—and which they absorb—over long periods of time.

Cultivation does not deny the importance of selective viewing, individual programs, or differences in viewers' interpretations; it just sees these as different research questions. It focuses on what is most broadly shared, in common, across program types and among large groups of otherwise heterogeneous viewers. No matter what impact exposure to genre X may have on attitude Y, the cultivation perspective argues that the consequences of *television* cannot be found in terms of isolated fragments of the whole. The project is an attempt to say something about the more broad-based ideological consequences of a commercially-supported cultural industry celebrating consumption, materialism, individualism, power, and the status quo along lines of gender, race, class, and age. None of this denies the fact that some programs may contain some messages more than others, that not all viewers watch the same programs, or that the messages may change somewhat over time.

The theory of cultivation emphasizes the role that story-telling plays in human society. The basic difference between human beings and other species is that we live in a world that is created by the stories we tell. Great portions of what we know, or think we know, come not from personal or direct experience, but from many forms and modes of story-telling. Stories—from myths and legends to sitcoms and cop shows—tend to express, define, and maintain a culture's dominant assumptions, expectations, and interpretations of social reality.

Television has transformed the cultural process of story-telling into a centralized, market-driven, advertiser-sponsored system. In earlier times, the stories of a culture were told face-to-face by members of a community, parents, teachers, or the clergy. Today, television tells most of the stories to most of the people, most of the time. Story-telling is now in the hands of global commercial conglomerates who have something to sell. Most of the stories we now consume are not hand-crafted works of individual expressive artists, but mass-produced by bureaucracies according to strict market specifications. To be acceptable to enormous audiences, the stories must fit into and reflect—and thereby sustain and cultivate—the "facts" of life that most people take for granted.

For the cultural indicators project, each year since 1967, week-long samples of U.S. network television drama have been recorded and content analyzed in order to delineate selected features and trends in the overall world television presents to its viewers. In the 1990s, the analysis has been extended to include the FOX network, "reality" programs, and various new cable channels. Through the years, message system analysis has focused on the most pervasive content patterns that are common to many different types of programs but characteristic of the system of programming as a whole, because these hold the most significant potential lessons television cultivates.

Findings from the analyses of television's content are then used to formulate questions about people's conceptions

of social reality, often contrasting television's "reality" with some other real-world criterion. Using standard techniques of survey methodology, the questions are posed to samples of children, adolescents, or adults, and the differences (if any) in the beliefs of light, medium, and heavy viewers, other things held constant, are assessed. The questions do not mention television, and respondents' awareness of the source of their information is seen as irrelevant.

The prominent and stable over-representation of well-off white males in the prime of life pervades prime time. Women are outnumbered by men at a rate of three to one and allowed a narrower range of activities and opportunities. The dominant white males are more likely to commit violence, while old, young, female, and minority characters are more likely to be victims. Crime in prime time is at least 10 times as rampant as in the real world, and an average of five to six acts of overt physical violence per hour involve well over half of all major characters.

Cultivation researchers have argued that these messages of power, dominance, segregation, and victimization cultivate relatively restrictive and intolerant views regarding personal morality and freedoms, women's roles, and minority rights. Rather than stimulating aggression, cultivation theory contends that heavy exposure to television violence cultivates insecurity, mistrust, and alienation, and a willingness to accept potentially repressive measures in the name of security, all of which strengthens and helps maintain the prevailing hierarchy of social power.

Cultivation is not a linear, unidirectional, mechanical "effect," but part of a continual, dynamic, ongoing process of interaction among messages and contexts. Television viewing usually relates in different ways to different groups' life situations and world views. For example, personal interaction with family and peers makes a difference, as do real-world experiences. A wide variety of socio-demographic and individual factors produce sharp variations in cultivation patterns.

These differences often illustrate a phenomenon called "mainstreaming," which is based on the idea that television has become the primary common source of everyday culture of an otherwise heterogeneous population. From the perspective of cultivation analysis, television provides a relatively restricted set of choices for a virtually unrestricted variety of interests and publics; its programs eliminate boundaries of age, class, and region and are designed by commercial necessity to be watched by nearly everyone.

"Mainstreaming" means that heavy television viewing may erode the differences in people's perspectives which stem from other factors and influences. Mainstreaming thus represents a relative homogenization and an absorption of divergent views and a convergence of disparate viewers. Cultivation researchers argue that television contributes to a blurring of cultural, political, social, regional, and class-based distinctions, the blending of attitudes into the television mainstream, and the bending of the direction of that

mainstream to the political and economic tasks of the medium and its client institutions.

Cultivation has been a highly controversial and provocative approach; the results of cultivation research have been many, varied, and sometimes counterintuitive. The assumptions and procedures of cultivation analysis have been vigorously critiqued on theoretical, methodological, and epistemological grounds; extensive debates and colloquies (sometimes lively, sometimes heated) continue to engage the scholarly community, and have led to some refinements and enhancements.

Some researchers have looked inward, seeking cognitive explanations for how television's images find their way into viewers' heads, and some have examined additional intervening variables and processes (e.g., perceived reality, active vs. passive viewing). Some have questioned the assumption of relative stability in program content over time and across genres, and emphasized differential impacts of exposure to different programs and types. The spread of alternative delivery systems such as cable and VCRs has been taken into account, as has the family and social context of exposure. Increasingly complex and demanding statistical tests have been applied. The paradigm has been implemented in at least a dozen countries besides the United States.

The literature contains numerous failures to replicate its findings as well as numerous independent confirmations of its conclusions. The most common conclusion, supported by meta-analysis, is that television makes a small but significant contribution to heavy viewers' beliefs about the world. Given the pervasiveness of television and even light viewers' cumulative exposure, finding any observable evidence of effects at all is remarkable. Therefore, the discovery of a systematic pattern of small but consistent differences between light and heavy viewers may indicate far-reaching consequences.

In sum, cultivation research is concerned with the most general consequences of long-term exposure to centrally-produced, commercially supported systems of stories. Cultivation analysis concentrates on the enduring and common consequences of growing up and living with television: the cultivation of stable, resistant, and widely shared assumptions and conceptions reflecting the institutional characteristics and interests of the medium itself and the larger society. Understanding the dynamics of cultivation can help develop and maintain a sense of alternatives essential for self-direction and self-government in the television age. The cultivation perspective will become even more important as we face the vast institutional, technological, and policy-related changes in television the 21st century is sure to bring.

AUDIENCE RESEARCH: EFFECTS ANALYSIS

Among matters of scholarly concern about television effects studies have been both tendentious and critical. Their relative importance is reflected in the following from a 1948 paper by Harold Laswell: "A convenient way to describe an act of communication is to answer the following questions: **Who Says What in Which Channel to Whom with What Effect?**"

The question as it is applied to television typically becomes either how is society different because television is part of it?, or how are individuals or specific groups of people different because they live in a world where television has been provided? The first of these questions may be thought of as a matter of media effect upon society; the second, a matter of media effect upon the development or status of individual people.

Effects of television then may be social or psychological and developmental. They may also be short-term and long term. Walter Weiss, writing in the second edition of

the *Handbook of Social Psychology* (1969), discussed effects literature under ten headings: (1) cognition, (2) comprehension, (3) emotional arousal, (4) identification, (5) attitude, (6) overt behavior, (7) interests and interest-related behavior, (8) public taste, (9) outlook and values, (10) family life.

For the most part, such effects, however they are characterized, have been studied in the haphazard fashion characterized by the funding priorities of governments and non-profit foundations. For example, there have been many efforts to assess the effect of the availability of television upon the developmental processes in children. In 1963, for instance, the British Home Office established its Television Research Committee with sociologist J. D. Halloran as its secretary. The effects of television were to be studied as both immediate and cumulative, with separate attention paid to perceptions of TV, its content and its function for viewers.

One area that has been heavily studied and produced an extensive research literature addresses the specific issue of violence, especially the connection between television treatment of violence and its manifestation in society. This work addresses the issue: will portrayals of violent behaviors result in members of the viewing audience becoming more violent in their relationships with others? This issue is often related to other presumed connections between the models projected by television and various modes of perception and behavior. Thus the way that women and minorities are presented in various television programs may be connected by some researchers to the ways these groups are perceived by viewers in other groups and by the group members themselves.

Just as the presence or absence of a medium or some particular of program content (e.g. violence) can be considered capable of producing effects in an audience, so can such technological innovations as pay-per-view, satellite delivery, three dimensional presentation, stereo sound, interactive television, etc. Any of these technological innovations may be linked in a research question with special viewing populations and special samples of program materials in attempts to determine whether or not the shift in technology has an effect on subsequent behavior or attitude.

Effects research is grounded in various forms of social scientific analysis and often depends on such techniques as controlled experiments, surveys, and observations. As a result, findings are often in dispute. Challenges to methods or design or sample size are used to call results into question and clear, incontrovertible conclusions are difficult to establish. Particularly with regard to research focused on children, or on the role of televised violence, these philosophical and

scientific difficulties have made it almost impossible to develop broadcasting policies based on research findings.

AUDIENCE RESEARCH: INDUSTRY AND MARKET ANALYSIS

The television audience is the commodity that stations and networks sell to advertisers. Television audiences are bought and sold and audience research is the currency, if you will, that the industry relies upon to make these transactions. From the television side of the business, the goal is to sell as many ads as possible while at the same time charging as much as advertisers are willing to pay. From the advertiser's perspective, the goal is to buy time in programs whose audience contains as many people as possible with the demographic characteristics most desired by the advertiser. Advertisers want to buy these audiences as efficiently as possible. In order to accomplish this task the industry usually describes audiences and their prices in terms of costs per thousand. This is simply the cost to purchase one or more ads divided by an estimate of the number of people in thousands. For example, if the cost for one advertisement is \$300,000 and the program audience estimate is 40,000,000 women, 18 to 49 years old, then the cost-per-thousand is $\$300,000/40,000=\7.50 . There are 40,000 one-thousands

in 40,000,000. In this example, an advertiser will spend \$7.50 for every 1,000 women 18 to 49 years old who watches the program in which the ad will be placed. Audience research provides the estimates of the size and characteristics of the audience that the industry buys and sells.

The A. C. Nielsen Company provides the audience estimates to stations, networks, program producers, advertisers and advertising agencies. Employing probability sample survey research methodology, Nielsen identifies which programs people watch and how long they watch them. Printed reports and on-line computer access allow Nielsen's clients to examine a detailed picture of television audiences.

Advertisers use this research information to locate the programs, stations and networks that have large numbers of viewers with demographic characteristics they desire. These characteristics are based upon other market research that indicates the factors like age, sex, income, household size, and geographic location of people who are most likely to purchase and use their products or services. As they identify

the significant users and purchasers of their products, advertisers look for television viewers with similar characteristics. These target audiences become the focus of the deals that buyers and sellers make. The audience research data helps identify the number of and characteristics of the audience as well as the efficiency of a particular advertising buy.

Television stations and networks approach this equation from the other side. They use market research to identify the characteristics of users and purchasers of products and services to whom they hope to sell advertising. TV sales executives then employ Nielsen audience research to find the programs these target audiences watch. They will then do competitive analyses to compare the size and composition of other station and or network program audiences. They will use this data to convince advertisers that they can deliver more of the target audience at a better price than their competition.

Audience research is an integral part of this business ritual. It really is a starting place for the negotiations in which buyers and sellers engage. As in any business deal there are many other factors that will determine the price. Supply and demand, personal relationships, and other intangibles affect prices, but in the television industry, audience research plays an important role in how business is conducted.

AUDIENCE RESEARCH: RECEPTION ANALYSIS

Despite the (implicit) nominal link to the work on what is also called "Reception Theory", within the field of literary studies, carried out by Wolfgang Iser, Hans Jauss and other literary scholars (particularly in Germany), the body of recent work on media audiences commonly referred to by this name, has on the whole, a different origin, although there are some theoretical links (cf., the work of Stanley Fish) than the work in literary theory. In practice, the term "reception analysis", has come to be widely used as a way of characterising the wave of audience research which occurred within communications and cultural studies during the 1980s and 1990s. On the whole, this work has adopted a "culturalist" perspective, has tended to use qualitative (and often ethnographic) methods of research and has tended to be concerned, one way or another, with exploring the active choices, uses and interpretations made of media materials, by their consumers.

As indicated in the previous discussion of "The Media Audience", the single most important point of origin for this work, lies with the development of cultural studies in the writings of Stuart Hall at the Centre for Contemporary Cultural Studies at the University of Birmingham, England, in the early 1970s and, in particular, Hall's widely influential "encoding/decoding" model of communications (see the discussion of "The Media Audience" for an explanation of this model). Hall's model provided the inspiration, and much of the conceptual framework, for a number of the centre's explorations of the process of media consumption, notably David Morley's widely cited study of the cultural patterning of differential interpretations of media messages among *The 'Nationwide' Audience* and Dorothy Hobson's work on women viewers of the soap opera *Crossroads*. These works were the forerunners of a blossoming of cultural studies work focusing on the media audience, throughout the 1980s and 1990s, including,

among the most influential, from a feminist point of view, the work of Tania Modleski and Janice Radway on women consumers of soap opera and romance, and the work of Ien Ang, Tamar Liebes and Elihu Katz, Kim Schroder and Jostein Gripsrud on international cross cultural consumption of American drama series, such as *Dallas* and *Dynasty*.

Much of this work has been effectively summarised and popularised, especially, in the United States by John Fiske, who has drawn on the theoretical work of Michel de Certeau to develop a particular emphasis on the "active audience", operating within what he terms the "semiotic democracy" of postmodern pluralistic culture. Fiske's work has subsequently been the object of some critique, in which a number of authors, among them Budd, Condit, Evans, Gripsrud, and Seamann have argued that the emphasis on the openness (or "polysemy") of the message and on the activity (and the implied "empowerment") of the audience, within reception analysis, has been taken too far, to the extent that the original issue—of the extent of media power—has been lost sight of, as if the "text" had been theoretically "dissolved" into the audience's (supposedly) multiple "readings" of (and "resistances" to) it.

In the late 1980s, there were a number of calls to scholars to recognise a possible "convergence" of previously disparate approaches under the general banner of "reception analysis" (cf. Jensen and Rosengren), while Blumler have claimed that the work of a scholar such as Radway is little more than a "re-invention" of the "uses and gratifications" tradition—a claim hotly contested by Schroder. More recently, both Curran and Corner have offered substantial critiques of "reception analysis"—the former accusing many reception analysts of ignorance of the earlier traditions of media audience research, and the latter accusing them of retreating away from important issues of macro-politics and power into inconsequential micro-ethnographies of domes-

tic television consumption. For a reply to these criticisms, see Morley, 1992.

—David Morley

AUSTRALIA

Australian television may be said to show a pattern of “historical modernity.” The key features of this pattern are as follows: a dual or mixed television system consisting of private, commercial television broadcast networks as well as a public service television broadcast sector; a heavy reliance on American-style programming practices; and, initially at least, equally heavy reliance on imported programs from America to fill the television schedule; the start-up of local programs on the commercial networks which when coupled with imported programs guarantees the overall viewing popularity of this sector; a relatively weak public service sector, perpetually caught in the dilemma of attempting to hold its traditional minority audiences with innovative, local programs and attracting larger, entertainment-oriented audiences with more main stream programs, often imported. While this pattern has been generally true for Australian television, it has not, however, been a static one. In particular Australian television has followed a classic economic tendency of “import substitution” whereby, after an initial high noon of imported American programs, locally produced popular television programs soon appeared that displaced imported programs in the Australian television schedule. In other words, American imported program played an important role in the creation of a local television production industry. The germ of this situation is there in the second television program broadcast on the opening night of regular television broadcasting on 16 September 1956. *Name That Tune* was an Australian “vernacularisation” of a game show that had first been broadcast on American television in 1953.

These features then of the Australian television situation—vigorous private commercial networks, weakened public service sector; the progressive substitution of locally produced programs for imported ones are part of a more general international and historical pattern that is repeated elsewhere in more recent times (for example, Western Europe in the 1980s). Thus there is a good deal of interest for television scholars elsewhere in the historic trajectory of Australian television both for its own sake and also for the comparative opportunities it offers for understanding developments elsewhere. Marshall McLuhan once claimed that Canadian media developments were an “early warning system” for trends that would later appear elsewhere and Richard Collins has recently embraced this claim, warning pessimistically of the possible “Canadianization” of television in Europe and elsewhere. However, the Australian experience has been at once more complex, more interest-

FURTHER READING

See “Audience Research” general entry.

ing and more positive. Given the linguistic and cultural barriers at work in countries in Europe and in other parts of the world, there are strong grounds for believing that “Dallas-ization” of international television was in fact a passing phase and that the Australian experience of television, most especially that of “import substitution” is, likely to be being repeated.

Structure

Australian television broadcasting began in the 1950s (Sydney and Melbourne in 1956 and Brisbane and Adelaide in 1959) a date that links it with other “major minor” economies such as Canada, Italy and the Netherlands, whereas major economies such as the United States and the United Kingdom, Germany and Japan had all inaugurated television broadcasting in the 1930s and 1940s. The structure of the Australian television system was established in 1950 when the newly elected conservative federal government reversed the decision of the post-war socialist government that television was to be a monopoly in the hands of a public service broadcaster. Instead the 1950 decision decreed that television was to be a dual system containing a private, commercial sector as well as a public service sector. This decision could be justified on the structural grounds that Australian radio had been a dual system since 1932 when the Australian Broadcasting Commission had been established. (In point of fact the development of the Australian Broadcasting Commission [ABC] in 1932 had been intended to create a unitary, public service broadcasting system, an outcome thwarted when private, commercial broadcasters had bought out community radio licenses after they had surrendered their own licenses to the government.)

The dual system of Australian television was to remain in place from the beginning of broadcasting in 1956 until the licensing of community television stations in the most populous cities in 1992–93. This is not however, to suggest that the channel choice of viewers remained the same over this period. In 1956 viewers in the larger cities had two commercial and one public service channels to choose from. By 1964–65 there were three commercial services available. In 1980 a second public service channel went on the air while the community channel of 1992–93 signals both the advent of a third sector as well as the sixth channel in the system. In deciding on the shape of the commercial services the initial consideration was technical: how many transmitting frequencies could be made available in each centre of popula-

tion? The answer generally was one, although in larger centres it was two.

Commercial television licenses were awarded to two operators in the state capitals of Sydney, Melbourne, Brisbane and Adelaide, and one in Canberra, Perth and Hobart. One commercial license was awarded in smaller cities and towns. This development occurred in several stages and followed the Development of Television Services Plan, an engineering plan devised by engineers at the broadcasting regulatory body, the Australian Broadcasting Control Board (ABCB). By 1965 nearly 80% of the country came within the net of television.

The granting of two licenses in the four most populous cities facilitated the development of networking arrangements. It also allowed for a much weaker network arrangement elsewhere. Networking in Australian commercial television between 1956 and 1987 was a combining together of local interests for the purposes of cost sharing, on program buying and program production. With newspaper companies securing major shares in several of those stations, the first metropolitan networking arrangements built on long term associations between different capital city newspapers which were already in place. Thus, for example, Frank Packer's TCN Channel 9 Sydney had links with HSV Channel 7 Melbourne from 1956 to 1960. However, Packer had ambitions to establish a television network chain, applying unsuccessfully for commercial licenses in Brisbane and in country areas of New South Wales. In 1960 he bought GTV Channel 9 in Melbourne and the Nine Network came into being. Sydney and Melbourne with some 35% of the national population were the hub of the network with Brisbane and Adelaide as satellites. The commercial stations with the designation "7" were forced into partnership but, lacking a common owner, the Seven Network (which emerged later in the decade) was always a looser association.

The Packer buyout was permitted under the two station ownership rule contained in the Broadcasting and Television Act and the Melbourne purchase highlighted the dominance of newspaper interests in Australian commercial television. Until the rule was changed in 1987, the Packer Consolidated Press group controlled TCN 9 and GTV 9, the *Herald* and *Weekly Times* group operated HSV 7 while John Fairfax and Sons controlled ATN 7. The other notable press entrant was the young Rupert Murdoch, owner of the afternoon *Adelaide News*, who in 1958 served the license for one of the first two commercial Adelaide Television stations, NWS Channel 9.

In 1953 the Royal Commission had recommended that the ABC run the public service television service. The government accepted this advice and allocated one channel to the ABC. The public sector radio broadcaster, the ABC was unaffected by these developments. Single ABC television stations began in Sydney and Melbourne in late 1956 and early 1957 respectively and other ABC stations rippled out across the country over the next nine years. Under its long-serving general manager, Sir Charles Moses, the ABC

gave little thought to its new television service. By and large, it was television as an extension of radio, along lines generally pioneered by the BBC. Thus by 1964 when Moses retired, the ABC's audience share was below 10% and badly in need of a shake up.

Programs

Early television owners and executives did not give a great deal of thought to programs, concerned as they were with the capital cost of establishing and operating stations. Although several would-be licensees expressed commitment to the idea of locally produced programs both during the hearings of the Royal Commission and the License Inquiries (1955–59), their early practice did not encourage local production. Fortunately for them, the early 1950s had seen American television switch from the live production of network programs, especially drama, in New York and Chicago, to filmed production in Hollywood. By 1956 when Australian television began, there was a plentiful supply of cheap imported American programs available and these soon dominated local prime time programming on the commercial networks. Thus commercial owners and operators offset the initial establishment and operating capital costs against the relatively cheap costs of the imported material. The imported programs also subsidised the production of local programs in a variety of genres. Variety/light entertainment programs represented an important investment in the early years of Australian television and programs such as the *Johnny O'Keefe Show*, *In Melbourne Tonight* and the *Bobby Limb Late Show* rated extremely well in prime time. Other genres of local production included news, game shows and sporting broadcasts. There was also a small amount of drama produced in this period although, generally, it did not rate sufficiently well to justify the relatively heavy costs involved. The most interesting area of local production was however, that of television commercials. In 1960 the government issued a requirement that 100% of all commercials be locally produced. Even more than the "vernacularising" of formats and formulas, already underway in game shows and light entertainment, this protectionist measure signaled that the import substitution was underway and would shortly spread to drama.

The initial role of Australian television stations was one of both distribution/exhibition of programs. The blueprint for such a role lay in the vertically integrated structure of the Hollywood motion picture companies of the studio era. In the Australian situation, the creation of television production sound stages was necessary because the fragile Australian film production industry of the 1950s, mostly lacked such infrastructure. In addition owning these facilities would give television operators a power over advertisers that their counterparts in radio had, often to their cost, lacked.

The most notable of the stations for in-house production were ATN Channel 7 in Sydney, GTV Channel 9 in Melbourne and the ABC in those two cities. GTV Channel 9 continued with its successful *In Melbourne Tonight* until

1965. ATN persisted with in-house production until 1970, while the ABC only opened its doors to independent producers (packagers) in 1986.

Development

Television is a complex entity (economic enterprise, technology, entertainment medium, political platform, advertising vehicle and so on) and, thus, at any time in its history it is likely to show quite different features in different shapes and combinations. Thus in order to survey developments in Australian television, its particular features and details may be divided into four periods, each lasting for approximately a decade: this coincidence highlights their classificatory convenience.

In the period up to 1965, Australian television, like television in general, was bounded in part by its technology. The programs were either imported and therefore on film, put live to air or else kinescoped as a filmed record of a live broadcast. The first video recorder was imported by Channel 7 Sydney in 1958, but, until around 1965, when other stations and production companies had video playback and editing facilities, this first machine made little difference to the practice of 'live' television. A second technical feature of the period was the local or regional character of television in Australia. Until 1964 there were no cable facilities that allowed the transmission of television signals from one capital city to another. Thus the continent consisted of a series of discrete, isolated television markets that often saw different local programs, regional schedules and frequently geographically distinct commercials.

News programs, soap opera and some early teenage music programs were fifteen minutes in length, although most programs ran for half an hour. A few imported drama series, plays and variety programs were longer, running sixty or ninety minutes. The programming schedule was dominated by half-hour programs such as *The Mickey Mouse Club*, *The Lone Ranger*, *Sergeant Bilko*, *Hancock's Half Hour*, *I Love Lucy* and others. The dominant drama genres were imported westerns, crime and situation comedies. This period was also marked by the popularity of the one-off television play. There were two kinds of play; the first, emanating from the BBC, was dominated by a West End conception of drama and theatre. It favoured theatrical works of famous British playwrights such as Shakespeare, Shaw and in the modern period, Coward and Rattigan. This model was the one adopted by ABC television. From the late 1950s it combined BBC imports with television versions of some famous Australian plays, essentially, for the latter, adapting pre-existing theatrical materials to television. The other kind of play came from U.S. television. In the early 1950s, in programs such as *The U.S. Steel Hour* and *Playhouse 90*, playwrights such as Silliphant, Chayefsky and Mosel had written a series of original social realist plays for television including *Marty*, *The Miracle Worker*, and *Requiem for a Heavyweight*. The *Playhouse 90* model was adopted in Australian television by ATN Channel 7 and its

partner station, first GTV Channel 9 and then HSV Channel 7, under the sponsorship of both Shell and General Motors. Notable plays written for television under the aegis of these sponsors include *Other People's Houses*, *Tragedy in a Temporary Town* and *Thunder of Silence*.

Current Affairs were absent from television in this early period. *Four Corners*, modeled on the BBC's *Panorama*, did not begin on the ABC until 1961. In its earliest form it was more of a newsreel or news digest program, with several items in each episode, rather than the hard-hitting investigative program it would later become. Its first producer, Bob Raymond, left the ABC in 1963 and began *Project 63* on TCN Channel 9. These programs were forerunners to the kind of current affairs television that blossomed on Australian television in the later 1960s and 1970s.

There was little in the way of locally oriented documentary films on Australian television at this time. The ABC did not establish a production facility (teams of cameramen available to news, documentary and drama), until 1959. There was, instead, especially in news, an enormous reliance on overseas material.

Any "Australian content" in this period, occurred in lower-cost production genres such as variety and quiz shows. Indeed there was a boom in local variety shows. Programs such as *In Melbourne Tonight*, *In Sydney Tonight*, *Revue 60/61*, *Bandstand*, *Six O'Clock Rock*, *The Bobby Limb Late Show*, *Tonight with Dave Allen* and the *Johnny O'Keefe Show* were important landmarks. In Brisbane and Adelaide local "tonight shows" were hosted by figures such as George Wallace Junior, Gerry Gibson and Ernie Sigley. Early successful local quiz shows included *Concentration* and *Tic-Tac-Dough*, all packaged for TCN Channel 9 by Reg Grundy.

A related feature of this period was that of switching various formats, programs and personalities that had worked well in radio across to the new medium. Australian examples included *Consider Your Verdict*, *Pick A Box* and *Wheel of Fortune* made successful transitions to television. There was also an attempt to move soap opera from radio to television in the late 1950s when ATN Channel 7 produced *Autumn Affair* and *The Story of Peter Gray*. These failed to find either sponsors nor audience. And although several radio personalities including Bob Dyer and Graham Kennedy moved successfully across, a notable casualty of the new medium was Jack Davey.

The local successes in variety game shows and to a lesser extent, drama, meant that, despite the overwhelming presence of American and British programs, Australian programs had a distinct place in the television schedule. It was through the presence of this variety cycle that Australian television was given a local look or flavour and developed a deliberate programming mix between overseas drama and local variety. But variety shows often had international guests, so that even if they qualified under ABCB regulations as Australian content, they had a distinctly international flavour.

The period from 1964 to 1976 was marked by a good deal of stability. The novelty of television was at an end.

Television was increasingly a national service, a part of everyday life, and increasingly—a mirror for the nation to see itself. Between 1963 and 1965 new commercial stations appeared in Sydney, Melbourne, Brisbane, Adelaide and Perth. The new stations were partly brought about by federal government's desire to introduce new players into the field of commercial television station ownership. Ansett, a major transportation group, secured the licenses of ATV 0 Melbourne and TVQ Brisbane while amalgamated wireless Australasia, a telecommunications manufacturing group, obtained the license of Ten 10 Sydney. The new stations formed themselves into the 0-10 Network, so that east coast Australia now had three commercial networks. The 0-10 Network was the weakest in terms of audience ratings—so much so that in 1973 a new federal Labor government briefly contemplated removing the licenses.

The advent of the new network meant that there was barely enough imported program material for the commercial networks and the ABC. This was an important factor in the sudden rise of local television drama production. A new drama cycle began with the unexpected success of the police series *Homicide*, which Crawford Productions in Melbourne began producing in late 1964. By the end of the 1960s there were three Crawford police series—*Homicide*, *Division 4* and *Matlock Police*—on the different commercial networks and a fourth local series, *Contrabandits*, on the ABC.

There are at least four significant reasons for claiming *Homicide* as the most important drama production in the history of Australian television. *Homicide* ushered in a new production system that saw the integration of indoor electronic recording and outdoor filming that has become a mainstay of local television production. It signaled that the independent packagers now had a permanent place in the Australian industry with networks now farming out production and themselves concentrating on distribution. Thirdly, *Homicide* would help create a drama production industry which in turn became the endorsement for a state supported feature film industry and fourthly *Homicide*, not least through import-substitution, would help create “a vernacular literature” of the small screen which in turn would help a new Australian nationalism.

Homicide ushered in a new look to Australian television. It presented audiences with a different, more factual, image of Australia, especially urban landscapes, than anything hitherto. The increased use of Australian film footage in news programs assisted the factual tone and the authenticity of location and detail. This *mise en scene* could be found across a wide range of locally produced television drama such as *Bellbird*, *You Can't See Round Corners*, *My Name's McGooley*, *The Battlers* and *Dynasty* all produced in those years and all signs of an expanding television drama production industry. These programs were made with Australian audiences in mind. Because they were in black and white and shot on an integrated basis they did not export particularly well. Thus their producers worked very much to Australian audiences in terms of the rendition of language, accents, references and visual icons.

However, the popularity of local drama series resulted in an equally dramatic downturn in variety programs. From 1965 variety production effectively ceased in Brisbane, Adelaide and Perth. Fewer shows came out of Sydney and Melbourne and Graham Kennedy and Bobby Limb, the biggest stars in the variety cycle, were seen infrequently.

The development of a “vernacular literature” was not confined to drama but also occurred in current affairs and documentary. The importance of current affairs and documentary television increased markedly also. After a shaky start, the weekly *Four Corners* settled down to a new kind of investigative journalism. In 1967 the ABC started the daily current affairs *This Day Tonight (TDT)*, modeled on the BBC series *Today Tonight*. The program had a hard-hitting journalistic drive that examined political and social issues in ways never imagined by earlier programs. It was a very big success for the ABC and markedly improved its ratings performance.

TDT and *Four Corners* were enormously influential in extending the range of current affairs television, on the ABC and commercial stations. In the 1970s many ABC journalists and reporters, of whom Mike Willesee was the most famous, would move to current affairs programs on commercial stations. This takeup of current affairs is one of the few instances where, contrary to the ABC's claims, the ABC has actually influenced commercial television in Australia. Documentary series also brought the life of the nation within their scope. The ABC's *Chequerboard* introduced *cinema verite* into Australian television, significantly expanding the range of social concerns and issues that could be examined in the medium of television. A second documentary series, *A Big Country* also enlarged the audience's sense of what constituted the nation.

However, one program, the family series *Skippy*, anticipates the next stage of Australian television. *Skippy* was produced in colour on film and featured a bush kangaroo. The program included familiar international icons of Australia including beaches, bush and fauna and was consciously made with exports in mind. In the event the program did enormously well and pointed out the international sales opportunity for Australian programs.

With the rise in popularity of Australian programs there was a shift in the economies of local commercial television. Earlier cheap television imports subsidised the capitalisation, equipping and maintenance of new stations; they now allowed the commercial stations and networks to underwrite the cost of local productions. It was on the basis of their Australian programs that the commercial stations rose or fell in the ratings.

The state, through the ABC played a part in securing the place of Australian content on television in this period. The first content regulations (effective from 1956 to the early 1960s) required stations to, whenever possible, employ Australians for the production and transmission of programs. But this regulation was too general to be enforceable; as imported programs were pre-recorded it was

irrelevant. In 1965 the ABCB introduced a quota system for Australian content. Stations were required to screen three hours per week of Australian content in prime time. A precedent for the program quota had been set by the ABCB 1960 requirement whereby all television commercials had to be Australian.

Three hours a week was a fairly limited quota which the commercial stations had little difficulty in meeting. The quota rose slowly throughout the rest of the 1960s. In 1972 it stood at ten hours per week during prime time. In 1973 the ABCB introduced a "points system", which still operated on a quota basis but attempted to discriminate in favour of more expensive program forms such as drama. However, these measures did not cause the big upsurge in Australian television production that began in 1965. They did though set a minimum threshold for the scheduling of local productions, below which commercial stations could not fall. In other words, the quota and points system helped guarantee at least part of the market for Australian producers.

While the commercial television stations between 1964 and 1972 switched to using independent production packagers, the ABC continued its in-house production. However, with the retirement of Sir Charles Moses in 1965 and following comparable moves some years earlier at the BBC, a major restructuring of ABC television and radio took place. Television drama severed many of its links with the Australian theatre. Following a BBC example, the ABC Drama Department was organised into three strands—series, serials and plays. The series strand produced several successful series including *Contrabandits* and *Delta*. The success of British soap operas, most especially *Coronation Street*, also struck a chord with the ABC. By 1967, the serial strand had initiated *Bellbird*, an ongoing serial set in a rural Australian town and the most successful serial to play on Australian television up to that point. It ran for more than 10 years. In 1973 it was joined by another ongoing serial, produced by the ABC in Sydney, *Certain Women*. The play strand was of lesser importance. It was most active in the late 1960s when it produced several successful seasons of *Australian Playhouse*, an anthology series of one-off hour and half-hour plays written for television.

The range of viewer choice was extended between 1976 and 1986 with the advent of new services and technologies. A new network, the Special Broadcasting Services (SBS) came on the air in 1980, at first serving only Sydney and Melbourne but gradually spreading to the other capital cities. SBS Television was designed to increase the media services available to ethnic Australians and it did this with multilingual programming. But SBS, with developing strengths in the areas of news, current affairs, documentary and foreign films, also appealed to English-language viewers. As a second public service television broadcaster, it considerably extended the range of choice of traditional ABC viewers, giving them an option to the ABC just as commercial viewers had been given an option to the Nine and Seven Networks in the mid 1960s.

This extra choice was fortuitous as the fortunes of the ABC declined between 1976 and 1986. Its operating budget suffered constant government pruning from 1975 onwards, and the national broadcaster steadily lost staff, program ideas and ratings to the commercial networks. In 1983 the ABC was reconstituted as a corporation following the passage of a new act through the federal parliament but these moves did little to arrest this process of decline. The output of ABC TV Drama suffered badly during this period, falling to as low as 40 hours total output in 1984–85. Despite this downturn, the ABC did produce some notable work including *Power Without Glory*, *Spring and Fall*, *Scales of Justice* and *Sweet and Sour*.

If things were gloomy at the ABC, commercial television was booming. The other major move at this time was the reinvigoration of the Ten Network thanks to Rupert Murdoch's News Limited purchase of ATV Channel 0 Melbourne in 1978, and Ten Channel 10 Sydney in 1979. Determined to increase the network's ratings, Murdoch increased Ten's program budget considerably. The network programmed heavily in the area of miniseries and feature films. Many fine miniseries—including *Water Under the Bridge*, *The Dismissal*, *Waterfront*, *Return to Eden*, and *Vietnam*—were produced for Ten, which helped push the network ahead of Nine and Seven in the ratings.

A more dramatic technological change was the introduction of colour transmission in 1975. Colour proved a boon for the commercial networks. Advertisers were eager to show their products in colour and station finances rose considerably. Viewers also obtained what was, in effect, a movie channel with the advent of the domestic VCR and the mushrooming availability of feature films on video. The video boom from 1980 to 1985 offered viewers an alternative to broadcast television and constituted a sixth channel in cities such as Sydney and Melbourne and a third channel in regional Australia. It also offered viewers an alternative relationship with broadcast television by making it possible to time shift, zap commercials and store programs. A related, and, as far as networks and advertisers were concerned, equally pernicious technology was the television/radio remote control, which first appeared in 1980. The control enabled viewers to flip channels, and avoid commercials.

The period also saw a new regulatory regime with the abolition in 1976 of the ABCB and its replacement by the Australian Broadcasting Tribunal (ABT). The ABCB had been an advisory body but the ABT was given the power to award radio and television licenses after a public enquiry. This feature, together with the early recognition of the right of public groups to be part of the licensing process represented a community-based broadcasting policy on the part of the government. However, the ABT also moved towards industry deregulation by giving commercial licensees control of such areas as program standards and advertising standards and scheduling. Although the stations were meant to be publicly accountable for their actions, in practice they were not. Australian content levels remained regulated

under the points system although stations lobbied vigorously to be allowed to set their own content levels. One other gain for program-makers and audience was the introduction by the ABT of the C classification for children's programs in 1978 and a C quota in 1984.

Following developments in America, Australian television in the mid to late 1970s saw the emergence of two new dramatic forms owing much to the cinema. The first Australian telemovie, a television program with the running time of a feature film, was produced in 1976 with the film *Polly My Love*. The miniseries, a consecutive narrative intended for screening in large time blocks over a short period, came to television in 1978 with *Against the Wind*. The telemovie and miniseries considerably extended the scheduling possibilities of television: series pilots could be screened in one or other form, while features could be reconstituted as mini-series.

By the early 1980s Australian film producers as various as Paul Barron, McElroy and McElroy, and Kennedy-Miller had all moved into television, although without relinquishing their commitment to cinema. After the collapse of the Australian period feature film at the box office, producers found television to be secure financially. They could pre-sell the latter programs to the Australian television networks, thereby considerably diminishing the overall financial risks in their production operation.

The cinematisation also meant that television was now a textually worthy object. Whereas in the 1960s and 1970s, Australian television had been subjected to cautious attention by psychologists and social scientists such as R.J. Thompson, David Martin and Fred Emery, who were anxious to gauge its possibly harmful audience effects, now media researchers such as Stuart Cunningham, John Fiske and John Tulloch celebrated the textual sophistications of Australian television, especially the miniseries.

These structural changes did much to foster drama production particularly in the areas of the serial, the miniseries and children's drama. Although drama serials had proved their ratings worth on commercial television from as early as 1972 with the success of *Number 96*, it was from 1976 that serials became part of the backbone of the program schedule. Serials such as *The Sullivans*, *The Restless Years*, *Prisoner*, *A Country Practice*, *Sons and Daughters* and *The Flying Doctors* ensured a solid audience for the networks other programs. Starting around 1982, and drawing in part on the recent international success of Australian cinema, Australian television programs, including serials, began to sell particularly well overseas. The move to colour substantially increased television's international sales opportunities as did the Australian stockpiling of episodes. When *The Young Doctors*, for example, went on sale internationally in 1983, Grundy had over 1,000 half-hour episodes on offer.

The richest crop in these golden years of Australian television drama lay in the miniseries. After the American and international success of *Roots*, Australian networks and producers made the miniseries a permanent feature in their

schedule. Between 1978 and 1987 more than 100 miniseries ranging in running time from four to 13 hours were produced locally. The miniseries as special event television was one important counter to the lure of the VCR, and several miniseries—such as *The Dismissal* and *Bodyline*—pulled very large audiences for the duration of their screening. Notable miniseries include *Vietnam*, *Return to Eden*, *The Timeless Land*, *A Town Like Alice* and *The Great Bookie Robbery*. The miniseries, and, to a lesser extent, the telemovie, were also an important stage in increasing the power of packagers vis-à-vis the networks. Piggybacking on the generous tax concessions, introduced in by government in 1981 to bolster a faltering feature film production industry, the packagers found that they could make deals for the international sale of their products. Initially these sales were secondary to Australian sales but from 1985 on, they were more important. This "internationalisation" of the Australian miniseries could be seen in the shift away from Australian historical situations, issues and figures to more contemporary dramas, frequently located off-shore, and including figures from various nations.

Children's series also blossomed in this general upswing of drama which had previously mostly been the domain of the ABC. The C classification and quota had the effect of making this area more financially attractive for producers than it had once been. Among producers who partially or completely specialised in this area were the Tasmanian Film Corporation, Barron Films, the Australian Children's Television Foundation and Revcom. Many entertaining series for children and young people were produced including particularly innovative work such as *Home, Sweet and Sour*, and *Dancing Daze*. With general international shortage of good children's material, this drama exported particularly well.

In 1987 the federal government made a series of important amendments to the Broadcasting and Television Act. Under the new rules, cross-ownership among the different media sectors (print, radio, television and film) was forbidden. The two-station rule was abandoned in favour of limits based on total audience size. Regional commercial television, a loose "network" of single stations that enjoyed a commercial monopoly in their local area, was also re-organised and under the title of "equalisation", capital city television networking was extended into rural Australia. Thus over 90% of the Australian population now gradually came within reach of the three capital city commercial networks. Divestiture and the extension of networking would, it was hoped, bring new players into commercial television. Such hopes were soon realised with all three networks being sold in 1987—Nine to the Bond Corporation, Seven to Qintex and Ten to Northern Star. However, unable to meet their bank interest charges, all of the new owners lost control of their networks in 1990. The Nine Network returned to the control of Kerry Packer while the other two networks were in the hands of the banks. By 1994-95 Rupert Murdoch and Telecom, the Australian telecommunications carrier, had bought 20% shares in the Seven network, seeking to add broadcast television to their Asian satellite ventures. If television

was once perceived as a license to print money, it was no longer the case. Instead it was clear that it would be some time before commercial television might again be a solidly prosperous sector of the media.

Although the networks claimed that their audience had remained mostly intact despite the VCR boom, nevertheless the advent of remote controls for VCRs and television sets led advertisers to look at some other advertising media, including direct mail. The stock market crash of October 1987 and the recession of the late 1980s caused a contraction in advertising budgets. In addition, the advent of people metres in 1991 indicated to advertisers that the television audience was far more mobile in shifting programs and channels than the diary method of gathering audience information had suggested.

The first AUSSAT satellite had been launched in 1986. Although much of its capacity was set aside for telecommunications, the satellite did symbolise the possibility of satellite delivered pay TV. After a protracted series of inquiries, ministerial statements, recommendations and policy changes, pay TV began as a new six channel service in Sydney and Melbourne in 1994.

The ABC also underwent upheaval after 1987. It had become a corporation in 1983 but even under a new administration its budgets still declined. In 1986–87 the new Head of TV Drama, decided, in line with the general moves by the national broadcaster towards corporatism, to farm out much of ABC's television drama requirements to independent or overseas packagers. Thus the ABC now makes little drama in-house, but is in the business of co-productions, supplying production facilities as its contribution to the making of miniseries, series and telefilm. In return for this investment the ABC secures rights to the Australian screening of the program. The packaging partner secures rights to the overseas distribution.

The wind-down of the generous tax concession in 1986 and the economic crises of the networks in 1989 also reduced drama and documentary. Producers increasingly target overseas market for finance and distribution with some companies such as Grundy, Kennedy-Miller and Beyond International relocating their headquarters off-shore. Such moves are indicative both of the internationalisation of markets as well as the continued depression of the Australian television program market. Indeed with production levels in the industry back to what they were around 1965, Australian television was witnessing the development of "underdevelopment".

The final feature of the present era in Australian television has been the creation of a new bureaucratic environment with the replacement of the ABT by the Australian Broadcasting Authority in 1992 and the creation of a new broadcasting bill, the Broadcast Services Act also in 1992. The two measures signified government commitment both to managerialism, new technology and liberal economic doctrines. The measures considerably lessened "public interest" as a factor in broadcasting policy and instead made technological innovation and

economic viability of operators the most important criteria in the new broadcasting environment.

In summary then certain key features in the structure and development of Australian television are worth reiterating. Australia has in the past been relatively slow to innovate various technologies associated with television including the broadcast service itself, colour transmission and multi-channel pay services. Nevertheless despite these time-lags, the system has exhibited a "historical modernity" in terms of its dual sections, weak public service and strong independent commercial. Import substitution has occurred leading to a vigorous television production industry which by the 1980s became a significant export earner. In the process the system spawned a number of successful companies and groups such as Packer, Murdoch's News Limited and the Grundy Organisation which are important players not only by local but also by international standards. In recent years Australian television has been increasingly internationalised at a series of levels including ownership, program content and technology. This has also been a period of upheaval and transition and is still without an end in sight.

In 1987 the Australian Broadcasting Tribunal was abolished and the Broadcasting Services Act was introduced. The Australian Broadcasting Authority, introduced in 1992, heralded the beginning of a new regulatory era.

AUSTRALIAN PRODUCTION COMPANIES

The leading Australian television production companies in the 1990s are the Australian Broadcasting Corporation (ABC), the Grundy Organisation, Village Roadshow and Roadshow, Coote and Carroll, Crawfords, the Beyond International Group, Southern Star, Film Australia, the Seven Network, and the Australian Children's Television Foundation. Other production concerns, such as Yoram Gross Film Studios, JNP, and Gannon Television, are more closely associated with one successful series and/or a set of spin-offs.

The Australian Broadcasting Corporation (ABC)

As Australia's main public service broadcaster, the ABC has always played a leading role in local program production, and is arguably the single most significant force in Australia in one-off television drama, in documentary, in nature programming and even, perhaps, in children's programming.

The ABC was virtually unrivalled in any category of drama until the mid-1970s. The period from 1968 until 1975 is often referred to as the "golden era" of the ABC, the time of long-running and popular series or acclaimed miniseries like *Bellbird*, *Contrabandits*, *Certain Women*, *Rush*, *Marion*, *Ben Hall* and *Power Without Glory*. Until the late 1980s, the ABC, like other public broadcasters around the world, was a vertically integrated producer-broadcaster. With the exception of a few co-productions, mainly with the BBC, all its production was initiated, financed and produced in-house. In the 1980s *Patrol Boat*, *1915*, *Spring and Fall*, *Scales of Justice*, *Palace of Dreams* and *Sweet and Sour* broke new ground in Australian television drama and provided an arena for trying out new writers and attempts at formal or conceptual innovation. Innovative comedy, such as *Mother and Son*, strong investigative journalism, such as the weekly current affairs program, *Four Corners* (in production since 1961), and quality drama, continue to attract critical and audience approval.

In 1986, after a period of confusion and demoralization in the wake of a major review—the Dix Report—in

the early 1980s, the ABC head of drama, Sandra Levy, initiated a "revival" in network drama content, the aim of which was to increase output to at least 100 hours a year. A decision was made to move more towards the "popular" end of the drama spectrum and away from what was seen as more esoteric, eccentric or specialised. At the same time, it was decided that the way to get quantity, quality and spread was by concentrating on a mixture of long-running series and miniseries and by eschewing one-offs which are too expensive when related to the audience they are likely to attract. And finally, it was also decided that the only way to increase drama hours was by entering into co-production arrangements with local producers who could raise cash from the "10BA" tax relief scheme and other government assistance schemes and from overseas presales, with the ABC contributing facilities and technical staff and as little cash as possible.

This strategy was immediately successful at least in quantity and audience terms. Close to 100 hours was achieved by 1988 and there was an immediate improvement in the ratings for miniseries and series, notably, in the latter category, the prime-time medical soap *GP*.

In the period 1988–91 a large number of prestigious miniseries were produced and broadcast; all were co-produced with local and overseas partners. Titles from this period include: *Act of Betrayal* (with TVS), *A Dangerous Life* (with HBO in the United States and Zenith in the United Kingdom), *Eden's Lost* (with Central TV), *The Leaving of Liverpool* (with the BBC), *The Paper Man* (with Granada). It is also the period when *GP* began to be sold to a number of overseas buyers although it has never achieved a large success in foreign markets. And the ABC's most successful situation comedy, both domestically and overseas, *Mother and Son*, was also sold during this period.

Since 1992 the possibilities for financing programs in the British market have diminished and the ABC has begun to swing back towards the production of programs fully financed in-house. Examples are *Phoenix I and II*, *Seven*

Deadly Sins, *The Damnation of Harvey McHugh*, *Heartland* and *Janus*. Amongst miniseries in-house titles are *Come in Spinner* and *True Believers*; whereas other parties hold the major rights to around 20 titles, including *Bodysurfer*, *Brides of Christ*, *Children of the Dragon*, *Frankie's House* and *The Leaving of Liverpool*, most of which were co-produced with U.K. partners.

The Grundy Organisation

Although it was bought in 1995 by the U.K. publishing and media conglomerate Pearsons, the history of the Grundy organisation is predominantly Australian and its Australian operations remain the single biggest national contribution to its overall activities. The history of Grundys is of a radio game show producer in the 1950s which transformed into a television game show producer for the local market during the 1960s. The 1970s brought considerable expansion as a local drama producer along with the consolidation of its reputation as a leader in light entertainment.

Without maintaining any particular link to any one network, Grundys has built up a substantial catalogue of game shows like *Celebrity Squares*, *Wheel of Fortune*, *Family Feud*, *Price Is Right*, *Blankety Blanks* and *Sale of the Century* (now in its fifteenth year of production) as well as highly successful drama programs like *Young Doctors*, *Number 96*, *The Restless Years*, *Prisoner*, *Sons and Daughters* and its flagship soap, which celebrated ten years of production in 1994, *Neighbours*.

Grundys experienced a breakthrough success with *Neighbours* both in Australia and in Britain from the mid-1980s. While that platform was the base on which a number of Grundys and other Australian serials and series were sold into the British market, it also was the impetus to develop the key globalising strategy which Reg Grundy, founder and chairman, dubbed "parochial internationalism." Grundys sets up wholly-owned local production companies to make programs that feature local people and are made by local Grundy staff who are nationals of the country in which the program is made.

By the mid-1990s, Grundys was producing about 50 hours of television a week worldwide. It sells into over 70 countries worldwide, employs around 1200 people in production and administration functions, and claims to be the second largest television light entertainment producer in the world, and, until its takeover by Pearson, one of the world's largest independent production organisations. While Europe as a whole generates more production throughput for the organisation, Australia remains the largest single country for production operations.

Criticisms levelled at Grundys have included that they have remained committed to innocuous formats (games and quiz) and safe drama renditions. However, programs like *Prisoner* and the New Zealand soap opera *Shortland Street* were risky and innovative for their time and places of production, while a program like *Man O Man* represents an equally risky strategy in light entertainment.

Village Roadshow and Roadshow, Coote and Carroll

The Village Roadshow group of companies has been unique in Australia. First established in the 1950s as a drive-in theater operator, it is now the only completely integrated audiovisual entertainment company, having involvement in studio management, production of both film and television, film distribution and exhibition, television distribution, video distribution and movie theme park management. The conglomerate is also moving into multimedia development and exhibition holdings in south east Asia. Its approach to internationalisation is also unique in that the main thrust of its strategy is to attract offshore productions to its Warner Roadshow Movieworld Studios near the Gold Coast in southeast Queensland.

The studios were kicked off in 1988–89 by housing two off-shore television productions for the Hollywood studio Paramount. These were *Dolphin Bay* and *Mission: Impossible*. It is estimated that an hour of series drama can be made here at a cost about 30% lower than a comparable hour made in Hollywood.

Since 1989, the studio has attracted part or whole production of several feature films, a mixture of Australian and overseas productions, including *The Delinquents*, *Blood Oath*, *Until the End of the World* and *Fortress*. It has also hosted a number of U.S. series, most of which haven't been shown in Australia, including *Animal Park*, *Savage Sea* and a new production of *Skippy*. In 1992–93 it housed the major U.S. series *Time Trax*, which, unlike *Mission: Impossible*, used a considerable number of Australian creative personnel, including directors and post-production people. It is, however, conceived, scripted in and entirely controlled from Hollywood.

Until 1995, Village Roadshow had a satellite production company, Roadshow Coote and Carroll (RCC), an outstanding boutique producer of mid-range budget television such as *GP* and *Brides of Christ*. RCC has been critically and culturally successful both locally and internationally, but it was not economically significant in the context of the whole conglomerate. This is because the huge investment in the studios depends totally on the success of Village Roadshow Pictures in attracting production to them. RCC is a very small organisation with very little fixed infrastructure and finally broke away from the parent company in 1995 so that its principal Matt Carroll could pursue wholly independent projects.

The strategy, scale and philosophy of RCC were at the opposite end of the spectrum from its parent company. Founded in 1984, it has chalked up an impressive list of television drama—*True Believers*, *Barlow and Chambers: A Long Way From Home*, *The Paper Man*, *Brides of Christ* and *Frankie's House*, as well as the long running ABC series *GP*. Many of its projects have been co-produced with the ABC. It is a marriage made in heaven: the expertise of RCC combined with the reputation of the facilities-rich ABC.

RCC's bigger budget productions which cost about A\$1.2 million an hour were typically financed one quarter

through Australian presale (usually the ABC), one quarter FFC investment, one third U.K. presale, and about one sixth other investors (including the ABC).

Brides of Christ exemplifies this. It rated 30 in Australia making it, in ratings terms, the most successful drama ever broadcast by the ABC. The repeats did almost as well (it had a third run on the Ten network) and it sold well on video. It also received uniform critical approval. In the United Kingdom, it also rated extremely well on Channel 4, gaining an audience of 6 million. Apart from Brenda Fricker (and an Irish orchestra playing the soundtrack music), all other aspects of the program were Australian. While its theme and mode of telling remained unambiguously Australian and the idiom and cultural feel of it were very local, its story of moral upheavals in the Catholic Church in the 1960s, set against the wider changes that were occurring, was recognisable enough in other places for it to gain wide acceptance internationally.

Brides of Christ, however, was an expensive miniseries set up when the European television market was still buoyant. The changed European environment has since meant that RCC now orients itself towards cheaper 13, 26 and 39 part series. While continuing with *GP*, they also developed *Law of the Land* for the Nine Network.

Crawfords

With a track record of more than 50 years, Crawfords is one of the oldest production companies in Australia, and in its time, the most respected. Before starting in television in 1954, it was Australia's most important producer of radio serials.

In the first 30 years of its existence as a television production company, Crawfords occupied a central place in Australian television. It pioneered popular police shows like *Homicide*, *Division 4*, *Matlock Police* in the 1960s and early 1970s; it made an early entry into soap opera with the long-running serial, *The Box* (1974); in 1976 it innovated again with the second world war serial, *The Sullivans*, which ran for 520 episodes and raised long-form drama to new heights of production values and cultural authenticity; and Crawfords was one of the earliest production companies to see the potential of 10BA as a vehicle for high quality miniseries with *All the Rivers Run* (1982). The company sailed through the early to mid-1980s on the back of productions like the glamorous *Carson's Law* and *Cop Shop*, another successful police serial, and further 10BA miniseries. Much of the Crawfords catalogue has great staying power; for example, both *The Sullivans* and *All the Rivers Run* continue to perform well around the world.

The company has always had its own extensive production facilities, unlike many a newer production company. In the more postfordist times that came in the late 1980s, the necessity to keep the facilities occupied became something of an albatross for Crawfords and recent further investment in new studios may have been ill-advised given the constant pressure of keeping the existing facilities occupied. This was

the height of the company's prosperity of recent times; *The Flying Doctors* was making excellent overseas sales (it was voted most popular drama in the Netherlands in 1992) and the Crawfords catalogue had been sold to the Kirch Group and to other territories with a view to the company diversifying into co-productions with overseas partners, game shows, sitcoms and telemovies.

The results of this strategy include the popular and ground-breaking multicultural sitcom, *Acropolis Now*, the game show *Cluedo*, produced in association with Zenith Productions of the United Kingdom; a co-produced package of six telemovies, called *The Feds*, with pre-sales to the Nine Network, TVNZ and a U.K. distribution guarantee; and the children's series, *Halfway Across the Galaxy and Turn Left*, a 1991 co-production with one of the Kirch subsidiaries, Beta-Taurus. The series became one of the most popular children's television programs on British television.

Despite the success of some of these programs, the cancellation of *The Flying Doctors* by the Nine Network in 1992, when it was still doing well in overseas markets, was a severe blow. It had a temporary stay of execution in 1993 when Crawfords were given a chance to revamp it as *RFDS* (for Royal Flying Doctor Service). The changes, though thoroughgoing, were not enough to save it, and without the fallback of "volume television" like that produced by Grundys, the viability of Crawfords has been questioned, at least temporarily.

The Beyond International Group

A young company among leading Australian television producers, the Beyond International Group (BIG) began in 1984 when the public service broadcaster, the ABC, axed *Towards 2000*, a four-year-old popular science and technology program, because it was becoming too expensive. An independent production company was set up and the new program, *Beyond 2000* was sold to the Seven Network in 1984 and then the Ten Network in 1993.

Beyond has progressed into a highly focused boutique production and distribution house whose corporate portfolio also includes merchandising, music publishing, corporate video and separate media production groups in the United States and New Zealand. It is a public unlisted company with approximately 200 employees, almost half of whom work on the production of *Beyond 2000*. Its international profile is by necessity as well as design. They concentrate on combining a training in solid craft skills and serious information programming with entrepreneurial ambition.

From the mid-1980s, what became Beyond International produced in differing formats, participated in international co-productions and became involved in distribution domestically and internationally, but its resounding success is the *Beyond 2000* format which, since 1985, has been sold in over 90 countries, has been dubbed in 10 languages and has an international audience reach of 50 million.

BIG has also involved itself in predominantly European co-production partnerships. In 1989, Beyond and the BBC

embarked upon the co-produced *Climate in Crisis* and then the four part series *Great Wall of Iron*, a documentary about the Chinese military. Beyond has also ventured into the production of drama series, miniseries and children's programming, with somewhat less success. The children's series *Bright Sparks* typifies the Beyond International strategy—animated robots take journeys around the world exploring science and technology. *Chances*, an adult drama series featuring nudity and outlandish storylines, was a failure. Its forays into local feature filmmaking virtually began and ceased with *The Crossing* in 1989. The failure of this film led the company to emphasise the more stable activity of distribution, and the distribution arm which began operation in 1990 became, along with Southern Star Distribution, one of two significant Australia-owned independent international distributors.

Southern Star

Southern Star is a lean, diversified operation with an integrated approach to production and distribution through film, television and video, and merchandising. Like most front-running independents, this enables Southern Star to balance higher against lower risk ventures. After a management buyout of the Taft-Hardie Group (whose major shareholders included the Great American Broadcasting Co. and James Hardie Industries) in 1988 by Neil Balnaves, Southern Star reorganised into six operating units including a distribution arm; a Los Angeles-based animation unit responsible for programs such as *Berenstein Bears* and *Peter Pan and the Pirates* made for the FOX Network; a video and audio tape duplication division; a merchandising arm handling BBC, Colombia Tri-Star and Paramount material; and a home video division.

Southern Star Entertainment is a broad corporate umbrella for established independent producers: Errol Sullivan/Southern Star Sullivan, Hal McElroy/Southern Star McElroy and Sandra Levy and John Edwards/Southern Star Xanadu. The production arms run as partnerships with Southern Star meeting all running costs, producer and staff salaries, finance and administration as well as publicity. McElroy and McElroy's *Last Frontier* (1986) was a model for programs that travelled internationally and promoted growth across the company through video release and a 22-hour series spin-off.

A good deal of Southern Star's major co-productions have been with the ABC and the BBC, including *Four Minute Mile* (1988), *Children of the Dragon* (1991) and *Police Rescue* (1990). The *Police Rescue* pilot was originally made for the BBC. The program is a co-production between Southern Star Xanadu and the ABC, with pre-sale to the BBC, who makes a substantial contribution to the current \$7 million budget. For their initial financial contribution to the series in 1990, the BBC maintained script, director and cast control. The program is driven by its ongoing success in Australia and its success has been built on a recognised format, a variation of the cop show, but with a 1990s balance between action and personal storylining, that

showcases the natural and built environment of Sydney, and the star profile of Gary Sweet.

In 1993 the Southern Star Group was responsible for a new successful long-running series, *Blue Heelers*, set around a country police station in Victoria. The general feel of the program is very much *A Country Practice* revisited and this seems to be succeeding with audiences all over again and it is in 1994 the highest rating Australian drama across all channels.

Film Australia

Currently a government-owned enterprise which is expected to generate up to two thirds of its own revenue, Film Australia started life in 1911 as a production unit within the Federal Government, before becoming a government-owned film production company in 1945. In the period after 1945 it nurtured the documentary tradition, and a significant number of film-makers who went on to play important roles in the film and television industries, were trained there. In 1976 the Commonwealth Film Unit became a branch of the Australian Film Commission and took on its present name, Film Australia. In 1987, it was made a government-owned business enterprise working under the stricture to become partly self-sufficient from government.

The mission to produce films and programs "in the national interest" continues and this is represented by the government's continuing to fund Film Australia under the so-called National Interest Program (NIP). This program is the core of Film Australia's business, and the reason for it being a government owned company. Both *Mini-Dragons* and *The Race to Save the Planet* used NIP money.

Outside of NIP projects, *The Girl From Tomorrow*, a fantasy science fiction children's series, is one of Film Australia's most successful exports and many countries which bought it also bought the sequel, *Tomorrow's End*. The pre-school children's series *Johnson and Friends* has sold exceptionally well and in addition has become an international marketing phenomenon. Film Australia also does well with the nature programs like *Koalas – The Bare Facts*, and the series *Great National Parks*. Other good sales have come from documentaries with an environmental or scientific angle like *After the Warming*, *The Loneliest Mountain*, *Mini-Dragons* and *Roads to Xanadu*.

Teachers of the World was a 1992 seven-part documentary series which dealt with the life of a teacher in each of the contributing countries, Australia, Canada, the United States, Korea and Poland. As a result of the *Teachers of the World* co-production, some of the partners came together again to produce a special documentary series called *Family* to celebrate the Year of the Family in 1994.

Film Australia's success lies in part in its specialisation in those program categories with greatest international currency—nature, environmental and science documentaries and children's programming—and it has had the foresight to focus on the burgeoning markets of Asia with product that doesn't confront too many cultural hurdles. In addition it is blessed with good facilities and the safety net of government funding.

The Seven Network

The Seven and Nine Networks were the two original commercial broadcasters in Australia and until the late 1980s enjoyed stable ownership and management, which allowed them to build up a high degree of programming expertise and audience loyalty. One of Seven's greatest strengths has been its commitment to drama, whereas the Nine Network has been stronger in news and current affairs and sport, which are far less internationally tradeable.

With its traditional emphasis on drama, the Seven Network was well positioned to take advantage of 10BA and during the 1980s produced a number of high quality miniseries with local and overseas partners. Series and serials sold by Seven on behalf of itself and the independent producers involved include *Rafferty's Rules*, *Skirts* and *A Country Practice*. Some of the programs from the 1980s which were sold that way (and which still sell today) were *Land of Hope* and *The Fremantle Conspiracy*, *Jackaroo*, *Sword of Honour* and *Melba*.

Two of the most successful programs of the early 1990s were *Home and Away* (still in production after seven years) and *Hey Dad* (which ran for seven years until 1994). The first is produced in-house by the Seven Network, the second produced by Gary Reilly and Associates and sold jointly by them and the Network through RPTA.

Home and Away was developed in-house as an immediate response to the success of *Neighbours* on the Ten Network. Ironically the latter had originally begun on Seven in 1985 but after indifferent ratings they let it go. When it achieved such success on Ten, Seven realised the potential for youth-oriented soap. *Home and Away* has gone on to achieve great popularity in both Australia, where it outrates its rival *Neighbours*, and in the United Kingdom, where in 1994 it was achieving audiences of 12 million for ITV versus 14 million for *Neighbours*.

By the mid 1990s, the Seven Network seemed well positioned to continue its strong record in commissioning and producing programs with strong export potential. The free-to-air service is flourishing, and Seven is exploring new markets in Asia and Eastern Europe which, while not lucrative in the short term, have great potential in the future. Seven is also exploring pay television and other broadband services and it is safe to predict that it will remain a force in the Australian entertainment industry at the turn of the millennium.

Children's Television Producers

Australia is a significant player in world children's television. Most major children's programs made in Australia recently have enjoyed international sales success and critical acclaim for Australian programs is a regular occurrence.

The structure of regulation and production in Australia for children has strengths which in some respects are unmatched elsewhere in the world. Within the general liberalisation of broadcasting regulation seen in the Broadcasting Services Act 1992, the only mandated regulations that continued from the old ABT were those for Australian

content and children, so that in the new regime, the most detailed imposed regulations pertain to children.

The Australian Children's Television Foundation (ACTF) dominates the field of Australian children's television. A body established as a result of both federal and Victorian government support and incorporated in 1982, the ACTF produces, commissions and distributes children's television programming as well as acting as a kind of think-tank and clearing house for children's television advocacy. ACTF has produced more than 115 hours of programming which has been screened in more than 90 countries, and it has received many international awards. *Lift Off*, *Round the Twist* and *Round the Twist 2* were all high-profile ACTF series which were very popular in the United Kingdom and *Sky Traders* has sold into a diverse range of territories.

Western Australia-based Barron Films concentrates on quality children/family television series as well as social realist films and adult television drama, having made *Falcon Island*, *Clowning Around*, and *Ship to Shore*. Yoram Gross Film Studios, an established specialist producer of animated children's films, has crossed successfully to television with the production and distribution of a 26-part television series based on its *Blinky Bill* films. Jonathan Shiff/Westbridge has specialised in children's television since 1988, its biggest production being the \$3 million series *Ocean Girl* which sold to Disney in the United States and to the BBC for a record sum for a children's series in the United Kingdom. Roger Mirams/Pacific Productions, a Sydney-based producer of children's programming since the 1950s, shot the \$8 million *Mission Top Secret* in seven countries. Pacific Productions made *South Pacific Adventures* in 1990 and Media World Features, another company involved in animated features, made a miniseries based on their animated film *The Silver Brumby*.

Beyond International produces *Deepwater Haven*, a children's drama series with a curious mix of French and New Zealand actors, in Auckland. Millennium Productions made *Miraculous Mellops*, a fantasy science fiction family series, and Warner Roadshow has produced *The Adventures of Skippy* and *Animal Park*.

Other Production Companies

JNP Productions established its reputation almost solely on its long-running and well-regarded series, *A Country Practice*. The program ran as one of the major Seven Network dramas from 1981 to 1993, before being bought by the Ten Network in 1994. Despite a reworked format and setting, the new series on Ten failed; JNP has yet to produce anything as remotely successful.

Like JNP, Gannon Television/View Films has built its name on one major television product, *Heartbreak High*, a youth-oriented series noted for its high production values and its treatment of youth issues. The series suffered from scheduling changes imposed by the Ten Network, but has picked up important sales in the lucrative markets of the United Kingdom, France and Germany to the extent that

the series is now produced on the basis of these sales, without any current Australian network deal. In addition to several feature films, View Films has also produced two television miniseries, *Shout! The Story of Johnny O'Keefe* (1985) for the Seven Network and *Shadow of the Cobra* (1988) for Zenith in the United Kingdom, the BBC and the Seven Network.

AUSTRALIAN PROGRAMMING

The peculiarly Australian television program is still in the minority on Australian television screens which remain dominated by the Hollywood product. Yet, compared with the situation of only a decade ago, Australian television programs today vie with Australian films in the search for markets worldwide. Australian soap operas such as *Neighbours* and *Home and Away* have achieved high ratings in such countries as England and Ireland. And while the Grundy Organization, Australia's largest producer of television shows, began by "borrowing" concepts and formats from American game shows, it has progressed to making a profitable business by selling recycled and rejuvenated American shows back to the country of their origin. *Sale of the Century* and *Wheel of Fortune* today typify this genre. While the ultimate ownership of the Australian companies is today increasingly in the hands of multinational corporations, the Australian character of their television programs now seems established and production resides in Australia.

To outline the origin of this national character, however, one must examine the antecedent media. As in any other national context, television programming in Australia can only be understood by examining its origins in radio and film. As in the American experience, and unlike the British, the major impetus to radio programming in Australia came from the commercial sector with the explosive growth of commercial radio in the 1930s. The Australian experience mimicked the American from the soap opera to the singing commercial. While, as the American critic Norman Corwin has observed, Australia is one of the few places on the globe where radio drama was considered as an art form, the vast bulk of commercial radio dramatic product was of the soap opera variety. In its heyday, it succeeded brilliantly by its own commercial standards, meeting not only a domestic niche, but also providing a steady stream of programs for export. It employed a small army of professional writers and production people who formed the nucleus of writers, actors

and producers for the infant Australian television industry when it began in the mid-1950s.

Unlike the American, and like the British experience, however, since the beginning of the 1930s, Australia has also had a powerful national, publicly-owned non-commercial broadcasting entity, the Australian Broadcasting Commission. (After 1983, "Commission" became "Corporation.") This corporation is recognized as the primary culture-making force in Australian national life. The ABC has, in fact, sponsored many non-broadcasting aspects of public culture, from the establishment of symphony orchestras in all states, involvement in children's clubs, sporting activities, advice to farmers through specialized agricultural service, and comment on markets and weather, to the explorations of the culture of the rural environment.

Still, it must be pointed out that despite the widespread misconception by commentators, the Australian Broadcasting Commission did not owe its origins to a simple amalgamation of the "good points" of American and British thinking. Rather it arose from the exigencies of the indigenous experience—an Australian response to an Australian requirement. Given its origins and its mandate, the programming from the ABC provided a contrast to the commercial television stations.

The early British broadcasting experience, was, however, very important in the formative years of the ABC. The BBC's "Reithian ethic" of high moral purpose, nation building, and elevating popular tastes, can, in hindsight, hardly be overestimated. High culture was encouraged by classical music programs and community building by popular music programs which often featured Australian musicians performing the latest popular songs from overseas. Sporting programs such as the dominant national pastime of horse racing and test cricket (in the early days especially with England) was a broadcasting staple from the 1930s to the present time. These broadcasts set the pattern of national

participation by the time television arrived in 1956, and the various programming categories and genres can be seen to derive from them.

Local programming by independent stations reached its heyday in the decade of the 1980s and exhibited patterns similar to that in other countries. It was relatively common for local stations to do a program on a local event or a car club rally. But local stations became "aggregated" by government policy into a networks not unlike the American commercial system. Local programming then found it necessary to appeal to a geographically wider-spread audience, and by the 1990s began to fade away.

The generalization that the British programming on Australian television tends to be mostly on the ABC is valid. Commercial stations, on the other hand sometimes take British programs, which have proven to be popular from ABC exposure, and rebroadcast them to achieve higher ratings. A range of programs from the ubiquitous *Yes, Minister* series to the more vulgar *Are You Being Served?* type vie with David Attenborough nature documentaries and similar British fare as might appear on PBS in America.

In sum, Australian television programming bears the marks of several systems which preceded it. But like many other systems it continues to mold those influences in its own ways. Whether the specifically "Australian" character of television can withstand an onslaught from new economic configurations and new technologies that transcend national boundaries remains to be seen.

Non-Fiction Programming

Talk shows, music, morning programs, sports, news, and current affairs programs are all represented in the Australian television line-up, and again, all derived from radio antecedents. As far as television is concerned little about them is specifically Australian.

In the light entertainment talk shows, for example, the programming is decidedly derivative. *Tonight Live* with Steve Vizard in the early nineties betrayed its lineage to David Letterman and Johnny Carson. Admittedly, there was an Australian strain of boyish irreverence inherited from the Australian stars such as Graham Kennedy and Bert Newton, but the sets, presentation, and overall style would be easily recognized by an American viewer. Most importantly, in the commercial medium, Vizard's success was due to the economic fact that his popularity allowed the Seven network to extend prime time and charge premium rates for what was, comparatively, an inexpensively produced program.

Music

High culture is typically provided on television with opera or symphony concerts simulcast on Sunday night by the ABC. At the other end of the scale, the ABC provides, in early morning hours, a simulcast of Triple J, the youth national radio network, which broadcasts rock music accompanied by exceptionally raunchy dialog.

Music videos are broadcast at various times on both commercial and national television.

Morning Television

In the very early morning hours, the ABC provides very high quality instructional television which can be correlated with written instruction and tutorial interaction and taken for college credit. Language, biology, business and other Open Learning subjects provide the casual viewer with exceptional, totally involving informational programming, most often of American origin.

Predictably, in the 1980s and 1990s, on Channel 9, the Australian *Today* show with one male and female compere, provided a mixture of news, interviews, sports and weather in a well-tested format. Variations of this theme have come and gone on competing networks. By the mid 1990s, for example, in the 9:00 A.M. slot, morning television featured *Good Morning Australia* with Bert Newton, another reference to an American programming format. Again, the interview is the feature of choice, with perhaps a lighter vein to vary the flavor. At least one station usually counterprograms these shows with cartoons for kids.

Sports

While sports-watching on television had long been a favorite Australian pastime, the connection between sports and advertising was traditionally not as strong in Australia as in the United States. However, the televised presentation of sporting events is increasingly influenced by American programming strategies. The broadcasting industry had long been poised for intensive activity surrounding the business of sports on television, and media moguls Kerry Packer and Rupert Murdoch vied (and collaborated on occasion) for various contracts with players, licenses and outlets for the advertising dollars and pay television subscriptions.

In cricket, for example, the tradition had been inherited from the British Empire, where white-suited cricketers (divided into "gentlemen" who were amateurs, and "professionals" who were paid) took days to play a "test" match. By the 1970s, media mogul Kerry Packer was credited with promoting a game more suited to television coverage: played in one day, with colorful costumes, showbiz accouterments and players exhibiting enthusiasm rather than the old British "stiff upper lip." Similar transformations occurred in tennis, football, hockey, soccer, netball and other sports. And the trend toward Americanization was markedly increased with the introduction of Rupert Murdoch's Superleague, an entirely new combination of Rugby League teams and with Pay TV sports programs which were becoming more prevalent by 1995.

Through all these changes, the scheduling strategies have remained quite the same. A typical week's viewing would begin with the traditional Saturday afternoon when all channels present one sport or another. The same pattern holds for Sunday afternoon, with one commercial channel starting sports programming at 9:00 A.M. (The ABC has counterprogrammed a high culture arts ghetto on Sunday

afternoons, and SBS also tends to eschew sports on Sunday afternoon). The regular television news on Sunday nights tends to increase its sports coverage beyond the acceptable thirty per cent for Australian television newscasts, and there are also irregular sports specials on at various prime time slots.

While special football games of various codes are broadcast during one or two week nights in Australia, American football tends to be consigned to late-night taped presentations on the ABC, except for the Super Bowl which is broadcast live. Basketball is the fastest growing sport in Australia, and thanks to television, in one celebrated 1994 survey 11 year-old Australians considered Michael Jordan as the Best Sportsman.

The television sporting scene is also affected by the specialized narrowcasting of events to pubs and clubs across the nation by satellite transmission. Horse racing is perhaps the sport most associated with gambling, but with the advent of new technologies, and especially with the advent of sports on pay-TV, the ubiquitous TAB's or gambling shops will undoubtedly evolve to exploit the new media.

With the Olympic Games scheduled for Sydney in 2000, the influence of television on the world of sports in Australia will undoubtedly reach a zenith.

News

Australian Radio news was available in the early days in a prototypical form with the stories taken from the newspapers. The newspaper proprietors, already having demonstrated their political clout by keeping the ABC from commercial taint (and revenues), were able to stifle radio news until the war years (1939–45). During World War II, a coalition government, pressured by the imminence of a Japanese invasion, decided that the ABC radio was crucial to the war effort. Once established, ABC news became one of the world's most professional news broadcasting services with bureaux worldwide.

Typically, the ABC television nightly news is of half-hour duration, is presented from each individual state with common stories from overseas feeds, and is followed by a current affairs program. The presenter is of the BBC "Newsreader" variety, and is not typically a practicing journalist. Richard Morecroft, who fronts the ABC TV 7:00 P.M. news in New South Wales (the state with the largest population), is perhaps the best exemplar of the ABC style.

The format is boiler plate: Local, state, national, international, sports and weather. The commercial stations tend to have similar formats, with quicker pacing and a more lurid selection of topics. Australian newscasts typically devote six or seven minutes of a thirty-minute slot to sport, a proportion far greater than typical in the United States. Brian Henderson, the anchor of the Channel Nine (commercial) news, is the long-time champion in the news ratings and provides his network with the coveted high-rated lead-in position for the rest of the night. Another veteran news anchor is his rival Roger Climpson, who fronts for the (also highly profitable) Seven network.

The Special Broadcasting Service, often admired for the quality of its television news, has an unmatched foreign coverage, and tends to longer and more comprehensive stories. Besides the nightly news there are shorter programs throughout the broadcast day, some being short updates.

Documentary and Current Affairs

The prototypical Australian television documentary (or current affairs) program is the long-running *Four Corners* program which is an institution on its Monday night slot at 8:30. Perhaps the finest hour in Australian television was the broadcast of "The Moonlight State" on 11 May 1987 when Australia's premier investigative journalist, Chris Masters, demonstrated on film the illegal booze joints, the prostitution, and the gambling dens whose existence had been long denied by the self-righteous government of the state of Queensland. Senior police officers went to jail and a government was overthrown following the subsequent inquiry triggered by the program.

Channel Nine presents a prestigious current affairs program *Sunday* on Sunday morning, and from time to time other commercial concerns have attempted to match Nine and the ABC with serious public affairs programming, but their efforts seem to vanish as management turns to more profitable programming.

SBS and the ABC program several high quality documentaries in any broadcasting week. Typical titles, chosen at random for illustration only, are: *The Big Picture*, *That Was Our War*, *Documentary*, *Australian Biography*, *Great Books* and *A Most Remarkable Planet*.

While a number of these presentations move toward television that is distinctively Australian, it is in fictional programming that the clearest and most powerful explorations of a national character and mode of representation have been established.

Fictional Programming

Although the Gorton Liberal (conservative) government in the early 1970s began the process, the great national renaissance in motion picture and television programming began with the free-spending Whitlam Labor government of 1973–75. Because the same people worked in film as worked in television, it is hard to separate out the stories of the different media. The technical infrastructure for movies was aided by the fact that since 1960 imported television commercials were banned. This meant that in the capital cities, especially in Sydney and Melbourne, motion picture laboratories developed a steady business and the technical expertise required to provide high quality professional product in the advertising arena. Until the advent of ENG (electronic news gathering) in the 1970s, when tape was used instead of film, television news, shot on 16mm film also provided a steady demand to supplement the work of the film labs.

The topics of television programming echoed those covered in the motion pictures. Australia, before the 1930s, had an economically viable silent film industry which did

not survive the advent of sound and the economic depression of the 1930s. Hollywood (and to a lesser extent British) product then dominated Australian cinema screens. Because film is a cultural artefact as well as being a salable commodity, the Australian audiences became saturated with American culture. Almost ten years after the advent of television in Australia, the American authority Wilson Dizard could make his famous statement: "The daily schedule of a typical Australian television station, particularly in prime listening hours, is virtually indistinguishable from that of a station in Iowa or New Jersey." And as late as 1967, the Australian Broadcasting Control Board required that only two hours of Australian drama be broadcast per month in prime time.

Thus deprived of Australian stories on the screen, when the 1970s Renaissance occurred, the subject of the programming tended to be the indigenous classics, and contemporary themes which depended on a distinctly Australian flavor. In 1976, the government decreed (with a "points system") that there be a 50% Australian content between the hours of 4:00 P.M. and 10:00 P.M., and demanded compliance of commercial licensees. Despite their early protests, the commercial stations found that the Australian programs were very popular with Australian audiences.

Available for television a year or so after cinema release, Australian films became an important part of the indigenous programming, but the epitome of television programming art was seen to be in the miniseries.

Miniseries

The miniseries brought important national myths and icons to the television screen. The quintessential Australian nation-building myth is that of ANZAC (Australian and New Zealand Army Corps). The ANZAC story is one of volunteer soldiers, who, in 1915, on behalf of the British war effort against Germany, invaded Turkish territory on the Gallipoli peninsula. The campaign was a defeat, but the valor of the soldiers, celebrated in a national day of commemoration (ANZAC day, 25 April), became a central theme of the Australian nation as a cause worth any sacrifice. The television miniseries *Anzacs* thus complemented the major motion picture *Gallipoli* to tell the ANZAC story.

Similarly, following the nationalistic, nostalgic (and essentially mythic) impetus, another miniseries, *The Last Outlaw*, told the story of arguably the most famous Australian folk hero, Ned Kelly. Ned Kelly is (literally) an Australian icon, because in his self-made steel body armour, he looked like a medieval knight with six guns. Like his American contemporary, Jesse James, he was a highway robber, but unlike James, his behavior elicited considerable public sympathy with large crowds protesting his hanging in 1880. Today his story is all-pervasive in Australian culture with the Ned Kelly icon appearing in the high culture of Sidney Nolan paintings in the National Gallery in Canberra, and the armour and six guns feature as a logo for a brand of sliced bread. Yet beyond the Australian version of the Robin Hood image lies an historical reality. Because Ned Kelly epitomized the rebellious Irishman persecuted by British rule, his story tied

in neatly with a long tradition of Republicanism which is becoming more potent at the turn of the millennium.

The television miniseries *Against the Wind* depicted another important facet of Australian history which had been ignored while American stories had dominated the Australian television screens. It, too, harked back to mythic origins, as Australia's convict past was evoked by the story of a spirited Irish lass who was transported to Australia as a political prisoner. She falls in love with a fine upstanding convict unjustly treated by a vicious system. The settings of the program owe more to the Disney studios than the squalor portrayed by recent historical accounts of the eighteenth century settlement, but the program fulfilled the requirements of standard founding myths which are requisite in all cultures.

The 19th century depiction of a family saga, *Seven Little Australians*, provided a local version of the American *Little House on the Prairie* or Canadian *Anne of Green Gables* genre. Other miniseries covered well-known Australian legends, such as those relating to the sporting stories between the wars. *Bodyline* portrayed unsportsmanlike Englishmen attacking stalwart and long-suffering Australians when playing the extremely popular sport of cricket. The title, *Bodyline*, described a tactic of aiming at the batsman's body, rather than at the wicket—a tactic that worked. The English won the test series in 1936 and a number of Australians were, in fact, injured. The other casualty was Australian good feeling for the British, although the Australians took the high moral ground and did not reciprocate with the "bodyline" tactic. This material, clearly restricted in commercial terms to the "old empire" of cricket players, is the stuff of myth and legend, and as such proved popular with its intended market.

Similarly, the mythic imperative of coming to grips with former enemies was handled with the miniseries *Cowra Breakout*. In 1944, Japanese prisoners of war "broke out" of a prisoner of war camp in the remote Australian town of Cowra. By the early 1980s, when the program was made, Japan and Australia had experienced a quarter century of mutual economic interest as trading partners, and Japan was the most important Australian market by far. The deaths of the brave, but culturally incomprehensible Japanese, were treated in this series in a way not unlike that of the pacifist film of the 1930s *All Quiet on the Western Front*.

Clearly, this outpouring of depictions of Australian history and culture resulted in part because of government production subsidies, provided as partial support for the requirement that holders of the lucrative television licenses broadcast Australian content. But when the ratings demonstrated that these Australian stories were very popular with Australian audiences, it seemed tangible proof that a cultural imperative was also inherent in their acceptance by the indigenous audience.

By the 1980s, however, the economic climate changed. Broadcasting seemed dominated by takeovers of the major television networks. Furthermore, deregulation and privatization rather than activist nationalistic initiatives seemed to capture the governmental imagination. Thus by

the end of the decade, the traditional mythical Australian themes of the tragic losers—Ned Kelly, the ANZACS, the bodyline cricketers, Les Darcy the boxer, and even Phar Lap the racehorse—were being superseded by a new type of Australian story. The audiences, satisfied by the availability of their indigenous stories, began to demand a change of programming and the program makers began to look beyond the most obvious indigenous themes.

By the 1990s, the motion picture industry was tackling contemporary themes presented with high production values. For example, *The Heartbreak Kid* concerned an affair between a high school student and his young teacher. The milieu of Greek culture in Melbourne provided a conflict intermingling male dominance (the teacher's fiancé resorts to violence, and her father's role is stereotypical) and a depiction of conflicting loyalties. The television serial spin-off was called *Heartbreak High*, with the same young male lead and an approximation of the cinematic verisimilitude in the sets. Produced at the same time was *Paradise Beach*, in the tradition of *Baywatch*, with Surfers Paradise in Queensland standing for the Californian coast.

Traditional themes, however, remained a staple. For example, *The Man From Snowy River*, a motion picture derived from a poem by Banjo Patterson, the author of "Waltzing Matilda" (the Australian national song) had been a success in the 1980s. By 1994, a 13-part television miniseries entitled *Banjo Patterson's The Man from Snowy River* continued the genre. It is perhaps a sign of the maturity of the industry in Australia that the subjects and formats which secured the initial popularity for Australian programs with Australian viewers now are merely one type of program amongst many.

Soaps

As in the United States soap operas are programmed during the day, and the typical commercial offering has a mixture of American programming (*Days of Our Lives*, *The Bold and the Beautiful*, *The Young and the Restless*), interspersed with Australian soap operas such as *Home and Away*, *Echo Point* and *Neighbours*. The basic rules of the daytime serials which were established in the 1930s radio era still apply, regardless of the racier themes and more topical situations. Perceptions of "Australianness" of the indigenous soap operas vary, and provide interesting perspectives on cultural productions. The general Australian opinion is that the lives of the protagonists in Australian soaps are more ordinary, everyday and working-class. Yet to European observers, the Australian soap opera is characterized by relatively healthy, happy beings who endure their endless travails in a fortunate sun-drenched situation. Regardless of these "Australian" traits, the Australian soap opera remains true to type, exhibiting, most significantly, the "endless narrative" which characterizes the genre worldwide.

Comedy

Much of Australia's television comedy is derivative. At 7:30 P.M. on the Nine Network, for example, *Australia's Funniest Home Video Show* uses the standard American formula.

Perhaps with a more indigenous flavor, the family situation comedy *Hey Dad* (in daytime reruns by the mid-1990s), followed the U.S. sitcom formula but focused on the same everyday working-class context as presented in the Australian soap operas. *Acropolis Now* (also in reruns), a politically incorrect sitcom, made gentle fun of Australia's ethnic communities placed within a dominant Anglo culture.

On the ABC in the mid-1990s, *Mother and Son* presented a genuinely challenging comic world. Veteran actors Ruth Cracknell and Gary Macdonald explored the tribulations of a man taking care of his mother—who is afflicted with Alzheimer's disease. And the cult comedy, *Frontline*, starred Rob Sitch as Mike More, an unhinged, venal, television talking head. A send-up of a television current affairs program, this show was generally considered to be thinly disguised social commentary.

Police Procedurals

The police serial in Australia began with Crawford's, a major production company in Melbourne. Crawford's came to prominence with *Homicide* and established a format with *Cop Shop*. Today, the Australian police show genre can be exemplified by considering two programs, *Police Rescue* and *Blue Heelers*. *Police Rescue*, with its star Gary Sweet as the ("hunk") lead Mickey, takes place in an urban setting. With high production values (as befits its ABC origins and overseas co-producers), the story lines deal with tensions of contemporary life in a city which is not necessarily recognizably Australian.

Blue Heelers, on the other hand, is set in mythical, bucolic, small town Australia. Produced for Channel Seven, *Blue Heelers* is constrained by a modest budget monitored by the creative guiding hand of leading Australian writer, Tony Morphett. The program is clearly indigenous, and not as accessible to overseas audiences as *Police Rescue*. The very name *Blue Heelers* plays a word game recognizable to Australian audiences, yet which would escape viewers unaware of Australian nuances. It refers simultaneously to the standard blue uniforms which color-code police in the English speaking world and to a breed of cattle-dog, the Queensland blue, notorious for sneaking behind unsuspecting people and nipping at their ankles. The star, John Wood, is positively avuncular, although the show has elements of action-drama. While Australians are among the most urbanized people on earth, the call of the small town, as exemplified by the long-running program *A Country Practice*, seems to provide an appeal in national escapism as provided by television.

Both *Blue Heelers* and *Police Rescue* aim at a family audience at eight thirty at night. Both present continuing characters who constitute a "family" in the workplace. Both offer the usual recipe of conflict, violence, sexual attraction and humor. Nevertheless, the program set in the country is much more clearly mythical, Australian, and designed to reassure its audience. While Australian viewers, as the ratings

attest, enjoy the restless camera and edgy performances of the American offering *NYPD Blue*, just as they enjoyed *Hill Street Blues*, Australian producers seem to have stayed with less gritty serials. On the other hand, police-based short series such as *Janus*, produced by the ABC from its Melbourne studios, have explored a much darker vision for the policing profession than that exemplified by the prototypical *Blue Heelers* and *Police Rescue*.

AUSTRALIAN PROGRAMMING (ABORIGINAL)

Although in some ways Australian television has provided little representation of that continent's Aboriginal inhabitants, in others it is impossible to overstate the importance of Aboriginality to the medium. As with many areas of Australian culture, the indigenous inhabitants have been co-opted here in the formation of an Australian sense of identity. It is unusual to watch an evening's television in Australia without encountering some representation of

Aboriginality—in an advertizement for the Mitsubishi Pajero; a trailer for a Yothu Yindi concert; or a news item on Aborigines' attempts for land rights. Aboriginal characters and issues have appeared in most genres of Australian television. Soap operas such as *Neighbours*, *Home and Away* and *A Country Practice* have featured Aboriginal characters; as have children's programs such as *Dolphin Cove* and *Kideo*; game shows such as *Wheel of Fortune* and *Family Feud*; and

even lifestyle programs, with *The Great Outdoors*, featuring an Aboriginal presenter.

As well as these insistent, unsystematic images of Aboriginality, Australian television features areas where a greater weight of indigenous representation has occurred. This is true both in Aboriginal produced and circulated programming and in the arena of the broadcast mainstream.

In "Mainstream" free-to-air broadcast television there is a fairly consistent representation of Aboriginal people and issues on Australia's news programs. As researchers have noticed, this often involves what are understood to be negative representations—of crime, drunkenness, family problems, victimhood, and helplessness. Defended as realistic by industry insiders, these patterns of representation are clichés, familiar ways of organising and creating stories in order to render them accessible. Another popular pattern of news coverage is to construct stories about land rights claims in terms of white versus black, two equal and opposing sides.

As well as television news programs, most representations of the Aboriginal on Australian mainstream television occur in nonfictional modes. *Four Corners* and *A Big Country*, two well-known (ABC) Australian documentary strands, have both included reports on the "plight" of indigenous Australians over the decades of their production (the former in episodes such as "Black Sickness, Black Cure," 1983; the latter in productions like 1974's "The Desert People").

There have also been avowedly Aboriginal programs on mainstream broadcast television. *First in Line* (SBS, 1989) and *Blackout* (ABC, 1989) are both Aboriginal-produced and -presented magazine-style programs. Again, they largely feature nonfictional material, although the latter has also increasingly involved comedy sketches and music in its mix.

The ABC miniseries *Heartland* (1994) is worth including in a category of its own. This 13-hour long drama is a unique contribution to Australian television. It is the only example of a drama program with an Aboriginal hero. (In 1992, a detective series called *Bony* singularly failed to do the same, taking a series of books with an Aboriginal protagonist and casting a white actor in the lead part.) Over the weeks, *Heartland* presented a series of Aboriginal communities, rural and urban, and a wide range of characters, all contributing to a vastly increased range of available discourses on Aborigines. An entertaining, watchable piece of television, it is truly distinctive in the history of Australian programming.

Ernie Dingo is responsible for a large amount of the Aboriginal representation on Australian television in the early 1990s. As well as starring in *Heartland* and presenting *The Great Outdoors*, he has appeared on programs such as *Dolphin Cove*, *Clowning Around*, *Wheel of Fortune*, *GP*, *The Flying Doctors*, and *Heartbreak High* and many others. His presence is a large part of current Australian Aboriginal programming.

Any consideration of Aboriginal programming must also cover the material which is made and distributed by Aboriginal groups and communities. Broadcasting for Re-

remote Areas Community Scheme (BRACS) is one of a series of projects set up by Australia's federal government to ensure that Aboriginal communities at a distance from the continent's urban centres can have access to broadcast television. BRACS is the successor of such projects as RATS (Remote Area Television Scheme), STRS (Self Help Television Reception Scheme), RUCS (Remote and Underserved Communities Scheme) and the SHBRS (Self-Help Broadcasting Reception Scheme). Funded by the 1987-88 budget of the Federal Department of Aboriginal Affairs, the purpose of BRACS was slightly different from that which had gone before. Rather than simply ensuring reception of broadcast television, BRACS would provide rebroadcasting and production facilities to allow Aboriginal communities to decide for themselves how much of the material received should actually be shown in their communities, and to make their own material to replace that which they did not want. In order to make this possible, BRACS supplies the community with satellite reception equipment, a domestic quality video camera, two domestic video recorders (to allow for basic editing), and the equipment to rebroadcast to the community. The initial idea was that this would allow broadcast in little-used languages (some Aboriginal dialects have less than 100 speakers), and to allow deletion of offensive material.

The scheme has had varying degrees of success. Difficulties have included the lack of well-trained personnel to look after the equipment, the built-in obsolescence of domestic equipment, equipment incompatibility with desert settings; lack of consultation with Aboriginal communities as to whether they wanted the equipment, and limited-range capability of the rebroadcast equipment. However, it seems that the scheme (available to over 80 Aboriginal communities by 1995) has at least taken into consideration the ways in which communities might want to use television. Although the difficulties with lack of training, equipment, and money cannot be ignored, many of the BRACS communities are finding the scheme useful, taking advantage of the chance to produce local material. Programs produced include news, health information, and music request programs: all with an intensely local orientation.

Perhaps the most active examples of such local television production are the Aboriginal communities in Ernabella and Yuendumu. Both of these towns pre-empted the government's BRACS scheme, establishing their own pirate television broadcasting well before BRACS legitimised the idea. In the latter community, the Warlpiri Media Association has produced hundreds of hours of programming: records of community life, travel tapes, and *Manyu Wana*, an Aboriginal version of *Sesame Street* designed to teach local children the Warlpiri language.

There is also Aboriginal video production from a series of media groups. CAAMA (Central Australian Aboriginal Media Association), TAIMA (Townsville and Aboriginal Islander Media Association), TEABBA (Top End Aboriginal Bush Broadcasting Association), WAAMA (Western Australian Aboriginal Media Association) and TSIAMA (Torres

Strait Islander and Aboriginal Media Association) produce video and radio material. The radio programs are often carried on the networks of the Australian Broadcasting Association. Larger organisations than the media producers in the BRACS communities, these groups make material that is less locally oriented, and has an address wider than a single community.

Australia broadcasts commercial television to the inner part of the continent on the satellite Aussat. Several Remote Commercial Television Service (RCTS) licenses were sold on this satellite; one is held by the CAAMA group. All of the bidders for these satellites were required to guarantee that their services would include material specifically commissioned for the Aboriginal people, who formed a relatively high proportion of their audiences (up to 27% in some cases). All did so, but none have done particularly well in keeping to those promises. The Golden West Network has one Aboriginal magazine program, *Milbindi*. Queensland Satellite Television broadcasts material provided by the government Aboriginal and Torres Strait Islander Commission and the Queensland State Government, programs which present carefully positive images of Aboriginality.

Imparja, despite being Aboriginal-owned, has found constraints of economy have made it difficult to produce

broadcast-quality Aboriginal material. The amount of indigenous programming on the channel has varied. When it started broadcasting in 1988, Imparja featured an Aboriginal magazine-style program, *Nganampa Anuernekenhe*. By contrast, in 1990, the station's Aboriginal broadcasting consisted only of community service announcements.

There is a vast range of material encompassed by the term Aboriginal broadcasting of Australia: mainstream television on Aboriginal issues; Aboriginal programs broadcast on the mainstream; and Aboriginal-produced and -controlled broadcasting which is allowing Aboriginal groups in Australia to interact assertively with new technologies, negotiating the places these will hold in their communities.

THE AVENGERS

British Thriller

Possibly Britain's most successful television export, *The Avengers* (1961–69) was the last English-made television show to find a prime-time slot on American network television. Initially *The Avengers* was designed to showcase the breakout star of *Police Surgeon* (1960), Ian Hendry, in the role of a doctor who, after the murder of his fiancée, joined forces with mysterious secret agent John Steed (Patrick Macnee). Six episodes were initially scheduled: twenty-six were made (three were videotaped) before Hendry left. Macnee continued to star in *The Avengers* for another eight years (136 episodes), finally resuming his role in 1976 in *The New Avengers* (produced by Fennell and Clemens). During the subsequent five seasons, he was teamed with three female sidekicks—Cathy Gale (Honor Blackman), a widowed, leather clad, martial arts expert with a Ph.D.; Mrs. Emma Peel (Diana Rigg), an aristocratic young widow, successful industrialist, psychologist and skilled fighter; and finally, Tara King (Linda Thorson), a young professional secret agent with less charisma or self-reliance than her amateur predecessors.

Once Macnee was teamed with Blackman, the show started to develop its characteristic flavor. Steed became more upper-class, dressed in increasingly dandified Edwardian fashion, while Gale represented a new vision of the strong, intelligent, active, and equal woman. Shot on multiple camera video, these episodes did not display the same flair for the fantastic as the later filmed series (indeed, they

The Avengers

look very much like the period's realistic "kitchen sink" dramas), although narratives started to flirt with the bizarre and unexpected.

During this same period (1962–64), there was increasing American interest in *The Avengers*, culminating in 1964 when ABC bought the series for the fall 1965 season. The network wanted a filmed series, so the show went on hiatus for nearly a year, reappearing on ITV in 1965 with new star Diana Rigg. ABC chose to wait until 1967 when color episodes would be available rather than risk showing an imported black-and-white series while the American networks were converting to all-color TV. After two seasons, Rigg left and was replaced by Linda Thorson (1968–69). ABC canceled the show in 1969 because audiences sharply declined after it was scheduled against the new hit *Rowan and Martin's Laugh-In*. Although it continued to top ratings in Britain and throughout Europe, production stopped (it was never officially canceled) because the production company, Associated British, now relied on American money.

While *The Avengers* is often considered part of the James Bond/Cold War cycle of espionage thrillers, it actually dealt less with international issues and more with changes in modern Britain. Narratives explicitly engaged with questions of colonialism, national heritage, and questions of imperial British history, often parodying the nation's past, its institutions and its stock stereotypes like the English Gentleman and the Retired Army Major. This humorous reflection on national identity was combined with a fascination with space age technology and an emphasis on modern femininity, a juxtaposition that recalled Britain's own long emergence out of postwar deprivation into the new, trend-setting world represented by Carnaby Street and the Beatles.

AZCARRAGA, EMILIO, AND EMILIO AZCARRAGA MILMO

Mexican Media Moguls

There are two Emilio Azcarragas, both equally significant in the history of television in Mexico: Emilio Azcarraga Viduarreta, the William Paley of Mexican broadcasting, and his son and heir, Emilio Azcarraga Milmo, the principal owner of the Mexican entertainment conglomerate Televisa. The elder Azcarraga created the first Mexican radio station in 1930, and soon took on a leading role in the

development of Latin American broadcasting. He convened meetings of fledgling Latin American broadcasting entrepreneurs where it was decided that the region would follow the U.S. commercial model and not the non-commercial, government supported, public service British model. Azcarraga, already the sole Mexican agent for Victor/RCA Records and a successful theater owner, promoted Mexican artists (who

were under exclusive contract to him) through his growing chain of radio stations, which included several along the U.S.-Mexican border. In 1950, he created Mexico's first television station and a decade later, the first U.S. Spanish language television stations. The Televisa radio and television networks have, since their inception, been characterized by their close association with the Mexican ruling party, known by its Spanish initials, PRI. Televisa produces conservative, nationalistic entertainment programming and fawning, uncritical news coverage of the Mexican government. Partly as a result of this comfortable relationship, broadcasting in Mexico is virtually unregulated.

This situation has continued through the stewardship of the second Emilio Azcarraga, known in Mexico as *El Tigre* (the tiger), as much for the white streak in his hair as for his reputedly ferocious manner. Azcarraga has expanded Televisa's monopolistic hold on Mexican broadcasting by buying media properties in other Latin American countries and selling Televisa programming throughout the world. For example, a Televisa *telenovela* (soap opera) was a huge hit in Moscow in the early 1990s. In 1993 Azcarraga acquired controlling interest of PanAmSat, a hemispheric communications satellite, further consolidating Televisa's position as the world's largest producer of Spanish language television programming. In one of the few setbacks suffered by the Televisa owner, in 1986 Azcarraga was forced to sell Televisa's U.S. subsidiary when it was found to be in violation of U.S. laws restricting foreign ownership. Just six years later, Azcarraga bought 25% of the U.S. network, while continuing to provide the majority of its programming. In Mexico, Azcarraga has diversified his holdings to include the largest stadium in the hemisphere, sports teams, publishing and recording companies, and even Mexico City real estate. Azcarraga maintains offices and homes in New York and Los Angeles, as well as Mexico City, and was featured on the cover of *Fortune's* 1994 issue on the world's richest men.

—America Rodriguez

EMILIO AZCARRAGA VIDUARRETA. Married: Laura, children: Emilio, Laura, Carmela. Representative for Victo-

ria/RCA Records; began radio station XEW, Mexico City, Mexico, 1930; built Churrubusco Studios, 1940s; creator and owner of Channel 2, 1950; became the first president of Telesistema Mexicano, 1955; involved in 92 different businesses by 1969; established Televisa, a production company for his stations. Died 1972.

EMILIO AZCARRAGA MILMO. Born August 1930. Educated at Culver Military Academy, graduated 1948. Married four times; fourth wife: Paula Cusi; children include Emilio Azcarraga Jean. Worked in various positions in television; owner, Univision, a twelve-station Spanish-language, U.S. network, 1960s and 1970s; controlling shareholder of Televisa, S.A.; owner of *The National* sports daily, 1990-91; owner of major Mexican television stations; chair, Galavision; also involved in publishing, video, and real estate ventures. Address: Televisa, S.A., Avda Chapultepec 28, 06724 Mexico City DF, Mexico.

B

BAIRD, JOHN LOGIE

Scottish Inventor

John Logie Baird pioneered early television with the mechanical scanning system he developed from 1923 to the late 1930s. He is remembered today as an inventor (178 patents) with considerable insight, who was in many ways ahead of his time. Among his pioneering ideas were early versions of color television, the video disc, large screen television, stereo television, televised sports, and pay television by closed circuit. But he is also a tragic figure who often worked alone for lack of financial backing and lived to see his technical ideas superseded. He was forgotten by the time he died at the age of 58.

Baird did not select television as a field of endeavor so much as he backed into it. As a teen, he had toyed with the notion of pictures by wireless, as had others fascinated with the new technology. Later, having unsuccessfully tried innovation in several more mundane fields (socks, jams, glass razors, shoe soles), Baird traveled to Hastings (on England's south coast) in 1923 to see if the sea air would aid his always marginal health. During a series of long walks there, his mind returned to his earlier notions of how to send wireless images. But he was not well trained in electronics, and this lack of basic knowledge often limited his thinking and experiments.

Beginning in 1923 and continuing until 1939, Baird produced a series of mechanical video systems that could scan (and thus transmit and receive) moving images. These offered a crude picture (about 30 lines of definition from 1929 to 1935, improving to about 240 before he broke off development) by means of a cumbersome system of large rotating discs fitted with lenses. Baird promoted initial public interest in television with the first public demonstrations (one in a London department store window) in 1925 to 1926, and long-distance transmissions by wire (between London and Glasgow in 1926) and short-wave (trans-Atlantic from London to New York in 1927). By 1928 he was experimenting with "phonovision," a means of recording his crude images on a phonograph-like disc. His efforts at promotion and sale of "televisor" devices created considerable controversy among experts as to whether television was sufficiently developed to promote public viewing and purchase of receivers.

For many years, the British Broadcasting Corporation (BBC) resisted his efforts to utilize their frequencies and studio facilities in his work. Under pressure from the British Post Office (then in charge of all wire and wireless transmission), the

John Logie Baird

Photo courtesy of the British Film Institute

BBC reluctantly began to work with Baird in 1930. Several years of experiments culminated in a regular daily broadcast comparison of his 240-line system with an RCA-like all-electronic 405-line system developed by Marconi-EMI in 1936–1937. Baird's now outmoded approach was soon dropped in favor of the latter's vastly superior electronic system.

Baird continued developmental work on color television, now making use of cathode-ray technology, and achieved 600-line experimental color telecasts by 1940. He continued his effort to perfect large-screen projection color television during the war, along with some apparent work for the British military. But his health, never strong, gave out and he died in 1946.

Did Baird "fail?" He ignored or denied the growing value of the cathode ray tube for too long (until the late 1930s), and held on to hopes for his mechanical alternative. His companies did not develop sufficient engineering depth and research capability beyond Baird himself. He kept no regular laboratory notes or records, making support for some

of his claims difficult to find. And—perhaps most important as an indicator of impact—he achieved little commercial success. Still, there is growing appreciation of his pioneering if limited role amongst scholars of British television.

—Christopher H. Sterling

JOHN LOGIE BAIRD. Born in Helensburgh, Dumbartonshire, Scotland, 13 August 1888. Attended Royal Technical College, Glasgow, and Glasgow University. Served as superintendent, Clyde Valley Electric Power Company; helped pioneer television transmission, successfully transmitting image of a Maltese cross several feet, 1924; gave scientists a demonstration of “Noctovision,” a form of infra-red television imaging, 26 January 1926; succeeded with world’s first transatlantic television transmission from London to New York, and produced first television images in natural color, 1928; experimented with stereoscopic television; the BBC adopted his 30-line, mechanically-scanned system, 1929, used for the first televising of the Derby from Epsom, 1931. Recipient: first gold medal of the International Faculty of Science given to an Englishman, 1937; Gold Medal of the International Faculty of Science, 1937. Died in Bexhill, Sussex, England, 14 June 1946.

BAKEWELL, JOAN

British Broadcast Journalist

Joan Bakewell has been one of the most respected presenters and commentators on British radio and television, with a career that spans more than thirty years. At the start of her career in the 1960s, she was one of the first women to establish a professional reputation in what had previously been an almost exclusively male preserve. She has since consolidated her status as one of the more serious-minded and thoughtful of television’s “talking heads,” making regular appearances both with the BBC and the independent companies and also becoming a regular writer for leading British broadsheet newspapers such as *The Times* and *The Sunday Times*.

Early appearances on such programmes as BBC2’s *Late Night Line Up* provided evidence of her understanding of a range of subjects and her ability to extract from complex arguments the crucial issues underlying them. She also profited by her youthful good looks, which were to earn her the unwanted tag (initially bestowed by humorist Frank Muir) “the thinking man’s crumpet.” Gradually, though, Bakewell shook herself free of the limitations of her physical description and went on to present a wide range of programmes from current affairs, discussions of the arts and questions of public and private morality (notably in her long-running

Joan Bakewell

Photo courtesy of the British Film Institute

series *The Heart of the Matter*) to the less intellectual territory inhabited by, for instance, *Film 73* and *Holiday*.

Always calm, Bakewell has sometimes been accused of having a somewhat "dour" and even cold personality; viewers have complained that only rarely has she been seen to smile with any conviction. Intent on getting to the bottom of a particular issue, she is never distracted by opportunities for light relief or lured into exploring the possibilities of a colourful tangential course. Even when presenting holiday reports from various exotic parts of the globe she never gave the impression she was ready to abandon herself to anything resembling relaxed frivolity or other conventional "holiday-making" (she was consequently usually dispatched to report back from destinations with obvious cultural and artistic links).

This seriousness of purpose is, however, arguably dictated largely by the material Bakewell is usually associated with—weighty matters of relevance to consumers, voters and enthusiasts of the arts and so on. Her unflurried, concerned tone of voice enables the viewer to concentrate upon the intellectual questions being raised during discussions of such emotional topics as providing funds for the treatment of terminally ill children—questions that in less practiced hands could otherwise all too easily be swamped by sentimentality. There is nonetheless a lighter side to Bakewell's character, amply demonstrated by her contributions to the jovial BBC radio programme *Newsquiz*, among other humorous productions.

—David Pickering

JOAN (DAWSON) BAKEWELL. Born in Stockport, Cheshire, England, 16 April 1933. Attended Stockport High School for Girls, Stockport, Cheshire; Newnham College, Cambridge, B.A. Married 1) Michael Bakewell, 1955 (divorced, 1972); children: Matthew and Harriet; 2) Jack Emery, 1975. Joined BBC radio as studio manager; subsequently hosted numerous arts, travel, and current affairs programmes; television critic, *The Times*, 1978–81; associate, 1980–81, associate fellow, 1984–87, Newnham College, Cambridge; columnist, *Sunday Times*, since 1988; BBC television arts correspondent, 1981–87; has also written for *Punch* and *Radio Times*; President, Society of Arts Publicists, 1984–90; member, governing body, British Film Institute, since 1994. Address: Knight Ayton Management, 70A Berwick Street, London W1V 3PE, England.

BALL, LUCILLE

U.S. Actor and Comedienne

Lucille Ball was one of television's foremost pioneers and, quite likely, the preeminent woman in the history of television. As a young contract player for MGM, Ball began her career as a Goldwyn Girl, eventually moving up to become a moderately respected star of "B" movies. She came to television after nearly 20 years in motion pictures, having

undergone a gradual transformation from a platinum blonde sex symbol to a wise-cracking redhead.

Her first television program, *I Love Lucy*, premiered 15 October 1951, and for the next 25 years Lucille Ball virtually ruled the airwaves in a series of situation comedies designed to exploit her elastic expressions, slapstick abilities and dis-

tinct verbal talents. A five-time Emmy Award winner, the first woman inducted into the Television Academy's Hall of Fame, recipient of a Genii Award and a Kennedy Center Honor, Lucille Ball was perhaps the most beloved of all television stars, and certainly the most recognizable.

In all of her television series, the protagonist she played was at once beautiful, zany, inept and talented. Her comedic skills were grounded in the style of the silent comics, and Buster Keaton, with whom she once shared an office at MGM, seems to have been particularly influential in the development of Ball's daring exploits, hang-dog expressions, and direct looks at the audience. Although she personally fueled the myth that much of her performance was ad-libbed, in actuality, every move was choreographed. An accomplished perfectionist, she spent days practicing a particular routine before incorporating it into her programs. So distinct were her rubbery facial expressions that scriptwriters for *I Love Lucy* referred to them with specific code word notations. For example, the cue "puddling up" directed the star to pause momentarily with huge tear-filled eyes and then burst into a loud wail. "Light bulb" was an indication to portray a sudden idea, while "credentials" directed the star to gape in astonished indignation. Her importance for future comediennes such as Mary Tyler Moore, Candice Bergen, and Cybill Shepard was paramount; Ball demonstrated that a woman could be beautiful and silly, and that she could perform the most outrageous of slapstick routines and still be feminine. Ball's unusual use of props and her imaginative escapes from the most implausible of situations influenced future sitcom stars such as Penny Marshall, Bronson Pinchot, Ellen Degeneris, and Robin Williams, whose comedic styles and series' storylines echoed her own.

But while her acting contributions are singularly laudable, it was Ball's role in re-defining the very structure of television programming that makes her noteworthy. Her independence, popularity, and determination, coupled with her husband's technical and financial savvy, resulted in their co-ownership and control of one of the most successful television production studios in history.

I Love Lucy was unique in that it was one of the first television series to be produced live on film, using a multiple camera technique in front of a studio audience. The filmed nature of the program granted it a permanency which allowed Ball and her husband, Desi Arnaz, to profit from re-runs, syndication and foreign distribution. The program was incomparably successful, reaching the number one position by February of its first season and remaining number one for four of its six years on the air, averaging a 67 share. Aired in over 100 countries, the series quite literally financed the creation of Desilu Studios, where Ball and her husband reigned as vice president and president respectively. Desilu went on to become the production headquarters of many of the greatest hits of 1950s and 1960s television programs, including *Our Miss Brooks*, *Make Room for Daddy*, *The Dick Van Dyke Show*, *The Untouchables*, *Mission Impossible*, *Mannix* and *Star Trek*.

Lucille Ball

Indeed, it was Ball's clout with the CBS network that convinced them to pick up the latter three pilots.

Ball's first success with *I Love Lucy* allowed her a power denied most entertainers. She was one of the few 1950s television stars to successfully fight the Communist witch hunts of HUAC, when a 1953 Walter Winchell program attempted to derail her career. Established film stars, such as Orson Welles, William Holden and Joan Crawford, who had previously shunned television, made guest-appearances for the sake of appearing with the queen of prime time. Ball's popularity with the press and her fans forced CBS executives to acquiesce to her decision to reveal her real-life pregnancy during the show's second season. This television first was monitored carefully by a trio of clergy who oversaw each script. While timid CBS executives insisted the word "expectant" be substituted for "pregnant," seven episodes detailed the fictional Lucy's pregnancy in near symmetry with the actress's own physical condition. Backlogging five episodes for use while she convalesced from delivery, the program worked around Ball's due date, so that her real life Caesarean delivery coincided with the airing of her television delivery. The episode set a rating record of 71.1, with more viewers tuning in to witness the fictional Lucy Ricardo give birth than had seen Eisenhower's inauguration.

With her 1962 buyout of Desilu from her by then ex-husband Desi Arnaz, Ball became the first woman to head a major television production studio. Through the mid-1970s she starred in three additional series for CBS, with her

third series, *The Lucy Show*, earning the highest initial price ever paid for a thirty-minute series (\$2.3 million dollars for 30 episodes). In the mid-1960s, she sold Desilu to Gulf and Western for \$17 million, and she went on to form Lucille Ball Productions with her second husband, Gary Morton, as vice president. Her final CBS series, *Here's Lucy*, while not as critically acclaimed as her previous ventures, was responsible for launching the careers of her children Lucie and Desi Arnaz, Jr., and for bringing Elizabeth Taylor and Richard Burton into situation comedy.

By the mid-1970s the diffused lighting, the surgical tape "face lifts," the skilled makeup and bright wig could not hide her diminishing physical flexibility or her increasing reliance on cue-cards. A 1986 ABC series, *Life with Lucy*, seemed forced and stodgy and lasted a mere 13 weeks. But even in her decline there were flashes of brilliance. In 1985 she surprised critics and fans with her appearance as a homeless woman in the CBS made-for-tv movie *Stone Pillow*. With her death in 1989, she was eulogized by fans, network executives, and even the president of the United States, as "the first woman of television."

For all her impact upon the very nature of television production, Ball is most vividly recalled as a series of black-and-white images. To remember Lucille Ball is to recall a profusion of universal images of magical mayhem—a losing battle with a candy conveyor belt, a flaming nose, a slippery vat of grapes—images which, contrary to most American situation comedy, transcend nationalities and generations, in an absolute paradigm of side-splitting laughter.

—Nina C. Leibman

LUCILLE (DÉSIRÉE) BALL (Lucy Montana, Diane Belmont). Born in Jamestown, New York, U.S.A. 6 August 1911. Attended John Murray Anderson-Robert Milton Dramatic School, New York City. Married: 1) Desi Arnaz, 1940 (divorced, 1960); children: Lucie Désirée and Desi, Jr.; 2) Gary Morton, 1961. Began her performing career in the 1920s under the name Diane Belmont, being hired for, then quickly fired from, Earl Carroll's *Vanities* and the Shuberts' *Stepping Stones*; had a walk-on role in *Broadway Thru a Keyhole*, 1933; selected as a "Goldwyn Girl" for film *Roman Scandals*, 1933; signed with Columbia, 1934; under contract to RKO, from 1935; moved to MGM 1943–46; played role on CBS radio program *My Favorite Husband*, 1947–50; co-starred with Bob Hope in *Sorrowful Jones*, 1949, and *Fancy Pants*, 1950; with husband Desi Arnaz established Desilu Productions, which began producing the *I Love Lucy* television series, 1951–57, and later series such as *The Ann Sothorn Show* and *The Untouchables*; with Arnaz, bought RKO studios and lot in 1957; debuted on Broadway in *Wildcat*, 1960; bought Arnaz's share of Desilu, 1962, which she managed until 1967; sold Desilu to Gulf and Western Industries, 1967; formed and managed Lucille Ball Productions, 1968; starred in film *Mame*, 1974; played a Manhattan bag lady in made-for-television movie *Stone Pillow*, 1985; starred in series *Life with Lucy*, 1986. Recipient: 5

Emmy Awards; Golden Apple Award, 1973; Ruby Award, 1974; Entertainer of the Year, 1975; Television Academy Hall of Fame, 1984. Died in Los Angeles, 26 April 1989.

BARBERA, JOSEPH See HANNA, WILLIAM, AND JOSEPH BARBERA

BASSETT, JOHN

Canadian Media Executive

Few individuals in the history of Canadian television have inspired as much controversy as John Bassett, a founder of Toronto station CFTO and key figure in the formation of the CTV network, Canada's first privately-owned television network. Bassett parleyed a career in journalism and his financial connections into a major ownership role in Canadian commercial television. Media historian Paul Rutherford identifies him as one of the architects of Canadian television.

When in 1959 the Board of Broadcast Governors (BBG), reflecting the views of the recently elected Conservative government of John Diefenbaker, decided to allow an expansion of private telecasting in Canada, the most covered market was Toronto, seen correctly as a potential gold mine. Many prominent business groups wanted the license and nine eventually applied. Bassett joined the Eaton family, owners of a large department store chain, and others in an enterprise known as BATON Broadcasting, which was awarded the Toronto rights. When the winner was announced, the decision was roundly criticized. Some critics alleged that Bassett, a party insider and (unsuccessful) candidate for the Progressive Conservative party, had capitalized on his political connections and personal relationship with the prime minister. The new licensee also owned the Toronto *Telegram*, an unashamedly right-wing supporter of the

John Bassett

Photo courtesy of the National Archives of Canada

party. This connection also aroused concerns about cross-media ownership. Bassett may have had some influence on the Diefenbaker government's decision to weaken the television monopoly held by the public network. However, historians report no evidence that the prime minister personally intervened in the BBG decision to award the license to BATON.

Conflict of interest was also suspected when the rights to televise Canadian professional football games went to BATON, rather than to the CBC with its national audience. Bassett also owned the Toronto club in the league at the time. Initially cool to Spence Caldwell's CTV network, Bassett was forced to come to an agreement with CTV—and the CBC—to reach a national audience for the then highly popular Canadian Football League telecasts. The national championship, known as the Grey Cup game, was a major national event, important to viewers and profitable for broadcasters with a national audience. Once in the fold, Bassett came to dominate the private network.

With its prime-time schedule filled with American imports, CFTO was soon accused of renegeing on its promises during the license hearings to promote Canadian content. Similar allegations were levelled at the entire CTV network, and the BBG was seen as either gullible or politically motivated in failing to enforce promises made during application hearings. During the BBG hearings, the BATON group had promised to fight the "battle of Buffalo," appealing to Canadian cultural concerns about American domination. Bassett's promise was to compete with Buffalo, New York, television stations for Toronto viewers, many of whom had been watching American programming for some years before Canadian stations came on the air.

Making matters worse, BATON agreed to sell stock to the American network ABC, a move endorsed by the BBG in 1961. Condemnation of the sale was fierce and sustained. The BBG retracted its decision, but Bassett engineered a different arrangement whereby ABC would make a substantial loan to CFTO in return for a contract to provide "management services" and personnel. This issue arose from

concerns about undue American influence in the operation and development of Canadian television.

CFTO went on the air on 1 January 1961 and by the early 1970s was extremely profitable. BATON was clearly the key force behind CTV and provided production services through Glen Warren Productions. Toronto was the center for CTV's limited Canadian production activities and Bassett and his partners began to purchase other media assets, including shares in other CTV affiliates. At times BATON's ambitions have collided with other partners in the network. This produced friction with other ambitious owners.

Bassett ran BATON from its inception until 1979, when he turned the day-to-day operations over to his son, Douglas, who has overseen further expansion of BATON's activities. Well over six feet tall and projecting a "tough, arrogant" image, John Bassett was a major player in the development of commercial television in Canada and the erosion of the dominance of the publicly-owned Canadian Broadcasting Corporation. Perhaps not surprisingly, given his newspaper background, Bassett's stations made their greatest contributions in news and public affairs programming.

—Frederick J. Fletcher and Robert Everett

JOHN BASSETT. Began career in journalism; owner of CFTO-TV, Toronto, and the Toronto *Telegram*; significant leader in CTV, Canadian commercial television network co-operative from 1966; chairman of the Toronto Argonauts football team.

BATMAN

U.S. Adventure Parody

Batman was created by Bob Kane in 1939 as a comic book hero. During his long career he was featured in the *Superman* radio series and in two movie serials produced during World War II. In 1966 the ABC network decided to produce the first *Batman* television series and it became an immediate hit. Initially, the show aired twice a week. On Wednesdays, Batman and his sidekick Robin would confront one of their archenemies and would end the episode in horrible danger, only to save themselves at the beginning of the next episode on Thursdays. These cliffhangers closely followed the tradition created by Kane in the comic books.

The television series also followed the comic books' plot. Bruce Wayne (played by Adam West) was orphaned in his teens when criminals killed his parents. He inherited a huge fortune and, obsessed with fighting the evil-doers who plagued Gotham City, became Batman, the Caped Crusader. Under his mansion, Batman constructed the Batcave, an elaborate laboratory used to fight crime. His young ward, Dick Grayson (played by Burt Ward), also orphaned due to evil-doers, became Robin, the Boy Wonder, under Batman/Wayne's tutelage. Together they defended the city against the sick minded criminals that populated the under-

world. The only person who knew their identity was Alfred (Alan Napier), Wayne's butler who raised Bruce after his parents were killed. In the Batlab, and at the Batcave, Batman and Robin were helped by the most advanced technology to fight their enemies. Police Commissioner Gordon (Neil Hamilton) could ask Batman for help either through the use of a searchlight, the Batsignal, or the Batphone, a direct line between the Police Station and Bruce Wayne's mansion. To defeat their enemies, Batman and Robin also used the Batmobile, their utility belts and other Batdevices.

The success of the series attracted several famous actors and actresses to play the villains. Among the most famous enemies were the Riddler (played first by Frank Gorshin and then John Astin), the Penguin (Burgess Meredith), the Joker (Cesar Romero), King Tut (Victor Buono), Egghead (Vincent Price) and Catwoman (played at different times by Julie Newmar, Lee Ann Meriwether, and Eartha Kitt).

Batman incorporated the expressive art and fashion of the period in its sets and costumes. It also relied excessively on technological gadgetry transforming the show into a parody of contemporary life. It was this self-reflexive parody-camp of the comic character that boosted the ratings of the program to the top ten during its first season. The show was not to be taken seriously. The acting was intentionally overdone and the situations extremely contrived. In the fight scenes animated "Bangs," "Pows," and "Bops" would fill the screen every time a blow was struck. These characteristics, besides displeasing the "organized vocal Batman fans," were not enough to save the show (Boichel, 1991).

Batman came to television under a massive advertising campaign followed by heavy merchandising placement. Directed towards adults and children, this campaign reached the millions of dollars (McNeil, 1991). Originally scheduled to start at the fall of 1966, the show debuted earlier in the middle of the spring season. ABC aired *Batman* on prime-time from 12 January 1966, to 14 March 1968. By fall 1966, ratings were already falling. To offset this trend, in the fall season of 1967, the show was cut to once a week and *Batgirl* was introduced. This time she came to save the show from falling ratings and not to protect Batman and Robin against accusations of a homoerotic relationship, as was the case for her creation by the comic book writers in the mid-1950s. *Batgirl* (Yvonne Craig), the daughter of Commissioner Gordon and a librarian, fought crime on her own and was many times paired with the Dynamic Duo. Her debut, however, was not enough to save the series. The producers tried to spice the plots with the new sexy heroine, but it did not work and *Batman* went off the air in mid-season in the spring of 1968.

In September 1968 CBS produced an animated version of *Batman* in which the super Duo shared one hour with Superman (in separated segments). Even though the program introduced a less camp version of Batman and Robin, possibly in response to fan criticisms to the prime-time serial, the program lasted only two seasons. Between February and

Batman

September 1977 CBS broadcast an animated version with the voices of Adam West and Burt Ward. In September of that year, CBS changed the *New Adventures of Batman* to *The Batman/Tarzan Hour*, in which Batman and Tarzan shared one hour back to back, in separated segments.

In the fall of 1992 FOX television released a new animated series capitalizing on publicity for the movie, *Batman Returns*. This new series followed the stylistic changes in the comic book hero. The FOX series earned critical and popular acclaim for its high-quality graphics and action-packed storylines. Interestingly, as in the two *Batman* movies released in the 1990s, this new animated series erased Robin from the scene, possibly responding to criticisms of the homoerotic subtext between the two heroes. Originally shown every afternoon, the FOX series moved to the Saturday morning FOX line-up in the spring of 1994. At the same time the series also brought Robin back, possibly responding to the word that a new *Batman* film to be released in 1995, would again include Robin in its plot.

THE BEACHCOMBERS

Canadian Family Drama Series

The *Beachcombers*, in production for 19 years, was the longest running series drama in Canadian television history. Developed by Marc Strange, producer Phil Keately, and a string of very good West Coast writers, this family series turned on the adventures of an ensemble of characters. Nick Adonidas (Bruno Gerussi) was a licensed beachcomber on the North West Coast of British Columbia. He was primarily involved with his young Native partner Jesse (Pat Johns) and his unscrupulous adversary and rival beachcomber Relic (Robert Clothier). Working out of the port of Gibson's Landing, Nick runs the *Persephone* into the inlets of the Sunshine coast, a setting filled with rugged individuals. The combination of characters, locations, and events strongly appealed to audiences abroad and was a driving force of the show's plot.

The format focused on physical action—boat chases, storms, rising tides, various rites of passage, a long-distance swim, taming a wild dog, a vision quest, but violence was largely confined to physical objects which break up or blow up or somehow threaten the characters. Comedy was part of almost every episode, and there was often a documentary flavour to the scenes of fishing, logging, and beachcombing. The show also used Canada's multi-cultural diversity. Germans, Italians, Japanese, Dutch, East Indians, Swedes, and even a Colonel Blimp from England, all provided opportunities for new plot developments.

Well-loved characters from the early seasons included the two children, Margaret and her older brother Hughie, and their "gran" who owned "Molly's Reach." As Jesse matured he was joined by a small sister, Sara, who also grew up on the show. He then married a widow, Laurel, whose son, Tommy, became the series' resident child. In *Beachcombers*, children of both sexes were respected as human beings who had much to learn and to share. Other running characters were Gus McLoskey, Captain Joe, and teenaged homeless lad, Pat O'Gorman. Constable John, the well-meaning, slightly klutzy member of the RCMP (Royal

Canadian Mounted Police) was one of the most popular of the continuing characters. He very seldom pulled a gun or even made an arrest.

The basic premise of *The Beachcombers* demanded that Nick remain a volatile Greek, unattached and available for many interesting women. Relic was his clever, unscrupulous, abrupt, antagonist for 19 years. Early on, his misanthropy was given a context in one of the best episodes, "Runt o' the Litter," written by Merv Campone. Born to a loveless Welsh coal-mining family, Relic is despised by his father—the father for whom he has nevertheless built fantasies of wealth in letters home. In this episode Relic's "Da," is present, and in some sort of doomed attempt to win back the family's honour, challenges Nick, 30 years younger, to an anchor pull. Others look on in horror as "Da" collapses in the sand, humiliated by yet another "failure." Relic, full of hatred and contempt, yet disappointed—every emotion to be read on the actor's face—grabs the rope, hauls the anchor across the line and says bitterly to his father "go home." The old man weeps. The episode is a miniature tragedy. Such ambiguity and ambivalence appeared regularly in the show's early years, and writers and producers occasionally used non-comedic endings, cutting against the grain of the genre.

The best episodes of the later years used two narrative strategies. The first was to continue the introduction of topical issues—the recurring issue of the confiscation of Japanese fishing boats during World War II, clear-cutting logging practices, or First Nations' land claims. This last topic was treated primarily in stories involving "The Reach," enabling writers to focus the issue in familiar terms using Laurel and Jesse, characters whom viewers knew well. Nick's fictional surrogate family and the show's viewers were disturbed—and informed. The second narrative strategy of the series' later period continued to revolve around conflicts between Relic and various other characters. As the 1980s brought increasing awareness of cultural appropriation and rising political tensions, however, this distinctive thread almost disappeared.

In a late attempt to boost ratings, a displaced urban mom, Dana, and her son, Sam, took over "The Reach." But conflicts constructed around urban/small-town, or capable Westerner/effete Easterner seemed not to interest the audience. The writing became tired, the plots full of action sequences. The series ended with an elegiac but rather lifeless one-hour special. To this day, however, the reruns and world-wide syndication of *Beachcombers* represent Canada and Canadians to millions of viewers around the world.

BEATON, NORMAN

British Actor

Norman Beaton was one of those unique actors who managed to scale classical roles, yet excel in light comedies. From 1989 to 1994 he enjoyed nationwide popularity on British television with Channel 4's highly successful situation comedy series *Desmond's*. This show was described as an African-Caribbean equivalent of America's *The Cosby Show*. With sharp scripts by young black writer Trix Worrell, Beaton gave a brilliant performance as the manic owner of a South London barbershop.

Born in Guyana (then British Guiana), Beaton came to Britain in 1960. His reputation as an actor grew steadily. He progressed from regional theater to leading roles at the Old Vic, the National Theatre (where he played Angelo in a blackcast version of Shakespeare's *Measure for Measure* in 1981) and the Royal Court Theatre. Apart from Shakespeare, his theater roles also encompassed Pinter, Beckett, Gilbert and Sullivan, Brecht, Moliere, and pantomime. In 1974 he established the Black Theatre of Brixton, which was instrumental in developing black theatre in Britain. During this period he also became one of Britain's leading television actors. Among his biggest successes were dramatic roles in *Afternoon Dancing* (1974); *Black Christmas* (1977); *Empire Road* (1978-79), Britain's first all-black soap opera; *Play for Today's* "Easy Money" (1981); *Nice* (1984); *Dead Head* (1986); *Playing Away* (1986); *Big George is Dead* (1987); *When Love Dies* (1990); and *Little Napoleons* (1993). He was also interviewed in the documentary *Black and White in Colour* (1992), a history of black people in British television.

Alongside Lenny Henry, Norman Beaton was the star of British television's first black situation comedy series, *The Fosters*, which ran for two series in 1976-77. But the actor will be best remembered for *Desmond's*. As a result of its popularity, African-American television star Bill Cosby invited him in 1991 to make a couple of guest appearances in *The Cosby Show*. Beaton readily accepted a role as a cricket-loving doctor, and Cosby was so taken by the actor that he wore Beaton's gift of a *Desmond's* baseball cap in the show. Shortly after he died in 1994 at the age of 60, Channel 4 aired *Shooting Stars* in the series *Black Christmas* with a memorable appearance by Beaton reading a sonnet by Shakespeare.

BEAVIS AND BUTT-HEAD

U.S. Cartoon

B*eavis and Butt-head* was first aired on the U.S. cable network MTV in March 1993. This show, which combined animation and music videos, was an example of the unique programming that MTV has consistently provided for its youthful demographics. The half-hour program alternated between a simple narrative, which focused on the exploits of two low-life adolescents, and clips from music videos, which the two teens commented on. Creator Mike Judge had penned the aimless duo for a festival of animation when Abby Turkuhle, MTV's senior vice president picked up an episode for the network's animated compendium *Liquid Television*. MTV immediately contracted for 65 episodes from Judge, with Turkuhle as producer, and placed *Beavis and Butt-head* in the 7:00 and 11:00 P.M. week-day time slots.

The characters, Beavis and Butt-head, are rude, crude, and stupid, and can be placed in the "dumb comedy" tradition, which includes Abbott and Costello, the Three Stooges, Cheech and Chong, *Saturday Night Live's* Wayne and Garth, and FOX's *The Simpsons*. When the show debuted, television critics differed in their opinions, with some praising the show for daring to present the stupidity of male "metalheads" who watch too much television (effectively satirizing the core MTV audience), and others categorizing *Beavis and Butt-head* as another example of television's declining quality. *Beavis and Butt-head* did find an audience and began pulling in MTV's highest ratings. But the show was also quite controversial, instigating heated public debate on the interconnected issues of representations of violence in the media and generational politics surrounding youth subcultures.

In October 1993 a two-year-old Ohio girl was killed in a fire lit by her five-year-old brother. The children's mother said that her son was inspired by the pyromaniac proclivities of *Beavis and Butt-head*. This real life event sparked the ire of media watchdog groups, who claimed that there was a direct link between the television show and the violent act of this impressionable child. One psychiatrist proclaimed *Beavis and Butt-head* a "Sesame Street for psychopaths." Concurrent Senate hearings on television violence placed these issues at the forefront of American cultural politics. Because of this incident, and given the cultural climate, MTV eliminated all references to fire, pulled four episodes off the air, and moved the cartoon to 10:30-11:30 P.M. only. MTV insisted that they changed the time slot, not because they believed the show was directly responsible for the incident, but because they felt that it was designed for an older audience, and that a different time slot would allow them to target that audience more effectively. Claiming that 90% of its audience was over 12 years of age, MTV attempted to move the discussion away from the children's television debate.

Beavis and Butt-head, they found, was especially popular with those in their twenties. It turned out to be bother-

some to many that young people enjoyed the show and laughed at its two imbecilic boys, even if these fans were much more intelligent and much less grating than Beavis and Butt-head. In this sense, *Beavis and Butt-head* raised the issue of generational taste cultures. Definitions of "taste," Pierre Bourdieu notes, "unite and separate, uniting those who are the product of similar conditions but only by distinguishing them from all others. And taste distinguishes in an essential way, since it is the basis of all that one has—people and things—and of all that one is for others, whereby one classifies oneself and is classified by others." To the degree that taste cultures agree, they are brought together into a subcultural formation; but to this degree they are also separated from those with whom they differ. It was the "bad taste" of *Beavis and Butt-head's* audience which bothered many, and this brings to the surface another one of the reasons why *Beavis and Butt-head* was so controversial.

Cultural critics, educators, and concerned parents gathered skeptically, sternly, and anxiously in front of the television set and passed judgment upon the "tasteless" *Beavis and Butt-head* show. And in an ironic reversal, *Beavis and Butt-head* countered by ascending the cultural hierarchy. The two youths channel-surfed, looking for videos that didn't suck (i.e. those with heavy metal or hardcore rap, those that contained violence, or encouraged genital response). In becoming the self-proclaimed Siskel and Ebert of music video,

Beavis and Butt-head

they served to evaluate pop culture with an unencumbered bottom line—does a music video “suck” or is it “cool?” *Beavis and Butt-head* as a television show, was certainly towards the lower end of traditional scales of cultural “quality.” But these two animated “slackers” evaluated other media, and so pronounced their own critical opinions and erected their own taste hierarchies. Beavis and Butt-head had their own particular brand of “taste:” they determined acceptability and unacceptability, invoking, while simultaneously upending, notions of “high” and “low” culture. In this, they entered that hallowed sphere of criticism, where they competed with others in overseeing the public good and preserving the place and status of artistic evaluation. They disregarded other accepted forms of authority, refusing to acknowledge their own limited perspectives. But like other critics, this was an important part of their appeal. After all, critics are sought out for straightforward opinion, not muddled oscillation.

In this recuperation of the critical discourse, Beavis and Butt-head joined with their audience, approximating the contradictory impulses of contemporary cynical youth, who mixed their self-delusion with self-awareness. In the case of fans of *Beavis and Butt-head*, these lines of demarcation indicated both a generational unity and the generation-based barriers between the baby boomers and the “baby busters.” The reputed cynicism of the “twentynothings” was on view as *Beavis and Butt-head* evoked both a stunted adolescence which was long past and an unsure and seemingly inaccessible future.

BELL CANADA

Canadian Telecommunications Company

Bell Canada, a subsidiary of BCE Inc. of Montreal, is the largest of Canada’s telecommunications companies. It provides telephone service to about 9 million customers in the provinces of Ontario and Quebec, and in portions of the Northwest Territories. Bell was created by federal Act of Parliament in 1880 and since 1906 has been subject to regulation by a succession of federal regulatory agencies, currently by the Canadian Radio-television and Telecommunications Commission (CRTC).

Bell Canada’s involvement in broadcasting type services dates back to the earliest years of telephony in Canada. Bell’s predecessor companies, controlled by Alexander Melville Bell (father of Alexander Graham Bell), offered point-to-mass content services over telephone lines as early as 1877: songs, duets, glees, and sermons, for example, were transmitted for reception by subscribers using ordinary telephone

instruments as receivers. As in other jurisdictions, these experimental closed-circuit content services dwindled

Courtesy of Bell Canada

within a few years, to re-emerge only in the 1950s with the advent of cable television.

Bell entered Canadian broadcasting in 1922 by securing licenses for radio stations in Toronto and Montreal. These one year licenses were allowed to lapse in 1923, however, when Bell signed a patent sharing agreement with radio set manufacturers (Canadian Westinghouse, International Western Electric, and Canadian General Electric) and with a radio telegraph company (Marconi) whereby the signatories agreed to split the fields into exclusive domains: Bell henceforth was not to engage in broadcasting or in radio telegraphy, while the other parties agreed not to compete with Bell in telephony.

Resulting from this 1923 contract bifurcating communication into distinct broadcasting and telephone (telecommunication) sectors, unique regulatory frameworks arose for each. Broadcasting companies came to be regulated under the provisions of a succession of *Broadcasting Acts*, requiring that licensed broadcasting undertakings contribute to the Canadian cultural and political identity. Broadcasting undertakings, furthermore, were to retain full responsibility for all programming carried; as a practical matter this meant that broadcasting organizations or their affiliates produced themselves a large portion of their Canadian content.

The legal/regulatory paradigm governing the telephone industry differed markedly from that for broadcasting. Telephone companies, as common carriers, came to be precluded from influencing message content; their mandate, rather, was simply to relay any and all messages on a non discriminatory basis upon the request of clients and upon payment of government-approved tariffs. As well, telephony, unlike broadcasting, was presumed to be a "natural monopoly," whose prices and profits needed to be subject to regulatory supervision and approval.

Although precluded from engaging directly in broadcasting, telephone companies nonetheless figured prominently in the provisioning indirectly of broadcasting services. With the advent of network broadcasting, for example, telephone companies such as Bell Canada provided inter-urban transmission facilities interlinking stations regionally, nationally and internationally. Telephone companies also served the cable television industry by providing independent cable firms with poles, ducts, rights-of-way, and with certain essential equipment such as coaxial cables. Initially telephone companies forced upon cable firms highly restrictive contracts intended to foreclose all possibility of competition in the provisioning of two-way, point-to-point telecommunication services. By the late 1970s the CRTC had overturned most of these restrictive contractual provisions, however, requiring telephone companies under its jurisdiction to provide reasonable access to telco poles and rights-of-way.

Under Canadian law, cable TV constitutes a component of the broadcasting system, and the CRTC to date (April 1995) has been unable and unwilling to license tele-

phone companies to provide cable-type services. Bell Canada and other Canadian telephone companies for many years argued, however, that they should be permitted to own exclusively any and all communication wires into the home or office, including the cable TV connection. Telephone companies proposed leasing portions of the bandwidth of their (to be acquired) broadband facilities to licensed cable entities that would thereby provide cable TV service in the mode of a value-added carrier. These proposals have never met with government approval.

More recently Canadian telephone companies led by Bell, as part of an "information highway" initiative, have argued that the technological convergence of broadcasting, telecommunications, and computer communications not only erodes previously distinct industry demarcations, but as well makes anachronous regulatory policies premised on such distinctions. Bell has argued further that telephone companies should now be permitted to enter directly the cable television industry, whether by leasing bandwidth from cable companies or by interconnecting their own coaxial or fibre optic facilities with those of cable companies, in order to receive signals for retransmission from cable headends. Telephone companies have argued further that cable systems, if they should choose so to do, should be permitted to enter the domain of the telephone companies in the provisioning of two-way, point-to-point telecommunications services. Telephone companies wish also to engage in video program creation, distribution, storage and related activities, for example the sale of advertising, long associated with broadcasting, and as well to enter emerging interactive, multimedia services.

Allowing telephone companies to enter cable TV and other content services would appear to be the likely next step in the CRTC's "pro-competitive" policy stance toward telecommunications. Indeed in September 1994 the commission published its "Review of Regulatory Framework" decision, wherein it announced its intention to promote "open entry and open access" to the greatest extent possible for "all telecommunications services." In March 1995, in response to a request from the Canadian federal government, the CRTC held public hearings concerning, in part, the terms under which telephone companies should be allowed to enter cable and content services.

As competition increasingly penetrates more and more areas of communication, venerable regulatory techniques, principles and goals are threatened. The principle of common carriage and the separation of content from carriage, for example, will be undermined if and when telephone companies are allowed to enter cable TV and other content creation markets. Likewise, the historical goal of safeguarding and promoting Canadian culture through broadcasting will prove to be increasingly illusive as internationally interconnected information highways are put in place. Information highway is the apotheosis of convergence, and hence of deregulation, but in Canada market forces historically have militated against indige-

nous program production and distribution. A deregulated information highway, whether controlled or not by erstwhile telephone companies enhances the power of those who would further commoditize information, as opposed to formulating information policy for social, political and cultural purposes.

—Robert Babe

BELLAMY, RALPH

U.S. Actor

Ralph Bellamy, the well-known stage and film “character” actor, began his career in 1922 when he joined a traveling troupe of Shakespearean players. Later that same year, Bellamy performed in stock and repertory theaters with the Chautauqua Road Company. In 1929, he made his Broadway debut in *Town Boy*, followed by a screen debut in 1931 in *The Secret Six*. In 1948 he made his television debut in the *Philco Television Playhouse*. He then went on to star in one of the medium’s first crime series, *Man Against Crime*, from 1949 to 1955.

In a career that spanned six decades on stage and screen, Bellamy played roles that fell into three broad categories: 1) the rich, reliable, but dull figure who is jilted by the leading lady, 2) the detective who always finds his prey, and 3) the slightly sinister but stylish villain. Usually appearing in supporting roles, Bellamy acted in over 100 films. He starred in several “B” movies, notably four in which he portrayed the detective Ellery Queen. Bellamy often said he never regarded himself as a leading man, so no one else did either. He is best remembered on film and television as the “dull other man.” It was on the stage that Bellamy made his mark as a strong actor in plays such as *Tomorrow the World*, *State of the Union* and, the most noteworthy, *Sunrise at Campobello*. It was in the latter play that Bellamy built his reputation as an actor by portraying Franklin Delano Roosevelt. By delving into the history of FDR the man and the politician, he came to an understanding of the personality and psyche of the character. He then spent weeks at a rehabilitation center learning how to manage braces, crutches, and a wheelchair, so that his portrayal of FDR, after he was stricken with polio, would be realistic and accurate. It can be said that character acting was defined and perfected by Ralph Bellamy. He won the Tony and New York’s Critics Circle Award as best actor in *Sunrise at Campobello* and starred in the subsequent film version in 1960.

Bellamy appeared in several television series during the 1960s and 1970s such as *The Eleventh Hour* (1963-1964), *The Survivors* (1969), *The Mostly Deadly Game* (1970), and *Hunter* (1976). He returned true to his roles as detective, villain, and other man in each of these series. It was in 1969 that Bellamy made a radical character shift by playing a

diabolist in *Rosemary’s Baby*. More recently he played a benevolent shipping magnate in the 1990 movie *Pretty Woman*, and a millionaire in *Trading Places* (1983). He recreated his performance as FDR in the 1988 television miniseries *War and Remembrance*.

Best remembered by his fellow actors as a champion of actors’ rights, Bellamy founded the Screen Actors Guild and served four terms as president of the American Actors’ Equity between 1952 and 1964. He doubled the equity’s assets within six years and established the first actors’ pension fund. Bellamy guided the Actors’ Equity through the political blacklisting of the McCarthy era by forming a panel that established ground rules to protect members against unproved charges of Communist Party membership or sympathy. He also actively lobbied for the repeal of theatre

Ralph Bellamy

admission taxes and for income averaging in computing taxes for performers.

“B” movie actor, the Ellery Queen of the 1940s, champion of actors’ rights, a well-known name in the film and television industries, the FDR of the 1950s and the 1980s, Ralph Bellamy is best remembered as the “nice but bland other man.”

—Gayle M. Pohl

RALPH BELLAMY. Born in Chicago, Illinois, U.S.A., 17 June 1904. Attended New Trier High School, Wilmette, Illinois. Married: 1) Alice Delbridge, 1922 (divorced, 1931); 2) Catherine Willard, 1931 (divorced, 1945), children: Lynn and Willard; 3) Ethel Smith, 1945 (divorced); 4) Alice Murphy, 1949. Formed acting troupe, North Shore Players, 1922; stage manager, Madison Stock Company, 1922–24; formed Ralph Bellamy Players, stock company, Des Moines, Iowa (later moved to Nashville, Tennessee), 1927; appeared on Broadway in *Town Boy*, 1929; founding member and member, first Board of Directors, Screen Actors Guild; president for twelve years of Actors’ Equity; appeared in film, theater, and radio, 1940s; began television career in *Man Against Crime*, live production, 1949–54. Presidential appointee, National Board of the United Service Organization (U.S.O.), 1958–60; chair, New York Regional National Council of Christians and Jews Brotherhood Week, 1963; Member: Presidential Commission on the 50th Anniversary of the Department of Labor, 1962; founding member, California Arts Commission; member, board of directors, People to People, Project Hope, Theatervision, 1972–73; Board of Governors, Academy of Motion Picture Arts and Sciences, 1982. Recipient: New York Drama Critics Award, 1958; Tony Award, 1959; Honorary Academy Award, 1986. Died 29 November 1991.

BEN CASEY

U.S. Medical Drama

Ben Casey, a medical drama about the “new breed” of doctors, ran on ABC from October 1961 to May 1966. James Moser, who also created the Richard Boone series *Medic*, created *Ben Casey* and Matthew Rapf produced the program for Bing Crosby Productions. The show was very successful for ABC and broke into the Top Twenty shows for its first two years. A 1988 made-for TV movie, *The Return of Ben Casey*, enjoyed only moderate success.

Ben Casey was one of two prominent medical dramas broadcast during the early 1960s. In *The Expanding Vista* (1990), Mary Ann Watson characterizes this show as a “New Frontier character drama.” Indeed, the title character often stood as a metaphor for the best and the brightest of his generation. Often the ills to which Casey attended were stand-ins for the ills of contemporary society. Symbolism was the stock-in-trade of *Ben Casey* as evidence by its stylized opening: a hand writing symbols on a chalk board as Sam Jaffe intoned, “Man, woman, birth, death, infinity.”

County General Hospital was the setting for the practice of its most prominent resident in neurosurgery, Ben Casey, played by Vince Edwards. Edwards had been discovered by Bing Crosby who saw to it that his protegee had a suitable vehicle for his talents. As Casey, Edwards was gruff, demanding, and decisive. Casey did not suffer fools lightly and apparently had unqualified respect only for the chief of neurosurgery, Dr. David Zorba (Sam Jaffe). The only other colleagues from whom he would seek counsel were anesthesiologist Dr. Maggie Graham (Bettye Ackerman) and Dr. Ted Hoffman (Harry Landers). Both Hoffman and Graham provided counterpoints of emotion and compassion to the stolid Casey. Virtually every episode in the entire first season of *Ben Casey* involved a patient with a brain tumor. But the nature of the malady was merely a device that allowed Casey to interact with a panoply of individuals with unique problems—only one of which was their illness. Like many shows of its era (*Route 66*, *The Fugitive*), the core of *Ben Casey* could be found in the development and growth of the characters in any given episode. It was what Casey brought to a person’s life as a whole that really drove the show.

Patients were not the only ones with problems. In *Ben Casey* the limits of medicine, the ethics of physicians, and the role of medicine in society were examined. The hospital functioned as a microcosm of the larger society it served. The professionals presented in *Ben Casey* were a tight group sworn to an oath of altruistic service. The majority of physicians in the employ of County General were not terribly inflated with self-importance. Their world was not so far removed from the world inhabited by those they helped. The problems that plagued the world outside the walls of County General could often be found within as well. During their work at County General, Casey and his colleagues came into contact with representatives from every level of society. Part of that contact was learning

about and making judgments on certain societal issues and problems. Racial tension, drug addiction, the plight of immigrants, child abuse, and euthanasia were a few of the issues treated in *Ben Casey*.

The series followed an episodic format for its first four years. But the final season saw Dr. Zorba replaced by Dr. Freeland (Franchot Tone) and a move to a serial, soap opera-like story structure. In so doing, *Ben Casey* moved away from the examination and possible correction of society’s problems and moved toward a more conventional, character-driven drama. Vince Edwards, hoping to flex his creative muscles, directed several of the episodes of the last two seasons. Chiefly in these ways, *Ben Casey* departed from the characteristics of the “New Frontier character drama” and more closely resembled an ordinary medical melodrama. In March 1966, ABC cancelled the show.

The real value of *Ben Casey* was in its presentation of maladies of the body and mind as representative of larger problems that existed in our society. The show was one of Hollywood’s reactions to FCC Chairman Newton Minnow’s plea for better television. With the character of Ben Casey at the center of each episode, the show presented (often quite skillfully) the interrelationship of mental, physical, and societal health.

BENNETT, ALAN

British Actor

Alan Bennett has been a household name in British theatre ever since he starred in and co-authored the satirical review *Beyond the Fringe*, with Dudley Moore, Peter Cooke, and Jonathan Miller, in 1960 at the Edinburgh Festival. Later, the same show played to packed houses in London's West End and in New York. Although Bennett started by writing and acting for the stage, he very soon turned his attention to writing plays for television.

Bennett's career, though less spectacular than those of his *Fringe* companions, has displayed great diversity and solid achievement. To many he is regarded as perhaps the premiere English dramatist of his generation. This is all the more surprising given the low-key themes and understated expression of the "ordinary people" who populate his dramatic world. Like the poetry of Philip Larkin, another Northerner whose writings he admires, his work frequently focuses on the everyday and the mundane: seaside holidays, lower-middle class pretensions, obsessions with class, cleanliness, propriety, and sexual repression. Like Larkin, Bennett casts a loving but critical eye on the objects of his irony, revealing what underlies the apparently trivial language of his protagonists. In "Say Something Happened," the clichéd expression of Dad is shown to be more constructive than the social work jargon of his interviewer June, since it functions to set at ease his gauche interlocutor. While June clings to lexical propriety, Dad attends to the much more important level of the speech act. In *Kafka's Dick* and *Me—I'm Afraid of Virginia Woolf*, Bennett pokes mischievous fun at Wittgenstein and the ordinary language philosophy of Austin, but his ear for telling dialogue reveals that he shares with those philosophers an awareness that language is a series of games, operating at different levels, whose rules can only be

inferred from within. We cannot assume that we know what people mean by reference to our own usage.

Bennett's dramas are easier to enjoy than to categorize and the writer himself is a dubious guide. In the introduction to the five teleplays written for London Weekend Television in 1978–79, *The Writer in Disguise*, Bennett identifies the silent central character in three of them as "the writer in

Alan Bennett

Photo courtesy of Alan Bennett

disguise." To the five plays written for the BBC in 1982 Bennett supplies a title *Objects of Affection*, but immediately disclaims he felt any such theme at the time of writing. The writer is not the centre of attention: Trevor in *Me—I'm Afraid of Virginia Woolf* is pathologically obsessed with not being noticed and yet somehow becomes the centre of others' attentions. He becomes an absent centre through whom other characters seek to make sense of their lives. Similarly, the perambulant Chinese waiter Lee, sent on a wild goose chase in search of a female admirer by a cruel fellow-worker, is a device to exhibit the casual xenophobia and fear of intimacy of the English lower-middle classes. The occasion for a Bennett play is often a holiday, or at least a break from routine: these are suggested in the titles of *All Day on the Sands*, *One Fine Day*, *Afternoon Off*, "Our Winnie," *A Day Out*, and even "Rolling Home." The break serves to highlight the peculiar nature of ordinary living by providing a distanced view of it: in extreme instances the distance indicates a near breakdown, as the estate agent Phillips in *One Fine Day* takes to living in a tower block he is unable to let, overwhelmed by the inauthenticity of the language and values of his employment. Hospitals figure in "Rolling Home," "Intensive Care" and "A Woman of No Importance:" here too, it is the intrusion of death which leads to a search for the significance of life, though frequently it is the lives of the visitors, not the patient, that are subjected to scrutiny, and Bennett's irony militates against any portentousness about "Life."

"A Woman of No Importance" marks an important step in Bennett's development: it is the first play featuring a single actress (Patricia Routledge), speaking directly to camera and with minimal scene changes which anticipates the format adopted for the six monologues of *Talking Heads*. The play is essentially a character study of a boring woman whose life revolves around the minutiae of precedence and status of canteen groupings. Peggy sees herself as creating happiness, order, and elegance in a shabby world: we see her as bossy, insensitive, and narrow-minded. Bennett's critique is subtle and sensitive as the gap between her and our vision of the world progressively narrows. Peggy is half-aware of the futility of her life which endows her struggle to make significance out of trivia with a heroic pathos. A more blinkered version of this character is to be found in Muriel in "Soldiering On" in *Talking Heads* who refuses to acknowledge her son's embezzlement and husband's incest. Here, our sympathy for her gradual social and economic privation is offset by the damage to the family of her collusive blindness to its shortcomings. The most successful of *Talking Heads* is probably "Bed Among the Lentils," the narrative of an alcoholic vicar's wife (brilliantly played by Maggie Smith) who is restored to some sense of self-worth by an affair with an Asian shopkeeper. Possessed of greater intelligence and insight than her husband and his adoring camp-followers, she is, despite her wit and perceptiveness, a figure of pathos: marooned in a marriage and a social role she despises but lacking the courage to abandon them or the

belief that real change is possible. In Bennett's world those who succeed do so by unselfconscious egoism, energy, and lack of imagination, but are marginal to our attention; conversely, the failures exhibit insight, and wit, but a crippling self-awareness that inhibits action.

While Bennett's "Englishness" and "Northerness" (terms by no means synonymous) are evident to see, they are no more nationalistic nor restricting than Chekhov's "Russianness." The characters he writes about are rooted in a particular social environment but the issues they raise are of more universal appeal: the essential isolation of human beings within the protective social roles they have adopted or had thrust upon them, the gap between self-awareness and the capacity to change, the crippling power of propriety. All of these themes are relayed through a tone that is simultaneously ironic and tender.

—Brendan Kenny

ALAN BENNETT. Born in Leeds, Yorkshire, England, 9 May 1934. Attended Leeds Modern School, 1946–52; Exeter College, Oxford, 1954–57, B.A. 1957. National service with Joint Services School for Linguists, Cambridge and Bodmin, 1957–59. Temporary junior lecturer in history, Magdalen College, Oxford, 1960–62. Stage debut at Edinburgh Festival, 1959; subsequently wrote and appeared in acclaimed comedy revue *Beyond the Fringe*, 1960; has since worked as writer, actor, director, and broadcaster for stage, television, radio, and films. D.Litt.: University of Leeds, 1990. Honorary Fellow, Exeter College, Oxford, 1987. Trustee, National Gallery, since 1994. BENNY, JACK

U.S. Comedian

Jack Benny was among the most beloved American entertainers of the 20th century. He brought a relationship-oriented, humorously vain persona honed in vaudeville, radio, and film to television in 1950, starring in his own television series from that year until 1965.

The comedian grew up in Waukegan and went on the vaudeville stage in his early teens playing the violin. The instrument quickly turned into a mere prop, and his lack of musicianship became one of the staples of his act. Benny's first major success was on the radio. He starred in a regular radio program from 1932 to 1955, establishing the format and personality he would transfer almost intact to television. Most of his films capitalized on his radio fame (e.g., *The Big Broadcast of 1937*), although a couple of pictures, *Charley's Aunt* (1941) and *To Be or Not to Be* (1942), showed that he could play more than one character.

Benny's radio program spent most of its run on NBC. In 1948, the entertainer, who had just signed a deal with the Music Corporation of America (MCA) that allowed him to form a company to produce the program and thereby make more money on it, was lured to CBS, where he stayed through the remainder of his radio career and most of his television years.

His television program evolved slowly. Benny made only four television shows in his first season. By the 1954–55 season, he was up to 20, and by 1960–61, 39. The format of *The Jack Benny Show* was flexible. Although each week's episode usually had a theme or starting premise, the actual playing out of that premise often devolved into a loose collection of skits.

Benny played a fictional version of himself, Jack Benny the television star, and the program often revolved around preparation for the next week's show—involving interactions between Benny and a regular stable of characters that included the program's announcer, Don Wilson, and its resident crooner, Dennis Day. Until her retirement in 1958, Benny's wife, Mary Livingstone, portrayed what her husband termed in his memoirs “a kind of heckler-secretary,” a wise-cracking friend of the family and the television program.

The main point of these interactions was to show off Benny's onscreen character. The Jack Benny with whom viewers were familiar was a cheap, vain, insecure, untalented braggart who would never willingly enter his fifth decade. Despite his conceit and braggadocio, however, Jack Benny's video persona was uniquely endearing and even in many ways admirable. He possessed a vulnerability and a flexibility few male fictional characters have achieved.

His myriad shortcomings were mercilessly exposed every week by his supporting cast, yet those characters always forgave him. They knew that “Jack” was never violent and never intentionally cruel—and that he wanted nothing (not even money) so much as love. The interaction

between this protagonist and his fellow cast members turned the Jack Benny Show into a forum for human absurdity and human affection.

“Human” is a key word, for the Benny persona defied sub-categorization. Benny had shed his Jewish identity along with his Jewish name on his way from vaudeville to radio. The character he and his writers sustained on the airwaves for four decades had no ethnicity or religion.

He had no strongly defined sexuality either, despite his boasts about mythical romantic success with glamorous female movie stars and his occasional brief dates with working-class women. In minimizing his ethnicity and sexuality, the Benny character managed to transcend those categories rather than deny them. Beneath his quickly lifted arrogant facade lurked an American Everyperson.

The Jack Benny Show further crossed boundaries by being the only program for decades that consistently portrayed Americans of mixed races living and working side by side. Jack Benny's ever-present butler/valet/nanny, Rochester (portrayed by Eddie Anderson), had first appeared on the Benny radio program as a Pullman porter but had pleased audiences so universally that he moved into Benny's fictional household. Unlike the popular African-American radio characters Amos and Andy, Rochester was portrayed

Jack Benny

by a black actor, Eddie Anderson, rather than a white actor in blackface.

Rochester's characterization was not devoid of racism. As Benny's employee he was, after all, always in a nominally subservient position. Nevertheless, neither Rochester nor his relationship with his employer was defined or limited by race. Like the other characters on the program, Rochester viewed Benny with slightly condescending affection—and frequently got the better of his employer in arguments that were obviously battles between peers. He was, in fact, the closest thing the Benny character had to either a spouse or a best friend.

The complex relationship between the two was typical of the Benny persona and its fictional formula, which relied on character rather than jokes. Benny sustained the persona and the formula, in his regular half-hour program and in a series of one-hour specials, until both wore out in the mid-1960s. He returned to television from time to time thereafter to star in additional specials but never dominated American ratings as he had in the 1950s, when he spent several years in the Nielsen top 20s and garnered Emmy Awards year after year.

Offscreen, Benny was apparently ambivalent about television. In his memoirs, *Sunday Nights at Seven*, posthumously published with his daughter as co-author in 1990, he wrote, "By my second year in television, I saw that the camera was a man-eating monster. It gave a performer close-up exposure that, week after week, threatened his existence as an interesting entertainer." Despite this concern, Jack Benny and American television clearly did well by each other.

—Tinky "Dakota" Weisblat

JACK BENNY. Born Benjamin Kubelsky in Waukegan, Illinois, U.S.A., 14 February 1894. Married: Mary Livingstone (Sayde Marks), 1927. Served in U.S. Navy, World War I. Worked in vaudeville as violinist in orchestra pit, 1909–14; after military service in World War I, returned to vaudeville, touring as comic and dancer under name Ben K. Benny; small-part actor in Broadway musicals during the 1920s; first film appearance, *Bright Moments* (short), 1928; role as the emcee in feature film *The Hollywood Revue of 1929*, 1929; worked on Broadway in successful *The Earl Carroll Vanities*, 1930; radio debut, *The Ed Sullivan Show*, 1932; own radio series, *The Jack Benny Show*, 1933–41; starring film roles in *Buck Benny Rides Again*, 1940, *Love Thy Neighbor*, 1940, and *Charley's Aunt*, 1941; notable perfor-

mance in film *To Be or Not to Be*, 1942; had own television series *The Jack Benny Show*, 1950–64 (CBS), 1964–65 (NBC); later guest roles in films. Died in Beverly Hills, California, U.S.A., 26 December 1974.

THE BENNY HILL SHOW

British Comedy Program

Thanks to his work in television, especially *The Benny Hill Show*, Benny Hill is the most universally recognised of British comedians. However, what most audiences outside of the United Kingdom know as *The Benny Hill Show*, was in fact a compilation series of 111 half-hour episodes, composed of sketches and numbers drawn from his British ITV series, produced over a 20-year period from 1969 to 1989, and syndicated on American television from 1979 onward.

This series picked up a cult following, making Hill one of the most popular British comedians to appear on U.S. television. The compilation series was sold in over 90 foreign language markets, including Russia and China, which normally did not buy British comedy. However, so much of Hill's series was based on sight gags and humour that audiences in many parts of the world could appreciate the comedy. The early series of *The Benny Hill Show* appeared on the BBC. Hill's television career was launched in 1955 and his show ran, off and on, on the BBC until 1968 with a brief season with ATV in 1967. In 1969 he moved to Thames Television and stayed through the end of the series in 1989.

His early work was inventive and local in its references. Some of the BBC shows are remembered for Hill's many inspired and usually hilarious impersonations of such icons of British television such as Hughie Green (of the talent series *Opportunity Knocks*) and Alan Wicker of the travel/foreign correspondent series *Wicker's World*. The Thames series was quintessential Benny with the cherubic/budgy Hill dominating sketches, slapstick routines, and silent-film type pantomimes of comedy and sight gags. Hill was adept at buffoons, who on a slightly closer inspection, turned out to be both sly and lecherous. Indeed, lechery and smuttiness were a hallmark of many of the shows, in which tall, beautiful girls were constantly being chased or ogled by Hill and a group of stereotypical males such as Henry McGee, Bob Todd, Jackie Wright, and Nicholas Parsons. Wright in particular, as the small, bald man, invariably cropped up in a comic fire brigade or as a cowboy in various of the slapstick sketches. Hill himself often played a series of stock figures such as the short-sighted Professor Marvel, a cowboy, Captain Fred Schutle and a member of the fireman's choir. His characteristic trademarks included a broad accent, whether American Southern, Devon, or other British versions, an oafish salute, and often a jacket buttoned too tightly across the chest. His songs and rhymes were rendered with the look of a happy idiot that constantly broke into a leer.

Although all his material was original, Hill nevertheless owed a comic debt to U.S. entertainer, Red Skelton. Like Skelton, Hill worked in broad strokes and sometimes in pantomime with a series of recurring comic personae. Hill even adopted Skelton's departing line from the latter's 1951-71 network program: "Good night, God bless." However,

Hill was without Skelton's often maudlin sentimentality, substituting instead a ribald energy and gusto.

BENSON

U.S. Situation Comedy

Benson premiered in August 1979 on ABC, a spin-off of the popular program, *Soap*, which ran from 1977 to 1981. Robert Guillaume resumed the title role in the new series joining a new cast of characters and moving from the home of a wealthy (if utterly absurd) family to a butler's position in a governor's mansion. The series ran for seven consecutive seasons with a few minor cast changes and with Benson's promotions from his first assignment, to state budget director, and finally, to lieutenant governor.

Although the story lines and the character poke fun at the incompetence of those in positions of wealth and power, the portrayal of an African American man as a butler remains a strong stereotype that serves to uphold racial power relations and reinforce social values in the neo-conservative 1970s and 1980s America. Despite conscious efforts of writers and actors, the main character's role remains a problem: Why in contemporary television is an African American man still portrayed as a servant? However light-hearted and fictitious *Benson* may be, its significance in television history is both serious and real.

Comedy has long been a way to represent characters of color in both American film and television. Hollywood film picked up where minstrel shows left off: using extreme stereotypes (and often white actors in "blackface" makeup) to connote African American characters. One stereotype in particular that became nearly omnipresent in many classic Hollywood films is the figure of the black servant, a remnant of the ante-bellum American South. This stereotypical trope of the servant is seen time and time again, subtly suggesting the superior status of whites and simultaneously dictating to the viewing audience the position of African Americans in society. The persistence of such representation in contemporary television demonstrates the continuing use of characters of color for racial demarcation and for comic relief.

Benson as a source of humor is historically significant in television. Few American programs featuring characters of color have been dramas. Instead, beginning with *Beulah* and *Amos 'n' Andy* in the 1950s and continuing into the present, this tradition has been continuously practiced, and most programs have fallen into the genre of situation comedy. Issues of race are to be dealt with, it seems, through laughter. Although the character of Benson is indeed allowed to rise through the occupational ladder, this advancement is carefully contained within the realm of comedy. It is also

controlled by the narrative, as evidenced in a 1983 episode in which the ghost of Jessica Tate comes back to haunt Benson and remind him of how far he has come.

The premise in this half-hour situation comedy is that Benson, who worked for the Tate household in the parodic *Soap*, has been "loaned" by Jessica to her cousin, Governor James Gatling, after his wife has passed away. This loan becomes permanent as Benson's utility becomes indispensable. Through his service in the governor's mansion—saving the governor from political blunders, managing both the political and domestic staff, and helping to raise the governor's daughter, Katie—Benson is seen not only as the source of composure and wisdom, but also of warmth. At the same time, he is famous for his sharp wit, often expressed at the expense of other characters on the show.

The critical view of *Benson* has generally been positive and, moreover, addresses the issue of Benson as a butler by arguing his is a "dignified" portrayal. Nevertheless, the limitations of the role are clearly set in the way in which he is characterized. For example, the headlines of some reviews instruct their readers in specific ways: "*Benson Moves Out and Up*," "Benson Butlers His Way Into a Sensational Spinoff," "ABC May Clean Up With *Benson*." One critic describes Benson as the "smug, cocky and perennially bored black butler." These descriptions and plays on words only emphasize the position that Benson is expected to occupy—his rise "out and up" are deemed unusual, irreverent, and ultimately funny. In this light, a "cocky" servant who is smarter than his masters is not a subversive portrayal as some may wish to believe, but rather, is exactly the opposite. The often overdetermined praise of Benson's independence and sophistication perhaps reveals the effort on the part of critics to compensate for the fact that Benson is a servant. Unfortunately, arguing that these characteristics of an African American man/butler are exceptional only further dictates what his place is supposed to be. To be uppity or insolent, as Benson is sometimes described, implies that he must somehow be put back down where he belongs.

This contradiction—Benson as the defiant yet also stereotypical character—seemed to have confused audiences as well. Although *Benson* was not among the top 10 shows (it was in the top 25 in its first year only), the program lasted for seven seasons. And although Robert Guillaume was nominated several times for an Emmy Award for Best Leading Actor, he won only in the category of Best Supporting

Benson

Actor for his work in *Soap*. While the producers and writers of the show worked consciously with Benson's character in light of the strides in civil rights that were made in the previous decades, they still chose to use the stereotype of the black servant. Hence, though far lower-rated, the fact that *Benson* far outlasted such programs as *Taxi* and even its parent program, *Soap*, might suggest that American television audiences were ultimately sustaining and supporting the status quo.

Guillaume has taken a critical stance toward his own role, saying variously, "I will not go back to 1936"; "This is not going to be one of those plantation-darky roles"; "It was employer-employee, not master-servant." Still, despite Guillaume's talent and his determined attempts to bring substance and accuracy to his role, the long-standing cultural connotations of an African American servant predominate. *Benson* is not derogatory or inflammatory and, in fact, can be quite entertaining. Nevertheless, the program stands as part of an on-going practice of representing people of color in subordinate positions. Though liberal, the television industry is by no means revolutionary. Accordingly, *Benson* attempts to portray the life of an African American in a progressive and "dignified" manner, yet cannot escape the trappings of a deeply embedded cultural classification.

BERG, GERTRUDE

U.S. Actor/Writer/Producer

Gertrude Berg was perhaps the only woman to reach a status on prime-time network television during the 1950s as the creator, principle writer and star of her own weekly situation comedy, *The Goldbergs*. When the show came to television she was already thoroughly identified in the public mind with her life-long dramatic persona, Molly Goldberg, a Jewish-American mother she had developed into a quintessential stereotype on a long-running radio series. Public familiarity with the Molly character tended to obscure her career as a remarkably prolific writer.

Berg began writing and performing skits at her father's resort hotel in the Catskill Mountains, later studying playwriting at Columbia University. After selling several dramatic scripts to radio, her big break came in 1929 with the debut of her own series on NBC, *The Rise of Goldbergs* (later shortened to *The Goldbergs*). It was among the most popular programs of the radio era, often rivaling *Amos 'n' Andy*, another NBC series based on racial stereotypes, at the top of the national ratings. Fifteen-minute episodes of *The Goldbergs* aired Monday through Friday, placing the form of the program somewhere between the contemporary parameters of situation comedy and daytime soap opera. Berg wrote most of the episodes which, after a twenty-year production run, numbered over 5,000. A pioneer in product tie-in concepts, the writer-performer capitalized on the Molly Goldberg phenomenon with short stories, stage plays, a feature film and even a cookbook.

The Goldbergs premiered on television as a CBS sitcom in 1949. During its five-season production run, the show would move around the dial to NBC, DuMont and first-run syndication. A sentimentalized vision of melting-pot assimilation, *The Goldbergs* was "pure schmaltz," a mythic idealization of the American dreams and aspirations of a lower-class Jewish family in the Bronx. The differences between traditional shtetl values and middle-American values are consistently exposed as merely stylistic. The older members of the family, including Molly, her husband Jake and Uncle David, all speak with thick Yiddish accents, while Molly's children, Rosalie and Sammy, sound more like the voices heard on *Ozzie and Harriet*. When it was becoming

clear in the mid-1950s that ethnic sitcoms of this type were on the way out, Berg revamped the show by moving the family to the suburbs, renaming the series *Molly* (1954–55) and offering it in first-run syndication. These changes, however, could not save it.

For the next five years Berg was a frequent guest on comedy-variety shows, appearing with Perry Como, Kate Smith, Ed Sullivan and others. She also played several dramatic roles on anthology showcases, such as *The U.S. Steel Hour* and *The Alcoa Hour*. In 1961, Berg attempted to return to situation comedy with *Mrs. G Goes to College* (also called *The Gertrude Berg Show*) on CBS. It was the first time she had appeared on

Gertrude Berg

series television as any character other than Molly Goldberg. The old assimilationist themes remained at the heart of Berg's work; she plays Sarah Green, an elderly widow pursuing the education denied her by a poverty-stricken youth. Once again, Jewish values and American values are portrayed as distinguishable only in matters of style.

Berg's autobiography, *Molly and Me*, was published in 1961. Her papers, including many of her radio and television scripts, are collected at the George Arents Research Library at Syracuse University. It is worth noting that Berg took a stand against the blacklist in 1951, refusing to fire her long-time co-star Philip Loeb (Loeb resigned to prevent the show's cancellation and later committed suicide).

—David Marc

GERTRUDE BERG. Born Gertrude Edelstein in New York City, New York, U.S.A., 3 October 1899. Extension courses in playwriting at Columbia University. Married: Lewis W. Berg, 1918; children: Harriet and Cherney Robert. First radio script, *Effie and Laura*, 1927; wrote, starred in and produced the NBC radio series situation comedy, *The Rise of the Goldbergs*, starting 1929; *The Rise of the Goldbergs* cast and Goldberg toured vaudeville, 1934–36; half-hour radio serial *The House of Glass*, 1935; first film, *Make a Wish*, 1937; wrote and starred in Broadway reworking of the Goldberg saga, titled *Me and Molly*, 1948; wrote and starred in *The Goldbergs*, CBS television, 1949–54; with N. Richard Nash co-wrote the movie version, *Molly*, starring in the title role, 1951; starred in *The Goldbergs*, NBC-TV, 1952 and the summer of 1953, then locally on WABD (Channel 5), 1954; appeared in MGM's *Main Street to Broadway*, 1953; acted in non-Molly Goldberg roles in stage plays, from 1956; starred in television series *Mrs. G Goes to*

College, later retitled *The Gertrude Berg Show*, 1961–62. Recipient: Federation of Jewish Philanthropies of New York Award, 1949; Emmy Award, 1950; Girls Clubs of America Radio and TV Mother of the Year; Antoinette Perry Award, 1959. Died in New York City, 14 September 1966.

BERLE, MILTON

U.S. Comedian/Actor

Milton Berle's career is one of the longest and most varied in show business, spanning silent film, vaudeville, radio, motion pictures, and television. He started in show business at the age of five, appearing as a child in *The Perils of Pauline* and *Tillie's Punctured Romance*. Through the 1920s, Berle moved up through the vaudeville circuit, finding his niche in the role of a brash comic known for stealing the material of fellow comedians. He also became a popular master of ceremonies in vaudeville, achieving top billing in the largest cities and theaters. During the 1930s, Berle appeared in a variety of Hollywood films and further polished his comedy routines in night clubs and on radio.

Berle is best known for his role as host of *Texaco Star Theater*, television's most popular program during its early years. The show had begun on the ABC radio network in the spring of 1948, and Berle took part in a television test version for Texaco and NBC in June of that year. He was selected as host, and the first East Coast broadcast of the

TV series began in September. Within two months, Berle became television's first superstar, with the highest ratings ever attained and was soon referred to as "Mr. Television," "Mr. Tuesday Night," and "Uncle Miltie." Restaurants, theaters, and nightclubs adjusted their schedules so patrons would not miss Berle's program at 8:00 P.M. on Tuesday nights. Berle is said to have stimulated television sales and audience size in the same way *Amos 'n' Andy* had sparked the growth of radio.

Although the budget for each program was a modest \$15,000, many well-known entertainers were eager to appear for the public exposure *Texaco Star Theater* afforded, providing further viewer appeal and popularity for the program. The one-hour live shows typically included visual vaudeville routines, music, comedy and sketches. Other regular features included the singing Texaco station attendants and the pitchman commercials by Sid Stone. Berle was noted for interjecting himself into the acts of his guests,

which, along with his opening appearance in outlandish costumes, became a regular feature. His use of sight gags, props, and visual style seemed well-suited for the TV medium. In 1951, Berle signed a contract with NBC granting him \$200,000 a year for 30 years, providing he appear on NBC exclusively.

His was one of the first television shows to be promoted through merchandising, including Uncle Miltie tee-shirts, comic books and chewing gum. When other programs evolved to compete with Berle's popularity, his dominance of the television audience began to wane, and Texaco ended its sponsorship. In the 1953–54 season, the *Buick-Berle Show*, as it was retitled, was set into the 8:00 P.M. Tuesday time slot. Facing greater competition and sensing the need for more determined effort to compensate for the dwindling novelty of both the program and the medium, Berle's staff and writers changed focus from the zany qualities of the show's early days to a more structured format. Berle continued to attract a substantial audience, but he was dropped by the sponsor Buick at the end of the season in 1955. Hour-long variety shows had become more difficult to orchestrate due to higher costs, increasing salary demands, and union complications. Also, Berle's persona had shifted from the impetuous and aggressive style of the *Texaco Star Theater* days to a more cultivated, but less distinctive personality, leaving many fans somehow unsatisfied. The show was produced in California for the 1955-56 season, but it failed to capture either the spirit or the audience of Uncle Miltie in his prime. Berle was featured on *Kraft Music Hall* in the late 1950s and *Jackpot Bowling*, a 1960s game show. In 1965, Berle renegotiated his 30-year contract with NBC, allowing him to appear on any network. He later made guest appearances in dramas as well as comedy programs. In addition to television, Berle's career in the later years included film, night clubs, and benefit shows. He has been the subject of nearly every show business tribute and award, including an Emmy and TV specials devoted to his contributions and legacy in broadcasting.

—B.R. Smith

MILTON BERLE. Born Mendel Berlinger in New York City, New York, U.S.A., 12 July 1908. Attended Professional Children's School. Married: 1) Joyce Mathews (twice; divorced, twice); two children; 2) Ruth Gosgrove Rosenthal, 1953; children: Vicki and Billy. Began career by winning contest for Charlie Chaplin imitators, 1913; children's roles in Biograph silent film productions; cast member E.W. Wolf's vaudeville children's acts; in theater since *Floradora*, Atlantic City, New Jersey, 1920, debuted in New York City with *Floradora*, 1920; in radio, 1930s; toured with Ziegfeld Follies, 1936; television series and specials from 1948; lyricist of more than 300 songs; contributor to *Variety* magazine. BERLUSCONI, SILVIO

Italian Media Mogul and Politician

While still a student, Silvio Berlusconi, the son of a Milan bank official, displayed two of the main qualities that marked his later career as a media tycoon: business acumen and a penchant for performing. While preparing a dissertation on "The Newspaper Advertising Contract", for his honours degree in law from Milan University, he helped finance his studies by working as a crooner on cruise ships.

On graduating, he was quick to recognise the entrepreneurial opportunities opened up by the wave of post-war affluence that rolled across Italy in the 1960s. He moved into the booming construction sector, and in 1969 borrowed 3 billion lire to build a prestigious dormitory suburb, Milano 2, on the edge of the city. His decision to install a cable network in the complex in 1974, was his first entry into a television marketplace that was about to undergo a massive expansion.

The historic monopoly over national broadcasting enjoyed by the public sector organisation, RAI (Radio Televisione Italiana) had been confirmed by Law 103, passed in 1975. But the following year, the Constitutional Court ruled that it did not extend to the local level. This decision legitimated the mushrooming "pirate" television operators and attracted new investors with around 700 commercial stations springing up around the country. Berlusconi was quick to see the enormous potential in this explosion of activity and in 1975 he set up a holding company, Fininvest, to manage his expanding interests. In 1979 he established a major film library, renting titles to stations on the condition that they carried advertising purchased through his Publitalia subsidiary. He rapidly became the dominant force in a market that saw television increase its share of national advertising from 15% in 1976 to nearly 50%, ten years later. By 1983, Publitalia's advertising reve-

nues had overtaken those of RAI and by the end of the decade they accounted for around 70% of all television advertising expenditure.

His power within the new commercial television marketplace was further cemented by his own moves into station ownership. Between 1977 and 1980, he created a nationwide network, Canale 5, creating the illusion of a single channel by dispatching video tapes by courier for simultaneous transmission. Programming was unashamedly populist relying heavily on imported films and soap operas and home produced game shows. In 1981, the Constitutional Court revised its earlier decision and ruled in favour of national private networks providing there were strong anti-trust provisions. Berlusconi took full advantage of this opening, buying out one of his main competitors, Italia 1, in 1982, and acquiring his only other serious challenger, Rete 4, in 1984. These moves confirmed his domination of commercial television earning him the nickname Su' Emittenza ("His Transmitter-ship", a pun on the traditional title for a cardinal).

His power did not go unopposed however. In October 1984 magistrates ruled that his channels breached RAI's monopoly right to broadcast a simultaneous national service, and shut them down. But he had powerful political friends, including the prime minister, Bettino Craxi, who returned from overseas early to sign a decree re-opening them. Even in a climate of growing enthusiasm for deregulation no other European government had allowed a single individual to accumulate such concentrated control over terrestrial television. This political support established an effective duopoly in national television for the rest of the decade, giving Fininvest's three commercial networks and RAI's three public channels an overall share of between 40 to 45% each.

Reviewing this situation in 1988, the Constitutional Court sent a warning to parliament urging them to introduce strong anti-trust provisions at the earliest opportunity. Parliament's response, the Broadcasting Act of 1990 (known as the "Mammi Act" after the Post and Telecommunications Minister who presented it) fell way short of this. The parliamentary debate was bitter with the former chair of the Constitutional Court arguing that the Act disregarded the Court's anti-trust instructions and was far too sympathetic to private television power. The new law legitimated the status quo. Berlusconi was allowed to keep his three broadcasting networks and Publitalia's domination of the television advertising market remained untouched. However, new cross ownership rules did require him to sell 90% of his shares in the country's first pay-TV venture, Telepiu, and to divest his majority stake in the Milan daily newspaper, *Il Giornale Nuovo*, which passed to his brother Paolo. Critics of his communicative power were unimpressed and in 1992 media workers mounted a strike to protest against Fininvest's domination of the advertising market.

Renewed pressure for tougher anti-trust legislation coincided with a worsening financial situation within Fininvest, as

the group absorbed the costs of recent acquisitions. In 1986, Berlusconi had bought the football club AC Milan and spent substantial sums on making it into the most successful Italian club of all time. In 1988, he acquired the La Standa department store chain, one of the largest in Italy. And, after an expensive and bitterly fought contest with Carlo de Benedetti of the computer company Olivetti, in 1990, he had made a major move into newspaper, magazine and book publishing with the purchase of the Mondadori group, giving him control of 20% of the domestic publishing market. These outlays led to a 12-fold increase in the group's debt, which stood at \$2 billion by 1994.

Faced with continuing demands for the break-up of his television empire, he seized the political initiative and at the beginning of 1994, announced that he would contest the forthcoming general election. Luciano Benetton, head of the clothing group, spoke for many when he wryly observed that, "Silvio Berlusconi's love of politics is motivated by fear of losing his television interests." His vehicle was an entirely new party, Forza Italia (named after the football chant "Go Italy") in coalition with the federalist Northern League and the remnants of the neo-fascist MSI movement, renamed the National Alliance. During the campaign he relied heavily on orchestrated support from his press and television interests leading the distinguished journalist, Indro Montanelli, to resign the editorship of *Il Giornale* in protest. He projected an image of a man untouched by the old corruption, in touch with the aspirations of young Italy, and in favour of low taxation, free markets and personal choice.

His coalition of the Right won 43% of the popular vote in the March 1994 poll and formed a government with Berlusconi as Prime Minister. There were immediate allegations of conflicts of interest. He had tried to forestall these at the start of his election campaign by resigning from all managerial positions and handing chairmanship of his major company to his old piano accompanist, Fidele Confalonieri. But since he and his family still held 51% of the group's shares, critics were unconvinced. These suspicions, coupled with the defection of the Northern League, led to the fall of his administration after nine months.

His exit from office coincided with other shifts in his personal circumstances. In July 1995 he announced that he had sold a 20% stake in his new subsidiary, Mediaset (covering his television, advertising, film and record interests) to three outside investors (including the German media magnate, Leo Kirch) for \$1.1 billion. More shares were sold later to banks and other institutions, reducing his holding to 72%. Then, two days before the April 1996 election, he announced a public flotation that would eliminate his majority control.

His political standing was also under threat. His carefully cultivated image of a man outside the corrupt old guard had been dented by revelations that in 1978 he had joined the secretive masonic lodge, P2 (Propaganda 2) that had formed a powerful state within a state with connections to the armed forces, secret services, banks and government.

Then in January 1996 he was called before magistrates in Milan to answer charges that he had bribed financial police to present a favourable tax audit of his corporate accounts.

This helped to sour his return to politics in the general election in April 1996. Although he was elected as a member of parliament, his right wing bloc was forced to concede control of government to the Olive Tree Alliance, Italy's first successful centre-left coalition since the war.

Whether he remains a central figure in Italian politics and business in the future, Berlusconi will be remembered as the man who in the space of just 25 years built a conglomerate that rose to dominate Italian commercial television, and to become Europe's second largest media empire (after Bertelsmann of Germany) and Italy's third biggest private company, and the man who used his communicative power and his flair for showmanship to launch a new political party that gathered enough votes to secure his election as Prime Minister in just four months. Overall, his career over the last 25 years stands as an impressive illustration and warning of the power of concentrated media ownership in a lightly regulated marketplace.

—Graham Murdock

SILVIO BERLUSCONI. Born in Milan, Italy, 29 September 1936. Educated at Milan University, degree in law 1971. Married: 1) Carla Dall'Oglio (divorced), children: Marina and Pier; 2) Veronica Lario, 1990. Founded real estate development companies Cantieri Riuniti Milanesi, 1962, and Edilnord, 1963; financed construction of suburbs Milano 2, 1969, and Milano 3, 1976; created Telemilano cable television system, 1974; established Canale 5 television network 1977-80; purchased television networks Italia 1, 1982, Rete 4, 1984; purchased movie theater chain, 1985; purchased Milan AC soccer club, 1986; acquired the La Standa department store chain, 1988; acquired interests in publishing conglomerate Arnoldo

Mondadori Editore S.p.A., 1990; formed political party Forza Italia, 1994; Prime Minister of Italy, 1994. Member: Masonic lodge Propoganda 2, 1978 (disbanded, 1981); Confindustria (Italian Manufacturers' Association). Honorary degree in managerial engineering from Calabria University, 1991. Recipient: Cavaliere del Lavoro, 1977; named Man of the Year by the International Film and Programme Market of Television, Cable, and Satellite, 1991.

BERNSTEIN, SIDNEY

British Media Executive

Sidney Bernstein was one of Britain's first television "barons", the least flamboyant but probably the most enduringly influential of a select number of show-business entrepreneurs who won the first independent commercial television franchises in the 1950s. As founding chair of the London-based Granada Group, and later of its famous subsidiary the Granada Television Network Ltd., Bernstein earned a considerable reputation as a man sensitive to the frequently contradictory ideals of popular entertainment and public service. Today, Granada Television continues to thrive, some 40 years after its creation, reconciling its twin roles as a powerful purveyor of regional culture and a senior participant in a vigorous national network. It is one of the most profitable and highly respected television companies in Europe and the only British Channel 3 contractor still

surviving in anything like its original form. In 1956, the first year of Granada's transmissions, the Granada Group posted pre-tax profits of £218,204; by 1980 that figure had grown to over £43 million. Sidney Bernstein, Socialist millionaire and "benevolent despot", is the visionary who brought this empire into being.

Bernstein had developed a considerable show-business organisation long before his controversial entry into television. Inheriting from his father a modest interest in a handful of small London cinemas while in his early twenties, he went on to build, with his brother Cecil, a successful circuit of some 60 cinemas and theatres on the way to creating a diversified leisure group with interests in publishing, property, motorway services, retail shops and bowling alleys, as well as the hugely profitable business of television rentals. It

is said he chose the name Granada for his cinema chain, and later for his television company, because its Spanish reference connoted sun-drenched gaiety and flamboyance, the qualities he sought to have associated with his entertainment establishments, which tended in the early days of cinema to be decorated in the Spanish baroque style. Another story suggests that Bernstein, rambling in Andalucia while looking for a name for his company, visited the city of Granada and its exotic splendour suggested the name. Always considering himself first and foremost an unashamed showman (an attitude underlined by his unqualified admiration for Phineas T. Barnum whose portrait hung symbolically in various parts of the Granada empire), Bernstein nevertheless possessed a seriousness of purpose. He introduced serious foreign films into his cinemas at a time when distribution outlets for them were scarce and was a founder of the British Film Society. More significantly for the future of independent television, he fought a crusade to equate popularity and accessibility with quality and depth.

Bernstein had been aware of the commercial potential of television from an early stage but his Socialist principles prevented him from questioning the BBC's monopoly. From 1948 he had been lobbying the government to give the cinema industry the right to produce and transmit television programmes, not to individual homes as the BBC did, but to collective audiences in cinemas and theatres. Indeed, the evidence of Granada Theatres Ltd. to the Beveridge Committee of Enquiry into Broadcasting (report published 1951), fully acknowledged the sanctity of the public monopoly principle in respect of domestic broadcasting. All the same, Granada and Bernstein were quick to overcome their reservations when the resulting Television Act of 1954 signalled the end of the BBC's monopoly and permitted private companies to apply for the first regional commercial franchises.

The London-based Granada group surprised the establishment by bidding, not for a lucrative contract in the affluent Southeast, but for the northern weekday licence centred on Manchester in the industrial north and embracing an area which then extended geographically right across the north of England and Wales. Granada's evidence to the Pilkington Committee of Enquiry into Broadcasting in 1961, justified this decision thus: "The North and London were the two biggest regions. Granada preferred the North because of its tradition of home-grown culture, and because it offered a chance to start a new creative industry away from the metropolitan atmosphere of London." Bernstein himself shrewdly put it another way: "the North is a closely knit, indigenous, industrial society; a homogeneous cultural group with a good record for music, theatre, literature and newspapers, not found elsewhere in this island, except perhaps in Scotland. Compare this with London and its suburbs—full of displaced persons. And, of course, if you look at a map of the concentration of population in the North and a rainfall map, you will see that the North is an ideal place for television."

So, indeed, it proved. Despite certain objections to a commercial franchise being awarded to a company with overtly left-wing leanings, Granada commenced broadcasting from Manchester in May 1956, proudly proclaiming its origins with the slogan "From the North" and labelling its new constituency "Granadaland". The first night's programming began, at Bernstein's insistence, with a homage to the BBC, whose public broadcasting pedigree he had always admired, and closed with a worthy, public-spirited statement of advertising policy which suggested an initial ambivalence surrounding the commercial imperative. Already by January 1957, Granada was responsible for all the top ten rated programmes receivable in its region and, in 1962, it became the first station to screen the Beatles to the British television audience. Bernstein's company soon came to be regarded as one of the most progressive of the independent television contractors and more consistently identifiable than most with the aspirations of its region. Its reputation for quality popular drama in the long-running serial *Coronation Street* and for high-profile current affairs and documentary in programmes like *World in Action* and *What the Papers Say* gave it early prestige and aligned it unmistakably with the ideals of its founder.

In the 1970s, Lord Bernstein finally relinquished stewardship of the television company and moved over to the business side of the Granada Group. He retired, after a long career, in 1979, and died in 1993, aged ninety-four.

BERTELSMANN AG

Bertelsmann AG is the one of the largest media corporations in the world (third as of 1995). Headquartered in Gutersloh, Germany, Bertelsmann is an international media conglomerate with major investments in book and magazine publishing, records and music publishing, broadcasting, on-line services, and other allied entertainment and information products.

A privately owned corporation dating back to 1835, Bertelsmann was revived after World War II by Reinhard Mohn, a fifth generation member of the founding family. In the 1950s, Bertelsmann established itself as a major publisher through its book clubs. To this day, publishing remains the center of Bertelsmann's profitability (and accounts for 55% of total sales). That profitability was enhanced in the 1970s with the purchase of a 74.9% interest in Gruner + Jahr, the German newspaper and magazine publisher of such titles as *Stern* and *Geo*, and the 1986 purchase of Bantam Doubleday Dell, the second largest trade publisher in the United States. Book clubs continue to be an important growth area for Bertelsmann, as the corporation recently expanded into Eastern Europe, China, and Latin America.

Bertelsmann also has major investments in the music industry, handled by its entertainment arm based in New York, Bertelsmann Music Group (BMG) Entertainment. In 1986, Bertelsmann made a major move into the entertainment industry with its purchase of RCA records. Also owners of the Arista and Ariola labels, BMG has become the second largest record club operator in the United States. BMG has sought to use its position in the music industry to expand further into other forms of media entertainment—namely music television. Bertelsmann was recently a partic-

Bertelsmann, Inc.

Courtesy of Bertelsmann, Inc.

ipant in a joint venture with Rupert Murdoch's Star TV satellite broadcast system in Asia, forming Channel V, a music video channel that replaced Viacom's MTV on the satellite feed. And though plans were later canceled, Bertelsmann had announced that it was joining with Telecommunications Inc. (TCI, America's largest cable television provider) in offering a hybrid music-video, home shopping cable channel to compete with MTV and VH-1 in the United States.

Ever since the German television market opened its previous public-based system to commercial competition in 1985, Bertelsmann's strong financial position in the media marketplace has allowed it to become one of the two dominant forces in the commercial television market (the other being the Kirch Group). Bertelsmann is part owner (39%) of RTL Plus, Germany's most successful and profitable commercial channel, which has recently developed several spin-off channels and has established itself as a major player in television production circles in Cologne. Bertelsmann also teamed with France's Canal Plus to launch Germany's first pay television movie channel, Premeire.

Not all Bertelsmann television ventures, however, have been so successful. In 1993, the company launched an infotainment channel, Vox, which has generally been a disaster. After only 15 months of operation, the company said it would shut down operations at Vox. The channel was saved, however, by substantial investments made by Rupert Murdoch (49.9%) and Canal Plus (24.9%). Bertelsmann blames such flagging performance on German licensing and anti-trust regulations, and on the low levels of advertising allowed by law. Indeed, German law has generally slowed the pace at which large media concerns such as Bertelsmann have been able to dominate the market. As a result, Bertelsmann has sought to develop joint ventures with other German and foreign media firms.

Bertelsmann has joined with Canal Plus in a programming venture to jointly fund the purchase of program and movie rights, as well as create a Europe wide network for pay television. In addition to owning several film and television production companies, including Ufa Film und Fernsehen, Stern-TV, and GEO-film, Bertelsmann has also formed a production company with the U.S. ABC Television Network. And though Bertelsmann has also shown substantial interest in purchasing a movie studio, it has made no offers. The industry press reports that management at Bertelsmann believes the company must make the transition from print to audio-visual based media products if the company is to continue to be successful in the future.

Another area of diversification for Bertelsmann is on-line services. The company recently bought a five per-

cent stake in America On-line (AOL), and has begun a joint venture with AOL in Europe. Finally, Bertelsmann had planned a joint venture with the Kirch Group and the state telephone monopoly to provide video on demand and other pay services for television—plans that were denied authorization by the European Commission in Brussels. In short, while Bertelsmann's current financial strength derives from its publishing and music related businesses, the company continues to advance its interest in the growing markets of television, film, and computer based technologies, and should continue to be a major force in those areas for years to come.

BERTON, PIERRE

Canadian Journalist/Broadcast Personality

Pierre Berton is one of Canada's best known personalities and arguably Canada's best-known living writer. He has also been an important television presence since the earliest days of Canadian television. For more than 30 years, he was rarely absent from the nation's television screens and by the 1970s was correctly described as "clearly Canada's best-known and most respected TV public affairs personality" by Warner Troyer in *The Sound and the Fury: An Anecdotal History of Canadian Broadcasting*. He was also one of most highly paid personalities. During his career as a columnist and commentator, he has been a tireless defender of public broadcasting and the importance of Canadian content. In all of his many public roles, he has been a prodigious popularizer of the Canadian experience. He may be remembered most for his many books, mostly popular histories, but he has long had an arresting television presence.

Berton's first TV appearance was probably in 1952, as a panellist on *Court of Opinion*, soon after he arrived in Toronto from Vancouver, where he got his start as a student newspaper editor (*The Ubysey*) and daily newspaper writer. Always well informed and opinionated, he provided a strong

journalistic thrust to various CBC public affairs programs. In 1957, he became the host of the interview show *Close-Up* and joined the panel of *Front Page Challenge*, a long-running program that featured "mystery guests." The guests were connected with stories in the news and the task of the panel was to identify them by asking questions and then to conduct a brief interview with the guest. After a long run, the program was finally cancelled in 1995. In 1963, on the newly formed private network, CTV, he premiered *The Pierre Berton Show* (also known as the *Pierre Berton Hour*) another talk show, which ran until 1973.

Berton's commitment to popular history led in 1974 to *My Canada* on a new, private television service, Global. The program made use of his formidable talents as a story teller to present Canadian history viewers. The program had few props and relied on Berton's ability to hold an audience with the story. Later, from 1986 to 1987, he was host of *Heritage Theatre* on CBC television, a series of dramatizations of true Canadian stories.

Among his major television triumphs was the 1974 CBC production of *The National Dream*. Based on his

books, *The National Dream* and *The Last Spike*, the drama-documentary series consisted of eight hour-long programs on the opening of the Canadian West and the building of the Canadian Pacific Railway. Berton wrote the series outline and served as on-air guide to the documentary and drama segments. The series premiered at 9:00 P.M., Sunday, 3 March 1974 and had 3.6 million viewers, a very large audience in English Canada, where, at that time, the average audience was 3.1 million.

Over his career, Berton made a major contribution to Canadian television. Not surprisingly, he has been an ardent champion of public broadcasting and the CBC. Closely involved with the Canadian Radio and Television League, he helped found a successor organization, the Friends of Canadian Broadcasting, which has been a critical supporter of the CBC and Canadian production. As a Canadian cultural nationalist, Berton has made a major contribution to the development of a distinct Canadian approach to television.

—Frederick J. Fletcher and Robert Everett

PIERRE BERTON. Born in Yukon Territory, Canada, 1920. Married: Janet; six children. Began career as reporter, the *Vancouver Sun*; managing editor, *Maclean's* magazine, 1947; editor/columnist, *Toronto Star* newspaper, 1958–62; writer of documentaries and plays for TV, film and radio, revue sketches and musical comedy for theatre; author of 36 books. Member: Canadian New Hall of Fame. Recipient: Companion of the Order of Canada, three Governor General Awards for Creative Non-fiction; two National Newspaper Awards; two ACTRA Awards for broadcasting.

BETACAM

After its introduction in 1981, Sony's Betacam became the standard professional field camera for location video work. Its adoption on an international scale was no small accomplishment given the brutal competition that characterized the "format wars" in television equipment manufacturing—a high-stakes, capital intensive struggle that produced scores of competing and incompatible high-end recording formats in less than a decade. The Panasonic Recam, Bosch QuarterCam, and RCA Hawkeye "alternatives" all proved costly losers to Sony in the race for the first successful broadcast quality "camcorder," a single unit containing both camera and videocassette recorder.

Before Betacam, electronic news gathering (ENG) utilized the 3/4" U-matic cassette format introduced in 1973. While 3/4" tape economies made 16mm newsfilm obsolete in the late 1970s, the video format was actually a step backwards in terms of portability and ease of use. While 16mm newsfilm cameras like the CP16R combined a magnetic sound recording head within the camera head, 3/4" videotape shooting required a separate video cameraperson, sound recordist and VCR (videocassette recorder) operator—all tethered together by multi-pin camera/sound cables in a cumbersome relationship that made moving shots extremely difficult. The 20-30 pound weight of each loaded VCR and camera in the late 1970s tethered system made logistics and transportation crucial in any location news assignment. Add to this the fact that 3/4" videotape was only marginally "broadcastable," and the system's limitations are apparent. While Ampex marketed a true broadcast-quality portable 1" system in the early 1980s (the 53 pound VPR-20) and producers had used AC-powered 1" type-C VTRs housed in trucks in the field, neither proved adequate solutions for those who sought to cover fast-breaking, spontaneous stories without being intrusive. At a mere 17.7 pounds, and in a configuration that combined both 1/2" VCR and camera in an integrated unit on the shoulder of a single camera operator, the BVW-1 Betacam was widely hailed as a revolution.

Betacam's significance came in three areas: in new technologies that the format introduced; in broader technical improvements that Betacam simply incorporated; and in a number of new practices that developed alongside widespread adoption of the format. First, Betacam's defining edge resulted from rejecting the dominant system of "composite" recording—where all electronic information is recorded as part of *one* fluctuating signal. Betacam was grounded in "component" recording. By recording and manipulating luminance (brightness) and chrominance (color) information separately throughout the production process, component recording aimed to "solve" one of the built-in flaws of the American NTSC broadcast standard. Historically, NTSC was standardized for black-and-white recording and was more than adequate for live transmission. Color, as approved by the Federal Communications

Commission (FCC) in the late 1940s, was a troubling afterthought for the NTSC system. Engineers struggled to "fit" color information onto its existing and very limited black and white composite signal. The resulting "compromise" meant that interference between chroma and luminance, and color instability due to multiple generations or amplifications, became synonymous with the NTSC standard. Component engineers argued that the production process should not remain hostage to the limited bandwidth of broadcasters, but could take advantage of superior—even if incompatible—alternatives, as long as the endproduct was compressed back to NTSC before broadcasting. Component recording, then, emerged as a production, rather than transmission, format. By maintaining the integrity of signal components throughout production Betacam eliminated the cross-interference that degrades NTSC composite image quality, even as Sony hyped a "field look" that rivaled 1" or 2" "studio quality."

Apart from logistical benefits that came with Betacam's size and portability, and the enhancements that came with its shift to component processing, the camcorders that followed the BVW-1 and BVW-3 became, in the next fifteen years, a veritable index of historical improvements in video technology. In 1983, for example, NEC first introduced charged coupled device (CCD) camera sensors. These solid state chips eliminated the aberrations of traditional camera pickup "tubes": blooming, burning, image variability, bulkiness, and high-light levels. It was Sony, however, that quickly exploited the breakthrough. Upgraded with CCDs, Betacams became even smaller, yet allowed videographers film-quality contrast at extremely low-light levels. Sony made the format "dockable" with high-end Ikegami cameras, added metal tape and the processing designation "SP" (for superior performance), and increased the camera resolution to 700+ lines. Betacam SP's visual sophistication made it the dominant rental camera in commercial production in the 1990s. The format was widely used in the field, in multi-camera shoots and in microwave uplinks for live news coverage.

Betacam also led to important changes in video postproduction. First, the advantages of component recording were only fully realized in editing systems that were also entirely component. While the shift was expensive, the 1980s saw widespread changeover to all-component processing in editing suites across the country. Second, the emergence of Betacam encouraged the development of "interformat" editing systems as well. Before Betacam, system source decks and master recorders typically utilized the same format. After the arrival of Betacam source tapes that equalled the quality of 1" online systems, however, "bumping" tapes up to 1" made no sense given the inevitable loss in quality that resulted from copying. Third party engineers quickly customized interformat suites that could exploit first generation Betacam quality for 1" program masters. With

an eye on the digitalization of post-production and to the future of field imaging, Sony aggressively marketed its next “breakthrough” in 1994: Betacam Digital. Made to compete with Panasonic’s D-3 and D-5 digital tape formats, analysts speculated that Sony’s existing market share and Betacam “branding” would insure the format’s future.

While Betacam can be seen as a barometer of technical developments, the unit is also symptomatic of aesthetic changes in the medium. Betacam emerged along with a number of new genres in the late 1980s. Its accessible “broadcast quality” gave half-hour “infomercials” the affordable wall-to-wall quality control that the form needed. Its extreme low-light capability provided the gritty street-look of the new “reality shows” that emerged in 1988–90 (*COPS*, *Rescue 911*, *America’s Most Wanted*). Its portability and collapsed crew size provided ample fragmentary fodder for the new tabloid shows (*Hard Copy*, *A Current Affair*). Even “higher” journalistic forms that disdained the tabloids—such as the primetime news magazines that experienced explosive growth in 1993–94 (*First Person*, *20/20*, *Dateline*)—made Betacam a bottom-line workhorse to fill primetime hours. When several Betacams were stolen from the frenzied corps that covered the O.J. Simpson trial in 1995, police quickly theorized that the gear—essentially low-cost studios-in-a-package—was probably already being used in the pornographic video industry that flourished in the San Fernando Valley area near Los Angeles. Technologies do not “cause” changes in narrative or genre, but Betacam’s proliferation in the 1980s and 1990s—alongside economic and institutional shifts—suggests that the system helped comprise the technical preconditions for one of television’s most volatile stylistic periods.

The fate of Betacam is directly tied to the future of three alternative imaging systems: film, digital video, and HDTV (High Definition Television). Low budget feature films have been shot on Betacam, printed on film, and distributed theatrically. Yet even the best Betacam Digital system cannot replicate the tonality of film negative—at least according to the Eastman Kodak Company. HDTV has been touted as a step closer to true film quality, a next generation camera system, but the best HDTV cameras are cumbersome compared to Betacam. Finally, the future of Betacam may have as much to do with the survival of videotape as with anything else. When Avid and Hitachi announced the joint development of a RAM (random access memory) disk-based portable camera system at the convention of the National Association of Broadcasters (NAB) in 1995 the implications were far from subtle: digital computer storage may revolutionize and render obsolete tape-linked camera technologies to the same extent that nonlinear editors and video servers have altered the practice of video post-production.

BETAMAX CASE

U.S. Legal Decision

Universal City Studios, Inc. et al. v. Sony Corporation of America Inc. et al., commonly known as the Betamax case, was the first concerted legal response of the American film industry to the home video revolution. After nearly a decade of announcements and false starts by one American company or another, Sony, the Japanese electronics manufacturing giant, introduced its Betamax video tape recorder to the U.S. consumer market in early 1976 at an affordable price. In its marketing strategy Sony promoted the machine’s ability to “time shift” programming—that is, to record a television program off the air even while watching another show on a different channel.

The plaintiffs, Universal and Walt Disney Productions on behalf of the Hollywood majors, charged that the ability of the Betamax to copy programming off air was an infringement of copyright and sought to halt the sale of the machines. The studios were ostensibly trying to protect

film and television producers from the economic consequences of unauthorized mass duplication and distribution. However, Universal might have also wanted to prevent Betamax from capturing a significant segment of the fledgling home video market before its parent company, MCA, could introduce its DiscoVision laserdisc system, which was to be scheduled for test marketing in the fall of 1977.

The Betamax case was filed in the U.S. Federal District Court of Los Angeles in November 1976 and went to trial on 30 January 1979. In its defense, Sony asserted that a consumer had the absolute right to record programs at home for private use. It drew an analogy to the audio cassette recorder, which was introduced in the 1960s and had made music tapers out of millions of American teenagers. Although the practice had not been tested in the courts, Sony believed a tradition had been established.

Handing down its decision in October 1979, the U.S. District Court ruled in favor of Sony, stating that taping off air for entertainment or time shifting constituted fair use; that copying an entire program also qualified as fair use; that set manufacturers could profit from the sale of VCRs; and that the plaintiffs did not prove that any of the above practices constituted economic harm to the motion picture industry.

These rulings pertained to the court's interpretation of the fair use doctrine as it pertained to consumers. Addressing the matter of retailing of videocassettes, the court let stand the First Sale Doctrine of the 1976 Copyright Act, which stated that the first purchaser of a copyrighted work (e.g. a motion picture on videocassette) could use it in any way the purchaser saw fit as long as copyright was not violated by illegal duplication, etc. This right extended to the rental of videocassettes purchased from Hollywood studios. Until the arrival of the VCR, film companies had received a portion of the box-office or a fee each time one of their films was shown. As holders of copyright on their pictures, the studios by law were entitled to these forms of remuneration. Since the court's interpretation of the First Sale Doctrine threatened to undermine Hollywood's control over the use of its product, Universal appealed the decision.

Although the U.S. Court of Appeals reversed the lower court's decision in October 1981, the decision, if it were to stand, would have been impossible to enforce. The home video market had been expanded enormously since the start of the case; VCR sales had increased from 30,000 sets a year in 1976 to 1,400,000 a year in 1981. Meanwhile, Sony lost the lead to its Japanese rival Matsushita, which introduced a competing format—VHS (for "video home system")—recorder in 1977. Normally, Sony and Matsushita cross-licensed recording and playback equipment, but for the home video market, the two Japanese companies went their separate ways by marketing systems that were incompatible. (The VHS cassette was larger than the Beta and had a longer recording capability.) VHS overtook Beta as the preferred format for home video and by 1981 more than six Japanese manufacturers had entered the business both in their own names and as suppliers of VHS machines to American firms. Starting out at around

\$1,300, the price of the machine had been dropping steadily, enabling it to become a standard appliance for most middle-class Americans.

The Betamax case went all the way to the Supreme Court, which reversed the appeals court decision on 17 January 1984. By 1986, VCRs had been installed in 50% of American homes and annual videocassettes sales surpassed the theatrical box-office. At first, the major studios believed that the only logical way to market videocassettes was direct sales, reasoning that consumers wanted to buy cassettes and create "libraries" in much the same way as they acquired record albums. But people preferred renting to buying and as the situation stood, retailers and not film producers initially wrung most of the profits from the market. After purchasing a cassette for around \$40 wholesale, a retailer could rent it over and over at a nominal charge. In contrast, the film company's profit would be small, less than a few dollars after materials, duplication, and distribution costs had been covered.

In their struggle with retailers to capture a dominant share of the home video market, the major Hollywood companies formulated a two-tiered pricing policy. For the first six months after a new movie went on sale, it would be priced relatively high on the assumption that the overwhelming majority of transactions would consist of sales to video stores for rental purposes. Then as demand began to ebb, the same movie would be reissued at a much lower price to stimulate home sales. The majors used similar strategies overseas and soon became the principal beneficiaries of the new distribution technology.

BEULAH

U.S. Situation Comedy

Beulah, the first nationally broadcast weekly television series starring an African American in the leading role, ran on ABC from 1950 to 1953. The role had originally been created by white, male actor Marlin Hurt for the *Fibber McGee and Molly* radio program and the character was spun off onto "her" own radio show in 1945. After Hurt's untimely death in 1946, Hattie McDaniel played the role on radio until her death in 1953. Ethel Waters played the

character on television during its first two seasons and Louise Beavers in its third year.

A half-hour situation comedy, the program revolved around the whimsical antics of a middle-aged black domestic, Beulah, the so-called "queen of the kitchen," and the white family for whom she worked—Harry and Alice Henderson and their young son, Donnie. Beulah's boyfriend Bill Jackson ran a fix-it shop, but managed to spend most of his

time hanging around Beulah's kitchen. Beulah's other black companion was Oriole, a feather-brained maid who worked for the white family next door. Storylines tended to involve Beulah coming to the rescue of her employers, by providing a great spread of Southern cuisine to impress Mr. Henderson's business client, teaching the awkward Donnie how to dance jive and impress the girls, or saving the Henderson's stale marriage. Beulah's other major obsession was trying to get Bill to agree to marry her. A regular comedic feature of the show involved Bill hyperbolically proclaiming his devotion to Beulah, while always finding a reason why the two could not wed just yet.

As one of the very few images of African-Americans on prime-time television in this period, the program came in for a certain amount of criticism for perpetuating comic black stereotypes. The show was panned in *The New York Times* and condemned by widely syndicated television critic John Crosby who singled out Ethel Waters for censure. Waters achieved great renown as a vocalist, actress (particularly for her work in the Broadway-production, *A Member of the Wedding*), and as an author with her brutally honest rags-to-riches autobiography. Yet her work in *Beulah* was considered by Crosby—and some critics in the black press—as a betrayal of her other exemplary accomplishments. Actor Bud Harris, who had been contracted to play the role of Bill, quit the series a few months into its run, complaining that the show's writers were forcing him to play the character as an "Uncle Tom" and engage in comic activity he found degrading to his race.

Despite these examples of controversy, *Beulah* never generated the amount of heated debate that *Amos 'n' Andy* provoked. The latter series joined the television airways a year after *Beulah* and became a flashpoint for organized protest. The National Association for the Advancement of Colored People (NAACP), at its June 1951 annual convention, condemned both shows for depicting black people in a derogatory manner which "tends to strengthen the conclusion among uninformed or prejudiced peoples that Negroes and other minorities are inferior, lazy, dumb and dishonest." The organization, however, chose to engage in a consumer boycott only of *Amos 'n' Andy's* sponsor, and not Procter and Gamble, the sponsor of *Beulah*.

Beulah is significant in that it was part of a phenomenon in early entertainment television programming which saw more diversity in ethnic and racial depictions than would be seen again at any time until the late 1960s. The portrayals may have been stereotyped—as they were in other early 1950s ethnic sitcoms such as *The Goldbergs* and *Life with Luigi*—but at least African Americans were visible in prime-time hours. After *Beulah* left the air in September 1953, no programme would star a black woman again until fifteen years later in 1968 when *Julia* appeared.

THE BEVERLY HILLBILLIES

U.S. Situation Comedy

The *Beverly Hillbillies* (1962–71, CBS) was the brain-child of Paul Henning, the cracker-barrel surrealist also responsible for *Petticoat Junction*, *The Real McCoys*, and, notably, *Green Acres*. Certainly the most popular sitcom in television history, and quite possibly the most successful network series ever, it ran more than 200 episodes, clocking in as the top-rated show of its premier season, and remaining in the top ten throughout its nine-year tenure. Individual episodes almost always placed in the Nielsen Top 20 and, on occasion, rivaled the ratings of Super Bowls.

As explained in the opening montage and cadenced theme song, Jed Clampett (Buddy Ebsen) is an Ozarks mountaineer who, through epic fortuity and sheer ineptitude rather than the Protestant work ethic, falls into unfathomable wealth with the discovery of oil beneath his worthless Arcadian scrub oak. When a roving petrochemical concern gets wind, they buy him out for \$25 million, whereupon town sophisticate Cousin Pearl (Bea Benaderet) convinces him fabled Beverly Hills might provide: (a) a suitable beau for his daughter Elly May (Donna Douglas) and (b) career opportunities for his wayward nephew Jethro Bodine (Max Baer, Jr.). Taking their cue from *The Grapes of Wrath* (Steinbeck via John Ford), they load up the truck and move to Beverly—replete with a rocking chair up top to house Granny (Irene Ryan), the family's reluctant matriarch.

Despite his mystification at the newfangled trappings of luxury, and the craven depths to which almost everyone around him sinks, Jed remains a bastion of homespun wisdom—very much the Lincolnesque backroads scholar. Virtually recycling his George Russel character, the sidekick in Disney's *Davy Crockett* series from the mid-1950s, Ebsen eventually carried the Lincoln conceit over into his private life, authoring a stage play in 1966 titled *The Champagne Generation*, in which he starred as the late president. (When Nancy Kulp, the birdwatching Vassar grad Miss Jane Hathaway, ran for a Congressional seat from Pennsylvania in the early 1980s, she only lost when Buddy Ebsen, a lifelong Republican, stepped in to actively campaign against her.)

Despite the silliness of much of its humor, *The Beverly Hillbillies* managed to bolster its credibility among its core audience with a kind of hillbilly authenticity. Bluegrass avatars Lester Flatt and Earl Scruggs were enlisted for the theme song, which quickly became a number-one hit on country-western charts, and they frequently appeared on the show as themselves (long before their music was appropriated for its native exoticism by the film *Bonnie and Clyde*). Cousin Pearl was a textbook recreation of Grand Ol' Opry

mainstay Minnie Pearl, and Roy Clarke was an occasional guest before inheriting the show's constituency with his 20-year stint as host of *Hee Haw*. Even the series name was taken from a bluegrass band of the 1930s. And, of course, the characters of Jethro, Elly Mae, and Granny seemed to borrow more than casually from Li'l Abner, Daisy May, and Mammy Yokum, respectively.

Yet turning up in the fall of 1962 as they did, the paradigmatic arrivistes, the Clampetts seemed to mirror almost perfectly another eccentric clan of uninvited backwoods arrivals, one which was thrust into the national spotlight—decisively and distastefully—with the Kennedy assassination. Suddenly, instead of glamorous Brahmins dictating the national agenda, we had Texas crackers straight off the farm (whose political fortunes could be traced back to Texas Tea of their own). And long before Lyndon Johnson was known for his consummate political savvy and rattlesnake ruthlessness, he entered the popular culture as a national embarrassment, remembered and endlessly ridiculed for turning off the lights in the White House to save electricity, or showing an incredulous nation his gall bladder scar.

By extension, the show became in certain quarters something of a public embarrassment as well, emblematic of the nation's having slipped another notch into pandering anti-intellectualism, a pervasive "bubbling crude" which stained all in its wake. By the time television had caught up with the changing times—the fall of 1971—youth culture and its built-in consumer demographic looked far more appealing to advertisers on the professional rut, and *The Beverly Hillbillies*, while still vastly successful, was caught in the same network purge which claimed Jackie Gleason, Red Skelton, and rural mainstays such as *Mayberry RFD* and Henning's own *Green Acres*. This is the same changing of the guard which ushered in *The Mary Tyler Moore Show*, *All in the Family*, *M*A*S*H*, and, ostensibly, social realism and the death of the 1960s. A Made-for-Television movie appeared on CBS in 1981, without Baer, and the series was later remade as a feature film in 1993 by the makers of *Wayne's World*, but neither did justice to the original.

BEVERLY HILLS 90210

U.S. Serial Drama

Despite a slow start in its inaugural season on FOX in fall, 1990, *Beverly Hills 90210* quickly became an important fixture on the network and in the popular discourse of adolescents and young adults. In that first season the show's main characters (Dylan, Kelly, Donna, Steve, David, Andrea and twins Brandon and Brenda) all attended West Beverly Hills High School (zip code 90210). Brandon and Brenda Walsh and their parents, transplants from Minneapolis, were the stable nuclear family with strong values; their home was a safe haven for the whole gang and the center of much of the drama. By its third season the show's popularity had soared, and in 1993 it became available in syndication both in the United States and internationally. In 1996 the show's ratings were still high, the teens had graduated from high school, and some were attending California University. A number of the original characters had literally graduated from the show by then, and new characters introduced. But despite those changes, *Beverly Hills 90210* continually attracted a loyal viewership.

Produced by Aaron Spelling, who has seemed to have his finger on the pulse of popular television taste since the 1960s, *Beverly Hills 90210*, was the first in a string of

programs on Fox geared toward adolescent and young adult audiences who were attracted to glamour and attention to certain issues. For both reasons, *90210's* popularity catapulted. Not long after the first season, cast members were interviewed regularly on other television programs and in such magazines as *TV Guide*, *Seventeen*, *Rolling Stone*, and *Ladies' Home Journal*. Soon, *Beverly Hills 90210* dolls, books and fan clubs were everywhere. The show set clothing and hairstyle trends for both male and female youth. Young women regularly sent letters to the character Brenda Walsh, asking her advice on their dating and other personal problems. Because the show dealt with topics of concern to adolescents in a way unlike any other teen drama to date, it was soon taken seriously by parents, educators and scholars as well. Some of the issues dealt with on the program included learning disabilities, prejudice, divorce, date rape, sexuality, alcoholism and drug use. One of the main characters, Dylan, had recurring drug and alcohol problems; another, Kelly, had a drug and alcohol abusing mother in recovery. Donna learned to overcome a learning disability, and several others struggled through parental divorce and remarriage. Many of the show's main characters were sexu-

ally active, and issues concerning safe sex and contraception were openly discussed on the program. Because it dealt with these realistic issues, the show was attractive to youth.

But not everyone considered it realistic. Some criticisms aimed at the show centered on unreal or stereotypical representations. The cast and the setting of the show were almost completely white, upper income. Non-whites appeared almost exclusively in episodes dealing with prejudice or difference. They were also almost always lower income, from a zip code outside Beverly Hills. Of the main characters, Andrea was the only Jewish female. She was portrayed as the brainy, less attractive female compared to Kelly, Donna and Brenda, who were sexier and less intellectual. Most viewers could not identify with the high income, WASP background of the Beverly Hills teens. Yet in spite of criticisms and differences, *Beverly Hills 90210* retained a diverse youth audience.

Hoping to capitalize on the early success of *90210* other Fox-Spelling collaborations followed. The first, *The Heights*, which was less glamorous but featured the same age group, did not last. Neither did the later *Models, Inc.*, set in the fashion industry. *Melrose Place*, however, did become a hit. That program, also set in southern California, featured a cast in their twenties, working on careers and later life issues like marriage and divorce. *Melrose Place* differed from *Beverly Hills 90210* in that it was far less sincere or moralistic in treating issues. *Melrose Place* relationships and plots were more sensationalized in a manner reminiscent of early 1980s prime time serials, *Dynasty* and *Dallas*. In early 1996 Aaron Spelling introduced another crowd of rich adolescents in the program *Malibu Shores*.

The rise of *Beverly Hills 90210* and its ilk coincided with changes in the broadcast network television in an era of increased competition from cable television. Network program narrowcasting to the youth market represented an attempt to remain competitive with other television distribution outlets. It also signaled a renewed effort to take seriously issues of importance to young people, a large and lucrative niche market.

BEWITCHED

U.S. Situation Comedy

Bewitched, a fantasy situation comedy featuring the suburban life of a witch housewife married to a mortal, aired on ABC from 1964 to 1972. In its first season, it was the highest rated of all the new series and for its first five seasons, the program found itself consistently in Neilsen's Top Twelve. By 1968, its re-runs had sold to ABC for nine million dollars.

Set in Westport, Connecticut, *Bewitched* chronicles the difficulties Samantha (Elizabeth Montgomery) has negotiating her supernatural powers and her role as the suburban housewife of advertising executive Darrin Stevens (Dick York, replaced by Dick Sargent after the fifth season). Other major characters include Samantha's mother, Endora (Agnes Moorehead), who enjoys employing meddling witchcraft to complicate her daughter's marriage, a suspicious neighbor named Gladys Kravitz (Alice Pearce, later replaced by Sandra Gould) and Darrin's neurotic boss Larry Tate (David White). Sporadically, Elizabeth Montgomery would appear as her cousin, Serena, embodied as a teeny-bopper, counter-culture type, with a knack for free-spirited and manipulative sorcery. Eventually, Samantha and Darrin have a daughter, Tabitha, and a son, Adam, both of whom display witchly powers. (In 1977, ABC attempted a spin-off called *Tabitha*, where the now grown witch [Lisa Hartman] works as assistant producer for a California news program—with Robert Urich as the anchorman. The spin-off failed before season's end.)

Bewitched's formula typically involves a disruption created by either Samantha or Darrin's family, or Darrin's boss Larry. Samantha's responsibility to keep up the family harmony comes into conflict with her vow not to exercise witchcraft. Usually the resolution does come about with witchcraft, but Samantha's role as a "good" wife undergoes re-inscription because she performed her spells for the sake of her family (Morey, 1993).

Samantha generally exercises her witchcraft by twitching her nose and mouth (known at the time of the show as the "witch twitch") or casting verbal spells. Either method may result in making objects and people disappear or appear, granting unearthly powers to herself or others, or turning herself or others into various kinds of animals. She constantly subordinates her supernatural powers at the request of her husband—he is particularly adamant that she not cheat her domestic duties. Samantha could easily have the entire house cleaned and dinner on the table with a single "witch twitch" but, for Darrin's sake, she chooses to perform the labor of housework herself.

At the same time, Samantha takes a keen interest in Darrin's job and gets him out of many a campaign jam with her "imagination" and "intuition"—sometimes attributed to her witchcraft, sometimes not. She often saves Darrin's job by producing sales concepts on the spot for his clients or sometimes even going to the extent of turning his clients into animals to prove a point or buy him time. Her mastery in this area includes shoring up Darrin's ego and making him feel that it was *his* ideas that saved the day. In this way, *Bewitched* brings forward a host of questions pressing mid-1960s middle class culture such as anxieties about women's place in the public and private spheres and general mistrust between the sexes: What is the appropriate woman's role? How should a woman exercise her own agency to the best of her abilities? What do we do with female power since it has been relegated to a place outside of culture for so long? Toward the end of the run of *Bewitched*, Samantha often travels to far away places and times or interacts with historical figures, somewhat displacing the centrality of the home and middle-class suburban life.

Notably, Elizabeth Montgomery's real-life husband was William Asher, the director of the series (who also

Bewitched

directed *I Love Lucy*, *Danny Thomas*, and *Patty Duke*). Asher and Montgomery owned a percentage of profits of *Bewitched* as well as a percentage of the merchandising rights which involved the conception of a Samantha doll, jewelry, cosmetics, and a flavor of *Bewitched* ice cream. The couple's first child was born three weeks before the production of the first episode, leading much of the popular press at the time to refer to the initiation of the show as a birthing process.

That series premier remains one of the series' most memorable episodes in many ways. When Samantha reveals to Darrin that she is a witch, he seeks the advice of others (best friend, doctor, bartender), each of whom refuses to take him seriously. So he returns home, resolving, "So my wife's a witch. Every married man has to make some adjustments." His conclusion rings true, and continues to define much of the series—marriage may not be what it appears on the

surface and the commitment to marriage and family, certainly in late 20th-century America, means confronting male fears about women's sexuality and otherness, women's power, and the changing social and cultural significance of domestic institutions.

BILLY GRAHAM CRUSADES

U.S. Religious Program

Billy Graham is often at pains to distinguish himself from the band of preachers known as “televangelists,” and his programs have typically been formulaic in the extreme. Still, no evangelist has used television as efficiently, effectively, and, ultimately, as creatively as has Billy Graham.

The legendary preacher’s initial experiment with television occurred in 1951, when he attempted to take his phenomenally successful radio program, *The Hour of Decision*, to the new medium. Some programs featured filmed segments from live crusades, where Graham was at his best, but most were studio productions that showed him in a study or living-room setting. They often included obviously rehearsed interviews and did not allow him to preach with the kind of intensity and effectiveness he could manifest before a large crowd. The program ran for nearly three years on the fledgling ABC network, but neither Graham nor his associates have ever regarded it as a particularly memorable effort. Years later, he told an interviewer, “They are interesting films, but I can’t find anyone who ever saw one! Prime time on Sunday nights on network TV, and no one remembers.”

Graham’s next attempt to fulfill the Great Commission via the cathode ray tube came in 1957, during his summer-long crusade in Madison Square Garden. At ABC’s invitation, and with J. Howard Pew’s financial guarantees, Graham began airing his Saturday-night services live from the Garden. The first broadcast, on 1 June, posted an 8.1 Trendex rating, which translated into approximately 6.4 million viewers, more than enough to convince the evangelist of television’s great promise as a vehicle for the gospel. A Gallup poll taken that summer revealed that 85 % of Ameri-

cans could correctly identify Billy Graham, and three-quarters of that number regarded him positively. In an

Billy Graham

Photo courtesy of the Billy Graham Evangelistic Association

innocent masterpiece of understatement, *Christian Life* magazine cautiously observed, "Undoubtedly, this fact will affect Graham's ministry."

Those first telecasts were quite simple. Cliff Barrows led a huge chorus in familiar hymns. George Beverly Shea sang "How Great Thou Art," a celebrity or two gave a testimony of the power of Christ in his or her life, Billy Graham preached, and hundreds of people streamed toward him when he offered the invitation at the conclusion of his sermon. Remarkably, Graham has stuck to that same prosaic formula for nearly forty years. To be sure, production values have improved dramatically, viewers are sometimes treated to a brief tour of the host city, Graham has adjusted his speaking style and bodily movements to the smaller screen, and the programs are aired weeks after the crusades end rather than live, but the basic elements remain the same.

One key to Graham's success in using television was an early decision not to attempt a weekly Sunday-morning program. As years of Nielsen and Arbitron ratings have demonstrated, the audiences for his programs, usually aired in prime time in groups of three on a quarterly basis, are far larger than those for the syndicated Sunday programs of other religious broadcasters. This larger audience also appears to contain far more unchurched people than do the Sunday shows. No less important, twelve programs a year, filmed while he is doing what he would be doing anyway, cost less than a weekly studio program, minimize the risk of overexposure, and cause far less drain on the evangelist's time and energy. In recent years, the production team has filmed all services in a crusade, then blended the best segments into three composite programs.

In addition to reaching for a mass audience with an edited product, Graham has long used the medium to carry crusade services live to audiences in locations far from the central arena. In 1954, during a twelve-week effort that packed London's Harringay Arena, the sound from the crusade was carried to various sites by landline relay. Twelve years later, during his 1966 visit to London, Graham used Eidophor projection equipment to supply a television feed to beam his message into auditoriums and stadiums in British cities where the ground had been prepared as if he were going to be present for a full-scale live crusade. A similar effort, also in London, followed in 1967. In 1970, he used an ambitious and innovative television relay system to transmit a crusade in Dortmund, Germany, to theaters, arenas, and stadiums throughout Western Europe and into Yugoslavia—"unscrambling Babel," as one aide put it—to reach speakers of eight different languages in ten nations.

In recent years, many of Graham's crusades, especially those outside the United States, have used satellite technology to elaborate on this means of multiplying the effectiveness of his crusades. Interestingly, the number of "inquirers" responding to Graham's invitation almost always match or exceed those registered at the central site. Encouraged by such results, the Billy Graham Evangelistic Association launched an ambitious effort to reach virtually the entire world in a series of transmissions. In 1989, Graham preached from London to more than 800,000

people gathered at 247 "live-link" centers throughout the United Kingdom and the Republic of Ireland, and to an astonishing 16,000 sites in 13 nations of Africa. In most cases, the down-link was effected by means of low-cost portable satellite dishes. Another 20 African nations received the program by videotape a week or two later, usually after translation into one of nine different languages. The aggregate attendance at the African sites exceeded 8 million. In 1990, similar technology was used to beam Graham's sermons from Hong Kong to an estimated 100 million souls assembled at 70,000 locations in 26 countries of Asia. In 1991, a Buenos Aires satellite mission reached 5 million people at 850 locations in 20 countries.

The climax to these efforts and, in all probability, to Billy Graham's 50-year ministry, came in March 1995, when the 76-year-old evangelist's distinctive voice and familiar message soared upward from his pulpit in Puerto Rico to a network of 30 satellites that bounced it back to receiving dishes in more than 165 countries. Plausible estimates indicate that, when network television telecasts and delayed videotape presentations were included, as many as one billion people heard at least one of Graham's sermons during this campaign, aptly titled "Global Mission." Graham sees no contradiction between "the old, old story" and the newest means to transmit it. "It is time," he observed, "for the church to use the technology to make a statement that in the midst of chaos, emptiness and despair, there is hope in the person of Jesus Christ."

BLACK AND WHITE IN COLOUR

British Documentary

In 1992, BBC Television broadcast a season of programmes celebrating the contribution which black and Asian people have made to British television. Prior to the five consecutive evenings' special screenings, BBC2 broadcast *Black and White in Colour* (26 June/3 July 1992), a two-part documentary tracing black participation in British television. The programmes resulted, in part, from the BFI (British Film Institute) Race and Ethnicity Project. This began in 1985 and aimed, through archival research, to examine black people's involvement in British television, both on and off the screen. The research emerged at a time when the debate about race and cultural representation was at its peak, and when there was increasing criticism of images of blackness on British television.

Black and White in Colour is a British Film Institute production, directed by the black British filmmaker, Isaac Julien. It examines both the socio-political context and on-screen developments and in so doing, effectively traces the shifts and contours of black British television history. The documentary, which uses rare archive footage, is narrated by Professor Stuart Hall and includes interviews with actors, actresses, cultural critics, directors and other key players in the making of black British television history.

The first part of *Black and White in Colour* begins by noting black American performers' contribution to British variety in the 1930s and 1940s. American entertainers such as Adelaide Hall, Buck and Bubbles and Elisabeth Welch were some of the first images on TV that British people saw of black people. Compared to other genres, light entertainment was significantly advanced in celebrating black performers such as Harry Belafonte and Shirley Bassey. *Black and White in Colour* goes on to discuss how the image of black person as social problem was developed in the post-war years, particularly in news and documentary programming. The late 1950s saw the emergence of some innovative drama which focused on race and the black British experience, for example, John Elliot's *A Man from the Sun* (1956) and John Hopkin's *Fable* (1965). What *Black and White in Colour* highlights is that in most pre-1970s programming black people were quite clearly spoken about and referred to rather than directly addressed.

The second part of *Black and White in Colour* concentrates on black representation on British television from 1962 to 1992. It begins by describing how Enoch Powell and his 1968 "rivers of blood" speech influenced perceptions of black British people. The most popular programme on British television at this time was Johnny Speight's sitcom *Till Death Us Do Part*, which, although it rarely featured black characters, gave space to the blatantly racist views of Alf Garnett (often described as

Powell's alter-ego). *Black and White in Colour* points out that, generally speaking, the first part of the 1970s was an uncreative time in terms of images of blackness. A number of situation comedies during the 1970s, such as *Love Thy Neighbour*, *Mind Your Language* and *Mixed Blessings*, claimed that they were diffusing racial tension by laughing at racism, but in fact developed their own set of racist stereotypes. During the same period, the first programmes which featured predominantly black casts began to emerge. *Empire Road* (1978–79) was the first black soap opera to be made for British television screens. *Black and White in Colour* also examines off-screen developments at this time, when many black artists were beginning to complain and campaign for better roles on television. For example, the Equity's Coloured Artists Committee was established in 1974. In 1979, the Campaign Against Racism in the Media critically assessed television's representation of race in *It Ain't Half Racist Mum*.

Black and White in Colour examines the impact of Channel 4 and the black British independent film movement on black cultural representation during the 1980s. Black programming was built into the structure of Channel 4, which began in 1982. Subsequently, black audiences were offered their own magazine programmes such as *Eastern Eye* and *Black on Black* and comedies such as *No Problem!*, *Tandoori Nights* and *Desmonds*. The specifically black programmes of the 1980s, triggered off a number of debates about black audiences, race and television.

Although *Black and White in Colour* traces a history which reveals an improvement in images of blackness on British television since 1936, the analysis makes it clear that representations of black people are far from perfect and that many of the early patterns are still apparent. In that sense, the two-part documentary is more a retrospective than a celebration. Most importantly perhaps, *Black and White in Colour* manages to illustrate how much black artists and practitioners have had to struggle to gain access to the British television institution.

THE BLACK AND WHITE MINSTREL SHOW

British Music/Variety/Minstrel Show

One hundred years after the “Nigger Minstrel” entertainment tradition had begun in London’s music-halls, the convention was revived on television in the form of *The Black and White Minstrel Show*. This variety series was first screened on BBC Television on 14 June 1958 and it was to stay on air for the next two decades. *The Black and White Minstrel Show* evolved from the “Swanee River” type minstrel radio shows. One year before it was first broadcast on television, George Inns produced the *1957 Television Minstrels* (BBC TV 2, September 1957) as part of the National Radio Show in London.

The occasional television specials soon developed into a regular series with a forty-five minute non-stop format of Mississippi tunes and Country and Western songs. The series was devised and produced by Inns and featured music conducted by George Mitchell and the Television Toppers

Dance Troupe. The series showcased the Mitchell Minstrels as well as solo performances from entertainers such as Tony Mercer, John Boulter and Dai Francis. During the early years, various comedians such as Lesley Crowther, Stan Stennett and George Chisholm acted as “fillers” between the slick song and dance routines.

The Black and White Minstrel Show won the 1961 Golden Rose of Montreux. The variety series could almost always guarantee an audience of at least 16 million, but frequently managed to top 18 million viewers. At a time when the variety show was a popular television genre for the whole family, *The Black and White Minstrel Show* established itself as one of the world’s greatest musical programmes on television. The music from the show broke sales records and the stage show was equally popular. Robert Luff’s production opened at the Victoria Palace

The Black and White Minstrel Show
Photo courtesy of the British Film Institute

Theatre in 1969 and established itself in *The Guinness Book of Records* as the stage show seen by the largest number of people. At this time, the creation had gained considerable international respect and kudos. *The Black and White Minstrel Show*'s success was marked by its regular Saturday night transmissions over a vast period. The programme managed to maintain its freshness, its manic pace and its nostalgic premise on a weekly basis.

What accounts for such immense popularity? Part of the explanation was undoubtedly the pleasure many got from the programme, with its meticulously choreographed dance routines and popular songs and melodies. George Inns combined white dancers with black-faced singers and this was believed to be visually striking, particularly when colour television was introduced in 1967. *The Black and White Minstrel Show* harked back to a specific period and location—the Deep South where coy white women could be seen being wooed by docile, smiling black slaves. The black men were, in fact, white artists “Blacked-up.” The racist implications of the premise of the programme were yet to be widely acknowledged or publicly discussed. But it was this which largely led to the programme’s eventual demise.

Many felt that a large part of “minstrel humour” was based on caricaturing black people and depicting them as being both stupid and credulous. This image was felt to be insensitive and inappropriate in an increasingly multi-racial and multi-cultural Britain. *The Black and White Minstrel Show* is important in the context of British television because it outlines how racist representations became part of public debate and how performance was linked to social context. The programme revealed a tension between the television

controllers, critics and audience. Many were angry at the fact that during this time there were very few other representations of black people on British television. On 18 May 1967, the Campaign Against Racial Discrimination delivered a petition to the BBC signed by both black and white people, which requested that the programme be taken off television. Despite the controversy, the programme continued until 1 July 1978. Ultimately, its removal from the air coincided with the demise of the popularity of the variety genre on British television.

BLACK ENTERTAINMENT TELEVISION

U.S. Cable Network

Black Entertainment Television (BET) is the first and only television network in the United States primarily devoted to the attraction of African American viewers. Launched with a paltry \$15,000 investment in 1980, the black-owned, basic-cable franchise had grown into a diversified, \$61 million media enterprise by late 1993. Despite this rather phenomenal growth, however, BET’s audience reach continues to be overshadowed by larger cable industry players (e.g., Turner Broadcasting Systems [TBS], Home Box Office [HBO], and ESPN).

Based in majority-black Washington, D.C., BET has added about 2 million subscriber homes per year since 1984, reaching more than 40 million cable households in 2500 markets by 1995. Moreover, the network has more than tripled revenues since 1985; it reported profits for the first time in 1986, when it finally hit A.C. Nielsen ratings charts and attracted major advertisers. In 1991, BET Holdings, Inc.—BET’s parent company—became the first black-

owned company to be traded on the New York Stock Exchange.

From the very beginning, the heart and soul of BET programming was the music video. Predating MTV by a year, BET has offered as much as eighteen hours of music

Courtesy of BET

videos a day, prompting many to perceive the 24-hour network as essentially a black-oriented music video service. Thus while MTV was being criticized in 1983 for excluding black artists from its playlist (Tina Turner and the interracial group English Beat excepted), many viewers were tuning into BET for such offerings. Indeed, the network's flagship program, *VideoSoul*, has become a household word in many black communities.

But as BET grew, the network began to diversify its program offerings and image. By its tenth anniversary in 1990, the network had initiated several original programs/projects, including: *For the Record*, featuring members of the Congressional Black Caucus; *Teen Summit*, a Saturday noon show for youth; *Black Agenda 2000*, a series of forums on issues of interest to the black community; *Conversation with Ed Gordon*, an interview program with contemporary newsmakers; *Inside Studio A*, concerts and interviews taped before a live audience; *Personal Diary*, one-on-one interviews with prominent blacks; *On Stage*, plays written and performed by blacks; and *Our Voices*, a daily talk show.

More recent BET program schedules have included: *ComicView*, a stand-up comedy review; *Screen Scene*, a black-oriented entertainment journal; *Jazz Central*, a jazz music program; and *Rap City*, a rap video program. From time to time, BET also airs sporting events featuring teams from historically black colleges and universities, and rounds out its schedule with reruns of popular black-oriented shows such as *Sanford and Son*, *What's Happening*, *Frank's Place* and *Roc*. News and public affairs programs tend to be relegated to the weekends.

BET was the brainchild of Robert L. Johnson, who developed the idea for the network in 1979 while serving as vice president for governmental relations at the National Cable Television Association. Johnson, an African American, noted in 1989 that BET "should be for black media what Disney is to the general media or what Motown was to music." Industry observers have applauded Johnson's efficient management style and his aggressive plans to expand the company's product base and consumers. Johnson currently owns 52 percent of BET, while HBO, Tele-Communications Inc., and Great American Broadcasting each own 16 percent.

Echoing others who point to unique obstacles in the path of black business, Johnson argued in 1989 that industry racism had stunted BET's growth. In particular, he noted that many cable operators have been slow to carry BET (e.g., BET was carried on only 1,825 of the nation's 7,500 systems in 1989), and that BET has been saddled with some of the lowest subscriber fees in the industry (e.g., BET earned only about five cents per subscriber in 1989, while other cable services typically earned between fifteen to twenty cents per subscriber). Some analysts

agreed with Johnson's charges of industry racism, but noted that many of BET's problems were due to the network's lack of resources and Johnson's corresponding inability to adequately market it.

Nonetheless, BET has become much more than just a basic-cable network since its humble beginnings. By 1995, BET Holdings owned and operated a broad array of black-oriented media products, including: Black Entertainment Television, the basic-cable network; *YSB (Young Sisters and Brothers)*, a magazine targeted at black youths; *Emerge*, a magazine offering analysis and commentary on contemporary issues facing black America; Action Pay-Per-View, a national, satellite-delivered, pay-per-view movie channel based in Santa Monica, California; BET International, a provider of BET programming throughout Africa and other foreign markets; Identity Television, a London-based cable service targeting Afro-Caribbean viewers; BET Productions, a subsidiary providing technical and production services to outside companies; BET Radio Network, a radio service providing news and entertainment packages to affiliated stations across the U.S.; and BET Pictures, a joint venture with Blockbuster Entertainment Corporation to produce and distribute black, family-oriented films.

BLACKLISTING

Blacklisting is the practice of refusing to hire or terminating from employment an individual whose opinions or associations are deemed politically inconvenient or commercially troublesome. In the U.S. tradition, the term is forever linked to the fervent anti-communism of the Cold War era, a time when government agencies, private newsletters, and patriotic organizations branded selected members of the entertainment industry as (variously) card-carrying communists, fellow travelers, pinkos, or unwitting dupes of Moscow. The rubric "McCarthyism" is often used as shorthand for the reckless accusations and limitations on free expression during the Cold War, but from a media perspective the term is something of a misnomer. The period of the blacklist pre-dated and post-dated the junior senator from Wisconsin's reign and McCarthy himself evinced little interest in the entertainment industry: his targets of choice were the Department of State and the U.S. Army. The blacklisting of directors, writers, and performers in film, radio, and television was the project of a much wider coalition of anti-communist forces, a web of interlocking agents that included government investigators (the FBI), legislative committees (the House Committee on Un-American Activities and the Senate Internal Security Subcommittee), private interest groups (American Business Consultants, AWARE, Inc.) and patriotic organizations (the American Legion, the Veterans of Foreign Wars). They applied pressure on, and worked in concert with, fearful and compliant studio heads, network executives, sponsors, and advertising agencies to curtail the employment opportunities and civil rights of targeted undesirables.

The convergence of two cultural historical factors abetted the blacklist. One of the legacies of World War II was a heightened sensitivity to the political impact of the popular media; one of the coincidences of history was that television's early days paralleled precisely the escalating intensity of the Cold War in the years from 1946 to 1954. The contest between East and West, Soviet Communism and American Democracy, found its domestic expression in impassioned debates over the subversive influence of the mass media. In June 1950, the atmosphere reached fever pitch with the arrest of the atomic spies Julius and Ethel Rosenberg and the outbreak of the Korean War. That same month the editors of *Counterattack*, a four page "newsletter of facts on communism," issued a special report entitled *Red Channels, The Report of Communist Influence in Radio and Television*, a listing of 151 names of performers deemed to be communist party members or to have like-minded opinions and associations (called "fellow travelers" in the argot of the day). The *Red Channels* report formalized an informal practice in effect since at least November 1947 when representatives from the major Hollywood studios pledged they would "not knowingly employ a communist" and "take positive action" on "disloyal elements." Though the scholarship of *Red Channels* was slipshod—the actors listed

ranged from unapologetic Communist Party members, to mainstream liberals, to bewildered innocents—its impact was immediate and long-lasting. CBS instituted in-house loyalty oaths; the advertising firm of Batten, Barton, Durstine, and Osborn recruited executives to serve as security officers. A study on blacklisting in the entertainment industry published by the Fund for the Republic in 1956 concluded that *Red Channels* put in black and white what was previously an *ad hoc* practice and thus "marked the formal beginning of blacklisting in the radio-TV industry."

As an emergent medium subject to government oversight by the Federal Communications Commission, television was the most timorous of the mass media when confronted by state power. The scrutiny of legislative bodies concentrated the minds of network executives powerfully, notably the hearings held by the House Committee on Un-American Activities in November 1947 and throughout 1951 and 1952 and a kindred set of hearings on the "Subversive Influence of Radio, Television, and the Entertain-

Cover of *Red Channels*

ment Industry” held by Senator McCarran’s Internal Investigatory Subcommittee in 1951. Moreover, as an advertiser supported medium still in embryonic development, television was especially susceptible to protests from special interest groups threatening product boycotts, pickets, or public censure. Casting the widest commercial net possible, the networks aimed for “100% acceptability” and assiduously avoided alienating any group of potential viewers.

Though the effect of the blacklist was punitive, its rationale was preemptive. From the perspective of the networks, its purpose was less to rid the medium of subversive content than to avoid the controversy that ensued upon the appearance of a suspect individual. Rather than canceling the appearance of announced performers or firing known talent, the blacklist tended to operate off-camera, behind the scenes, by deleting or clearing talent in advance. Though the list in *Red Channels* was the founding document, other lists and publications (not to say rumors and innuendo) might also render an individual politically radioactive in the eyes of any one of the networks, sponsors, or advertising agencies.

For talent tainted with the communist brush, the path to vindication was tortuous. Once accused, actors might suffer in silence, defy the accusations, or engage in rituals of public recantation or denial (“clearance”) either before Congress, in the public press, or at the offices of *Counter-attack* itself. Given the difficulty of proving a negative, the total number of people burned by the blacklist—careers permanently derailed, jobs lost, or energies squandered—is difficult to gauge, but hundreds were listed and investigated and thousands were singled by paranoia. Even allowing for the vagaries of memory and self-romanticization, the blacklist traumatized a generation of artists in the entertainment industry. One particularly tragic case may stand for many. Listed in *Red Channels*, Philip Loeb, who played the warm Jewish patriarch in *Molly* on radio and in the show’s first television season in 1950–51, was replaced in the show’s second season after General Foods withdrew its sponsorship. An embittered and unemployed Loeb committed suicide in 1955.

BLEASDALE, ALAN

British Writer

Alan Bleasdale is one of the most successful and influential writers working in British television today. Drawing on the traditions of realist television drama, he has created powerful but darkly comic television plays and mini-series set in the depressed cities of the north of England.

Bleasdale’s first success as a writer came with the development of the character of Scully, a Liverpool youth whose anarchic adventures challenge the authority of those responsible for the impoverished society in which he lives. A series of stories about Scully was broadcast on BBC Radio

In the wake of the TV-inspired downfall of McCarthy in 1954, some of the pressure to purge alleged subversive from the airwaves lifted, but the blacklist—both as a formal, institutionalized procedure and as an informal gentleman’s agreement—endured well into the next decade. The motion picture industry began gingerly defying the blacklist in the late 1950s and by 1960 was giving screen credit to once-blacklisted writers. By contrast, television, ever cautious, kept well back in the ranks of defiance. Not until the fall of 1967, on *The Smothers Brothers Comedy Hour*, was blacklisted folk singer Pete Seeger finally “cleared” for a return to network television.

Merseyside in 1971 while Bleasdale was still earning his living as a teacher. From 1974 to 1979 Bleasdale presented the *Franny Scully Show* on Radio City Liverpool, while the character also appeared in a touring theater show, a television play called *Scully’s New Year’s Eve* broadcast by the BBC in 1978, and two novels which became the basis of a Granada television series in 1984.

The ability to create characters who capture the popular imagination was also apparent in *Boys from the Blackstuff*, the series which firmly established Bleasdale as a key

figure in British television in the 1980s. This project had its roots in a single play called *The Black Stuff*, broadcast by the BBC in 1980, dealing with the disastrous money-making efforts of a gang of road workers from Liverpool. With the support of producer Michael Wearing, Bleasdale was able to create a five-part series dealing with the effects of unemployment on the “boys” and their families after their return to Liverpool.

Boys from the Blackstuff was first shown in a late-night time-slot on BBC2 in 1982 but proved so popular that it was quickly repeated in prime-time on BBC1 in January 1983. Each episode centered on a different character, but their paths frequently crossed and the action built toward the final episode in which they all came together at the funeral of an old worker whose socialist ideals no longer inspire the men of Margaret Thatcher’s Britain. The impact of the series grew out of its commitment to showing the experience of unemployment from the point-of-view of the unemployed. It drew on the conventions of northern working-class realism prevalent in British cinema and television since the 1960s but also included elements of black comedy, derived from Liverpool’s traditional “scouse” humor, and grotesque nightmare images that expressed the psychological pressures of unemployment. This mixture of elements created an unsettling effect but, despite its bleak vision, *Boys from the Blackstuff* promoted a sense of solidarity in viewers who faced similar problems. Catchphrases from the series were incorporated into chants by the supporters of the Liverpool soccer team.

Bleasdale has continued to write for television, as well as for film and theater, but the closest he has come to repeating the success of *Boys from the Blackstuff* has been with *GBH*, a seven-part serial broadcast on Channel 4 in 1991. Dealing with the takeover of a northern English city by a fascist organization, *GBH* was related to earlier serials, such as Troy Kennedy Martin’s *Edge of Darkness* (1985) and Alan Plater’s *A Very British Coup* (1988), which blended science-fiction and political thriller to address growing fears that the British democratic system was threatened with collapse. Bleasdale’s political message was more explicitly stated here than in *Boys from the Blackstuff*, but the fiction was once again enriched by grotesque comedy, largely associated with the casting of Michael Palin, a member of the Monty Python troupe, as an unassuming school teacher who inadvertently becomes a symbol of resistance to the new order.

In 1994 Bleasdale took on a new role as producer of series on Channel 4 called *Alan Bleasdale Presents*, using the influence made possible by the popular success of his work to give young writers a chance to demonstrate their talents. While the dramas presented in this series have adopted a variety of approaches, they owe much to Bleasdale’s own achievement, grounded in the tradition of “naturalism” in British television drama but creating compelling fictions by gradually introducing disruptive elements drawn from popular genres.

BLUE PETER**British Children's Programme**

Blue Peter is one of British television's longest running programmes, regularly reaching 5 to 6 million children and teenagers. It takes its name from the blue and white flag hoisted by a ship leaving port on a voyage. The originator of the programme wanted this to suggest the voyage of discovery that it would provide for its young viewers. The programming has a magazine format that involves a combination of studio presentation, interview, and demonstration with additional film report items. It is transmitted live from the BBC's Television Centre after hectic rehearsal. The programme was launched with its catchy "Barnacle Bill" signature tune in 1958 as a fifteen-minute slot, involving two presenters, described by Barnes and Baxter as "Chris Trace playing with trains and Lelia Williams playing with dolls." It became a twice-weekly, 30-minute programme in 1963. A third presenter was later introduced and its Monday/Thursday slots were changed to thrice-weekly transmission (Monday/Wednesday/Friday) in 1965. *Blue Peter* runs for a 40-week season from autumn to

early summer with a ten-week break in which special overseas items are filmed. The programme is broadcast between 17:05 and 17:35 hours, a bridging slot taking teenagers into an Australian soap opera and into "adult" early evening news. It has won over twenty major television awards, including from BAFTA, the Sun Television, and the National Viewers and Listeners Association for excellence in children's programming.

It is successful as a programme because it has remained true to the basic format of its original creator, John Hunter Blair, but has accommodated itself to the social change that has taken place over two generations of television viewing. Editorial continuity was achieved by the singular influence of long-standing editor Bidy Baxter, who worked on *Blue Peter* between 1962 and 1988. Baxter was a liberal, inventive, but demanding leader of the programme team with a very shrewd sense of how the developing medium could best be harnessed for a young audience. In the best tradition of British public service broadcasting, *Blue Peter* aims to in-

form, educate, and stimulate its target viewers with entertaining content and it remains one TV programme that parents encourage their children to watch. In the 1960s many of the programme's innovations were quickly imitated by rivals or adapted in later programmes such as ITV's *Magpie*, aired from 1968 to 1980. In 1965, for instance, *Blue Peter* introduced a puppy to the programme and then asked its viewers to send in suggestions for its name. Petra became the nation's first TV pet. Phenomenally popular, other pets, including cats and tortoises, were added to the programme so that respect for animals and pet care tips could be passed on. The programme actively encouraged the participation of its viewers by instituting a *Blue Peter* badge scheme (awarded for appearances on the programme or special achievements), regular competitions and an annual Christmas Appeal to raise money for charity. The studio items very often involve presenters trying new hobbies, cooking, making home-made toys from household rubbish (washing-up liquid bottles, wire coat-hangers, and "sticky-backed plastic" being favoured materials), or bringing talented youngsters into the studio to make their achievements more widely known. The overall ethos of the programme encourages children by the example of the adult presenters to "have a go", to try something new and be inquisitive about the world around them. *Blue Peter* presenters with strong personalities involved in unforgettable exploits have impressed themselves on the popular memory of television viewers. The phrases of their scripted cookery demonstrations ("here's one I made earlier") and idiosyncratic expressions ("get down, Shep!") have become clichés and are parodied in pop songs. The show remains "live," which means that unplanned incidents occur, much to the delight of the viewers. One such moment has gone down in British television lore. It involved a baby elephant ("Lulu") departing from the script by defecating in the studio and running amok with its elderly zoo keeper as the transmission came to a close.

Today's presenters follow in a long line of enthusiastic personalities who have played no small part in shaping the views of generations of viewers. Critics of the programme suggest that *Blue Peter*'s format, content and presentation epitomise a "safe" agenda of middle-class attitudes, that it is patronising towards young people, replicating a dominant ideology. The programme's own audience research would suggest that on the whole its target audience do not feel patronised. Given the centrality of *Blue Peter* to its scheduling area, it is not surprising that it tends to reflect the values and aspirations of the institution from which it originates. It is more accurate to see *Blue Peter* as a barometer of social values and cultural change in Britain over the extended period of its existence. Like all successful programmes, *Blue Peter* has had to deal with change and be flexible to a degree, but this has been uneven. Lewis Bronze, who succeeded Baxter in 1988, introduced Diane-Louisi Jordan, a black presenter, in 1990. The editorial team was quietly accepting and supportive of the unmarried status of Janet Ellis, who became pregnant, but shaken to find out that one of its

Blue Peter

Photo courtesy of the British Film Institute

ex-presenters, Michael Sundin, turned out to be gay. The significance of *Blue Peter* within British television history resides in its longevity, continued popularity, and institutional centrality. Within Children's BBC, *Blue Peter* is still, in the words of Anna Home, head of Children's Television, "very deliberately chosen as one of the foundation stones upon which the rest of the schedule can be built."

THE BOB NEWHART SHOW/NEWHART

U.S. Situation Comedy

The *Bob Newhart Show* and *Newhart* are both prime examples of the ensemble comedy that came into vogue in U.S. television during the 1970s and enjoyed continued popularity in the 1980s and 1990s. The two shows had much else in common (in addition to their star, Bob Newhart); both had sharp writing, well-drawn characters, and a distinctive style of humor that was intelligent and sophisticated, yet just a bit off the wall.

As with many 1970s ensemble sitcoms, such as *The Mary Tyler Moore Show*, *The Bob Newhart Show* focused on career-oriented adults, mostly single, related by circumstance rather than blood. Newhart played Dr. Bob Hartley, a psychologist practicing in Chicago. He treated a variety of patients whose problems, no matter how eccentric, were played for laughs; the star among them was the misanthropic Elliott Carlin (Jack Riley). Bob's office mate was Dr. Jerry Robinson (Peter Bonerz), an orthodontist and typical 1970s "swinging single"; they shared the services of a quick-witted secretary-receptionist, Carol Kester (Marcia Wallace). Bob's wife, Emily—smart, funny, sexy—was played by Suzanne Pleshette. The couple's neighbor and closest friend in their high-rise apartment building was Howard Borden (Bill Daily), a childlike airline navigator who ate most of his meals with the Hartleys and had them water his plants even when he was home; he was, in effect, the offspring they didn't have.

"That guy could lose an argument with a fern," was the caustic Carlin's comment on Howard.

A few lines and situations illustrate the show's deft and daft humor: Bob and Emily have a bicentennial party in 1976 and invite Carlin because, according to Bob, "He says he gets lonely every bicentennial"; Howard explains how spilling salt could be fatal—after Bob nearly falls down an elevator shaft and becomes obsessed with death; the Hartleys send Howard to a psychologist so he can become independent and responsible—but then want the old Howard back; Jerry comes into money, gives up his practice, and turns into "the village coot," who wants to do nothing but whittle and watch the sunrise.

These characters, even if defined by their specific quirks, developed and grew throughout the show's long run. Emily began as a substitute teacher, became a full-time teacher and moved up to vice principal; Carol married a travel agent and also tried out some other careers, but always came back to Bob and Jerry; Howard was engaged for a time to Bob's sister Ellen, a newspaper reporter, but she went out of his life and off the show when she moved to Cleveland for a better job (and after she had a flirtation with Howard's visiting brother, game warden Gordon Borden). The show made creative use of running gags such as Bob's one-sided telephone conversations, which had been a popular part of

The Bob Newhart Show

Newhart

Newhart's standup act; his habit of trying to explain situations by using analogies no one understood; and his bedtime conversations with Emily, as each could turn back on the light, and make one more comment.

When Newhart retired the show, by choice, he expressed misgivings about the direction of situation comedy as the 1970s gave way to the 1980s. Broad physical comedy and obvious jokes seemed to be pushing out wit and sophistication. The subsequent success of *Newhart*, however, showed there was still a place for intelligent, eccentric comedy. In this series Newhart played Dick Loudon, a writer of how-to books who moved from New York to Vermont to realize his dream of running a country inn. His wife, again smart, funny, and sexy, was named Joanna and was played by Mary Frann. Again there were numerous quirky supporting characters. Tom Poston, who had frequently guested on the earlier show, portrayed the inn's unhandy handyman, George Utley. Julia Duffy played the hilariously vain and spoiled Stephanie Vanderkellen, an heiress working as a maid at the inn (Stephanie replaced her less interesting cousin, Leslie, after the first season). Stephanie's boyfriend, Michael Harris (Peter Scolari), was an insufferable yuppie and producer of a local TV show, *Vermont Today*, which Dick began hosting a few years into *Newhart*'s run. Perhaps the most memorable, and certainly the most unusual, characters were three bizarre backwoodsmen, of whom only one ever spoke (until the final episode). "I'm Larry, this is my brother Darryl, and this is my other brother Darryl," was their stock introduction. They could always be counted upon to enjoy any activity that would disgust most people. The show, like Newhart's earlier sitcom, weeded out weak characters and developed the strong ones as it went along.

Newhart closed its successful eight-year run with one of the best final episodes of any series. It involved everyone in town—except the Loudons—selling their property to a Japanese corporation, included a parody of *Fiddler on the Roof*, and ended with Newhart waking up in bed with Suzanne Pleshette, the woman who portrayed his wife on his previous show, and explaining that he'd had a very strange dream (a parodic reference to the famous 1986–87 season of *Dallas*).

As this ending indicates, the 1970s *Bob Newhart* show is especially fondly remembered and there have been several other tributes to its enduring popularity. Marcia Wallace made a guest appearance on *Taxi* as the dream date of cabby Jim Ignatowski, who had nearly memorized every episode of *The Bob Newhart Show*. (Many members of the creative staff of *Taxi* had begun their careers at MTM Entertainment, Inc., the company that produced *The Bob Newhart Show*.) Newhart reprised Dr. Bob Hartley on a *Saturday Night Live* segment in the 1990s, with Hartley being the only voice of reason on a talk-show panel. And when TV character Murphy Brown (as part of a continuing joke on the show of the same name) was finally assigned a competent secretary, it was again Marcia Wallace, playing Carol. At the end of the episode, however, Newhart showed up as

Bob Hartley and, after reducing himself to begging, won her back from Murphy.

BOCHCO, STEVEN

U.S. Writer and Producer

Steven Bochco has become a brand name for American quality television in the 1980s and 1990s. With a reputation for not contenting himself with given formats or standard practices, Bochco has developed a unique style, perhaps several unique styles, for his work. His firm's logo—a concert violinist playing a short section of Vivaldi's "Four Seasons"—constantly reminds us of Bochco's creative intentions and artistic higher aims while at the same time indicating his roots in a more traditional humanistic education. Bochco's father Rudolph was a concert violinist, and his mother, Mimi Bochco, a painter.

He began writing for television after he finished college. He always considered himself to be a writer, and when, in the 1960s, MCA gave writing grants to theater departments around the country, he jumped at the occasion. As he puts it in a 1988 interview with Michael Winship: "I had an MCA writing fellowship when I was in college, and I used that to sort of con my way into a summer job at Universal Studios between my junior and senior years. They put me in the story department as an assistant to its head, and at the end of that summer, they invited me to come back permanently when I graduated." Mike Ludmer, then head of Universal's story department, made sure everyone on the lot got to know the talented young man with no writing experience at all. Bochco's first writing credit (with Harry Tattelman) came with a segment of the *Bob Hope Presents the Chrysler Theater* called "A Slow Fade to Black", starring Rod Serling.

Bochco stayed twelve years with Universal, working his way up from writer to story editor (for the Robert Stack

umbo). He went on to produce, starting with "Lt. Shuster's Wife", a Movie of the Week for ABC, starring Lee Grant. He also had to learn how to handle flops: *Griff*, made for ABC, was supposed to become a post-*Bonanza* vehicle for Lorne Greene. The series lasted a only few days into 1974. The same experience occurred with his next series, *The Invisible Man*, an update of the classical H.G. Wells story for NBC (1975–76). *Delvecchio*, made for CBS in 1976, bloomed one full season before being canceled in June 1977. Bochco was co-producer and wrote eight of the twenty scripts eventually broadcast. On *Delvecchio* he met Michael Kozoll, with whom he later co-created and co-wrote *Hill Street Blues*. Both Charles Haid and Michael Conrad were regulars of the show, and both would later find themselves among the regular cast of *Hill Street Blues*.

While at Universal, Steven Bochco wrote episodes for *McMillan and Wife* and *Ironside* as well as other series. He was involved in different movie projects, such as *The Counterfeit Killings* (1968) and *Silent Running* (1972), both for theatrical release, and *Double Indemnity* for ABC (1973). His last project for Universal was *Richie Brockelman, Private Eye* (NBC, 1978), starring Dennis Dugan, Robert Hogan and Barbara Bosson, Steven Bochco's wife, a short-lived spin-off to Stephen J. Cannell and Roy Huggins' successful detective drama *The Rockford Files*.

Bochco left Universal in 1978 for MTM Enterprises. One of the reasons he left was his apparent wish to break new ground, both inside and outside the confined world of action-adventure drama series. He also felt there was more to learn about producing than what Universal had to offer. His first MTM venture was a Movie of the Week called *Vampire*, co-written with Michael Kozoll. Then came *Paris*, a police drama series (CBS, 1979) which lasted, again, just a few days into 1980. *Paris* was interesting in terms of quality writing. There were unusual stories, focused on a black police captain moonlighting as a criminology-teacher at a nearby university. The impressive cast was headed by James Earl Jones as Woody Paris. But there was, or so it seemed, just not enough old-fashioned "spice" to attract a larger audience.

In January 1980, NBC asked MTM if Bochco and Kozoll could come up with something for them. Vague ideas about an ensemble piece set in a hotel lobby led nowhere. (The concept would later be developed by Aaron Spelling to become *Hotel*.) What NBC wanted was a cop melodrama, a cop ensemble piece. Bochco and Kozoll agreed under two conditions: total creative control and a meeting about network standards. The result of that meeting was *Hill Street Blues*, a cop show setting new rules for almost every aspect of the action-adventure formula. As David Marc and Robert J. Thompson put it, *Hill Street Blues* set standards for "multiple centers of audience identification; complicated personal lives; overlapping dialogue; hand-held camera shots; busy, crowded mise-en-scènes." The show also established its own realistic, "dirty" look and

defined a fictional world, "the Hill," that could be understood as a metaphorical melting pot, a community (or family) consisting of members of almost any nation and race that had ever set foot in America. These elements could later be recognized, in a more accented and refined matter, in many drama series developed in the 1990s, set in police precincts (*NYPD Blue*, and *Hill Street Blues*) or hospitals or courtrooms.

Hill Street Blues earned its creators several Emmies (for "Outstanding Drama Series" and "Outstanding Writing", among others) and a Golden Globe for "Best Television Drama Series". Still, MTM remained somewhat unhappy about its prestige object, which was very expensive and never able to pay off financially. *Hill Street Blues* lasted from 1981 well into 1987; Bochco was fired in 1985, after the disastrous short run of another of his (and MTM's) high-brow series projects, *The Bay City Blues* (NBC, 1983). Later, for Twentieth Century-Fox, Bochco developed another long-running hit, a legal drama called *L.A. Law* (NBC, 1986–94). On this project he served as co-producer with Terry Louise Fischer. As often noted, *L.A. Law* looked very similar to *Hill Street Blues* set in a fancy law office, with many characters and stories intertwined in each episode. Bochco himself pointed out the differences between the two shows, however, describing *L.A. Law* as "populated by people who are infinitely more successful. They make more money, they drive nicer cars, they have prettier girlfriends, they're possibly smarter, and they win more." But the series maintained its "bluesy" feeling, a certain notion of the world being a much too complicated and absurd place to live in, with rules no one would ever really understand.

Besides crime and courtroom dramas (*Civil Wars*, dealing with divorce cases, lasted from 1991 to 1993), Bochco developed one quite successful half-hour comedy drama, together with David Kelley. *Doogie Howser, M.D.* (ABC, 1989–93) told the improbable story of perhaps the youngest doctor ever to do medical examinations on-screen. The mild-mannered youngster was only sixteen years old when his professional career began. Bochco wouldn't be Bochco without at least one taboo being broken. Here, Neil Patrick Harris hit the news when his character lost his virginity, in one of the later episodes of the series.

The wish to break new ground on prime time, in terms of content as well as in aesthetic matters, has become even more apparent in Bochco's television productions for the 1990s. Some of these attempts were flops. The infamous experiment attempting to combine the cop show with a musical in *Cop Rock* (ABC, 1990) lasted for only a few weeks.

NYPD Blue (ABC, 1993–), however, earned its cast and crew six Emmies in 1994 alone. It was basically another ensemble piece, set in a police precinct right in Bochco's childhood home, New York. With *NYPD Blue*. Bochco tried to expand the limits of network standards even further, experimenting with gritty realism, or documentarism, filmed in a highly stylized, self-reflexive

manner. The show was controversial even before its appearance on the schedule because Bochco had announced that he would include far coarser language and some nudity in his move toward realism.

Bochco has earned a reputation for re-inventing the formula of the cop-show with *Hill Street Blues* and *NYPD Blue*. He certainly has introduced a new understanding of television realism, complete with partial nudity and four-letter words, into prime time—despite network Standards and Practices and actual boycotts of advertisers and network affiliates around the country in the case of *NYPD Blue*. Thanks to him, the term “teamwork” has taken on new meaning in television producing: it means quality writing, and it means intriguing, interesting stories of human bonding and struggle which drive the actors, individually and collectively, to give their best. Bochco has thus succeeded in integrating different aspects and perspectives into what seems (or seemed) to be one and the same story.

New projects in the post-O.J.Simpson-era continue his tendency toward innovation in the area of narrative structure. A new courtroom drama, *Murder One* (1995–), follows a single murder trial for an entire season, interweaving personal and professional lives of a large cast of characters.

—Ursula Ganz-Blaettler

STEVEN BOCHCO. Born in New York City, New York, U.S.A. 16 December 1943. Attended High School of Music and Art, Manhattan, New York; New York University, Manhattan; Carnegie Institute of Technology (now Carnegie-Mellon University), B.F.A. in Theater 1966. Married Barbara Bosson, 1969; children: Jeffrey and Melissa. Assistant to head of story department, Universal Television, 1966; and subsequent writer of various other Universal television series; joined MTM Enterprises as writer-producer, 1978; formed Steven Bochco Productions and entered into production deal with Twentieth Century-Fox and ABC, 1987. Recipient: Emmy Awards, 1971, 1972, 1981, 1982, 1983, 1984, 1987, 1989.

BOGART, PAUL

U.S. Director

Paul Bogart has enjoyed a career as a director in almost every medium of visual communication. Bogart is one of a handful of individuals who has directed live television productions of the "Golden Age", the telefilm, the made-for-television movie, and the feature film.

Bogart's career began as a puppeteer and actor with the Berkeley Marionettes in 1946. From there he went on to be stage manager and associate director at NBC, working on such "Golden Age" cornerstones as *Kraft Television Theater*, *Goodyear Playhouse*, and *Armstrong Circle Theater*. During the 1955-1956 season, when *Goodyear Playhouse* was known as the *Alcoa Hour-Goodyear Playhouse*, Bogart directed an episode entitled "The Confidence Man" and an award-winning partnership began. This was the first time Bogart had directed for producer Herbert Brodtkin. Bogart would go on to direct many episodes of Brodtkin's *The Defenders*, one of television's most honored series, and garner his first Emmy Award for directing "The 700-Year Old Gang," a two-part *Defenders* episode. Bogart worked almost exclusively for Brodtkin series during the early to mid-1960s (*The Defenders*, *The Nurses*, *The Doctors and Nurses*, and *Coronet Blue*).

After *The Defenders* period, the larger part of Bogart's work was in long form—either television specials, television movies, or feature films. His work for *CBS Playhouse* was particularly noteworthy. Under that banner, Bogart won Emmys for his direction of "Dear Friends" (again with Brodtkin producing) and "Shadow Game." During this period Bogart produced the 1966 television series *Hawk*, starring Burt Reynolds; he also directed the pilot and a handful of episodes for the series. For theatrical release he directed *Halls of Anger* (1968), *Marlowe* (1969), and *The Skin Game* (1971).

In the mid-1970s, Bogart began another long-term relationship with a single production unit. He directed scores of episodes of *All in the Family* for Norman Lear and Bud Yorkin's Tandem Productions and in 1978 earned another Emmy for his work on the series. *The Golden Girls* brought Bogart yet another Emmy in 1986. In 1986 he directed *The Canterville Ghost* for television and *Torch Song Trilogy* for theatrical release.

Bogart has said that, in an ideal world, the feature film is his form of choice because the time constraints of television production are absent. Still, he is a singular talent among television directors. He has expressed a partiality for strong characters over a strong story. This preference takes advantage of the intimacy of the television medium, and allows those characters to reveal themselves to viewers through the nuance and subtlety of staging and blocking. These qualities are at a premium in entertainment television today, but because Bogart's aesthetic sensibilities were developed early, in the theater and live television, the episodes he directs are graced by excellent staging and movement of characters. One need only carefully watch Bogart's work for

Paul Bogart

Photo courtesy of the Academy of Motion Picture Arts and Sciences

The Defenders, *All in the Family*, or *Nichols* to understand that this ability to place characters for the camera is one of the strongest characteristics of his work.

A second characteristic is that he directs like an editor. Bogart begins a directing assignment with a very clear idea of what the program should look like. He then creates the images he needs and pays particular attention to the way those images are linked to make a program. He has stated that, in his view, one of the most important aspects of visual expression is how one image follows another and contributes to the cumulative effect of those joined images. Bogart understands that the power of emotions and ideas can be reinforced or defeated by the manner in which shots are linked. The result is a directorial style which draws on the best elements of the editor's art—the linking of carefully composed images for emotional and dramatic emphasis.

In 1991, Bogart was awarded the French Festival Internationale Programmes Audiovisuelle at Cannes, one of the few television directors to be recognized for a remarkable body of work. Many directors working in television today are members of a generation raised on television. The better of these directors are those who paid attention to the work of Paul Bogart.

—John Cooper

BOLAM, JAMES

British Actor

James Bolam has proved one of the most popular and enduring character stars of British television comedy and drama, capitalizing on his northern background and on his natural, pugnacious charm in a variety of roles over a 30-year period. Bolam had the good fortune to begin his screen career at a time when there was a tremendous vogue in British theatre, film, and television for working-class northern drama. With his punchy but vulnerable Geordie persona and undisguised accent, Bolam was a natural choice for such worthy though relatively plodding films as *The Kitchen*, which was based on the play by Arnold Wesker, and John Schlesinger's North Country feature *A Kind of Loving*. Subsequently, among other films, he supported fellow-northerner Tom Courtenay in *Otley* and played second lead to Alan Bates in Lindsay Anderson's *In Celebration* (a David Storey play set in the mining towns of Nottinghamshire in which he and Bates had already appeared on the Royal Court stage).

It was as a favourite of television comedy and period drama audiences, however, that Bolam (a former trainee chartered accountant) was destined to make his mark. Cast

as the girl-chasing, anti-establishment cynic Terry Collier opposite Rodney Bewes's diffident and socially-aspiring Bob Ferris in the long-running and warmly realistic comedy series *The Likely Lads* (1964–66), written by Ian La Frenais and Dick Clement, Bolam cut a fine line between pathos and brash northern cockiness. In his scorn for Bob's middle-class pretensions, Bolam's work-shy proletarian Terry typified northern prejudice and aggression, but in his overt sensitivity to any rejection by his aspiring childhood friend and drinking partner, he became both endearing and sympathetic, as much a victim of a hostile class system as his soul companion. The friendship between the two characters was in many situations their only defence, coupled with a shared nostalgia for time-honoured northern ways. The series, which relied heavily on the writing of Le Frenais and Clements as well as upon the innate charm of Bolam and Bewes, was significant in that it raised issues of greater relevance to the viewing public than was attempted by virtually any other sitcom of the time (and, indeed, by many in succeeding decades).

The underlying theme of nostalgia for the values of the old north, and the comedy inherent in two northern lads trying to keep their friendship alive while coming to terms with the realities of life, was underlined in the even better later series, *Whatever Happened to the Likely Lads?* (1973–74), in which the pathos was strengthened by an awareness of time passing. This revival, which took up the lives of the two friends after Terry's return from four years in the army and Bob's assumption of bourgeois respectability (and engagement to the self-willed Thelma, played by Bridgit Forsyth), proved as well written and as pointed as the first series, the friendship tottering and swaying as the two men argued heatedly about their conflicting views on such issues as class, sexual equality, and self-advancement.

Though identified primarily with northern working-class characters, Bolam has managed to vary his diet by escaping from the straitjacket of television comedy on several occasions. Particularly notable was his success as the indomitable entrepreneur Jack Ford in the long-running between-the-wars period drama set in South Shields, *When the Boat Comes In*, which extended to four series and finally ended with Ford's death in the Spanish Civil War. Jessie Seaton, women's campaigner and Ford's love interest in the series, was played by Bolam's off-stage wife, Susan Jameson.

To underline Bolam's versatility, he also appeared with success in a BBC production of William Shakespeare's *As You Like It*, and in the 1980s forged a new variation on the sympathetic but single-minded northerner theme as Trevor Chaplain, the inquisitive jazz-loving schoolteacher investigating corruption in Alan Plater's *The Beiderbecke Affair* and its sequels.

A long-established favourite of low-brow television comedy, since the days of *The Likely Lads*, Bolam has continued to enjoy success in such unchallenging fare as *Only When I Laugh*, an unexceptional hospital sitcom that nevertheless lasted four series, *Room at the Bottom*, *Andy Capp*, *Executive Stress*, *Sticky Wickets*, and, most recently, *Eleven Men Against Eleven* (1995)—a comedy thriller in which Bolam played the beleaguered manager of an ailing Premier Division football team, under crooked chairman Timothy West.

—David Pickering

JAMES BOLAM. Born in Sunderland, Tyne and Wear, England, 16 June 1938. Attended Bede Grammar School, Sunderland; Bemrose School, Derby. Married: Susan Jameson; one child: Lucy. Trained as actor at Central School of Speech and Drama, London; stage debut, Royal Court Theatre, London, 1959; established reputation as television star in the long-running series *The Likely Lads*, 1964–66, and the sequel *Whatever Happened to the Likely Lads?*, 1973–74; subsequently consolidated reputation as popular star of situation comedy as well as playing straight roles and acting in films. Address: Barry Burnett Organization Ltd, Suite 42–43, Grafton House, 2–3 Golden Square, London W1, England.

BONANZA

U.S. Western

Bonanza, the first Western televised in color, premiered on a Saturday night in the fall of 1959. After *Gunsmoke*, *Bonanza* was the longest-running and most successful Western in U.S. television, airing for fourteen seasons. The series related the story of Ben Cartwright (Lorne Greene) and his three sons, Adam (Pernell Roberts), Hoss (Dan Blocker) and

Little Joe (Michael Landon), prosperous ranchers in the vicinity of Virginia City, Nevada, in the mid 1800s, during the Civil War years and the discovery of the Comstock Silver Lode. The show was designed to appeal to a broad audience, crossing age and gender groups. The action characteristics catered to a more traditional audience for Westerns, while

Bonanza

dramatic issues and family values expanded the show's popularity to a more general audience. The careful photography presented beautiful scenery and interiors resembled movies more than other contemporary television shows.

The Cartwrights were not a traditional nuclear family. The patriarch was a three-time widower, with a son from each wife. In the first few seasons, personality differences between the sons motivated most of the plot conflicts. Two years after its debut, *Bonanza* moved to Sunday night and its popularity soared. By this time, the three sons had worked out most of their differences and the show was about the dealings of a well-integrated all male family as well as their problems with mining and ranch interests. Other characters would wander into the community causing conflict, leading the members of the family individually or communally as a group to restore the order. The oldest son, Adam, was the most serious of the three brothers, the potential patriarch. Middle son, Hoss was the Buffoon type, big and friendly, naive yet explosive. Little Joe was the impulsive and romantic type in the family.

Bonanza differs from other Westerns in its relative use of violence and "shoot-outs". Conflicts were resolved through dialogue between the main characters and guest stars. Generally, this one-hour show tackled topical issues (i.e., racial discrimination, voting, religion). Famous guest stars such as Yvonne De Carlo, Ida Lupino, Barry Sullivan, Ricardo Cortez and Jack Carson added to the show's popularity. *Bonanza* was also the first show to introduce the ranch, in this case the thousand-acre Ponderosa, as an important element in the narrative, the fifth character, as producers referred to it. Brauer and Brauer (1975) argue that this emphasis on the "piece of land" was symbolic of a shift in emphasizing mobility, the lone wanderer, with his gun and horse to a focus on the settle landowner. These changes also led to a restructuring of the leading characters' role in the community.

The cook at Ponderosa was Hop Sing (Victor Sen Yung), a Chinese immigrant. He was presented in the traditional subservient role reserved for minorities in the period the show was produced. He spoke with a heavy accent, wore generic Asian clothes and long, braided hair, and he always delivered words of wisdom. In several episodes the family engaged in various conflicts with outsiders to protect Hop Sing against discrimination. In doing so, the show foregrounded the racial discrimination in the historical period as well as the ongoing racial conflicts in the 1960s.

Between 12 September 1959 and 16 January 1973 a total of 440 episodes were produced. Those years witnessed several cast changes. Pernel Roberts left the series at the end of 1964–65 season calling it "Junk TV" and complaining about the glorified portrayal of wealthy ranchers. His character was eliminated from the series. Dan Blocker died before the beginning of the 1972–73 season. After his death the show's ratings started to fall, and it was canceled in 1973. A change from the traditional slot on Sunday to Tuesday

evening, after 11 years on the air might also have caused the demise of the show. Even before the show was canceled it was already being rerun under the name *Ponderosa* by NBC on Tuesday evenings. *Bonanza* was exported throughout the world, and it has been in syndication for several years in the United States.

In the mid-1980s there was an attempt to revive the series with a made-for-television movie entitled *Bonanza: The Next Generation*. None of the original cast of the series appeared in the show. Greene's death forced the producer to cast another actor. John Ireland, playing Ben Cartwright's brother, became the patriarch of Ponderosa. He could not control the ranch and it was almost taken over by miners and oil speculators. It is only when the sons of Little Joe and Hoss returned that the ranch experienced a new *Bonanza*.

—Antonio Lapastina

BOONE, RICHARD

U.S. Actor

Richard Boone was one of the television acting profession's gladiators, a craggy, determined and almost menacing figure among the actors and directors who worked with him. His uncompromising commitment to his work often brought him into conflict with his fellow players and was as well a constant source of frustration to the directors and producers who tried to control him. That his work for television eventually brought him critical acclaim and viewer popularity while he simultaneously alienated certain sections of the industry may be, perhaps, the hallmark of his genius.

In 1947 he travelled to New York and joined the well-known Actor's Studio (where his classmates included such then unknowns as Marlon Brando, Karl Malden, Eva Marie Saint and Julie Harris). He got his growth, he claimed, as an actor in some 150 live TV shows in New York between 1948 and 1950, after which he returned home to California. He is also reported as being a regular on the CBS children's program *Mr. I. Magination* in 1947 (when the program was a local New York show) and also appeared as one of the reporters in *The Front Page* series (1949–50) during its early days. Back in Los Angeles he was put under contract to 20th Century-Fox and his first feature film was *Halls of Montezuma*, directed by Lewis Milestone in 1950 (Milestone would later be invited to direct episodes of *Have Gun, Will Travel* and *The Richard Boone Show*). While at Fox he was also working for Jack Webb in his radio *Dragnet* when, still as an unknown bit player, around the summer of 1950, he did a single radio drama called *The Doctor* (written by *Dragnet* writer James Moser). This radio show turned out to be the forerunner of Boone's first starring TV role, *Medic*.

By 1954 his Dr. Konrad Styner, host, narrator and frequent participant of *Medic* (1954–56), which had been created and written by Moser, had made him a household name. *Medic* employed a dramatic-documentary style, factual and educational in content but with a dramatic impact that few if any physician centered programs achieved until the advent of *Ben Casey* in 1961. With Moser writing and generally steering the series, *Medic* developed a highly effective semi-documentary technique similar to TV's popular *Dragnet*. The program took its stories from the files of the L.A. County Medical Association, real medical case histories showing inherent drama. Boone's stolid underplaying heightened the dramatic force of the series but there were critics and viewers at the time who thought his character too dour and gruff. When *Medic* came to an end Boone found other parts elusive; although this had been his first real doctor role casting directors had come to see him as a "doctor" character and his strong screen association with the role of Dr. Styner left him typecast in the "he always plays doctors" file.

His most memorable TV role, however, was set in a completely different genre and featured Boone as a 1870s

Richard Boone

San Francisco gentleman-adventurer who hired himself out as a mercenary gunslinger. As the impassive troubleshooter Paladin in the post Civil War West of *Have Gun, Will Travel* (1957–63), Boone helped push the series to top-ten positions in the Nielsen ratings (numbers 3 and 4) during its first four seasons. The part was originally offered to Randolph Scott, who at the time had other commitments. After first turning down Boone for the role, CBS made a five-minute test film for New York executives still prepared to type-cast him as a physician—and then signed him to a five-year contract. While *Have Gun, Will Travel* and Boone's popularity rose in the ratings and in the esteem of fans, his standing among people in the industry dropped significantly. His strict dedication to his work, which he also demanded of everyone around him, saw him all but legally take over the CBS production; scripts, actors, directors, even costumes, all had to receive his personal approval. From 1960 onwards Boone was particularly active in the series' director's chair, directing almost one in four episodes himself. "When I direct a show, I'm pretty arbitrary," he commented to *TV Guide* magazine in early 1961. "If I have a fault, it's that I see an end and go for it with all my energy; and if I'm bugged with people who don't see it or won't go for it, it looks as though I'm riding all over them."

During this time of course he also continued appearing in multiple TV plays. Notable performances during this period came with David Shaw's acclaimed "The Tunnel" (1959; for *Playhouse 90*), in *The Right Man* (1960), for which he delivered a fine performance as Lincoln, and with his work as narrator for Stephen Vincent Benet's Pulitzer Prize-winning poem *John Brown's Body* (1962).

The Richard Boone Show repertory theatre idea was first proposed by Boone in 1960 to CBS. When CBS executives suggested that they might find a slot for such a program among their Sunday afternoon schedules Boone put the idea on a back-burner until he had acquired his "go-to-hell money", as he put it, from the millions he made during his years in *Have Gun, Will Travel*, and to a lesser extent from *Medic*. It was not until his idea received the enthusiasm and support of the distinguished playwright Clifford Odets, the Goodson-Todman production company and NBC president Robert Kintner that the television repertory company series started becoming a reality. *The Richard Boone Show* (1963–64) featured a workshop of ten actors whom Boone considered the best in the business: Robert Blake, Lloyd Bochner, Laura Devon, June Harding, Bethel Leslie, Harry Morgan, Jeanette Nolan, Ford Rainey, Warren Stevens and Guy Stockwell. Boone himself, of course, starred at times and served as the regular host. With Odets as the program's script editor, the series' prestige was almost guaranteed. Unfortunately, after completing much of the preliminary work for the series, Odets died in August 1963. Before the 24 episodes had completed their run (and despite having just been voted "the best dramatic program on the air" in the 15th Annual Motion Picture Daily poll) the program was cancelled in January 1964. Boone took the news hard. It had after all been a very personal project and—the result of a premature NBC press office release—he learned of his program's demise in a morning trade paper. Still, his anger was tempered by the knowledge that he was by that time already receiving \$50,000 a year for 20 years after selling out his interest in *Have Gun, Will Travel*; he was also to receive a reported \$20,000 a week for his now-defunct show, also on a deferred payment basis.

From 1964 to 1971 he lived a very comfortable life with his family in Honolulu, travelling to the mainland only for the occasional movie such as *Hombre* (1966) and *The Kremlin Letter* (1969). He also helped induce producer Leonard Freeman to film *Hawaii Five-O* in Honolulu instead of the intended San Pedro; Freeman even offered him the leading part of McGarrett which he declined.

In 1971 Boone was offered the lead role in Universal TV/Mark VII's *Hec Ramsey* (1972–74) series (two seasons as one of four rotating 90-minute TV-movies). The program, about a grizzled turn-of-the-century lawman with a fascination for the new science of criminology, was in its way, perhaps, a gentle monument to Boone's earlier TV performances: Hec Ramsey was Paladin grown older, with an accumulation of artfulness and astuteness along with a stockpile of barely contained impatience.

The latter part of his career was taken up with such diverse made-for-TV movie plots and themes as the elaborate murder set-up of *In Broad Daylight* (1971), the espionage tale of *Deadly Harvest* (1972), the period private-eye spoof *Goodnight, My Love* (1972), the Depression-era drama *The Great Niagra* (1974) and the rather sorry fantasy adventure *The Last Dinosaur* (1977).

With his dedication to his work in television Boone always gave an extraordinarily commanding performance, always straightforward, always the center of interest.

—Tise Vahimagi

RICHARD (ALLEN) BOONE. Born in Los Angeles, California, U.S.A. 18 June 1917. Attended military school; Stanford University, 1934–37. Married: 1) Jane Hopper, 1937 (divorced, 1940); 2) Mimi Kelly, 1949 (divorced, 1950); 3) Claire McAloon, 1951; children: Peter. Served in U.S. Navy, 1941–45. Oilfield worker, 1930s; painter and short story writer, 1930s; after World War II, studied acting at the Neighborhood Playhouse and Actors Studio; studied modern dance with Martha Graham; stage debut as soldier, and as understudy to John Gielgud's Jason in Broadway staging of *Medea*, 1947; acted in radio drama *The Halls of Montezuma*, 1950; led to role in the movie version, 1951; film actor, 1951–79; starred in television series *Medic*, 1954–56; starred in CBS Television's *Have Gun, Will Travel*, 1957–63; developed and directed repertory theater-style television series, *The Richard Boone Show* (also host and often the lead), 1963–64; in Hawaii, after *The Richard Boone Show* cancelled, established movie company Pioneer Productions, and taught acting; starred in NBC Television's *Hec Ramsey*, one of four rotating series comprising the *Sunday Night Mystery Shows*, 1972–73; lectured on acting at Flagler College. Member: Academy of Television Arts and Sciences; Academy of Motion Picture Arts and Sciences. Recipient: three American Television Critics Best Actor Awards. Died in St. Augustine, Florida, 10 January 1981.

BOYLE, HARRY

Canadian Writer/Media Executive

Harry Boyle made his career in broadcasting, but, given the ephemeral nature of radio and television productions, he may be remembered more as an author and humorist. Television historians, however, will likely see his accomplishments as a broadcast regulator as the most significant aspects of his long career. Boyle started his career on a radio station in Wingham, Ontario, and after a brief detour into the newspaper business he joined the Canadian Broadcasting Corporation (CBC) in 1943 as a farm commentator. He advanced rapidly into executive ranks and joined the television service in the 1960s, serving as program director and executive producer. In both radio and television, he established a reputation as a creative programmer who launched the careers of many talented broadcasters, such as the comedy team of Wayne and Shuster, and the eclectic Max Ferguson. He was known for defending the independence of producers against management restrictions.

Boyle's career as a regulator began in 1967. While serving as program supervisor at CBC-Toronto, he was appointed by the Board of Broadcast Governors (BBG) to an eleven-member consultative committee on program policy, the only member from the CBC. The committee issued its report in 1968, just as the BBG was abolished by the 1968 Broadcasting Act, to be replaced by a new, more powerful regulatory body, the Canadian Radio-Television Commission (CRTC), later called the Canadian Radio-Television and Telecommunications Commission.

Boyle was appointed vice chair of commission, led by the formidable Pierre Juneau. He served with Juneau until Juneau resigned in 1975. Boyle was named acting head and then confirmed in the role in 1976, but he left after a year, by some accounts disenchanted with his limited influence on programming.

Throughout his career, Boyle promoted a vision of Canadian identity as an expression of a sense of place, best realized in specific communities. He argued that the CBC, and Canadian broadcasting generally, neglected local, regional and multi-cultural programming in pursuing national audiences. In a recent interview, Boyle commented that he agreed to the

CRTC appointment in the hope of pushing the CBC into providing such coverage. The team of Juneau, dapper and precise, and Boyle, ruffled and disorganized, accomplished much more than anyone expected in carrying forward the ambitious goals of the 1968 Broadcasting Act. They safeguarded domestic ownership of Canada's broadcasting industry, produced a strong set of Canadian content quotas for television (regulations that contributed significantly to the development of Canada's independent television production industry), supported the extension of the private network CTV,

Harry Boyle

and formulated the first rules for the cable TV industry. Though rendered increasingly obsolete by new broadcast technologies, these initiatives provided important opportunities for Canadian expression.

Boyle's most controversial legacy was a report tabled by the Committee of Inquiry into the National Broadcasting Service in 1977. Boyle presided over the inquiry, which was launched shortly after the 1976 Quebec election, in which a party dedicated to a sovereign Quebec received a majority. Not surprisingly, the event added to concerns about Canadian unity and led to accusations that the French-language news services of the CBC were biased in favor of Quebec independence. It has been suggested that Boyle accepted the task to forestall a more politically-motivated investigation. He may also have been motivated by the fact that the committee's mandate reflected his much-quoted view that Canada "exists by reason of communication." The report expressed concern about the centralization of the Canadian television system, the lack of programming from regions outside central Canada and, in particular, the gulf between French and English audiences. Although supportive of the CBC, Boyle also expressed the hope that new communications technologies, formats and programming would bridge the divisions in Canadian society. One example was the multichannel possibilities presented by cable television and pay-per-view programming. The report, with others, helped to lay the foundation for the expansion of cable services.

With respect to content, the report characterized the CBC as "biased to the point of subversiveness" for its failure, in the committee's view, to promote communication among the country's regional and linguistic communities. The report was not received favorably by CBC journalists—who felt it was inaccurate and unfair—but it was successful in turning attention away from accusations of "separatist bias" to the extent to which the English and French networks reflected Canada as a whole. Debate about the latter issue has continued. In the politically charged atmosphere of 1977, however, the tack taken by Boyle helped to defuse French-English tensions a little.

BOYS FROM THE BLACKSTUFF

British Drama Series

Boys from the Blackstuff, the first television series by Liverpool playwright Alan Bleasdale, was a technical and topical triumph for BBC English Regions Drama, capturing the public mood in 1982, at a time of economic recession and anxiety about unemployment. Set in a grimly recognisable Liverpool, it chronicled the disparate and sometimes dissolute attempts of five former members of a tarmac gang to find work in a city hit hard by mounting unemployment and depression. As an outwardly realist intervention into a serious social problem, its impact, sustained through its dramatic power and emotional truth, was comparable to

Boyle's substantial personal archives have been deposited with York University in Toronto and will attract scholars interested in making sense of a crucial time in the development of Canadian television.

—Frederick J. Fletcher and Robert Everett

HARRY BOYLE. Born in St. Augustine, Ontario, Canada, 7 October 1915. Attended St. Jerome's College in Kitchener, Ontario. Married: Marion McCaffery, 1937; children: Patricia and Michael. Worked for radio station CKNX, Wingham, Ontario, 1936-41; writer, *Beacon-Herald*, Stratford, Ontario, 1941-42; farm broadcaster, CBC, Toronto, Ontario, 1943; supervisor of farm broadcasts, 1943-45; program director, Trans-Canada Network, 1946-52; regional program director, radio and television, 1952-55; supervisor of radio features, from 1955; television executive producer, from 1963; weekly columnist, *Toronto Telegram*, 1956-68; author of numerous books, since 1961; vice chair, Canadian Radio-Television Commission, 1968-75; chair, 1976-77; columnist, *Montreal Star* from 1978. Recipient: Stephen Leacock Medal for Humour, 1964; John Drainie Award, Association of Canadian Television and Radio Artists, 1970; named to Canadian Newspaper Hall of Fame, 1979; Jack Chisholm Award, Canadian Film and TV Directors' Association, 1980.

that of *Cathy Come Home* fifteen years earlier. With its ostensibly sombre subject matter leavened by passionate direction and flashes of ironic Scouse wit, *Boys from the Blackstuff* overcame its regional setting and minority channel scheduling (on BBC2) to receive instant critical acclaim, winning an unprecedented repeat run only nine weeks later on BBC1 and a BAFTA award for best drama series of 1982.

Bleasdale (who described it as "an absurd, mad, black farce") originally conceived *Boys from the Blackstuff* in 1978 during filming for *The Black Stuff* (D. J. Goddard), his single play introducing the Boys as a tarmac gang (hence the title)

Boys from the Blackstuff

and culminating in their sacking for “doing a foreigner” (non-contract job). But whilst technically a sequel, *Boys from the Blackstuff* was a deeper and darker investigation of character and circumstance consisting of five linked plays of varying lengths (from 55 to 70 minutes). As such, it proved difficult to fit into the production and budgetary system of English Regions Drama. However, the delay to the production which this caused contributed significantly to the strength and originality of the final work as well as providing a timely conjunction between its transmission and the apex of British unemployment.

To cut costs the production was budgeted across two financial years using newly available lightweight video equipment except for one episode (“Yosser’s Story”) made on film with the unit’s annual film budget. Unusually for the time, the video episodes were edited in post-production and the series’ filmic qualities were further enhanced by Ilona Sekacz’s specially-composed music and by the replacement of Goddard (no longer available) with Philip Saville, through whose elegant and inventive shooting style Liverpool’s dereliction took on a crumbling grandeur.

Of the five central characters, Chrissie (Michael Angelis) was the most ordinary (standing, perhaps, for Bleasdale himself), desperate for legitimate work and increasingly soured by the indignity and insecurity of life on the dole. Loggo (Alan Igbon), more defiant, stood as an ironic observer least affected by the experience. Dixie (Tom George-son), once the gang’s foreman, had become embittered and unforgiving, his pride as a working man shattered. George (Peter Kerrigan), much the oldest, represented the dignity of labour, wise and greatly respected as a trade union official, refusing to give up hope even on the remarkable wheelchair ride through the decaying Albert Dock which precedes his death—a scene which includes an emotional speech based partly on Kerrigan’s own experiences as a docker. But it was Bernard Hill’s maniacally self-destructive Yosser, a colossal performance of incoherence, savagery and pathos, who captured the public imagination. Deprived of his dignity and eventually of his children, he is reduced to butting authority figures with the bewildered declaration: “I’m Yosser Hughes!” Yosser’s head-butts and his woeful “gizza job” became totems in the popular press.

The delay in production also benefitted the series in enabling the script to develop through ruthless changes initiated by producer Michael Wearing. In the most extreme case, lamenting the absence of female and domestic perspectives on unemployment, Wearing returned the original episode 3 with an instruction to “write Angie”. In the rewrite, Angie (Julie Walters), Chrissie’s wife, emerged as a pivotal character. In an emotionally-charged performance she uttered the lines which seemed to sum up the series’ message about Liverpool and the dole:

“It’s not funny, it’s not friggin’ funny. I’ve had enough of that ‘if you don’t laugh you’ll cry’. I’ve heard it for years. This stupid soddin’ city’s full of it... Why don’t you fight back, you bastard. Fight back.”

As well as pricking the national conscience (helping to dissolve the popular characterisation of the unemployed as “scroungers”), *Boys from the Blackstuff* confirmed Bleasdale as one of the nation’s leading writers for stage and television, although his subsequent television work (most notably the self-produced *GBH*) might have benefitted from the editorial influence of Wearing. Equally important, it helped to establish Liverpool as a dramatic location of special significance, where brutality, decay and poverty could serve as a backdrop for the expression, through darkly defiant wit, of the resilience and spirit of ordinary people. Its indirect influence is detectable in the proliferation of Liverpool-based television and film drama of the 1980s, including the sitcom *Bread*, resembling a travestied *Boys from the Blackstuff*

stripped of its social conscience, and the long-running soap *Brookside*, which inherited its shooting style (single camera shooting on lightweight video) as well as part of its milieu.

THE BOYS OF ST. VINCENT

Canadian Docudrama

The Boys of St. Vincent (1993), directed by John N. Smith for the National Film Board of Canada, is a two-part docudrama which caused considerable controversy when it first appeared. At the time of its release, the criminal trials of several brothers from Mount Cashel Orphanage in Newfoundland were in progress. The Canadian Broadcasting Corporation (CBC) was not allowed to broadcast the film in Ontario and western Quebec in case it should in some way interfere with the trial—even though a disclaimer, saying that the film is loosely based upon several different events and not any real individuals, was added. Part one of *The Boys of St. Vincent* deals with the brutalization and sexual molestation of several orphans under the care of a group of priests headed by brother Peter Lavin (Henry Czerny). Part Two, which takes place fifteen years later, concerns the events surrounding Lavin’s trial and the lives of the boys, who are now adults. *The Boys of St. Vincent* is a powerful, adult docudrama about a painful and largely repressed part of Canadian history.

The critic John Caughie locates the specificity of docudrama in the integration of two distinct discourses: that of the realist narrative drama (which I would call melo-

drama), and that of the Griersonian documentary, from which the docudrama adopts two aspects, a strong desire for social education presented in a palatable form, and the need to reveal repressed histories. The melodramatic aspect attracts an audience and the documentary aspect serves to keep the narrative truthful. In effect, the documentary acts to detrivialize the melodrama—an essential function if its moral point is to be taken seriously. Some critics, such as Elaine Rapping, have taken the made-for-television movie seriously, but it is still widely castigated for its overly emotional representation of domestic disasters.

Unlike most American-made telefeatures, *The Boys of St. Vincent* does not have a hero. The two main characters, Kevin Reeny, who is one of the abused children, and Peter Lavin, the head of the orphanage, are not really figures with whom the audience can identify easily. In Part One Reeny is a badly abused child who barely speaks. Smith builds up tremendous sympathy for Reeny in Part One, showing the child’s desperate attempts to avoid the priest and escape from the orphanage. His youthfulness makes him an object of our compassion, particularly as he struggles to free himself and stand up to the predatory Lavin. Audience identification is

much stronger with him in this part of the film. In Part Two Reeny becomes a troubled man, unable to deal with his past. A loner given to bouts of violence, and clearly troubled in his relationship with his girlfriend, he is a closed and emotionally withdrawn character with whom it is possible to sympathize, but not really identify.

Peter Lavin is certainly the centre of the film's controversy and also its insightful and troubling depiction of child molestation. The fact that Lavin is a handsome, intelligent and charismatic man, as well as a brutal and overbearing pedophile is part of what makes *The Boys of St. Vincent* such a complex experience. In many child molestation films the child molester is a villain, pure and simple. This is never the case with the Smith film. The film in fact asks the audience to understand Lavin, and even gives the audience his point of view as he molests Kevin. This is a shocking moment in the narrative. As the first scene of molestation begins, the camera is placed in an observer's position. But as the sequence develops, the camera moves close to Lavin's point of view as he fondles Kevin's body. When Kevin refuses the priest's advances, he is severely beaten, and a statue of a wounded Jesus juts into the frame as if to comment upon what is taking place. The next morning as Brother Lavin watches the boys shower, the camera shows an aesthetically pleasing and sensuous depiction of their naked bodies. How is the spectator expected to respond to those pictures of desire—when the object of that desire is a beautiful, nude ten-year-old boy seen through the eyes of a pedophile? This highly charged and controversial sequence was cut when *The Boys of St. Vincent* was shown on the A and E channel in the United States. This excision, however, undermines Smith's attempt to ask the audience to understand a pedophile rather than merely condemning him or turning him into a melodramatic villain.

Of further significance in *The Boys of St. Vincent* is Smith's critique of patriarchy as a whole, with its patterns of dominance and submission worked throughout the educational system and the religious and governmental orders. We are shown boys literally owned by the church, brutalized not only physically, but intellectually through the fear and guilt instilled in them in both church and classroom. Lessons are taught by hypocritical and tedious rote, and the boys are harshly disciplined for seemingly minor infractions. *Boys* is nothing if not a thorough critique of middle-class, patriarchal capitalism in its most brutalizing form. Interestingly, Smith shows that both the boys and the priests are all victims of this system, that in fact this kind of behaviour is institutionalized and even traditional in orphanages.

Except for one of the older boys, the janitor and one policeman, no one is much outraged by what has gone on. Through *The Boys of St. Vincent* we are kept thoroughly off balance, not only by Smith's style, which tends to throw us into situations with few establishing shots, but also by the difficulty of identifying with any of the damaged characters in the fiction. Nor does the ending of the film bring any relief. Although the priests are brought to trial, Brother

Lavin is neither healed nor forgiven; ironically, he is only able to confess his sins in the confessional, where he may in fact, be confessing to another child molester, and his confession never becomes public. We are never shown whether he has confessed his problems to his psychiatrist, and because the film ends before the verdict is given, we do not have the satisfaction of knowing what will happen to him. The film ends with Lavin's wife demanding to know if he has molested his own sons—and no answer is forthcoming here either. Kevin Reeny, who has resisted all attempts to speak up at the trial, finally manages to testify, but we are left with no sense of either triumph or revenge. One of the other boys, who has become a prostitute and a drug addict, overdoses and dies before the trial is complete. This film does not offer us any comfortable assurances about the future, and by avoiding closure, it implies that this kind of crime does not go away. In a film that consistently violates convention, this may be the most difficult of all to face, since no morally reassuring note is sounded at the film's conclusion.

The Boys of St. Vincent fully develops the potential of the made-for-television movie. Although it has a high-concept plot and is based upon a sensational news story, it

The Boys of St. Vincent
Photo courtesy of Tele-Action

violates many of the conventions of the U.S. telefeature. *Boys* mounts a damning condemnation of both the Catholic Church and the government of Newfoundland. It asks the audience to consider a child molester as a human being, not merely a depraved monster. By controlling the worst excesses of the melodrama and adopting documentary techniques, it manages to become a believable and powerful depiction of a serious social problem, proving that the simplicity of the made-for-television movie does not have to equal simple-mindedness, and that made-for-television movies can become sites for significant, but accessible social critique.

THE BRADY BUNCH

U.S. Situation Comedy

When it premiered on ABC in 1969, *The Brady Bunch* garnered mostly negative reviews. From that date until 1974, its entire network run, the series never reached the top ten ranks of the Nielsen ratings. Yet, the program stands as one of the most important sitcoms of American 1970s television programming, spawning numerous other series on all three major networks, as well as records, lunch boxes, a cookbook, and even a stage show and feature film.

In an era in which situation comedies emphasized how social climates were changing, *The Brady Bunch* was one of the few series that hearkened back to the traditional family values seen in such sitcoms as *Leave it to Beaver* and *Father Knows Best*. Executive producer Sherwood Schwartz conceived of the premise: a widower, father of three boys, marries a widow, mother of three girls. The concept worked as a springboard for dramatizations of an array of childhood and adolescent traumas. The cluster of children—Greg (Barry Williams), Marcia (Maureen McCormick), Peter (Christopher Knight), Jan (Eve Plumb), Bobby (Mike Lookinland) and Cindy (Susan Olsen)—provided a male and female version for three separate stages of youth. With this group the show managed to portray the typical crises of orthodonture, first crushes, neighborhood bullies and school plays, as well such homebound issues as sibling rivalry and problems with parental restrictions. (Robert Reed) was always there with a weekly homily that would explain to the children the lessons they had learned. Although mother Carol Brady (Florence Henderson) was initially written as a divorcee, and episodes of the first season did deal with the problems of children getting used to a new mother or father, the half-hour show repeatedly and firmly upheld the family as a tight unit of support, love and understanding.

Unlike *All in the Family* or even *Julia*, *The Brady Bunch* tried to steer clear of the political and social issues of the day. Rarely were non-white characters introduced into the series. Women's liberation and gender equality were boiled down to brother-sister in-fighting. The counterculture of the 1960s was represented in random minor characters portrayed as buffoons—or in Greg trying to impress a girl with hippie jargon.

The representation of childhood in the series as a time of blissful innocence was in marked contrast to what was happening off camera. Many of the boys and girls playing the Brady children dated each other secretly, making out in their trailers or in the doghouse of the Brady's pet, Tiger. Oldest boy Barry Williams attempted to date Florence Henderson and filmed at least one episode while high on marijuana. All these incidents (as well as Robert Reed's homosexuality) occurred behind closed doors, coming to light only a decade after the series originally aired.

The Brady Bunch

The decided emphasis of the series on the Brady children made it very popular among younger audiences. ABC capitalized on this appeal, programming the show early on Friday evenings. This popularity also resulted in various attempts to create other profitable spin-off products: "The Brady Kids," a

pop rock group (patterned on "The Archies" and "The Partridge Family"), a Saturday morning cartoon called *The Brady Kids* (1972–74), and regular appearances of the young actors and actresses (particularly Maureen McCormick and Christopher Knight), in teen fan magazines.

Following its initial network run, *The Brady Bunch* became inordinately popular in rerun syndication. This success can be attributed in part to children's afternoon-viewing patterns. Often programmed as a daily "strip" in after-school time periods, the show found new viewers who had not previously seen the series. The age distribution of the cast may have created appeal among a range of young viewers, and as they aged they were able to take a more ironic viewing stance toward the entertainment of their childhood.

The ongoing success of the Brady characters has continually brought them back to television. *The Brady Bunch Hour*, produced by Sid and Marty Krofft from 1976 to 1977 on ABC, had the family hosting a vividly-colored disco-oriented variety series. *The Brady Brides*, on NBC in 1981, was a half-hour sitcom about Marcia and Jan as they dealt with their new husbands and the trials of being married. In December 1988, CBS aired the TV-movie *A Very Brady Christmas*, which became CBS' highest-rated TV-movie that season. This led in 1990 to a short-lived hour-long dramatic series called simply *The Bradys*.

Although the dramatic series faded quickly, a live-stage parody of the original series quickly became a national sensation after its debut in Chicago in 1990. Playing the original scripts as camp performance, "The Real Live Brady Bunch" seemed to tap into viewers' simultaneous love for and cynicism towards the values presented by the series. The stage show and the subsequent film *The Brady Bunch Movie* (1995) reveled in the kitsch taste of 1970s culture, complete with "groovy" bell bottoms and day-glo orange and lime-green color schemes. Yet, although the stage production and the film gleefully deconstructed the absurdity of the wholesomeness of the Brady family, an admiration remained. Many children who grew up with the show came from families of divorce, or were "latch-key" children with both parents working. Consequently, some of those amused at the naiveté of the series also admittedly envy the ideal nuclear family that they never had and that the Bradys represent.

Much like *Star Trek*, another Paramount-produced television series of the late 1960s, *The Brady Bunch* was underappreciated by critics and network executives, but fan loyalty has made the series a franchise for book deals,

memorabilia and feature films. A cultural throwback even in its time, the family led by "a lovely lady" and "a man named Brady" has become celebrated in part precisely for its steadfast obliviousness to societal change.

BRAGG, MELVYN

British Media Executive/Personality/Author

Melvyn Bragg has become the most articulate spokesman for the arts on Independent Television (ITV) in Britain. As presenter and editor of *The South Bank Show* since 1978 and head of arts for London Weekend Television from 1982 to 1990 (since 1990 controller of arts), Bragg has attained the same fame as an arts expert for ITV that Huw Wheldon enjoyed in the 1960s for the BBC TV arts program

Monitor in the 1960s. Both Wheldon and Bragg became senior management administrators because of their successful role as arts presenters and both became articulate authors who wrote extensively about the directions in which television should develop.

Bragg was a working-class boy who went to Wadham College, Oxford. After Oxford he joined the BBC as a radio

and later television producer, but he never forgot his origins, and viewers shared with him his genuine delight in new artistic discovery. At the BBC he worked for the *Monitor* program under Huw Wheldon, and became widely respected for his arts reporting. In 1967 Bragg became a freelance writer and broadcaster, working as producer and editor of *New Release* and *Writers' World*, and later presenting the BBC series *Second House* and *Read all about It*. Interviewed in 1970, he explained that when he worked for the BBC in the sixties he had wanted to make arts programs current; he added that he wanted to put on the arts because "I think it's the only way that People, with a capital P, are going to find out about the things that I particularly like. Missionary is too strong a word for it and propaganda is the wrong word—but it's certainly to do with the fact that the people I was born and brought up among very rarely read books, but all of them look at television."

Bragg's tenure as the anchor of the BBC Radio 4 program *Start the Week*, as well as being editor of *The South Bank Show*, has given him a role as "Arts Tsar" or "Arts Supremo." Critics have suggested that "any traffic between high art and mass taste had to pass through Bragg's custom post", as Henry Porter wrote in the *Guardian*. Bragg replied that in England if people get too big for their boots they get cut off at the knees. His long tenure as presenter of *The South Bank Show* has kept the flag flying for the arts on ITV, and at times the program has achieved greatness, especially with Bragg's portrait of the English film director David Lean. His arts stories have been sold worldwide, and history will see his contribution to *The South Bank Show* to be as remarkable as Huw Wheldon's to *Monitor*.

Bragg is also a prolific writer with fifteen novels to his credit, some depicting his working-class background in Cumbria; his 1990 novel *A Time to Dance* was televised in 1992. He has written two stage musicals: *Mardi Gras* in 1976 and *The Hired Man* in 1984. His screenplays include *Isadora*, *Jesus Christ Superstar* and, with Ken Russell, *Clouds of Glory*. Bragg is also a prolific journalist, and has written for the *Guardian*, the *Daily Mail* and the *Evening Standard* and other English newspapers.

As chair of the ITV program contractor Border Television since 1990, Bragg's views are heard with respect. Without his skills and dedication, it is possible that arts programs on ITV might have been marginalized in the same way that ITV religious programs have been. His presence has ensured good time slots and good ratings for *The South Bank Show*. And his clear-sighted integrity has endeared him to television makers, artists and politicians alike.

Established as an outstanding arts presenter, Bragg is also seen as a wise elder statesman commenting on the future of ITV. In the 1980s his *Guardian* article in July 1984 on ITV's identity crisis was a timely warning of ITV's future problems. In the 1990s he warned the government that British television is being turned into a two-tier system, "telly for nobs and telly for slob", and that it was being destroyed by a "class and cash system" whereby satellite and

cable television systems were able to syphon off prime material. Every newspaper reported his speech, and the *Daily Telegraph* devoted an editorial to the subject. Such leadership, all too rare in the independent sector, suggests that Melvyn Bragg will be remembered as one of the greatest of the ITV leaders in the 1980s and 1990s.

BRAMBELL, WILFRID

British Actor

British character actor Wilfrid Brambell became nationally famous late in his career as Albert Steptoe in the BBC's most popular and successful sitcom, *Steptoe and Son*, although the character he played was considerably older than he was. He was never one for starring roles, but supplied reliable support in a variety of stage, screen and television roles before Albert Steptoe thrust him into the limelight. Television appearances included a variety of parts in adaptations of classic texts, including *The Government Inspector* (1958), *Bleak House* (1959) and *Our Mutual Friend* (1959), all for the BBC.

Writers Ray Galton and Alan Simpson wanted to use straight actors, rather than comedians, when casting the leads for their new BBC comedy *Steptoe and Son* in 1962. Harry H. Corbett was cast as Harold Steptoe and Brambell given the role of his father Albert. Over the years to follow, the actors and writers together were to develop characters which found their way into the national consciousness.

Albert Steptoe is an old-time rag-and-bone man who inherited the family business of the title from his father and now runs it with his son, Harold. Harold goes out on the cart to collect the junk, while Albert remains at home, ostensibly to run the administrative side of the business, but, in reality, to take it easy or go out to the cinema. Albert is a widower. He still has an eye for the ladies, and for the main chance, though generally espousing an old-fashioned morality. He is a veteran of the Great War and bemoans declining standards, but his own behaviour is often gross and earthy in the extreme. He rarely washes and, when he does, is liable to eat his evening meal in the bath. His language and behaviour are, in Harold's eyes in particular, uncouth, prompting the description, "You dirty old man!", the series' only catchphrase.

Brambell played Albert Steptoe as a grumpy old curmudgeon, capable of resorting to the most pathetic pleading to get his own way. The role of the scruffy old man could not have been further from the rather suave and cultured person Brambell was in real life.

Steptoe and Son ran for four series between 1962 and 1965. It regularly attracted audiences of over 20 million, from all sectors of society, and in 1963 a *Steptoe and Son* sketch was performed by Brambell and Corbett as part of that year's Royal Variety Performance. Between series, and after Galton and Simpson brought it to an end, both Brambell and Corbett were in demand for movie parts because of their great popularity. Amongst Brambell's roles was that of Paul McCartney's grandfather in the Beatles film *A Hard Day's Night* and the White Rabbit in Jonathan Miller's 1966 television version of *Alice in Wonderland*.

Steptoe and Son was revived, in colour, by the BBC in 1970 and ran for another four series between then and 1974. There were also two spin-off feature films. The characters and situations had not changed—nor had the quality of writing and performance or the popularity of the show.

—Steve Bryant

WILFRID BRAMBELL. Born in Dublin, Ireland, 22 March 1912. Attended schools in Dublin. Married: Molly (divorced, 1955). Stage debut as a child, entertaining troops during World War I, 1914; began professional acting career as an adult at the Gate Theatre, Dublin; toured with ENSA during World War II; first appearance on London stage, 1950; single appearance on Broadway, 1965; played character parts in theater and films before achieving fame as Albert Steptoe in long-running *Steptoe and Son* comedy series, 1962–74. Died in London, 18 January 1985.

BRAZIL

Brazil has one of the world's largest and most productive commercial television systems. Its biggest television network, TV Globo, is the fourth largest commercial network in the world. Brazil is also one of the largest television exporters within Latin America and around the world, particularly of *telenovelas*, the characteristic Latin American prime time serials, which have become popular in a many countries.

Though Brazilian television began in 1950, it remained urban and elitist. Sets were expensive, programs were broadcast live, and transmitters covered only major centers. As in many other settings, that era of early television produced quite a bit of classic drama, and during this period local traditions in variety, news, drama and *telenovelas* were established. The advent of videotape around 1960 opened Brazil to imported programs. Again, typical of countries then developing their television systems, the imports dominated programming for much of the decade, but their presence also stimulated some efforts at creating local networks. Two major early networks, TV Tupi and TV Excelsior, operated at that time.

Television became a truly mass medium in Brazil earlier than in most developing countries. The military governments which took power in 1964 saw televisual communication as a potential tool for creating a stronger national identity, creating a broader consumer economy, and controlling political information. The military pushed television deeper into the population by subsidizing credit for set sales, by building national microwave and satellite distribution systems, and by promoting the growth of one network they chose as a privileged partner. TV Globo, which also started in 1964, created the first true national network by the late 1960s. Censorship of news was extensive under the military governments between 1966 and 1978, but they also encouraged national television program production. In the

early 1970s, several government ministers pushed the commercial networks hard to develop more Brazilian programming and reduce reliance on imported programs, particularly those that contained violence.

The 1960s represented a formative period for genre development. Brazilian *telenovelas* had largely been patterned after those in other Latin American countries, even using imported scripts, but during these years they were developed into a considerably more sophisticated genre by TV Excelsior in São Paulo and TV Globo in Rio. A key turning point was the 1968 *telenovela*, *Beto Rockefeller*, a well-produced story reflecting a singular Brazilian personality, the Rio good-lifer or *boa vida*. By the 1970s, *telenovelas* were the most popular programs and dominated prime time on the major networks, TV Globo and TV Tupi. TV Globo, in particular, began to attract major writers and actors from both film and theater to also work in *telenovelas*. The Brazilian *telenovelas* became good enough, as commercial television entertainment, to be exported throughout Latin America and into Europe, Asia and Africa.

Another major genre of the 1960s was the *show de auditório*, a live variety show mixing games, quizzes, amateur and professional entertainers, comedy, and discussion. The *shows de auditório* have been extremely popular with the lower-middle and lower-classes, and, according to analyses such as Sérgio Miceli's 1972 *A Noite da Madrinha* (*Evening with the Godmother*), played an extremely important role in drawing them into television viewing.

The years 1968 to 1985 constitute Brazilian television's second phase. In this period TV Globo dominated both the audience and the development of television programming. It tended to have a 60-80% share of the viewers in the major cities at any given time. TV Globo was accused during this period of representing the view of the government, of being its mouthpiece. Other broadcast television networks found

themselves pursuing smaller, more specific audience segments largely defined by social class. SBS (Sílvio Santos) targeted a lower middle class, working class and poor audience, mostly with variety and game shows. The strategy gained it a consistent second place in ratings in most of the 1980s and 1990s. TV Manchete targeted a more elite audience initially, with news, high budget *telenovelas*, and imported programs, but found the segment too small to gain adequate advertiser support. TV Bandeirantes tended to emphasize news, public affairs and sports. All three ultimately wished to pursue a general audience with general appeal programming, such as *telenovelas*, but generally discovered that such efforts still did not gain an audience sufficient to pay for the increased programming costs.

Brazilian television since 1985 has gone through a third phase, marked by its role in the transition to a new civilian republic. In 1984, TV Globo initially supported the military government against a campaign for direct election of a civilian government, while other media, including other television networks, many radio stations, and most of the major newspapers supported the change. Perceiving that it might literally lose its audience to the competition, Globo switched sides and supported transition to a civilian regime, which was indirectly elected in a compromise situation. The new political circumstances immediately reduced political censorship and pressure on broadcasters.

The fourth phase of Brazilian television has been its internationalization. The importation of television programs into Brazil declined from the 1970s through the 1980s, as Brazilian networks produced more of their own material. TV Globo often filled 12-14 hours a day with indigenous productions. TV Globo and other networks also began to export programs, particularly *telenovelas*, and Brazilian exports of programming to the rest of the world soon became economically and culturally significant. Brazilian exports reached over a hundred countries and the programs have often proved great international successes. This is particularly the case with historical *telenovelas* such as *A Escrava Isaura* (*Isaura the Slave*), about the abolition of slavery in Brazil, a hit in countries as diverse as Poland, China, Cuba and most of Latin America.

The recent fifth phase of Brazilian television is marked by the appearance of some new video distribution systems. The first new technology to diffuse widely in Brazil was the home videocassette recorder (VCR), which largely gave the middle and upper classes greater access to imported feature films. The new technology with most effect on Brazilian electronic media, however, is the satellite distribution of television to small repeaters throughout the country. In the 1980s, thousands of small towns in rural Brazil purchased satellite dishes and low power repeaters to bring in Brazilian television networks, effectively extending television to 99% of the population. Recent studies show that over 90% of the population probably has television sets. New video technologies entered the Brazilian television market in the 1990s, offering focused or segmented programming through additional advertising supported UHF

(ultra high frequency) channels or pay-TV systems such as subscription television (STV), cable TV systems, multichannel multipoint distribution systems (MMDS) and direct satellite broadcasting (DBS).

In this most recent period three main approaches have so far been used to support programming and distribution: Advertising supported UHF, exemplified by the Brazilian adaptation of MTV, which features about 10-20% Brazilian music; over-the-air pay-TV systems, which usually rely on imported channels like CNN, ESPN and HBO; and DBS (Direct Broadcast Satellite) systems, which require subscription. So far only MTV has gained even a small share of the audience. Studies to date indicate that most satellite dishes and many cable connections are being used to secure better reception of Brazilian channels.

Even though the new technologies seem to threaten to bring in a new wave of largely U.S. programming, then, the audience studies so far do not indicate a strong audience response to them, except perhaps among a globalized elite and upper middle class. The dominant characteristic of Brazilian television still seems to be that of a strong national system with a distinct set of genres very popular with its own audience and in export.

BRIDESHEAD REVISITED

British Miniseries

B*rideshead Revisited* was made by Granada television, scripted by John Mortimer and originally shown on ITV in October 1981. The eleven episode adaptation of Evelyn Waugh's novel of the same name helped set the tone of a number of subsequent screen presentations of heritage England, such as *Chariots of Fire* (1981), *The Jewel in the Crown* (1982), *A Passage to India* (1984), and *A Room with a View* (1986). These "white flannel" dramas, both on television and on the big screen, represented a yearning for an England that was no more, or never was. *Brideshead Revisited* opens in England on the eve of the World War II. Charles Ryder (played by Jeremy Irons), the main character and narrator, is presented as a rather incompetent officer in the British Army. He stumbles upon an English country house, which he has visited more than twenty years before. Upon seeing the house, Charles begins to tell the story of his years at Oxford, his meeting with Sebastian Flyte (Anthony Andrews) and his love for Julia (Diana Quick). This retrospective narrative is nostalgic in two senses. It is concerned with Charles' nostalgia for his affairs in the interwar period. But it is also concerned with a nostalgia for a time before World War I—a longing for a lost way of life, for an Edwardian England.

The first five episodes focus on Charles' relationship with Sebastian, dealing candidly with homosexual passion. Parts six to eight portray Charles' "dead years," his ties to the Flyte family apparently severed. His growing love for Julia returns him to Brideshead. The final three parts follow the development and decline of this relationship and the death of Lord Marchmain.

The locations are centrally important in the drama. In the early episodes of the serial Charles recounts his years at university in Oxford. Establishing shots of "dreaming spires" and college courtyards paint a picture of opulent, languid, summer days. Likewise Brideshead Castle, the home of Sebastian and Julia, presents in stark symbolic form the once commanding heights of a now declining aristocracy. The stately home was actually Castle Howard in Yorkshire, the home of the then BBC chair, George Howard. These were

deliberate signs of "quality". *Brideshead Revisited* visually displayed all the hallmarks of "quality television". The serial, which lasted over twelve hours in total, was officially costed by Granada television at £4.5 million, but other estimates put the figure closer to £11 million. Granada was committed to capturing an accurate atmosphere of Waugh's original novel and the high production values signaled a desire for authenticity. For example, filming on board the ocean liner the *Queen Elizabeth II* cost £50,000 per eight minutes of film. Other rich backdrops were provided by expensive location filming in Venice, Malta, and the island of Gozo. The large budget was justified by artful creation: "every frame a Rembrandt," as Mike Scott put it. Viewers, taken with the obvious prestigious connotations of the production, frequently mistook the serial as originating from the British Broadcasting Corporation.

The visual lushness of the serial was matched by the excessive decadence of Sebastian and his various friends. Waugh's misogyny is revealed and we are delivered a gathering of aristocratic men accustomed to each others' company rather than to women. The myth of Edwardian England is fashioned through their clothes and manners. Sebastian is styled in cricket whites, Charles in tweed. The foppishness of their character is matched by the flow of their loose fitting wardrobe. Altogether, we are presented with a 1920s version of the Edwardian dandy—"tastefully" homoerotic. Sebastian's Teddy Bear, Aloysius, which is closely clutched in the early episodes, became a popular icon in the early 1980s of a new breed of white flannelled men. As the drama unfolds Charles is caught within a more engulfing family romance. As Charles comes to know the family and as his love for Julia grows, Sebastian grows more melancholy and the idyllic images of Oxford and Brideshead Castle give way to a more disturbing ambiance of loss and mourning.

The elegance and nostalgia, the longing for a bygone "Englishness" of empire and perceived stability led to *Brideshead* being widely attacked in cultural criticism. It was seen as a "Thatcherite text", part of a resurgence of regressive nationalism. It was criticised for its slow, reverential pace,

Brideshead Revisited

for wallowing in inherited wealth, for being a glorified “soap”. Nevertheless, the production is seen internationally as an example of what the British do best, a large-scale “quality” production of television drama.

BRIGGS, ASA

British Historian

Asa Briggs is the most important broadcasting historian in Britain. By writing about broadcasting as part of modern British social history, he has become a powerful advocate for the continuation of the British Broadcasting Company (BBC).

A Victorian historian of considerable note, Asa Briggs began his great work *The History of Broadcasting in the United Kingdom* in the 1960s. The first volume, entitled *Birth of Broadcasting*, was published in 1961, and contained a marvelously evocative description of the birth of the BBC, and its founder John Reith, through 1927. The second volume, *Golden Age of Wireless*, published in 1965, covered the period from 1927 to 1939, and received very favorable reviews. Volume three, *War of Words*, covered the war years, 1939 to 1945. The fourth volume, entitled *Sound and Vision*, covered the period from 1945 to 1955, and the final volume, *Competition*, from the end of the BBC monopoly in 1955 to the mid-1970s.

Because independent television was not created until 1955, Briggs is primarily a historian of the BBC. However, in 1985 Briggs was commissioned by the independent companies to write with Joanna Spicer an account of the way the Independent Broadcasting Authority organized awarding franchises in 1980. In this book *The Franchise Affair* his normal Olympian detachment from the politics of broadcasting was dropped in a fascinating and often critical account of the development of independent TV. Cynics pointed out that Briggs had been a director of Southern Television, one of only two companies whose franchise was arbitrarily removed in 1980. *The Franchise Affair* was published by Hutchinson, a wholly owned subsidiary of London Weekend Television, which was re-awarded its franchise.

Made Baron Briggs of Lewes in 1976, Briggs is often seen as an establishment figure keen on preserving the status of the BBC. But readers of his 1985 compilation volume, *The BBC: The First 50 Years*, were delighted to find that Briggs was not uncritical of the organization that sponsored his mammoth *History of Broadcasting in the United Kingdom* and paid for his offices in London.

Perhaps Briggs' greatest contribution to British broadcasting may not be his history books; it could be his role as chancellor of the Open University from 1978 to 1994, a non-residential institution which provides primary contacts

with its students through radio and television broadcast. The Open University has grown to become a major educational institution, awarding degrees for low fees, while maintaining high intellectual standards. Briggs has spent some of his prodigious energies fostering the growth of similar Open Universities of the Air in countries of the British Commonwealth.

As a member of the Campaign for Quality Television, Briggs has been a great defender of the BBC's charter, which came up for renewal in 1996. Thanks to the many defenders of the BBC's position in British society, not least to the Campaign for Quality Television, the BBC had its charter renewed for a further 15 years. Briggs is well satisfied with the result. Thanks to his influence, perhaps in the future some historian will be able to write a history of the First Hundred Years of the BBC. Briggs' contribution to broadcasting is that of historian and advocate. He has skillfully narrated the story of the most important of all British media enterprises.

—Andrew Quicke

BRINKLEY, DAVID

U.S. Broadcast Journalist

David Brinkley and Chet Huntley debuted NBC's *The Huntley—Brinkley Report* in October 1956. A few months earlier NBC producer Reuven Frank had put them together as a team to anchor the network's television coverage of the Democratic and Republican presidential nominating conventions. Network news would never be the same. Nor would Sunday mornings a quarter of a century later when Brinkley introduced on ABC, *This Week with David Brinkley*. Since the mid-1950s Brinkley has not only reported the news; he has also helped to shape the industry of television news. His renowned wit, his singular delivery, and his superb TV news writing style have made him an institution in broadcast journalism.

Brinkley's story is as interesting as any he has ever covered. It begins in a small North Carolina town in 1920, and takes him to the pinnacle of media stardom, a solid journalist with enormous credibility who has also been so famous that he was once more recognizable than John Wayne and the Beatles. And the media world has informally named him one of the "Magnificent Seven" (which also includes Barbara Walters, Peter Jennings, Sam Donaldson, Hugh Downs, Ted Koppel, and Diane Sawyer—all of ABC).

But Brinkley was no star when he first went to NBC radio in 1943. His talent for strong and clear writing became evident as he continually struggled to write for announcers who read only the words and seemed to miss the meaning. He also began to gain experience as a newscaster when he did ten-minute newscasts for the network. Nor was he famous when he became the Washington reporter for John Cameron Swayze's *Camel News Caravan*, NBC's early TV news effort. But as the 1956 political conventions came into

focus for the U.S. TV audience, they came to see, hear, and to know Brinkley as a new breed of TV journalist.

David Brinkley
Photo courtesy of ABC

Brinkley was one of the first journalists to be absolutely comfortable with this new medium of TV. As his boss at NBC, Reuven Frank, has often said, Brinkley had wit, style, intelligence, and perhaps most importantly, a lean writing style filled with powerful declarative sentences which is very effective in TV news. And Brinkley was aware that TV was made up of pictures and corresponding sounds. He understood that the reporter had to stop talking and let the news footage tell the story. "Brinkley writes silence better than anyone else I know," says Frank. And when this natural TV journalist was teamed with the California reporter Chet Huntley, they literally took TV audiences by storm.

TV news before Huntley and Brinkley was a combination of dull film reports, similar to movie theater newsreels of the 1940s, and a radio reporting style similar to the World War II era. But Huntley and Brinkley took TV news into a new age of electronic journalism. According to one of their main competitors, Don Hewitt of CBS who produced Walter Cronkite and later *60 Minutes*, "They came at us like an express train." When Huntley spoke, it was clear the story was a global story. When Brinkley spoke, it was clear it was a story about Washington. They began with a 15-minute newscast, and in 1963 increased to 30 minutes per night. Audiences in the 1990s take for granted seeing different journalists in different cities talking to each other on TV. But it was *The Huntley-Brinkley Report* that began such techniques. And this switching back and forth between Huntley in New York and Brinkley in Washington created the now famous final exchange from every newscast: "Good night, David"... "Good night, Chet." The order of the exchange alternated night by night—until their last newscast together in 1970 when Huntley's "Good night, David" brought the response, "Good-bye, Chet."

In that year Huntley retired to a Montana ranch, and Brinkley became progressively restless at NBC. His important role in *The Huntley-Brinkley Report* could not be matched, and he did not continue producing the excellent documentaries on *David Brinkley's Journal*. He became known as the grumpy older newsman in the NBC family. He did a series of programs for NBC, including *NBC Nightly News* and *NBC Magazine with David Brinkley*. But he hated to go to New York to do the news, since he saw his news beat as Washington. Finally, in 1981 Roone Arledge hired Brinkley for ABC. All the years with *The Huntley-Brinkley Report* had made Brinkley into the absolute Washington insider. When ABC gave him the Sunday program *This Week with David Brinkley*, he and his guests could talk among themselves and with all the other Washington insiders about the week's news event.

Brinkley asked his friend George Will to join him on *This Week with David Brinkley*. ABC reporter Sam Donaldson joined as the resident "liberal" to confront Will's avowed "conservative" stance. Besides the guests who were interviewed every week, other reporters such as NPR's Cokie Roberts have joined Brinkley, Will, and Donaldson. By some critics the program has been deemed opinionated,

referred to as ABC's Op-Ed page. But there has traditionally been very little interpretation of news on U.S. TV, and *This Week with David Brinkley* seems to have partially filled the void. Because of Brinkley's strong Washington ties, the show has at times appeared to be one group of Washingtonians talking to another. But criticisms aside, with ABC's *This Week with David Brinkley*, Brinkley's enormous talents and his many decades of TV news experience have been given free reign.

Brinkley has received many awards, most notably the Presidential Medal of Freedom by President George Bush. But when asked what he thought his legacy to TV news would be, Brinkley told *Broadcasting* magazine, "(E)very news program on the air looks essentially as we started it (with *The Huntley-Brinkley Report*). We more or less set the form for broadcasting news on television which is still used. No one has been able to think of a better way to do it."

—Clayland H. Waite

BRITISH ACADEMY OF FILM AND TELEVISION ARTS

The British Academy of Film and Television Arts, (BAFTA) developed from the British Film Academy (founded 1947) and the Guild of Television Producers and Directors (founded 1953). The two organizations amalgamated as the Society of Film and Television Arts in 1958 which assumed its present identity as BAFTA in 1976. One of the Guild's stated aims was to provide awards of merit for outstanding work in television. The first of the Guild award ceremonies was held at the Television Ball of the Savoy Hotel in October 1954. The awards on this occasion were six in number, presented to actors (2 awards), writer, producer, designer, and a "personality" award. In 1957 the number of awards was expanded to nine to accommodate entries from Independent television, including one for "Light Entertainment Artist" which went to Tony Hancock. In 1960 the Desmond Davis award for "outstanding service to television" was added to commemorate a founding member and past chairman. The first recipient was the broadcaster Richard Dimbleby. The number and the categories covered increased and varied over the years, and by 1967 there were 17 Guild awards and 3 additional awards presented under the aegis of the Guild by Mullard Ltd., Shell International and the National Institute of Adult Education. The total had swelled by 1993 to 32 television and 21 film BAFTA awards.

BAFTA consists of approximately 3000 members in the United Kingdom with branches in Manchester, Scotland, Wales and Los Angeles. Any person working within the film and television industries in Britain is eligible to join. The organization prides itself on its democratic principles and has developed voting procedures with checks and balances to ensure that awards are allocated on a combination of popular vote and expert opinion. Nominations are collected direct from the members throughout a year. Broadcast companies are permitted to add programmes to the final members' lists in the television categories. Members then vote directly to select the Best Film as well as all the Film and Television Performance awards.

The Production and Craft Awards are decided by peer-group juries (the chairman appointed by the Council has absolute discretion to select experts of diverse interests whether members or non-members). The jury panel reaches its decision following viewings of the short-listed candidates' work.

The Film Committee determines the nominations for the Alexander Korda Award for the Best British Film and the Council of the Academy selects the winner. The Michael Balcon, the Alan Clarke, the Dennis Potter and the Richard Dimbleby Awards, the Foreign Television Programme, the Television Award for Originality, the Academy Fellowship and any special awards are awarded by the Council of Management.

These built-in safeguards in the award process ensure a balance between respect for democracy and professionalism. It has also resulted in high credibility and prestige attaching to BAFTA awards which, though not as influential as the American Academy Awards, are increasingly seen as enhancing the subsequent commercial success of films and programmes. Televising of the Award Ceremony in Britain is a media event second only to that for the Oscars, and keeps BAFTA awards in the public eye. Despite the benefits of

*British Academy of Film and Television Arts
Courtesy of BAFTA*

awards, there has been little evidence in Britain of any lobbying to influence panel decisions.

Television awards are primarily devoted to British television, although there is a category for the best programme not in English and for Best Foreign Television. As yet there have been no submissions by satellite channels, but these are eligible to submit and are likely to do so in the near future. New categories of award are constantly emerging in response to developments within the media: a recent addition has been the Lew Grade Award for Significant and Popular Television and under consideration is an award for best interactive video production.

Film awards are international, although there is one reserved for best British film—the Alexander Korda Award. This category is increasingly difficult to determine given the prevalence of co-production arrangements, films made for

television with prior release to cinema audiences (e.g. *Film on Four* by Channel 4) and films made in Britain with American backing.

As a registered charity BAFTA supports a wide range of educational and training initiatives for young people (e.g. the Carl Foreman Award) provides a scholarship to study script writing in the University of California.

Among distinguished contributors to the shaping of the organization have been: Richard Cawston, Lord Attenborough, Sir Sydney Samuelson and Sir David Puttnam. The current chairman is Edward Mirzoeff CVO.

—Brendan Kenny

The author would like to thank the following BAFTA personnel for their generous assistance: Doreen Dean, Harry Manley and Peter Morley.

BRITISH PROGRAMME PRODUCTION COMPANIES

The British government has always played a key role in the development of broadcasting policy, which has direct implications for the production of television programmes in the United Kingdom. No significant structural changes have taken place without the report of a major government committee followed by a parliamentary act. Some of the more significant reports and acts are:

- the Selsdon Committee Report (1935) on the development of television and the relative merits of the different technical systems available;
- The Hankey Committee Report (1945) on post-war television in Britain;
- the Beveridge Committee (1949–51), the result of which was the Broadcasting Act of 1954 which recommended the creation of commercial TV;
- the Pilkington Committee (1960–62), which led to the Broadcasting Act of 1964 and the creation of BBC2;
- the Annan Committee (1974–77), which led to the Broadcasting Act of 1980 and the creation of Channel 4;
- The Hunt Report (1982), which led to Cable and Broadcasting Act 1984 setting up the new cable authority to oversee the selection and monitoring of the operations of the new cable operators;
- the Peacock Report published in July 1986, which reinterpreted the role of the market in broadcasting, argued against introducing advertising on the BBC system but recommended a quota for independent production;
- the Broadcasting Act of 1990, which restructured the Independent Broadcasting Authority (IBA) as the Independent Television Commission (ITC),

incorporating the cable authority and also restructured the ITV franchise system;

- 1995 BBC Charter Renewal.

The BBC History

By far the largest and still in many ways the most interesting producer of television in the United Kingdom is the British Broadcasting Corporation itself. The BBC is a public corporation which operates under a Royal Charter of Incorporation (first granted on 1 January 1927 when the BBC was a radio organisation) and funded through a license fee system. The corporation now supplements this income from foreign sales and cable and satellite contracts. It is a national broadcaster, based in London with eight regional TV studios in England and further studios in Wales, Scotland, and Northern Ireland. The government appoints, on a five-year rolling basis, a board of 12 governors to oversee the running of the corporation.

John (later Lord) Reith was the first managing director of the BBC when it was founded in 1922 as the British Broadcasting Company, and was eventually named director general. In his 16 years at the BBC he exerted the greatest direct influence on attitudes about broadcasting in the United Kingdom, and, indirectly influenced the development of public service broadcasting in Canada, Australia, and New Zealand. Reith gave rise to the original principle of public service broadcasting “to inform, educate and entertain.” Public service broadcasting is a much debated principle and includes attitudes about the responsibility to be objective and balanced when reporting events in news, current affairs, and documentary programmes.

Following World War II, BBC Television resumed transmissions on 7 June 1946 and enjoyed a monopoly of TV broadcasting until Associated Rediffusion made the first commercially-funded transmission at 7:15 P.M. on 22 September 1955. A second BBC TV service, called BBC2, was

launched in April 1964. The channel had a more specialized and cultural focus.

There have been 11 director generals since Reith. Perhaps the most famous has been Hugh (later Sir Hugh) Carleton Greene, brother of novelist and film critic Graham Greene. He defended the BBC against criticism of some of its most exciting and daringly satirical productions (*That Was The Week That Was*), that reflected the shifting moral and political climate of the “permissive” and “swinging” 1960s. Director General John Birt is noted for his role in restructuring the BBC and its practices in the mid-1990s in order to make the corporation more financially and administratively efficient and smaller in scale. Whilst not responsible for the 1991 system of “Producer Choice,” John Birt developed a notoriety for implementing a more wide-ranging version of the controversial system whereby all producers have total control over an individual programme budget and don’t have to use the internal technical facilities. Instead they are encouraged to hire outside technical facilities with the lowest bid on a project.

The BBC World Service is one of the oldest and most respected services globally, a reputation which was established during World War II. It is the only section of the BBC not funded from the license fee—the bulk of the income comes from the Foreign Office—and it launched BBC World Service TV in October 1991.

The BBC has also established significant operations which lie outside mainstream broadcasting. These include BBC Enterprises which was set up to market BBC programmes internationally and has become one of the key wings of the whole operation, and the BBC’s Open University operation which has transmitted OU television and radio programmes since 1971.

Commercial Television History

In the mid-1950s, commercial television began in the United Kingdom. A new group of broadcasters emerged, who were also to be heavily involved in original programming for television. In setting up commercial television, the government established the Independent Television Authority (ITA) on 30 July 1954 by an act of parliament. The ITA later became the Independent Broadcasting Authority (IBA), when commercial radio was introduced in 1972. The ITA/IBA fulfilled four functions:

- to build, operate and own the transmitters;
- appoint the independent programme companies;
- supervise programmes; and
- control advertising.

The purpose of ITA/IBA was to ensure that the commercial companies observed a broad public service broadcasting policy, and as balanced a schedule of programmes as the BBC. Independent television broadcasters were also required to provide fair, objective, and balanced reporting in news, current affairs, and documentary programmes. Similarly to the BBC, the ITA/IBA had a board of 12

governors appointed by the government. The first chair was Sir Kenneth Clarke and the first director general was Sir Robert Fraser, both appointed on 3 August 1954.

The 1990-restructured organization, now named the Independent Television Commission (ITC), periodically organises the reallocation of commercial television franchises as a way of encouraging companies to maintain and improve standards. After the founding companies were established in 1955, franchise reallocations took place in 1968, 1982, and 1990. Most of the companies maintain their franchises, but over the years, there were notable changes.

Commercial TV is funded by advertising and overseas sales and, more recently, through sponsorship, cable, and satellite deals. Until 1990, the commercial companies paid an annual fee to the ITA/IBA to finance that operation and also a levy to the Exchequer which, for many years, amounted to 66.6% of all profits.

Commercial TV is structured regionally with two companies serving London (one weekdays, and the other weekends) and 13 others serving the rest of the United Kingdom. The companies jointly owned a company which was a national news provider, Independent Television News (ITN). The commercial companies did not compete with each other for advertising revenue but instead worked in consort to compete with the BBC for audience share. After a financially disastrous first year of operation the commercial companies established the “Network” where the five largest companies met regularly to organise the schedule for prime-time viewing (i.e. 7:30-10:30 P.M.). Between these hours programming across the United Kingdom is identical. For the rest of the schedule there are regional variations and “opt-outs.”

Traditionally the companies fell into three groups:

(1) The “Big Five” covered the four most densely populated parts of England—London (two companies), the Midlands, the northwest, and Yorkshire. These companies provided the bulk of the domestically-produced programmes for the network. The companies have changed over the years but the most influential have been: in London, Thames Television and London Weekend Television; in the Midlands, Central TV; in the northwest, Granada TV; and in Yorkshire, Yorkshire TV.

(2) The middle five (sometimes called the “mini-majors”) covered the less populated areas and produced perhaps two hours of network programming a week, plus a range of regional programmes. The regions are: south and southeast England; east of England; northeast England; central Scotland; and Wales and the west of England.

(3) The smallest five cover the remote and least populous areas of the United Kingdom. They make an average of one hour a day of local programming. The regions are: southwest England; the Borders (south Scotland and the Isle of Man); north Scotland; Northern Ireland; and the Channel Islands.

Channel Four

A second commercial channel—Channel Four—began transmission on 2 November 1982. This national channel, a wholly

owned subsidiary of the ITC, is also funded by advertising but has a specialized, minority interest. Channel Four has a radically different structure to the other TV organisation in the United Kingdom and was set up as a result of the Annan Commission Report. Published in March 1977, the report recommended that a fourth channel be run by an Open Broadcasting Authority on a publishing model.

In addition to mainstream programming, it encourages programmes which reflect the concerns of minority groups (blacks, the disabled), disadvantaged groups (women, the working class), and political parties, broadcasting partisan programmes. Individual programmes are allowed to display bias and offer controversial views as long as the overall schedule reflects a balanced range of positions.

Channel Four does not make its own programmes but commissions independent producers and production companies (including commercial ITV companies) to make programmes and is therefore considered to function more like a book publisher. This structure encouraged the development of small independent television production companies in the early 1980s.

Wales has its own Channel Four called Sianel Pedwar Cymru (S4C) which began transmission on 1 November 1982 and transmits a significant percentage of its programmes in Welsh. It also transmits BBC Welsh language programmes, making it the only commercial channel to schedule BBC programmes.

Breakfast Television

Breakfast TV was not introduced until 1983. The IBA created a franchise for a national station to run for three hours each morning. It was awarded to TV-AM, a new TV company which featured on screen the Famous Five: David Frost, Michael Parkinson, Robert Kee, Anna Ford, and Angela Rippon. TV-AM promised to offer a dynamic and exciting news service and took to the air with a self-declared "mission to explain." The BBC decided to establish its own five-days-a-week breakfast news service (*Breakfast Time*, renamed *Breakfast News* in 1989), which went on air two weeks earlier (17 January 1983), thereby making the competition tough for the fledgling commercial station which began transmission on 1 February 1983.

Viewer ratings for TV-AM's *Good Morning Britain* were disastrous and, in less than three months, four of the "Five," plus the chair and chief executive Peter Jay, resigned. Timothy Aitkin and, eventually, Bruce Gyngell took over, making a commercial success of the station. During the 1991 franchise renewals, TV-AM lost its license, when it was outbid by Sunrise Television (later renamed GMTV).

Shortly afterwards Channel 4 started its own breakfast service, which provided a high-powered news and business information service. Since 1982 it has offered a kid's show produced by Bob Geldorf's Planet 24.

The Main Commercial Television Companies

Thames Television won the London weekday franchise on 29 July 1968, and was formed by the merger of the American

Broadcasting Corporation (ABC) and Associated Rediffusion, the first company to begin commercial TV transmissions in 1955. For many years Thames was the largest and wealthiest of the ITV companies and built a reputation for producing a wide range of high quality programmes with a particular emphasis on contemporary drama. Jeremy Isaacs, director of programmes in the 1970s, became the first chief executive of Channel 4 and was dubbed "the finest Director General the BBC never had." Thames TV also owned the highly successful film production company Euston Films, which produced many major dramas including *The Sweeney*, *Minder*, *Out*, *Fox Widows*, and *Reilly—Ace of Spies*. Surprisingly, given the success of the company, it lost its franchise in 1991 when it was outbid by Carlton Communications. Since then Thames has concentrated on programme production and has also helped to establish the satellite channel U.K. Gold, which broadcasts archive Thames material alongside old BBC favourites.

London Weekend Television (LWT) obtained the franchise for weekend transmissions in London in 1967 and went on air on 2 August 1968, replacing Associated Television (ATV—the only company which held franchises in two regions). The company is well known for its light entertainment productions, current affairs coverage with *Weekend World* and *Walden*, and the longest running arts programme, Melvyn Bragg's *The South Bank Show* (launched in 1978).

Central Independent Television went on air on 1 January 1982, and covers the East and West Midlands region. Lord Grade of Elstree (Lew Grade) was, for many years, chief executive of ATV and the most powerful personality in British TV. He was also chair of Associated Communications Corporation which was Britain's only fully-fledged entertainment conglomerate. He was also, from the 1950s, the most successful exporter of British TV programmes to the United States including series such as *The Saint*, *The Persuaders*, *The Julie Andrews Show* and *The Muppets*. In 1991 Central retained its franchise with a bid of just £2,000 (there were no competitors) and was subsequently taken over by Carlton Communications.

Granada Television Network covers the northwest of England and began transmission on 5 May 1956. One of the most influential people in the early days of British television was Granada's chair Sidney Bernstein, who *The Observer* described in 1959 as "the celebrated Socialist millionaire, Sidney Bernstein, the Mr. Culture of TV." Granada TV Network Ltd was born out of the 22-year-old Granada Group which ran a chain of cinemas and theatres. Granada TV built a solid reputation as one of the most important contributors to the ITV network particularly in current affairs, drama, and regional programming. Its two most famous and longest-running shows are the current affairs programme *World in Action* (from January 1963 to present day) and the first British television soap opera *Coronation*

Street (from December 1960 to the present day). Granada is the longest surviving ITV company and in the 1990s took over LWT and also bought shares in Rupert Murdoch's satellite channel, BSkyB.

Independent Television News (ITN), established as a specialist news company in 1955, is a wholly owned subsidiary of the ITV companies. Its first bulletin was transmitted on 22 September 1955. Following the regulations of the 1990 Broadcasting Act, ITN was refounded as a profit-making news business with commercial contracts to the ITV companies and other broadcasters. It is owned by a consortium of Carlton, Central, Granada, LWT, Reuters (all 18%) and Anglia and STV (both 5%).

Until the creation of Channel Four, virtually all domestic television was produced by either the BBC or the ITV companies. Furthermore, strict controls were placed on the importation of foreign programming. Basically, 84% of all television transmitted had to be domestically produced. There was a proliferation of new small independent production companies, fueled by the Channel Four commissions, and the 1990 Broadcasting Bill that required both the BBC and ITV companies to commission at least 25% of their programmes from independent producers by 1993.

Alternate Delivery Systems

Cable television (using coaxial cable) began in the late 1940s as a master antenna system for communities that had poor reception signals due to buildings, topographical problems, or distance from relay antenna. In 1972 Britain's first local cable station was inaugurated by Greenwich Cablevision on 3 July with a programme entitled *Cable Town*. This station was followed by five others: Bristol Channel, Sheffield Cablevision, Swindon Viewpoint, Cablevision (Wellingborough) Ltd, and Milton Keynes' Channel 40, with two experiments taking place in Scotland.

Five Direct Broadcasting by Satellite (DBS) channels were allocated to Britain at the World Administrative Radio Conference (WARC) in 1977. Two of these channels were allocated exclusively to the BBC in 1982, the year that

Rupert Murdoch's Sky Channel in Europe was launched. Sky used existing telecommunication satellites to broadcast to cable stations and by the time the Astra satellites went into orbit, Sky was able to broadcast four satellite channels directly into peoples' homes.

Also in 1982 the British government accepted the Home Office recommendation that the new D-MAC technical format be adopted. Thus committed to this format British Satellite Broadcasting (BSB) won the DBS contract in 1986 and, after many financial and technical setbacks, the service was officially launched in April 1990. However Sky had already launched service using conventional television standards. Both companies experienced serious financial difficulties, Sky announcing operating losses in 1990 of £95,000,000 with £121,000,000 start-up costs. However, BSB's problems were even greater. On 2 November 1990 the merger of the two companies was formally announced. The new company was called BSkyB, trading as Sky. Sky offered nine of its own channels and marketed a range of other channels in its Sky Multi-Channel package.

Both cable and satellite have been slow to develop in the United Kingdom. A number of reasons have been suggested for this seeming lack of interest in these "new" delivery systems, including the generally high quality and wide variety of terrestrial television—despite the limit of four channels—resulting in overall audience satisfaction. In the 1990s cable was finally beginning to take off, and satellite "sports wars" got more people to subscribe to satellite channels.

However, a significant reason for the slow development of cable and satellite has been the undoubted success of video in the U.K. market, with one of the highest levels of video penetration in the world. The technology is used extensively for time-shift viewing—another indicator of audience satisfaction with British TV—but also for video rental which is particularly strong among the large ethnic communities, such as those from the Indian sub continent, where video is used to maintain cultural cohesion through the viewing of Asian films and TV programmes.

—Manuel Alvarado

BRITISH PROGRAMMING

There are a few points to note about British television programming. The first is that it is not uncommon for certain programmes—particularly, but not solely, light entertainment ones—to change production base and transmission channel. The second is that all domestic programmes not listed here as BBC productions have been produced either by one of the ITV companies or an independent commercial TV production company. The third is that production information about U.S. shows and those from

other countries, which air in the United Kingdom, are not indicated in this history.

The BBC provided the world's first public high-definition regular domestic television service from 3:00 P.M. on 2 November 1936. After the initial introductory speeches the first programme began with a cinema newsreel, followed by an international variety show involving British, American, and Chinese performers. After closing down at 4:00 P.M., the service resumed for another hour at 9:00 P.M.

when a short documentary and a magazine programme were screened, then the newsreel was repeated. In the three years until the closedown of British television on 1 September 1939 (due to the announcement of Britain entering World War II) a complete range of television programmes had been transmitted on the fledgling service. These included newsreels, documentaries, dramas, magazine shows, light entertainment, and children's programmes. Drama productions were almost solely theatrical productions of classics; on 28 March 1938, Cecil Madden established the Sunday night TV drama, beginning with the transmission of Pirandello's *Henry IV*.

From the earliest days, a mobile broadcast unit was utilized. The coronation of King George VI was covered in 1937, with a viewing audience of more than 10,000 people. The unit also covered other public occasions such as the Lord Mayor's Show, the Armistice Day Service, and a range of sporting events such as Wimbledon (tennis) and the FA Cup Final (association football). Undoubtedly the most popular offering was the twice-weekly one-hour magazine programme of topical and general interest, *Picture Page*, which ran from 1936 to 1939 and then returned in 1946 for a further 300 editions until 1954.

The immediate post-war years saw the continuation of *Picture Page* and the broadcast of events such as the Victory Parade (8 June 1946), and royal and sporting events such as tennis and test cricket. The largest such coverage of the 1940s was the televising of the XIVth Olympiad held in London in 1948.

Many plays were transmitted—including some written especially for TV—although very few films and filmed newsreels were broadcast due to industry fears of supporting the competition. The few films that were shown were recognised classics such as D. W. Griffiths' *The Birth of a Nation* (1915), Josef von Sternberg's *Der Blaue Engel* (*The Blue Angel*, 1930), Sergei Eisenstein's *Alexander Nevsky* (1938), and Marcel Carne's *Les enfants du paradis* (1945). The introduction of a ballroom dancing competition programme entitled *Come Dancing*, began in 1949 and is still running.

The early 1950s saw a rapid expansion of TV-set ownership, with the broadcast of the 1953 coronation of Queen Elizabeth II often cited as one of the driving causes. More than 2 million licenses were registered in 1953 (approximately 20% of all households). Licenses rose to over 10 million by the end of the decade. The coronation was broadcast for seven hours; it is estimated that 20 million people in the United Kingdom saw it before it was shipped for screenings in Europe, North America, and across the Commonwealth.

In the 1950s the BBC's monopoly of TV broadcast ended. The government ushered in television funded through the sale of advertising revenue at the end of July 1954, with transmissions starting on 22 September 1955. Commercial TV transformed the safe, traditional, and cosy world depicted in many programmes produced by the BBC.

The early part of the 1950s saw the production of the United Kingdom's longest running police series, *Dixon of Dock Green* (BBC, 1955–76), created by Ted Willis, one of the world's most prolific creators of television series. *The Good Old Days* (BBC), an Edwardian style variety show ran from 1953 to 1983. *What's My Line?* (BBC, 1951–62, 1973–74; Thames, 1984–90) could be characterised as a quiz show but belongs to a typically British radio and TV genre which continues to this day. This genre is best described as a parlour game show played by guest celebrities. Other examples include *Face the Music* (BBC 1967–84), *A Question of Sport* (BBC, 1970–), *Celebrity Squares* (ATV/Central, 1975–79; 1993–), *Call My Bluff* (BBC 1965–88), *Give Us a Clue* (Thames 1979–91).

Commercial television introduced new ideas and many new areas of programming. British television drama, for instance, was transformed by *Armchair Theatre* (ABC, 1956–69, Thames, 1970–74), which served as an umbrella programme for different productions by new writing talent, particularly under Canadian producer Sidney Newman. A more North American-style entertainment was also produced, such as the variety show *Sunday Night at the London Palladium* (ATV, 1955–67, 1973–74), and game shows such as *Double Your Money* (A-R, 1955–68) and *Take Your Pick* (A-R 1955–68). One example of the BBC buying an American format was *This Is Your Life* (BBC, 1955–64), although Thames took it over from 1969 to the present day.

A very popular production was the science fiction/horror serial *The Quatermas Experiment* (BBC, 1953) from which there have been a number of spin-offs. It was the half-hour filmed period action series which became the most popular drama. These included *The Adventures of Robin Hood* (ABC/Sapphire/ITP, 1955–59), *The Adventures of Sir Lancelot* (Sapphire, 1956–57), *The Adventures of William Tell* (ITC-NTA, 1958–59), *The Count of Monte Cristo* (Vision Productions, 1958), *Ivanhoe* (Sydney Box Prods.-Screen Gems/ITC, 1958).

In comedy, the first edition of *The Benny Hill Show* was produced by the BBC in 1955. The BBC continued to produce it, with a one year gap in 1967, until 1968. Thames (ITV) took it over in 1969 and ran it for the next 20 years. *Hancock's Half Hour* (1956–60) showcased the talents of Britain's best-loved radio comic, Tony Hancock, and Alfie Bass and Bill Fraser, the two main characters of the situation comedy *The Army Game* (Granada, 1957–61). The American shows *The Phil Silvers Show* and *I Love Lucy* were very popular.

In the 1950s, ITV established the practice of buying American shows to supplement its own production. The most popular purchases were traditionally American genres: westerns such as *Gunsmoke/Gun Law*, *Wagon Train*, *Cheyenne*, *The Lone Ranger*, *Rawhide*, or fast-moving police series such as *Highway Patrol* and *Dragnet*. Gradually British TV began to imitate such police series and the first of these was *No Hiding Place* (A-R, 1959–67). *The Alfred Hitchcock* shows were also popular (*Alfred Hitchcock Pres-*

ents and *The Alfred Hitchcock Hour*). In light entertainment, *The Black and White Minstrel Show* (BBC 1958–78) ran for 20 years until eventually the offensiveness of white performers “blacking up” was finally acknowledged. *Opportunity Knocks!* (A-R, 1956; ABC, 1964–67; Thames, 1968–78) was a talent show—a genre which has continued in many guises since.

Popular music shows began with *Six-Five Special* (BBC, 1957–58) and was followed by *Oh Boy!* (ABC, 1958–59), *Juke Box Jury* (BBC, 1959–67; 1979; 1989–90), *Thank Your Lucky Stars* (ABC, 1958–59). The notorious *Eurovision Song Contest* began in 1956 and the United Kingdom has broadcast it from 1957 to the present day.

The first twice-weekly soap opera was set in a hospital (*Emergency Ward 10*, ATV, 1957–65) and was soon followed by the popular American import *Dr. Kildare*.

Current affairs began to develop as a key area of television broadcasting in the 1950s with the introduction of an early evening five-nights-a-week programme *Tonight* (BBC, 1957–65). General arts programmes were launched with *Monitor* (BBC, 1958–65). The 1950s also saw the introduction of a number of programmes that still ran 40 years later. These include *Grandstand* (BBC, 1958–), the longest running live sports series on TV; *The Sky at Night* (BBC, 1957–), which is an astronomy programme presented by Patrick Moore; and the range of programmes with many titles fronted by Alan Whicker offering his idiosyncratic travelogues of the world. The children’s programme *Blue Peter* (BBC) also enjoyed surprising longevity, running from 1958 until the present day.

On 21 April 1964, the BBC launched its second channel—BBC2. To the annoyance of the commercial TV companies (who were not allocated their second channel, Channel 4, for nearly two decades), the BBC could schedule some of its more specialist programming to this “minority” channel and therefore compete more directly with ITV by running the most popular programming on BBC1.

To further restrict the commercial companies, in August 1965 the ITA instructed that from 8:00 to 8:55 P.M. Monday through Friday no more than two of five programmes could be from the United States, and no more than three could be crime or western series. This was followed by the rule whereby only 14% of output could be originated in the United States with a further 2% allowed from the Commonwealth and 1.5% from Europe. These proportions were not changed until the development of cable and satellite in the 1980s, and still pertain to broadcast television.

The largest national audience in British broadcasting history watched the final of the World Cup 1966 in which England beat West Germany 4-2 at Wembley. It is estimated that more than 33 million people watched the final.

On 2 December 1967 colour TV was officially introduced on BBC2. It is generally considered that the 1960s saw some of the most innovative and imaginative programming in the history of broadcasting in Britain. In the field of drama the BBC introduced *The Wednesday Play* (BBC,

1964–70), which, like *Armchair Theatre*, was innovative and commissioned a number of controversial and subsequently famous plays. These included Jeremy Sandford’s *Cathy Come Home* (1966), Nell Dunn’s *Up the Junction* (1965) and Dennis Potter’s *Vote, Vote, Vote for Nigel Barton* (1965). Peter Watkins’ *Culloden* (1964) covered an important battle in Scottish history and *The War Game* (1966) dealt with the devastating results of nuclear war. *The War Game* was not transmitted for 25 years because it was considered too distressing. On the popular drama front, one of the most enduring shows was the espionage series *The Avengers* (ABC, 1961–69). Popular too was the BBC’s production of the French novelist George Simenon’s *Maigret* (BBC, 1960–63) and the medical series set in rural Scotland *Dr. Finlay’s Casebook* (BBC, 1962–71), which STV began as a new series in 1993.

The BBC also introduced a new form of gritty realism with the creation of *Z Cars* (BBC, 1962–78), a police show, which was supported with the spin-off *Softly, Softly* (BBC, 1966–70). Another highly successful espionage series was *Danger Man* (ATV/ITC, 1960–61; 1964–67), starring Patrick McGoohan. As a result of this success, McGoohan was allowed to produce the enigmatic *The Prisoner* (Everyman/ATV, 1967–68) which, although only 17 episodes long, became one of the great cult series. Roger Moore starred in two “mid-Atlantic” thrillers, *The Saint* (ATV, 1962–69), which was followed in the 1970s by the unsuccessful series, *The Persuaders!* (Tribune/ITC, 1971–72), co-starring Tony Curtis.

BBC’s most successful series *Doctor Who* (1963–89), a science fiction programme about a time lord who travels through time, was designed for children but developed a cult status enjoyed by a huge and faithful adult audience. This was also the decade in which some major soap operas were created. In 1960 Granada TV launched *Coronation Street*, a representation of daily life in a northern working-class community, in the northwest but it was soon networked across the country. It still remains at the top of the audience ratings after over 35 years and transmissions have been increased from twice to four times a week.

In 1964 ATV introduced the highly popular *Crossroads*, a soap set in a Midlands motel, which ran for 24 years. Until 1985 when the BBC introduced the highly successful *EastEnders*, the BBC did not fare well with its soaps. Two were experimented with: *Compact* (1962–65) was set in the offices of a magazine, and *The Newcomers* (1965–69) presented the story of a London family that moved to a country town.

In the 1960s *Comedy Playhouse* (BBC, 1961–74) was created. This was a premiere comedy showcase in which pilots written by writers such as Alan Simpson and Ray Galton were televised. A number of the pilots went on to become some of the best loved comedy series on British TV. They included *Steptoe and Son* (BBC, 1962–65; 1970; 1972; 1974), and *Till Death Us Do Part* (BBC, 1966–68; 1972; 1974–75, which later became *In Sickness and in Health*, BBC 1985–). In the 1960s there was a rise of satirical shows such

as *That Was the Week That Was* (BBC, 1962–63) and *Not Only—But Also...* (BBC, 1965–66; 1970), innovative shows such as *Monty Python's Flying Circus* (BBC, 1969–70; 1972–73), and the enduring favourite *Dad's Army* (BBC, 1968–77)—a sitcom about a partially geriatric Home Guard in the early days of the World War II. A number of Gerry Anderson's puppet productions were also produced: *Supercar* (ATV/AP/ITC, 1961–62) *Fireball XL5* (AP/ATV/ITC, 1962–63); *Stingray* (AP/ATV/ITC, 1964–65), *Thunderbirds* (ATV/AP/ITC, 1965–66) and *Captain Scarlett* and *The Mysterons* (ITC/Century 21 TV Prod, 1967–68).

Eric Morecambe and Ernie Wise grew in popularity to the level of national institution. Their show, under different titles, ran from 1961 to 1983, regularly changing channels. In the pop music field, *Thank Your Lucky Stars* (ABC, 1961–66), *Ready, Steady Go!* (A-R, 1963–66) and the BBC's *Top of the Pops* was launched in 1964 and continued through the 1990s.

In the nonfiction field, a number of notable series were broadcast. In 1967, the BBC initiated David Attenborough's long-running *The World about Us* (BBC, 1967–86), a natural history series which resulted in the creation of the BBC's natural history unit at their Bristol studios. Sir Kenneth Clark's renowned *Civilization* (BBC 1969) charted the history of western culture from the collapse of Greece and Rome to the 20th Century.

A number of series were initiated which continue to this day. ITN created the first half-hour evening news bulletin, *News at Ten*, in 1967; Granada TV's pathbreaking current affairs series *World in Action* was first transmitted in 1963; the BBC's science series *Horizon* began in 1964; the BBC's science futures programme *Tomorrow's World* started in 1965; and the BBC's seasonal weekly football magazine *Match of the Day* was first broadcast in 1964.

Television in the 1970s moved away from the experiments of the 1960s into safer territory. For example, apart from *Play for Today* (BBC, 1970–84), original TV drama was replaced with period- and novel-based serials. These included such series as *The Six Wives of Henry VIII* (1970), *Upstairs Downstairs* (LWT, 1971–75). It was also the decade of the major, solemn documentary series such as *The World at War* (Thames, 1973–74), *The Ascent of Man* (BBC, 1973), and *Life on Earth* (BBC, 1979).

Comedy moved more into the fairly bland with *Are You Being Served?* (BBC, 1973–83). There were, however, some notable exceptions such as *Fawlty Towers* (BBC, 1975; 1979), *Porridge* (BBC, 1974–77), *Some Mothers Do 'Ave 'Em* (BBC, 1973–75; 1978), *Rising Damp* (YTV, 1974–78), *The Fall and Rise of Reginald Perrin* (BBC, 1976–79), *The Liver Birds* (BBC 1969–79), and *The Last of the Summer Wine* (BBC, 1973–). There was also the zany *The Goodies* (BBC, 1970–77; 1980) and the perennially popular *The Two Ronnies* (BBC, 1971–86).

American westerns virtually disappeared in the 1980s and American crime series were in ascendance. However, programmes such as *Kojak* were influential, and indirectly encouraged the development of more action-oriented Brit-

ish crime series. One company in particular—Euston Films Limited (a subsidiary of Thames TV)—developed a portfolio of such programmes for the ITV network. These included *Van der Valk* (Thames, 1972–73; Euston 1977; Thames 1991–92), *The Sweeney* (Euston, 1975–78), *Minder* (Euston, 1979–85; 1988–), *Widows* (Euston 1983; *Widows II* 1985), *Reilly—Ace of Spies* (Euston, 1983). Series from other commercial companies included *The Professionals* (LWT, 1977–83) and two grittily realistic and much applauded serials made by the BBC, *Gangsters* (1976; 1978) and G. F. Newman's four-part *Law and Order* (1978).

There were also a number of highly successful drama series two of which focused on court-room situations—the day-time (three days a week) *Crown Court* (Granada, 1972–84), and the immensely popular *Rumpole of the Bailey* (Thames, 1978–79; 1983; 1987–88; 1991–present day). There was also a highly successful serial set in a secondary school, *Grange Hill* (BBC, 1978–), devised by the ex-teacher Phil Redmond (who went on to found Mersey Productions and to produce Channel 4's equally successful soap *Brookside*).

On the soap front, Yorkshire TV produced a rural daytime serial, *Emmerdale Farm*, which began in 1972 and became increasingly popular as *Emmerdale*. The BBC also experimented with an all black soap (written by a black author), *Empire Road* (1978–79).

In light entertainment, there was Bruce Forsyth's *Generation Game* (BBC, 1971–77), a very popular format which has continued on and off (with Larry Grayson taking over his role); the chat show *Parkinson* (BBC, 1971–82) featuring Michael Parkinson; the long-running *That's Life* (BBC, 1973–94); *Jim'll Fix It* (BBC, 1975–); *The Muppet Show* (ATV/Central, 1976–81); *Blankety Blank* (BBC, 1979–89). There were quiz shows ranging from *Mastermind* (BBC, 1972–) where contestants compete for a title by answering complex general-knowledge questions and obscure questions about specialist areas of knowledge they possess through *Sale of the Century* (Anglia, 1972–83) to the banal *Mr. and Mrs.* (ATV/Border, 1972–88).

There was a great deal of television activity in the 1980s. The commercial second channel was launched on 2 November 1982; Breakfast TV was introduced on three of the four channels; there was a massive growth in video recorder ownership; and cable and satellite networks were established. American soaps such as *Dallas* and *Dynasty* dominated the ratings, media coverage, and popular debate. Possibly the most disastrous attempt to compete with the United States head on was the production of *Chateaufallon* (1985), where five European networks attempted to produce a competitive equivalent to *Dallas*.

In programming terms, the 1980s represented a period when some very expensive classic drama was produced. This included *Death of a Princess* (ATV, 1980) which gained notoriety because it was about the public beheading of a Saudi princess and her lover. The Saudi government tried to stop its transmission, and banned its importation to Saudi Arabia. Because of video technology, it was being clandestinely viewed

in Saudi Arabia within 24 hours of first transmission in the United Kingdom. Almost as controversial was the BBC's *Boys from the Blackstuff* (BBC, 1982) about unemployment in Liverpool. Granada TV produced the hugely expensive, highly successful 13-part series *The Jewel in the Crown* (1984), which was shot entirely in India. The BBC also produced the film-noir-style six-part drama, *Edge of Darkness* (1985), about the attempt to sabotage a nuclear power station.

Police dramas proliferated in the 1980s. Both the BBC and ITV had female detectives—*Juliet Bravo* (BBC, 1980–85) and *The Gentle Touch* (LWT, 1980–84) respectively; there was a black detective—*Wolcott* (ATV 1981); a local radio detective, *Shoestring* (BBC, 1979–80); a Chinese detective, *The Chinese Detective* (BBC, 1981–82); a Scottish detective, *Taggart* (STV, 1983–); the long-running series set on the island of Jersey, *Bergerac* (BBC, 1981–91); and the highly acclaimed series set in Oxford starring John Thaw, *Inspector Morse* (Central, 1987–92); and literary private detectives: *The Adventures of Sherlock Holmes* (Granada, 1984–85; *The Return of Sherlock Holmes*, 1986–88; *The Casebook of Sherlock Holmes*, 1991; *Sherlock Holmes*, 1993) with Jeremy Brett offering what is currently considered to be the definitive performance of the great detective; and two famous Agatha Christie detectives—the BBC-produced *Miss Marple* (1984–92) and ITV's *Poirot* (LWT/Carnival 1989–).

Popular non-crime series included the BBC's *A Very Peculiar Practice* (1986 and 1988), set in a university health centre; and two highly realistic long-running series, one based in a fire station, *London's Burning* (LWT, 1988–), and the other an equally long-running hospital series, *Casualty* (BBC, 1986–).

A number of new soap operas started in the 1980s. First there was Scottish TV's daytime soap *Take the High Road* (1980–); Channel 4's *Brookside* (Mersey, 1982–); the BBC's first successful soap which rivaled *Coronation Street* in the audience ratings *EastEnders* (1985–); and a police soap, *The Bill* (Thames, 1984–).

In the 1980s a range of highly successful and, in some cases long-running sitcoms developed. There was Carla Lane's long-running *Bread* (BBC, 1986–) and *Yes, Minister* (BBC, 1980, 1982) was successful enough for Paul Eddington (the minister) to return as the prime minister in *Yes, Prime Minister* in 1986 and 1988. *Hi-De-Hi!* (BBC, 1981–88); *'Allo, 'Allo* (BBC, 1984–92) and *Only Fools and Horses* (BBC, 1981–) are long-running series that, like *Dad's Army* and *Fawlty Towers*, continue to be regularly repeated. Over the decades the BBC has always been more successful with sitcoms than the ITV companies, but in the 1980s ITV enjoyed significant success in this field with Rik Mayall's *The New Statesman* (Yorkshire, 1987–92).

In the 1980s U.K. TV produced its first all-black sitcom, *No Problem!* (C4, 1983–85), Rowan Atkinson in *Blackadder* (BBC, 1983–) and Peter Fluck and Roger Law's award winning satirical puppet show *Spitting Image* (Central, 1984–). This last show has enjoyed significant international format sales.

In the area of light entertainment the BBC's *The Lenny Henry Show* (BBC, 1984–85; 1987–88) and French and

Saunders (BBC, 1987–88) were very successful and Channel 4 enjoyed success with the innovative pop music show *The Tube* (Tyne, Tees 1982–87) and the even more original *Max Headroom* (Chrysalis, 1985).

A number of new game shows were introduced in the 1980s. *Bulleseye* (ATV, 1981–), a show based on the game of darts and Channel 4's *Countdown* (Yorkshire, 1982–), a word game with which C4 opened transmissions. Two American formats were hugely successful, *The Price Is Right* (Central, 1984–88) and *Blind Date* (LWT, 1985–). In current affairs, the BBC introduced *Newsnight* (1980–) and LWT made the first ethnic minority current affairs programmes for Channel 4, *Black on Black* (1982–85) and *Eastern Eye* (1982–85).

In the 1980s programmes about cooking, e.g. *Food and Drink* (BBC/Bazal, 1982–) and holidays, e.g. *Holiday* (BBC, 1969–), which has a number of rivals including ITV's *Wish You Were Here...?* (Thames, 1976–) proliferated and became hugely popular.

The 1990s saw the development of the satellite companies and the financial battle over the rights to major world sporting events, with Rupert Murdoch seeming to win most of the battles. It was also the decade that the Australian soaps such as *Neighbours* and *Home and Away* dominated the U.K. daytime schedules.

The major drama successes were *Prime Suspect* (Granada, 1991–95), *The Darling Buds of May* (Yorkshire, 1991–), *Oranges Are Not the Only Fruit* (BBC, 1990) and *Jeeves and Wooster* (Granada, 1990–93), starring Hugh Laurie and Stephen Fry.

The BBC made another foray into soap territory with a spectacular failure set on the Costa del Sol, *Eldorado* (Cinema Verity/J Dy T, 1992–93) which ironically was just beginning to significantly improve its audience ratings when it was cut from broadcast.

Successful sitcoms included *One Foot in the Grave* (BBC, 1990–), Channel 4's set in a TV newsroom *Drop the Dead Donkey* (Hat Trick, 1990–) and *Absolutely Fabulous* (BBC, 1992–). However, probably the most acclaimed comedy show of the decade was the wickedly funny *Have I Got News For You?* (Hat Trick, 1990–) which is a panel game recorded the day before transmission to ensure its biting satire is completely topical.

BRITISH SKY BROADCASTING

International Satellite Broadcasting Service

British Sky Broadcasting (BSkyB) is the first entrepreneurial venture of any significance to have challenged the hitherto closely regulated, four-channel, public service character of British television. As part of the international media empire that includes the FOX network and Star TV, BSkyB has rapidly become a major player in the world broadcasting market-place. It is a large commercial satellite network, available principally to viewers in the British Isles but capable of reception anywhere within the European ASTRA satellite system footprint.

Forty per cent owned by News International and successfully floated on the British Stock Exchange as a public company at the end of 1994, BSkyB is instantly associated with the name of Rupert Murdoch who invested heavily in the venture from 1983, accepting enormous initial losses while waiting for satellite television in Britain to become profitable. Although many other satellite services are available to British audiences, the wide choice offered by BSkyB's continually expanding package of channels is undoubtedly the main incentive to satellite antenna acquisition; the network has come to be regarded by the terrestrial broadcasting sector as the true commercial competition. In just over a decade from its inception, BSkyB has firmly established itself as the third force in British broadcasting.

The inauspicious origins of BSkyB can be traced to Rupert Murdoch's purchase in 1983 of a 65% share (subsequently increased to 82%) in a fledgling London-based operation called Satellite Television Ltd which, as the first European satellite television channel, had been transmitting programmes for about a year to small audiences in Western Europe over one of the earliest EUTELSAT satellites. Murdoch, who has described satellite television as "the most important single advance since Caxton invented the printing press", re-launched the company as Sky Channel and commenced broadcasting a new programming mix in January 1984, receivable in Britain only by cable households (at that time no more than about 10,000). By 1987 Sky had achieved an 11.3% share of viewing in those homes capable of receiving it and had raised some £28 million in rights issues to fund its planned expansion into direct-to-home delivery.

Sky's expansion, widely criticised at the time as irresponsibly risky, began in February 1989 when the company's new three-channel package went on air over the first Luxembourg-owned ASTRA satellite. Indeed, since U.K. broadcasting legislation did not then permit a satellite undertaking to uplink signals from British soil, Sky was only legally able to do so by virtue of its non-British transmission source. At first available unscrambled and free-of-charge, the original Sky package consisted of a premium film channel (Sky Movies), a 24-hour news channel (Sky News) and a general entertainment family channel (Sky One). This package, however, experienced a very slow initial take-up by the British public for a number of reasons, the main one being

that many potential customers were holding back pending the heavily advertised launch of the rival satellite service, British Satellite Broadcasting (BSB), which promised subscribers an attractive range of alternative benefits with a distinctly British cultural emphasis.

The rise and fall of BSB represents something of a fiasco in broadcasting deregulation, but in retrospect can be seen as an unprecedented opportunity for the entrepreneurship of Rupert Murdoch's Sky. This organisation, specially provided for in the British Government's Broadcasting Act of 1990, was licensed as the official Direct Broadcast by Satellite (DBS) provider, legally enabled to uplink from British soil and established as the direct competitor of Sky. BSB was claimed to possess an enormous technological advantage over its rival in that it would use a much higher powered satellite with the more technically sophisticated D-MAC transmission standard delivering a higher fidelity TV picture than Sky's inferior (but more affordable) PAL standard. BSB's two Marco Polo satellites (at an astronomical cost of some £500 million each) were duly launched from Cape Kennedy by Space Shuttle between August 1989 and early 1990, by which time Sky had been consolidating its audience for over a year. After several embarrassing delays, BSB launched on 29 April 1990 and its five-channel service competed uneasily with Sky throughout the summer and autumn of 1990 but was even slower than Sky to attract consumer interest. On 2 November 1990 (ironically the day after the Broadcasting Act was finally passed), BSB suddenly collapsed, recognising that the market could not sustain two such capital-intensive satellite operations in competition. Without the permission of the Independent Broadcasting Authority, Sky immediately announced a merger with BSB to form the BSkyB network. Though this was, in effect, a serious breach of BSB's contract, the merger (in effect, a take-over) was allowed to proceed in the best interests of viewers and transitional arrangements were put in hand to compensate dispossessed BSB subscribers so that a five-channel service would continue to be available to them via Marco Polo until the end of 1992 but provided by the new BSkyB organisation.

Freed from non-terrestrial competition, BSkyB was now in a position to rationalise its activities, especially in the area of subscription services. It immediately re-launched BSB's Movie Channel, having acquired the rights to an expanded cartel of Hollywood feature films, thus giving itself greater flexibility and market domination in movie scheduling. In October 1992, the company replaced a short-lived Comedy Channel experiment with a third movie channel, Sky Movies Gold, dedicated to classic films. Then, in September 1993, BSkyB introduced its most aggressive market move to date when it announced the "Sky Multichannels" subscription package with various price options to suit viewer preference. By now a Sports Channel had been added to the network, later to be followed by Sky Sports 2, Sky Travel and Sky Soaps. Interestingly, the Multichannels

package also included a number of competing English language ASTRA channels, such as Discovery, Bravo, Children's Channel, Nickelodeon and QVC which pay BSkyB a premium for the use of its patented Videocrypt™ decoding technology. Hence, BSkyB cleverly generates revenue, not only from its own programmes but also from those of its immediate competitors.

Rupert Murdoch initially regarded the Sky satellite venture as a five-year risk to profitability from 1988. After gigantic early losses which would have deterred more timid investors, the company had already begun to move into profit by early 1992 and has since built itself into an extremely valuable and powerful business. In the five months between June and November 1993 alone, BSkyB experienced an impressive 30% increase in its operating profit and has continued to thrive with the gradual increase in satellite dish penetration. More recently, much to the chagrin of terrestrial broadcasters, the network has concentrated on purchasing exclusive rights to major sporting events in the hope of attracting many new subscribers. In the late 1990s, digital television will undoubtedly offer BSkyB new opportunities but it is also likely to usher in serious competition from new satellite ventures. BSkyB has, however, become so well established as part of an enormous vertically-integrated international media empire that it will probably continue to maintain its market advantage unless cross-media ownership rules eventually place debilitating constraints on its potential.

—Tony Pearson

BRITISH TELEVISION

British television is impossible to pigeonhole. Eminently capacious, it has increasingly been open to multiple goals, forces and programming approaches. It has responded to new demands more often by accretion and absorption than by re-direction. Though inundated with public service principles, these have periodically been retuned to chime both with shifting social needs and with more pragmatic imperatives. British television has simultaneously pursued intrinsic communication purposes (enriching viewers, serving society) and extrinsic ones (organisational survival, earnings, power).

It also tends to be taken seriously. For many Britons, broadcasting is a social pillar that closely affects the well-being of other key institutions—not only the crown, Parliament and the church but also sport, education, theater, the arts and film. Much valued, much debated, often officially enquired into, and much criticised, it is treated as both a national asset and a national scapegoat. Its present and future condition are therefore thought to matter greatly. In 1990s television, however, the British way of managing the tensions of continuity vs. change is being severely tested.

Television in the United Kingdom has historically been a highly regulated public service system that has periodically

admitted, while striving to contain, commercially competitive impulses. Three of its four core terrestrial channels still have public service remits (BBC-1, BBC-2 and Channel 4) and the other significant public service requirements (channel 3 of Independent Television). Whereas BBC-2 and Channel 4 have predominantly catered for minority and specialist tastes (each attracting around 10 to 12% of viewers), competition for larger audiences has been waged between BBC-1 and ITV's Channel 3 (with the latter usually gaining a somewhat greater share).

Although until recently the notion of "public service" was nowhere explicitly defined, it was widely understood to embrace purposes of programming range, quality, and popularity with the general viewing audience. Other emphases have included: universality of reception; reflection of national identity and community; provision of a civic forum; special regard for minorities; respect for children's all-round personality and development needs; due impartiality in coverage of controversial issues; avoiding offense to law and order, taste and decency; and the editorial independence of program makers within the overall regulatory framework.

The sway of the public service idea helps to explain many past programming strengths of British television:

- Heavy investment in news and current affairs, including treatment of election campaigns as transforming civic events.
- An impressive tradition of children's television, including a wide range of entertainment, information, drama and animation, not only on Saturday mornings but also on mid-afternoon weekdays on BBC-1 and Channel 3.
- Provision of a very wide range of drama in format, subject matter and cultural level.
- Leading soap operas frequently laced with explorations of significant social issues and moral dilemmas.
- Vigorous documentary strands, especially on BBC-2 and Channel 4.
- The cultural patronage role of arts coverage, including BBC funding of a chorus and five large orchestras and commissioning of feature films by Channel 4 and BBC-2.
- Well-resourced programming in natural history, popular science and technology.
- Investment in a wide range of educational television (for schools, further and adult education, the Open University and prime-time public awareness campaigns), social action programs, public access programs and programs for immigrant communities.

Three organisations have been central in the governance of British television. First, government responsibility for broadcasting is lodged with the Department of the National Heritage (succeeding the Home Office in 1992, which had previously taken over from the Postmaster General). This appoints the members of all regulatory bodies, oversees policy development (sometimes jointly with the Department of Trade and Industry), and initiates legislation and debates in Parliament.

Second, a board of 12 governors is required to direct the British Broadcasting Corporation (BBC) in the public interest. The BBC is a large organisation of approximately 25,000 employees and a £2 billion annual income, the bulk of which comes from a licence fee that is levied on every household with a television set. Fixed by negotiation between the BBC and the government, the level of the fee has broadly kept pace with the retail price index since the mid-1980s. The BBC's obligations are outlined in a charter and agreement, the present terms of which will run until 2006 (although BBC finance will be reviewed in 2001). For the first time, these spell out in some detail both its public service programming role and the governors' supervisory duties as well as authorising BBC involvement in commercial activities. The governors appoint the BBC director-general and, in consultation with him, other members of a board of management. Traditionally, management decided most matters of BBC policy and programming with the governors serving more as a sounding board and ultimate authorizer, commenting only after the fact on individual broadcasts of which they approved or disapproved. From the

1970s, however, the governors became increasingly active and in the late 1980s were even a spur for fundamental organisational reform.

Third, all advertising-financed television is under the jurisdiction of the Independent Television Commission (ITC; known in previous incarnations as the Independent Broadcasting Authority and the Independent Television Authority). Its writ runs over Independent Television, a federal grouping of 15 regionally-based companies, plus companies of national news and breakfast television, which jointly schedule the nationally networked portion of Channel 3; Channel 4, a non-profit "publisher-broadcaster" (commissioning and scheduling but not making programs), which is legally required to be innovative and to cater for different interests and tastes from those served by Channel 3; Channel 5, a new terrestrial service that will cover approximately two thirds of the country from 1997; and cable and satellite services originating in Britain. The ITC will eventually be responsible as well for any channels of digital terrestrial television that may be introduced.

The ITC's duties are set out in the Broadcasting Act of 1990, and its 12 members are appointed by the government. The main tasks are to franchise the commercial television companies by a process of first tendering for and then auctioning the licences and to enforce the licence conditions thereafter. The act posits a "quality threshold", which all applying companies must cross before being admitted to the auction itself, at which the highest bidder would normally be the winner. Since 1993, when the new Channel 3 licensee took over, the ITC has been a relatively resolute regulator, holding the companies to their obligations (through directives, warnings and fines as necessary) and annually reporting on their programming performance.

Three further features of the system should also be mentioned. First, the opening of Channel 4 in 1982 encouraged the growth of a large sector of some 900 independent program-making companies of diverse sizes and production specialisms. This was strengthened by the Broadcasting Act of 1990, which obliged all terrestrial broadcasters to commission at least 25% of their output from such sources, and will be further boosted by many commissions from Channel 5.

Second, elaborate codes of practice have been evolved to cover a wide range of matters on which programs could cause offense. The ITC has drawn up four such codes—on program sponsorship; advertising standards and practices; advertising breaks; and the Program Code—for their conformity to which the ITV companies are required to introduce effective compliance procedures. The BBC has developed a 300-page booklet of Producers' Guidelines, oversight of which is vested in a four-person Editorial Policy Unit. In addition, for the specific areas of violence, sexual display, taste, decency and bad language, the government in 1988 established a Broadcasting Standards Council to issue the Code of Practice that all broadcasters must take into account and in light of which viewers may submit complaints.

Third, public expectations of broadcasting and options for its future development have been shaped in the past by a series of comprehensive reviews by independent Committees of enquiry appointed by the government. (Their main reports are listed in the suggestions for further reading accompanying this essay).

In recent times, however, all these structures have been buffeted by both internal and external pressures to change. Within British broadcasting, technological developments are paving the way for new program-delivery systems, multi-channel expansion and intensified competition for viewers' attention. Television finance is becoming much tighter, as production costs escalate (responding to competition for top performers, programs and sporting events) beyond the general inflation rate. External markets—as arenas of sales, imports, co-production and international rivalry—are becoming more salient. To cope, revamped organisational structures, program commissioning strategies, scheduling practices, accounting systems and managerial skills are all required. In commercial television the rules on concentration of ownership are also being relaxed to encourage the emergence of “national champions” in global markets.

Admittedly, adaptation to change has been eased by the relatively slow diffusion of multichannel offerings to the British audience. Although cable franchises cover 70% of the population, not all are up and running, and only one in five households passed have subscribed. Satellite television, provided by BSkyB (40% owned by Rupert Murdoch's News International Corporation), has been more successful, gaining over 3 million subscribers to packages of up to 28 channels, and profiting especially from people's willingness to pay extra for premium sports and movie channels. But with cable and satellite services in only about a fifth of British homes and attracting an overall audience share under 10%, the multichannel revolution is seeping into British television instead of taking it by storm.

Nevertheless, around broadcasting, the values, expectations and ways of life of British viewers are also changing. The advance of consumerism breeds a more choosy and critical audience. The advance of social complexity multiplies sub-group tastes and identities and fragments moral and political opinion. Leaders in many spheres face waning respect for and growing scepticism toward their claims and credentials. The brokerage role of programming between elite perspectives and mass interests has been disrupted.

In these conditions, British television resembles a large ocean-liner, fashioned by a master ship-builder and serving many classes of passengers in a host of compartments, which is sailing through ever stormier seas that may—or may not—tear it apart! How did it get that way? From its inception British television has progressed through five overlapping phases.

First, up to 1955, development of the medium was subordinated to the needs of radio. Having provided sound broadcasting since 1922, the BBC inaugurated the world's first television service in 1936, shut it down during World

War II, and reopened it in 1946. In the early post-war years, however, television enthusiasts waged an uphill battle against those in higher BBC echelons who saw it as a cultural Trojan horse—committed predominantly to entertainment, brash and childish, not very civilised, and conducive to audience passivity. The balance began to shift in 1952, first, after the appointment as director-general of Sir Ian Jacob, who realised that television had to be taken more seriously, and secondly, with the striking success in June of that year of the televising of the Coronation of Queen Elizabeth—as a spectacle with great symbolic impact, audience reach and appeal.

This phase came to an end through a characteristic political development, one that aimed to reconcile a cultural mission for broadcasting with chances to exploit the advertising potential of television and to upgrade the claims of popular taste. The Television Act of 1954 authorised creation of a new advertising-financed service, to be called Independent Television (purposely not “Commercial Television”), in competition with the BBC. Although the Beveridge Committee enquiry (1951) had recommended renewal of the BBC's monopoly, the incoming conservative government of 1951 adopted a minority report that proposed “some element of competition” in television. Bitterly fought inside and outside Parliament, the government had to concede crucial safeguards against rampant commercialism: no sponsorship; only time spots of controlled length and frequency would be sold to advertisers who would have no say in program content; and creation of a new public corporation, an Independent Television Authority, to appoint the companies and supervise their performance in light of requirements specified in the act.

A second phase followed from the mid-1950s to the early 1960s of vigorous but creative competition between an insurgent ITV and a threatened BBC, which, though it aroused doubts, fear and dismay among some at the time, is now widely regarded as having advanced the medium's programming powers and viewers' all-round enjoyment. From the outset, ITV set its cap at neglected mass tastes, especially for entertainment, while cultivating a more informal and accessible presentation style and celebrating what one executive termed “people's television”. After experiencing a dramatic loss of viewers (down to a 28% share at the nadir), the BBC fought back hard all across the programming board.

Many achievements ensued. Since ITV was based on separate companies in London and other parts of the country, British television catered for the first time to diverse regional interests in addition to metropolitan ones. Television news was transformed—with named news readers, pace, incisiveness and eye-catching pictures. Inhibitions on political and election coverage were shed. Saturday afternoons were devoted to coverage of top sporting events. A host of memorable children's programs were developed. New forms of television drama were pioneered. New comedy stars (e.g. Tony Hancock, Jimmy Edwards, Charlie

Duke) were born, served by high-profile writers. The BBC created an early evening topical magazine, *Tonight*, the sprightliness and irreverence of which broke sharply with its traditions. Yet the flag of authoritativeness was also flown in its weekly current affairs program, *Panorama*, a new arts magazine, *Monitor*, and an in-depth interview program, *Face to Face*.

In this phase, the British concern to blend potentially opposed impulses in its television system remained strong. For its part, the BBC had to become more competitive and seek a larger audience share to sustain its claim to licence fee funding and its status as Britain's national broadcaster. But this was not to be its sole aim and was to be achieved through high standards of quality across a broad range of programming. Endorsing its record, the Pilkington Committee enquiry (1962) recommended that the BBC be awarded a second channel (BBC-2, which opened in 1966). Finding that ITV programming had become too commercial, trivial and undemanding, the committee proposed stronger regulatory powers and duties for the ITA. The next television act accordingly instructed the Authority to ensure a "proper balance and wide range of subject matter having regard both to the programmes as a whole and also to the day of the week on which, and the times of day at which, the programmes are broadcast" as well as "a wide showing of programmes of merit." The ITV companies were also obliged to submit their program schedules for advance approval to the ITA, who could direct the exclusion of any items from them.

In much of the 1960s and early 1970s, a third phase ensued, as hierarchical and consensual ties loosened and traditional institutions were criticised more often in the name of modernisation. Broadcasters became concerned to portray the different sectors of a pluralist society realistically in both fictional and factual programs and to be more probingly critical themselves. For Hugh Greene, BBC director-general from 1960 to 1969, public service implied putting an honest mirror before society, reflecting what was there, whether it was "bigotry...and intolerance or accomplishment and inspiring achievement". He also believed broadcasters had a duty to take account of changes in society, the challenges and options they posed and where they might lead. He even regarded impudence as an acceptable broadcasting quality (a far cry from founding father John Reith's stress on dignity). Illustrative of this spirit were hard-hitting satire (*That Was the Week That Was*), anarchic comedy (*Monty Python*), more forceful political interviewing, series set in northern towns (*Coronation Street*, *The Likely Lads*), realistic police series (*Z Cars*), social-issue drama (*Cathy Come Home*) and socially conscious comedy (*Til' Death Us Do Part*, featuring a Cockney racist, and *Steptoe and Son*, featuring a rag-and-bone man and his son).

In a fourth phase throughout much of the 1970s, British television increasingly acquired the image of an over-mighty subject, attracting unprecedentedly sharp criticism and pressure to mend its ways. On balance, more of the fire was directed at factual than fictional programming.

In 1971, politicians of all parties had been outraged by a BBC program about labour in opposition, *Yesterday's Men*, deploring its flippant tone, lack of openness when interviewees were briefed about the intended approach, and questions put to former Prime Minister Harold Wilson that seemed beyond the pale (e.g. about earnings from his memoirs). Thereafter, the political establishment became more assertive of its interests, more organised in their pursuit and more vocal in its complaints. Spokespersons of other groups also voiced dissatisfaction over stereotypical portrayals and limited access. Traditional moralists (like the members of Mary Whitehouse's Viewers' and Listeners' Association) were deeply unhappy about what they regarded as increasingly permissive depictions of sex and violence in programs. Media sociologists chipped in with a series of studies purporting to undermine the pretensions of broadcasters to impartiality and objectivity and to demonstrate how news coverage of social conflicts supported the ideological status quo. Other critics perceived a middle-ground convergence in BBC and ITV output that excluded unconventional perspectives and opinions. Behind these otherwise different reactions, there was also a shared concern over the difficulties of holding broadcasters to account for their policies and performance.

Structural responses to this chorus of criticism included some tightening of editorial controls; creation by the BBC of a Community Programming Unit to help groups to present their ideas on their own terms in a new strand of access broadcasting; and establishment of a Programme Complaints Board by the BBC to consider complaints against producers of unfair representation and invasions of privacy. The most important outcome, however, was the creation in 1982 of Channel 4 with its brief to be different, experimental and heterodox. Although commercials would be sold on the channel, pains were taken to avoid competition for advertising with ITV. Its budget was therefore fixed by the IBA on the basis of funds it levied from the ITV companies, who were allowed to sell (and keep the revenues from) its advertising. Thus, a viable source of funding would be tapped, the Channel would be guaranteed sufficient resources for its tasks, and its innovative efforts would be insulated from advertisers' conformist pressures.

Beginning in the mid-1980s, the fifth phase of British television has been dominated by issues of structure and finance. In this period, all British broadcasters have had to adjust to a new and less supportive political mood—one that regards television more as an industry than a cultural agency and its institutions as badly in need of a shake-up. A tide of radically revisionist commercialism was unleashed, which effected major changes but was also resisted and curbed at key points.

The curtain-raiser was appointment in 1985 of the Peacock Committee on Financing the BBC to consider alternative sources of revenue to the licence fee, including advertising and sponsorship. Its 1986 report condemned the existing system as a cosy and overly "comfortable

duopoly", lacking financial disciplines to keep costs down in both the BBC and ITV; it defined the fundamental aim of broadcasting as increasing through competition "the freedom of choice of the consumer and the opportunities available to offer alternative wares to the public"; and it proposed that "public service" in British television be scaled down from a full-blown to a market-supplementing model. Yet the committee also counselled against the sale of commercials by the BBC, since competition for advertising would narrow its range of programming. But although the government accepted this last recommendation, it drew heavily on the committee's rationale for its policies to overhaul British television.

The government acted directly on the advertising-financed sector through three significant features of the 1990 Broadcasting Act. One was the introduction of competition for advertising by requiring Channel 4 to sell its own commercials and authorising a fifth commercial channel. Another was the new franchising system of auctioning licences to the highest bidder among qualified applicants. A third was a change in status of the regulator, whereby the new ITC lost the old IBA's broad powers to preview programs and schedules in advance; hereafter it could only enforce company compliance to specific obligations defined in law and licences after the fact.

Even so, a full-scale commercialism was avoided. Channel 4 was given a safety net, whereby it would be subsidised by the Channel 3 companies should its advertising income fall below 14% of the total advertising and sponsorship income of Channels 3 and 4. And in a period of intense debate while the act was passing through Parliament, the "quality threshold" for franchise applicants was much strengthened. Companies would have to give a "sufficient amount of time" to a series of mandated programs—which included national and regional news, current affairs, religion and children's television; cater for a variety of tastes; and give a "sufficient amount of time" to "programmes that are of high quality". Moreover, the ITC fleshed out some of these requirements in precise quantitative terms, specifying, for example, that companies would have to offer 90 minutes of high-quality current affairs programs weekly, at least two hours of religious programs and 10 hours a week of children's television, including a range of entertainment, drama and information.

The government promoted change at the BBC by conveying its expectation of far-reaching reforms, appointing a forceful chair of the Board of Governors (Marmaduke Hussey) who shared its priorities, and implying that the terms of the next BBC Charter (to take effect in 1996) were at stake in the process. Led by director-generals Michael Checkland (from 1987) and John Birt (from 1991), the BBC's managerial structure was overhauled. Overheads were cut, axing more than 2,000 jobs. Most important from the government's standpoint were two steps. An internal market (known as Producers' Choice) was introduced in relations between program producers and providers of tech-

nical facilities. And an aggressive policy was adopted of BBC entry into international markets of multichannel television, program sales and co-production. Nevertheless, the BBC also undertook a fundamental review of the meaning and implications of "public service" in multichannel conditions, the results of which appeared in *Extending Choice* (1992) and *People and Programmes* (1995). Concentrating mainly on future directions and roles, the former proposed three priority purposes: "informing the national debate"; "expressing British culture and entertainment"; and "creating opportunities for education". More attuned to the modern choosy audience member, the latter stressed themes of relevance and accessibility and the need for program makers in all fields to take greater account of popular interests, tastes and attitudes.

New conditions have made it more difficult to classify and give an appropriate label to the British television system. The public service element remains pervasive but is less influential and stable than formerly. Significant elements of competition have been injected but have not been given their full head. The British pattern is nowhere near the U.S. model—an essentially commercial system with a marginal public service to pick up its slack. Neither is it even a compartmentalised half-and-half system, pitting a ratings-sensitive sector against a quality-sensitive public service sector. What seems to be emerging in Britain is a thoroughly mixed television system. Competitive populism is advancing everywhere in it, but public service is nowhere denied. The impulses are not segregated in separate camps. Instead, they are commingled in every service, albeit in different balances and gradations—with social responsibilities most influential in the programming of BBC-2 and Channel 4, next at BBC-1 and least so (but still a presence) at Channel 3.

Three further features dominate. First, the BBC is still a major force in British television, now officially confirmed as such by the government, but is also a rather torn force. Charged with multiple tasks and a focus of numerous expectations, the BBC is having to ride many horses at once. For its *raison d'être* in a multichannel system, it must offer distinctive programs (ones the market will not supply), though to justify its claim to licence fee support from all viewers in the land, it must engage in head-to-head competition with ITV for the mass audience. Although the government says that as the U.K.'s main public service broadcaster, its primary role should be making programs for the domestic audience, it also urges the BBC "to increase its income from its commercial activities" (to contribute to U.K. exports, to ensure that a distinctive British culture is spread in world markets and to generate more income for program making). It must reconcile its reputation for quality, responsibility, seriousness and high standards with recognition of the fact that when people have a lot of choice, excellence and authority may not be enough to bring home the bacon. It must keep the creative juices flowing within a framework of much closer budgetary and managerial control. It must reconcile its tradition of editorial independence with demands for increased public accountability.

Time will tell whether this can be accomplished. In high policy terms, however, one BBC endeavour to do so should be noted—in its present emphasis on yet more extended broadcasting range. The thrust for each main area of production is to offer a full mix of programs from the demanding to the easy-to-take, the more esoteric to the most popular. “Distinctiveness” may then be satisfied at one end (say, with lavish classic serials or extensive election coverage), while mass appeal can be sought elsewhere (even by inserting programs into the schedules that would not have previously made it to the screen, such as chat, game and blind-dating shows).

Second, in Britain’s gradually emerging multichannel system, the force of audience competition, even if still controlled, is reshaping everything it touches. Competitive scheduling has become more concerted and aggressive on all channels. Initiative and power have shifted to the schedulers, to whose more formed requirements creative staffs must tailor their work. Their audience targets and expectations have become more definite; audience research and other data are being articulated more systematically to their needs. Calculations of costs-by-viewers-reached are playing a bigger part. Competitive bidding between BSkyB, the BBC and ITV for coverage rights to major sporting events has heated up, and Parliament has keenly debated proposals to guarantee access for terrestrial channels against exclusive satellite deals. When Channel 5 opens in 1997, able to counter-program against the established services, all these pressures will be exacerbated.

One consequence of such a situation is that the competition for viewers becomes more of a struggle to be noticed. More favored are strategies of immediate attention gaining and qualities of pace, impact, brevity, the arresting, and personal stories with which ordinary people can identify. A new-found populism has come into vogue—with talk shows, studio audiences, phone-ins (even e-mail-ins!), after-discussion polls, clips from viewers’ home videos and camcorders all on the increase. Overall, more money and screen time are being devoted to program promotion. Even Channel 4 (so successful in selling its own advertising that its safety net will be phased out) has not been immune to these tendencies. Though praised by the ITC for fulfilling its remit with “general distinction”, some of its recent output has appeared to equate innovation with outrageousness and sensationalist taboo-breaking.

Third, both continuing commitment and increasing uncertainty attend some of the programming areas on which Britain’s public service tradition was based. The presence of two well-supported and widely viewed lesser channels—BBC-2 and Channel 4—sustains the production bases of minority genres that might otherwise go to the wall. Nevertheless, some of those genres are now under a degree of strain:

- Children’s television: despite a continuing commitment to range, relying more on animation and on licensing products from program spin-offs.
- Documentaries: treatments tending to focus less on socio-political issues and more on slices of popular life in modern society.

- Current affairs: still impressive for extent and breadth of significant issues covered, but party politicians appear less often (except in Sunday morning interview programs).
- Arts programming: some strands have been moved out of peak time and popular culture is receiving more attention.
- Soap operas: scheduled in the early evening, some of these bear heavy competitive responsibilities, with more episodes per week scheduled and more melodramatic story lines plotted.
- Other drama: more reliance on high-profile stars and actors and an increase in serials based on crime, law and order, hospital settings, emergency services and urban grittiness.

Of course evaluations of such a mixed and fluid system will vary. It is less “priestly” and sometimes more flashy than in the past. Some observers perceive a gradual erosion of standards of quality, and some top writers and producers have complained of more bureaucratic interference in the creative process. As evidence that British broadcasting is artistically still in fine shape, however, others point to the recent appearance of such outstanding programs: *Pride and Prejudice* (classic serial), *The Borrowers* (children’s serial), *Our Friends in the North* (socio-political drama), *Have I Got News for You* (inventive comedy quiz), *Rory Bremner Who Else?* (satire), *Newsnight* and Channel 4 News. Even if the world is spinning away from public service as it used to be conceived, British television still differs greatly from U.S. television in important ways:

- Its network news bulletins are models of solidity.
- It has no tabloid magazines, heavy on emotion-packed tales (such as *A Current Affair*).
- It does not treat children predominantly as mere excitement-loving consumers.
- Its resort to violence in programs is measurably less.
- It has not killed off the documentary tradition.
- It continues to support drama of social relevance.
- Advertising on the main commercial channels is limited to seven minutes per hour, and product placement is strictly prohibited.

BRITAIN, DONALD

Canadian Documentary Filmmaker

Donald Britain is well known for his National Film Board documentaries, all shown on Canadian Broadcasting Corporation (CBC) television. In the 1980s Donald Britain directed *Running Man*, an early exploration of homosexuality in the CBC's topical anthology *For the Record*. He then created two biographical docudramas: one about mobster and union boss Hal Banks in the two-hour docudrama special *Canada's Sweetheart: The Saga of Hal C. Banks* (1985), the other about Prime Minister William Lyon MacKenzie King, in a six-hour miniseries, *The King Chronicles* (1987).

In *Canada's Sweetheart* Britain shows us, through the lens of the Seafarers' International Union, the primitive state of labour-management relations in Canada from the late 1940s to early 1960s. In *The King Chronicles* he explores Canadian political culture from the days following World War I to the wrenching changes in society in the aftermath of World War II. Britain spells out Canadian complicity in the activities of both men—an imported thug who controlled Great Lakes shipping and a prime minister who, to quote Britain's narrative, was "a

creature who cast no shadow though he ruled the land of the midnight sun."

Canada's Sweetheart incorporated interviews with survivors from those years, stills, newsreels, and dramatisation. Britain uses full colour for the dramatised Royal Commission hearings, the interviews with real people and some of the flashbacks. Black-and-white scenes include Banks' quiet entrance into Canada and his equally surreptitious exit, and union leader Jim Todd's futile challenge to an executive in a packed meeting hall. Some scenes which are particularly violent or menacing are given a specifically *film noir* treatment.

The film is also quite self-reflexive. Todd, recalls how Banks' bully-boys came to his house one night while his wife was in the kitchen. The camera then discloses the hitherto silent Mrs. Todd who tells us that "Friday is fish and chips night" and that when she heard a commotion she went into the living room with a full pan of boiling fat in her hand. At her firm word "that dinner was ready", the thug left. Her understated telling of the situation is far more effective than a dramatisation would be, a strong illustration of what happened when ordinary seamen and lock

masters had finally had enough. In another sequence Jack Pickersgill, a cabinet minister in St. Laurent's government, is filmed with a pet dog in his lap—a nicely ironic touch. He damns himself without knowing it. The episodic narrative then turns into one of the oldest forms of dramatic confrontation—the trial. However, in typically Canadian fashion, the drama ends not with the damning report of the Royal Commission but with Banks slipping out of the country with the implicit cooperation of cabinet ministers.

In *The King Chronicles* Brittain dramatises both the public records and the private diaries of Prime Minister King. As with Hal Banks, the public King is represented by news footage intercut with drama, often with ironic effect. For the private life of King (who was discovered, after his death, to have been a spiritualist who talked to his dead mother and his dead dog), Brittain uses recurring, visually lyrical motifs. Less successfully, he also uses grotesque fantasy sequences for King's visions.

The primary focus in each film is on power: how it is used for a variety of purposes, and how it changes the men who use it. Throughout both films Brittain shows his viewers how Hal Banks and Willie King grappled with the necessity of maintaining an acceptable public face and how they managed to hide both their goals and methods and their eccentric and dangerous private personae.

Of course, he shows us King the manipulator, the obsessively vain and insecure politician, object of a hundred political cartoons, editorials and sardonic poems. Yet there are enough glimpses of the man's ability to surprise us throughout the miniseries. Maury Chaykin as Banks and Sean McCann as King gave superb performances full of subtextual nuance covering a wide range of emotions. Each actor was physically brilliant in his gestures and body language.

Brittain has said he enjoyed "the tone of someone's voice combined with a certain visual setup against something that went before," an effect achieved in post-production. Editorial decisions such as splicing are crucial to his work. Brittain includes a sense of scale and of social context, a feel for curious juxtapositions, a sense of ironic detachment and black humour, and what has been called his signature, a "tart historical narrative".

In both these films Brittain provides almost continuous voice-over, counterpointing the images on the screen with a highly personal interpretation of events. This ironic inflection of the "voice of god" convention of early National Film Board of Canada documentaries was intended to signify an objective, omniscient perspective. These two films also stand within a tradition of docudrama at the CBC, one that included the very controversial modern adaptation of the Easter story told in the style of direct cinema, *The Open Grave* (1964), as well as massive 1970s projects like the six-hour *The National Dream* and the critical look at Canada's *October Crisis*. Brittain was one of the few who used television to tell memorable tales which redefined the life and times of the viewers.

BROADCAST PROMOTION AND MARKETING EXECUTIVES

PROMAX International (formerly BPME—Broadcast Promotion and Marketing Executives) is the trade organization for media promotion and marketing professionals. Founded in the United States in 1956 as the Broadcast Promotion Association (BPA), its name changes tellingly reflect the substantial changes experienced by the media industries in the last four decades.

Initially, broadcast promotion was the term for media efforts conducted by television and radio stations to maximize the size of audiences and the numbers of advertisers. These efforts largely consisted of date/time program announcements on the station's own air coupled with print advertisements in the local media (particularly *TV Guide* in the case of television promotion). More elaborate promotion campaigns were usually handled by the networks. Sweeping industry changes in the 1970s and 1980s—including among others the lessening of the dominance of the commercial networks, the growing importance of locally-produced news, the rise of cable and pay-TV services, increases in program production costs, and the growth of syndicated programming—resulted in a significantly more complex media environment and led to the need for more sophisticated promotion techniques. Consequently, in 1985, the organization changed its name to Broadcast Promotion and Marketing Executives (BPME) to reflect the increasing importance of marketing principles such as the use of consumer research, competitive positioning, long range planning, and audience segmentation. An ever-more-rapidly changing media scene in the late 1980s and early 1990s—including the growth of non-broadcast program distribution channels and increasingly international webs of participation—led to a second major name change to PROMAX International in 1993.

PROMAX, a loose acronym for Promotion and Marketing Executives in the Electronic Media, employs a full time paid president and staff and receives oversight from a volunteer board of directors comprised of industry personnel. Focussing on the fields of broadcast and cable television, radio, entertainment, and emerging technologies, the organization supports a wide range of related activities including promotion, market-

Courtesy of Promax International

ing, advertising, public relations, design, sales, and community service. Among its services to members are: the quarterly magazine *Image*, which reports on industry events and developments, key issues, notable campaigns, and new products, services, and techniques; *PromoFax*, a weekly newsletter faxed directly to members; an annual directory/promotion planner which lists members and suppliers, including key industry dates and events; the Resource Center, located in the organization's Los Angeles headquarters, which houses an extensive collection of videotapes, printed materials, and publications; and a Job Line, which provides information on available positions and job seekers (a key service in a field noted for advancement across rather than within markets). Perhaps the most notable service is the organization's annual seminar where members meet for workshops, demonstrations, presentations, and general networking. Suppliers of promotion materials demonstrate their products and services in an exhibit hall, and networks, group owners, and other industry organizations host suites for special presentations. The culmination of the seminar is an awards ceremony recognizing creative excellence, for many years hosted by the popular film critics Gene Siskel and Roger Ebert.

In addition to ongoing member services, PROMAX awards several academic scholarships in cooperation with sponsoring industry groups. In 1980 the organization published a college text, *Broadcast Advertising and Promotion: A Handbook for Students and Professionals*. It has also conducted numerous surveys over the years on salaries, budgets, staff size, and other departmental measures, which help promotion executives gauge their status and performance according to industry standards.

BROADCASTING STANDARDS COUNCIL/COMMISSION

British Regulatory Commission

Television has been described as a battle ground for rival sets of moral perspectives and disputed assessments of the medium's power to influence its audiences. It enters the home, may trade in vivid and unexpected images, and appeals greatly to children. It presents both reassuring and disturbing impressions of values and behaviors prevalent in society. The propriety of its program standards is therefore continually debated in many countries.

In Britain, the government responded to perceived public concerns of this kind by establishing a Broadcasting Standards Council, on a pre-statutory basis in 1988 and as a statutory body under the Broadcasting Act of 1990. Its remit covers the portrayal in television and radio programs and advertising of violence, sexual conduct and matters of taste and decency. The council has five main tasks:

- To draw up a code of practice in consultation with the broadcasting authorities and others, which broadcasting organisations must "reflect" (not adopt) in their own codes and program guidelines. Initially published in 1989, the code was revised in 1994.
- To monitor programs and make reports in the areas of its remit.
- To commission research and enquiries in those areas.
- To consider and make findings on complaints about programs and advertisements.
- To represent the United Kingdom on international bodies involved in setting standards for broadcasting.

The BSC is not an instrument of censorship, for it has no authority to consider programs before transmission. Since its findings are essentially subjective judgments (not determinations of fact within a framework of law), neither is it a judicial body. Its powers are relatively limited. It may require broadcasters to supply tapes of programs and statements in response to complaints about them. It publishes its findings in a Complaints Bulletin (which is widely reported in the press) and in serious cases may require the offending broadcaster to do so on air or in print as well. The council is made up of eight members, including a chairman and seputy, appointed by the secretary of state for the Department of National Heritage. It has been served by a staff of 15 full-time posts, including a director and deputy; and had a budget of £1,375,000 in 1994–95.

The council's role and approach may be summarised in five features: First, its remit is more wide-ranging than might be supposed. Although it covers the three main areas of violence, sexual conduct and bad language, its 56-page Code of Practice also deals with the stereotyping of women, men, the elderly, and ethnic minorities; disparaging treatments of the disabled and mentally ill; depictions of death, grief and bereavement, suicide, disasters, respect for victims and intrusions into privacy; and responsible presentations of alcohol, drugs and smoking.

Second, the council's "philosophy" of standards is not one-sidedly illiberal. It aims to balance the claims of creativity and explorations of contemporary reality against those of respect for audience sensitivities.

Third, the council does not apply the simple precepts of a black-and-white morality. Its Code of Practice reads more like a guide to editorial responsibility than a set of proscriptions. Very little is ruled out *per se*, and most code provisions and findings are couched in a spirit of context-sensitivity. Conditioning factors may include the time of scheduling, the program genre and viewers' expectations of what it tends to present, likely audience composition at the time, whether advance warnings of sensitive material have been given, and the role of such material in the overall flow of the story or report. Among the contextual influences, much weight is given to a 9:00 P.M. "watershed", before which nothing that is unsuitable for children should be shown and after which it is acceptable to move to a more adult type of material. But even after 9:00 P.M., *carte blanche* is not envisaged, and broadcasters are expected to move only gradually into more challenging waters.

Fourth, although the council has had to deal with an increasing volume of complaints (rising from 512 in 1990–91 to 1,473 in 1993–94 and 2,032 in 1994–95), its approach has not been draconian. In most years, only about 20% of complaints have been upheld.

Fifth, the council has largely based its work on an understanding of the broad limits and tolerances of British public opinion (including how these are evolving). To that end, it consulted approximately 100 organisations when drawing up its Code of Practice. Its members periodically travel on "road shows" to meet diverse groups in different parts of the country, exchanging views on broadcasting standards. Above all, it has commissioned and published the results of a great deal of high-quality, often cited and well-regarded research.

This has included broad surveys over time of both program content and audience attitudes in the key remit areas. The results

have drawn attention to the diversity of public opinion about the boundaries between acceptable and unacceptable treatments of violence, sex and other matters and have done justice to the complexity of people's views. This has supported the council's emphasis on "context" when dealing with complaints. Other projects have included a review of research findings on violence and pornography effects, an enquiry into the future of children's television, an international review of approaches to media education, a study of delinquents' media use patterns, and in-depth studies of interpretations of screened violence by women, men and victims of actual violence; children's cognitive and emotional responses to diverse program materials; the portrayal of ethnic minorities; and perspectives on the portrayal of disabilities by both disabled and able-bodied viewers. The council has also co-sponsored a large-scale enquiry into children's uses of the television screen in the new media environment and commissioned an independent analysis of the representativeness of those who submit complaints to it. On the whole, the latter suggested that complainants come from a relatively broad spectrum of the audience.

Critics occasionally object to the council's role on one of three grounds: for inducing caution among broadcasters; for imposing fuddy-duddy restrictions on a medium of expanding diversity and choice; and for a confusing overlap of jurisdiction with other authorities like the Independent Television Commission and a Programme Complaints Commission. Such objections do not seem widely shared or politically weighty, however, and much of the early suspicion of the council as a prospective agent of right-wing or puritanical control has been disarmed by its record. Indeed, Mary Whitehouse (past leader of the Viewers' and Listeners' Association and once a forceful lobbyist for a body of standards control) has complained about its failure to stand up to broadcasters' permissiveness.

BRODKIN, HERBERT

U.S. Producer

Herb Brodtkin enjoyed a singular career in television because of his insistence on quality, his uncompromising standards, and his longevity. Brodtkin, who served as executive producer or producer on some of television's finest moments, began his television career producing live television in its Golden Age, and produced until his death in 1991.

Brodtkin came to television with a background in theater and scenic design. He began working as a set designer for CBS in 1950. After three years he was handling the production chores for no less than three anthology dramas. Brodtkin continued to work in the anthology format during what has been generally termed the "golden years of television." These dramas, such as *Playhouse 90* and *Studio One*, were splendid vehicles for Brodtkin's broad and varied theatrical experience. One telecast in particular would prove fortuitous for Brodtkin and others. "The Defender" (28

In 1996, a bill was introduced into Parliament to merge the BSC with the Programme Complaints Commission, which, since its statutory establishment in 1982, had considered complaints arising from alleged unfairness toward people appearing in or dealt with in programs and alleged invasions of privacy. The new body is to be called the Broadcasting Standards Commission.

February and 4 March 1957), starring Ralph Bellamy and William Shatner, would serve as a model for one of Brodtkin's cornerstone filmed series.

When the telefilm began to flourish in the 1950s and most filmed production came from Hollywood, Brodtkin remained in New York although he, too, changed from the live format to film. Brodtkin brought a great deal of technical expertise to telefilm production, for he had made dozens of films for the Army Signal Corps. His first series, *Brenner*, focused on a father/son team of cops and was scheduled sporadically by CBS. But Brodtkin's next series was the landmark *The Defenders*. The series was based on the *Studio One* show and featured E.G. Marshall and Robert Reed as a father/son team of lawyers. The "Brodtkin approach" of treating controversial issues with intelligence and dispassion, developed during the live years, translated well to the filmed medium of television. Brodtkin had always held the script in

the highest esteem and consistently used writers of excellence—Ernest Kinoy, Robert Crean, and Reginald Rose. Though television was and is a medium that appeals largely to the emotions, Brodtkin's productions consistently asked the viewer to think, to consider, and to weigh. Issues considered taboo, such as abortion, euthanasia, racial prejudice, and blacklisting, were familiar ground to Brodtkin. CBS constantly battled affiliates that refused to clear *The Defenders* and the network endured some financial hardship due to advertiser pull-out from the series. Nevertheless, the hallmark of every Herb Brodtkin production was a thoughtful and even-handed examination of an issue in a dramatic context. *The Defenders* enjoyed a four-year run in which it garnered every major award for television drama.

Brodtkin's filmed series work often used the settings of the legal and medical profession to explore a variety of very contemporary controversies. The series also used the convention of the mentor/student relationship. In *The Defenders* as well as *Brenner* the protagonists are father and son. In the unsold pilot *The Firm*, written by long-time Brodtkin associate Ernest Kinoy, the protagonists are father and daughter. Brodtkin, and those who wrote for him, proved especially adept at balancing the maturity of the mentor and the intellectual enthusiasm of the student as a framework for examining the issues of the day.

In 1965, Brodtkin shifted his attention from his Plautus Productions to his newly created Titus Productions (formed with Robert Berger), under whose banner some of his most memorable dramatic specials were produced. This was also the year of one of Brodtkin's more metaphorical productions. *Coronet Blue* was a short series run by CBS in the summer of 1967. It chronicled amnesiac Michael Alden's search for his identity while being pursued by a shadowy band of assailants. The only clue to Alden's identity was the cryptic phrase, "coronet blue." The character of Alden can be seen as a metaphor for the angst-ridden youth of the 1960s. His search mirrored the search of the "counterculture" for its identity, its place in the world. The series was fairly well-received but could not be revived for regular production because Frank Converse, who played Michael Alden, was already signed for another series.

In 1981, Titus Productions was acquired by the Taft Entertainment Company. Both Brodtkin and Berger remained to produce dramatic specials for Taft. Notable among those specials was *Skokie*, starring Danny Kaye as a Holocaust survivor who fights to keep a group of neo-Nazis from marching in Skokie, Illinois, and the HBO special *Sakharov*, which featured Jason Robards and Glenda Jackson as Soviet dissident Andrei Sakharov and his wife Elena Bonner. In 1985, the Museum of Broadcasting in New York mounted a retrospective of Herbert Brodtkin's career. In the words of television curator Ronald Simon, "the oeuvre of Herb Brodtkin is an impressive collection of socially significant dramas." Herb Brodtkin died in 1991 leaving a legacy of creative and intellectual integrity unparalleled in the annals of television.

BROKAW, TOM

U.S. Broadcast Journalist

Tom Brokaw serves as anchor and managing editor of *NBC Nightly News*. Sole anchor of the program since 1983, he had previously been anchor of *NBC News' Today Show* from 1976 to 1982 and had worked in a series of increasingly prominent assignments for *NBC News*. Brokaw's distinctively smooth style and boyish charm have made him a well-recognized star through the shifting stakes in television news in the 1980s and 1990s.

After an early position in Sioux City, Iowa, Brokaw's career in broadcast news began in earnest in 1962 when he worked in Omaha, Nebraska. He moved to Atlanta, Georgia, in 1965 to report on the Civil Rights Movement, then joined *NBC* in Los Angeles as a reporter and anchor in 1966. From the West Coast, Brokaw moved to Washington, eventually becoming *NBC's* White House correspondent during the Watergate era. In 1976 and 1980 he was a member of *NBC News'* team of floor reporters for the Democratic and Republican conventions. In 1984 and 1988 he served as anchor of all *NBC News'* coverage of the primaries, national conventions, and election night, a role he repeated in 1992. In the fall of 1987 Brokaw scored a number of high profile successes, interviewing Mikhail Gorbachev in the Kremlin, Ronald Reagan in the White House, and in December 1987 moderating a live, televised debate from Washington among all declared candidates for the presidential nomination from both parties. He also moderated the first debate among the declared Democratic candidates for president in December 1991.

Brokaw's opportunity to serve as anchor arose when, after being courted by *ABC*, *NBC* countered by teaming him with Roger Mudd (apparently attempting to replicate the Chet Huntley-David Brinkley pairing), and the two went on the air as co-anchors in April 1982. Mudd was soon dropped by *NBC*, and Brokaw took over as sole anchor in August 1983. At *CBS* Dan Rather had replaced Walter Cronkite in 1981, at *ABC* Peter Jennings, who had anchored from 1965 to 1968, returned to that position in 1983, and thus a three-man race was

put in place which continues to structure the national nightly news. When each of the networks was bought by a large conglomerate in the mid-1980s (*ABC* by Capital Cities, *CBS* by Laurence Tisch's Loews Corporation, and *NBC* by General Electric), network news divisions became cost-accountable in new ways that also impinged on the importance of the anchor.

Tom Brokaw
 Photo courtesy of *NBC*

While budgets and staffs were cut, promotional campaigns were expanded, and increasingly, the center of those campaigns was the persona of the news anchor, who became a virtual corporate symbol.

Brokaw has been one of the most well-recognized participants in the trend toward expanding the role of the news reader into a prominent position of creative control and celebrity. Along with Rather and Jennings, Brokaw has emerged in the 1990s as a kind of living logo, the image taken to be representative of an entire news organization. A number of critics have raised questions about the quality and integrity of news presentation in this increasingly star-driven climate, charging that on the national news broadcasts, journalism has become subordinate to entertainment. Brokaw was reportedly the model for William Hurt's Tom Grunick, the protagonist in James L. Brooks' 1987 film *Broadcast News*.

As an anchor, Brokaw is renowned for his globetrotting, and he has provided live coverage of such important recent events as the dismantling of the Berlin Wall. In addition to *NBC Nightly News*, Brokaw has anchored, with Katie Couric, the nighttime program. *Now with Tom Brokaw and Katie Couric* as well as the short-lived *Expose*, a news magazine show on the order of *60 Minutes*. He has also anchored a series of periodic prime-time specials.

—Diane M. Negra

TOM (THOMAS JOHN) BROKAW. Born in Webster, South Dakota, U.S.A. 6 February 1940. Educated at University of South Dakota, B.A. in political science 1962. Married: Meredith Lynn Auld, 1962; children: Jennifer Jean, Andrea Brooks, and Sarah Auld. BROOKE-TAYLOR, TIM

British Comedian/Writer

Tim Brooke-Taylor has established himself as a familiar face on British television since making his first appearances in the early 1960s, when he was one of a celebrated generation of young new comedians and comedy writers to emerge from the famous Cambridge University Footlights Revue.

Brooke-Taylor began his television career working for *On the Braden Beat*, which was one of a flood of innovative new comedy shows to be created around 1962 to 1964. Subsequently he teamed up as a writer with star Eric Idle on *The Frost Report* and also contributed as writer and performer to the spin-off series *At Last the 1948 Show*, on which his collaborators were John Cleese, Marty Feldman, Graham Chapman and Aimi Macdonald, under the leadership of David Frost as producer. This last

1966. Honorary degrees: University of South Dakota; Washington University; Syracuse University; Hofstra University; Boston College; Emerson College; Simpson College; Duke University, 1991; Notre Dame University, 1993. Recipient: duPont Award, 1987; Peabody Award, 1988.

show was a significant step in British television comedy, having a distinctly surreal air with its unconnected sketches and eccentric, often slapstick humour, which paved the way for the *Monty Python* series, among other successors.

After teaming up as straight man to Marty Feldman on *Marty*, Brooke-Taylor entered upon the most successful collaboration of his television career to date, completing a highly popular comedy trio with Graeme Garden and Bill Oddie in *The Goodies*. Oddie, Garden, and Brooke-Taylor had in fact already worked together once before with some success, first developing their sparky three-man act in the series *Twice a Fortnight* in 1967. Anarchic, weird, and often hilarious, *The Goodies* sought to save the world from such

bizarre threats as a marauding giant kitten and a plague of Rolf HARRISES. Pedalling into action on a beflagged three-seater bicycle, the trio were purveyors of a more slapstick, lighthearted brand of comedy than their counterparts in *Monty Python* and consequently appealed to a wider age range, with many fans in their teens or even younger.

Much of the humour evolved from the contrasting, and ludicrous, personalities of the three heroes. While Graeme Garden was the obsessive scientist who dreamt up all manner of wacky schemes to save the world and Bill Oddie was a short, scruffy hippy with a strong cynical streak, Tim Brooke-Taylor was the clean-cut patriot in union jack waistcoat, always ready with a rousing Churchillian speech when things looked bleak but first to bolt when danger reared its head. Targets of the humour included a range of contemporary fads and issues, from satirical swipes at the science-fiction adventure serial *Dr. Who* to take-offs of the Hollywood western.

The series was hugely successful, but ultimately it fell victim to the BBC's indecision about whether it should be scheduled for adult or younger audiences (despite pleas from the performers themselves, it was broadcast relatively early in the evening, thus restricting the adult content of the material). The team switched to London Weekend Television in 1981 in the hope that they might fare better there, but there was no real improvement and no more programmes were made after 1982.

After *The Goodies* the three stars went their more or less separate ways, Tim Brooke-Taylor managing to maintain the highest profile in subsequent years. As well as establishing himself as a prominent panellist on such long-running radio programmes as *I'm Sorry, I Haven't a Clue*, he also developed a second television career in situation comedy, starring in several efficient but fairly unremarkable series in the 1980s and early 1990s. Perhaps the most successful of these latter efforts was *Me and My Girl*, in which Brooke-Taylor gave support as best friend (Derek Yates) to Richard Sullivan, an advertising executive struggling to bring up a teenage daughter on his own. Typical of other series that were greeted with only lukewarm praise was *You Must Be the Husband*, in which Brooke-Taylor was the startled uptight husband of a woman newly revealed as the bestselling authoress of salacious romantic novels.

—David Pickering

TIM(OTHY JULIAN) BROOKE-TAYLOR. Born in Buxton, Derbyshire, England, 17 July 1940. Attended Cambridge University. Married: Christine Wheadon, 1968; children: Ben and Edward. Actor, Cambridge Footlights Revue while at university; writer, various 1960s comedy series, co-star, *The Goodies*, 1970–80, 1981–82; later appeared in situation comedies and consolidated reputation as radio performer. BROOKS, JAMES L.

U.S. Writer/Producer/Director

James L. Brooks is one of television's most outstanding and successful writer-producers. He is also one of the few who have become highly successful screenwriters and directors of feature films. His work in both media has been recognized with numerous awards from peers and critics, and both television programs and films have been acclaimed by audiences.

Brooks career in television began, however, in a very different arena. He was a writer for CBS News in New York from 1964 to 1966. In 1966 he moved to Los Angeles and became a writer and producer of documentaries for David Wolper at Wolper Productions. By 1968, however, Brooks and his partner, Allan Burns, had created the hit television show *Room 222*, where they served as executive story editors. This program broke new ground for television by focusing on the career of a black high-school teacher, Pete Dixon (Lloyd Haynes). The show tackled tough issues such as drug use and racial conflict in a concerned, humane manner and won an Emmy as Outstanding New Series in 1969.

Much of the same style and tone carried over into Brooks and Burns next success, *The Mary Tyler Moore Show*. At MTM Entertainment Brooks and Burns were among the first members of a large group of extremely talented individuals, all working in a creatively charged atmosphere established by executive producer Grant Tinker. Tinker's philosophy was to acquire the services of creative individuals and then assist them in every way possible to become even more productive. Brooks and Burns thrived under the system, working first on *The Mary Tyler Moore Show*, then creating or co-creating, *Rhoda*, *Paul Sand in Friends and Lovers*, *Taxi*, *The Associates*, and *Lou Grant*. On the basis of these successes, the team of Brooks and Burns became known as members of a new group of Hollywood television producers, often referred to as the *auteur* producers. They were the creative force behind their shows, imparting a recognizable, distinctive style and tone. Indeed, programs created at MTM have been referred to as the defining examples of "quality television."

The programs were noted not only for their wit and quick jokes, but for establishing a focus on character. Most were built around groups of characters related by circumstance or profession rather than by family relations. They were quickly recognized by critics as something different from the earlier forms of television comedy focused either on zany "situations" or on domestic settings. These new programs were among the first and strongest of the "ensemble comedies" that were to dominate television for decades to come. Human frailty and the comfort of friends, professional limitations and the joy of co-workers, a readiness to take one's self too seriously at times, matched by a willingness to puncture excessive ego—all these are hallmarks of the Brooks style of ensemble comedy. While social issues might come to the foreground in any given episode, they were always subordinate to the comedy of human manners, to character. In this way, the MTM shows were distinguished from the more overtly issue-oriented style of Norman

James L. Brooks

Photo courtesy of Broadcasting and Cable

Lear. This focus on character and ensemble has been passed down through professional and industrial relationships into the work of other producer-writers in shows as diverse as *ER* and *Hill Street Blues*, and programs such as *Cheers*, *Murphy Brown* or *Seinfeld* are clear descendants of the work of Brooks and his various partners.

In 1978 Brooks began to shift his work toward feature films. He worked as writer and co-producer on the film *Starting Over* and in 1983 he wrote, produced, and directed *Terms of Endearment*, a highly successful film in terms of both box office and critical response.

In 1984 Brooks founded Gracie Films, his own production company, to oversee work on film and television projects. To date, the best known television programs developed at Gracie Films have been *The Tracey Ullman Show* and its immensely popular spin-off, *The Simpsons*. With some degree of irony, given Brooks' career, these two shows are marvelously skewed views of television comedy. *The Tracey Ullman Show* was replete with send-ups of American TV "types," the housewife-mother, the bored "pink collar" worker, the prime-time vamp. And *The Simpsons*, using all the cartoon techniques at its disposal, pokes fun at, the idealized version of domestic comedy that has long been a television staple. While Brooks' involvement with these shows remains primarily at the level of executive producer,

the style and attitude he developed throughout his years in television comedy is clearly at work. In some ways he might be said to have inherited the mantle of Grant Tinker, discovering new talent, making a space for creative individuals, and changing the face of television in the process.

—Horace Newcomb

JAMES L. BROOKS. Born in Brooklyn, New York, U.S.A., 9 May 1940. Attended New York University, New York City, 1958–60. Married: 1) Marianne Katherine Morrissey, 1964 (divorced), child: Amy Lorriane; 2) Holly Beth Holmberg. Began career at CBS television Sports division; writer/producer, David Wolper Productions, 1966; co-creator, with Alan Burns, *Room 222*; writer/producer, MTM; founder, Gracie Films, 1984; film writer, producer and director. Recipient: numerous Emmy Awards; Golden Globe Awards; Peabody Awards; Humanitas Awards; Directors Guild Awards; Writers Guild of America Awards.

BROOKSIDE

British Soap Opera

Brookside, produced independently by Mersey Television, is inextricably linked to the history of the British independent publishing channel, Channel Four. Founded in 1982, Channel Four's remit was to attract audiences not already catered for by other channels, and to innovate in form and style. In particular, *Brookside* attracted a young audience who were essential to its success.

Unlike earlier serial dramas, *Brookside* avoids the traditional television studio; the show filmed on a small housing estate, built as part of a Liverpool housing redevelopment. The structure of the close itself, with small "two up, two down" working-class accommodation next to large detached houses for wealthier occupants, set the stage for confrontation between classes, with politically contentious issues dealt with in an upfront manner.

Whereas its competitor soaps are perceived to be "character-based," *Brookside's* initial aim was a realism that directly tackled the social and political problems apparent in the Britain of the 1980s. This approach has been followed by the BBC's *Eastenders*, which also copied *Brookside's* "weekend omnibus repeat" format. More recently, the pressing concerns of audience maximisation have led to a more sensationalist approach to social issues, with British television's first "on-screen" lesbian kiss, and a recent story line focusing on an incestuous affair between brother and sister. These developments have led to suggestions that *Brookside*, in particular its Saturday omnibus edition, is unsuitable for "family audiences."

One crucial difference between the *Brookside* of the 1980s and other British soaps was the lack of a central community

meeting point such as a public house or corner shop, forcing characters to interact either on the close itself, or in scenes shot on location in and around Liverpool. However, the addition of a shopping development to the set, has led to more traditional interactions over the counter of a pizza parlour, and at the bar of Brookside's nightclub, La Luz.

Many of the main changes in *Brookside* are symbolised by the fate of the Grant family. Moving onto the close at the start of the programme, the Grants symbolised the expansion in working-class property ownership encouraged by the Conservative governments of the 1980s. Bobby Grant, a trade unionist with a fierce line in socialist rhetoric, suffered unemployment, Damon Grant was murdered in London (with the death filmed as part of a *Brookside* spin-off entitled *Damon and Debbie*, a format copied by Granada's *Coronation Street*); Karen Grant left home to study at university, and Sheila Grant left Bobby, symbolising the breakdown of the traditional post-World War II family unit. Barry Grant gradually developed the role of a ruthlessly competitive young entrepreneur, encouraged by the boom-bust cycle of the British economy during the 1980s and 1990s. He continued with the series into the 1990s, but gradually disappeared after murdering the wife and child of his lifelong best mate, Terry Sullivan. Murder and violence are no strangers to the *Brookside* set, which, since its inception, has seen two armed sieges, the murder of a child-abusing father, a violent rape, and a fatal cocaine-fueled car accident.

Channel Four broadcasts three episodes a week of the soap, and *Brookside* is invariably the channel's most popular programme, giving it a greater scope for minority-oriented programming elsewhere in the schedule. Still shot film-style with one camera, the contemporary *Brookside* retains many of the formal qualities of its 1980s twice-weekly version. However, gritty social realism has gradually given way to a more populist approach; whereas early episodes did their best to reflect the specific concerns of the northwest of England, nowadays *Brookside* rarely references its Liverpool roots.

BUREAU OF MEASUREMENT

The Bureau of Measurement is a cooperative, non-profit Canadian audience research organization, which has struggled to survive in the face of increasing competition from the American-based A. C. Nielsen company, advances in electronic systems of audience measurement, and ambivalent support from the major Canadian broadcasters. It was created on 11 May 1944, on the recommendation of the Canadian Association of Broadcasters, and granted a government charter a year later. Originally called the Bureau of Broadcast Measurement (BBM), its first president was Lew Phenner of Canadian Cellucotton Products. It had no paid staff initially, but received administrative assistance from the Association of Canadian Advertisers and technical support from the Canadian Broadcasting Corporation. Its primary purpose in the beginning was to provide radio stations with reliable coverage estimates so that they could compete with the print media for advertising. The first BBM survey, released in October 1944, was conducted by the private ratings company Elliott-Haynes using the unaided mail ballot technique developed by CBS; instead of checking stations from a prepared list, participants compiled their own lists of stations to which they had listened.

Although financed largely by broadcasters, BBM was controlled for many years by advertising interests; of the nine positions on the original board of directors, three were filled by advertisers, three by advertising agencies, and three by broadcasters. Shortly after the creation of BBM, a similar organization called the Broadcast Measurement Bureau (BMB) was established in the United States. As a result of the efforts of Horace Stovin, chairman of BBM's technical committee, the two organizations worked in concert for a few years, using the same mail ballot technique and running their surveys simultaneously. This enabled advertisers to operate on either side of the border with equal facility. However, BMB was criticized for its methods, plagued by high costs, and thrown into disarray by the resignation of its president, Rugh M. Feltis. In 1950 it threw in the towel and left the American station coverage field to A. C. Nielsen, which used an interview-aided recall method.

By the end of Phenner's presidency in 1951, BBM had increased the number of areas surveyed, introduced bilingual ballots in some areas, and more than doubled its broadcasting membership. But a number of stations still refused to join, and in 1956 the CBC withdrew because of dissatisfaction with BBM's surveys. The same year, BBM began Producing time-period ratings for radio and television using a panel-diary method pioneered in Canada by International Surveys Limited. The new surveys were initially conducted every spring and fall with each member of participating households keeping a week-long diary of listening and viewing by half-hour periods. At the same time, the circulation surveys were increased from every other year to twice a year. However, the CBC remained critical of BBM operations

BBM Bureau of Measurement

Courtesy of BBM

and subscribed instead to Nielsen, ISL, and McDonald Research. A 1962 CBC report criticized BBM's surveys for their "non-coverage, biased selection procedure, low response and poor quality of response." By then BBM was also coming under strong criticism from both advertisers and private broadcasters, and there was a danger that it might collapse.

Under Bill Hawkins of CFOS Owen Sound, BBM began to put its house in order. It revised its constitution so as to increase the representation of broadcasters, and in 1964 became the first ratings service in the world to introduce computerized sample selection. It also increased the number of surveys, redesigned the bilingual household diary, and switched its premium from a card of safety pins to a 50-cent coin. In terms of winning back confidence in the validity of its surveys, the most important step was taken in 1967 when BBM decided to switch from household diaries, which had usually been kept by the harried home-maker, to personal diaries sent to selected members of households—including children, although their diaries were filled out by an adult. This change increased the response rate for mailed diaries to almost 50% and facilitated the acquisition of demographic data. Within a few years, BBM became the only audience measurement service for radio in Canada, and in television the competition was reduced to Nielsen. Between 1963 and 1968, BBM increased its membership from 357 to 534 or about 90% of the broadcasting industry, including the CBC.

Unlike the original household diary, the new personal diary was used for both radio and television, largely for reasons of cost. In theory, however, the most reliable diary is the single-medium personal diary. In addition, the use of dual-media diaries irritated radio broadcasters, who argued that they provided BBM with twice as much revenue as television broadcasters but only received the same benefits. In 1975, therefore, following several studies and considerable debate, BBM adopted separate diaries for each medium, including different samples and survey dates. This move greatly increased survey costs, however, so that in the mid-1980s BBM implemented household flooding or saturation

sampling for both radio and television. Ironically, this development brought BBM almost full-circle back to its original household diary technique and illustrated the fact that audience measurement methods generally are determined as much by economic considerations as by the requirements for scientific validity.

In the mid-1970s, BBM began investigating electronic measuring systems. A committee was set up to develop a proposal for a meter-based system for television, and a contract was signed with Torpey Controls Ltd. for a prototype using existing circuitry and the vertical blanking interval. Despite successful test results, however, the cost of switching from diaries to meters was considered prohibitive, especially since diaries would still be required for radio and to supplement the data gathered for television. It was not until the advent of "electronic diaries" or people meters by Nielsen and others in the early 1980s that BBM gave serious consideration to replacing its traditional diary system for television. Unlike the original Nielsen audimeter, the people meter measured viewing rather than mere tuning and could track audience flow much more precisely.

In 1984, while still testing its new meter technology in the United States, Nielsen announced its intention to launch a people meter service in Canada. In response, BBM turned initially to Audits of Great Britain for help, but then decided to invite bids from other companies as well, including Niel-

sen. In November 1985, Nielsen and BBM reached a tentative agreement by which Nielsen would provide BBM with people meter data from 1,800 Canadian households, which it could then market as it saw fit. The agreement later fell through, however, and in September 1989 Nielsen launched a people meter service for network television in Canada on its own. BBM tried to develop its own electronic television audience measurement or TAM system in conjunction with Les Entreprise Videoway, but the tests results were unsatisfactory. Late in 1990, BBM and Nielsen resumed talks for a joint venture to extend people meters from the national network level to local and regional broadcasting. But the following year, a proposed deal again fell apart because of the concerns of local and regional broadcasters about costs and various technical matters. Since then, BBM has continued to use its diary method of audience measurement for both radio and television.

BURNETT, CAROL

U.S. Comedienne

The many honors awarded Carol Burnett attest to the approbation of her peers and the love of her public. Burnett has been Outstanding Comedienne for the American Guild of Variety Artists five times and recipient of five Emmys. She received *TV Guide's* award as Favorite Female Performer for three consecutive years in the early 1960s, and a Peabody award in 1963. The Academy of Television Arts and Sciences proclaimed her Woman of the Year; a Gallup Poll found her to be one of America's 20 Most Admired Women in 1977. She received the first National TV Critics Circle Award for Outstanding Performance, the first Ace Award for Best Actress, and the Horatio Alger Award, conferred by the Horatio Alger Association of Distinguished Americans. The latter is, in many ways, most significant, as Burnett's personal style and endearing "everywoman" qualities resulted from a life filled with emotional abuse and the ravages of poverty. She was inducted into the Television Hall of Fame in 1985.

Her grandmother wanted her to go to secretarial school, with the objective of marrying a rich executive. Burnett wanted college, and a degree in journalism. The odds were slim against her finding tuition and carfare of over fifty dollars at a time when the family's rent was thirty-five dollars per month. When an anonymous donor placed a fifty dollar bill in the mailbox,

Carol Burnett

Photo courtesy of Carol Burnett

she enrolled at University of California, Los Angeles, quickly switching from journalism to theater arts. Eventually, she joined a musical comedy/opera workshop where she honed her skills in characterization, comic music, and acting. She became a campus star. But her family's poverty made her dreams of moving to New York City and playing on Broadway seem unattainable. A performance at a professor's home in a skit from the musical *Annie Get Your Gun* in 1954 offered her an unexpected break. A party guest gave Burnett and her boyfriend, Don Saroyan, each a grant of one thousand dollars designed to jump-start their careers. Her benefactor attached four stipulations to the money: she must never reveal his identity, she must move to New York City to try her luck; she had to repay the loan within five years; and she was honor-bound to help other young people attain careers in the entertainment business. Within eighteen months, she managed to fulfill two of these criteria. While living at New York's Rehearsal Club, the hotel haven for aspiring actresses that had inspired the movie *Stage Door*, she made her own break by organizing the First Annual Rehearsal Club Revue, which showcased the myriad talents of her housemates. While others gained varying opportunities from the program, Burnett signed with the William Morris Agency and rapidly found outlets for her comedic and singing talents.

The Winchell-Mahoney Show, Paul Winchell's children's program, was her first break in television; for 13 weeks in 1955 she played comic foil for his ventriloquist dummies, where she sang, but did little comedy. She played Buddy Hackett's girlfriend in NBC's short-lived 1956 sitcom, *Stanley*. A comedic nightclub act and her collaboration with writer/composer Ken Welch gave her more opportunities for exposure to television audiences. Welch wrote a song spoofing the Elvis craze; Burnett's rendition of "I Made a Fool of Myself over John Foster Dulles" led to appearances on *The Tonight Show* with Jack Paar, *Toast of the Town* with Ed Sullivan, and an amazing amount of publicity as the dour Secretary of State fielded questions regarding his "relationship" with Burnett. In 1956, she appeared on CBS-TV's morning show with Garry Moore, and from 1959 to 1962, became a regular on Moore's eponymous prime-time program. Critical and popular praise followed, as Burnett portrayed as many as five or six characters an hour in each show; ranked as America's Favorite Female Performer of 1961-62 by *TV Guide*, that season she received her first Emmy. She also made a television special based on her successful 1959-61 portrayal of Princess Winnifred, the gangly, sensitive heroine of the off/on Broadway musical, *Once Upon a Mattress*. She and Julie Andrews made an Emmy-winning special, *Julie and Carol at Carnegie Hall*. Her popularity amply confirmed, CBS negotiated a ten-year contract which required her to perform in specials and guest appearances for the first five years. During the remaining five, Burnett was to dedicate herself to her own show.

The Carol Burnett Show debuted on 11 September 1967, and ran for eleven seasons. It gave Burnett the opportunity to integrate a vaudeville-inspired melange of guest stars, music, and various comedic styles with her own unique blend of sophisti-

cation and folksiness. By filming the show live, with an in-studio audience and a recurring ensemble cast, *The Carol Burnett Show* fused the aura of live performance with the benefits of filmed production. Burnett's opening question-and-answer session with audience members showcased her congenial, unpretentious persona, and illustrated her astonishing spontaneity in dealing with the unexpected. Bits and pieces of her life experience found their way into the show: her signature ear-tug, originally a signal to her grandmother, the working-class grace of her Charwoman character, her childhood fascination with movies and stars, and the painfully funny relationship between Burnett's Eunice character and Vicki Laurence's Mama in "Family" sketches. The show reached its ratings peak in 1972, but remained popular enough to carry it through 1978, when Burnett terminated the program before it became too stale.

After *The Carol Burnett Show*, Burnett continued to perform in all aspects of the entertainment industry, from television to Broadway. Highlights of her television career include the made-for-television movie, *Friendly Fire* (1979), which examined issues confronting families with sons in Vietnam, the miniseries *Fresno* (1986), which lampooned popular night-time soap operas like *Dallas* by presenting comedic elements as if they were serious drama, and musical/opera specials with stars as diverse as Beverly Sills and Dolly Parton. Burnett-as-performer is also known as Burnett-the-Crusader: in 1981, she won a lawsuit against *The National Enquirer* tabloid, which had slandered her in 1976 with an article suggesting that she was drunk and rowdy at a gathering of celebrities and international political figures. Burnett's diverse list of credits continue to grow, and even after a lifetime of success, this consummate professional remains true to the pledge she made to her anonymous benefactor—a lecture given for the Actors' Studio in New York City is scheduled for airing in 1996 on the *Bravo* Arts network, as Burnett helps others find their way into television, motion pictures, and legitimate theater.

BURNS, ALLAN

U.S. Writer/Producer

Allan Burns moved to Los Angeles in 1956 intending to
pursue a career as a cartoonist or commercial artist.
After being laid off from his job as a page at NBC, he did
begin earning a living as a cartoonist for greeting cards. He

soon moved to television, employed in 1962 by Jay Ward
on the cartoon series, *Rocky and his Friends* and *The
Bullwinkle Show*. Burns then formed a partnership with
Chris Hayward and they created *The Munsters*, perhaps an

obvious next step for a cartoonist. He then moved on to the comedy series, *He and She*, where he won the first of six Emmy Awards for his writing. Of that series Burns says, "That was my first great experience, creating character rather than gimmicks." On *He and She* Burns met Jay Sandrich, who was directing the show.

Hayward and Burns then became story editors for *Get Smart*, where they worked with Mel Brooks and Buck Henry and where Sandrich also worked for a time as a producer. Following that experience the Burns-Hayward partnership dissolved and in 1969 Burns saw the pilot of *Room 222*, created by James L. Brooks, liked it, and began to write for the show. When Brooks took a leave to do a movie, Grant Tinker, the executive in charge of programming, asked Burns to produce *Room 222*.

At about this same time Tinker received a 13-week commitment from CBS for an undeveloped series starring Mary Tyler Moore, to whom he was then married. CBS agreed that the project was to be under the complete control of Tinker and Moore; Tinker approached Burns and Brooks and asked them to collaborate to develop a show. As Burns remembers, "We had this remarkable situation where we had an office and an on-air commitment and nothing else."

The group rejected the idea of a domestic comedy and determined to portray a woman who was 30 years old, unmarried, and employed "somewhere." Burns recalls that they had to explain "30 and unmarried" to the network, so "We thought, 'Ah! here is our chance to do a divorce.'" CBS would have no part of that idea and the executives in New York sent word to Tinker, "Get rid of those guys." He refused. Instead, the creators changed the plot to begin with Mary having just ended a failed love affair. The pilot was made, with Jay Sandrich directing, and one of television's landmark series, *The Mary Tyler Moore Show*, was on its way.

In 1977 when the show concluded after 168 episodes most of the writing staff moved to Paramount with long term contracts. Burns, however, decided to stay with Tinker and joined with Gene Reynolds to create *Lou Grant*. Despite the fact that it essentially re-invented the Lou Grant character, the series was a major success, and soon became part of the CBS Monday night response to ABC football.

Burns also directed his talent to the writing of feature films, one being the highly praised *A Little Romance*, starring Laurence Olivier, for which he received an Oscar nomination for Best Screenplay Adaptation. Burns left MTM in 1991 after developing several other TV series.

Calm and persuasive, Allan Burns combines outstanding talent with an ability to work extremely well with a variety of competing personalities. Observing him on the set of a series in production one senses that he quickly commands both trust and respect from those with whom he collaborates. Director Jay Sandrich sums it up well, "Allan is the best."

BURNS, GEORGE

U.S. Comedian and Actor

George Burns moved in the course of his lengthy career from serving as a vaudeville straight man to being one of the grand old men of American show business—and an expert on the history of entertainment in the United States. The television program he shared with his wife, comedienne Gracie Allen, for eight years (1950 to 1958 on CBS) was central to Burns' professional life, chronologically and symbolically.

According to accounts of his early life (all of which originate from Burns himself), he was drawn to show business as a small child, singing on street corners with friends for pennies, and never seriously considered any other calling. Burns floundered in vaudeville for years, changing his act with great frequency, until he met Allen in 1922 (or 1923; accounts vary), and the couple inaugurated the straight-man/"Dumb Dora" pairing they would enact for more than four decades. The team moved successfully into film and radio in the early 1930s and finally into television in October 1950.

In *The George Burns and Gracie Allen Show*, Burns and Allen played versions of themselves, a show-business couple living in Beverly Hills, California. As she had throughout their joint career, Allen acted as the comedian of the two, creating chaos through her misunderstandings of the world about her, while Burns served as her straight man. He helped establish her elaborate humorous situations, set the timing for their conversations, and lovingly extricated his partner and wife from the fictional consequences of her "zany" personality—all the while maintaining a deadpan stance.

The pair were supported by Bea Benaderet playing their neighbor Blanche Morton, by a series of actors portraying Blanche's husband Harry, by their announcer (first Bill Goodwin, later Harry von Zell) playing himself, and eventually by their son Ronnie. The program was playful and sophisticated, relying more on linguistic than on physical humor. Although the character of Gracie was dumb in many ways, she never lost the respect and affection of her fellow cast members, particularly not of her husband. Her mistakes were never unkind, and her dumbness was in its own way brilliant. Perhaps more than any other couple-oriented situation comedy of its day, *Burns and Allen* presented an egalitarian marriage—in large part because George Burns as straight man was always dependent on his partner's comic abilities.

Burns used the new medium of television to expand his straight-man role, however. In *Gracie: A Love Story*, a 1988 biography of Allen, he jokingly explained his function in planning the show: "My major contribution to the format was to suggest that I be able to step out of the plot and speak directly to the audience, and then be able to go right back into the action. That was an original idea of mine; I know it was because I originally stole it from Thornton Wilder's play *Our Town*."

George Burns

Burns thus moved from merely setting up his partner's jokes to interpreting them, and indeed the entire action of the program, to the audience. Eventually the program's writers (of whom Burns himself served as the head) gave the character George-as-narrator additional omniscience by placing a magic television set in his den. This device enabled him to monitor and comment on the plot even when he was not directly involved in it.

Television gave additional responsibilities to the offscreen George Burns as well as to his onscreen counterpart. Like many video stars of the 1950s, Burns owned the program in which he starred. His production company, McCadden, also produced or co-produced a number of advertisements and two other situation comedies—*The Bob Cummings Show* (1955–1959) and *The People's Choice* (1955–1958).

The ever-busy Burns also used the *Burns and Allen* years to become an author. He produced his first volume of memoirs, *I Love Her, That's Why!*, with Cynthia Hobart Lindsay in 1955. The book enhanced Burns' reputation as a raconteur and staked his claim to authorship of the Burns and Allen team.

Unfortunately for Burns, he was soon to discover that he was still not the star of that team. When Allen retired from their act and from show business in 1958, he immediately reassembled his writers and his cast to churn out

The George Burns Show, a situation comedy featuring all of *Burns and Allen's* characters except Allen. The show founded after one season.

Burns persevered, trying nightclub work alone and with other actresses. In the fall of 1964, attempting to recover from Allen's death earlier that year, he returned to television, co-starring in *Wendy and Me* with Connie Stevens and producing *No Time for Sergeants*. Neither program lasted beyond the first season. The following year, he was back producing another short-lived program, *Mona McCluskey*.

Burns continued to move along on the edges of American show business until 1975, when, after the death of his close friend Jack Benny, he was given Benny's part in the film version of Neil Simon's comedy *The Sunshine Boys*. His success in this role led to other film work (including portrayal of the almighty in three *Oh, God!* pictures), television specials, and contracts for several more books—mostly memoirs.

His final book, *100 Years, 100 Stories*, was published in 1996. In many ways, this small and entertaining volume summed up the life and career of George Burns. It consisted of a number of often retold, highly repolished jokes. Its origins, like Burns' own ethnic roots, were obscured but oddly irrelevant-seeming. (Burns himself was in such poor health during the book's production that he clearly played little part in it; nevertheless, the stories were ones he had told for years and years.) Years after her death, it still depended heavily for its meaning on Burns' relationship with Allen, who figured prominently in many of the stories. And coming out as it did in the weeks between its author's 100th birthday in January of 1996 and his death in March, this final volume exhibited the sort of timing for which George Burns was justly renowned.

—Tinky "Dakota" Weisblat

GEORGE BURNS. Born Nathan Birnbaum, in New York City, New York, U.S.A. 20 January 1896. Married: Gracie Allen, 1926 (died, 1964); children: Sandra Jean and Ronald Jon. Early career in vaudeville as singer in children's quartet, then as dancer, roller skater, and comedian; formed comedy partnership with Gracie Allen, 1923; co-starred with Allen in radio program, 1932–50; partnership moved to television in *The George Burns and Gracie Allen Show*, 1950–58; continued as star of *The George Burns Show*, 1958–59; after death of Allen in 1964, continued to work in film, notably in *The Sunshine Boys*, 1976. Honorary degree: University of Hartford, 1988. Recipient: Academy Award, 1976; Kennedy Center Honor, 1988. Died in Beverly Hills, California, 9 March 1996.

BURNS, KEN**U.S. Documentary Film Maker**

Ken Burns is one of public television's most celebrated and prolific producers. He has already fashioned a record of nine major Public Broadcasting System (PBS) specials, addressing a wide range of topics from American history, such as *The Brooklyn Bridge* (PBS, 1982), *The Shakers: Hands to Work, Hearts to God* (PBS, 1985), *The Statue of Liberty* (PBS, 1985), *Huey Long* (PBS, 1986), *Thomas Hart Benton* (PBS, 1989), *The Congress* (PBS, 1989), *The Civil War* (PBS, 1990), *Empire of the Air* (PBS, 1992), and *Baseball* (PBS, 1994), which have all won various awards and recognitions from both professional and scholarly organizations and at international film festivals.

Burns is a 1975 graduate of Hampshire College in Amherst, Massachusetts, where he studied under still photographers, Jerome Liebling and Elaine Mayes, and received a degree in film studies and design. Upon graduation, he and two of his college friends started Florentine Films and struggled for a number of years doing freelance assignments, finishing a few short documentaries before beginning work in 1977 on a film based on David McCullough's book, *The Great Bridge* (1972). Four years later, they completed *The Brooklyn Bridge*, which won several honors including an Academy Award nomination, thus ushering Burns into the ambit of public television. While editing *The Brooklyn Bridge* in 1979, Burns moved Florentine Films to Walpole, New Hampshire, surviving on as little as "\$2,500 one year to stay independent."

Much about Ken Burns's career defies conventional wisdom. He operates his own independent company in a small New England village more than four hours north of New York City, hardly a crossroads in the highly competitive and often insular world of corporately funded, PBS-sponsored productions. His television career is a popular and critical success story in an era when the historical documentary generally holds little interest for most Americans. His PBS specials so far are also strikingly out of step with the visual pyrotechnics and frenetic pacing of most reality-based TV programming, relying instead on techniques that are literally decades old, although Burns reintegrates these constituent elements into a wholly new and highly complex textual arrangement.

Beginning with *The Brooklyn Bridge* and continuing through *Baseball*, Burns has intricately blended narration with what he calls his "chorus of voices," meaning readings from personal papers, diaries, and letters; interpretive commentaries from on-screen experts, usually historians; his "rephotographing" technique which closely examines photographs, paintings, drawings, daguerreotypes, and other artifacts with a movie camera; all backed with a musical-track that features period compositions and folk music. The effect of this collage of techniques is to create the illusion that the viewer is being transported back in time, literally finding an emotional connection with the people and events of America's past.

Ken Burns

At first, it may appear that he has embraced a wide assortment of subjects—a bridge, a 19th-century religious sect, a statue, a demagogue, a painter, the congress, the Civil War, radio, and the national pastime—but several underlying common denominators bind this medley of Americana together. Burns's body of work casts an image of America which is built on consensus and is celebratory in nature, highlighting the nation's ideals and achievements. He suggests, moreover, that "television can become a new Homeric mode," drawing narrative parameters which are epic and heroic in scope. The epic form tends to celebrate a people's shared tradition in sweeping terms, while recounting the lives of national heroes is the classical way of imparting values by erecting edifying examples for present and future generations.

In this way, Burns's chronicles are populated with seemingly ordinary men and women who rise up from the ranks of the citizenry to become paragons of national (and occasionally transcendent) achievement, always persisting against great odds. *The Brooklyn Bridge*, for example, described by the film's "chorus of voices" as "a work of art" and "the greatest feat of civil engineering in the world," is the "inspiration" of a kind of "Renaissance man," John A. Roebling, who died as the building of the bridge was beginning, and his son, Washington Roebling, who finished the monument 14 years later through his own dogged perseverance and courage, despite being bedridden in the process.

Along with being an outstanding documentarian and popular historian, Burns, like all important cultural voices, is also a moralist. Taken as a whole his series of films stand as morality tales, drawing upon epic events, landmarks, and institutions of historical significance. They are populated by heroes and villains who allegorically personify certain virtues and vices in the national character as understood through the popular mythology of our modern memory. At the beginning of *Empire of the Air*, for instance, Jason Robards' narration explains how Lee DeForest, David Sarnoff, and Edwin H. Armstrong "were driven to create [radio] by ancient qualities, idealism and imagination, greed and envy, ambition and determination, and genius." And Burns himself describes Huey Long as "a tragic almost Shakespearean story of a man who started off good, went bad, and got killed for it."

Burns is best known, of course, for his 11-hour documentary series, *The Civil War*. The overwhelming popularity of this program, aired in September 1990, made him a household name. Much of the success of the series must be equated to the extent with which Burns makes this 130-year-old conflict immediate and comprehensible to a contemporary audience. He adopted a similar strategy with *Baseball*. "Baseball," he says, "is as much about American social history as it is about the game," as it examines such issues as immigration, assimilation, labor and management conflicts, and, most importantly, race relations. Burns explains that "Jackie Robinson and his story are sort of the center of gravity for the film, the Gettysburg Address and Emancipa-

tion Proclamation rolled into one." This 19-hour history of the sport debuted over nine evenings in September 1994, lasting nearly double the length and costing twice the budget (\$7 million) of *The Civil War*.

Burns is now executive producer on two additional projects for PBS. He has next committed to a 10-hour, seven-part multicultural history of the American West, which is scheduled to inaugurate the public television season during the fall of 1996. He also has an agreement with General Motors to oversee a series entitled *American Lives*, in which various documentarians, including himself, will film brief biographies of important historical figures, such as Thomas Jefferson, Susan B. Anthony, and Mark Twain. His involvement with *American Lives* ensures that Burns will be a fixture at PBS into the next century.

Despite his long-standing affiliation with non-commercial television in the U. S., Burns still remembers his boyhood dream of becoming the next John Ford. As he recalls, "I had always wanted to be a Hollywood director. I think as I look back now in retrospect, I realize how my whole body of work is a kind of documentary version of Ford—that is a real love for American mythology." Burns is once again exploring a subject that is intimately related to John Ford's filmic legacy in *The West*. Ford was a visual poet of the first order; he was also a populist, stressing a respect for the past and the lessons it can teach. Burns shares a similar style and outlook in his documentaries: "All my work is animated by the question 'who are we?' that is to say who are we as a people? What does it mean to be an American? And all of these questions are not necessarily answered by these investigations as the questions are themselves deepened." In this respect, no one has ever done a better job of probing and revivifying the past for more Americans through the power and reach of prime-time television than Ken Burns.

—Gary R. Edgerton

KEN BURNS. Born in Brooklyn, New York, U.S.A., 29 July, 1953. Educated at Hampshire College, B.A. in film studies and design, 1975. Married: Amy Stechler, 1982, children: Sarah and Lily. Cinematographer, BBC, Italian television, and others; president and owner, Florentine Films, since 1975; producer, cinematographer, and director of documentaries, since 1977. Member: Academy of Motion Picture Arts and Sciences; Society of American Historians; American Antiquarian Society; Massachusetts Historical Society; Walpole Society for Bringing to Justice Horse Thieves and Pilferers. BURR, RAYMOND

U.S. Actor

Raymond Burr is so associated with his characterization of television lawyer/detective *Perry Mason* that his rich and varied career in film, radio, and television is often ignored. His face, in the words of *Perry Mason* creator Erle Stanley Gardner, is cow-eyed. He is broad shouldered, heavy, robust, but excelled at playing introverted rather than extroverted characters. This may be, in part, why Burr accomplished the rare television feat in which actor becomes almost thoroughly identified with character, the performer inseparable from the role. Just as William Shatner is James Kirk, Peter Falk is Columbo, and Carroll O'Connor is Archie Bunker, Burr is Perry Mason.

Burr began as a stage actor who performed small roles in radio. His early film work was remarkable only in the sense that he rarely played anything other than the villain in such films as *Raw Deal* (1948). Burr even managed to play the "heavy" in comedies, such as the Marx Brothers' *Love Happy* (1949). When he was in the courtroom drama *A Place in the Sun* (1951), he assumed the role of the relentless district attorney. During these movie years Burr continued to work in several radio series such as *Pat Novak for Hire* (1949) and *Dragnet* (1949–1950). In 1954 he confirmed his villainous persona with his appearance as the menacing wife-killer Lars Thorwald in Alfred Hitchcock's *Rear Window* (1954).

In 1955 when he learned that the lawyer/detective drama *Perry Mason* was being cast for television, Burr was requested to audition—but for the part of district attorney Hamilton Burger, another "villain". As the story goes the producers at Paisano Productions (the *Perry Mason* produc-

tion company) allowed Burr to try for the title role simply to secure his audition for Burger. Erle Stanley Gardner,

Raymond Burr

author of the original Mason novels and co-creator of the television series, is said to have taken a look at Burr during the audition and declared "He's Perry Mason." This was the role Burr played from 1957 to 1966 and reprised in a successful series of made-for-television movies from 1985 until his death in 1993.

At the time of *Perry Mason's* popularity Burr was one of the highest paid actors in series television, commanding a yearly salary of \$1 million. Yet he was well known for his philanthropy. Between television production seasons he would take the time to journey to Vietnam on his own—not to perform but to meet and visit with those serving on the front lines. Burr was comfortable with self-deprecating humor and appeared in numerous television send-ups of his own career and characters on shows such as *The Jack Benny Show* and *The Red Skelton Show*.

What happened to Burr was a classic case of an actor being blended with a character he or she successfully plays. During his time on *Perry Mason*, Burr and his character gradually merged so much that when the series was recast in 1973 with Monte Markham in the title role the audience refused to accept anyone else as Mason. The Markham version was canceled after 15 unsuccessful episodes. The Burr/Mason association was so strong that Burr even received an honorary law doctorate from the McGeorge School of Law in Sacramento, California.

This connection between character and actor was a burden to Burr. He continued to be associated with Mason, even when he starred as a wheelchair-bound policeman in another successful series, *Ironside* (1967–75). In this series, Burr portrayed Chief of Detectives Robert Ironside, crippled by an assassin's bullet in the pilot episode. Although urged to retire, Ironside worked to ferret out criminals—this time from the prosecution's side. The show was pure crime drama common to the late sixties, mixed with "hip" dialogue and situations relevant to the time. As Richard Meyers argues in *TV Detectives* (1988), Ironside was the perfect "armchair detective." It was still rational detection, in the *Perry Mason* mode, that was his strongest asset.

Burr tried several other series, but after the twin successes of *Perry Mason* and *Ironside* he was unable to capture the unity of character that a television series needs. In 1976 he had the title role of a lawyer in *Mallory: Circumstantial Evidence*, a pilot that never went to series. Next he played an investigative reporter in *Kingston*, which aired as a series for less than a season 1977, and another lawyer in *The Jordan Chance* (1978), also a failed pilot. Through the early to middle 1980s Burr was a pitchman for a number of products such as the Independent Insurance Agents association.

Only when he returned to the role of Mason in the made-for-television movie *Perry Mason Returns* (1985) was he able to renew his success in American television. He also reprised his role as Chief Ironside in *The Return of Ironside* in 1993. The original cast returned for what was planned to be a new series of made-for-television movies, but only the

first movie was completed. Burr finally succumbed to cancer on 12 September 1993.

To every character, Burr brought a cool calculation and intensity. In his three most notable roles—as Lars Thorwald in Hitchcock's *Rear Window*, Perry Mason and Robert Ironside—his acting is introspective and low-key. He portrayed Thorwald as stony-faced and deliberate, thoroughly menacing. That same focus was present in his Mason and Ironside but transformed Burr into the hero rather than the villain. While his Thorwald could level a stare across a courtyard to frighten voyeurs looking out their rear window, his Mason could stare down a witness and bring a quick and heartfelt confession. Burr's stare still reveals more than the ranting and pacing of most other actors.

—J. Dennis Bounds

RAYMOND BURR. Born in New Westminster, British Columbia, Canada, 21 May 1917. Attended Stanford University, University of California, Columbia University, and University of Chungking. Married: 1) Annette Sutherland, 1941 (died, 1943); children: Michael and Evan (died, 1953); 2) Isabella Ward, 1947 (divorced); 3) Laura Andrina Morgan, 1953 (died, 1955). Served in California Conservation Corp. and Forestry Service. Began stage career as teenager, eventually performing on Broadway in *Crazy with the Heat*, 1941, and *The Duke in Darkness*, 1944; director, Pasadena Community Playhouse, 1943; started film career in 1946; cast often as villain, notably in *A Place in the Sun*, 1951, and *Rear Window*, 1954; television actor, appearing as title character in *Perry Mason*, CBS, 1957–66, and *Ironside*, NBC, 1967–75; returned to television as Perry Mason in 1985–86 made-for-television movie, which led to 25 subsequent Perry Mason made-for-television movies on NBC; started Royal Blue Ltd., television production company with business partner Robert Benevides, 1988. Recipient: Emmy Awards, 1959 and 1961. Died, in Dry Creek, California, 12 September 1993.

BURROWS, JAMES

U.S. Director/Producer

James Burrows is one of the few television directors who has made the successful transition to producer. He became one of the top sitcom directors at MTM Productions, the company founded by Mary Tyler Moore and Grant Tinker. Later, as well working as the resident director for *Taxi*, Burrows helped form the independent production company responsible for the long-running NBC series *Cheers*. His critically acclaimed directing and production talents have won numerous awards, including seven Emmies.

One of Burrow's first goals was to establish an identity separate from that of his famous father, Abe, who had written the books for a number of successful musicals, including *Guys and Dolls* and *How to Succeed in Business Without Really Trying*. Ironically, the senior Burrows had also written for the popular 1930s radio series *Duffy's Tavern*, which, like *Cheers*, was set in a bar. While this did not inspire the younger Burrows to duplicate that situation in *Cheers*, his father's work on a stage adaptation of Truman

Capote's *Breakfast at Tiffany's*, which starred Mary Tyler Moore, did lead James Burrows to an informal meeting with MTM President Grant Tinker. At that time, the younger Burrows was known simply as "Abe's kid."

In 1974, while directing theater in Florida, Burrows asked Tinker for a job at MTM and was hired to observe other MTM sitcom directors, with his first assignment being *The Bob Newhart Show*. Tinker recounts in his autobiography, *Tinker in Television*, that as Burrows became more comfortable with his role as observer, he began drawing closer to action on the *Bob Newhart* set, causing Newhart to turn to his producer and demand, "Get that guy out of here. He makes me nervous."

This incident marked a significant turning point in Burrows' career, for Tinker responded by teaming Burrows with MTM's veteran director Jay Sandrich. The two hit it off immediately, and Burrows proved a quick study. Today he is considered as accomplished a director as Sandrich himself. Like Sandrich, he developed a directing style sensitive to the specific needs of the weekly sitcom format, which includes actors who already have a deep understanding of the characters they portray. Burrows' goal is to make his actors "director proof," so that subsequent directors do not erode the developed, established personae.

Burrows stayed with MTM until 1977, gaining directing experience on every sitcom they produced, including *The Bob Newhart Show*. He then joined MTM alumni James L. Brooks, Stan Daniels, David Davis and Ed Weinberger on the series *Taxi*, for which he directed 76 episodes. Because *Taxi* had such a large set, Burrows became one of the first directors to use four cameras simultaneously, an adaptation of the three-camera system that had been a staple of sitcom production since *I Love Lucy*. A testament to his talent, Burrows won Emmies in both 1980 and 1981 for his *Taxi* efforts.

In 1982, Burrows, along with Glen and Les Charles, formed the Charles-Burrows-Charles Company, and then created and produced *Cheers*. Lasting into the 1990s, *Cheers* allowed Burrows, now in the role of producer, to carry on the tradition of quality television established two decades earlier at MTM. Although the Charles-Burrows-Charles Company disbanded after *Cheers* voluntarily retired, Burrows has continued working as a director for such sitcoms as *Wings*, *Flesh 'N' Blood*, *Friends*, and *News Radio*.

—Michael Kassel

JAMES BURROWS. Born in Los Angeles, California, U.S.A., 30 December 1940. Education: Oberlin College, B.A.; Yale University, M.F.A. Director, some off-Broadway productions; worked at MTM Productions, 1974–77, directed episodes of *The Mary Tyler Moore Show*, *The Bob Newhart*

Show, *Rhoda*, *Phyllis*, *Taxi*, *Lou Grant*; *Dear John* (pilot), *Night Court*; with Glen and Les Charles, formed Charles-Burrows-Charles Company, 1982; co-creator and co-executive producer, as well as director of *Cheers*; further directing credits include *Wings* (pilot); *Roc* (pilot); episodes of *Flesh 'N' Blood*, *Friends*, and *News Radio*. Recipient: Directors Guild of America award for comedy direction, 1984; seven Emmy Awards 1979–80, 1980–81, 1982–83, 1990–91; 1982–83, 1983–84, 1989–90. Address: c/o Paramount TV Productions 5555 Melrose Avenue, Los Angeles, California 90038, U.S.A.

CABLE NETWORKS

Cable networks are programming services that deliver packages of information or entertainment by satellite to local cable television systems. The cable systems then redistribute the network programs, through wires, to individual residences in their local franchise areas. The number of cable networks carried by any particular cable system varies, and is based on the channel capacity of the system. Older cable systems may have as few as twenty channels while newer ones may have more than 150 channels. Cable system managers decide which cable networks will be carried. Their decisions are based on analyses of the requirements of their franchise agreement with the local community they serve, on their own economic needs and abilities, and on local audience needs and wishes. Cable networks can be divided into three major types: basic, pay, and pay-per-view.

Basic Networks

The majority of channels on most cable systems are devoted to basic cable networks. These are termed “basic” because the subscriber can obtain a large number of them for a low price. There are over sixty basic networks including:

Arts and Entertainment (A and E)—cultural fiction and non-fiction.

Black Entertainment Television (BET)—talk shows, children’s programs, game shows and other fare particularly aimed at people of color.

Bravo—cultural programming.

Cable News Network (CNN)—24 hours a day of news and information.

Consumer News and Business Channel (CNBC)—primarily business news.

Comedy Central—situation comedies, stand-up comedians, comedy movies and similar fare.

Courtroom Television—coverage of cases being tried in the courts.

C-SPAN—coverage of Congress and other political bodies and events.

The Discovery Channel—documentaries and informational programming.

E! Entertainment TV—programming by and about entertainment.

ESPN—24 hour sports programming.

The Family Channel (formerly CBN, the Christian Broadcasting Network)—wholesome programming including reruns of older commercial TV series.

Courtesy of CourtTV

Courtesy of Discovery Networks

Courtesy of the Disney Channel

Courtesy of HSN

Courtesy of Lifetime

Home Shopping Network—demonstrations of products people can buy by calling the network.

The Learning Channel—formal college credit courses and general education material.

Lifetime Television—information and entertainment shows aimed primarily at women.

MTV—music videos and music-related material aimed at teenagers.

Nickelodeon—children’s and family programming.

Nostalgia Television—TV programming from the past, particularly old commercial network series.

QVC Network—a home shopping service.

TNN: Nashville Net—music and other country related programming.

Turner Network TV (TNT)—old movies and some original programming.

Univision—a general Spanish language service.

USA Network—a general service that includes network reruns, children’s programs, and originally produced material.

VH-1—primarily music videos for people who are older than teenagers.

The Weather Channel—24 hours a day of weather information.

Most basic cable networks charge the cable systems for their service. The fee is based on the number of subscribers the cable system has. A typical basic network charges a cable system an amount between 3 and 25 cents per month per subscriber, depending on its popularity. ESPN, for example, can charge more than Nostalgia Television.

The systems must recoup their expenses, and potentially garner some profit, by selling the cable TV service to consumer households. Most cable systems offer a “basic service” as a package to their subscribers. This includes all local origination and public access channels, all local broadcast stations, and all basic networks for a cost of about \$15 a month. Some cable

systems divide this basic package into two or more “tiers.” They offer local origination, public access, local broadcast stations, and some of the public service and less glamorous basic networks (C-SPAN, the Learning Channel) for a very inexpensive price, about \$5. The second, and more expensive, tier may include MTV, ESPN, USA, A and E, and other more entertainment-oriented basic networks.

Most basic networks sell advertising. As a result they have two sources of income—cable system subscriber fees and fees paid by advertisers. Cable advertising rates are not as high as those for commercial networks such as NBC, ABC, or CBS because audiences are not as large. Most cable networks are delighted if they obtain a rating of 4, whereas commercial network program ratings tend to be in the 11-15 range. One reason cable network audiences are low is that many cable networks program for relatively specific audiences—Lifetime to women, ESPN to sports fans, Nickelodeon to children. These and other program suppliers were created specifically as cable television entities.

Superstations, however, such as WTBS from Atlanta, WGN from Chicago, and WWOR from New York, are a special type of basic service. They are not really networks. Rather they are local television stations that have been placed on the satellite for national distribution. The stations themselves do not

earn direct money from becoming a superstation. They are placed on the satellite by other companies such as United Video. These companies collect the fees from the cable systems. The superstations make additional money because they can set advertising rates based on a national rather than local audience.

Among the more than 60 basic networks, there is considerable variation in operating procedure. C-SPAN, which features the proceedings of the House and Senate, is non-commercial. All revenue comes from money paid to it by the cable systems. The home shopping networks, which make their money because viewers call in and buy the products shown, are usually provided to cable systems free of charge. As an initial enticement to try its material, networks sometimes pay systems to carry their programming. If the system later decides to carry the network on a regular basis it must start paying the networks.

In addition to “moving picture” networks, other services are offered to cable systems as part of the basic package. These include digital sound services such as Home Music Store and electronic text services such as news bulletins from Associated Press and Reuters.

Some basic channels produce most of their own programming. ESPN, for example, provides its own coverage of sporting events, and CNN produces its own newscasts. The same applies to C-SPAN, Courtroom Television, the

Weather Channel, and the home shopping channels. Many networks, however, acquire programming from other sources. Lifetime, the Family Channel, Nickelodeon and others often contract with independent producers to develop movies or series for them. Other channels obtain movies from the major motion picture studios. A and E and Discovery buy some of their programming from the British Broadcasting Corporation. Many channels program old commercial network series. USA Network, for example, has programmed *Murder, She Wrote*, and Lifetime has used *Cagney and Lacey*. In a few instances cable networks have picked up commercial series canceled by the major broadcast networks (*Paper Chase*, *The Days and Nights of Molly Dodd*), produced new episodes, and aired them as a series.

Pay Networks

Pay cable networks, such as HBO, the Movie Channel, Showtime, Cinemax, and the Disney Channel, do not sell advertising. They derive all income from the cable systems that carry them. The systems, in turn, charge consumers subscription fees for each pay network, usually at a rate of \$10 to \$20 per month per pay service. In other words, the pay services are on a more expensive tier than basic services. The systems and the networks divide the consumer fee, usually about 50-50, but this ratio is subject to negotiation. Consumers who do not subscribe to the pay services receive scrambled signals on channels occupied by those services. To justify their additional monthly fees, pay channels must offer subscribers programming or services they can not receive for free. Most of these channels present feature films. The networks purchase rights from motion picture studios allowing them to show feature films shortly after their theatrical runs and prior to their availability to broadcast networks. They show the films uncut and without commercial interruptions. To many viewers this programming policy is worth the extra dollars they pay each month. Some pay channels also offer commercial-free specials such as sporting events, documentaries, miniseries, comedy specials, musical concerts, and original movies created for the pay service. Some of the channels, primarily HBO and Showtime, produce their own television series. These programs usually contain language or themes that commercial networks do not present to their larger, general audiences. Some of these original programs are created by network personnel, some by outside production companies.

Pay-per-View Networks

Of all forms of cable networks, pay-per-view networks are the newest, and therefore the most unsettled. With these systems, subscribers pay only for those programs they actually watch. If they have not paid for a particular program, a scrambled signal appears on the pay-per-view channel. The network and the system divide the subscriber fees, based on a negotiated percentage. The subscriber pays what the market will bear. Movies can be seen for a few

dollars, while major sports events may have a price tag in the \$20 to \$50 range.

Most cable systems that offer pay-per-view programming employ addressable technology that allows for interaction. Viewers who want to see a particular program can press a button on a remote control device that sends a signal back through the wire to the cable system. The program is then unscrambled or otherwise made viewable by the consumer. A computer also notes that the subscriber should be billed for the program and this amount is added to the monthly amount the subscriber must pay. Systems without addressable technology can operate pay-per-view options by having subscribers call an 800 number to order a particular program, but the instant access provided by the remote control works better.

The two main pay-per-view services, Request Television and Viewer's Choice, program twenty-four hours a day. Their staple programming is newly released hit movies, but they also present sports and entertainment specials. Both these services provide multiple channels that repeatedly run the same movie (or the same ten or fifteen movies). The fundamental plan of pay-per-view television is to compete with the video rental business. Pay-per-view services want to enable viewers to see movies at their convenience without having to leave their homes.

Playboy at Night cablecasts each evening and is the oldest of the services that are now pay-per-view. Originally a pay cable service, many community groups objected to the "adult entertainment" content of the material. They pointed out that if parents subscribed to the Playboy Channel on a monthly basis, unsupervised children could easily tune in—accidentally or on purpose. As a pay-per-view option, each Playboy program must be specifically requested.

Other pay-per-view networks do not cablecast on a regular basis—they feature special events, primarily sports and concerts. TVKO, for example, programs a boxing event the second Friday of each month. The Wrestling Federation supplies occasional wrestling matches. And Forum Boxing shows events from the Los Angeles Great Western Forum.

Regional Networks

Regional networks that supply programming to a limited geographic area are fairly numerous in the cable world. Almost all of them are sports or news oriented (e.g. Home Team Sports, Prime Ticket, Madison Square Garden Network, and Orange County Now). Sports networks are active only when games are in progress, but most of the news services provide 24 hours a day of regional news information. Some of these news services are operated in conjunction with a local newspaper or local TV station.

Some regional sports networks are considered pay or pay-per-view services even though they contain advertisements. Usually the placement of such sports channels in the "basic" or "pay" category depends on the particular system. Some systems juggle regional sports networks between basic and pay. If the system can obtain greater revenue by offering

a pay service, it may do so. If there is little interest among consumers, the network is placed in the basic tier.

History

The first cable network was Home Box Office (HBO). This service was established in 1972 by Time, Inc., as a movie/special service for Time's local cable system in New York City. The company then decided to expand the service to other cable systems and set up a traditional broadcast-style microwave link to a cable system in Wilkes-Barre, Pennsylvania. In November of 1972, HBO sent its first programming from New York to Wilkes-Barre. During the next several years HBO expanded its microwave system to include about fourteen cable companies. The venture was not overly successful, nor was it profitable for Time.

In 1975, however, shortly after domestic satellites were launched, Time used satellite transmission from Manila to program the Muhammad Ali-Joe Frazier heavyweight championship match for two of its U.S. cable systems. The experiment was technically and financially successful and HBO decided to distribute all its programming by satellite. The satellite distribution system was easier and cheaper than the microwave system. It also made it possible for HBO signals to be received throughout the country by any cable system willing and able to buy an earth station satellite receiving dish.

HBO began marketing its service to cable systems nationwide, but initially was not very successful. Few local systems were willing to pay the almost \$150,000 required for the technology required to receive the signal. But satellite technology changed quickly, and by 1977 dishes sold for less than \$10,000. Other pricing and programming problems had to be overcome as well. But once the service reached consumers, it was readily accepted. Viewers were willing to pay to watch uncut movies without commercial interruptions. By October of 1977, Time was able to announce that HBO had turned its first profit.

Shortly after HBO beamed onto the satellite, Ted Turner, who owned WTBS, a low-rated UHF station in Atlanta, Georgia, decided to put his station's signal on the same satellite as HBO. Cable operators who had installed a receiving dish for HBO could now also place Turner's station, complete with network reruns and the Atlanta Braves baseball games, on one of their channels. This placement created the first superstation. A company transmitting the station charged cable operators ten cents a month per subscriber for the signal, but the systems provided WTBS free to their subscribers. The rationale for presenting the superstation in this manner was that the extra program service would entice more subscribers. The charge to the cable companies did not cover WTBS's own costs, but the station was now able to set higher advertising rates because its audience was spread over the entire country.

With two successful programming services on the satellite, the floodgates opened and many other companies set up cable networks. Viacom launched a pay-cable service,

Showtime, to compete with HBO. Like Time, Viacom owned various cable systems throughout the country and had been feeding them movies and special events through a network that involved shipping the tapes by mail for microwave relay. Following the launching of Showtime, Warner Amex began the Movie Channel, a pay service that provided movies 24 hours a day. Not to be outdone, Time established a second network, Cinemax, a service that consisted mostly of movies programmed at times complementary to HBO. Other pay services that sprung up were Galavision, a Spanish-language movie service; Spotlight, a Times-Mirror movie service; Bravo and the Entertainment Channel, both cultural programming services; and Playboy, an adult service that entered the cable business by joining forces with an already established network, Escapade.

Services that accepted commercials (later to be known as basic services) also exploded in number. ESPN was an early entry, and its sports programming was much in demand. Other basic services that appeared by the early 1980s were CNN (also owned by Turner), the Christian Broadcasting Network (CBN), USA, MTV, and C-SPAN. Two basic cultural services were formed. One, owned by ABC, was called ARTS. The other was CBS Cable, a service very expensive for its broadcast network owner because it featured a great deal of originally-produced material. Satellite News Channel (SNC), a twenty-four hour news joint venture between Westinghouse and ABC was established to compete with CNN. Daytime was a service geared toward women, and Cable Health Network programmed material dealing with physical and mental health. The number of superstations also grew as WGN in Chicago and WWOR in New York joined WTBS.

For several years in the early 1980s, both new pay and basic networks were announced at a rapid rate—sometimes several in one day. Some of these never materialized, some existed only for short periods, but many showed signs of longevity. The entire cable TV industry was growing. Revenues and profits increased over 100% a year.

Of course, this could not last forever. In the mid-1980s cable growth began to decline and the entire cable industry went through a period of retrenchment. Many cable networks consolidated or went out of business. Both Galavision and Bravo converted from pay services to basic services. Spotlight went out of business. The Entertainment Channel turned its pay programming over to the basic network ARTS, which then became Arts and Entertainment. The Playboy Channel shifted programming between hard-core and soft pornography, caught between angry citizens who objected to televised nudity and a small but loyal group of viewers who wanted access to it. This shifting strategy angered its partner, Escapade, and the two parted company with Playboy paying Escapade \$3 million dollars. MTV's ownership changed from Warner-Amex to Viacom, as did Nickelodeon's. Getty Oil, which owned ESPN, was purchased by Texaco. The new owner had no interest in the sports network and sold it to ABC. CBN changed from a

strictly religious format to a broader, family-oriented format, and became the Family Channel. Daytime and Cable Health Network joined to form Lifetime.

The most highly touted failure was that of the CBS-owned cultural channel, CBS Cable, which ended programming in 1983 after losing \$50 million. The service did not receive sufficient financial support from either subscribers or advertisers. Its demise was almost applauded by some cable companies who resented the encroachment of the broadcast networks into their business. Another well-publicized coup occurred when Ted Turner's Cable News Network bought out the Westinghouse/ABC Satellite News Channel. This meant less competition for CNN, which proceeded on less tenuous financial footing. The Turner organization then established CNN2, a headline service that used the same writers and reporters as the original CNN.

Very few new cable networks were introduced in the mid to late 1980s, in part because many cable systems had filled all their channels and had no room for newcomers. One notable exception was the Discovery Channel, launched in 1985, which became quite successful.

The cable network landscape changed somewhat in the 1990s. The downsizing of the late 1980s allowed for moderate growth in the next decade. In addition, in 1992, Congress passed a bill requiring cable networks to sell their programming to services in competition with cable, such as direct broadcast satellite (DBS) and multichannel multi-point distribution services (MMDS). Prior to this time, cable systems had tried to keep cable network programming to themselves. In fact, many cable system owners also owned all or part of cable networks, making it convenient and financially rewarding to make sure their cable networks provided content for their own cable systems. For example, TCI (Telecommunications, Inc.), the largest cable system owner, had a financial stake in American Movie Classics, Black Entertainment Television, CNN, the Discovery Channel, the Family Channel, QVC Home Shopping, Turner Network TV, and WTBS.

Probably the greatest threats to the cable system structure (but not necessarily the cable networks) are Congressional actions of the 1990s that have opened the door for telephone companies to enter the cable TV business. Phone companies hope to become the "one wire into the home." If this happens, cable systems will suffer, or perhaps disappear. But the phone companies will have to turn somewhere for programming, no doubt to entities that closely resemble the present cable networks.

Technology also improved in the 1990s, and the prospect of digital signals delivered over fiber optic lines meant cable systems (or phone companies) would be able to deliver more than 500 channels to the home. All these channels would need programming.

With new markets and new technologies in mind, a number of companies launched new networks. NBC started Consumer News and Business Channel (CNBC) in 1991, and was followed by Courtroom TV and two new Turner

services, TNT (Turner Network Television) and the Cartoon Channel. Several comedy channels started and eventually merged into Comedy Central. A science fiction network, a game show network, a history network, and many others appeared.

The proposed change in programming most likely to affect cable networks is video-on-demand (VOD). This type of distribution allows consumers to select and view a program or movie at any time. Now in the experimental stage, this process will probably involve a system that can receive and store an entire movie in a device in or on the TV set and play it from there at the viewer's convenience. Closer to reality is near-video-on demand (NVOD). A cable system with 500 channels could easily devote twelve channels to one two-hour movie and start the movie on a different channel every ten minutes. In this way any viewer could have the movie within ten minutes of when he or she wanted it. Twenty or thirty movies could be running this way at the same time. The present pay-per-view services engage in a limited version of near-video-on-demand, but true VOD might very well change the nature of both pay and pay-per-view services.

These changes in both technology and policy will continue to keep cable television services at the center of issues surrounding television. Just as early cable networks transformed the meaning and experience of television programming and viewing, the newer practices will undoubtedly continue to alter our understanding and use of the medium.

CABLE NEWS NETWORK

U.S. Cable Network

The Cable News Network (CNN) ranks as one of the most important, indeed perhaps the most important, innovation in cable television during the final quarter of the 20th century. In 1984 CNN first began to earn wide-spread recognition and praise for its nearly around the clock coverage of the Democratic and Republican conventions. By 1990 Ted Turner's 24 hour-a-day creation had become the major source for breaking news. Praise became so routine that few were surprised when a mid-1990s Roper survey found viewers ranked CNN as the "most fair" among all TV outlets, and the Times Mirror's Center for the People and the Press found viewers trusted CNN more than any television news organization.

But success did not come overnight. Launched in June 1980 by the then tiny Turner Broadcasting of Atlanta, in the beginning CNN (mocked as the "Chicken Noodle Network") accumulated losses at the rate of \$2 million a month. Ted Turner transferred earnings from his highly profitable superstation to slowly build a first rate news organization. CNN set up bureaus across the United States, and then around the world, beginning with Rome and London. Yet at first Turner and his executives were never sure they would even survive the stiff competition from rival Satellite NewsChannel, a joint venture of Group W Westinghouse and ABC. In January 1982 Turner let Satellite News Channels know he was serious and initiated a second CNN service, "Headline News." Through 1982 and most of 1983 CNN battled SNC. In October 1983 ABC and Westinghouse gave up and sold their news venture to Turner for \$25 million, ending effective competition for CNN in the United States.

CNN then took off. By 1985 it was reaching in excess of 30 million homes in the United States and had claimed its first profit. Turner added bureaus in Bonn, Moscow, Cairo and Tel Aviv, and in the years before Court TV alone televised celebrated trials such as the Claus von Bulow murder case. In 1987 when President Ronald Reagan met Mikhail S. Gorbachev at a summit that would signal the end of the Cold War, CNN was on the air continuously with some seventeen correspondents on site. By 1989 CNN had 1600 employees, an annual budget was

about \$150 million, and was available in 65 countries with such specialized segments such as a daily entertainment report, *Show Biz Today*, and a nightly evening newscast, *The World Today*. Larry King had moved his interview show to CNN and become famous for attracting ambitious politicians and infamous celebrities. In 1991, as the only TV network in the world operating live from the very beginning of Operation Desert Storm, CNN reported everything the military permitted—from the first bombing of Baghdad to the tank blitz that ended the conflict. Indeed, at a press conference after the initial air bombing runs by the U.S. Air Force, Defense Secretary Richard B. Cheney and General Colin L. Powell, chairman of the Joint Chiefs of Staff, admitted that they were getting much of their war information from CNN.

But the fame of CNN's Gulf War coverage did not turn into corporate fortune because the costs of coverage of a wide ranging set of battles had risen faster than advertising revenues. The crest came on the night of the invasion of Kuwait by Iraq when CNN captured 11% of the audience as compared to the usual 1 or 2% normal audience shares. Advertising time had already been sold. Still, as the late 1980s and early 1990s provided regular disasters, wars, and "media

Courtesy of CNN

events," CNN was able to experience surges in interest and thus take in ratings binges around the fascination peaked by the confrontations at Tiananmen Square, the calamities of the San Francisco earthquake, and the long awaited announcement of the verdict in O. J. Simpson's "trial of the century."

Whatever the news mix, CNN's prestige never stopped rising. It became a basic component of how the new global village communicated. When United States troops invaded Panama in 1989, the Soviet foreign ministry's first call did not go to its counterpart in the United States diplomatic corps, but to the Moscow bureau of CNN—a statement could be read on camera condemning the action. Ted Turner proudly told anyone who would listen that Margaret Thatcher, Francois Mitterrand, Nancy Reagan, and Fidel Castro all had declared themselves faithful viewers of CNN. But as CNN moved well past 50 million households reached in the United States (and millions more abroad), all was not calm inside the organization. Staffers began to grumble about low wages and pressure not to unionize. And by the early 1990s Ted Turner seemed to lose his innovative magic. In 1992 he heralded and launched an "Airport Channel," and a "Supermarket Channel," but neither added much in the way of new audience or profits. And as CNN reached over more and more of the world, indigenous local news organizations began to publicly label Ted Turner a "cultural imperialist."

Yet there was no doubt that as CNN turned fifteen in June 1995 it had surely become a prosperous and important

part of the new world of cable television. Yearly revenues neared one billion dollars, but growth stalled as advertisers realized that the CNN audience was "too old" and "not as affluent" as could be found elsewhere. The year 1995 was most eventful. First Ted Turner sold his complete operation, including CNN, to mega-media giant Time Warner and skeptics grumbled that a serious news organization would have difficulty trying to function as part of such a corporate colossus. At the end of the year Microsoft announced it would ally with NBC to form MSNBC to directly challenge CNN. Rupert Murdoch's News Corps., Inc., and Capital Cities/ABC also promised future 24-hour news services to contest CNN around the world. Whatever the future held by the mid-1990s CNN had become the stuff of legend. Ted Turner had forever changed the history of television news with his innovation of CNN.

CAESAR, SID

U.S. Comedian

Son of a Yonkers restaurant owner, Sid Caesar learned first-hand the variety of dialects and accents he would later be known to mimic as a comedian. But his first performing interest was as a musician. He studied saxophone at Julliard, and later played with nationally famous bands (Charlie Spivak, Claude Thornhill, Shep Fields, Art Mooney). During World War II, Caesar was assigned as a musician in the Coast Guard, taking part in the service show "Tars and Spars," where producer Max Liebman overheard him improvising comedy routines among the band members, and switched him over to comedy. Caesar went on to perform his "war" routine in the stage and movie versions of the review, and continued in Liebman's guidance after the war, appearing in theatrical reviews in the Catskills and Florida.

Liebman cast Caesar in the Broadway review *Make Mine Manhattan* in 1948, and in 1949 brought him to star on television in the big-budget variety show *Admiral Broadway Review*, which was simultaneously broadcast on both the NBC and DuMont networks. Caesar had appeared on Milton Berle's *Texaco Star Theater* the previous fall, but became an enormous success on his own program, starring

with the multi-talented and splendid comedienne Imogene Coca (who had appeared on TV as early as 1939), Mary McCarty, Marge and Gower Champion, and Bobby Van, among others. The series, produced and directed by Liebman, adopted the format of a Broadway review, with top-name guest stars in comedy skits and big production numbers. It also introduced a savvy genre-bending that would help to characterize Caesar's programs: the opening show closed with an elaborate parody of both opera and Billy Rose, called "No, No, Rigoletto." Seen in every city with television facilities in the United States (either live or by filmed kinescope), the show dominated Friday night viewing, the way Berle did on Tuesday and Ed Sullivan on Sunday. Its sponsor, Admiral, was a major manufacturer of television sets. Running an hour in length, the show lasted only seventeen weeks, from January to June 1949.

Its successor, *Your Show of Shows*, was a Saturday night fixture for four years, adopting a similar format of comedy monologues, skits, and parodies of movies and plays. But this program was less a showcase for guest stars than for Caesar and Coca, ably supported by Carl Reiner (who replaced Tom Avera after the first season) and Howard

Morris (who joined a season later). Writers Mel Tolkin, Lucille Kallen, and Mel Brooks, choreographer James Starbuck, set designer Frederick Fox, and conductor Charles Sanford were all *Admiral* alumni; the other writers completed a Who's Who of post-World War II American comedy—Larry Gelbart (*M*A*S*H*, TV series), Bill Persky and Sam Denoff (*The Dick Van Dyke Show*), Neil Simon, and also Joe Stein (*Fiddler on the Roof*) and Mike Stewart (*Hello, Dolly* and *Bye, Bye Birdie*). The writing sessions were reputedly raucous and sometimes even violent, splitting up into groups of two or three who competed with one another, all fighting for attention and success—with the possible exception of Simon, whispering his suggestions to Reiner, who would repeat them to the group. It has long been reported that Woody Allen worked on the show, though this has recently been suggested to be untrue.

The show included a large cast of regular singers and dancers, and was originally the New York half of a larger overall show, NBC's *Saturday Night Revue*. (Jack Carter hosted a Chicago portion an hour earlier.) At the end of the first season, Carter and the umbrella title were dropped, and Caesar and company went on to perform some 160 telecasts—all live, original comedy. Both raucous and urbane, combined revue and sketch comedy with a rather sophisticated sense of satire and parody, especially for early TV: how many other programs of this era would have conceived a spoof of Italian neorealist cinema?

Caesar, notorious for his deviations from the script, was skilled at mime, dialects, monologues, foreign language double-talk, and general comic acting. Whether alone, paired with Coca, or part of the four-man repertory group, he excelled. Not a rapid-fire jokester like Berle or Fred Allen, Caesar was often compared in the press to the likes of Chaplin, Fields, or Raimu. The 90-minute show usually featured a guest host (who played a minor role), at least two production numbers, sketches between Caesar and Coca, the showcase parody of a popular film (e.g., "Aggravation Boulevard," "From Here to Obscurity"), further sketches (as many as ten per show), Caesar in monologue or pantomime (e.g., an expectant father in the waiting room, the autobiography of a gum-ball machine), and the entire company in a production number. The most famous characters included Charlie and Doris Hickenlooper, a mis-matched married couple; the Professor, a Germanic expert scientist in everything and nothing; storyteller Somerset Winterset; jazz musicians Cool C's and Progress Hornsby; and the mechanical figures of the great clock of Baverhoff, Bavaria, striking one another in addition to the hour.

In the fall of 1954, Leibman went on to produce "Spectaculars" for NBC, Caesar began *Caesar's Hour* (with Reiner, Morris, and Nannette Fabray), which lasted three seasons, while Coca had her own half-hour show, lasting one season. Caesar and Coca reunited in 1958 on the short-lived *Sid Caesar Invites You*.

Building on the interest generated by a 1972 *Esquire* article about the show, Liebman compiled routines of

Sid Caesar

Photo courtesy of Sid Caesar

several programs from 1950 to 1954 into a feature film, *Ten from Your Show of Shows* (1973). NBC had thrown away their copies of the program, but Caesar and Liebman had retained their kinescopes made during the show's original run. A series of 90-minute TV specials anthologized from the original shows were syndicated in 1976. By the mid-1970s, Caesar was seen only in occasional guest appearances, and later in diverse TV series and films (*Grease*, 1978). His autobiography, *Where Have I Been?*, was published in 1983. Caesar and *Your Show of Shows* served as the not-so-thinly-veiled inspiration behind the film *My Favorite Year* (1982).

—Mark Williams

SID CAESAR. Born in Yonkers, New York, U.S.A., 8 September 1922. Graduated Yonkers High School, 1939. Married: Florence Levy, 1943; children: Michele, Richard, and Karen. Studied saxophone and clarinet, New York City; played in small bands, then the orchestras of Charlie Spivak, Shep Fields, and Claude Thornhill; toured theaters and nightclubs as a comedian; appeared in film, on Broadway and television, from 1945; starred in several TV shows; returned to Broadway as star of *Little Me*, 1962-63; appeared in such films as *It's a Mad, Mad, Mad, Mad World*, 1963, *Silent Movie*, 1975, and *Grease*, 1978; appeared in opera *Die Fledermaus*, 1987. Recipient: Best Comedian on TV Award from *Look* magazine, 1951 and 1956; Emmy Award, 1956; Sylvania Award, 1958. Named to U.S. Hall of Fame, 1967.

CAGNEY AND LACEY

U.S. Police Series

C*agney and Lacey*, a U.S. police procedural with pervasive melodramatic overtones, is, deservedly, one of the most widely discussed programs in television history. The series aired on the CBS television network from 1982 to 1988 and presented a set of bold dramatic combinations, blending and bending genre, character, and narrative strategies. Though rated in the list of top 25 programs only once during those years, the show drew critical acclaim—and controversy—and established a substantial audience of fiercely loyal viewers who, on at least one occasion, helped save the program from cancellation by the network. As demonstrated by television scholar Julie D'Acci's outstanding study, *Defining Women: Television and the Case of Cagney and Lacey*, the history of *Cagney and Lacey* provides a textbook case illustrating many issues pervasive in the U.S. television industry as well as that industry's complicated relationship to social and cultural issues.

Created in its earliest version by writer-producers Barbara Corday and Barbara Avedon in 1974, *Cagney and Lacey* was first designed as a feature film. Unable to sell the project, the women presented it to television networks as a potential series.

Cannonball Run II, 1983; *Stoogemania*, 1985; *The Emperor's New Clothes*, 1987; *The South Pacific Story*, 1991.

Rebuffed again, they finally brought *Cagney and Lacey* to the screen as a 1981 made-for-television movie, co-produced by Barney Rosenzweig, then Corday's husband. The movie drew high ratings and led to the series, which premiered in 1982. The difficulties involved in the production history to this point was indicative of struggles encountered by women writers and producers in the film and television industries—especially when their work focuses on women. Those difficulties, however, were merely the beginning of continuing contests.

As put by D'Acci, "the negotiation of meanings of *women, woman, and femininity* took place among a variety of vested interests and with considerable conflict." Throughout the run of the series the "negotiations" continued, and the interests included the creative team for the series—producers, writers, actors, directors. They also included network executives and officials at every level, television critics, special interest groups, and the unusually involved audience that actively participated in ongoing discussions of the series' meanings and directions.

While many of these controversies took place on sets, in writer's meetings, and in board rooms, one of the earliest

spilled over into public discussion in newspapers, magazines, and letters. In the made-for-television movie, the character of Christine Cagney was played by Loretta Swit, that of Mary Beth Lacey by Tyne Daly. Unavailable to take on the Cagney role in the series because of her continuing work in *M*A*S*H*, Swit was replaced by Meg Foster. Almost immediately discussion at CBS and in some public venues focused on potential homosexual overtones in the relationship between the two women. Foster, who had played a lesbian in an earlier television role, was cited as “masculine” and “aggressive,” and after considerable argument CBS threatened to cancel the series, made Foster’s removal and replacement a condition of continuing the show, and the fall 1982 season began with Sharon Gless, presumably more conventionally feminine and heterosexual, portraying Cagney.

Similar, though not so visible, conflicts and adjustments continued throughout the history of the series. Questions of appearance—dress, body weight, hair styles—were constantly under consideration and negotiation. Story material, particularly when focused on issues of vital concern to women—rape, incest, abortion, breast cancer—often proved controversial and led to continuing battles with the network standards and practices offices. Daly reported that even in the matter of sexual relations with her fictional husband, Harvey (John Karlin), differences of opinion flared into argument over how to present domestic sexual behavior.

In the spring of 1983 CBS executives had more straightforward matters to present to the producers of *Cagney and Lacey*; pointing to low audience ratings, they canceled the program. By this time, however, the producers and the production company for the series had mounted an impressive public relations campaign and letter-writers from across the country mailed their protests to the company, the network, the producers—to anyone who would read and make use of them. The National Organization of Women took a lead role in the publicity campaigns. Newspaper critics called attention to the campaign. The series won numerous awards, Daly’s Emmys for Best Actress in 1982-83 and 1983-84 among them. In the fall of 1983, CBS announced it would program seven “trial episodes” beginning in March 1984. *Cagney and Lacey* was back and remained on the air four more seasons.

All of these difficulties were played out as the series developed narrative strategies that took best advantage of U.S. commercial television’s abilities to present serious social and personal issues in the context of genre fiction. Two factors stand out among the techniques that distinguish *Cagney and Lacey*. One strategy, evidenced in many of the conflicts described above, is the series’ ability to blend three areas of concern into single dramatic productions. First, most episodes of *Cagney and Lacey* dealt with the on-going difficulties encountered by two women in a male-dominant profession. This entailed far more than simply presenting gender conflicts in the work place, though certainly there

Cagney and Lacey

Photo courtesy of Orion Pictures Corporation

were many of those. Rather, this dramatic structure required a reconsideration of the entire generic structure of the “cop show.” As the two women dealt with issues such as violence, guns, male criminals, or the streets—all elements of police fiction—writer-producers as well as audiences were required to reflect on new resonances within the genre.

Second, each narrative usually focused on a particular crime and criminal investigation. The generic modifications were intertwined with rather conventional police matters, and the sense of strangeness caused by the gender shift was combined with the familiarity of crime drama.

Third, each story usually linked the crime drama to a social problem, the kinds of issues often explored in television drama throughout the history of the medium. Thus, the issues cited above, often, though not always definable as “women’s issues,” formed a third aspect of the narrative triad structuring individual episodes.

The series was at its best when these elements were “balanced,” that is, when it was not overly didactic regarding the social issue, nor utterly conventional as a police drama, nor submerged in the exploration of gender inflected genre. If, as sometimes happened, one of these aspects did “take over” the story, the result was often a very thin examination of the element.

The second major narrative strategy of the series militated against this imbalance. This was the establishment of

Cagney and Lacey as a “cumulative narrative.” Unlike serial dramas such as *Hill Street Blues*, or, in the more strictly melodramatic vein, *Dallas*, *Cagney and Lacey* did usually bring each episode to closure. Criminals were caught. Cases were solved. Sometimes, even the particular gender-related work place issue was brought to a satisfactory solution.

But beneath these short term narrative aspects of the series, the long-term narrative stakes were continually explored. More important, each of the closed episodes shed light on those ongoing matters. Thus, as viewers watched the Lacey children move from childhood into adolescence, they also saw strains appear in the Lacey marriage, and the toll that strain took on professional commitments, and the conflicts the strain caused in the interpersonal relationship of the two women, and so on. Similarly, each small development could lead to new story possibilities, new inflections of character. Elements from past episodes could be brought into play. Features of character biographies could be revealed to explain events in a particular episode, then used to develop further characteristics in future episodes.

The cumulative narrative, one of television’s strongest forms, was put to near perfect use in *Cagney and Lacey*. Evidence of the utility of this strategy, and the ways in which its methods of story elaboration can appeal to viewers, came in the latter years of the series. Though some critics see the series as diminishing its stronger feminist tonality in this period, it is also possible to see the growing emphasis on the “personal” and “the domestic” as a fuller union of public and private.

One of the most significant developments in the series in this period was the exploration of Christine Cagney’s alcoholism. In addition to their own focus on this topic, producer-writers have cited viewer letters calling attention to the fact that Cagney often turned to alcohol in times of stress. In a harrowing, two-part, award-winning performance, Sharon Gless portrayed Cagney’s descent into “rock bottom” alcoholic behavior. What is significant about the development is that it altered not only the series present and future, but its history as well, and simultaneously altered the “triadic” structure of social issue, personal problem, and police drama.

Cagney and Lacey left network program schedules in 1988. But it continued for some time as a staple for the Lifetime network’s programming aimed at female audiences. Critical and viewer responses to the series continue to be mixed even now. Most recently the series characters have been resurrected in the form of several made-for-television movies. Older, physically changed, perhaps “wiser,” these fictional characters and the narratives in which they appear continue to explore complex issues and themes, and to experiment with narrative forms.

CALL SIGNS/LETTERS

U.S. Broadcasting Policy

Call letters are used by television stations to identify themselves to the TV audience. The call letters usually consist of various combinations of four letters, sometimes followed by the suffix—TV; for example, WAAA-TV. Since many of the early television stations shared common ownership with radio stations, they often shared the same call letters. If the radio station call letters were WBBB, the TV station simply became WBBB-TV.

Federal Communications Commission regulations require that each TV station identify itself at least once each hour by call letters and by city of license. The announcement should be made at or close to the hour during a natural break in programming and can be made either visually or aurally. Stations have the option to insert their channel numbers between the call letters and the city of license, and virtually all stations follow this practice; e.g., KRON-TV, channel four, San Francisco. In advertising and promotional announcements, stations generally promote their channel assignments more vigorously than their call letters.

Some of the more ingenious call letters actually identify the channel either by word or by Roman numeral. These include *KTWO*, Casper, Wyoming; *KFOR*, Oklahoma City; *WTEN*, Albany, New York; and *KTEN*, Ada, Oklahoma. Two Roman numeral examples include *WIXT*, Syracuse, New York; and *KXII*, Ardmore, Oklahoma. Two other stations, *WPVI*, Philadelphia; and *KPVI*, Pocatello, Idaho, both use a P for their respective cities followed by Roman numerals to indicate their channel six assignments.

The procedures for assigning call letters have their origin in the earliest days of radio. Blocks of initial letters were assigned to various countries following the London International Radiotelegraph Conference of 1912. The letters W, K, N, and A were assigned to the United States. W and K were used to designate commercial broadcasters, while N and A were allocated to military users of the radio spectrum. The initial letters C and X were assigned to Canada and Mexico, respectively, and are still used today to identify Canadian and Mexican television stations.

The first U.S. radio stations were allowed to select their own call letters beginning with either a W or a K. Also, early radio stations could select either a three-letter or a four-letter combination. Later, around 1928, the Federal Radio Commission formalized rules which required that all stations use four-letter combinations. Further, those stations east of the Mississippi were required to

use an initial W while those stations west of the Mississippi were required to use an initial K.

Stations already on the air were allowed to keep their call letters regardless of number or location. Radio and later television stations such as KDKA, Pittsburgh, Pennsylvania; WGN, Chicago; WHO, Des Moines, Iowa; and WOW, Omaha, Nebraska, demonstrate their pioneer status and their unbroken ownership by being notable exceptions to the current rules. When WOR-TV, New York, was acquired by a new owner it was required to adhere to the four-letter requirement and became WWOR-TV.

Call letters often tell something about station ownership. New York stations WABC-TV, WCBS-TV, and WNBC-TV are each owned and operated by the respective networks contained within their call letters. So too are Los Angeles stations KABC-TV, KCBS-TV, and KNBC-TV. Ted Turner's WTBS (Turner Broadcasting System) is still another example. A change in ownership will often, but not always, bring a change in call letters. When Philadelphia TV station WTAJ was sold by Taft Broadcasting to another owner, it became WTXF.

Some TV call letters trace their origins to the slogans of their radio station predecessors. Examples include WGN (World's Greatest Newspaper), the Chicago station owned by the *Chicago Tribune*; WLS (World's Largest Store), the Chicago station originally owned by Sears Roebuck; WSM (We Shelter Millions), the Nashville station originally owned by an insurance company; and WSB (Welcome South, Brother), the Atlanta station that conveys regional boosterism in its call letters.

Public television stations have continued this tradition. Chicago's WTTW (Windows to the World) and Philadelphia's WHYY (Wider Horizons for You and Yours) are two examples. Both WQED, Pittsburgh, and KQED, San Francisco, use the abbreviation for the Latin phrase *Quod Erat Demonstrandum*, "which was to be proven," in their call letters.

The growth of cable has increased the promotional value of call letters since some cable systems re-transmit TV signals "off-channel." For example, a VHF station that broadcasts on channel ten might be carried on cable channel five; a UHF station that broadcasts on channel forty-eight might be carried on channel thirteen. As a result, many TV stations continue to identify themselves by channel assignments, but also promote their call letters more extensively than in the past.

—Norman Felsenthal

CAMCORDER

The "Camcorder" is a commercial name for professional and home video cameras that combine a camera and video recorder in one unit. Since the introduction of this technology in 1981, camcorders have become the tool of choice for local and national Electronic News Gathering (ENG). Consumer camcorders, introduced by Sony in 1985, have rendered Super-8 film for home movies obsolete. Moreover, some critics and academic media theorists claim the camcorder has democratized the media, as well.

Professional and consumer camcorders are based on several, non-compatible formats. Ed Beta and MII are popular professional formats, while VHS, Compact VHS, and ultra-compact 8mm dominate among consumers. The 8mm format led to significantly smaller cameras that can be operated with one hand (Sony uses the trade name *Handycam* to describe their 8mm models). Super VHS (S-VHS) and Hi-8, which are compatible with their lower resolution counterparts, offer higher definition and color control when used with high resolution playback equipment. S-VHS and Hi-8 are used by high-end consumers, as well as academic and industrial videographers. The camcorder has also led to a growing sophistication in ancillary equipment for the home video market, with numerous titlers, editors, and mixers available to both average and high-end users. Computer-based multimedia allows camcorder images to be incorporated in computer presentations for business and instructional use.

The camcorder came into prominence in early 1991, when Hollywood plumbing store manager George Holliday focused his camcorder on the beating of Rodney King by members of the Los Angeles Police Department. The tape, which Holliday submitted to KTLA, received international attention, and showed the power amateur video can wield over the national, indeed, world psyche. Previous to this, local stations, as well as cable news giant CNN, had solicited and used newsworthy amateur video. The popular ABC series *America's Funniest Home Videos* and similar television programs throughout the world are based on the existence of camcorders, as well.

The camcorder has also become an icon of numerous dramas and sitcoms, which commonly frame home and family scenes within the confines of a camcorder viewfinder, replacing the very notion of "home movies" as a form of expression.

CAMERON, EARL

Canadian News Reader

Earl Cameron was English Canada's first noteworthy TV news anchor, once known as "Mr. CBC News." Unlike his successors, however, Cameron was a presenter in the British tradition, not a journalist in the American tradition, and he fell victim to the professionalization of television news during the 1960s.

The news service of the Canadian Broadcasting Corporation (CBC) was created in the early years of World War II and modeled on the style of the British Broadcasting Corporation. The key figure was Dan McArthur, the first chief news editor, who believed that broadcast news should be delivered in a calm, neutral fashion, free of any showmanship or editorializing. McArthur wanted the news to appear "authoritative": meaning the news reader must act as an impersonal presenter of the news text.

Cameron was trained in this tradition. He had begun to deliver the National News Bulletin in 1944, the year he joined the CBC, and remained a top CBC radio announcer throughout the 1950s. Although he had little or no experience in television, he succeeded to the job of reading the nightly 11:00 P.M. TV news in 1959, probably because of his reputation as a top announcer.

For the next seven years Cameron was almost unchallenged as the voice of the news, since the rival CTV News, born in 1962, lacked the resources to match the quality of CBC's *The National* (then called *CBC Television News*). He obeyed the rules laid down long ago by McArthur—he appeared solid, even bland, and spoke in measured, careful tones that avoided all hint of emotion or bias. "No matter what Earl Cameron reads," noted one critic, "he makes it sound less alarming than it sounds coming from someone else." Within a few years, *The National* had earned a reputation as more being reliable and believable than newspapers and radio.

But as the 1960s progressed, Cameron looked increasingly outdated. He was not, in any sense of the word, a journalist: "I just read the words," he once told Knowlton Nash, who would later anchor *The National*. Such an attitude did not sit well with the new people who had entered the ranks of CBC news. First, Cameron was pro-

hibited from narrating commercials, a task that had been common amongst staff announcers as a source of extra revenue. His participation in such a crass business as selling toothpaste apparently undermined the credibility of the news. Then Bill Cunningham, the executive producer of news and an admirer of Walter Cronkite, proposed a sweeping change in the character of the CBC news service along the lines common in the United States. He urged a longer newscast, eighteen minutes instead of thirteen during the week, more pictures and less talking heads, more coverage over Canada (rather than just Ottawa, Montreal, and Toronto), and above all more "pizzazz." The changes would require that *The National* be delivered by a news-person: only a journalist could properly convey the significance of the news to the viewing audience.

The argument was not wholly specious: it was true that viewers expected the anchor to understand the news. But the key was the performance of the anchor, his or her ability to act as a storyteller, to present the news items in a coherent and organized fashion that would serve to make clear what happened. This crucial task could be carried out by an announcer as well, or better, than by a journalist. Whatever the merits of Cunningham's argument, it apparently swayed CBC management. Cameron was replaced in 1966 by an actual journalist. Ironically, union regulations prevented his frustrated successor from writing or editing *The National*, a situation which was not remedied until many years later. Only a few of the recommendations of Cunningham's report were effectively implemented, and he himself was soon removed as executive producer.

Cameron did not immediately disappear from Canadian screens. He became the host of *Viewpoint*, a talking-head program that ran for about five minutes after *The National* as a vehicle for individual opinions on public issues. But, according to one of his compatriots, he remained unhappy over his treatment and eventually took early retirement from the CBC, a victim of changing fashions.

—Paul Rutherford

EARL CAMERON. Born in Canada, 1915. Began career as radio news announcer, 1944; moved to television as news reader for *The National*, 1959–66; host of *Viewpoint* (a five-minute commentary).

CANADA

The story of Canadian television begins in 1952, with the launching of bilingual French-English broadcasts by the Canadian Broadcasting Corporation (CBC) in Montreal. Within a year, the CBC was well on its way to establishing two national television networks.

The CBC had been charged with setting up a public service television system following the study carried out by a wide-ranging royal commission on the arts, letters and sciences, which reported in 1951. This procedure followed the tradition of an earlier royal commission on radio, which had recommended establishing a public broadcasting corporation along the lines of the BBC model, and had led to the creation of the CBC in 1936. But radio in Canada developed during the 1930s and 1940s under "mixed" ownership, with public and private stations co-existing in a single system, and competing for advertising. This model was to be repeated in television. While the CBC would enjoy a virtual monopoly for most of television's crucial first decade in Canada, private commercial television appeared in 1960. As of 1961 CTV, a national network linking private television stations, was on the air competing vigorously with the CBC.

The 1950s were critical in setting the tone for Canadian television, in both English and French. Distinctive Canadian news and current affairs formats were developed and, in French particularly, popular dramatic serials known as *téléromans* were established. *Hockey Night in Canada*, programmed in both official languages, became a national ritual which continues unto this day. But as in most other television systems, some important genres, such as live theatre, remain strictly in the memory of the ageing.

The basic legislation governing Canadian broadcasting was rewritten in 1958, following the election of a Conservative government friendly to the interests of the private broadcasting industry. Responding to a long-standing demand of the Canadian Association of Broadcasters (CAB), an independent regulatory authority, the Board of Broadcast Governors (BBG) was created, removing the regulation of private broadcasting from the respon-

sibility of the CBC. Shortly thereafter, the BBG began to license private television stations.

Meanwhile, CBC faced a series of political crises. On the English side, attempts by the government to interfere with programming led to massive resignations among current affairs staff in 1959. In the same year, a strike by French-language Radio-Canada producers paralysed the French television service for over two months, and became an important symbolic reference point for the emerging Quebec nationalist movement.

During the 1960s, news and information programming continued to be a source of friction both within the CBC and in the corporation's relationship with the government. The unorthodox weekly program *This Hour Has Seven Days*, which rated the highest audience "enjoyment index" of any CBC show, provoked an internal management and authority crisis that eventually toppled CBC's senior management while redefining Canadian television journalism. During the same period, French service news programs infuriated the government by paying serious attention to Quebec separatist politicians and issues, and in 1968 the law was rewritten, albeit with little effect, obliging CBC to "contribute to national unity".

While CBC led the way in Canadian programming, private television was slowly and steadily carving a place for itself, building an audience by consistently offering the most popular U.S. programs, competing with CBC for the broadcasting rights to Canadian sports classics such as football's annual Grey Cup Game, and emulating the CBC's successes in news and current affairs. By the late 1980s, the CBC's share of the Canadian television audience was down to around 20% in English and 30% in French.

The issue of maintaining a balance between Canadian and U.S. programs was tackled by the regulatory authority early on. Beginning in 1960, Canadian television broadcasters were required to offer 55% Canadian programs. (In 1970, the regulation was stiffened to 60% in prime time.) Canadian content regulations remain a controversial and ongoing issue in Cana-

dian television up to the present. Aside from the philosophical question surrounding the legitimacy of intervening in audience "choice", the effectiveness of content quotas in bringing Canadian programs to the screen and getting Canadians to watch them has been a subject of continual debate. Since the 1960s, however, there has been a general consensus that without Canadian content requirements commercial broadcasters would have no incentive to produce Canadian programs when they could acquire U.S. exports for as little as one-tenth the cost.

The 1968 reform of the Broadcasting Act replaced the BBG with the Canadian Radio-Television Commission, or CRTC (which became the Canadian Radio-Television and Telecommunications Commission in 1976). The CRTC spent most of the 1970s developing a regulatory framework for the rapidly expanding cable industry, which had emerged in the 1950s as community antenna television serving remote areas. By retransmitting signals picked out of the air from U.S. border-town transmitters (for which they paid no license fees until 1989), the Canadian cable industry built an attractive product for the Canadian television audience, which quickly developed a taste for the best of both worlds. To paraphrase the 1929 royal commission on broadcasting, Canadians wanted Canadian programming, but they wanted U.S. programming too.

Aware that the increasingly widespread cable model was undermining its policy to support and promote Canadian content, the CRTC moved to ensure that cable, as well, contributed to the overriding policy objective of delivering Canadian television to Canadians. Must-carry provisions ensure that every available Canadian over-the-air signal in any area is offered as basic service, along with a local community channel. But in exchange, cable companies were authorised to distribute the three U.S. commercial networks plus PBS. This was, for many years, the basic cable package available to Canadian cable subscribers, and on this basis, cable penetration grew to 76% of Canadian homes by 1992.

The CRTC was also charged with putting in place Canadian ownership regulations, limiting foreign participation in Canadian broadcasting companies to 20%. This policy has resulted in the fact that Canadian television today is 100% Canadian owned, with only a handful of operations having any proportion of foreign ownership at all. It has not affected the rise of Canadian media conglomerates along the lines of those known elsewhere, however, and the Canadian television industry is characterised by a high degree of concentration of ownership. The trend since the mid-1980s is towards the take-over of private television outfits by cable companies, creating multi-media conglomerates which, in some cases, verge on monopoly. The best known examples are the Quebec cable enterprise Vidéotron, which also owns Canada's main French-language network, TVA; and Rogers Communications, Canada's largest cable company, which acquired the Maclean-Hunter publishing, television and cable conglomerate in 1994.

An important shift in the ecology of Canadian television occurred in the 1970s, when the CRTC began to license

second private stations in large metropolitan markets. Regional networks such as Global (in southern Ontario) and Quatre Saisons (in Quebec) grew out of this policy, which also saw the establishment of independent stations in many cities, including Toronto's highly successful CITY-TV. The resulting audience fragmentation contributed to further eating away at the CBC's audience share. Consequently, it also weakened important arguments for legitimating the spiralling cost of public broadcasting to the public purse.

Although advertising had always been a component of CBC television, basic funding was provided by an annual grant from Parliament. By the late 1980s, this grant had risen to over \$1 billion CAN annually. Advertising, meanwhile, represented over 20% of the budget—enough to be an important consideration in every programming decision, but not nearly enough to take the pressure off the public treasury. The CBC's dilemma, particularly for services provided in English, has been how to maintain a distinctive television profile while competing commercially, and how to respond to the vast demands of an encompassing mandate in a context of government cut-backs. It has not been an easy process.

Private television, meanwhile, after two lucrative decades in the 1960s and 1970s, also began to experience the financial doldrums of a weak market in the 1980s. As a period of stagnating advertising revenues followed the earlier licensing boom, many private television operations became ripe for takeover, especially by cable companies.

Conventional broadcasters faced a further challenge with the introduction, in 1982, of pay-tv and later, in 1987, of a series of Canadian speciality channels. The CRTC had resisted pressure from the cable industry to allow the importation of the new U.S. services such as HBO that came on the market in the mid-1970s. The Commission opted instead to promote development of Canadian services along the same lines. In most cases, such as movies, sports and rock videos, the Canadian services provide a range of programs similar to that of their American counterparts, but they are Canadian-owned, subject to CRTC licensing, and they do offer at least a window for Canadian programs. In some cases, such as the CBC's 24-hour news service, *Newsworld*, or the international francophone channel, *TV5*, the first generation of Canadian speciality services licensed in 1987 represented a distinctive addition to the program offerings.

The financing of Canadian pay-tv and speciality channels provides an instructive example in the problems of competing with globally distributed television products in a small domestic market. The regulatory justification for creating Canadian pay-tv in 1982 was to provide an additional vehicle for Canadian feature films but the actual percentage of Canadian films offered has never been statistically significant. At the same time, weak penetration of the cable market by film channels made them commercially unviable. Thus, when the CRTC decided to license a new series of speciality channels in 1987, it chose a different

funding formula. This time, cable operators were authorised to provide the new range of services to all subscribers in their territory, and charge accordingly. The discretionary aspect was thus shifted from the consumer to the cable operator, who could calculate the economics of the deal with great precision. The cost to the consumer for each additional service was relatively low, and as rates were regulated, the market mechanism was essentially removed. At the same time, cable operators could still offer the available Canadian discretionary pay-tv channels which they were by now packaging along with a range of authorised American services not considered to be competitors of the Canadian offerings.

Since 1987, then, Canadian cable subscribers in most markets have received a 24-hour CBC news channel (in English), channels featuring music videos, sports, weather, and children's programming (in either English or French), and the international francophone channel *TV5*. In addition, they could choose to subscribe to pay-tv movie channels, specialised channels in the other official language, and, depending where they lived, a range of American channels including CNN (but not, for example, MTV, which was a direct competitor of the new Canadian equivalent).

By the early 1990s, combined viewing of all of these services accounted for somewhat under 20% of the overall audience share. But pressure to establish even more Canadian services continued. It was grounded in discussions of the coming "500-channel universe" and the perceived need to maintain the attractiveness of a cable subscription for Canadian viewers and forestall their defection to direct broadcast satellites. Thus, as of 1 January 1995, a cabled Canadian household (now up to 76%) can receive, in addition to everything mentioned previously, a French-language CBC news channel, arts-and-entertainment channels in English or French (depending on the market), a science channel, a women's channel, a lifestyle channel, a Canadian country music channel, and a channel featuring old programs. The specific offer and funding formulas have become extremely complicated, and vary from territory to territory according to the leeway provided by the CRTC to each cable operator. The initial response from consumers has been laced with confusion and frustration, for despite the concept of "consumer sovereignty" that supposedly accompanies increased channel capacity, the consumer finds that he or she is not really the one who has the choice.

In the mid-1990s, Canadian television was struggling to adjust to the new technological and economic environment characterised by the metaphor of the "information highway". The CRTC's regulatory regime was under review, the CBC faced increasingly radical budgetary restrictions, and private broadcasters were competing for dwindling advertising revenue. As in other western countries, the conventional model of generalist television was increasingly in a state of siege. However, Canadian distribution undertakings—still protected from U.S. dominance under the cultural industries exemption within the North American Free

Trade Agreement—were well-positioned in the Canadian market. And across the range of channels available, Canadian independent productions were finding an audience.

In addition, Canadian television provided some unique programming services in the form of its provincial government-supported educational broadcasters, community broadcasters, and autonomous undertakings run by northern and native broadcasters. In all its facets, Canadian television constituted a complex system which, in the spirit of the Broadcasting Act, was seen as "a public service essential to the maintenance and enhancement of national identity and cultural sovereignty".

CANADIAN BROADCASTING CORPORATION NEWSWORLD

Canadian News Channel

Canada's English-language all-news 24-hour channel, Canadian Broadcasting Corporation Newsworld, followed CNN as the second such network in the world when it went on the air in August 1989. News has historically been a strong suit on Canadian television, with many innovative programs including *CBC Newsmagazine*, *This Hour Has Seven Days*, and *The Journal*. Canadian audiences have consistently demonstrated a taste for news produced indigenously, reflecting local concerns, as well as for Canadian perspectives on international events. Unlike other areas of television, such as drama and situation comedy, news programming has been able to draw significant and reliable audience numbers. Consequently, the availability of only the U.S.-based CNN during the 1980s sparked an interest in the formation of a similar Canadian 24-hour news network.

The Canadian Broadcasting Corporation (CBC) won the license for the all-news network in November 1987. Private broadcasters fought this decision made by the Canadian Radio-television and Telecommunications Commission (CRTC). In particular, Allarcom Ltd., whose own bid lost to CBC, felt that there was undue favoritism towards the national public broadcaster. After a tough challenge in a conservative parliament sympathetic to Allarcom's charges, the CRTC's decision was finally accepted, though not without delaying the network's start date for over a year. Federal cabinet actions, however, modified the conditions of the license by insisting that CBC Newsworld involve the private sector in their operations and that they develop a similar French-language service.

The perception that CBC has a central Canadian bias, and therefore that it does not adequately reflect the diverse interests and locations of the nation as a whole, also surfaced as a criticism of the CRTC decision. In a bid to address the issue of CBC's centralization in Toronto, CBC Newsworld began by situating its broadcast centres in Halifax, Winnipeg and Calgary.

CBC Newsworld's financing is entirely separate from that of CBC. Its revenue comes from advertising and "pass-through" cable fees. As part of basic cable service, the pass-through fee meant that all cable subscribers had to pay

for the service, whether they wanted it or not. The monthly cost to cable subscribers was 44.5 cents (CDN) in 1989, increased to 55 cents (CDN) in 1992. Some cable operators, particularly around Montreal, initially refused to accept the service because the pass-through fee for an English-language service made no sense to their majority francophone subscribers.

The network's annual budget is \$20 million, which makes its operation roughly one-tenth the size of CNN in terms of both budget and staff. Thus, CBC Newsworld relies heavily upon other news-gatherers (e.g. local CBC reporters, CBC national news, and internationally packaged programming from BBC, ITN and CNN). As such, it has become essentially a news re-broadcaster. This need for inexpensive programming has led toward the news-panel and phone-in format for many of their productions (e.g. *Sunday Morning Live*, *Petrie in Prime*, *On the Line with Patrick Conlon*, and *Coast to Coast*). *Rough Cuts*, *The Passionate Eye*, and *Witness* are prominent windows for documentary film, the latter being a rebroadcast from CBC. In 1994, the CBC French-language all-news service received its licence. *Le Réseau de l'information* (RDI) went on the air in 1995, and like CBC Newsworld, it is part of the basic cable service in Canada.

CANADIAN CABLE TELEVISION ASSOCIATION

In 1957, Canada's fledgling cable operators formed the National Community Antenna Television Association of Canada to represent their collective interests to the public and various government bodies. In 1968, after the passage of the Broadcasting Act and the creation of the Canadian Radio-television and Telecommunications Commission, the cable indus-

try changed the name of its umbrella organization to the Canadian Cable Television Association (CCTA). Over the last three decades Canada's cable operators have certainly dramatically altered the character of Canadian television services, by extending the range of programming and services available to Canadians and opening the door to the "500 channel universe."

The first Canadian cable television system was established in London, Ontario, in 1952 (though it was preceded by a Montreal cable system that delivered audio-only service until later the same year). Cable's original purpose was simply to improve the quality of over-the-air reception from local and regional TV stations. In London, Ontario, in 1952 the cable TV system delivered the CBC signal from Toronto and the U.S. networks from border cities. In 1963, Canadian cable TV operators began using microwave technology to deliver services to rural and remote communities.

In the 1970s cable subscriptions rose sharply. By 1977, the number of households subscribing to cable passed 50%. Currently 95% of Canadian TV households are passed by cable and 81% of those households subscribe to cable services. Through microwave relay and satellite systems, cable TV services are available in more than 2,000 small and rural communities across Canada.

The cable business has been extremely lucrative for most CCTA members. Between 1983 and 1993, cable rates rose an average of 80% compared to a 31% increase in local telephone rates and a 47% increase in the consumer price index. Moreover, the CRTC only regulates the basic subscription rate charged by cable operators, but 96% of subscribers chose a package of channels known as extended basic whose rate is unregulated.

Like other media industries, cable is now characterised by a significant level of corporate concentration; the largest nine companies account for 80% of total subscribers. With over 30% of all Canadian cable subscribers, and close to 45% of all English-Canadian subscribers under its corporate banner, Rogers Communications is the dominant national firm. In Quebec, Le Groupe Videotron accounts for close to 60% of all subscribers.

The expansion of cable in Canada in the 1970s can be attributed to a number of regulatory decisions made by the Canadian Radio-television and Telecommunications Commission (CRTC). In 1969, after much public pressure and lobbying from the CCTA, the CRTC permitted cable systems operating at a distance from the U.S. border, as in Edmonton and Ottawa, to use microwave distribution technology to gather U.S. broadcast signals. Cable's success as a distribution technology was directly related to its ability to provide Canadian households with U.S. signals they either could not otherwise receive or received poorly with conventional roof-top antennae. In 1975, the CRTC declared that cable was a "chosen instrument of public policy" and developed detailed regulations concerning the signals and services that cable companies can or must provide, the rates charged subscribers, the provision of a community channel, and more.

In many respects, cable was the first of the much ballyhooed new technologies. Aside from its early use of microwave technology, Canadian cable TV initiated the use of satellite-delivered services when in the 1970s it offered the House of Commons proceedings to subscribers across the country. Cable companies also developed the first alpha-numeric television services in Canada. Home shopping and real estate services have been available in larger centers for several

years. Some cable systems also offer travel information, electronic mail, video games, and instructional services. Cable companies are involved in a number of field-trials to deliver broadband, interactive home services.

At the local level, the member companies of the CCTA have supported community channels for over 25 years. In 1993, 225 community channels across the country provided more than 235,000 hours of programming. For all but the smallest cable companies, community channels are a condition of their license to operate. Cable companies must make available both space and equipment to community groups and individuals interested in producing television programming; the cable operators are legally responsible for all the material broadcast on the community channels. Although they were initially envisioned as a great experiment in citizen participation and democratic communication, the community channels have by and large developed into rather paternalistic institutions that avoid controversial and politically-charged programming. Instead, local council meetings, local sports events, and multi-cultural information programming make up the bulk of the offerings on most community channels.

As Canada moves forward into age of interactive information and entertainment services, the CCTA must contend with the looming possibility of competition from Canada's telephone companies. The CCTA has argued repeatedly that cable operators are better suited to providing Canadians with access to the information superhighway. CCTA companies are currently engaged in an elaborate project to improve the interactive, multimedia, transactional capabilities of cables systems, including a plan to establish national interconnection via cable. The CCTA has also maintained that, unlike the telephone companies, cable operators are committed to protecting and supporting the production of Canadian material in the interests of reinforcing Canadian sovereignty and cultural identity.

CANADIAN FILM AND TELEVISION PRODUCTION ASSOCIATION

The Canadian Film and Television Production Association (CFTPA) is a national, non-profit association of over 300 companies in Canada's independent production industry. The CFTPA is Canada's only national film producers' association, bringing together entrepreneurial companies engaged in film, television and video production, in distribution, and in the provision of facilities and services to the independent production industry. Member companies include Canada's leading independent film and television producers, such as Alliance, Atlantis, Nelvana, Paragon and Cinar.

The CFTPA promotes the interests of its members by lobbying government on policy matters, negotiating labor agreements on behalf of independent producers (including a low-budget production agreement which entitles CFTPA members to discounts on ACTRA performers), sponsoring conferences, seminars and/or workshops, and publishing a variety of material to assist CFTPA members. The CFTPA is also the founding member of the Canadian Retransmission Collective, the body that claims royalties from Canadian cable companies on behalf of program creators.

The CFTPA is the latest incarnation of voluntary organizations that have represented Canada's independent film and television producers. The first such organization, the Association of Motion Picture Producers and Laboratories of Canada (AMPPLC) was established in 1948. The AMPPLC focused its lobbying efforts on reducing the role of the National Film Board of Canada (NFB), and expanding the opportunities for Canada's independent producers. Throughout the 1950s and into the early 1960s, the AMPPLC challenged what it described as the NFB's "expansionist, monopolistic psychology" and repeatedly called for the contracting-out of government film work. By the 1960s, the AMPPLC had also joined the growing chorus of organizations and individuals making the case for government subsidies for the production of private-sector feature films.

Since the 1960s, and especially since the establishment of the Canadian Film Development Corporation (now Telefilm Canada), the independent sector for film and television production in Canada has grown substantially. The industry employs more than 31,000 Canadians and its direct impact on Canada's GDP is over \$800 million a year. Exports of Canadian film and television productions are now valued at well over \$150 million a year, more than double the value of exports in 1986.

CFTPA members benefit from a number of government programs and regulations designed to stimulate independent film and television production in Canada. Since 1968 the Canadian Film and Development Corporation has offered a combination of loans, subsidies and grants to private-sector feature film production. In 1983,

Telefilm Canada initiated the Canadian Broadcast Program Development Fund earmarked especially for Canadian television productions. CFTPA members also make use of a wide range of provincial funding sources, the largest of which is the Ontario Film Development Corporation. As of 1993, the total annual amount of government funds available for private-sector film and television productions was \$340 million.

Aside from the availability of government funds to "prime-the-pump" of independent film and television production, CFTPA members also benefit from the Canadian-content regulations that are a condition of license for all Canadian broadcasters. Administered by the Canadian Radio-television and Telecommunications Commission, the Canadian-content regulations ensure that Canadian broadcasters do not operate merely as conduits for foreign programming which is much cheaper to acquire. Since the early 1980s, traditional over-the-air broadcasters, such as CTV and Global, have made much greater use of product from the independent sector to fulfill their Canadian-content responsibilities.

CFTPA members have also benefited considerably from the licensing of new specialty cable and pay-TV channels in the 1980s. Indeed, the global expansion of new outlets for television programming has greatly enhanced the fortunes of CFTPA members. CFTPA members now export their product to markets around the world and many of the larger firms have developed effective working relationships with foreign partners. Joint ventures with U.S. firms have become a mainstay of the industry, in part because of the savings in production costs that result from the relative value of the Canadian dollar.

The CFTPA plays a crucial role in ensuring a stable business climate for its members. In the midst of political pressure to reduce the level of government spending, the CFTPA has repeatedly lobbied on behalf of the efforts of Telefilm Canada, the provincial fund agencies, and the Canadian Broadcasting Corporation (which is the major buyer of independent TV programs in Canada). The CFTPA has also been at the forefront of efforts to establish a refundable tax credit system for Canadian producers. Aside from issues related directly to the production of Canadian film and television production, the CFTPA is also a vocal proponent of the need to maintain regulations that ensure a minimum level of Canadian content on new and proposed delivery systems, such as the information highway. Relatedly, the CFTPA has argued repeatedly for legislation that would enhance the role of Canadian film distributors by making it impossible for U.S. film distributors to treat Canada as part of their domestic market.

CANADIAN MORNING TELEVISION

Canadian Morning Television is partially defined by the perception that audiences use television differently at that time of day. Much morning programming is designed to fit into the patterns of everyday rituals: the discrete nature of programs and content that often defines prime time programming breaks down in the patterns of morning television.

Historically, morning TV in Canada has been the location of the marginalia of television culture. Farm reports were regular features of morning television after the sign-on of local stations in the early 1960s, and some local religious programming was part of early regional television in a rotation that covered the principal Christian denominations. After 6:00 A.M., television became the province of news or children's programming. Children's programming generally divided along the lines of syndicated American situation comedies and cartoons with live hosts who catered to the local market. In commercial television the early morning hours were the province of the local station and rarely determined by network time organization. This resulted in a great variety of programs across the country. A morning movie could be part of one television market, while the *Junior Forest Rangers* part of another. Because the CBC partially operated on a network of commercial affiliates, the early morning hours were generally not programmed with CBC network feeds. One of the principal changes of early morning television that moved it closer to its contemporary form was the shift away from this local focus to network programming.

In 1972 CTV, a private network established in 1960 introduced *Canada A.M.*, a program modeled on the long-running American NBC *Today* show. This news and chat show—with regular bulletins of news, sports, and weather—begins

each day at 6:30 and runs until 9:00 A.M. In its live presentation and with its relatively relaxed hosts who move seamlessly into softer news stories and entertainment gossip, *Canada A.M.* attempts to be an ambient program designed to be used during other preparations for the workday. CBC also launched *CBC Morning News* which provides a similar diet of bulletins and easy-listening banter among hosts and guests. Regional networks such as Global in Ontario have counter-programmed against this style of "flow" television with either reruns of children's cartoons such as the *Care Bears* (which provides needed Canadian content) or religious programming drawn from both Canadian and American sources.

The pattern of morning network television shifts quite dramatically after 9:00 A.M.; the news flow model organized for the working audience transforms into something that targets those connected neither to work nor school, and the divide between the commercial stations and the public broadcasters becomes more obvious. Public stations generally engage in children's educational programming aimed primarily at the preschool age group. The provincially-funded education networks such as TVO in Ontario and the Knowledge Network in British Columbia vary this diet with programs aimed at older students within the school and university system. With its larger mandate, CBC's programs operate commercial-free, providing a series of critically acclaimed and internationally successful children's series, which have included the long-running *Mr. Dress Up*, *Fred Penner's Place*, *Under the Umbrella Tree*, and *Theodore Tugboat*. These programs have followed in the tradition of *Chez Helene* (1959-72) and the *Friendly Giant* (1958-85) as staples of childhood experience in Canada. A Canadian version of *Sesame Street* has run on CBC since 1973, and inserts of Canadian puppets and stories (including French language

Canada A.M.

Photo courtesy of CTV

training) derived from Canadian city and country landscapes have increased from 5 minutes to 25% of the program content of this American program. *Sesame Street* provides the end of morning shows on the CBC.

In contrast, the commercial free-to-air stations provide almost exclusively adult-oriented programming during this same time period with talk and game shows predominating in the schedule. *Dini*, an hour-long talk show hosted by Dini

Petty in the tradition of *Oprah* and *Donahue*, has had a successful Canadian run on CTV and BBS, and made a brief appearance in the American market. *Supermarket Sweep* is the latest of the scaled-down (in terms of the size of prizes) Canadian versions of American game shows shown on daytime television. Peppered into the schedule are imported American programs such as *Regis and Kathy Lee*, that provide talk-celebrity shows better connected to the Hollywood

circuit of stars, or issue talk shows such *Sally Jesse Raphael*. Exercise programs have on occasion been successful at either the pre or post-9:00 A.M. slot. The most successful in terms of Canadian and American syndication was the 1980s Citytv production *The Twenty-minute Workout*, which featured three female models performing aerobics routines to a *Miami Vice*-like synthesized backbeat soundtrack. *Body Moves* is a current fitness program that continues this tradition.

Religious programming is also presented on Canadian television to some degree. The most prevalent Canadian program which competes with American productions is *100 Huntley Street*. Like the “infomercials,” religious programs often buy blocks of time directly from the station and use it for their own forms of promotion. Because they are often out of the general flow of morning television they are also placed further to the margins of early morning.

Weekend morning television presents another principal distinction in Canadian programming. On both Saturday and Sunday mornings, the commercial stations expand their children’s programming to include virtually the entire time period. This focus on cartoons and hosted programs aimed at children gradually dissolves by late morning into sports programming. Sunday morning is divided among a variety of Canadian and American-based religious programs and children’s television. The religious programs are further subdivided between local production and more slickly produced syndicated shows.

The expansion of Canadian television channels in the 1980s and 1990s has made the temporal designations in programming—such as the category of morning television—less valid. The patterns of morning television have instead been expanded into actual channels, where the former marginalia of television populate the entire broadcast day. For instance, CBC Newsworld, the 24 hour news channel does alter its content throughout the day, but the general pattern resembles breakfast television news programs that predated the channel’s launch. Subtle differences can be

seen in channels producing what could be described as micro-genres. Muchmusic, the nationally distributed cable music channel, organizes its morning into *Videoflow* and the retro-oriented mid-morning *Clip Trip*.

These channel orientations are complicated, however, by technological factors. Satellite distribution, unless it delays the signal—as it does for the more traditional networks of CTV and CBC—means that programming strategies of the cable-to-satellite channels break down in their attempts to match the temporal flows of their viewers. Programming designed for morning television in Toronto would appear in its satellite feed as very early morning television in Vancouver. Partly as a result of these difficulties, one can discern a slight tendency to program for the most populous part of the country connected to Montreal-Ottawa-Toronto eastern time zone.

Nevertheless, what can be identified more generally is that morning television, as it is now presented through the 40 or more channels available through Canadian television, may be slipping into programs associated with other day parts and even other generations, or “eras,” from previous years of television. Past television becomes the domain of channels such as Bravo and the distinction between morning and prime time appears to dissolve. Cable channel advertising decisions now rotate commercials through the entire day of programming. Such a strategy indicates that the newer cable channels aim to gather their target audience through cumulative reach, rather than with the purchase of a particular prime time moment at a premium rate.

Morning television, then, does continue to provide particular categories of viewing practices and has produced associated genres connected to this marginalized part of television. The emerging reality of multi-channel television in Canada has made this sense of Canadian morning television and its connection to a temporal identification less distinct, but it is nevertheless a clear and continuing pattern in both programming and production practices.

—P. David Marshall

CANADIAN PRODUCTION COMPANIES

Most Canadian production companies are relatively recent phenomena. Indeed, prior to 1983 and the creation of Telefilm Canada, the independent production sector was either extremely weak or virtually non-existent. Since 1983, however, the sector has blossomed and Canada now has a number of financially sound production companies. Besides the CBC, the largest production companies are Alliance Communications Inc., Astral Communications Inc., Atlantis Communications Inc., and Paragon Entertainment Corporation. Other companies include Nelvana Ltd., Cinar Films, TeleScene Films, Primedia Productions, Sullivan Films, and Salter Street Films. The most unanticipated addition to the sector occurred in 1995 when Seagram

Company Ltd. of Montreal acquired Hollywood-based MCA.

Pre-Telefilm

From 1952 to 1982, television production was dominated by the television networks themselves. This was especially true of the CBC which produced almost entirely in-house and which was, until 1961, the only network. The dominance of network production arises from three main factors. First, unlike U.S. networks, Canadian networks are restricted neither from owning all of their affiliates nor from producing all of their content. The CBC therefore is an integrated production, distribution, and broadcasting enter-

prise. As the owner of its affiliates, it naturally seeks to fill their air time with content which it produces in its fully-owned facilities. Second, there existed in Canada no film industry similar to Hollywood on which the nascent television networks could draw for content, expertise, or ideas. Third, CBC television adopted its operational methods from CBC radio where in-house production was the norm.

Consequently, the CBC, and to a lesser extent private networks after 1961, filled the need for content themselves. The CBC became therefore Canada's first major television production company, a role which it maintains to the present though on a reduced scale. However, until the early 1980s, the CBC dwarfed competitors and collaborators alike in terms of both the quantity and quality of its output.

The sheer volume of CBC production cannot adequately be characterized. It is possible, however, to point to certain structural elements. As a public network, the CBC's production activities necessarily occur within the framework of its parliamentary mandate which enjoins it to "reflect Canada and its regions to national and regional audiences, while serving the special needs of those regions" and to "contribute to shared national consciousness and identity". Hence, CBC production must provide for both mass and specialized audiences while being "distinctively Canadian". Second, as the CBC is only partially reliant upon commercial revenues, it has traditionally enjoyed the freedom to experiment and schedule material which is either challenging or of limited audience appeal. Third, its heavy reliance on in-house production has resulted in a recognizable network style across all program categories. This style, derived from the CBC's expertise in news and documentaries, has at times been called awkward, and has been blamed for a tendency to turn even drama into fictionalized news accounts.

Nonetheless, since its inception, the CBC has produced not only news and public affairs, for which it has earned a well-deserved reputation, but also drama (*CBC Playbill*, *On Camera*, *For the Record*), variety (*Don Messer's Jubilee*, *The Tommy Hunter Show*, *Rita and Friends*), comedy (*Wayne and Shuster*, *Kids in the Hall*), science (*The Nature of Things*), game shows (*Front Page Challenge*, *Reach for the Top*), weekly serials (*RCMP*, *Wojeck*, *Street Legal*), talk shows (*Take 30*, *90 Minutes Live*), children's shows (*The Friendly Giant*, *Chez Hélène*, *Fred Penner's Place*), miniseries (*The Whiteoaks of Jalna*, *Empire Inc.*), arts programming (*Adrienne Clarkson Presents*), religious programming (*Man Alive*), cooking shows, do-it-yourself shows, numerous sports shows, and so on.

Four major aspects of CBC production stand out. The first is its stability. For example, whereas other North American broadcasters have abandoned variety and prime time game shows, the CBC continues to produce both. Additionally, many CBC shows have been in continual production for over 20 or 30 years. Both *Front Page Challenge* and *The Nature of Things* debuted in 1956 and are still in production. Comedians Wayne and Shuster performed on CBC televi-

sion from 1952 until well into the 1980s. The nature/adventure drama *The Beachcombers* ran uninterrupted for 18 years from 1972 to 1990. CBC production, then, runs on a longer cycle than American production largely because it is responsive to social and cultural imperatives rather than simply to commercial and economic imperatives.

The second aspect is its variety. The CBC clearly attempts to produce for a much broader range of audience tastes and interests than virtually any other North American broadcaster. As a result, its production slate is perhaps the most highly varied though not the most watched in North America.

The third aspect concerns the nature of in-house production. This practice effectively precluded the emergence of an independent production sector. The CBC felt no need to call upon outside resources since everything could be done in-house. Likewise, outside resources had few opportunities to break into the business since the CBC would not buy from them. As a result, the independent sector languished and CBC production, despite its abundance and variety, acquired a recognizable look. Independent producers were forced to depend upon private broadcasters who were financially weak and slow to develop. However, the 1983 requirement that the CBC purchase dramatic content from independent producers both altered the look and feel of CBC programming and greatly assisted the independent production sector.

The fourth aspect concerns the way in which CBC programs attempt to meet the requirements of the Broadcasting Act. Systematically, they appeal to varied and various audiences, cover topics of broad appeal and specialist interest, are set in various regions of the country, cover different types of interest, are overwhelmingly pro-social, and deal with recognizably Canadian characters and situations.

In this respect, the most typical CBC genre may be the nature/adventure drama of which outstanding examples include *The Forest Rangers* (1963–66), *Adventures in Rainbow Country* (1970), *The Beachcombers* (1972–90), *Ritter's Cove* (1979–91), *Danger Bay* (1984–90), and others. The genre is highly durable and usually features children or adolescents surrounded by caring adults in a nature or wilderness setting. Each week, a problem arises which the young people attempt to solve through their own resources and the help of authoritative others, typically parents, the local RCMP detachment, or a native person. Favourite animals may also figure prominently as companions.

The genre corresponds well to the objectives of the Broadcasting Act. By decentralizing production to non-urban locations, it shows Canada to Canadians and gives all regions a sense of representation. It also appeals to parents as non-violent programming with potentially educational benefits. Furthermore, the genre's lower costs coincide with the resources of Canadian producers. Finally, as the child audience is both very forgiving and constantly renewed, the same programs can be constantly reissued, thereby building up a profitable backlog of shows. For all of these reasons,

independent producers have also shown a proclivity for this genre or elements of it.

The CBC's French-language network, SRC (Société Radio-Canada), shares certain of the above characteristics. Like the CBC, the SRC was until 1961 virtually the only French-language producer in Canada and, like the CBC, produced huge quantities of programs across an enormous range of categories. It was likewise bound by budgetary constraints due to the size of its market (approximately six million viewers concentrated mainly in Quebec) and by the Broadcasting Act. However, it evolved quite differently.

Television in Quebec was immediately embraced as a tool for shaping a cultural community. As a result, French-language productions enjoy a popularity and cultural status unimaginable for English-language productions. The very rapid development of an indigenous star system and advertising culture further reinforced their appeal. They therefore address a loyal and voracious audience and are less concerned with "showing Canada to Canadians" than with representing and affirming their own culture. Hence, there is little crossover between French- and English-language productions.

The most popular and enduring genre of French-language TV is the *téléroman*. It is highly comparable to both the South American *telenovela* and the Australian *soapie*, and is a cross between American daytime soap opera, for production values, and prime time drama, for audience interest, cultural impact, and prestige. *Téléromans* are frequently written by leading authors or playwrights and may possess a cultural status similar to an important play or novel. They frequently broach topical issues or deal with significant historical and political themes though many are merely family sagas.

Private networks began to go to air in 1961. Their production activities, however, were much more limited than those of the CBC and tended to resemble the patterns of American TV. They typically produced news and sports but called upon outside producers to provide games shows (*It's Your Move*, *The Mad Dash*), the occasional sitcom (*The Trouble With Tracy*, *Pardon My French*, *Snow Job*), and some drama (*The Littlest Hobo*, *The Starlost*). They heavily supplemented their schedules with U.S. imports. On the French-language side, importation was more difficult and broadcasters soon became producers. Hence, the French-language TVA network became an important production company in its own right, duplicating much of SRC's output though with a heavier emphasis on the demotic and the inexpensive. Significantly, TVA has also come to rely on the *téléroman*, a genre pioneered by the public network.

The market represented by private networks, however, was sufficiently small that only very few independent production companies could co-exist. As a result, the private networks tended to draw heavily upon a very small number of independent producers thereby reproducing in the private sector a situation analogous to the public sector's use of in-house production.

This entire period is characterized, therefore, by the dominance of public networks, the prevalence of in-house

production or its analogue, a relatively small number of private broadcasters relying on U.S. imports, and the absence of a syndication market. Beginning in the early 1980s, the situation changed.

Post-Telefilm

In 1983, the federal government established Telefilm Canada. Telefilm administers two funds, the Feature Film Fund (FFF) and the Canadian Broadcast Program Development Fund (CBPDF), each worth approximately C\$60 million per year. This money is available for independent producers and Telefilm invests in all phases of production: scriptwriting and pre-production, production, post-production, dubbing, marketing, test-marketing, and distribution.

To receive Tele film funding, a project must be certified as "Canadian" according to the "points system" administered by CAVCO (the Canadian Audio-Visual Certification Office). In the first instance:

- the material must be produced by a Canadian citizen or landed immigrant
- its copyright must be owned by a Canadian citizen
- 75% of remuneration must be payable to Canadians
- 75% of aggregate costs for services must be payable to Canadians

Additionally, the content must obtain six points on the following scale:

- two points each for director and screenwriter
- one point each for highest paid actor
- one point each for second highest paid actor
- one point each for art director, music composer, picture editor, director of photography

Private investors participating in certified projects may also receive tax benefits. Additionally, provincial governments have instituted parallel structures to support film and television production and to attract activity to their territory. To date, Vancouver, Toronto, and Montreal have emerged as the centres of a vigorous independent film and television production industry.

Telefilm essentially provided a new source of funding for independent producers. However, it worked in conjunction with three other factors: the widening of the Canadian television industry, the emergence of a U.S. syndication market for Canadian content, and the development of a system of international co-productions.

The television market was widened in several ways. First, in 1983 the CBC was ordered to acquire entertainment programming from outside sources. It did, and by 1990, 50% of its entertainment content came from independent producers. The CBC has therefore been transformed from a producer to a purchaser of programming, thereby creating opportunities for the independent production sector. Amongst the highly successful independent productions acquired by the CBC are the

made-for-TV miniseries *Ann of Green Gables* (Sullivan Entertainment) which earned the highest ratings of any television show in Canada to that time (5.8 million viewers) and was subsequently turned into a weekly series, *Road to Avonlea* (Sullivan Entertainment), *Kids in the Hall* (Broadway Video), *North of 60* (Alliance), *Babar* (Nelvana), *Wimzie's House* (Cinar), and numerous made-for-TV movies including the highly acclaimed *The Boys of St. Vincent* (Alliance).

Second, since 1982, the CRTC has licensed over 20 specialty and pay-TV channels. These channels not only require but also frequently demand highly specialized content, thereby requiring diversification within production companies or the emergence of parallel specialized producers. For example, the two music video channels, MuchMusic and MusiquePlus, obviously require musical content and a fund, VideoFax, has been set aside for the production of Canadian music videos. The sports channel requires news and information in addition to sports content. The movie channels require a certain number of Canadian movies. The Discovery Channel has an appetite for science and documentary. YTV, the youth channel, has likewise spawned shows aimed at its target audience. All of these channels also provide a second life to many older shows, thereby capitalizing the earlier investments of production companies.

Third, the CRTC has maintained its Canadian content quotas. These quotas effectively create a permanent domestic market for Canadian content. However, in order to avoid situations in which broadcasters program Canadian content in off-peak hours or fund only the cheapest types of content, the CRTC has also attached conditions to the licenses of virtually all the major broadcasters, whether they be over-the-air, cable networks, or independent television stations. The conditions vary from broadcaster to broadcaster but overall require that specified sums be spent on high profile content.

Fourth, U.S. cable networks have also emerged as a syndication market for Canadian content. Although they have insatiable appetites, they also tend to have smaller budgets than the major U.S. networks. As a result, they need content which is more affordable while still possessing acceptable production values. Consequently, they have turned to Canadian production companies and it is estimated that up to 30% of their original programming comes from Canadian producers.

The success of cable networks using Canadian content has convinced not only the major U.S. networks but also major U.S. production companies to begin investing in Canada where many American shows are now produced. As a result, CBS scheduled in 1994 the first non-American prime time series ever to air in the United States, *Due South* (Alliance). As well, Spelling Productions and Stephen J. Cannell productions have both set up shop in Vancouver. U.S. shows produced in Canada currently include *The X-Files*, *The Commish*, *Top Cops*, and others.

Several conditions have, therefore, combined to transform the fortunes of Canadian production companies. On

the one hand, new sources of funding have been created through the establishment of Telefilm Canada and tax deductions. Furthermore, the regulatory environment has contributed to Canadian production through the maintenance of content quotas, the attachment of conditions of license, and the CAVCO certification procedure. Finally, the market has expanded through the licensing of new channels and the emergence of a U.S. syndication market. Even the presence of American productions has created opportunities for Canadian producers by affording them high profile exposure which they might not otherwise obtain. Together, they have given Canadian production companies two things they never before possessed: a track record and a backlog of marketable product.

However, the Canadian television market remains too small and too fragile to support the current scale of Canadian production. Indeed, Atlantis Communications Inc. reported in January 1995 that fully 80% of its license fees came from outside Canada. Hence, access to the wider North American and international markets constitutes the key to continued viability for Canadian production companies. They are therefore driven to seek additional sources of funding through international partnerships and Canada has developed a highly elaborate system of "international co-productions".

Co-productions involve partners from Canada and another country contributing to the manufacture of a single film or television program. They occur within the framework of treaties signed by the governments of both countries and covering financial participation, mutual tax concessions, national treatment, creative control, and copy-right. Canada has over thirty such treaties and is the world's leading co-producer.

The advantage of co-productions are higher production values, access to foreign markets, and opportunities for on-going business relations. Their disadvantages are that they also create opportunities for conflict over financial and creative control, can be nightmares to administer, and can result in culturally unspecific content. The success of co-productions in their various markets is, of course, extraordinarily variable but they have served the fundamental purposes of broadening the financial base of production companies and giving them international reach.

Structure of a Production Company

An examination of some of the leading companies reveals strategic differences and similarities.

Astral Communications Inc. of Montreal was founded in 1962 as a photographic store but incorporated under its current name in 1974. It owns over 100 photographic stores, distributes film, television, and video, and has a library of 2000 titles. For Astral, production refers to the physical process of handling raw material and distributing content rather than to the combination of ideas, money, and talent to form a television program. It provides video duplication, post-production, and dubbing services, and

owns a motion picture laboratory in downtown Montreal. It also participates in production and has long-standing relationships with Walt Disney Company, Warner Brothers Inc., Columbia Pictures, Universal Studios, and Hearst Entertainment, as well as others. For example, Astral and Twentieth Century-Fox have together formed Fox Astral Television which develops and finances international co-productions and distributes *NYPD Blue*, *The Simpsons*, *The American Music Awards*, and others. Astral also controls seven Canadian specialty channels: the Movie Network, Viewer's Choice, Family Channel, SuperEcran, Canal Famille, Moviepix, and Arts et divertissement. Finally, it manufactures up to 32 million CDs per year for music, education, and video. Astral invests, manufactures, and distributes. Its strength, therefore, lies not in the content which it produces but in the distribution networks which it controls and in its ability to market across media. Finally, as with many Canadian production companies, Astral handles both film and television productions for both the English- and French-language markets.

Alliance Communications Corporation of Toronto was incorporated in 1985 and is involved in both film and television production and co-production. Although Astral is Canada's largest entertainment enterprise, Alliance is definitely its most successful and its president, Robert Lantos, is currently the most important producer in Canada. Alliance has broken itself down into separate operating units: Alliance Releasing which handles distribution, Alliance Productions, the production arm, Alliance International, which distributes to Europe, Latin American, Asia, and the Pacific Rim, and Alliance Equicap, its financial and brokerage arm. Alliance produced two "breakthrough" programs in the late 1980s, *Night Heat*, a police drama, and *E.N.G.*, about the daily life of a television station. Not only did they sell internationally but they also achieved extremely good ratings in Canada, demonstrating that Canadian content could be popular (even in Canada) and that Canadian production companies used the highest production values. Alliance also landed the first regular prime time Canadian series on a U.S. network, *Due South*, and is currently developing several other projects. It also produced *Mrs. Harris Goes to New York*, *To Save the Children*, *Woman on the Run*, *Family of Strangers*, *Counterstrike*, *Bordertown*, *Diamonds*, and others. Alliance has heavily used the co-production treaty system in order to gain expertise and entry into various markets although it is tending increasingly towards purely private investment. Alliance's long-term strategy has been to invest in more modest projects budgeted at under \$30 million and to finance only part of them. Alliance also owns 55% of the Showcase Network, a specialty cable channel which serves as an outlet for its catalogue. Like Astral, Alliance is involved in both film and television and produces and co-produces for both the English- and French-language markets.

Paragon Entertainment Corporation, though based in Toronto, has located its CEO and chairman, Jan Slan, in Los Angeles. Paragon's strategy is not to rely on the Cana-

dian market but to produce for the North American and international markets. It wants to be in the right place at the right time and to be independent of Canadian financing. It sees itself as a production company on the international scene which just happens to be Canadian. It has been reasonably successful and has produced *Forever Knight*, *Lamb Chop's Play-Along*, *Sherlock Holmes Returns*, and *Blood Brothers*. The "Canadian" element of these programs lies in their financial and creative control rather than in their thematic or stylistic content.

Atlantis Communications Inc. of Toronto has a varied production slate including *Lost in the Barrens*, *Ray Bradbury Theatre*, *Tekwar*, *The Twilight Zone*, *Maniac Mansion*, *Adrift*, *Journey into Darkness: The Bruce Curtis Story*, *Kurt Vonnegut's Monkey House*, and *Race to Freedom: The Underground Railroad*. Like many other production companies, Atlantis produces for both the film and TV markets. Atlantis also owns a cable channel, the Life Network, as well as 28% of YTV. It intends to launch a science-fiction channel in order to capitalize on its expertise and backlog in the genre and to acquire another permanent outlet for its production.

Nelvana Ltd. of Toronto has specialized in the traditional Canadian niches of animation and children's programming. Its recent productions include *Babar*, *Tales From the Cryptkeeper*, *Cadillacs*, *Dinosaurs*, and *Tintin*. *Babar* in particular yielded profitable marketing tie-ins (toys, posters, etc.).

Cinar Films of Montreal has likewise targeted children with *Wimzie's House/La maison de Ouïmzie*, a program aimed at four-year-old children from which it expects marketing tie-ins. It has also sold *The Busy World of Richard Scarry*, based on the popular children's book known around the world, and produced *Are You Afraid of the Dark?*, a horror/fantasy show for young people, for both Nickelodeon and YTV. It has also produced the TV-movie *Million Dollar Babies*, about the Dionne quintuplets.

Independent producer Kevin Sullivan has enjoyed enormous success, first with the two-part miniseries *Anne of Green Gables*, then with the weekly series *Road to Avonlea*, which ran for seven seasons, and finally with his TV movie, *Butterbox Babies*. All three ranked amongst the highest rating Canadian television programs.

Interestingly, many independent production companies have attempted to locate at least some of their output in an area of traditional Canadian strength, the "family drama", which both incorporates and transforms elements of the nature/adventure genre. Like nature/adventure shows, family dramas usually involve children and families, though they possess few of the precocious or saccharine characteristics of U.S. sitcoms. They also systematically eschew violence in favour of cleverness or circumstance and foreground pro-social values. However, unlike nature/adventure shows, they freely mix humour with drama, often fail to end happily, and jettison the requirement for wilderness settings and animals in favour of urban and frequently highly ironic plot lines.

The most celebrated example is probably *The Kids of Degrassi Street* (Playing with Time Productions) which spawned both *Degrassi Junior High* and *Degrassi High*. Like nature/adventure shows, the Degrassi series is aimed squarely at a family audience, features young people, and involves weekly dilemmas, but these are now cast in an urban setting with frequently unforeseen results and are neither clearly drama nor comedy. *Mom P.I.* (Atlantis) involves a mother whose job as a waitress forces her to moonlight as a detective; *My Secret Identity* (Sunrise Films) concerns a teenage boy with super powers; *Max Glick* (Glick Productions Inc.) follows the early-1960s adventures of the young title character.

Astral has been a publicly traded company since 1974, however, Alliance, Paragon, Atlantis, and Cinar all went public in 1993. Another factor which most of these companies have in common is their effort to acquire existing film libraries to feed their distribution channels. Finally, virtually all of them have major deals underway with U.S. networks and all of them maintain offices around the world.

Canadian production companies are, therefore, relatively recent phenomena. They produce for both film and television. They increasingly attempt to control distribution outlets thereby tending to make them integrated production/distribution houses on the CBC model. They increasingly attempt to acquire film libraries to feed their distribution networks and to market internationally alongside their own material. They rely heavily upon international markets although they rely less and less upon public money. Their content is frequently "Canadian" from the point of view of creative and financial control rather than from the perspective of thematic and stylistic content.

CANADIAN PROGRAMMING IN ENGLISH

The term "Canadianization" is used by some Europeans as a metonym for their fear of the audience fragmentation new satellite technologies would bring to their orderly systems of state supported public service broadcasting. But if the presence of alternative programming choices is this powerful, how did distinctive Canadian programming survive alongside the largest and most enclosed media giant in the world? Decades before cable and satellite the majority of Canadians could flick a dial and find ABC, NBC and CBS, plus dozens of local American stations. In the 1970s and 1980s Canadians had a cornucopia of specialty channels on cable, albeit the mix was controlled by the CRTC (Canadian Radio-Television and Telecommunications Commission).

By the mid-1970s, parts of Southern Ontario rivaled New York City for television choices. Yet here stands Canada—its electronic frontier as permeable as the world's longest unguarded border, still a separate nation-state. Canada's response to and appropriation of other sources of television may serve more as a success story for other national contexts than a model of dire consequences.

In 1952, when the Canadian Broadcasting Company (CBC) first went to air, thousands of Canadians along the border from coast to distant coast had already set their aerials to receive signals from the many American stations within range. And it is true that even in those early days, American television genres shaped the expectations of Canadian view-

ers about the conventions of television. At the same time, these types of programmes were beginning to differ significantly from the radio prototypes—variety shows, soaps, quiz and game shows—which had also been familiar beyond the northern border. Viewers were also enjoying the more televisual treatment of sports, documentaries and dramas.

On American television, these programme genres were usually clearly separated. However, the multi-talented first CBC head of programming, Mavor Moore, and his producer/directors (who were drawn from the National Film Board, the theatre, radio and off the street) were interested in experimenting with the forms of television. For example, on series like *Horizon* and anthologies like Robert Allen's *Scope/Folio/Festival*, Daryl Duke's *Q for Quest* and Mario Prizick's *Eyeopener*, they combined dramatization with panel discussions or documentaries or interviews.

But after the early years of experimentation the genres for the most part settled back into their self-defined places and thus the history of Canadian broadcasting can be summarised in terms of separate compartments, reflecting not only the sharpened distinctions made for the viewers but also the developing administrative empires.

In the first 15 years of CBC TV arts and drama producers broadcast the first full-length opera, programmed evenings of jazz, poetry and avant-garde drama (the outlawed American play *The Brig*, and scripts by Pinter, Albee, Beckett, Arrabal Anouilh). They adapted Shaw and Chekov. They broadcast live the family serial *The Family Plouffe* in both French and English, wrote and broadcast musicals for television (*Anne of Green Gables* is still performed on stage) and trained writers new to television on half-hour adaptations of Stephen Leacock's *Sketches of a Sunshine Town*. They produced ballet, Gilbert and Sullivan shows, regular classical music, folk and jazz concerts and made a quite successful *Hamlet* under severe limitations imposed by a tiny drama studio. Until 1967 almost all of the output was in black and white—colour came late to Canada—and live or live to tape until the late 1960s. They stirred up a major controversy (duplicated in the United Kingdom when the BBC bought the film) with Ron Kelly's direct cinema experimental drama, *The Open Grave*. Kelly had the nerve to treat the Resurrection as a breaking news story, full of interruptions and improvisations, using familiar reporters from CBC news and the following scenario: the previous Friday, Joshua Corbett had been hanged for alleged terrorism, though in fact he has disrupted the war industries with his pacifist ideas. Now his grave is empty and neither Mary Morrison, a ravaged, rather vague middle-aged prostitute, nor any of his other friends know where he is. The film, intended for broadcast on Easter Sunday, made the headlines for weeks.

Although in the United States, series from radio (soaps, westerns, cop shows and situation comedies) were transferred to television, for many years series were not made by the CBC. On American television viewers saw 1950s television anthologies like *Playhouse 90* and *Studio One* fade to black in the 1960s under the tide of strippable series filmed

by major studios or independent producers in Hollywood. In the 1960s the CBC did introduce *RCMP (Royal Canadian Mounted Police)* and *Seaway*, two moderately successful independent productions for an adult audience. These were followed in 1966 by Ron Weyman's hugely successful and innovative in-house CBC series about a coroner, *Wojeck*. However the CBC also kept anthology drama alive for another three decades. With neither the inclination nor the resources to succumb to the "disease of the week" nor "murder of the week" staples of the popular American movies of the week the CBC preferred to put a significant portion of its revenue into drama specials and the long running topical drama anthology, *For the Record*. This program was followed in the late 1980s and 1990s by explorations of the country's regions with *The Way We Are*, and ethnic communities with *Inside Stories*. Anthology disappeared, at least to this date, in 1993.

Sports

Hockey Night in Canada was a staple of Saturday night radio in the 1930s and 1940s with the well-loved voice of Foster Hewitt shouting "He shoots . . . He Scores !!!" from the gondola in Toronto's Maple Leaf Gardens. When hockey came to television it continued to be a consistent ratings winner right up to the mid-1990s. What began as the "hot stove league" (commentary occurring between playing periods), became weekly tirades by the much-loved-or-hated Don Cherry. Initially, the expert camera work and the on-air commentary spoiled Canadians for coverage from the expansion teams but the gaps have closed—although Canadian viewers are bemused by the electronic pucks, cartoons and other "explanations" of the game by the U.S. FOX network.

Coverage of the short season of then immensely popular Canadian Football League (CFL) contests, including the Grey Cup Championship Game, began in 1952. CFL survival, now tied to television revenues as well as an ill-advised expansion, is in doubt in the 1990s. The national curling bonspiels were another regular sports feature. A much loved drama by W. O. Mitchell called *The Black Bonspiel of Wullie MacRimmon*, first seen CBC in 1955, is still produced in theatres around the country 40 years later, reflecting the Canadian affection for this purely amateur winter sport.

Baseball came late to national Canadian television first with the Montreal Expos and then the Toronto Blue Jays—who, though in two different leagues, still echo the traditional winter hockey rivalry of the two cities—and languages. As the Olympic coverage has expanded, other sports receive more regular coverage: from skiing and gymnastics, which are a natural for television, to track and field, swimming and rowing. There are also annual events such as the rodeo competitions at the Calgary Stampede and the Queen's Plate, the oldest horse race on the continent. Women are used as colour commentators in many of these sports—but they are also authoritative voices in both gendered sports and horse racing, dressage and show jumping where both sexes appear in one field of competitors.

In recent years with the introduction of hemi-demi-finals which create a Hockey season extending into June, many Canadian viewers have complained that sports is dominating not only Saturday afternoons and nights and Sunday afternoons, but too much week night CBC prime time as well. Private broadcasters repeatedly urge the CRTC and the government to force the CBC out of this lucrative field. The CBC reply is direct. Government revenues have been cut in constant dollars from 1982 onwards. Professional Sports programming, particularly hockey gets ratings, makes money—and subsidises the coverage of amateur sports which CTV and Global/Canwest will not cover. The policy of displacing all other programming for 10 weeks when the hockey “finals” get under way in April continues. The 1995 Juneau report on the mandate of the CBC recommends that the CBC scrap the early rounds and get out of sports broadcasting except, of course, hockey coverage.

A cross-over between Sports and Entertainment has been the very successful skating specials pioneered by Toller Cranston in the early 1980s with *Strawberry Ice*. Brian Orser, Elizabeth Manley, Kurt Browning, Elvis Stojko, and pairs champions Eisler and Brasseur, have followed with specials which offer a little narrative, a lot of music and spectacle, other international medal-winning skaters and non-skating stars and superb special effects to complement the skating.

Religion

From the mid 1930s to 1995, both the CBC and the private networks were explicitly forbidden to sell time to radio and television evangelists. The result was that the CBC offers weekly a church service drawn from a variety of denominations and that individual stations program local church services or sell time to a few evangelists on late night or early-morning television. In 1995, the CRTC did license a small evangelical station in Lethbridge, Alberta.

In the 1950s and early 1960s the CBC broadcast specific words and music or drama programming keyed to Christmas and Easter, notably the innovative drama *The Hill* and *The Open Grave*. In these more ecumenical and culturally diverse times, such specific observances outside of the church or synagogue have disappeared. Surviving for many years however has been the popular, cheaply produced and musically impeccable *Hymn Sing*. *Man Alive*, the 25-year-old programme on ethical and moral issues, continues and is widely sold abroad.

A broadcasting initiative unique to Canada is Vision, a network run by a consortium of several faiths. It is financed by sales of weekend time to all kinds of groups from Jimmy Swaggart to Ba'hai. This “Mosaic” programming, so identified, must conform to Canadian laws regarding defamation, and a few programs have been pulled from the air. Vision's weekday and primetime programming offers a mix of documentaries, news, commentary, controversy, films and series from other countries, and programmes made by the marginalised, most of which offer an ethical perspective on the issues of the day as well

as addressing more permanent issues raised by the human condition. These programmes usually present more questions than answers. The network is provided on basic cable and also depends on viewer donations

News and Current Affairs

Unlike their American cousins who spare only a half hour (including commercials) for the national and, too seldom, international news, Canadians take their news, news analysis, current affairs and documentaries very seriously. They demand the best and they often get it. Since 1980 significant numbers have been willing to watch an hour of CBC news analysis and documentaries from 10-11:00 P.M. then switch to CTV at 11:00 P.M. for another half hour. CTV depends more on American and British feed than the CBC and too often neglects the regions outside of central Canada but on national stories they often do as well or better, finding fresh information or a different angle. Both newscasts attract significant numbers. However, when a national crisis such as the 1995 referendum looms, the CBC and CBC News-world, a separate all-news and features network, combine forces to bring Canadians detailed and comprehensive coverage and analysis. In those circumstances, as the ratings indicate, the CBC is the first choice.

If someone from another country asks who are the Canadian TV “stars” the candidates are likely to appear among the following lists of reporters and anchors rather than from the leads of a sitcom or cop show. They are also likely to be told how Knowlton Nash resigned as anchor of *The National* so that Peter Mansbridge would stay home to replace him rather than taking up a far more lucrative offer in the United States. And yet no one, anchor or reporter, could ever be said to have influenced a country's opinion on a national issue as Walter Cronkite is said to have done with the Vietnam War. Canadians accord no individual in broadcasting that kind of influence or impact, not even the late and much lamented anchor of *The Journal*, Barbara Frum.

Throughout its history, Canadian television, particularly the CBC, as part of its mandate, has emphasised News and Current Affairs. The nightly newscasts began in the early 1950s—with film clips rapidly gaining prominence. Anchors, many of whom were also reporters have included Earl Cameron, Larry Henderson, Stanley Burke, Knowlton Nash, Peter Mansbridge, Lloyd Robertson at both CBC and then CTV, Sandie Renaldo, Hana Gartner, Alison Smith, Pamela Wallin and Sheldon Turcotte.

In the 1970s the CBC and latterly CTV have used men and women in all the hot spots and on most beats. Well-known reporters include Peter Kent reporting from Cambodia, Anne Medina, an American who became an incisive Canadian voice from Lebanon, Brian Stewart from Ethiopia and Rwanda, Joe Schlosinger from all over the world, Bill Cameron, Anna-Maria Tremonti from Russia and Bosnia, senior Ottawa correspondents Jason Moscowitch and David Halton, Terry Malewski, Mary-Lou Finlay, Ian Hanomansing, Eve Savory on social policy and Der Ho Yen on economic policy.

Well known CBC current affairs and features series have included *Close-up*, *Telescope Quarterly Report* and the much admired and feared 1960s “gotcha” journalism of *This Hour Has Seven Days* whose cancellation led to debate in Cabinet, a crisis in confidence between management and producers and a chilling effect on current affairs. After a hiatus in the late 1960s the news and current affairs department came back strongly with *the fifth estate*. CTV answered with W5 (with *Eric Mallins* added in the 1980s). Among the widely acclaimed 1960s documentaries were Beryl Fox’s cinema verite treatment of Vietnam, *The Mills of the Gods*, and Larry Gosnell’s *Air of Death* on air pollution. For over 25 years the CBC has also offered a variety of analytical as well as descriptive programming about science and the natural world on the weekly series *The Nature of Things*.

Morning, Noon and Night Shows

Until quite recently CTV has had the only national “morning show” with *Canada AM*.—where lighter fare, news and national weather was the backdrop for incisive questioning of national and international figures. Norm Perry, Pamela Wallin, Valerie Pringle and Keith Morrison gave a jumpstart to sluggish viewers heading out for work or into the day’s work at home. In the 1980s Citytv (Toronto) and some other local stations offered a lighter version of “breakfast television”. *Newsworld* offers full news and analysis to the country, updated hourly.

The CBC, again unlike the American networks, did not leave the afternoons completely to the soap opera and the rerun. From the early 1960s *Take 30* used the considerable journalistic talents of hosts like Adrienne Clarkson and Paul Soles to provide women at home with a daily half hour of news, current affairs, personalities, reviews, interviews and regular features, including by far the most thorough coverage at the time of the Royal Commission on the Status of Women. The program was replaced in 1994 by *Midday*, an hour at noon for the same audience, updated to include regular gardening features, analysis of popular culture and mini-documentaries. It is even more likely than its predecessor to examine the topical serious issues of the day from Quebec separation to the collapse of the fishing stock on both coasts.

Tabloid was an early (1953–63) national supper hour show which featured personalities from politics and entertainment. With a chalk-tossing weatherman, Percy Saltzman, the show was hosted by the genial Dick MacDougal and hostess Elaine Grand, and later Joyce Davidson. For the most part, however, supper hour shows of news, weather sports and features have been the territory of local stations. Under severe financial constraints and in some haste, the CBC closed some local stations in the late 1980s and ordered the stations which survived to cover a wider market with their supper hour shows—a decision which devastated morale and resulted in much lower ratings in some areas. The policy has since been reversed.

Basically all stations in Canada, independently or publicly owned or part of a network provide supper hour shows

and news, weather and sports at 11:00 P.M. The quality varies enormously but Toronto stations (with a potential market of 3 million) will cover transit policy, policing in the suburbs and “what’s on” in the nightclubs while CKNX Wingham (pop. 10,000 with a market of 50,000) will cover the day’s prices for cattle, the problems of the Saugeen Valley water authority and the “snowfest” in Durham.

Children’s Programming

Programming for children is specifically mentioned in the existing CBC mandate. The CBC has offered very creative commercial-free, non-violent programming on weekday mornings since its inception. Ed McCurdy, Raffi, Sharon Lois and Bram, Fred Penner brought all kinds of music to kids. Puppets like *Uncle Chichimus* and his friend *Hollyhock* were followed by somewhat more sophisticated, much loved and very long lived series such as *Mister Dress-up* with his puppet friend Casey and *The Friendly Giant* with Rusty and his silent pal, the giraffe Jerome. *Romper Room* on CTV and *Polka Dot Door* on TVO (the Ontario educational network) were other popular programmes for young children. Special segments in both French and English were made in Canada as inserts for *Sesame Street*. Since its inception in 1970, TVO has devised all kinds of award winning children’s series.

For older children viewing in prime-time there were 1960s adventure series on CBC like *Adventures in Rainbow Country* and *The Forest Rangers*. Both series were set in Canada’s wilderness and structured around the usual gaggle of boys—and a girl or two—who get in and out of trouble, very little of it violent, with the help of parents or adult friends. Both are still in reruns.

The 1970s and 1980s belonged to *The Edison Twins* who used science to solve domestic puzzles, CTV’s well-written family series *The Campbells*, set just before the Rebellion of 1837, and the three CBC *Degrassi* series which followed basically the same group of young actors through three series as they grew up. Using workshops and improvisational exercises, the series developed characters and plots reflecting their own lives until the “kids” graduated from high school. This success led to the more gritty *Northwood* and Global’s *Madison* as well as the excellent “tween” show *Ready or Not*.

A much more complex concept for the 1990s is the CBC’s *The Odyssey* which takes its viewer from the regular “Upworld” of school and work where Jay, the protagonist lies in a coma into the “Downworld,” inhabited entirely by children. Downworld is full of great adventures (and wildly imaginative designs) which mirror and sometimes parody, as a dream might, the world of consciousness. The basic quest narrative (Jay seeks his absent father) has evolved over the seasons into more interaction between the worlds.

Variety

In the 1950s and 1960s variety shows combined singers, dancers, puppet shows, acrobats, animal acts and comedy sketches—including recurring favourites on *The Ed Sullivan*

Show like *Wayne and Shuster*. In Canada there were copies of American programs such as *Cross-Canada Hit Parade*, and *Show-time*, country and western shows like *Holiday Ranch* and then for twenty-five years *The Tommy Hunter Show*. Light music shows starred home-grown favourites like everyone's "pet *Juliette*" who sang pop favourites and ballads and always said good night to her mom. CTV responded to Canadian content regulations requiring cultural diversity with an imitation English pub *The Pig and Whistle* and the home-grown *Ian Tyson Show*.

A special case was the much loved down East fiddle music of *Don Messer's Jubilee*. With Marg Osborne and Charlie Chamberlain, Don Messer and his Islanders flourished for years on radio and then on television—until the late 1960s music "revolution" persuaded the executives in Toronto to cancel it for a limp imitation of similar American shows called *Hullabaloo*. Re-edited for the 1990s, *Don Messer's Jubilee* was surprise hit.

The CBC also discovered that in the 1990s an eclectic mix of every style of Canadian music from grunge rock to Buffy Ste. Marie, hosted by Cape Bretoner, Rita MacNeil is a major ratings winner. Running against an American trend to narrowcasting, musical variety at least has returned to Canadian prime-time.

Talk Shows and Game Shows

The nearly forty-year run of *Front Page Challenge* reflected the Canadian preference for hybrid form and an emphasis on current affairs. Part quiz, part-current affairs show, its guests included domestic and foreign prime ministers, sports and entertainment celebrities and ordinary citizens who had made the headlines. Most other Canadian quiz shows have been "Canadian Content fillers," (produced to meet requirements for Canadian content), and were merely less expensive imitations of American game shows. On CTV *Shirley, Dini Petty*, and in a more serious vein *Jane Hawtin Live* are successful day-time talk shows. *Pamela Wallin Live* on Newsworld is a 1990s prime-time success story with a very wide range of guests and subjects and a few callers. Other cross-country call-in shows on Newsworld are oriented toward public affairs. Neither public nor private television has been successful with late night talk shows

Comedy Shows

For 50 years Canadians have excelled in developing small companies who perform satirical, usually topical revue comedy on radio and television. The grandfather of them all was *Wayne and Shuster*. The grandmother was the annual theatrical revue *Spring Thaw*. The proud children were *SCTV* in the 1970's and *The Royal Canadian AirFarce* still going strong on radio and television. The grandchildren are *CODCO* (and its stepchild *This Hour Has 22 Minutes*) and *Kids in the Hall*. With their gentle, literate yet often slapstick parodies of both high and popular culture, edited reruns of *Wayne and Shuster* were popular in many countries. *SCTV* (also in reruns) was so self-reflexive that it became a cult favourite with a younger media literate generation as did

Kids whose executive producer, Canadian Lorne Michaels was so closely connected to *Saturday Night Live*. In contrast to *Kids in the Hall*, *CODCO*'s much harder hitting satire and complex, sustained characterisations were informed by the eloquence of Newfoundland speech and a more distinctly Canadian sense of values. Some of *CODCO*'s original members now turn their biting wit on the week's news in *This Hour Has 22 Minutes*.

Drama

For the first twenty years of CBC TV drama, in the absence of any strong professional theatre, the general policy was that it should entertain, inform, and reflect national and regional concerns (intermittently and with significant gaps). It should experiment with television as a medium, show Canadians what classical and contemporary world theatre looked like and explore the relationship of the documentary and the fictional. In the 1960s, the drama department was also expected to inflect some forms of American popular culture (cop shows, mysteries, sitcoms) and ignore others like soaps; and until 1992 continue with anthology drama. Finally, in very occasional miniseries or films, the "single" play, whether a light comedy, a theatre adaptation, a docudrama or an intensely personal vision, would find a home.

Biographies

Throughout its history the CBC has explored various dramatic forms to produce biographies. A mixture of voice-over commentary, selections from the works of fiction or the paintings etc., sustained satire, even musical numbers have been used to produce a non-standard series of biographies: the mix of drama, documentary and commentators in *The Baron of Brewery Bay* with John Drainie playing Stephen Leacock; the lives of artists Tom Thompson and Emily Carr; Kate Reid as suffragette Nellie McLung; three versions of the life of feminist Emily Murphy; Prime Ministers John A. Macdonald (several times) and William Lyon MacKenzie King (once as a satire, *Rexy*, once as a miniseries by Donald Brittain). Others less well known included Brittain's *Canada's Sweetheart the Saga of Hal Banks* (the imported thug who ran the waterfronts of Canada), colourful newspaper editors and columnists like Bob Barker and "Ma" Murray. The CBC also presented the trials of the assassin of D'Arcy McGee twice and rebel/martyr Louis Riel three times: first as a two part drama, then as an opera and finally as a lavish, revisionist miniseries, shot in both languages in 1979.

The lives of explorers, politicians, financiers and engineers were treated in the hugely successful five part adaptation of Pierre Berton's trilogy *The National Dream*. The miniseries combined contemporary narrative, shot by Berton on locations across the country, with dramatizations of the men who made it happen. In the 1980s *Some Honourable Gentlemen* also depicted a wide variety of historical figures—not all of them heroes.

Two successful experiments on the private networks include *The Life and Times of Edwin Alonzo Lloyd* (with

veteran actor Gordon Pinsent) and Pierre Berton's inexpensive and fascinating half-hour vignettes on *Heritage Theatre*.

Soap Opera

Some of the most popular U.S. genres have never appeared on Canadian television. Unlike every other developed country and despite successful efforts in 1940s and 1950s radio, until the 1990s, there were no soap operas, no *telenovelas* (a francophone long serial form at which SRC excels) on English Canadian television. There was only one brief though seminal fling in the 1960s at short serials on film. There is a very straightforward reason for this. In the early days the CBC had no interest. When CTV arrived in the early 1960s, soaps were "too expensive" since they involved a sustained commitment to TV drama. In the 1970s CBC TV tried the longer serial form using Mazo de la Roche's widely popular Whiteoaks novels. *Jalna* was shot using experimental techniques, multiple story and time lines—and failed. In the same decade, the CBC also tried a twice weekly night soap called *House of Pride*. Reflecting the CBC mandate to show Canadians the five "Regions"—a largely fictional but still potent set of geopolitical myths consisting of "the Atlantic provinces", Quebec, Ontario, "the West" and British Columbia—*House of Pride* was set and taped in five cities across the country. Although ahead of its time (*Dallas* was five years away) logistics and problems with the story lines killed it.

After a hiatus of more than ten years two half hour daytime soaps appeared on the private networks. Whether Global's early 1990s *A Foreign Affair* or CTV's *Family Passions*, both co-produced with several other countries, will survive long enough to be the training ground and cash cow that Canadian television, both public and private, needs remains to be seen. Perhaps because they are international co-productions they seem to be more hodgepodge than tasty puddings.

Canada's Exports: People

Canadians take rueful pride in the export of talent that has happened throughout their broadcast history: host Bernard Braden, many producers including Sydney Newman to the United Kingdom; actors Raymond Massey, Leslie Nielsen, Lorne Green, William Shatner, John Colicos, Martin Short and John Candy, producer Lorne Michaels, writers Bernard Slade, Arthur Hailey, Anna Sandor and Bill Gough and literally dozens of others to the United States. In the 1980s the independently made satire *The Canadian Connection*, using several expatriates explored the theory that Canadians were involved in a conspiracy to take over Hollywood—and thus all of American culture. It has been rerun several times.

Programmes

Why didn't Canada simply export some of its entertainment programming to the United States instead of its talent? The answers are many. First, there was no star system in English Canadian TV until the mid 1970s and then only fitfully—

no actor was bankable. Since its beginning, Canadian television could not retain some of its major talent because it paid much less than competitors in other countries. When talented individuals stay—and many do—it is because of the life in Canada and the opportunities to do a very different kind of work. Still, Canadian television has been shaped from the beginning by a steady exodus. An American network bought the concept, writer, star and much of the technical team of *Wojeck* which, after being run through the network blender came as the barely recognisable *Quincy*.

Nearly 20 years later a summer prime-time run of the fairly gritty and not overtly Canadian CTV cop show *Side-street* (which had been scheduled by CBS at midnight, though run in Canada at 10:00 P.M.) meant American stars had to appear as guests. More to the point, the scripts had to be more straightforward with less allusion and ambiguity. In the case of *Danger Bay*, in the 1980s a popular family/adventure series set in part at the Vancouver aquarium, the CBC and their independent partner had to struggle with co-producers from Disney to allow a scene and a story line featuring the live birth of a whale. One of the CBC's most successful exports, *Road to Avonlea* has featured at least one American or British star for an episode or two because Disney was co-producer.

Docudrama

The perception that current events are raw material for the by now thoroughly debased U.S. "docudrama" permeates U.S. society. In the North American context of the 1990s it may be one of the most distinctive things about Canadian culture that front page events are not yet seen as fodder for the movie-of-the-week mill, nor Canadians, as they live their lives, as featured players for next week's video releases.

In fact Canadians still care very much about the differences between evidence, argument, reenactment and the "make it up or leave it out, whichever makes a more entertaining television movie" approach. Canadian audiences can still distinguish between docudrama (real people are characters), topical drama (foregrounding a contemporary issue) or historical drama (a mixture of real and fictional characters set in a time when most viewers will not have first-hand knowledge of the "history" portrayed). The example of the very controversial co-production with the National Film Board (NFB), *The Valour and the Horror*, illustrates the difference. It is unimaginable that Americans in the United States would argue strenuously for months on end about the verisimilitude of both the documentary and dramatized segments of three programs about the World War II. Jeanine Locke, a writer-producer of period and topical dramas made many distinctive drama specials like *Chautauqua Girl* (which looked at both 1930s prairie populism and the Chautauqua circuit), *You've Come a Long Way Katie* (about alcoholism—Katie dies) and *The Greening of Ian Elliot* (which combined the debate about the ordination of homosexual ministers in the Unified Church and the fight against the Aleimeda-Rafferty Dam).

From 1976–85 the CBC presented an anthology of what R.L. Thomas, the first executive producer called “journalistic dramas”. Searching, topical, often controversial, innovative in subject matter and not usually too didactic, *For the Record* attracted the best talent in the country, in front of and behind the cameras. Some of the most notable productions were *A Far Cry From Home*, *Ready for Slaughter*, *Blind Faith*, *Every Person is Guilty*, *I Love a Man in Uniform*, *Maria*, *One of Our Own*, and *The Winnings of Frankie Walls*. Subjects included unemployment, the economic troubles of family farms, euthanasia, aboriginal injustice, televangelism, wife abuse, and a Francophone/Anglophone marriage at the time of the 1980 referendum.

When the CBC made *The Scales of Justice* a series of drama specials about well known, (sometimes sensational, sometimes only half-remembered) legal cases, they hired a well-known criminal lawyer to advise on the scripts and serve as an on-camera/voice-over guide through the intricacies of the law. The parts of the script based on testimony and those based on speculation, as well as the contradictions, are explicitly pointed out. *The Scales of Justice* appears two or three times a year, presenting Canadian judicial and social history without losing track of the ethical questions involved in docudrama.

In the late 1980s and 1990s miniseries the voice is also distinctive, however dissonant to the English Canadian culture under scrutiny: producer Bernie Zukerman’s *Love and Hate*, explored the personalities involved and also the cultural context of the terrorising and murder of the wife of a well known Saskatchewan political family. His *Conspiracy of Silence: The Story of Helen Betty Osborne* is a searching account of the racism in a northern community. *Liar, Liar* looked at the possibility that a child may lie about child abuse and *Life with Billy* examined once again wife and child abuse. *Butter Box Babies* recreated a period tale of neglect in an orphanage and Adam Egoyan’s *Gross Misconduct* was an unsparing (and experimental) look at the destruction of a hockey star. Many of these have been ratings hits on American prime-time.

Of them all, John Smith’s *The Boys of St. Vincent*, a 1993 CBC/NFB collaboration is the best example of the survival of a distinctive English Canadian television voice. It is also worth noting that, like *The Valour and the Horror*, *The Boys of St. Vincent* eluded efforts at censorship through a court injunction in Ontario and parts of Quebec because the NFB (partnered with an independent company with a broadcast window and input from the CBC) had the conviction and the resources to put these programs on cassette for sale or loan. The miniseries had a Canada-wide airing a few months later.

No such “State” institutions exist in the United States. More important is the fact that the commercial constraints on the independent television film-makers and the American networks would have ensured that such programs are not made. When shown on A and E in 1994, some of the scenes from *The Boys of St. Vincent*, scenes which made the

viewer a potentially complicit spectator—a point vital to the moral challenge of the work—were simply cut. Unfortunately this masterwork was not shown on the CBC without commercials on the “publicly owned broadcasting system”. The effect was very damaging to the integrity of the work.

Series

Most Canadian series are produced by the CBC and are inflections or sometimes hybrids of U.S. genres. Yet they show a different legal or medical system, different urban landscapes (no mean streets), very different ethnic mixes and attitudes, and are less violent. They are also often less confrontational, although not always, as illustrated by *Streetlegal* and its mid-1980s rival, CTV’s only high quality series *E.N.G.* In most of these series we see actors who are comfortable working in ensemble, usually performing in less extroverted ways than their U.S. cousins. The writers, producers and executives have always been more comfortable with ambiguity in characterisation, literate dialogue, sometimes open endings and often complex subtext.

The fact is, that if Canadians created many clones of a U.S. genre like CTV’s action adventure series *Counterstrike* they could not compete with the production values or the stars and would not be worth watching when the originals are a channel changers’ zap away. But it is also true that Canadians are utterly delighted that the huge neighbour to the south broadcast in primetime 1994—and then renewed mid-season 1995–96 CTV’s *Due South*, the “odd couple” comedy/cop show which features a Mountie from the far north displaced to the streets of Chicago and Ray, his cynical side-kick. Both cultures are satirised, but Canadians, saturated in U.S. popular culture get all the jokes. Americans may well miss many of them.

It is true that Canadian popular drama has always been competitive with “theirs” when time and money is spent on it. Note the success of *Wojeck*, *The Manipulators*, the much loved period series *A Gift to Last*, *The Great Detective* and sitcoms like *King of Kensington*, *Hangin’ In*, *Max Glick*, and the wonderful hybrid mystery show *Seeing Things*. Co-producers David Barlow and Louis DelGrande inflected the cop show to produce a protagonist, Louie Ciccone, a short-sighted newspaper reporter with glasses who has visions of murders he would much rather ignore, doesn’t drive or know which end of a gun is which, is rescued by a flying puck, a cake and often by his wife Marge. Yet the series had a strong moral centre, a lot of culturally specific topical satire and also worked as a good whodunnit.

Francophone and First Nations

The French fact in Quebec, the million francophones outside Quebec and the aboriginal nations, who are scattered throughout Canada and dominant in the north, have all been visible intermittently in English Canada’s television drama. *La famille Plouffe* (1953–59 on CBC, 1952–59 on Radio Canada) was broadcast live, sequentially, in both languages. There were also a few efforts to reflect each

culture to the other in the arts. *Festival* presented in English a handful of Quebec playwrights including Michel Tremblay's *Les Belles Soeurs*. But *For the Record* produced just one contemporary drama, *Don't forget: Je me souviens* in 1980. There has been no other drama on this subject on the CBC in the last 16 years. Yet television fiction is the site where the conflicting discourses of society are made concrete, sometimes mediated and sometimes exposed as unresolved.

As the CBC itself admitted in its submission to the CRTC in 1978 "the perception of the need to reflect the two linguistic communities to one another emerged in the CBC at about the same time as it emerged in the country—gradually over the last half of the 1960s and then early 1970s and then abruptly in the mid-1970s". Yes, the CBC presented our fractious politics at length in the 1980s on *The Nation* and *The Journal* in all kinds of specials during recurrent crises—but not in fiction.

On the other hand, Radio-Canada created its own mythology by decontextualizing and repeating months later, over and over, the "red-necks stomp on the Quebec flag episode" during the Meech Lake Accord fiasco. Radio-Canada also regularly ignores the Arts in the rest of Canada as well as most anglophone popular culture, with a nationalist fervour that also creates a deafening silence.

There were a few "cross-cultural" dramas during and after the first Quebec referendum in 1980. Miniseries such as the French *Duplessis*, the very successful English *Empire Inc.* and the less successful *Chasing Rainbows* (all set in Montreal, all lavish period pieces) were dubbed into the other language. However, *Lance et Compte (He shoots! He Scores!)* (1987) which was shot in both languages, turned into a litmus test of both cultures. *Lance et Compte* started on SRC with a million viewers and soon nearly tripled to 2.7 out of a total viewing population of 6 million. There were T-shirts, mugs, a fan magazine, a book, even sweat suits over its three year run. Yet the same scripts in English using the same actors, directors, producer and crew drew, at its peak in a hockey obsessed culture, only 750,000 viewers.

It is safe to say that at no time in its history did CBC English Television depend on a soupçon of French for a distinctive flavour to its stew. Although efforts in news and current affairs continue, if Quebec leaves Canada the opportunities for shared music, drama, news reporting, sports-casts and documentaries on a daily basis which have been wasted over the previous four decades may be one of the clearest discernible reasons for the divorce.

A more consistently distinctive motif in Canadian television has been the representation of aboriginal peoples. The subject was first fully explored by Philip Keately (producer/director) and Paul St. Pierre (writer) who created a 1960s anthology with recurring characters *Cariboo Country*, a contemporary television "western" which was as far away as it could get from the U.S. TV Westerns so popular at the time. The motif reappeared sporadically in other places

throughout the 1970s and 1980s: Claude Jutra's *Dreamspeaker*, *Where the Heart Is*, *A Thousand Moons*, many episodes of *Beachcombers*, a few episodes of *Danger Bay*, all of the short series for children *Spirit Bay*, and most notably and controversially in 1989 *Where the Spirit Lives*, a historical drama about residential schools which was sold to PBS and around the world and rebroadcast in Canada four times.

Since 1992 the CBC presented four full seasons of *North of 60*, set on a reservation in the North West Territories. Unlike *Northern Exposure*, the U.S. cult hit to which it is sometimes so inappropriately compared, *North of 60* does not use aboriginal people as an exotic back-drop. In its third and fourth seasons all but one of the leading characters have been native. The series has presented complex and sustained examinations of alcoholism, the effect of residential schools and forced acculturation on individuals and families, internal feuds and band politics, interference from government, anthropologists and ill-informed animal rights activists, the ongoing friendships and resentments between white band manager, store-keeper and nurse and the chief, treatment centre staff, visiting artists etc. There were also the drama specials *Spirit Rider* and *Medicine River*, based on a novel by aboriginal writer Thomas King. However stereotypes can still be found in reruns of the late 1980s *Bordertown*, the CTV "western" about a Mountie, a U.S. marshal and a woman doctor from France (the series is a co-production with France), or Global's steamy *Destiny Ridge*, and in the CBC's 1994 *Trial at Fortitude Bay*.

Nevertheless, since the OKA crisis of 1990 and in the midst of an ongoing debate about cultural appropriation, Canadians have changed what they watch and how they watch it. Meanwhile, the long-running and evolving aboriginal motif has now been claimed by those whose lives it reflects. Slowly the fresh perceptions which can arise from First Nations writers, directors and producers are making their way into the main stream of CBC drama.

The future of the CBC as it is now constituted is as uncertain as the composition of the country as it is now constituted. Yet despite its proximity to the biggest media giants in the world, its "mixed" structure and its inevitable ups and downs Canadian television and the CBC in particular has retained a distinctive voice supporting, amplifying and sometimes defining a distinctive national culture.

CANADIAN PROGRAMMING IN FRENCH

Television was embraced by French-language viewers more quickly than any other group in Canada. They bought TV sets more rapidly and watched more television than did their English-speaking counterparts. A majority of television households were concentrated among the working-class families of Montreal. From the beginning, La Société Radio-Canada, Canada's public francophone broadcaster, was the center of French programming in Canada and the company strategy was to attempt to be all things to all people.

As the only francophone television broadcaster, it enjoyed a monopoly position. Because it faced no competition either inside or outside Canada, and because it had to produce over 75% of its own programming, Radio-Canada was able to craft programs intended to enlighten and educate as well as entertain its captive audience. The power of television was very quickly understood by Quebec's creative community and, unlike comparable groups in anglophone Canada, television production in Quebec drew upon some of the most creative and inventive minds in French Canadian society. Historians and commentators generally describe francophone television's early years from 1952 to 1960 as a "golden age." Leading academics, artists, intellectuals, and cultural heroes were quick to embrace this new medium, making television a powerful force in Quebec's Quiet Revolution.

In the realm of news and information, Radio-Canada was determined to keep its public well-informed—not only about the country but about the entire world. Journalists such as Gerard Pelletier and André Laurendeau argued that television could be an instrument of modernity which would not only introduce the rest of the world to Quebec but which would serve to improve knowledge and raise the sense of national pride. Pelletier hosted *Les idées en marche* (1955–61), a public affairs show which featured debates and interviews with prominent intellectuals on domestic and international issues. Laurendeau presided over *Pays et merveilles* (1953–61), a world-travel series which featured film footage and guests who would discuss such issues as the Middle East. Other popular news information shows in-

cluded *Carrefour* (1958–59) and *Premier Plan* (1959–60) which were interview shows. But the most critically-acclaimed news and information program was *Point de Mire* (1957–59), hosted by René Lévesque, the future premier of Quebec. This show attempted to popularize international issues such as the Algerian crisis, and used maps, charts, film footage, even a blackboard, to educate and inform viewers. Only occasionally did the show address Quebecois or Canadian themes.

Other shows like *Panoramique* (1958–59) a series of historical documentaries from the French division of the National Film Board of Canada, drew viewers attention to Canadian and Quebec historical issues. *Le roman de la science* was a docudrama about major scientific discoveries throughout history. *Je me souviens/Dateline* was a bilingual informational program on Quebec and Canadian history. *Explorations* (1956–61) was another history series which tried to bridge the Canadian cultural and linguistic divide. One segment from the series, "Two Studies of French Canada," was run on the English-language CBC. Hosted by Lévesque this program tried to explain to anglophone Canadian the recent history and aspirations of French Canadians.

Variety and musical programs also carried an international flavour. *Music Hall* (1955–65), Quebec's alternative to *The Ed Sullivan Show*, hosted a line-up of international francophone stars which included Maurice Chevalier, Edith Piaf, and Charles Aznavour as well as well-known Canadian singers such as Monique Leyrac and Denise Filiatrault.

Radio-Canada provided a broad range of variety programs to suit all tastes. *Feu de joie* featured jazz, *Dans tous les cantons* ran traditional French-Canadian folk music, *Chansons vedettes* and *Chansons canadiennes* showcased contemporary popular artists. Despite this impressive line-up with extravagant costumes and lavishly produced numbers, the shows did not attract viewers. Variety programming was the least popular of all the types of television produced by Radio-Canada in the 1960s and, unlike the CBC, the system never had a truly popular program such as those

hosted on the CBC by Don Messer or Tommy Hunter. The only light entertainment show which developed any following was the comedy-sketch series, *Quelles nouvelles*, which had been a popular radio series and starred Jean Duceppe and Marjolaine Hébert.

Comedy was, however, a central feature of game shows. Cheap and easy to design and produce—particularly since they involved little prize money—quiz shows like *Le nez de Cléopâtre* (1953–57) and *Point d'interrogation* (1956–62) featured panels of well-known personalities given a limit of twenty questions in which to identify a person or object. Other shows like *Chacun son métier* (1954–59) was a French version of the popular American program *What's My Line?*

Radio-Canada's real strength was the novelty or fun show. Shows such as *La clef des champs* (1955–59) and *Le club des autographes* (1957–62) were popular with audiences as much for their comedy as for their contests. Both were based on simple premises; *La clef des champs* was a charades game but the actor and comedians competed more for laughs than for prizes, while *Le club des autographes* invited celebrities to twist and shake in a comical dance contest. The audience's favorite and the most extreme example of this kind of programming was *La rigolade* (1955–58). Referring to itself as the "least serious broadcast on the air," it invited ordinary people to test their skills at the silliest contests the producers could invent. As the contests became zanier, critics decried it as a scandalous spectacle and it was pulled off the air after only three seasons despite being among the top-ranked shows on Radio-Canada.

Francophone programmers were continually faced with trying to balance such popular programs with its cultural and educational mandate. Any kind of spectacle seem to have a large audience. *La Lutte* (1952–59) and *La Boxe* (1952–55) broadcast weekly prize fights which attracted a large following (even among women). Sports were consistently in demand, especially *La soirée du hockey*, the most popular program on television. Though hockey had always been popular in Quebec, television made players like Rocket Richard, the star of the Montreal Canadiens, into national heroes. As many as two million fans watched each Canadiens' game. Richard had become such a cultural icon that when he was suspended from the playoffs in the spring of 1995, the city exploded into rioting. It was no accident that Richard made public television appeals to induce the crowds to end the violence.

This incident only added to the dilemma facing programmers as more and more viewers demanded more sports while the elites and the clergy condemned television for inciting and promoting violence. Television programmers tried to counteract these charges in the 1950s by scheduling most of its sportscasts on the weekends and by increasing its broadcast of the performing arts.

Radio-Canada had always believed that television could stimulate and educate the viewer. Music, ballet, opera, and drama were presented several times a week in various anthol-

ogies. *L'heure du concert* (1954–66) was devoted to concerts, opera, and ballet. Initially, it offered a series of excerpts from various productions and provided brief lectures on various art forms. Theatre also occupied the most prominent place in Radio-Canada's early programming, and despite the challenges and difficulties and production costs involved with live television drama, CBFT produced as much as two dramas a week throughout the 1950s. A demand for local productions fuelled an enormous expansion in the development of Quebecois literature. Initially, great classical works such as Cocteau's *Oedipe-Roi* had been presented, but these were quickly replaced with local works. Soon short stories and even novels had to be adapted for television as more traditional works were soon exhausted. Eventually, Quebecois authors were commissioned to write specifically for television.

Between 1952 and 1960, Radio-Canada aired 435 plays, 80% of which were originally written or adapted by popular Quebecois writers such as Marcel Dubé, Hubert Aquin, Françoise Loranger, and Felix Leclerc. The majority of teleplays were showcased in *Le Téléthéâtre de Radio-Canada* (1953–66) which presented more than 160 works and *Théâtre populaire* (1956–58) which presented more than 100 plays. Other series included *Théâtre d'été* (1954–61) and *En première* (1958–60), *Théâtre du dimanche* (1960–61), *Jeudi Théâtre* (1961–62), and *Théâtre d'une heure* (1963–1966).

While the teleplays received great critical acclaim, they were far less popular than the *téléromans*, televised serials adapted from popular novels. Since the debut of Roger Lemelin's *La famille Plouffe* (1953–59), this television genre has been a mainstay of francophone programming. Usually broadcast in half-hour episodes in peak hours over the fall/winter schedule, the stories would generally be completed in two or three seasons, but two series lasted much longer than the norm. *Les Belles Histoires des pays d'en haut* went on for 14 years while *Rue des Pignons* continued for 11 years. Other popular téléromans included: *Quatorze, rue de Galais* (1954–57), *Le Survenant* (1954–57, 59–60), *Cap-aux-sorciers* (1955–58), *La Pension Velder* (1957–61), *La Côte de sable* (1960–62), *De 9 à 5* (1963–66), and *Septième nord* (1963–67).

A producer's strike at CBFT in Montreal from December 1958 to March 1959 brought serious disruption to francophone programming and an end to the "golden age" of French-Canadian broadcasting. Not only did popular shows like *Point de Mire* and *La famille Plouffe* end their run, many critically-acclaimed programs were never to return to the airwaves. The strike has become part of the annals of Quebec's Quiet Revolution. Some of the province's most popular television personalities like René Lévesque abandoned careers in broadcasting, in Lévesque's case to launch himself into politics.

The strike and its aftermath reflected the changing realities that television faced. In 1960, Radio-Canada faced competition from a private broadcaster. Télé-Métropole, "le 10," promoted itself as the station for ordinary people. In

1971 it became part of the Télé-Diffuseurs Associés (TVA) network. Its programming relied heavily on foreign movies and dubbed American drama series. Quiz shows like *Quiz-O* and *Télé-poker* became mainstays on the schedule, along with hockey broadcasts and variety programs which showcased Quebec's popular comedians and singers such as Robert Charlebois and Yvon Deschamps.

"Le 10" did produce a daily serial, *Ma femme et moi*, which ran in 1961 but it was only with *Cré Basile* (1965–68) that Télé-Métropole and the TVA network found critical acclaim for its television dramas. *Cré Basile* was Quebec's first sitcom and for the first time comedy was to become an integral part of francophone television drama. Télé-Métropole went on to develop other popular burlesque comedies *Lecoq et fils* (1967–68), *Symphorien* (1974–78), *Les Brillant* (1979–80), and situation comedies *Dominique* (1977–80) and *Peau de banane* (1982–87). Télé-Métropole's programming was immediately popular. By 1966 it had 23 out of the top 25 shows and in turn, spurred Radio-Canada to change many of its programs.

With competition, advertising revenues and sponsorships began to play a larger role in determining the television schedule. Radio-Canada's own internal surveys taken in 1960 had shown that viewers were little affected by the interruption in programming save for the loss of the téléromans. Feature films which had occupied much of the 1959–60 schedule had drawn as large an audience as its regular line-up. American imports were now available on film and could be easily translated and dubbed for a francophone audience. Not only were they cheaper than locally made productions, they were watched by more people and generated more revenue for their broadcasters. By the mid-1960s, Radio-Canada had virtually abandoned its notion of public service in favour of a more stream-lined and entertaining schedule.

Performing arts broadcasts were the first victims of this change. *L'heure du concert* was cut back to bi-monthly broadcasts and presented only one performance per episode as it dropped all pretensions of educating the public. Teleplays were confined to 90 minutes per week or appeared only in summer anthologies. From a high of almost 100 broadcast hours per year, theatre drama had dropped to 20 hours per year in the mid-1960s. By 1966, all music, opera, ballet and theatrical programs were combined in the two-hour anthology *Les beaux dimanches* which has remained as part of the Sunday line-up.

A shift to lighter programming affected all genres. Public affairs programming reflected this change with the introduction of *Appelle-moi Lise*, a late-night talk show with host Lise Payette which became the new model for the interview format. Sports gained more prominence and give-away shows such as *La poule aux oeufs d'or* (1958–65) which had replaced *La rigolade* were modelled on American quiz shows such as *The \$64,000 Question*. It was later joined by *Tous pour un* (1963–64) which became the most watched program on Tuesday nights.

Téléromans which had always been successes remained as the backbone of Radio-Canada's production. They were joined by locally-made comedies and sitcoms as the public broadcaster sought to win back viewers. *Moi et l'autre* (1966–71), *La p'tite semaine* (1972–76), *Du tac à tac* (1977–81), and *Poivre et sel* (1983–87) were just some of the lighter television series which competed with the private network.

When TVA launched its celebrated *Les Berger* (1970–78) series, francophone television added the new family saga genre to its drama repertoire. *Rue des Pignons* (1970–77), *Grand-Papa* (1976–85), and *Terre humaine* (1978–84) were part of the regular of Radio-Canada which competed with TVA's *Le Clan Beaulieu* (1978–82), *Marisol* (1980–83), and *Les Moineau et le Pinsons* (1982–85).

A growing concern over the sharp decline in educational and cultural programming as well as a sharp increase in dubbed American imports, prompted the Quebec provincial government to launch its own public broadcaster, Radio-Québec in 1968. Its programming was, and still is, devoted to providing educational and cultural programs which reflect Quebecois society. Largely a community-based system, it did not begin to broadcast in the evening until the 1972–73 season. Its programming featured many documentaries, nature, and science shows as well as broadcasts of the proceedings of the legislative assembly. In recent years, it too has developed its own series such as *Avec un grand A* (1985–1992). It has also showcased some English-made series such as *Degrassi* but has remained committed to its educational mandate. Over half of its programming is educational and very few of its programs are American imports.

With the development of cable systems and more private stations, fears that the airwaves would be overrun with American programming once again became an issue. Although studies had shown that only about 20% of all programming were foreign imports, they also showed that local productions were dominant only in the informational, sports, and educational genres. More alarming was the fact that over 80% of all drama and comedies were American-made imports.

This led to a call for a stronger commitment on the part of the province's two public broadcasters to strengthen their commitment to producing more local dramas since the studies also indicated that, when given a clear choice between imports and local shows, Quebecois viewers prefer to see their own artists and programs. Many Quebecois programs rank consistently in the top ten lists. The recent success of the drama series like *Lance et compte*, *Les Filles du Caleb*, and the comedy hit *La Petite vie*, which have had huge followings both domestically and internationally, attest to Quebecois television's vitality and creativity.

Francophone television has always offered the Québécois a vivid expression of their own unique history and places. Its public affairs, sports, and popular drama have not only mirrored society's growth, they have mirrored the development of television itself. Despite a variety of changes and the proliferation of choices available to the average viewer, the Quebecois remain avid television fans. They

spend more time watching television than any other activity, other than sleeping and working. Though no longer a “captive audience,” they remain enthusiastic about their own brand of programming. Television still remains an integral part of Quebecois cultural life as it still strives to be all things to all people.

—Manon Lamontagne

CANADIAN TELEVISION NETWORK

Canadian Television Network Ltd.(CTV) was incorporated in 1961 as Canada's first private television network. Unlike other North American networks, CTV has no owned and operated stations and controls no production facilities. Instead, CTV consists of major independent stations located in cities throughout Canada. As a result, it has a unique network structure which strongly affects its operations.

CTV is the most popular Canadian network with over 20% of the English-speaking audience, although this figure has tended to decline in the 1980s. It has also been accused by cultural nationalists and regulatory agencies of airing U.S. imports in prime time and relegating its few often inexpensive Canadian productions to off-peak hours. Although the network has produced relatively little drama or comedy, it has achieved some notable programming successes. In 1967, CTV launched the news magazine *W5* which still enjoys excellent ratings. In 1972, it launched *Canada AM* which became the prototype for ABC's *Good Morning America*. Its news and sports programs have also enjoyed steady success, even at times surpassing the CBC. In the mid to late 1980s, CTV co-produced such highly successful drama as *Night Heat* and *E.N.G.* Ultimately, CTV's protestations that its achievements are under appreciated must be balanced against the view that it has failed to contribute fully to the development of national culture.

CTV's network structure has moved through three distinct phases. From 1961 to 1965, CTV was controlled principally by its founder, Spencer Caldwell. Having won the original licence, he planned to supply affiliates with ten hours of programming per week: content acquired internationally, original content produced in the affiliates' stations, and content controlled by the affiliates but offered to the network. Caldwell hoped to increase the weekly hours until CTV rivalled the CBC.

Three factors prevented the realization of this plan. First, Caldwell underestimated the technological startup costs and was forced to seek loans from the affiliates. Second, the affiliation agreements worked to the detriment

of the network since affiliates could demand network compensation even if the network had not managed to sell all of its air time. Third, as CTV supplied only 10 hours per week, the affiliates established a parallel acquisition service to fill another 24 hours. The ITO (Independent Television Organization) effectively competed against CTV and drove up prices.

By 1965, on the brink of bankruptcy, Caldwell sold out to the affiliates. Until 1993, CTV operated as a cooperative. As such, each affiliate became a shareholder in the network, each shareholder sat on the board of directors, and each held the power of veto over board decisions. Additionally, the network now provided 39.5 hours of programming per week, thereby obviating the need for the ITO which was abolished in 1969. Finally, affiliates could no longer demand compensation for unsold air time.

This structure introduced new tensions. First, the affiliates served highly differentiated markets and held correspondingly divergent views on appropriate programming. Second, as major local independents, affiliates derived as much profit from local market dominance as from network affiliation. Hence, they tended to their own profitability

Courtesy of CTV

before the network's health, treating it at times as a necessary evil and approving only minimal operating budgets. Third, although the larger affiliates attracted a larger share of the audience, and therefore contributed proportionally more to network profits, they had only one vote and could be overruled. Four, some shareholders acquired more than one affiliate but were nonetheless restricted to a single vote. As a result, some shareholders lobbied for changes to the network structure. Finally, some shareholders owned stations unaffiliated with CTV thereby creating potential conflicts of interest, especially as these stations sometimes competed against CTV for both program acquisition and market share.

CTV therefore failed to develop as a powerful network. Its weakness as a network curtailed its ability to produce Canadian content and therefore to meet the expectations of the Broadcasting Act.

In 1986, CTV's corporate structure came to the attention of the CRTC which introduced new conditions at the network's licence renewal hearings. For example, between 1987 and 1994, the CRTC instructed CTV: (a) to spend \$C403 million on Canadian programming, (b) to schedule 120 hours of Canadian dramatic features, miniseries and limited series in prime time, (c) to provide 24 hours of Canadian musical programming, and (d) to provide a minimum of 1.5 hours of regularly scheduled Canadian programming in prime time rising to 3.5 hours per week. CTV spent \$C417 million, scheduled 126 hours of dramatic features, programmed 40 hours of musical content, and (e) requested that the minimum number of regularly scheduled dramatic hours not exceed three per week.

In January 1993, CTV instituted a new corporate structure. The network now operates under the Canadian Business Corporations Act. It consists of seven shareholders who have each invested \$2 million into the network. Board decisions are taken by majority vote with no party having a veto. Shares may be sold and transferred so long as they are

first offered to the other shareholders. The network also provides 42.5 hours of programming per week and purchases air time from affiliates for a fixed annual sum.

This structure brings CTV closer to the American network model while maintaining some earlier features. For example, although CTV now compensates affiliates at a fixed rate, it still has no owned and operated stations. Indeed, it is the shareholders who control chains of stations and who are in the best position to operate as U.S.-style networks. Indeed, CTV's largest shareholder, Baton Broadcasting Inc., which owns 20 stations, has proposed to buy the network outright. In the absence of a positive response, Baton has created its own Ontario-based network, ONT (Ontario Network Television), and has taken away from CTV the rights to certain highly prized sporting events.

At this time, CTV's future appears uncertain as its strongest parts may strike out on their own. This possibility coincides with the accelerated fragmentation of the television audience. In 1990-91, CTV registered its first and only annual loss. Nonetheless, CTV is turning towards more Canadian production and "big event" programming in the belief that these will emerge as distinguishing features in a television universe characterized by 500 or more channels.

CANDID CAMERA

U.S. Humor/Reality Program

C*andid Camera*, the first and longest running reality-based comedy program, premiered on ABC 10 August 1948 under its original radio title *Candid Microphone*. The format of the program featured footage taken by a hidden camera of everyday people caught in hoaxes devised by the show's host Allen Funt. In the world of *Candid Camera* mailboxes talked to passers-by, cars rolled along effortlessly without engines, little boys used x-ray glasses, and secretaries were chained to their desks—all to provoke a reaction from unsuspecting mechanics, clerks, customers and passers-by. In a 1985 *Psychology Today* article, Funt explained his move to television by saying that he "wanted to go beyond what people merely said, to record what they did—their gestures, facial expressions, confusions and delights."

The program ultimately changed its name to *Candid Camera* when it moved to NBC in 1949, but did not gain a permanent time slot until it finally moved to CBS in 1960. For the next seven years it was consistently rated as one of television's top ten shows before it was abruptly canceled. Funt was frequently joined by guest hosts such as Arthur Godfrey, Durward Kirby and Bess Meyerson. A syndicated version of the program containing old and new material aired from 1974 to 1978. Aided by his son Peter, Funt continued to create special theme episodes (e.g., "Smile, You're on Vacation," "Candid Camera goes to the Doctor," etc.) for CBS until 1990 when *The New Candid Camera*, advised by Funt and hosted by Dom DeLuise, went into syndication. Low ratings finally prevented King Productions from renewing the show for the 1992-93 season.

The scenarios designed and recorded by Funt and his crew were unique glimpses into the quirks and foibles of human nature never before deliberately captured on film. The average scenario lasted approximately five minutes and was based on one of five strategies. These “ideas” included reversing normal or anticipated procedures, exposing basic human weaknesses such as ignorance or vanity, fulfilling fantasies, using the element of surprise or placing something in a bizarre or inappropriate setting. As Funt noted, “You have to make lots of adjustments to create viewer believability and really involve the subject. You need the right setting, one in which the whole scenario will fit and make sense to the audience even when it doesn’t to the actor.” Finding the right setting, and the right people for *Candid Camera* stunts was not always an easy task.

Early attempts to film *Candid Camera* were hampered by technical, logistical and censorship difficulties. While they appeared simple, the staged scenes took many hours to prepare and success was far from guaranteed. Approximately fifty recorded sequences were filmed for every four to five aired on the program. Funt and his crew had to contend with burdensome equipment that was difficult to conceal. The cameras were often hidden behind a screen, but the lights needed for them had to be left out in the open. Would-be victims were told that the lights were part of “renovations.” Microphones were concealed in boxes, under tables and, in a number of episodes, in a cast worn by Funt himself. In his book *Eavesdropping at Large* (1952), Funt also described his battles with network censors and sponsors who had never before confronted this type of programming and were often fickle in their decisions about what was and was not acceptable material for television at the time. Funt himself destroyed any material that was off color, or reached too deeply into people’s private lives. A hotel gag designed to fool guests placed a “men’s room” sign on a closet door. The funniest, but ultimately unaired reaction, came from a gentleman who ignored the obvious lack of accommodations and “used” the closet anyway.

Candid Camera’s unique approach to documenting unexpected elements of human behavior was inspired in part by Funt’s background as a research assistant at Cornell University. Here Funt aided psychologist Kurt Lewin in experiments on the behaviors of mothers and children. He also drew on his experiences in the Army Signal Corps where he was responsible for recording soldier’s letters home. *Candid Camera* was different from other programming because of its focus on the everyday—on the extraordinary things that happen in ordinary, everyday contexts. “Generations have been educated to accept the characterizations of the stage and screen,” Funt noted in his chronicle of the program’s history. “Our audiences have to unlearn much of this to accept candid studies, although anyone can verify our findings just by looking around and listening.”

Candid Camera spawned a new genre of “reality programming” in the late 1980s, including such shows as *America’s Funniest Home Videos* and *Totally Hidden Video*. Television audiences were forced to become reflexive about

Candid Camera

their own role in the production of comedy and in thinking about the practices of everyday life. “We used the medium of TV well,” Funt commented, “There were close ups of people in action. The audience saw ordinary people like themselves and the reality of events as they were unfolding. Each piece was brief, self-contained and the simple humor of the situation could be quickly understood by virtually anyone in our audience.” Conceived in a less complex era free of camcorder technology, *Candid Camera* brought insight and humor into understanding both the potential of television and the role of the TV audience.

CANNELL, STEPHEN J.

U.S. Producer and Writer

Stephen J. Cannell emerged as one of television's most powerful producer-writers in the 1980s. A prolific writer, he would eventually also become a series creator, an executive producer, a director, a station owner, and the head of his own studio. He specializes almost exclusively in crime shows and action-adventures, and his work, by its sheer volume, played a significant role in redefining the parameters of those genres. Early in his career, he created and produced programs with such other crime show auteurs as Jack Webb, Roy Huggins, William Link and Richard Levinson, and Steven Bochco.

Like many other aspiring television artists in the 1960s, Cannell got his start at Universal Television, where he joined the writing staff of *Adam-12* in 1970. After a few years of writing for several of the company's other series, he began to create and produce his own shows for Universal, including *Chase*, *Baretta*, *Baa Baa Blacksheep*, *Richie Brockelman*, *Private Eye*, *The Duke*, and *Stone*. *The Rockford Files*, which won an Emmy for Outstanding Drama in 1978, was by far his most commercially and critically successful series of this period. The show exhibited all the trademarks of the Cannell style: a facile blending of comedy and drama, up-to-the-minute contemporary vernacular dialogue, and a protagonist who was a likable outsider, in this case an ex-convict.

In 1979 Cannell left Universal to form Stephen J. Cannell Productions. He won a Writers Guild Award for *Tenspeed and Brownshoe* and achieved some modest ratings success for *The Greatest American Hero*, but it was *The A-Team* that established the company as a major force in Hollywood in 1983. Adding a heavy dosage of cartoon-like action to the familiar Cannell themes, *The A-Team* made Nielsen's top ten in its debut season. Three years later, Cannell had six series on the network prime-time schedule, including *Hunter*, *Riptide*, and *Hardcastle and McCormick*.

Many critics who had praised *The Rockford Files* rejected this latest batch of Cannell's series, complaining that they were juvenile and overly formulaic. With the debut of *Wiseguy* in 1987, however, one of Cannell's shows once again earned critical respect for its intelligent dialogue, complex characterization, and occasional treatment of

Stephen J. Cannell

timely issues. *Wiseguy* also employed an innovative new narrative structure, the "story arc," whereby the season was in effect divided into several multi-part episodes.

In an effort to lower production costs, Cannell opened a major studio facility in Vancouver, British Columbia, toward the end of the 1980s. One of the first series shot there was *21 Jump Street*, the highest-rated show of the new FOX network's first season. *Scene of the Crime*, a mystery anthology series for CBS' late-night schedule, was also filmed in Vancouver and was hosted by Cannell himself.

—Robert J. Thompson

STEPHEN J. CANNELL. Born in Los Angeles, California, U.S.A., 5 February 1941. University of Oregon, B.A. 1964. Married: Marcia C. Finch, 1964; children: Derek (deceased), Tawnia, Chelsea, Cody. Began career as television writer in late 1960s, selling story ideas to Desilu Productions; head writer, Universal Studios, *Adam 12*, 1970; creator, writer, producer of other Universal action-adventure programs, through 1970s; founder, Stephen J. Cannell Productions, 1979. Recipient: Mystery Writers Award; four Emmy Awards; four Writers Guild of America Awards.

CAPTAIN VIDEO AND HIS VIDEO RANGERS

U.S. Children's Science-Fiction Program

C*aptain Video and His Video Rangers*, which premiered 27 June 1949 on the DuMont Network, was the first science-fiction, space adventure program on television and was to inspire a spate of similar offerings. Although it combined many of the early staples of children's programming, such as the inclusion of inexpensive film clips and pointed moral lessons, *Captain Video* capitalized upon the public fascination with science and space and the technical elements of the new television medium to create the longest running science-fiction show in early television.

Captain Video was the creation of James L. Caddigan, a DuMont vice president. Set in the year 2254, the show was an ambitious undertaking—it was live, technically demand-

ing, and programmed as a continuing serial appearing every evening from 7:00 to 7:30 P.M. The show was designed to take advantage of the new technology; dissolves, superimpositions, and crude luminance key effects were utilized to place Captain Video in fanciful surroundings and allow him to travel through space and time. Without the luxury of video tape and editing, however, scripts, written by Maurice C. Brock (a veteran radio scriptwriter for *Dick Tracy* and *Gangbusters*), had to contain a great deal of exposition to allow time to set-up for short bursts of action.

The lack of sustained action was the reason given by creator Caddigan for using clips from the DuMont film library. In a typical program, as the conflict subsided for a

moment, Captain Video (played by Richard Coogan, who later portrayed U.S. Marshal Matt Wayne on *The Californians*) would turn to his Remote Tele-Carrier, or inexplicably the show would switch to Ranger Headquarters, to show the exploits of other rangers (often cowboys such as Bob Steele and Sunset Carson in Western films). These clips always involved action-oriented sequences and helped to pick up the pace of the show and allow time for the production crew to change sets and set up special effects.

Other breaks between scenes were filled with Ranger Messages. While messages on other children's programs would focus on children's issues such as safely crossing the street, Ranger Messages dealt with more global issues such as freedom, the Golden Rule, and nondiscrimination. The sophistication of these messages seemed to anticipate an adult audience, but the shifts between space and Western adventures were incomprehensible to many adults. The show was most popular with children and by 1951 was carried by 24 stations and seen by 3.5 million viewers, outdrawing its nearest competitor, *Kukla, Fran and Ollie*.

As the "Master of Science," Captain Video was a technological genius, who invented a variety of devices including the Opticon Scillometer, a long-range, X-ray machine used to see through walls; the Discatron, a portable television screen which served as an intercom; and the Radio Scillograph, a palm-sized, two-way radio. With public concerns about violence in television programming, Captain Video's weapons were never lethal but were designed to capture his opponents (a Cosmic Ray Vibrator, a static beam of electricity able to paralyze its target; an Atomic Disintegrator Rifle; and the Electronic Strait Jacket, which placed captives in invisible restraints). In testimony before Senator Estes Kefauver's subcommittee probing the connection between television violence and juvenile delinquency, Al Hodge, who had previously starred in radio's *Green Hornet* and became Captain Video in 1951, noted that he did not even use the word "kill" on the show.

In addition to the futuristic inventions, the plots featured sharply drawn distinctions between good and bad science. Although Captain Video, with the fifteen-year-old Video Ranger (played by Don Hastings, who later appeared in *The Edge of Night* and *As the World Turns*), battled a wide array of enemies, the most clever and persistent was the deranged scientist Dr. Pauli (originally portrayed by Bram Nossem who could not sustain the grueling live schedule and was replaced by Hal Conklin). The battles were originally earthbound with Captain Video circling the globe in his X-9 jet to thwart the plans of Dr. Pauli who joined forces with other villains, such as the evil Heng Foo Sueeng. However, in response to other newly created science-fiction competitors, in 1951 Captain Video began to patrol the universe and battle aliens in the spaceship Galaxy under the auspices of the Solar Council of the Interplanetary Alliance. He encountered such notable villains as clumsy McGee, (played by Arnold Stang) an inept Martian, Norgola (played by Ernest Borgnine) who turned the sun's energy into magnetic forces, and television's first robot, Tobor ("robot" spelled backwards), played by Dave Ballard.

Captain Video and His Video Rangers

The audience was exceptionally involved in the show, often writing to oppose plot developments or to suggest new inventions. For example, Tobor and Dr. Pauli were destroyed when their schemes backfired; however, the opposition of the viewers was great enough to bring them back in later episodes. Young viewers were also encouraged to join the Video Rangers Club and to buy Captain Video merchandise, including helmets, toy rockets, games, and records although the show not as extensively merchandised as some of its competitors. The show was supported, however, by large sponsors such as Skippy Peanut Butter and Post Cereals. Fawcett also published six issues of *Captain Video Comics* in 1951. A fifteen-chapter movie serial, *Captain Video, Master of the Stratosphere* (released by Columbia Pictures in 1951, starring Judd Holdren and Larry Stewart) was the first attempt by Hollywood to capitalize on a television program. DuMont also attempted to build on the popularity of the show by developing *The Secret Files of Captain Video*, a thirty-minute, weekly adventure complete within itself which ran concurrently with the serial from September 1953 until May 1954.

However, although Captain Video was "The Guardian of the Safety of the World," he was not able to escape the economic necessities of the industry nor prevent the demise of the DuMont network. When Miles Laboratories, Inc., canceled its sponsorship of the Morgan Beatty news program, *Captain Video* remained as DuMont's only sponsored program between 7:00 and 8:00 P.M. Unfortunately the income was not large enough to justify the rental of the

coaxial cable, and *Captain Video* left the air 1 April 1955, with DuMont folding that same year.

CAPTIONING

Captioning is the display, in writing, of dialogue, narration or other unspoken information on the screen. As an audiovisual medium, television makes extensive use of writing. Captions usually appear in two to three lines at the bottom of the screen.

Captions used for translating a foreign-language text or program are usually called subtitles. While such “translation subtitling” is rarely used in some countries including the United States, captioning in the same language is indispensable especially in information programs such as news, documentaries and weather reporting, or entertainment programs such as game shows. Captions are also used when intelligibility is reduced by poor voice quality, dialectalism, colloquialism or other features of speech. Commercials make extensive use of captioning, sometimes with calligraphic expression. The written element either enhances the spoken, visual, graphic, sound and musical components of an advertisement, or provides additional information.

Captions are either “open,” i.e. appear on the screen without viewer control of their display, or “closed,” i.e. available for display at viewer’s choice; closed captions can be “opened” with a decoder. An increasingly important use of closed captions is for making the spoken language of television available to the hearing impaired and hard-of-hearing audiences. The first experiments with such captioning were initiated by the PBS in the early 1970s, and approved by the Federal Communications Commission

(FCC) in 1976. The PBS’s Boston station, WGBH-TV, established a Caption Center which set standards for captioned programming. Although a real success with hearing-impaired viewers who lobbied for more, the hearing audience complained about the distraction of open captions. The problem was solved when it became possible to assign line 21 of the “vertical-blanking interval” for hiding captions, which could be conveniently opened up by a decoder. The non-profit National Captioning Institute, formed in

An example of captioning
 Photo courtesy of the Caption Center

1981, promoted the service and tried to gradually meet viewers' demands. In Britain, the 1990 Broadcasting Act stipulated the captioning of a minimum of fifty percent of all programs by 1998. In Canada, broadcasters raised public interest in this service by opening closed captions during a Captioning Awareness Week in 1995. In the United States, all television sets with screens larger than 13 inches produced after 1993 were required to be equipped with decoders.

Non-standardized technology is an obstacle to transnational exchange of closed caption programs in countries speaking the same language. By the mid-1990s, there were some 3,000 captioned videos in the United States. However, NCI captioned products in Britain could be viewed only with a decoder because the VBI lines used in the two countries are not compatible.

In both film and television, captioning began as a post-production activity. Technological advances as well as a growing demand by hearing-impaired viewers have made it possible to provide real-time captioning for live broadcasting. This is done with the aid of a court-room stenograph or short-hand machine; a high-speed stenographer can type no less than 200 words per minute, which is adequate for keeping up with the speed of normal conversation. Stenographed texts are not readable, however, because words are abbreviated or split into consonant and vowel clusters. While the stenographer strikes the keyboard, a computer transforms them into captions and delivers them to the transmitting station, making it possible for the viewers to read the words seconds after they are spoken. Stenocaptioning was first tried in the early 1980s in Britain and the United States. The improved system was in use in

North America in the mid-1990s, although alternative technologies were being developed in Europe.

While captioning allows millions of deaf and hard-of-hearing citizens access to television, it usually involves heavy editing of the spoken language. Screen space is limited and captions can be displayed for only a few seconds. Thus, in order to allow viewers enough time to read the captions and watch the pictures, the dialogue or narration must be summarized; such editing entails change of meaning or loss of information. However, refined, though not yet standardized, styles are developed to help the viewer get a better grasp of the spoken language. When more than one speaker is present, the captions may either be placed next to each speaker or marked by different colours. Moreover, codes or brief comments are used to indicate the presence of some features of the speech, music and sound effects.

Captioning is a useful teaching aid in second language learning, child or adult acquisition of literacy, and in most types of educational programming. It also has a potential for creating new television genres and art forms.

CARIBOO COUNTRY

Canadian Drama Series

C*ariboo Country*, one of the most imaginative, innovative, and evocative series ever broadcast by the CBC, was a hybrid of anthology and series programming originating in Vancouver. It appeared on the CBC as a summer replacement from 1960 to 1967, and was among the first Canadian television dramas to be filmed on location. This meant that the team of producer Philip Keately and writer Paul St. Pierre, as well as the actors whose characters appeared in various episodes, all received direct and timely reactions from the ranchers and First Nations' peoples of the Cariboo whose lives the series explored.

The series was a deliberate antithesis to the dominant North American television genre of the 1960s—the television western. It was set in the Chilcotin region of modern British Columbia. Guns were used for hunting only and were seldom seen. Horses and overused tractors shared the fields. The stories were told by a gently humorous narrator who ran the general store. Reflecting Canada's different culture and history, there were no stagecoach

robberies, range wars, or wagon trains fending off hostile Indians with the help of the cavalry. When the Royal Canadian Mounted Police were introduced in one episode they were parodied. There were no prim school mams or whores with hearts of gold. The women were occasionally in the foreground but only as full partners to the men—and they never needed rescue.

The series introduced actor Chief Dan George as "Ol' Antoine," and was distinguished in the 1960s by the fact that all actors representing Indian characters were members of the First Nations. *Cariboo Country* was shot in black-and-white in documentary style without programmatic music or rapid edits. It used laconic but superbly allusive dialogue, marked by silences and honed by St. Pierre's ear for dialect.

Notable episodes included the historical flashback called *The Strong Ones*, about the reaction of a young man to the fact that his Indian mother and her children—who are involved in an "up country" relationship with a successful rancher—are suddenly displaced by a "suitable" bride

from the East. Another episode, *One Small Ranch*, documents the struggles of Smith, a recurring character, and his wife to survive harsh weather, low prices, and government interference on their marginal ranch. It also explains with ironic humour why they refuse to sell it to wealthy hunters from “outside.” In *Sarah’s Copper*, a young couple eventually refuse to sell a precious artifact—a “copper” which signifies for Northwest Coast aboriginal peoples wealth, prestige, and an honourable history—to a white collector for his apartment wall. Their choice is made more difficult because it means they will have to do without a new truck. *All Indian*, like Keatley’s *Beachcombers*, tried to be authentic and responsive to concerns about cultural appropriation long before the term was widely used. This episode refuted the myth that “all Indians are the same” by showing a cross-cultural conflict between a husband from the Cariboo and his coast Salish wife who is “kidnapped” by her people to become a spirit dancer. The episode included a trailer which pointed out that none of the dances shown were authentic. Other episodes looked at an old rancher who competes in the rodeo until it kills him, and at the conflict between a metis and his wife who bears him an imperfect child and then leaves him. Like most of the episodes of *Cariboo Country*, few of these had linear plots or neatly wrapped endings.

Two hour-long specials were developed from the series. The award-winning *The Education of Phylistine* (pulled together from two half-hour episodes), not only explains the roots of the heedless racism which drives an Indian child out of a small rural school, but also explores the relationship between the child and Ol’ Antoine, her grandfather. The second, *How to Break a Quarterhorse*, was commissioned for the prestigious anthology, *Festival*, during the 1967 Centennial. It is a story of justice Cariboo style—the recent history of exploitation and racism which motivates a murder is taken into account when a fugitive surrenders after ten years on the run, and he is acquitted by a Cariboo jury. The story’s other plot line focuses on how Smith, Ol’ Antoine’s old friend, gets involved in the outcome of the case. After a less successful third drama special, *Sister Balonika*, Keately moved on to *Beachcombers* while St. Pierre continued to write short stories about the Cariboo.

St. Pierre and Keately enjoyed the freedom of being away from Toronto, production headquarters of English Canada, and were thus able to make filmed drama when it was not usually done. *Cariboo Country* was broadcast for several summers on CBC-owned stations only, and then was presented as part of *The Serial* (despite the fact that each episode was self-sufficient). It remains one of the very best works of television created in English Canada on the CBC or the private networks.

CARNEY, ART

U.S. Actor

Art Carney’s many noteworthy achievements as an actor will always be overshadowed by one role: Ed Norton. Carney made his reputation as the loyal but dopey neighbor, Ed Norton, opposite Jackie Gleason’s Ralph Kramden in the classic sketches and series *The Honeymooners*. So complete was Carney’s transformation into the loose-limbed, bumbling sewer worker that he won five Emmy Awards for his work with Gleason, including three consecutive awards as best supporting actor from 1953 to 1955.

Carney got his start in show business doing imitations and comedy bits with Horace Heidt’s orchestra. Stints in radio and bit parts in films led to Carney’s first regular role on television on *The Morey Amsterdam Show*. When Jackie Gleason took over as host of the DuMont network’s *Cavalcade of Stars*, Carney became a principal supporting player. He moved with the show to CBS in 1952 where it was rechristened *The Jackie Gleason Show* and “The Honeymooners” became a regular sketch.

Ed Norton may have been second banana to Ralph Kramden, but Carney's performance never took a back seat to Gleason's. Indeed, the pair created a symbiosis of comic styles so unique that when Carney left the show in 1957 "The Honeymooners" went on hiatus until his return almost ten years later. In contrast to Gleason's broad, blustery Kramden, Carney's Norton was the personification of non-chalance. His casual delivery could make any statement sound vacuous. Even his typical greeting, "Hey-hey, Ralphie boy," announced Norton's child-like amicability as well as his lack of brains. Carney's face drooped into a slackjawed expression that was perpetually blank. Coupled with his feeble-minded manner was a body like a rubber band. It could be as slouched as the hat that was always perched on his head at one moment, then snapping into improbable contortions the next. Carney seemed to make up for Ed's lack of intelligence by investing the character with a host of broad physical tics that could turn a game of pool, a few moments on a pinball machine, or a mambo step, into a comic ballet. Much like the great silent comedians, Carney created an wholly original character who was recognizable at a glance. In Ed Norton we find the pathos of Chaplin, the earnestness of Lloyd, and the physical grace of Keaton.

Even though the *Gleason Show* and the role of Ed Norton cemented Carney's success as a comedian, he was never content to be known as merely a comic actor. When the program moved to CBS, Carney's agent negotiated for the actor to have three out of every thirteen weeks off to perform in noncompetitive shows. Carney built up a solid background as a dramatic performer on episodes of *Studio One*, *Suspense*, *Kraft Television Theatre*, and *Playhouse 90*, and in special events like a telecast of Thornton Wilder's *Our Town*. By the latter part of the decade critics had come to take the excellence of Carney's dramatic performances for granted. When he appeared in the lead in Rod Serling teleplay "The Velvet Alley" on *Playhouse 90*, the *Variety* review of 28 January 1959 commented, "Carney achieved considerable stature as a dramatic actor with his remarkable performance."

In 1966 Carney returned to *The Jackie Gleason Show*, and the role of Norton. That same year, he captured one of the coveted slots as a guest villain ("The Archer") in ABC's wildly popular *Batman* series. He had achieved success on Broadway, creating the role of Felix Unger in the original run of Neil Simon's *The Odd Couple*. And he was maturing as an actor. Lacking any formal training in the profession, Carney drew from his own life to build performances. Overcoming battles with alcoholism and depression seemed to add depth and wisdom to his characterizations. His ability to convey a sense of loneliness and world-weary resignation tended to belie his relative youth. This was evident in his film work, including his Academy Award winning portrayal as an old man traveling across the country with his cat in *Harry and Tonto* (1974), and as the aging hardboiled detective in *The Late Show* (1977). He also had impressive performances in television movies, such as his low-key portrayal of Robert Stroud, "The Birdman of Alcatraz" in

Art Carney

Alcatraz: The Whole Shocking Story (1980). Despite a flourishing career for theatrical features Carney continually returned to the medium that made him a star. He took the lead in the short-lived series *Lanigan's Rabbi* (1977), did guest appearances on shows like *Alice* and *Fame*, and was featured in specials and telefilms. He won a sixth Emmy in a heartfelt performance as the loyal caretaker of an elderly boxing champion (played by Jimmy Cagney in his last role), in *Terrible Joe Moran* (1984).

Constant re-runs of *The Honeymooners* and the packaging of the so-called lost "Honeymooners" sketches from *The Jackie Gleason Show* have guaranteed Art Carney's place in the pantheon of television comedians. But to be given his full due Carney must be recognized as one of the most accomplished and multi-faceted actors to emerge during television's "golden age."

THE CAROL BURNETT SHOW

U.S. Comedy/Variety Show

When *The Carol Burnett Show* aired in September 1967 on CBS, no one expected it to run eleven years. The show gave Carol Burnett, along with regulars Harvey Korman, Vicki Lawrence, Lyle Waggoner (who left in 1974), and Tim Conway (whose occasional guest appearances became permanent in 1975) an opportunity to fuse the best of live vaudeville-style performance with the creative benefits of time and

tape. Burnett's ensemble quickly bonded into a tight unit of professionals who looked and acted as if performing on *The Carol Burnett Show* was the best fun an entertainer could have. In reality, the meticulously-structured, musical-comedy program became one of the last, and one of the finest, prime-time variety shows to link the modern television age with Tin Pan Alley and the golden ages of motion pictures and television.

The show brought Carol Burnett's working-class persona into a unique relationship with her audience. There was a glamorous, celebrity-brushed side to her work: Burnett could wear exclusive Bob Mackie gowns, banter with popular celebrities, and illustrate her brilliant talent for physical and intellectual comedy in cleverly written and produced skits. Her musical abilities ranged from Shubert's *Alley* to more refined venues, and her voice could amuse and inspire. She vamped with Hollywood royalty: Lucille Ball, Liza Minnelli, Sammy Davis, Jr. Even California governor Ronald Reagan joked and performed. On the other hand, Burnett's charwoman character, her dysfunctional and beleaguered "family" member, Eunice, her zestful Tarzan call, and her weekly question-and-answer sessions with the studio audience gave her an accessibility and down-to-earth warmth that firmly reinstated her within the world of her viewers. The dichotomy between the two Carols—one homespun, the other neon-minted—gave *The Carol Burnett Show* a flavor and personality that showcased the idiosyncrasies of its eponymous star. Only later did Burnett reveal the source of that working-class quality—the talented comedienne had lifted herself from appalling poverty, a dysfunctional family, and emotional abuse to become a beloved star. One of Burnett's insightful actions, as she constructed her characters and her persona, was to draw on the contradictions that informed her artistic evolution.

Throughout the show's run, Burnett maintained, and increased, her creative input and control. She worked closely with a team of writers, among them Ken Welch and his wife, Mitzi, who had a strong sense of Burnett's attributes and strengths. (Ken Welch had written the famous "I Made a Fool of Myself over John Foster Dulles" routine which had catapulted comic chanteuse Burnett to fame in 1956.) The show combined musical comedy with humorous sketches, using the ensemble of players as well as weekly guest stars, such as Jim Nabors, Cher, and Julie Andrews.

Burnett's three-tiered abilities—singer, actress, comedienne—allowed the writers to create and sustain characters throughout the 11-year-run. The charwoman, whose pantomimed mishaps often brought her into the shadow of greatness, became the show's trademark; a caricature of the dusty maid adorned credits and teasers for the program. Eunice, who was always under the abusive power of her mama, blended the kind of sharply-sketched comedy and tragedy that marks the finest comedic characters. Eunice, Mama, and the rest of the working-class family members insulted, demeaned, and belittled one another, in acrimonious skits that revealed the dark heart of a family in turmoil. Critics complained that Eunice became more disturbing, rather than amusing, as the show progressed. Eventually, the family skits were spun off into a situation comedy, without Burnett, entitled *Mama's Family*, in which Vicki Lawrence reprised her role as the bilious Mama.

The show centered on Burnett, but its enduring qualities also arose from its talented ensemble of players, whose interactions contributed to the overwhelming sense of "live" performance exuded by the show. Vicki Lawrence was fresh out of

The Carol Burnett Show

high school when her resemblance to Burnett won her a role; her transformation from sprightly youth to dour Mama astonished and delighted audience and cast. The infamous comic rivalry between perennial bemused Harvey Korman and the irrepressible Tim Conway remains one of the show's most distinctive features, as Conway's scripted and ad-libbed high jinks forced Korman to battle uncontrollable laughter during skits. Bits would halt as Korman struggled to stay in character; Conway would continue to pile on more egregious additions, trying to break up his costar. While the other cast members joined in unexpected break-ups, the anarchic camaraderie of Korman and Conway became legendary.

These refreshing ad-libs often appeared during movie parodies, another of the show's trademarks. Burnett had been deeply influenced by classical Hollywood films during her childhood, and she and her writers drew from a copious knowledge of motion pictures to design film-related skits. Nothing was sacred: genres, films, actors, and characters from familiar and obscure pictures provided fodder for the ensemble. A take-off of *Gone with the Wind* ("Went with the Wind") found Burnett dressed in Bob Mackie window drapes, complete with curtain rods doubling as shoulder pads, rolling down the stairs as she deconstructed one of the film's most famous moments, Scarlett's miscarriage during a fight with Rhett. "From Here to Maternity," "Sunnyset Boulevard," "Lovely Story": Burnett and her ensemble paid tribute to a bygone golden age with arch and loving comic elegies.

The show ended in 1978, still attaining decent ratings at a time when variety shows no longer attracted large audiences. Burnett wished to go on to other projects, and wanted to close *The Carol Burnett Show* while it could still entertain its viewers. The show periodically appears in syndication as *Carol and Company*, in 1992, *Carol Burnett: A Reunion* brought highlights of the run back to CBS prime time, where the special did well in the ratings. Ultimately, *The Carol Burnett Show* represents a sophisticated fusion of music, comedy, drama, celebrity, parody, and slapstick which both resurrected and archived the traditions of America's vaudeville-variety past.

CARSEY, MARCY

U.S. Producer

Marcy Carsey, one of the most successful situation comedy producers of the 1980s and 1990s, is co-owner of the Carsey-Werner Company, an independent television production company responsible for two of the most highly rated and longest running sitcoms on TV, *The Cosby Show* and *Roseanne*. Carsey has a number of notable accomplishments in the television industry: she developed the concept of building a sitcom around a single standup comedian; she established one of the first successful production companies to operate independently of the networks; she is frequently named one of the most powerful women in show business.

Carsey began her career in television in the 1960s as a tour guide at NBC, later becoming a story editor for the Tomorrow Entertainment company. In 1974 she joined ABC as a program executive concentrating on comedy programming, rising, to senior vice president of prime-time series in 1978. While at ABC, she developed some of the most successful shows of that era, including *Mork and Mindy*, *Soap*, and *Happy Days*. In 1980 she left ABC and in 1982 started Carsey Productions, an independent production company. She was joined in this venture a year later by Tom Werner who had worked with her at ABC. They remain equal partners in the Carsey-Werner Company.

The programs produced by Carsey-Werner have been notable for their innovation in pushing the boundaries of traditional sitcom fare. *The Cosby Show*, the first sitcom about an African-American family to sustain wide, diverse and enduring popularity, consistently led in the ratings for several years. It was Carsey-Werner's first hit show, employing the formula that helped to establish them as a television production powerhouse: building a family-based situation comedy around a popular, established standup comedian. *Cosby* aired in prime time for eight seasons and is currently in worldwide syndication. With virtually no track record when they sold *Cosby* to NBC, the company's success was firmly established, as well as its reputation as a source of programming.

In *Roseanne*, Carsey-Werner continued the concept of a show starring a well-known comedian, in this case Roseanne (then Roseanne Barr). *Roseanne* has been a centerpiece of the ABC programming schedule since it was introduced in 1988. In contrast to *Cosby*, which was about an upper-middle-class family, *Roseanne* featured a working-class woman with husband and children, a perspective not usually found in prime-time sitcoms. The character Roseanne is closely based on the persona evident in Barr's stand-up performances, which she derived from her personal experi-

Marcy Carsey with Tom Werner
 Photo courtesy of the Carsey-Werner Company

ences. Not only is the main character relatively authentic, the program has received critical acclaim for the topics it addresses and the quality of the writing. It has gained a reputation for scathing dialogue and controversial plotlines, while sustaining high ratings.

In addition to *Cosby* and *Roseanne*, Carsey and Werner have a number of other popular situation comedies to their credit, including *Grace Under Fire*, *A Different World*, and *Cybill*. Beginning with *The Cosby Show*, Carsey-Werner programs have emphasized non-mainstream, non-traditional, and ethnic family groupings. This can be seen in the flops as much as the hits—shows like *Chicken Soup* starring Jewish comedian Jackie Mason, and *Frannie's Turn* based on the life of a single working-class mother.

Carsey and Werner have led the wave of independent production companies in the 1980s that resist affiliation with a major network or distributor. Carsey-Werner shows have appeared on all three major broadcast networks. They retain (or have repurchased) control of syndication rights for re-runs of their hit shows and have produced original programming for syndication, for example a revival of the Groucho Marx quiz show, *You Bet Your Life* hosted by Bill Cosby, which aired briefly in the early 1990s. In 1995, Carsey-Werner ventured into the feature film industry by founding Carsey-Werner Moving Pictures. Carsey has been quoted as saying that the secret of the success of Carsey-

Werner's shows has to do with their preference for thinking up "people and ideas together" and for "atypical casting."

Carsey has been touted as one of the few women in high-level executive positions in television and one of the most successful American business women in show business. She has been on the board of directors of the Academy of Television Arts and Sciences and on the board of the Film School at the University of Southern California.

—Kathryn Cirksena

CARSON, JOHNNY

U.S. Comedian/Talk Show Host

Johnny Carson is best known as America's late night king of comedy. For thirty years he hosted NBC television's *Tonight Show*; his topical monologues, irreverent characters, comical double takes and frivolous sketches entertained more people than any other performer in history. His late-night arena provided plugs for untold books, films and products, created a springboard to stardom for an infinite number of new performers, and, more than occasionally, offered a secure refuge for aging legends.

Carson began performing professionally at the age of fourteen as a magician-comic, "The Great Carsoni," for the local Rotary Club in his hometown of Norfolk, Nebraska. After a two-year stint as a Navy Ensign during World War II, and four years as a radio-drama major at the University of Nebraska, he plunged headfirst into the world of broadcasting as a radio announcer-disc jockey. When WOW in Omaha began television operations in 1949, Carson was there to host his first video program, *The Squirrel's Nest*, a daily early afternoon show. The young performer told jokes, conducted humorous interviews and staged various skits with wacky comic characters and premises. *Squirrel's Nest* gave Carson the opportunity to develop a good portion of his public persona and adjust his performance style to the intimate visual medium.

Relocating to Hollywood in the early 1950s, Carson's television career took a step forward with his weekly low-budget series, *Carson's Cellar*, on CBS' KNXT. Performing monologues and satirical sketches reminiscent of his later work, Carson attracted the attention of such stars as Fred Allen, Groucho Marx and Red Skelton—all of whom dropped by to appear on the local show at no charge. Based on his work with *Carson's Cellar*, a more sophisticated *Johnny Carson Show* was created for regional broadcasts in the western United States. This proved unsuccessful and Carson subsequently began work for *The Red Skelton Show* as a writer.

Casting about for new on-air opportunities, Carson's first prime-time network television exposure happened in

May 1954, as host of the short-lived quiz show, *Earn Your Vacation*. Fortunately, working for Skelton provided more of a career boost. When Skelton was injured during a show rehearsal, the young Carson was thrust instantly into the limelight as substitute host. On the strength of this appearance, CBS created a new prime-time *Johnny Carson Show*, a traditional potpourri of comedy, music, dance, skits and monologues. Working through seven writers and eight directors in thirty-nine weeks, the troubled show left the air due to poor ratings.

As quizmaster of the ABC-TV daytime show, *Who Do You Trust?*, in 1957, Carson's career again took an upward turn. This highly rated daytime entry allowed Carson to display his engaging personality and quick wit through five years of continual give and take with a wide variety of guests. During this time, he also worked at extending his reputation and base of experience by appearing on a number of television musical variety shows and game shows, on Broadway and as a guest actor in live television plays. Most importantly, Carson's successes brought him offers to substitute for Jack Paar as guest host on *The Tonight Show* and ultimately to replace Paar when the temperamental emcee retired.

On 1 October 1962, Carson broadcast his first *Tonight Show* as permanent host. Less excitable and emotional than his predecessor, Carson's relaxed pace, more casual interviewing style, impeccable timing and ability to play straight for other guests proved instantly popular with his viewing audience. Comparing differences between Paar and Carson, *Time* magazine reported on 28 May 1965 that "Paar's emotionalism had made the show the biggest sleep stopper since caffeine. By contrast, Carson came on like pure Sanka. But soon his low-key, affable humor began to prove addictive. Paar generated new interest, but Carson is watched."

Within four months of assuming *Tonight Show* reins, Carson surpassed Paar's old record night-time ratings by nearly a half million viewers, adding approximately twenty stations to the NBC network—this despite heavy CBS com-

Johnny Carson

Photo courtesy of Carson Productions

petition from former *Tonight Show* host Steve Allen. Incredibly, over a fifteen-year period, with continual competitive threats from CBS and ABC, the *Tonight Show* doubled its audience. Observed Kenneth Tynan in his *New Yorker* portrait of Carson on 20 February 1978, this was “a feat that, in its blend of staying power and mounting popularity, is without precedent in the history of television.”

Despite occasional contract squabbles, criticism over his numerous days off, marital conflicts and assorted family problems, Carson continued to outdistance his competition for an additional fifteen years. Without losing his timing, his unpredictability or his perfectionist work ethic, for thirty years he kept his finger on the pulse of mainstream America’s moods, attitudes and concerns. Combining his verbal dexterity with a well-stocked supply of facial expressions and gestures, he became the acknowledged master at lampooning the pretentious, salvaging the boring or sharpening a nervous guest’s performance for maximum effect.

Through the years, Carson hosted a number of network television specials, including the Academy Awards and Emmy Awards, and performed stand-up comedy at the top hotels in Las Vegas. But it was *The Tonight Show* that guaranteed his place in American history. For thirty years, he entered our homes to provide commentary on the day’s news, to help determine our next day’s conversational agenda and, of course, to entertain. Over time, his mild-mannered midwestern brand of humor became more politically biting and sexually frank but never demeaning or offensive. His well-known characters, like Carnac, Aunt Blabby, and Art Fern, so familiar to multiple generations of American families, remained brash, silly and, somehow, consistently funny.

On 22 May 1992, at the age of sixty-six, Johnny Carson left the *Tonight Show*—a remarkable thirty-year run in more than a half century of comedy performance that raised him to the level of national court jester and national treasure.

—Joel Sternberg

JOHNNY (JOHN WILLIAM) CARSON. Born in Corning, Iowa, U.S.A., 23 October 1925. Attended the University of Nebraska, Lincoln, Nebraska, B.A. 1949. Ensign, U.S. Navy, World War II. Married: 1) Jody Wolcott, 1948 (divorced, 1963), children: Chris, Ricky, Cory; 2) Joanne Copeland, 1963 (divorced); 3) Joanna Holland, 1972 (divorced, 1983); 4) Alexis Maas, 1987. Began career as radio announcer, KFAB, Lincoln, Nebraska, 1948; announcer, WOW and WOW-TV, Omaha, Nebraska; announcer, KNXT-TV, Los Angeles, California, 1950; began television with *Carson's Cellar*, a comedy-variety-talk show, KNXT-TV, 1951; writer, *The Red Skelton Show*, on air as replacement for the injured Skelton, 1954; host-star of quiz show, *The Johnny Carson Show*, 1955–56; succeeded Jack Paar as host of *The Tonight Show*, 1 October 1962; last telecast 22 May 1992. Recipient: four Emmy Awards; Friar's Club Entertainer of the Year Awards, 1965, 1969; Harvard Hasty Pudding Club Man of the Year, 1977.

TELEVISION

1951–52 *Carson's Cellar*
 1954 *Earn Your Vacation*
 1955–56 *The Johnny Carson Show*
 1957–62 *Who Do You Trust?*

CARTIER, RUDOLPH

British Producer/Director

When Rudolph Cartier died in June 1994 his obituaries unanimously credited him as the "inventor of television drama" and "a television pioneer". He was a television drama director at the BBC from 1952 to the late-1960s (although the BBC preferred the title "producer" for their directors until the 1960s) and he was one of first

innovative television stylists working in British television during this period. The range of his 120 television productions (all for the BBC) stretched from the science fiction serial (*The Quatermass Experiment*, 1953; *Quatermass II*, 1955; *Quatermass and the Pit*, 1958), drama documentary (*Lee Oswald—Assassin*, 1966), adaptations of classics

(*Wuthering Heights*, 1953; *Anna Karenina*, 1961), to crime serials (*Maigret*, 1961 and *Z Cars*, 1963) and opera.

He was born Rudolph Katscher in Vienna, 1904, and studied to be an architect, before attending classes given by Max Reinhardt which had an important impact upon him. In 1929 he submitted a script to a film company in Berlin which was accepted and he was enrolled as a staff writer (paired with Egon Eis) scripting low-budget crime movies. He later moved on to writing for UFA and directed his first movie, *Unischtbare Gegner* in 1931. Cartier emigrated to Britain in 1935, but it was not until 1952 that he began work as a BBC television drama director. From this point until the mid-1960s he directed over 120 separate productions, most of them live studio plays, although he also had a penchant for televised opera adaptations.

Cartier did not expand the spectrum of BBC TV drama single-handedly, but he did offer some innovations both stylistically and thematically. Before Cartier's arrival on the scene BBC TV drama production has been perceived as consisting largely of adaptations of West End successes: theatrical, static stage performances respectfully and passively relayed by efficient BBC personnel. This is a false perception, although it captures the sense of impasse felt by a drama department which, during the late 1940s, was starved of funds, studio space and equipment. The transformation of BBC drama in the early 1950s was the result of various factors, not simply Cartier's fortuitous arrival. By 1951 the expansion of television was underway: threats of a commercial competitor, and increased funding for the TV department meant that new studios were acquired and refitted with fresh equipment (new camera mountings, cranes, etc.). The largely ad hoc manner of production and training was formalised: training manuals and production courses were established.

The appointment of Michael Barry (a former drama director, and innovative in his own way—he had directed the first documentary-drama for the BBC) as Head of Drama established a continuity of drama policy that was to last a decade until Barry was replaced by Sydney Newman. Unlike his predecessors Barry was convinced that TV drama had to rely less on dialogue, more on the “power of the image”: that television had to be visibly televisual, not a discrete passive relay medium. It was into this new fertile environment that Cartier was employed, and he quickly took full advantage, “I said [to Barry] that the BBC needed new scripts, a new approach, a whole new spirit, rather than endlessly televising classics like Dickens or familiar London stage plays.” Barry was initially receptive to these suggestions (drama directors were given a relative amount of freedom in the selection of their material).

One way of changing traditional approaches to drama direction was to change the material: instead of using current or recent West End successes, Cartier drew upon the science-fiction genre and European modernist theatre as well as the pulp detective genres he had worked on in Germany. Initially Cartier directed more unconventional, European

modernist drama: Brecht, Sartre, Anouilh; later he developed a partnership with the newly appointed BBC staff writer Nigel Kneale, and directed works specifically written by Kneale for the medium, including the three *Quatermass* serials. Later Kneale adapted Orwell's *Nineteen Eighty-Four* for television and Cartier directed.

The impact of that play (transmitted live and repeated live a few days later, as was the norm) cannot be overstated. Produced in 1954, as Cold War ideologies were being constructed and reinforced, the play's landscapes of totalitarian control achieved a massive resonance with the public, both celebratory when perceived as an anti-Soviet piece (an editorial in *The Times* praised the play for clarifying the “Communist practice of making words stand on their heads” for the British public) and disgusted by the graphic depiction of torture (one letter to the BBC reads, “Dear Sir, *Nineteen Eighty-Four* was unspeakably putrid and depraved”). Questions were asked in Parliament about the tendency for BBC drama to “pander to sexual and sadistic tastes” and Cartier himself received death threats from those who considered the play anti-fascist (the BBC provided bodyguards for him).

Hidden behind the furor is an important point. If the 1953 BBC live broadcast of the coronation proved that television had a mass audience which could be united by a spectacle of national re-birth, Cartier's *Nineteen Eighty-Four* proved television's ability to influence, and frighten a mass audience (one *Daily Express* headline read, “Wife Dies as She Watches”). It was the beginning of television's role as an agency of pernicious influence.

The power of that production rests with Cartier's explicit desire to influence and manipulate the television audience. *Nineteen Eighty-Four* is an exemplary instance of his technique: the mixture of powerful close-up and expanded studio space. Writing in 1958, Cartier cites the close-up as a key tool of the TV director, “When the viewer was watching these ‘horrific’ TV productions of mine, he was, completely in my power.”

Another important element was his use of filmed inserts. The restrictive space of the Lime Grove studios meant that filmed inserts were usually location scenes introduced into the live studio action. In this way scenery, camera and costume changes could be made in the studio. But Cartier took this further: instead of filmed inserts for entire scenes, he often used telecine inserts *between shots* hence expanding the apparent studio space.

For example, a minor, almost unnoticeable case in *Nineteen Eighty-Four*. Winston Smith (Peter Cushing) is walking down a corridor past another employee working at a console. This movement consists of three shots. The first, live in the studio, Winston walks past. The second, a filmed insert, Winston walks past another console (in fact the same one, filmed earlier with another actor). And the third—with Cushing having the chance to re-position—Winston walks past the same console again: the corridor appears to be long, but takes only a few steps to complete! This is a minor

example of how confident Cartier was combining both live and telecine material seamlessly.

One criticism of this technique made by television purists at the time was that the expansion of space gave the plays a cinematic rather than a strictly televisual feel: one critic described his plays as “the trick of making a picture on a TV screen seem as wide and deep as Cinemascope”. And Cartier’s desire to expand the scale of television often brought him into conflict with Barry.

In 1954 Barry sent Cartier a warning that his productions were becoming ambitious and, more importantly, expensive. He cites Cartier’s recent version of *Rebecca*:

I am unable to defend at a time when departmental costs and scene loads are in an acute state the load imposed by *Rebecca* on Design and Supply and the expenditure upon extras and costumes ... the leading performances were stagey and very often the actors were lost in the setting.

Occasionally there were fine shots such as when Max was playing the piano with his wife beside him, and the composition of figures, piano top and vase made a good frame, but the vast area of the hall and the stairway never justified the great expenditure of effort required in building and one is left with a very clear impression of reaching a point where the department must be accused of not knowing what it is doing.

Michael Barry to Rudolph Cartier, memo, 12 October 1954,
BBC Written Archives Centre, File number T5/424

In effect Barry is judging Cartier by the model of the small-scale “intimate style” espoused by many critics and television producers of the time—for them television plays should be small with few characters, and nice close shots, “Max playing the piano with his wife beside him”. Cartier’s television style was radically different: large spaces, long shots *and* close-ups. Cartier’s response to Barry is that “the set should be large enough so that the small Mrs. de Winter should feel ‘lost’ enough and not ‘cosy’”. Packed into this observation is the contrast between the early BBC drama style of directors such as Fred O’Donovan, George More O’Ferrall, Jan Bussell and Royston Morley (longer-running shots, close-ups, the study of one or two characters) and Cartier and Kneale’s conception of a wider canvas of shooting styles, a more integrated mixture of studio and film, larger sets, multi-character productions.

Cartier’s difference from other directors did not simply lie in a greater use of film. It was a refusal to confine television within one essentialist style which required constant reference to its material base (intimate because the screen was small, the audience was at home, urgent because it was live, etc.). It was a use of film not primarily dependent on the limitations of what could be achieved during live

studio production, a use as a material which could expand the space of the production.

Cartier never saw himself as a film director constrained by an imperfect medium: he preferred television production (although he returned once to cinema in 1958 to direct a striking melodrama, *The Passionate Summer*). Writing in 1958, when his stature was confirmed, he noted, “If the TV director knows his medium well and handles it skillfully, he can wield almost unlimited power over his mass audience; a power no other form of entertainment can give him—not even cinema.”

—Jason J. Jacobs

RUDOLPH CARTIER. Born Rudolph Katscher in Vienna, Austria, 17 April 1904. Attended the Vienna Academy of Music and Dramatic Art (Max Reinhardt’s master-class). Married: Margaret Pepper, 1949; two daughters. Film director and writer, Berlin; emigrated to the United Kingdom, 1935; joined BBC, 1952, and remained for 25 years as producer and director. Recipient: Guild of Television Producers and Directors Award, 1957. Died in London, 7 June 1994.

CARTOONS

Cartoons have long existed on the periphery of broadcast television, consigned to the shadowy regions of weekday afternoons and Saturday mornings. The networks' evening programming has been remarkably empty of cartoon series. Indeed, there have been only a pair of prime-time series that have lasted more than two seasons: *The Flintstones* and *The Simpsons*. Many of the "television" cartoon characters with which we are the most familiar (Bugs Bunny, Mickey Mouse, Daffy Duck, Popeye) were not actually designed for television, but, rather, were initially exhibited in cinema theaters. On any given day one may view a short history of theatrical film animation on television—as cartoons from the 1930s and 1940s are juxtaposed with more recent offerings. This results in some odd cultural gaps, such as when a viewer born in the 1980s watches cartoons making jokes about 1930s movie stars and politicians.

Cartoons initially evolved in the teens, but their development was slowed by their prohibitive cost. After all, 24

entire pictures had to be drawn for every second of film. Animation became more economically feasible in 1914 when Earl Hurd patented the animation cel. The cel is a sheet of transparent celluloid that is placed on top of a background drawing. By using cels, the animator need only re-draw the portions of the image that move, thus saving considerable time and expense. The acceptance of the cel was slowed by legal wrangling, however, and comparatively few silent cartoons were made.

At the same time that sound and color film technologies were popularized, studios also found ways to streamline the animation process by using storyboards (small drawings of frames that represented different shots in the cartoon) to plan the cartoon and departmentalizing the steps of the process. Thus, something resembling an assembly line was created for animation, making it much more cost effective. Producer Walt Disney was a leader in using these technologies and devising an efficient mode of cartoon production.

Batman: The Animated Series

Steamboat Willie (1928) was the first significant cartoon with synchronized sound and *Flowers and Trees* (1932) was the first to use the three-color Technicolor process (which became the cinema's principal color process in the late 1930s). Disney was so protective of these new technologies that he negotiated an exclusive deal with Technicolor; for three years, no other animators could use it.

The final key to the success of the cartoon was an effective distribution system. During the silent era, cartoons had been created by small studios with limited access to cinema theaters. In the 1930s, major studios such as Paramount, Warners, Universal, and MGM each signed distribution deals with the cartoon studios, or they created their own cartoon departments—the output of which they then distributed themselves. Since the studios also owned the preeminent theaters and since the standard way of exhibiting films at the time was two feature-length films separated by a newsreel and a cartoon, the animation studios and departments had a steady, constant demand for their product. The late 1930s to 1950s were a “golden era” for the cartoon and it is from this era that most theatrical cartoons on television are drawn.

Cartoons started their emigration to television in the late 1940s when one of the smaller studios (Van Beuren) began marketing their catalogue to early children's programs such as *Movies for Small Fry*. Other, larger studios were slower to take advantage of the electronic medium. In 1948 the major studios were forced by the U.S. Supreme Court

to divest themselves of their theaters—which greatly weakened their ability to distribute their product. In this weakened state, they also had to compete with television for viewers. Disney, however, was among the first of the major cartoon studios to develop a liaison with television networks. Its long-running programs, *Disneyland* (later known as, among other things, *The Wonderful World of Disney*) and *The Mickey Mouse Club*, included cartoons among live action shorts and other materials when they premiered in the mid-1950s. The other studios soon followed suit and, by 1960, most theatrical films and cartoons were also available to be shown on television.

Concurrent with these critical and, for the film studios, disastrous changes in the entertainment industry were significant transformations in the aesthetics of animation. Up until the 1950s cartoonists, especially those with Disney, had labored under a naturalistic aesthetic—striving to make their drawings look as much like real world objects as was possible in this medium. The apotheosis of this was Disney's *Snow White* which traced the movements of dancer Marge Champion and transformed her into Snow White. But post-World War II art movements such as abstract expressionism rejected this naturalistic approach and these avant-garde principles eventually filtered down to the popular cartoon. In particular, United Productions of America (UPA), a studio which contained renegade animators who had left Disney during the 1941 strike, nurtured an aesthetic that emphasized abstract line, shape, and pattern over naturalistic figures. UPA's initial success came in

Huckleberry Hound

The Jetsons

1949 with the *Mr. Magoo* series, but its later, Academy Award-winning *Gerald McBoing Boing* (1951) is what truly established this new style.

The UPA style was characterized by flattened perspective, abstract backgrounds, strong primary colors, and “limited” animation. Instead of using perspective to create the illusion of depth in a drawing, UPA’s cartoon objects looked flat, like the blobs of color that they were. Instead of filling in backgrounds with lifelike detail as in, say, a forest scene in *Bambi*, UPA presented backgrounds that were broad fields of color, with small squiggles to suggest clouds and trees. Instead of varying the shades and hues of colors to imply the colors of the natural world, UPA’s cartoons contained bold, bright, saturated colors.

Most importantly for the development of television cartoons, UPA used animation that was limited in three ways. First, the amount of movement within the frame was substantially reduced. Rather than have a cartoon woman move her entire head in a shot, a UPA cartoon might have her just blink her eyes. Second, in limited animation figure movements are often repeated. A character waving goodbye, for instance, might contain only two distinct movements which are then repeated without change. Full animation, in contrast, includes many unique movements. Third, limited animation uses fewer individual frames to represent a movement. If, for example, Yosemite Sam were to hop off his mule in a movement that takes one second, full animation might use 24 discrete frames to represent that

movement. Limited animation, in contrast, might cut that number in half. The result is a slightly jerkier movement.

UPA’s changes in animation appear to have been aesthetically inspired, but they also made good business sense. Flattened perspective, abstract backgrounds, strong primary colors, and limited animation result in cartoons that are quicker and cheaper to produce. When animators began creating programs specifically for television, they quickly adopted these economical practices, jettisoning UPA’s aesthetics in the process.

The first successful, designed-for-television cartoon was not created for a TV network, but rather was released directly into syndication. *Crusader Rabbit*, created by Jay Ward (of *Rocky and Bullwinkle* fame) and Alexander Anderson, was first distributed in 1949. Network television cartooning came along eight years later. The networks’ first cartoon series was *The Ruff and Reddy Show*, which was developed by the most successful producers of television cartoons, Bill Hanna and Joe Barbera. *The Ruff and Reddy Show* was also the first made-for-TV cartoon show to be broadcast nationally on Saturday mornings; its popularity helped establish the feasibility of Saturday morning network programming. Hanna-Barbera was also responsible for bringing cartoons to the prime-time network schedule—though its success in prime-time did not result in a trend. Hanna-Barbera’s *The Flintstones* (1960) was prime-time’s first successful cartoon series. It was also prime-time’s last successful series until the premiere of *The Simpsons* in 1989.

With *Crusader Rabbit*, *The Ruff and Reddy Show*, and *The Flintstones*, the characteristics of the made-for-TV cartoon were established. UPA-style aesthetics (especially limited animation) were blended with narrative structures that developed in 1950s television. In particular, *The Flintstones* closely resembled live-action situation comedies and was often compared to Jackie Gleason's *The Honeymooners*. One final characteristic of the made-for-TV cartoon that distinguishes it from the theatrical cartoon is an emphasis on dialogue. Often dialogue in *The Flintstones* re-states that which is happening visually. Fred will cry out, "Pebbles is headed to the zoo" over an image of Pebbles' baby carriage rolling past a sign that reads, "Zoo, this way." In this way, television reveals its roots in radio. There is an reliance on sound that is missing from, say, *Roadrunner* cartoons in which there is no dialogue at all. Made-for-TV cartoons are often less visually oriented than theatrical cartoons from the "golden era."

Since the early 1960s, when cartoons became an established television feature, they have been the source of two major controversies: commercialization/merchandising and violence. These two issues have taken on special significance with the cartoon since so many of its viewers are impressionable children.

Commercialization and merchandising have been a part of cartooning since comic strips first began appearing in newspapers. The level of merchandising increased in the 1980s, however, as several cartoon programs were built around already existing commercial products: *Strawberry Shortcake*, *The Smurfs*, and *He-Man*. Unlike the merchandising of, for instance, Mickey Mouse, these cartoon characters began as products and thus their cartoons were little more than extended commercials for the products themselves. It became more and more difficult for child viewers to discern where the cartoon ended and the commercial began. The degree of cartoon merchandising did not lessen in the 1990s—as the popularity of the *Mighty Morphin Power Rangers* attested—but broadcasters did add short intros to the programs to try to better distinguish cartoon from commercial.

The complicated issue of violence on television and its potential impact on behavior has yet to be resolved, but in response to critics of cartoon violence broadcasters have censored violent scenes from many theatrical films shown on television. Oddly enough, scenes that were considered appropriate for a general audience in a theater in the 1940s are now thought to be too brutal for today's Nintendo-educated children.

TV cartoons in the 1990s were dominated by the phenomenal success of Matt Groening's *The Simpsons*, which thrived after its series premiere in 1989 (first appearing in 1988, in short form, on *The Tracey Ullman Show*). Its ratings triumph was largely responsible for establishing a new television network (FOX) and launching one of the biggest merchandising campaigns of the decade. In 1990, Bart Simpson was on T-shirts across the United States

declaring, "Don't have a cow, man!" And yet, despite the trappings of success, *The Simpsons* was often a sly parody of popular culture, in general, and television cartoons, in particular—as was to be expected from Groening, who established himself as the artist of the *Life in Hell* comic strip. The recurrent feature of *The Itchy and Scratchy Show*, a cartoon within *The Simpsons*, allowed the program to critique violence in cartoons at the same time it reveled in it. And in one episode, *The Simpsons* retold the entire history of cartooning as if Itchy and Scratchy had been early Disney creations.

CASUALTY

British Hospital Drama

Since it was launched in autumn 1986 as a 15-part series, the hospital drama *Casualty* has grown into one of the BBC's most successful programmes. Eventually running to 24 episodes a year (plus a repeat season), and with ratings second only to those for soap operas *EastEnders* and *Neighbours*, it was to become a linchpin of the schedule and crucial to the corporation's confidence in the run up to the renewal of its charter in 1996.

The series began as the brainchild of Jeremy Brock, a young BBC script editor, and Paul Unwin, a director at the Bristol Old Vic Theatre. A visit to a Bristol accident and emergency ward and conversation with one of the charge nurses prompted the idea of a series which would deal with the working lives of casualty staff but which would also have a campaigning edge at a time when the National Health Service in Britain was under increasing financial and political pressure. The proposal was taken up by the head of BBC drama, Jonathan Powell, who was convinced that a medical series was essential to a healthy schedule. The Bristol hospital became Holby General and the nurse, Peter Salt, one of the programme's medical advisors and a model for the longest serving central character, charge nurse (later nursing manager) Charlie Fairhead.

The foregrounding of a male nurse was one of several ways in which *Casualty* set out to contest the traditional values of hospital drama. The gender stereotyping associated with sluice room romances of popular medical fiction was inverted (if not always subverted) in storylines such as Charlie's passionate involvement with a female house officer, and the protracted consequences of nursing officer Duffin's pregnancy by a feckless doctor. The series has also attempted to address racial underrepresentation by placing black characters at the centre of the drama and has carried storylines on racial prejudice and abuse.

What *Casualty* sought to achieve in its first series was a gritty realism, bordering on documentary authenticity, capable of dealing with the day-to-day stresses of front-line emergency care, and the further difficulties of working in a system coming apart at the seams. Brock claimed to have been influenced by the high-octane style of MTM Entertainment Inc. shows, especially *Hill Street Blues*, with their overlapping narratives and dialogue, their rapid cutting and their wry humour, though the series never went for the sort of élan found in its U.S. counterparts. It began on a modest budget, and was shot exclusively on video, with lightweight cameras to give it pace and fluidity: the technique of following dialogue down corridors and picking up on several overlapping conversations within the same take was to become a hallmark of the emerging production style.

The central storyline for the first two series was the campaign to keep the night shift open at Holby in the teeth of funding cuts. The shift also provided the setting and time frame for each episode and, improbably, a justifica-

tion for focusing on the same eight members of staff. By the end of the first series, although another was in production, there was talk of *Casualty* being axed. There had been criticism of the show's stress-laden relentlessness and press coverage of protests from the medical professions about the disreputable image of staff conduct, though there was considerable support for the series' representation of health service conditions. The programme also came under attack from the ruling Conservative Party for its stand against such key Thatcherite policies as funding cuts and the contracting out of services and, along with news coverage of the bombing of Tripoli and the drama *The Monocled Mutineer*, was held up as an example of alleged left-wing bias at the BBC.

However, as audience figures for the second series began to climb to eight million, the BBC started to invest more in it. New characters were brought in and a sharper style began to emerge, particularly in the cross-weaving of storylines and the more honed gallows humour. By 1991, *Casualty* had an audience of 12 to 13 million and the formula was securely established: a basic structure created by the 10 main characters' continuing stories, a major accident interwoven with 6 to 8 further parallel storylines and up to 80 short scenes per episode, a real-time feel based on the single-shift setting, sharp cutting, mobile single-camera work, no background music, realistic lighting, an army of trauma-specific extras and models, and a range of 30-40 guest actors per series. The casting of familiar, high-caliber performers in cameo roles was, for some time, one of the series' main attractions, along with its growing reputation for graphic authenticity in the depiction of injuries and their treatment. The series also shed its regional identity: although still shot in and around Bristol, this was no longer its ostensible setting and the characters came to reflect a more general population mix. A proposal by Powell, by now controller of BBC1, to go to a twice weekly, early-evening slot was rejected but by this time, many would argue, the show had already softened into a standardized predictability. By 1993, audiences were peaking at 15.47 million and the programme was tentpoled the Saturday evening schedule. A ruling in that year by the Broadcasting Standards Council concerning the pre-watershed unsuitability of a storyline about rent boys and male rape and further controversy over an episode showing teenagers rioting and burning down the ward forced the new BBC1 controller, Alan Yentob, into a promise of greater "responsibility" in the handling of topical material. A year later, audiences stood at 17.2 million.

Against the claim that *Casualty* has lost its earlier political abrasiveness, the producers would argue that public opinion had caught up with the programme, that the once controversial claims had become fact and the issues were more subtly woven into the fabric of the stories. By

1995, however, the series seemed to reach a final transformation into soap opera. It was the human interest vignettes imported with each casualty case which now dominated, along with the lives and loves of the regular medical staff. Yet the storylines have never fully lost contact with the fabric of contemporary life, one of the series' recurring concerns being the social cohesion of the world beyond the hospital doors.

Casualty is a classic example of the intergeneric development of formula-based television fiction. All the attractions of hospital drama are there: life, death, and human vulnerability; institutional hierarchy; and the personal and professional tension. The show also chimes in with the ascendancy in the 1990s of a new genre of emergency service narrative on British television, from Carlton's drama, *London's Burning*, to reconstruction programmes like the BBC's *999*. Beneath the surface, however, the fictional structure rests on foundations tried and tested in the cop-shop police drama, and it is no coincidence that the background of founding producer Geraint Morris lay with series such as *Softly Softly* and *Juliet Bravo*. The accident and emergency ward, in particular the waiting area that provides the focal point of the production set, operates here as a classic front line—a site of friction between the hospital community and life on the street, and a liminal space into which hundreds of individual cases are drawn, to be returned, in varying states of social and psychological repair, to the world beyond.

CATHY COME HOME

British Docudrama

Cathy Come Home was screened by BBC1 on 16 December 1966, within the regular *Wednesday Play* slot. The program is a “drama-documentary” concerning homelessness and its effect upon families. Written by Jeremy Sandford, produced by Tony Garnett and directed by Ken Loach, the programme has become a British TV “classic,” regularly referred to by critics and researchers as well as by programme-makers themselves. Part of the status accorded to *Cathy* is undoubtedly due to its particular qualities of scripting, direction and acting, but part follows from the way in which has been seen to focus and exemplify questions about the mixing of dramatic with documentary material and, more generally, about the public power of television in highlighting social problems. After the screening, the issue of homelessness, and of various measures adopted by local authorities to deal with it, became more prominent in public and political discussion and the housing action charity “Shelter” was formed. The more long-term consequences, in terms of changes to the kinds of conditions depicted in the film, remain much more doubtful, of course.

Cathy is organised as a narrative about a young woman who marries, has children and who then, following an accident to her husband which results in his loss of job and the following family poverty, suffers various states of homelessness in poor or temporary accommodation until her children are taken into care by the social services. The programme adopts an episodic structure, depicting the stages in the decline of Cathy and her family across a number of years. Both as a play and as a kind of documentary, it is held together by the commentary of Cathy herself, a commentary which is given in a self-reflective past-tense and which not only introduces and ends the programme but is heard regularly throughout it, providing a bridge between episodes and a source of additional explanation to that obtained by watching the dramatic action.

The “documentary” element of *Cathy* is a matter of depictive style. But is also partly a matter both of the large amount of research on the problem of homelessness which went into the writing of the script and the amount of time the script gives to depicting aspects of this problem as it advances the storyline concerning Cathy and her family.

Stylistically, the programme has a number of scenes which are shot in the documentary mode of action-led camera, with events appearing to develop spontaneously and to be “caught” by the filming. The resultant effect is one of high immediacy values, providing the viewer with a strong sense of “witness.” Where the script broadens its scope to situate Cathy’s story in the context of the more general problem, camerawork and sound-recording produce a scopic field and address to the viewer which is that of conventional reportage. So, for instance, in a scene in a crowded tenement block, we hear the anonymous voices of occupants on the soundtrack whilst various shots are com-

Cathy Come Home
Photo courtesy of BBC

bined to produce a montage of “place,” of “environment.” Similarly, when towards the end of the film Cathy and her children enter the lowest class of Hostel accommodation, the camera not only situates them in the crowded dormitory they have entered but offers “snapshot” case-histories of some of the other women who are living there. Some of this information comes through voice-over, some in speech to camera, as if addressed to Cathy herself. The documentarist element is more directly present in the use of commentary and brief “viewpoint” voice-over at several points in the film. These moments offer statistics on the housing situation and allow various perspectives on it to be heard in a manner which directly follows conventional documentary practice.

Therefore *Cathy* plays with the codes of reportage and merges them with those of realist drama. The developing story, however, often shown through an exploration of private, intimate space, requires that the film be organised principally as narrative fiction, moving outwards to establish a documentary framing of context at a number of points and then closing back in on “story.” Since the story is a *particularization* of the general problem, however, movement between “story” and “report” often involves no sharp disjunctions, substantive or stylistic.

The initial critical response to the programme was generally positive but public discussion tended to circulate around two issues—the possibility of the audience being deceived into according a greater “truth” to it than was warranted by its fictional status, and the way the account was a “biased” one, depicting officials as uncaring and often hostile in a way which would have been unacceptable in a conventional documentary.

It is hard to imagine a viewer so unskilled in the conventions of television as to believe that *Cathy* was “actuality” footage, so extensively is it conceived of in terms of narrative fiction. However, doubt clearly existed in some viewers’ minds as to whether it was a story based directly on a real incident, or whether (as was actually the case) *Cathy*’s tale was a construction developed from a range of research materials. The legitimacy of combining the dramatic license to articulate a viewpoint through character and action with the documentary requirement to be “impartial” was queried by several commentators, often with a certain amount of naiveté about the veracity of “straight documentary.”

Against these complaints, other critics defended the programme-makers’ right to use dramatic emotional devices in order to engage the viewer with public issues, pointing to the way in which the programme’s view of officialdom was essentially the view of *Cathy* herself—in their eyes, a perfectly proper use of character viewpoint from which audience members could measure their own empathetic distance.

In British television history, then, *Cathy Come Home* remains an important marker in the long-running debate

about television and truth. This should not be allowed to overshadow its own qualities as a work of social imagination, however, and as an exploration in “hybridized” forms which sometimes brilliantly prefigures much later shifts in the modes of address of factual television.

CAVALCADE OF AMERICA

U.S. Anthology Drama

Cavalcade of America pioneered the use of anthology drama for company voice advertising. A knock-off of sponsor E.I. DuPont de Nemours and Company’s long running radio program, television’s *Cavalcade* celebrated acts of individual initiative and achievement consistent with its sponsor’s “Better things for better living” motto. The historical-documentary format especially fit the politically conservative DuPont Company, whose own history in America dated to 1802. The *Cavalcade* frequently touched upon science and invention, often focusing its free enterprise subtext upon the early American republic. “Poor Richard,” its first telecast 1 October 1952, dramatized the wit and inventiveness of Benjamin Franklin. Developed from a back catalog of radio plays judged to have “picture qualities,” the drama sent the “old and obstinate” Franklin to delay American surrender talks with the British, thereby allowing General George Washington to escape capture to fight another day. The denouement found Franklin “on his knees praying for Liberty and Peace and the ability to deserve them.” Other first season telecasts reprised *Cavalcade* favorites Samuel Morse in “What Hath God Wrought,” electric motor inventor Thomas Davenport as “The Indomitable Blacksmith,”

Samuel Slater in “Slater’s Dream” and Eli Whitney as “The Man Who Took a Chance.”

For many viewers the *Cavalcade of America* was history on the air. DuPont Company publicist Lyman Dewey confidently asserted that the typical viewer “abstracts (sic) the meaning for himself” without explicit statement from the company, identifying DuPont with the “rugged scene of America’s struggle.” Program specialists exercised the format’s malleable historical and dramatic properties under maximum editorial control. A complete reliance upon telefilms ensured the prescribed interpretation of scripts, expanded the scope of production limited by the television studio, and lent programs a finished look that specialists felt reflected the company’s stature. The use of telefilms allowed for additional economies in the rebroadcast and syndication of programs. Shorn of the “Story of Chemistry” commercials that concluded each program, telefilms were then placed in circulation on the club-and-school circuit. Merchandising directed to the general viewing public leavened the series’ educational purpose with entertainment values. Promotional material accompanying the *Cavalcade*’s second telecast entitled “All’s Well with Lydia,” for example, described

"the Revolutionary War story of Lydia Darragh, American patriot and Philadelphia widow, who by her cleverness gained information instrumental in an American victory." Spot announcement texts supplied to local stations read "Was she minx or patriot?" A second exclaimed, "Lydia Darragh's receptive ear, ready smile and pink cheek are more dangerous to British hopes than a thousand muskets!"

In a bid to freshen up the series' historical venue with the trend toward "actuals" then in favor on *General Electric Theater* and *Armstrong Circle Theatre*, during the 1954-55 television season, *Cavalcade* introduced contemporary story subjects: "Saturday Story," with the Cleveland Browns' Otto Graham, who played himself; "Man on the Beat," a police drama; "The Gift of Dr. Minot," the story of the 1934 Nobel Laureate in Medicine and his treatment of anemia; and "Sunrise on a Dirty Face," a juvenile delinquent drama. The favorable reception of stories of "modern American life" led to a change of title for the 1955-56 television season. Retaining an option on the historical past, the new *DuPont Cavalcade Theater* debuted with "A Time for Courage," the story of "Nancy Merki and the swimming coach who led her to victory over polio and to Olympic stardom." In subsequent weeks the *Cavalcade* featured a contemporary, historical story mix including "Toward Tomorrow," a biography of Dr. Ralph Bunche; "Disaster Patrol," an adventure story about the Civil Air Patrol; "The Swamp Fox," featuring Hans Conried in the role of General Francis Marion; and "Postmark: Danger," a police drama drawn from the files of U.S. postal investigators.

DuPont's new interest in contemporary relevance, however, was occasionally misread by Batten, Barton, Durstine and Osborn, its Madison Avenue advertising agency and program producer. Rejecting a *Cavalcade Theater* script entitled "I Lost My Job," a DuPont Company official testily explained to agency producers that "on *Cavalcade* or in any other DuPont advertising, we do not want to picture business in a bad light, or in any way that can be interpreted as negative by even a single viewer. It just seems

axiomatic that we'd be silly to spend advertising money to tear down the very concept we're trying to sell." By the 1956-57 television season that sale had moved to new settings and locations far from the *Cavalcade's* capsule demonstrations of free enterprise at work. Spurred by an editorial confidence in the value of entertainment, the newly renamed *DuPont Theatre* all but abandoned the historical past, at least as an educational prerequisite for an evening's entertainment. The following season the *DuPont Show of the Month* confirmed the trend with a schedule of 90-minute spectacles, some in color, debuting 29 September 1957 with "Crescendo," a musical variety program co-starring Ethel Merman and Rex Harrison.

CENSORSHIP

Conceptions of censorship derive from Roman practice in which two officials were appointed by the government to conduct the census, award public contracts and supervise the manners and morals of the people. Today the scope of censorship has been expanded to include most media and involves suppressing any or all parts deemed objectionable on moral, political, military and other grounds.

With regard to television in the United States, censorship usually refers to the exclusion of certain topics, social groups or language from the content of broadcast programming. While censorship has often been constructed against the explicit backdrop of morality, it has been implicitly

based on assumptions about the identity and composition of the audience for American broadcast television at particular points in time. Different conceptions of the audience held by broadcasters have been motivated by the economic drive to maximize network profits. At times, the television audience has been constructed as an undifferentiated mass. During other periods, the audience has been divided into demographically desirable categories. As the definition of the audience has changed over time, so has the boundary between appropriate and inappropriate content. At times, different sets of moral values have often come into conflict with each other and with the economic forces of American broadcasting. The moral limits on content stem from what

might be viewed as the social and cultural taboos of specific social groups, particularly concerning religious and sexual topics.

During the 1950s and 1960s, the networks and advertisers measured the viewing audience as an undifferentiated mass. Despite the lumping together of all viewers, broadcasters structured programming content around the “normal,” dominant, values of white, middle-class Americans. Therefore, content centered around the concerns of the nuclear family. Topics such as racism or sexuality which had little direct impact on this domestic setting were excluded from content. Indeed, ethnic minorities were excluded, for the most part, from the television screen because they did not fit into the networks’ assumptions about the viewing audience. Sexuality was a topic allocated to the private, personal sphere rather than the public arena of network broadcasting. For example, the sexual relationship between Rob and Laura Petrie in *The Dick Van Dyke Show* during the mid-1960s could only be implied. When the couple’s bedroom was shown, twin beds diffused any explicit connotation that they had a physical relationship. Direct references to non-normative heterosexuality were excluded from programming altogether. In addition, coarse language which described bodily functions and sexual activity or profaned sacred words were excluded from broadcast discourse.

However, conceptions about the viewing audience and the limits of censorship changed drastically during the early 1970s. To a large degree, this shift in censorship came about because techniques for measuring the viewing audience became much more refined at that time. Ratings researchers began to break down the viewing audience for individual programs according to specific demographic characteristics, including age, ethnicity, education and economic background. In this context, the baby boomer generation—younger, better educated, with more disposable income—became the desired target audience for television programming and advertising. Even though baby boomers grew up on television programming of the 1950s and 1960s, their tastes and values were often in marked contrast to that of their middle-class parents. Subjects previously excluded from television began to appear with regularity. *All in the Family* was the predominant battering ram that broke down the restrictions placed on television content during the preceding twenty years. Frank discussions of sexuality, even outside of traditional heterosexual monogamy, became the focal point of many of the comedy’s narratives. The series also introduced issues of ethnicity and bigotry as staples of its content. Constraints on the use of profanity began to crumble as well. Scriptwriters began to pepper dialogue with “damns” and “hells,” language not permitted during the more conservative 1950s and 1960s.

While the redefinition of the desirable audience in the early 1970s did expand the parameters of appropriate content for television programming, the new candor prompted

reactions from several fronts, and demonstrated larger divisions within social and cultural communities. As early as 1973 the Supreme Court emphasized that community standards vary from place to place: “It is neither realistic nor constitutionally sound to read the First Amendment as requiring that people of Maine or Mississippi accept public depiction of conduct found tolerable in Las Vegas or New York City.” Clearly such a ruling leaves it to states or communities to define what is acceptable and what is not, a task which cannot be carried out to everyone’s satisfaction. When applying community standards, the courts must decide what the “average person, in the community” finds acceptable or not and some communities are clearly more conservative than others. These standards are particularly difficult to apply to television programming which is produced, for economic reasons, to cross all such regional and social boundaries.

In part as a result of these divisions, however, special interest or advocacy groups began to confront the networks about representations and content that had not been present before 1971. For some social groups which had had very little, if any, visibility during the first twenty years of American broadcast television, the expanding parameters of programming content were a mixed blessing. The inclusion of Hispanics, African-Americans, and gays and lesbians in programming was preferable to their near invisibility during the previous two decades, but advocacy groups often took issue with the framing and stereotyping of the new images. From the contrasting perspective, conservative groups began to oppose the incorporation of topics within content which did not align easily with traditional American values or beliefs. In particular, the American Family Association decried the increasing presentation of non-traditional sexual behavior as acceptable in broadcast programming. Other groups rallied against the increased use of violence in broadcast content. As a result, attempts to define the boundaries of appropriate content has become an ongoing struggle as the networks negotiate their own interests against those of advertisers and various social groups. Whereas censorship in the 1950s and 1960s was based on the presumed standards and tastes of the white middle-class nuclear family, censorship in the 1970s became a process of balancing the often conflicting values of marginal social groups.

The proliferation of cable in the 1980s and the 1990s has only exacerbated the conflicts over programming and censorship. Because of a different mode of distribution and exhibition—often referred to as “narrowcasting”—cable television has been able to offer more explicit sexual and violent programming than broadcast television. To compete for the viewing audience that increasing turns to cable television channels, the broadcast networks have loosened restrictions on programming content enabling them to include partial nudity, somewhat more graphic violence and the use of coarse language. This strategy seems to have been partially successful in attracting viewers as evidenced by the popular-

ity of adult dramas such as *NYPD Blue*. However, this programming approach has opened the networks to further attacks from conservative advocacy groups who have increased the pressure for government regulation, i.e. censorship, of objectionable program content.

As these issues and problems indicate, most Americans, because of cherished First Amendment rights, are extremely sensitive to any forms of censorship. Relative to other countries, however, the United States enjoys remarkable freedom from official monitoring of program content. Negative reactions are often expressed toward imported or foreign programs when they do not reflect indigenous norms and values. "Cutting of scenes" is practiced far more in developing countries than in western countries. And Americans may find it interesting to note that even European countries consider exposure to nudity and sex to be less objectionable than abusive language or violence.

Head, et al. (1994), point out that the control of media and media content is also related to the type of government in power within a particular country. They identify four types of governmental philosophy related to the issue of censorship; authoritarian, paternalistic, pluralistic and permissive. Of the four types, the first two are more inclined to exercise censorship because they assume they know what is best for citizens. Anything that challenges this exclusive view must be banned or excluded. Since most broadcasting in such countries is state funded, control is relatively easy to impose. Exclusionary methods include governmental control of broadcast stations' licenses, jamming external broadcasts, promoting indigenous programming, imposing restrictions on imported programs, excluding newspaper articles, cutting scenes from films, shutting down printing presses, etc.

Pluralistic and permissive governments allow for varying degrees of private ownership of broadcasting stations. Such governments assume that citizens will choose what they consider best in a free market where competing media companies offer their products. Such an ideal can only be effective, of course, if the competitors are roughly equal and operate in the interests of the public. To maintain this "balance of ideas" in the United States, the Federal Communications Commission (FCC) established rules which control the formation of media monopolies and require stations to demonstrate they operate in the interests of their audiences' good. Despite such intentions, recent deregulation has disturbed the balance, allowing powerful media conglomerates to dominate the market place and reduce the number of voices heard.

Pluralistic and permissive governments also assume that competing companies will regulate themselves. Perhaps the most well known attempt at self regulation is conducted by the Motion Picture Association of America (MPAA), which rates motion pictures for particular audiences. For example, the contents of "G" rated movies are considered suitable for all audiences, "GP" requires parental guidance, "R," "X," and "NC17" are considered appropriate for adults. These

standards are offered as a guide to audiences and have never been strictly enforced. Parents may take children to see X-rated movies if they so desire.

In the past one of the arguments against censorship has been freedom of choice. Parents who object to offensive television programs can always switch the channel or choose another show. Unfortunately, parental supervision is lacking in many households. In the 1990s this problem, coupled with political and interest group outrage against media producers has opened the possibility of a self imposed television rating system similar to that of the MPAA. To counter conservative criticism and government censorship, producers and the networks have agreed to begin a ratings system which could be electronically monitored and blocked in the home. Thus, parents could effectively censor programming which they found unsuitable for their children while still allowing the networks to air adult-oriented programming.

In the 1970s an early attempt at a similar sort of regulation came when the FCC encouraged the television industry to introduce a "family viewing concept," according to which television networks would agree to delay the showing of adult programs until children were, presumably, no longer among the audience. The National Association of Broadcasters (NAB) willingly complied with this pressure but in 1979 a court ruled that the NAB's action was a violation of the First Amendment.

In the late 1990s, as networks relaxed corporate restrictions on content in their competition with cable and satellite programming, the early evening hours once again took on special importance. In mid-1996 more than 75 members of the U.S. Congress placed an open letter to the entertainment industry in *Daily Variety*. The letter called on the creative community and the programmers to provide an hour of programming each evening that was free from sexual innuendo, violence, or otherwise troublesome material. Clearly, the question of censorship in television continues to vex programmers, producers, government officials, and viewers. No immediate solution to the problems involved is apparent.

However, the debate and struggle over censorship of programming will more than likely continue into the next century, as social groups with diverse values vie for increased influence over program content.

—Richard Worringham and Rodney A. Buxton

CENTRAL EUROPE

Television in Central Europe has undergone major changes in the last decade. Up until 1989, all of the countries of the region, with the exception of Austria, were ruled by Communist governments. These governments attempted, with varying degrees of success, to exercise a complete monopoly over economic, political, and symbolic power. They thus had television systems which were very different from that existing in the United States and Western Europe. Since 1989, with the collapse of Communist rule and the establishment of a variety of new governments in the region, television has been both a contributory factor to political transformation and has, in its turn, been itself transformed.

There is a well-known model of the "Soviet-Communist media system" which dates from the depths of the Cold War. In this model, the Communist political elite regarded media as an instrument of social engineering and used a considerable battery of powers to ensure that it voiced nothing which would cast doubt on their vision of a rosy Communist future. Media also played a role in the construction of the Communist human psychology which would flourish in the new world. The media was thus closely controlled politically and didactic in its intent, both in news and entertainment.

By the end of the 1980s, this model was seriously at odds with the reality of the television systems of Central Europe. Even if it had ever been accurate, it was certainly now false. There was no single "Soviet-Communist" model. On the contrary, broadcasting differed considerably from country to country.

At one extreme stood Romania, where many of the features of the classic model could still be observed in action and where the combination of political tyranny and economic disaster had brought the television system very close to collapse. Another example of a tightly controlled system was that in Czechoslovakia. After the Russian invasion of 1968, a conservative Stalinist government was imposed, putting an end to all of the previous manifestations of liberalism. Television was amongst the new government's chief targets. Direct political control continued to be exercised up to the fall of the regime in the Velvet Revolution of 1989.

Even in Czechoslovakia, however, despite continual policy statements that entertainment should reflect Communist values, the buyers of television imports found it

impossible to reach their quotas of programs from other Communist countries. There was a continual inflow of programs from the capitalist west, and these often accounted for a majority of imported programs.

This inability to control the symbolic landscape was widespread in Central Europe. In many cases, it is difficult to find evidence that, by the 1980s, there was any serious will on the part of the political leadership, either in government or in television, even to attempt to enforce media control. By the mid-1980s, for example, the three largest suppliers of imported programs to Hungarian television (MTV) were, in order of numbers of programs supplied, the United Kingdom, West Germany, and the United States. All of these provided many more programs than the USSR.

Political control was more sustained in news and current affairs, but even in those areas observers detected a shift of emphasis in the course of the 1980s. In Poland, after the banning of Solidarity and the imposition of martial law in December 1981, there was a return to close control of the news. By the middle of the decade, however, the government spokespersons increasingly were prepared to engage in indirect debates in the media with the representatives of the opposition. One Polish spokesperson even won a small propaganda victory by demanding to be allowed to broadcast on Radio Free Europe and then claiming capitalist censorship when refused. The general tone of the news and current affairs programming gradually shifted from proclaiming the glories of Communist construction to accepting the simple fact of Communist rule and the impossibility of replacing it while the Russian veto remained.

Because of these developments, it is profitable to think about the television systems in Central Europe not as examples of the Communist media system but as one version of a more general type. They may be considered as examples of state-controlled television, similar to RTVE in Spain under Franco or the ORTF in France under de Gaulle. In each case, there was a different degree of ideological control over the output of the stations, but they all had in common the fact that there were obvious and direct links between the television system and the government in power. The distance from, and attempt to balance between, the major political parties which are marked features of the public service broadcasters of northwestern Europe and the U.S. commercial system, were here quite absent.

Television has not been a simple and direct beneficiary of the new freedom and independence. On the contrary, in many countries, broadcast media continues to have a subordinate relationship to politics in general and to the governing parties in particular. There have indeed been considerable changes to the broadcasting systems, but there have also been marked continuities.

The politicians and broadcasters of Central Europe have been deluged with advice from well-paid western experts. Some of these have advocated the adoption of a version of the U.S. system, in which the central place is held by commercial companies. Others have advocated the Western European model in which state broadcasters hold a central role. In general, a mixed system of broadcasting is emerging in Central Europe in which ownership is more based on the European model than the U.S. model. There is, generally, a large state broadcaster at the center of the system, with an increasing number of franchised and supervised commercial channels emerging to compete with them.

There is, however, little evidence that this restructuring of television is producing a solution to the problem of political subordination. In the extreme cases like Croatia and Serbia, political control of television remains as tight, or possibly even tighter, than it was in the last days of the Communist regimes. In most other cases, the new political elites have been less successful in their attempts to control broadcasting, despite sometimes vigorous efforts in that direction.

The most dramatic case was that of the Hungarian "media wars." As part of the preparations for the first democratic elections in 1990, the main political forces agreed on new heads for Hungarian Radio and Hungarian Television (MTV). These were appointed by a process which involved the consent of both the governing party and the opposition. The intention was to make broadcasting independent of pressure from political parties. The situation was seen by all parties as an interim one, since the new appointees headed organizations that operated under media laws inherited from the Communist regime. The new director's task was to ensure that the transition to a new broadcasting system was a smooth one, unmarked by partisan strife.

The man appointed to head MTV was an eminent sociologist and longtime opponent of the old regime, Elemér Hankiss. Opinions as to the merits of his leadership vary widely, even amongst those who count themselves his strong supporters, but there is no doubt that he pursued a line independent of the Hungarian Democratic Forum (MDF) government which emerged as a result of the first election.

The MDF party was concerned about two things. Firstly, it perceived that the bulk of the printed press supported opposition parties both during the election and in the aftermath. It therefore wished to use broadcasting as a counterweight to this bias, and to ensure that TV and radio gave a full and favorable account of the government's point of view. It was particularly concerned that the main news and current affairs programs reflect this orientation and be staffed by people it considered politically reliable.

The second major issue stemmed from the fact that the MDF was a strongly nationalist party, which included a right-wing which voiced xenophobic and anti-Semitic views. The party as a whole was strongly committed to rebuilding and sustaining a sense of Hungarian national identity. They saw television as a major element in helping form this national consciousness, and were therefore very concerned that it reflected what they said were the "genuine" Hungarian concerns and cultural values.

The government was further concerned that large numbers of ethnic Hungarians lived outside the contemporary borders of Hungary. These Hungarian minorities have often experienced oppression at the hands of the majority in the states in which they live. The MDF government wished to provide cultural resources for these people, and television programming was one important element they attempted to make available.

Hankiss, and many professional broadcasters, resisted the pressure to turn TV into an MDF fiefdom. The government responded with three forms of pressure to force broadcasters into line. The first was to restrict the government subsidy to MTV, thus provoking a financial crisis. The money saved was used to launch a satellite channel, Duna TV, directed at the nonresident Hungarian populations. Secondly, they mobilized their followers in street demonstrations against the leadership of radio and television. Thirdly, they attempted to sack the existing directors.

In the short term, these pressures proved inadequate. Hankiss countered the financial squeeze by greatly increasing the advertising revenues of MTV. Supporters of the opposition parties organized their own street demonstrations in favor of the existing directors. The president of the Republic, legally responsible for their appointment, refused to sign the dismissal notices and the sackings became bogged down in legal and constitutional wrangling.

The matter was not soon resolved, however, since the Parliament was unable to reach a quick decision on the form of a new broadcasting law. The interim arrangements persisted for much longer than was originally envisaged. In the long term, though, the government was able to wear down the resistance of Hankiss and his colleagues. In December 1992 they were interrogated by a parliamentary inquiry into allegations that they had mismanaged the funds of MTV. Although they were able successfully to defend themselves, the strain proved too much, and in January 1993 both Hankiss and the director of radio resigned. The government was not constitutionally able to replace them, since that power lay with the president. Instead, it appointed its own supporters, already installed as deputy directors, as acting directors, thus effectively bypassing the legal process.

The new acting directors carried out a series of political purges of the broadcasting organizations, particularly the news sections. They managed to ensure that the key posts were held by individuals loyal to the MDF. By the elections of 1994, MTV was effectively a propaganda weapon for the MDF government. The election was a crushing defeat for

the MDF, and a big win for the Hungarian Socialist Party, the main successor to the Communists. The election also helped support a suspicion long held by scholarly observers, but persistently disbelieved by politicians around the world, that there is no simple and direct connection between control of television and electoral success.

In 1995, five years after the first democratic elections, there was no new comprehensive television law in Hungary. Broadcasting still operated under a legal framework which is, in essence, inherited from the Communist regime. The new government has been less aggressive in its attempts to control television, and its threats of mass sackings are motivated more by the need to cut costs than to remove political opponents from editorial positions. It has still found it convenient, though, to preside over a television system whose basic structure remains untransformed.

Other countries have made more progress in installing new legal regimes for broadcasting and in awarding licenses for commercial broadcasters. This does not mean, however, that elsewhere the process has been free of political interference. In the new Czech Republic (Czechia) and Slovakia, which issued from the collapse of the old Czechoslovak Federal Republic at the end of 1992, and in Poland the new laws grant a measure of independence from the government to broadcasting councils. In all three cases, leading politicians have been reluctant to accept that they cannot interfere in the direction of television. One of the major tasks of the new broadcasting councils is to allocate the new commercial franchises, and this has often proved politically contentious.

These new commercial stations were envisaged not merely as commercial ventures but as a prime mechanism by which the political culture of Central Europe could be brought closer to the norms of western capitalist countries. It was argued in Central Europe that the only way out of the trap of government intervention in television, which turned every attempt to create Western European-style public service broadcasters into the mere mouthpieces of the ruling party, was to establish a commercial system. The pursuit of profit would lead to an attempt to maximize audiences in order to maximize advertising revenue, and this in turn would lead to the adoption of a neutral political position in order to avoid alienating any large section of the potential audience.

The argument had a considerable persuasive force. This was partly due to the positive example of the well-documented development of U.S. print journalism toward objectivity as a result of similar economic factors. In a negative sense, it was partly due to the continuing pervasive interference of governments in the running of the would-be public service broadcasters.

Two factors have conspired to undermine the appeal of the case. In the first place, the career of Sylvio Berlusconi in Italy was widely noted in Central Europe. In direct contradiction to the Hungarian example, this seemed to demonstrate that, at least under some circumstances, the control of

television could be a major factor in political success. Further, it demonstrated that partisan television was as possible in a commercial system as in a state one.

The second factor is that, at least in countries emerging from a long period of repressive government, economic groupings are often closely aligned with different political factions. Whatever may be the reality, political leaders as diverse as Walensa in Poland, Meciar in Slovakia, and Klaus in Czechia are convinced that it is important to their political future that the new commercial licences are awarded to people whose views they believe they can rely on.

A good example is provided by Czechia, whose government is the most free-market oriented of the region. The first commercial licence was awarded the first national commercial television licence to a North-American-owned company, Central European Television. This provoked an angry attack from the governing party, who believed that many of the local collaborators of the new station (TV Nova) were its political opponents, if not actually former supporters of the Communist regime.

The power to grant licences for commercial operators was granted to the National Broadcasting Council under the new broadcasting law rushed through parliament at the birth of the new state. This body is independent of parliament and the government, although its members are appointed by the parliament. The only power that parliament retains over the council is the ability to reject its annual report. In the event of that happening, the council members must resign and a new council is appointed.

In both 1993 and 1994, the governing party attempted to reject the annual report, but narrowly failed to command a majority. In 1993, the vote was tied and the political pressure was so great that the chair of the council felt obliged to resign as an individual. Subsequently, in the course of 1995, the parliament launched a new offensive, this time concentrating on the holders of radio licences, whom it alleged paid for their franchises and stations with funds acquired illegally under the old regime.

Up until 1996, then, the broadcasting systems of Central Europe remained highly politicized. In this, they display a marked continuity with the old order. It is important, however, to note that while there is no apparent transformation in the nature of the systems, there has been a major change in the degree of control. The old Communist systems were, in principal, unified. Whatever the constitution may have said, the Central Committee reached all of the important decisions, including those on television. That is not to say that there were not struggles in Communist societies. Quite apart from those between the bureaucrats and the workers and peasants they ruled, there were, in reality, bitter fights within the bureaucracy itself, which sometimes found expression in different nuances in the mass media. All of these differences, and indeed their expression, were contained within the Communist system itself. They were never subject to the popular will. Consequently, the degree of direct political control was very high.

In the new, post-Communist, systems of Central Europe there is a plurality of parties and of economic forces. Political disputes are now between parties and take place in public, and there are occasions upon which the popular will is expressed, in however distorted a form. Attempts by the government to control the mass media therefore face much greater obstacles. They are contested by other parties and by journalists and other media workers. It is extremely difficult for any of the new governments to have the same sort of complete and stable control over the whole of the mass media as did the old Communist regimes. This new contestation of political control, and the consequent spaces which open up for oppositional voices, is the major shift in the political aspect of television since the collapse of Communism, and it is a great gain for democracy.

Some of the other major issues in Central European television are local variations of more general themes. The first of these concerns the relationship between state-based broadcasting services and the increasingly internationalised world television industry. Many of the new governments in Central Europe have adopted strongly nationalistic policies and, as a consequence, have written into their broadcasting acts restrictions on the ownership and direction of commercial broadcasters. They often have specific instructions about the amount of nationally-originated material that must be broadcast, either included in the broadcasting acts themselves or in the licences to broadcast awarded to commercial companies.

These measures are under pressure from two directions. In the first place, a number of transnational media enterprises view the emerging markets of Central Europe as important and seek to position themselves strongly in terms of ownership of media industries. At the same time, the would-be local commercial broadcasters are often lacking in the technical skills of running profitable channels and, above all, in the capital needed to establish such channels. There is thus a constant tendency for the restrictions on ownership to be challenged.

One of the allegations directed by Polish President Lech Walensa against the winner of the first Polish national commercial franchise, Polsat, was that it was secretly controlled by Rupert Murdoch. This charge was probably advanced as a cover for more directly political objections. On the other hand, there is no doubt that Murdoch, Hersant, Bertelsmann, Berlusconi, and almost every other large international player has, at one time or another, attempted to gain entry to the local television market.

The most successful so far of these companies is Central European Television, which already controls TV Nova in Czechia and which is likely to be granted a licence in Hungary in the course of 1995. This is not a major media concern, being effectively controlled by an heir to the U.S. Lauder cosmetics fortune.

Its activity in the region is interesting for two reasons. In the first place, it is an example of what may be termed "missionary capitalism." According to its most prominent figure, the interest in the region is only partly commercial and springs in part from Lauder's rediscovery of his family roots. That is

not to say that its operation is not run as an aggressive commercial venture interested in maximizing revenue and return on capital, but that its path into the ownership of television is a different one from the normal pattern.

The second reason the success of this company is interesting is that it is a reflection, in part at least, of the close link between political and economic power in the region. Its most prominent negotiator is Mark Palmer, former U.S. ambassador to Hungary, who is extremely well-known to all of the major political figures, both former Communists and former oppositionists, in the region.

The other factor which bears upon the relationship between nationalism and the world market is the question of imported programming. The broadcast of imported programs is no novelty in most regions. Previously, the main constraint was often a shortage of the hard currency needed to buy them. That has now been lifted, and there has been a considerable increase in the number of imported programs, particular from the United States. This irritates the more nationalist-minded politicians because they would prefer the population to be watching material which more closely reflects their view of the local cultural values. On the other hand, imported programming has initially proved very popular with the audiences, and is relatively cheap to acquire. All of the states in Central Europe lack the resources of the major U.S. networks, or the BBC. The choice, therefore, was often not between broadcasting good local programs with a strong "national" content and good imported programs, but between cheap local programs with a strong "national" content and good imported programs. The latter produced good audiences and cost little, and so was popular with broadcasters as well as audiences.

There have been suggestions that the audiences in Central Europe are becoming "standardized" in their tastes. After the initial period in which anything from the West, and particularly from the United States, was regarded as automatically better, audiences are apparently starting to discriminate between good and bad imported programs. They may also be starting to express preference for good local programs over good imported programs. Some broadcasters are attempting to meet this demand. Given the poverty of resources, it is unlikely that they will be able to produce a full schedule of high quality education, information, and entertainment, but there are plans to try to go as far as possible. The other open question is whether popular local programming will be of a kind to satisfy the definition of "national" advanced by politicians. In some cases, their view of properly national television consisted of church services and folk dancing. Whether this kind of programming could prove enduringly popular is a matter of some doubt. It is more likely that broadcasting in the region will tend to follow the more general European pattern in which, at least in prime time, the programming tends increasingly to be local in origin. Very often it is of a franchised nature and is dominated by the cheaper kinds of programming like games and quizzes.

The final factor to consider is the funding of television. Internationally, funding systems may be arranged on a spec-

trum. At one extreme there is the system of competing private channels financed more or less entirely out of advertising revenue. The United States is the best-known example of this pattern. At the other extreme is the broadcaster dependent upon state funds. The BBC is the best-known example of this pattern, even though its funds are mediated through a licence fee. In between, there are a number of variants. One which has been popular in Europe is the state broadcaster which is, either wholly (Spain) or partly (Germany) dependent upon advertising. Up until the 1970s, the state broadcasters were the only television providers and faced no competition for advertising revenue. In these circumstances, the commercial revenue provided a welcome source of additional funding independent of politicians, which could be generated without excessive concessions to commercial programming. The introduction of private broadcasting everywhere produced a crisis in this model of funding.

The state broadcasters of Central Europe generally combine revenue sources. They enjoy state funding, either directly, through a budget subsidy, or indirectly, through a licence fee. They also enjoy advertising revenue. So long as there were no commercial competitors, this advertising revenue was very valuable. It supplemented shrinking state funding. It permitted a measure of political independence, as in the case of Hungary. It seemed a perfect source of funding.

The entry of commercial competitors has begun to change this situation. In the Czech case, for example, TV Nova very rapidly gained large audiences and has been able to use these to win a large share of advertising revenue. Even though the total amount of advertising revenue available in Czechia is growing quite quickly, the impact of competition upon the state broadcaster has still been quite marked. The state broadcaster is further handicapped, as is common in Central Europe, by regulations which restrict the amount of advertising time that they can sell to below that permitted to the commercial broadcasters.

The dilemma faced by the state broadcaster is increasingly the one which is familiar from Western Europe. On the one hand, there is the possibility of meeting the commercial challenge head on. While this will almost certainly mean an improvement in some aspects of programming, it will also mean the acceptance of the dominance of commercial goals in production, purchase, and scheduling. This runs counter to any attempt to develop a public-service-type broadcasting policy. On the other hand, the state broadcaster could accept a much smaller audience share and consequently less revenue from advertising. This would not only lead to a decline in the available budgets for production and purchase, but would also throw the broadcasters upon the mercy of the politicians. The political culture in Central Europe is not one in which the government is likely to increase the subsidy to television without demanding concessions in return. This, in turn, would defeat any attempt at constructing a public-service-type broadcaster.

It has here been argued that, during the Communist era, broadcasting in Central Europe was best understood as one extreme version of a more common European type of state intervention. As the legacy of Communism recedes into the past,

this European dimension becomes ever more clear. Increasingly, the dilemmas and problems of television in Central Europe are clearly variants, albeit often extreme variants, of dilemmas and problems faced more widely in Europe, and perhaps beyond.

CHANNEL FOUR

British Programming Service

The fourth British channel arrived on the scene in 1982 after extensive debate between proponents of public service television on the one hand and of commercial broadcasting on the other. The timing was crucial, for the commercially funded ITV network was starting to outstrip combined BBC1 and BBC2 in terms of audience numbers. Channel Four (C4) was a compromise between the two principles: it was to be financed by advertising revenue from the existing private companies, but governed independently from them, with a brief to provide minority and complementary programming to the three existing channels. It would make none of its own programming, but rather “publish” work produced by outside production companies, and indeed, a host of small independent producers sprung up in its wake, peddling their ideas to a group of “commissioning editors”. It would be innovative in program styles and working practices and would find new audiences.

Piloted in its first years by Jeremy Isaacs, a veteran of documentary and current affairs television production who had given a noteworthy speech about his vision at an Edinburgh Television Festival, C4 saw its role as being “different, but not too different”. It would stake its claim to being “alternative” by pioneering material new to British television (access, community, youth and minority programs), by catering for as-yet-untelevised sports and hobby enthusiasts (cycling, basketball, chess), and by giving new life to threatened genres like documentary, arts features and independent film. Risk-taking would include the first hour-long TV news and the first overtly “committed” current affairs magazines (*The Friday Alternative*). Dubbed “Channel Bore” by early critics put off by earnest late-night intellectual discussions, and afflicted with occasional censorship battles over certain programs that appeared overly partisan (toward the left), the channel saw its audience share gradually creep upward—though it never attained the 10% share it sought in a national television landscape as yet untouched by cable and satellite. Associated with yuppie and liberal values, it boasted a 90% satisfaction rate among its selective audience.

Channel Four did not neglect popular genres, creating its own early evening serial (*Brookside*, Liverpool-set, remains its most popular program), and launching *Max Headroom* and other avant-garde—or at least less classical than existing—series. It showed quality series imported from the United States like *Hill Street Blues* and *Cheers* and launched some of Britain’s alternative comedians (*Comic Strip Presents...*).

But its main success has been its feature film production; Channel Four revitalized a moribund British film industry. It invested in a third of the feature films made in Britain in 1984, financing a number of low budget films like Stephen Frears’ *My Beautiful Laundrette* (shot on 16-mm in 1985) and co-producing medium budget ones

Courtesy of Channel Four

like *The Draughtsman’s Contract* (Peter Greenaway) and *Dance with a Stranger* (Mike Newell). “Film on Four”, under David Rose, wooed writers like David Hare and directors like Mike Leigh from the BBC, and attracted new ones like Neil Jordan and Derek Jarman. In contrast to the BBC, C4 policy has been to address contemporary issues and use experimental storytelling. It has backed a number of projects aimed at the European art film market: Wim Wender’s *Paris, Texas*, Agnes Varda’s *Vagabond*, Andre Tarkovsky’s *The Sacrifice*, Neil Jordan’s *The Crying Game*. “Film Four International” showcases independent filmmakers from around the world.

In 1988 chief executive Isaacs stepped down and was replaced by Michael Grade, formerly controller of BBC1 and scion of a family distinguished in commercial entertainment. Despite fears that he would be forced by commercial pressures to take the channel down a vulgarian path Grade proved a populist in the best sense of the word, importing more U.S. shows (e.g., *Oprah Winfrey*, *Roseanne*, *ER*), although the gamble on American content did not always pay off (*Tales of the City*). The 1990 Broadcasting Act refined its remit to be “distinctive”, that is, to include proportions which are European and are supplied by independent producers. More importantly, the act spun C4 off from the ITV companies by giving it the right to market its own advertising. Funding, like distribution, became a problem: Channel Four has been so successful at marketing itself that subsidy is flowing the other way, as a share of its profits instead reverts back to the ITV companies’ coffers—£ 38 million in 1994.

Channel Four’s 1993 audience share of 5.4 % reflected a quality market for advertisers (BBC1 had 19.9%

at the time). But despite its international reputation as a model for innovative television, some critics questioned whether it had indeed been a life-saving transfusion to the British film industry or even to the independent film and video sector, as many of the workshops folded, more of the commissions settled on a few strong production companies, and as BBC2 responded to C4's innovations. The inherent tension between the channel's public service and commercial objectives seemed to tilt increasingly toward the latter.

—Susan Emmanuel

CHANNEL ONE

U.S. Proprietary Programming Service

Channel One is a twelve-minute television news program targeted to teenagers and distributed via satellite to over 12,000 middle and high schools across the United States each school day morning. This represents an audience of over eight million students, with thousands of other schools currently on a waiting list to receive the program. *Channel One* became, almost from its inception, a highly controversial educational program offering, primarily because two minutes of each program are devoted to advertising.

Channel One began its pilot phase in January 1989 originally as a production of Whittle Communications, Inc. in Knoxville, Tennessee, and was heavily promoted by the company's founder, Christopher Whittle. In 1995, Whittle Communications, Inc. closed, and sold *Channel One* to K-III Communications Corporation, a large diversified communications company focused on education, information and magazine publishing. Among its titles are *Weekly Reader*, *Funk and Wagnell's New Encyclopedia*, and *Seventeen* magazine.

In order for a school to receive *Channel One*, it must sign a three-year agreement to carry the program in its entirety each school day, and make the telecast available to at least 90% of the student body. In return, each school receives a satellite dish (TVRO), two videocassette recorders, one 19-inch television set per classroom and all of the necessary cabling. No money is exchanged.

Channel One news content is geared to teenagers, and delivered by anchors and reporters typically in their early to mid-20s. Program content includes the latest news as well as week-long series for more depth on such topics as jobs, drug abuse, science and technology and international politics. According to *Channel One*, its news programming has "five educational goals":

1. To enhance cultural literacy
2. To promote critical thinking
3. To provide a common language and shared experience
4. To provide relevance and motivation

5. To strengthen character and build a sense of responsibility

Channel One has received many awards including the Advertising Council's Silver Bell Award for "outstanding public service" and a George Foster Peabody Award for the series "A Decade of AIDs."

In addition to the daily *Channel One* news program, schools are also provided with approximately 250 hours per school year of noncommercial educational programming (through an agreement with Pacific Mountain Network) that is designed to serve as a supplemental teaching tool to support existing curricula.

Many in the educational community and elsewhere have decried *Channel One* on the basis that it commercializes the classroom environment, and some have expressed concern that there may be an implicit endorsement of the products shown. *Channel One* characterizes its role as a

Photo courtesy of Channel One

positive partnership between the educational and business communities. They cite, for example, a three-year study of *Channel One* by a team, commissioned by Whittle, from the University of Michigan. Among the study's findings were apparent increases in awareness and knowledge of current events by the audience, and the judgment by a majority of teachers surveyed that they would recommend the program to other teachers. Other studies have found that *Channel One's* stated commitment to community service is evidenced by a high percentage (about 15%) of the commercial time being given to public service announcements. And in a 1993 report published in *Educational Leadership*, 90% of teachers thought *Channel One* included the "most important events of the previous day." Others teachers, critics, and evaluators, however, still find the idea of students viewing advertising in the classroom anathema. The debate continues.

—Thomas A. Birk

CHARLES, GLEN AND LES

U.S. Writers and Producers

When Glen and Les Charles watched television comedies in the early 1970s, they saw more than just clever entertainment and escape—they saw an opportunity to leave their unsatisfying jobs and become part of show business. While many people might share this dream, the Charles brothers had the talent, dedication, and luck to move from their sofa to behind the scenes of some of the most successful comedies in television history.

The Charles were raised Mormon near Las Vegas, exposed to the glitz of their hometown while absorbing their family's emphasis on education. They both received a liberal arts education at University of Redlands in Los Angeles. Les Charles followed in his mother's footsteps by teaching public school, while Glen Charles attended law school, and eventually worked as an advertising copywriter. Neither brother was content in his job and both dreamed of something more. So on a Saturday night in 1974, they were watching their favorite night of television and they became inspired—instead of just watching CBS' Saturday line-up of *All in the Family*, *M*A*S*H*, *The Bob Newhart Show*, and *The Mary Tyler Moore Show*, they would write episodes for these television comedies.

They started by writing an episode of their favorite, *The Mary Tyler Moore Show*, and sending it to MTM Productions. After receiving no response, they persisted, writing a sample episode of every television comedy they enjoyed and sending it to the producers on spec. Confident in their talents, they both quit their jobs to dedicate more time to their writing; Les Charles and his wife were living out of their van when the Charles brothers received notification of their first sold script. They lived off the money and excitement generated from seeing their episode of *M*A*S*H* on the air, but no jobs followed immediately. Finally after two years

and dozens of unsolicited scripts, they received the phone call they'd been waiting for—the producers at MTM had read their first script at last and offered them jobs as staff writers on the spin-off *Phyllis*.

Often referred to MTM Television University, MTM Productions was a training ground for young writers in the 1970s, offering a supportive atmosphere that emphasized talent and quality over commercial success and popularity. The Charles brothers quickly climbed up the ranks in MTM, moving from story editors to producers at *Phyllis* and eventually getting the opportunity to produce one of the programs that had first inspired them, *The Bob Newhart Show*. While at *Phyllis*, the brothers met a colleague with whom they would form a long fruitful working partnership—James Burrows. The Charles brothers and Burrows "graduated" from MTM together when four MTM veterans created *Taxi* and hired this team to oversee the daily production of the show. Glen and Les Charles left MTM to become writer-producers for *Taxi*, while Burrows directed the series.

Taxi brought both success and acclaim to the Charles brothers, winning Emmy Awards for their writing in addition to TV's top honor in their category—Outstanding Comedy Series. But Glen and Les Charles and Jim Burrows all wanted to work on a series that was uniquely their own, not the concept of other writers and producers. So after three highly successful years at *Taxi*, the trio left the show to form Charles-Burrows-Charles Productions and create their own signature brand of television comedy. Luckily for them, Grant Tinker had just taken over NBC and was looking for "quality" programming to fill out the last-place network's schedule. Without even a concept or script in hand, Tinker gave Charles-Burrows-Charles a deal to produce a new comedy for NBC.

All three partners were fans of the British comedy *Fawlty Towers* and thought that setting the series in a hotel would be a good choice. Like the British series, theirs would feature odd guests passing through and associating with the series regulars. But after sketching out their ideas, they realized that most scenes took place in the hotel bar and they could streamline the show by eliminating the hotel altogether. Unlike the seedy atmosphere commonly associated with bars, they envisioned a classy neighborhood tavern based on a Boston pub. To avoid any implication that they were glorifying drinking they made the owner of the bar a recovering alcoholic. After casting a group of unknowns, many of whom had been guest stars on *Taxi*, *Cheers* was born.

While *Cheers* certainly bore many of the marks of MTM shows and *Taxi*, there were aspects distinct to Charles Burrows Charles. Unlike most MTM shows, there were no well-known actors on the show, which relied solely on the comedic talent of the cast and writing to draw in audiences. While *Taxi* had moved away from the middle-class and optimistic settings of MTM programs and toward a grittier and more pessimistic view of the world, *Cheers* found a middle-ground—while no characters were truly happy with their jobs or circumstances, there was a contentedness in the bar where “everybody knew your name” that was never present in *Taxi*. The major adjustment the Charles brothers brought to *Cheers* was the presence of a long-term narrative arc concerning the tempestuous romance between Sam Malone and Diane Chambers; Glen and Les Charles wrote this aspect of the series in direct reaction to the static relationship between Mary Richards and Lou Grant, which never changed through the course of the *The Mary Tyler Moore Show*.

Luckily for the Charles brothers, Tinker was willing to give *Cheers* a chance to develop this long-term arc. The program’s first season ratings were horrible (77th place), but both Tinker and his programming head Brandon Tartikoff were fans of *Cheers* and subsequently gave the show another chance. Emmy Awards followed, word of mouth grew, and the show gained in the ratings, but it wasn’t until *The Cosby Show* found its place in the lead-off slot of NBC’s Thursday night line-up that *Cheers* turned into a blockbuster show. The Charles brothers moved away from writing individual episodes and served as general overseers of the program from their executive producer chairs. They attempted to develop a stable of programs by introducing the *Cheers* spin-off *The Tortellis* and *All Is Forgiven*, but both shows bombed; after this failure, Glen and Les Charles decided that they were not the “comedy

factory” type of producers. They needed direct day-to-day control of their programs. They stuck with *Cheers* as executive producers throughout its eleven-year run and returned to the writing table to script the series’ final episode. Since *Cheers*, the Charles brothers have been fairly inactive, working on a few unproduced film scripts and other projects. But even if they never write another script for television, their rise from comedy fans to creators of one of the most successful and acclaimed television series ever should be enough for a valued place in television history.

—Jason Mittell

GLEN CHARLES. Born in Henderson, Nevada, U.S.A. Attended University of Redlands, California, B.A. in English; San Francisco State University. CHARLIE'S ANGELS

U.S. Detective Drama

Charlie's Angels, the critically panned female detective series that heralded the age of "jiggle TV," aired on ABC from 1976 to 1981. The show, which featured three shapely, often scantily clad women solving crimes undercover for a boss they knew only as a Godly voice from a phone speaker, was an immediate sensation, landing the number five spot in the Nielsen ratings during the 1976-77 TV season. (This premiere-season record would remain unbroken until 1994-95, when NBC's new medical drama *ER* finished number two for the year.) In its second year, following the departure of its most popular star, *Charlie's Angels* tied for number four with, ironically, the critically acclaimed *60 Minutes* and *All in the Family*. But by its third season, *Charlie's Angels* slipped out of the top ten. And in 1980-81, the show's novelty had worn as thin as the Angels' slinky outfits, and *Charlie's Angels*, placing 59 out of 65 shows, was cancelled after 115 episodes.

Deemed sexploitation by its detractors, *Charlie's Angels* was the brainchild of producer Aaron Spelling, who in the early 1970s had found success in the TV detective genre with *The Mod Squad* and *The Rookies*, hip series shooting for young-adult audiences. With *Charlie's Angels*, Spelling spun a new formula that would attract desirable demographics among young men and women: he combined detective drama with the glamorous fantasy that would become his staple in the 1980s with *Dynasty* and the 1990s with *Beverly Hills, 90210* and *Melrose Place*. Not only were his Angels beautiful and sexy, they were smart and powerful heroines who used provocative attraction (and feminine, often feigned, vulnerability) to lure and capture unsuspecting male criminals. Though *Charlie's Angels* was among TV's first dramas to instill female characters with typically male "powers" via a dominant subject position, the show's critics, including infuriated feminists, countered that *Charlie's Angels* was little more than a patriarchal production that sexually objectified its characters.

Charlie's Angels' premise placed its feminine heroes in a male-dominated work place and a woman-as-victim society. The Angels—once "three little girls who went to the police academy"—worked under the auspices of a patriarchal, narrative voice they called Charlie (the never-seen John Forsythe), who ran from remote locations the Charles Townsend Detective Agency in Los Angeles. Bosley, Charlie's asexual (and thus unthreatening) representative (played by David Doyle), helped direct the Angels meet Charlie's desired ends. Working undercover in women's prison camps, as showgirls, as prostitutes, and in other sexually suggestive locales and professions, the Angels inevitably found themselves in jeopardy each week, victimized either by evil men or unattractive (which in Spelling's lexicon meant "bad") women who underestimated the Angels' smarts and strengths as beautiful, seemingly frail decoys.

The three original Angels included two decoys—brunette Kelly Garret (played by Jaclyn Smith, the only Angel

Charlie's Angels

to remain through the series' entire run) and blonde Jill Munroe (played by Farrah Fawcett, whose fluffy, feathered hairstyle became a nationwide 1970s fad and whose sexy posters became bestsellers). By contrast, the third, less glamorous Angel, Sabrina Duncan (played by Kate Jackson, who also starred in Spelling's *The Rookies*), became known as "the smart one." Sabrina's impish qualities—independence, athleticism, adventurism and asexuality—often kept her working behind the scenes with Bosley, helping to rescue other Angels, and consequently often kept her out of the bikinis, braless t-shirts and tight dresses with plunging necklines that her co-workers opted to wear. Sabrina, Jill and Kelly (a martial arts expert) all participated in the show's choreographed violence, which included karate chops, kicks to the groin and other sanitized brutality (guns seldom were fired).

Fawcett (then Farrah Fawcett-Majors during her brief marriage to *Six Million Dollar Man* star Lee Majors) broke her contract and left the series after one season to become a movie star. She was replaced by blonde actress Cheryl Ladd, who played Jill's younger sister, Kris, also a decoy character. (As part of her exit agreement, Fawcett was forced to make guest appearances through the show's fourth season.) After two seasons and struggles to insert more meaningful characterizations into the show, Kate Jackson also retired her wings. She was replaced in 1979 by blonde actress Shelley Hack, who in 1980 was replaced by

brunette actress Tanya Roberts for the show's final season. Throughout these cast changes, the formula remained consistent, save the loss of the impish Sabrina.

All six Angels, especially Fawcett, Smith, Jackson and Ladd, became media icons whose faces—and heavenly bodies—were plastered on magazine covers, posters, lunch boxes and loads of other toys and related merchandise. *Charlie's Angels* was undoubtedly a fantasy whose trappings appealed to males and females, young and old. Whether the show ultimately helped or hurt female portrayals in TV drama remains debatable. But as pure camp, the show, highlighted by episodes with titles like "Angels in Chains," remains a cult classic. As the omniscient Charlie would say, "Good work, Angels."

CHAYEFSKY, PADDY

U.S. Writer

Sydney "Paddy" Chayefsky was one of the most renowned dramatists to emerge from the "golden age" of American television. His intimate, realistic scripts helped shape the naturalistic style of television drama in the 1950s. After leaving television, Chayefsky succeeded as a playwright and novelist. He won greatest acclaim as a Hollywood screenwriter, receiving Academy Awards for three scripts, including *Marty* (1955), based on his own television drama, and *Network* (1976), his scathing satire of the television industry.

Chayefsky began his television career writing episodes for *Danger* and *Manhunt* in the early 1950s. His scripts caught the attention of Fred Coe, the dynamic producer of NBC's live anthology drama, the *Philco Television Playhouse* and the *Goodyear Television Playhouse*, alternating series. Chayefsky's first script for Coe, *Holiday Song*, won immediate critical acclaim when it aired in 1952. Subsequently, Chayefsky bucked the trend of the anthology writers by insisting that he would write only original dramas, not adaptations. The result was a banner year in 1953. Coe produced six Chayefsky scripts, including *Printer's Measure* and *The Reluctant Citizen*. Chayefsky became one of television's best-known writers, along with such dramatists as Tad Mosel, Reginald Rose, and Rod Serling.

Chayefsky's stories were notable for their dialogue, their depiction of second-generation Americans, and their infusions

of sentiment and humor. They frequently drew on the author's upbringing in the Bronx. The protagonists were generally middle-class tradesmen struggling with personal problems: loneliness, pressures to conform, blindness to their own emotions. The technical limitations of live broadcast suited these dramas. The stories took place in cramped interior settings and were advanced by dialogue, not action. Chayefsky said that he focused on "the people I understand; the \$75 to \$125 a week kind"; this subject matter struck a sympathetic chord with the mainly urban, middle-class audiences of the time.

Marty, a typical Chayefsky teleplay and one of the most acclaimed of all the live anthology dramas, aired in 1953. Rod Steiger played the lonely butcher who felt that whatever women wanted in a man, "I ain't got it." When Marty finally met a woman, his friends cruelly labeled her "a dog." Marty finally decided that he was a dog himself and had to seize his chance for love. The play ended happily, with Marty arranging a date. Critics compared *Marty* and other Chayefsky teleplays to the realistic dramas of Arthur Miller and Clifford Odets. In Chayefsky's plays, however, positive endings and celebrations of love tended to emerge from the naturalistic framework. The Chayefsky plays also steered clear of social issues, like most of the anthology dramas.

After *Marty* enjoyed phenomenal success as a Hollywood film, Chayefsky left television in 1956. His exit

narrowly preceded the demise of the live dramas, as sponsors began to prefer pre-recorded shows. Even while the live dramas were declining, however, Chayefsky's teleplays found new life. Simon and Schuster published a volume of Chayefsky's television plays. And three of them, in addition to *Marty*, became Hollywood films: *The Bachelor Party* (1957) and *Middle of the Night* (1959), adapted by Chayefsky, and *The Catered Affair* (1957), adapted by Gore Vidal.

In the 1960s, Chayefsky abandoned the intimate, personal dramas on which he had built his reputation. His subsequent work was often dark and satiric, like the Academy-Award winning film, *The Hospital* (1971). *Network*, Chayefsky's send-up of television, marked the apex of his satiric mode. He depicted an institution that had sold its soul for ratings and become "a goddamned amusement park," in the words of news anchor Howard Beale, the movie's main character. Before Chayefsky's death in 1981, he wrote one more screenplay, *Altered States* (1980), based on his own novel. He refused a script credit, however, due to disagreements with the film's director, Ken Russell.

Chayefsky wrote only one television script after 1956, an adaptation of his 1961 play *Gideon*. His reputation as a television dramatist rests on the eleven scripts he completed for the *Philco* and *Goodyear Playhouse* series. His influence on the live anthologies was considerable, but he is just as notable for the career he forged after television.

CHEERS

U.S. Situation Comedy

Cheers, NBC's longest running comedy series, aired from 1982 to 1993, at 9:00 P.M. Thursdays. The show narrowly escaped cancellation during its first season and took several years to develop a strong following. By 1985, however, *Cheers* was one of television's most popular shows. It garnered top ten ratings for seven of its eleven seasons and often earned the number one ranking in the weekly Nielsens. The final episode, aired 20 May 1993, received the second-best Nielsen ratings of all-time for an episodic program. Numerous awards complemented *Cheers*' commercial success and the show boosted the careers of all its stars.

This popular situation comedy is often cited for successfully blending elements of romance and soap opera into the sitcom format. Fans of the show enjoyed its witty dialogue and comic situations, but also followed the twists and turns in the lives of the main characters. Would Sam and Diane get together? Would Rebecca marry Robin? These sorts of plot questions strung together episodes and whole seasons, which often ended with summer cliffhangers, a rare device for television comedy.

The show was set at Cheers, the Boston bar "where everybody knows your name." Bar owner Sam Malone (Ted Danson), a former Red Sox pitcher and an irascible womanizer, served up beers and traded one-liners with regular customers Cliff (John Ratzenberger) and Norm (George Wendt). Carla (Rhea Perlman), a feisty waitress with a weakness for hockey players, kept the men in check with her ascerbic comments. Bartender "Coach" (Nicholas Col-

Cheers

assanto) was the slow-witted and ironically funny straight man of the ensemble cast. When Colassanto passed away in 1985, Woody Harrelson joined the cast as Woody, a young bartender who took slow-wittedness to new heights.

Sam's on-again, off-again romance with cocktail waitress Diane (Shelly Long) exemplified the show's serial-comedy mix. In the first season, Diane despised Sam and constantly rejected his come-ons. In the second season, she started a torrid affair with him. They broke it off in the third season, and Diane took up with a neurotic psychiatrist, Frasier Crane (Kelsey Grammer). Diane almost went back to Sam after the fourth season, but then rejected his marriage proposal. The ongoing romantic tension allowed Sam and Diane to develop as characters. Flashbacks and references to past episodes gave the show a sense of continuous history, like an evening soap. Over the years, other characters developed their own plot lines. Rebecca (Kirstie Alley), who replaced Diane when actress Shelly Long left the show in 1987, pursued a futile romance with Robin, a corporate raider who briefly owned the bar. Woody dated Kelly (Jackie Swanson), a wealthy socialite who matched him in naiveté. Frasier married Lillith (Bebe Neuwirth), an ice-cold psychiatrist who matched him in neurosis. Only Cliff and Norm remained essentially static, holding down the bar with their mutual put-downs.

The creators of *Cheers*, Glen Charles, James Burrows, and Les Charles, previously worked on various MTM sitcoms, such as *The Mary Tyler Moore Show*, *Phyllis*, and *The Bob Newhart Show*. Like *Taxi*, another of their creations, *Cheers* inherited the MTM emphasis on character development. Upscale audiences appreciated this emphasis—and advertisers appreciated the upscale audiences. *Cheers* was not politically correct: the main character was a womanizer; Rebecca pretended to be a career woman but really just wanted a rich husband; and the collegial atmosphere centered around drinking. Though several of the characters were working-class, the show completely avoided social issues. And *Cheers* never preached to its audience on any subjects whatsoever. Even the poignant moments of personal drama that quieted the set from time to time were quickly counter-balanced by sardonic one-liners before any serious message could take hold.

In 1993 Paramount announced that *Cheers* would go off the air. The show was still highly rated, but production costs had soared to record numbers—\$65 million for the 1991–92 season. Star Ted Danson, reportedly in on the decision to cancel, was earning \$450,000 per episode. The network orchestrated a rousing finale, which garnered a 45.5 rating and a 64-audience share. On the evening of the finale, many local newscasts aired segments from bars, where fans saluted *Cheers* from an appropriate setting. In 1994, Kelsey Grammer launched a spin-off, *Frasier*, and George Wendt tried his own series, *The George Wendt Show*. Woody Harrelson landed starring roles in Hollywood, following in the footsteps of his *Cheers* co-stars Alley and Danson.

Over the years *Cheers* received 26 Emmy Awards and a record 111 Emmy nominations. In 1995 it rivaled *M*A*S*H* and *Roseanne* on the rerun circuit and showed all signs of continuing to be a major hit in syndication. As an inheritor of the MTM character-comedy tradition, *Cheers* pushed the “serialization” of sitcoms to new levels and was one of the most successful shows from the 1980s.

CHEYENNE

U.S. Western

Cheyenne was the first successful television series to be produced by the motion picture studio, Warner Brothers. Originally one of the three rotating series in the studio's showcase series, *Warner Brothers Presents*, *Cheyenne* emerged as the program's breakout hit and helped to fuel ABC's ratings ascent during the mid-1950s. ABC had fewer national affiliates than CBS and NBC, but in markets with affiliates of all three networks, *Cheyenne* immediately entered the top ten; by 1957, it had become the number one program in those markets. Although clearly successful, *Cheyenne* never stood alone as a weekly series, but alternated bi-weekly with other Warner Brothers series: *Casablanca* and *King's Row* in *Warner Brothers Presents* (1955–56), *Conflict* (1956–57), and two spin-off series, *Sugarfoot* (1957–61) and *Bronco* (1958–62). *Cheyenne's* eight-year run produced only 107 episodes, an average of thirteen per season.

Early network television was staked out by refugees from Hollywood's B-western backlots who salvaged their careers by appealing to a vast audience of children. Cowboy stars Gene Autrey, Roy Rogers, and William "Hopalong Cassidy" Boyd made their fortunes in television with inexpensive little westerns made from noisy gunfights and stock-footage Indian raids. As television westerns were made to appeal to younger viewers, the movie industry shifted in the opposite direction, toward "adult" westerns in which the genre's familiar landscape became the setting for psychological drama or mythic allegory, as in *High Noon* (1952) and *The Searchers* (1956). With the 1955 premieres of *Cheyenne*, *Gunsmoke* (1955–75), and *The Life and Legend of Wyatt Earp* (1955–61), the networks attempted to import the "adult" western into prime time by infusing the genre with more resonant characters and psychological conflicts.

Cheyenne starred Clint Walker as Cheyenne Bodie, a former frontier scout who drifts through the old West, traveling without any particular motivation from one adventure to another. Along the way he takes a number of jobs, working on ranches or wagon trains, taking part in cattle drives or protecting precious cargo. Sometimes he works for the federal government; at other times he finds himself deputized by local lawmen. Essentially, the producers of *Cheyenne* changed the character's circumstances at will in order to insert him into any imaginable conflict. Indeed, several *Cheyenne* episodes were remakes of earlier Warner Brothers movies like *To Have and Have Not* (1944) and *Treasure of the Sierra Madre* (1948) with the character of Cheyenne Bodie simply inserted into the original plot.

With Walker as a lone redeemer wandering from community to community, *Cheyenne* had a thin, though ex-

remely adaptable, premise for generating episodic stories. With its virtually unrelated individual episodes, this type of series bears many similarities to the anthology format. In *Cheyenne*, each episode featured a new conflict involving new characters, with only the recurring character of Cheyenne Bodie to connect one episode with another. Each time Cheyenne enters a new community, he either witnesses or provokes a new story in which he can participate to varying degree—though he is the force of moral order able to resolve any conflict. This structure is particularly suited to the western's violent resolutions, since only one continuing character must remain alive when the dust settles.

The series was held together not so much by its premise as by its charismatic star, Clint Walker, who rose from obscurity to become one of the icons of the TV western. With his powerful physique and towering height, Walker commanded the small screen through sheer presence; his

Cheyenne

performance gained gravity simply from the way his body dominated the screen. Walker's personal strength extended beyond the screen to his dealings with Warner Brothers, which exercised tight control over its contract performers. In battling the studio, Walker made *Cheyenne* one of the more tempestuous productions in the history of television.

For the 1957–58 season ABC offered to purchase a full season of thirty-nine episodes of *Cheyenne*, but Warner Brothers declined. Since each hour-long episode took six working days for principle photography alone, the studio couldn't supply a new episode each week. Because Walker appeared in virtually every scene, it was also impossible to shoot more than one episode at a time. Consequently, Warner Brothers developed a second series, *Sugarfoot*, to alternate with *Cheyenne*.

In a gesture that would characterize creativity at Warner Brothers, the studio designed *Sugarfoot* as only a slight variation on the *Cheyenne* formula. In *Sugarfoot*, Will Hutchins played Tom Brewster, a kind-hearted young drifter who travels the West while studying to become a lawyer. Toting a stack of law books and an aversion to violence, he shares Cheyenne Bodie's penchant for meddling in the affairs of others. But whereas Cheyenne usually dispatches conflicts with firepower, Tom Brewster replaces gunplay with a gift for rhetoric—though he knows how to handle a weapon when persuasion fails. The series was more light-hearted than *Cheyenne*, but otherwise held close to the formula of the heroic loner.

In May 1958 Clint Walker demanded to renegotiate his contract before returning for another season. Walker had signed his first contract at Warner Brothers in 1955 as a virtual unknown and had received an initial salary of \$175 per week, which had risen gradually to \$1250 per week. After the second season of *Cheyenne*, Warner Brothers capitalized on Walker's rising popularity by casting him in a feature film, *Fort Dobbs* (1958), and by releasing a musical album on which he sang. But Walker was still merely a contract performer who worked on the studio's terms. Walker timed his ultimatum carefully, assuming that he had acquired some leverage once *Cheyenne* finished the 1957–58 season as ABC's second-highest-rated series. He requested more freedom from his iron-clad contract, particularly the autonomy to decide which projects to pursue outside the series. "Television is a vicious, tiring business," he informed the press, "and all I'm asking is my fair share."

When Warner Brothers refused to negotiate, Walker left the studio and did not return for the entire 1958–59 season. After meeting with ABC and advertisers, Warner Brothers decided to continue the *Cheyenne* series without its star. In his place the studio simply substituted a new charismatic drifter, a former Confederate captain named Bronco Layne (Ty Hardin). Warner Brothers received some puzzled fan mail, but the studio sustained an entire season without Walker—and finished among the top twenty programs—by interspersing Bronco Layne episodes with reruns of Walker episodes from previous seasons. If there was a difference between episodes of *Bronco* and *Cheyenne*, it was solely in the stars; otherwise, *Bronco* was a nearly identical clone.

Warner Brothers finally renegotiated Walker's contract after his boycott, and *Cheyenne* resumed with its star for the 1959–60 season. *Bronco* survived as a stand-alone series and alternated with *Sugarfoot* for the season. During the following season, the three shows alternated in *The Cheyenne Show*; occasionally the characters would crossover into episodes of the other series.

By the end, the actors were numbed by the repetition of the scripts and by the dreary, taxing routine of production on series in which one episode was virtually indistinguishable from another. Even after returning from his holdout, Walker disliked working on *Cheyenne* and complained to the press that he felt "like a caged animal" pacing back and forth in a zoo. "A TV series is a dead-end street," he lamented. "You work the same set, with the same actors, and with the same limited budgets. Pretty soon you don't know which picture you're in and you don't care." Will Hutchins admitted hoping that *Sugarfoot* would be canceled. Its episodes, he complained, "are pretty much the same after you've seen a handful. They're moneymakers for the studio, the stations, and the actors, but there's a kind of empty feeling when you're through."

CHICAGO SCHOOL OF TELEVISION

During the late 1940s and early 1950s, broadcast television emanating from Chicago was noted for its original ideas, inventive production techniques and significant contributions to the development of the new visual medium. Paying close attention to the problems of adjusting personal styles of writing, direction, and performance to television, and to the more theoretical questions of how television actually worked, Chicago broadcasters developed a style or technique that came to be known as the Chicago School of Television.

While all Chicago stations contributed to the school, most success with the distinctive approach to programming is attributed to the NBC owned and operated station, WNBQ. Under the leadership of station manager Jules Herbuveaux and program manager Ted Mills, the NBC outlet went further in developing formats and ideas that would capitalize on television's idiosyncrasies.

Simply stated, the Chicago School worked at creating inventive programs different from both New York's theatri-

cal offerings or Hollywood's screenplay based productions. Utilizing an almost totally scriptless-improvisational approach reliant on interpretive camera work and creative use of scenery, costumes, props, and lighting, Chicago School practitioners produced successful programs in limited spaces with local talent and small budgets. Herbuveaux provided the freedom for his staff to create and Mills theorized and experimented with a variety of ideas including Chinese Opera, commedia dell'arte and Pirandellian forms of reality in his search for new and effective television forms.

By late 1949, Chicago's low-cost television packages were making a ratings impact with such offerings as NBC's *Kukla, Fran and Ollie*, ABC's *Super Circus* and the piano talents of DuMont's Al Morgan. By spring, 1950, the major body of Chicago School work focused on such NBC-WNBQ variety offerings as *Garroway at Large*, the *Wayne King Show*, *Hawkins Falls*, and *Saturday Square*. Children's shows consisted of an extraordinary number of award winning entries including *Zoo Parade*, *Quiz Kids*, *Mr. Wizard*,

(foreground from left) *Kukla, Fran and Ollie*; *Studs' Place*; *Garroway at Large*

Ding Dong School, *Pistol Pete and Jennifer* and the highly rated-low budgeted cowboy film series, *Cactus Jim*. For comedy and drama there was Studs Terkel's *Studs' Place*, *Portrait of America*, *Crisis*, and *Reported Missing*. Actuality programming featured *Walt's Workshop*, *The Pet Shop* and *R.F.D. America*. Local news offered the unique *Five Star Final* with weatherman Clint Youle, news anchor Clifton Utley, Dorsey Connors with consumer tips, sportscaster Tom Duggan and, reflecting Herbuveaux's sense of showmanship, Herbie Mintz with musical nostalgia.

As critically acclaimed as it proved to be, elements of the Chicago School's decline were seen as early as 1950. Chicago programs were shortened and/or removed from network schedules. Key personnel left Chicago to pursue more lucrative careers in New York and Los Angeles and, in 1953, with the opening of the coast-to-coast network cable, there was less and less need for Chicago productions. In 1953, thirteen network programs originated from Chicago. By 1955, no Chicago produced programs appeared on the DuMont network. CBS and NBC had no Chicago network originations except occasional newscasts and a network radio farm program. The Chicago School of Television was becoming just a fond memory.

CHILDREN AND TELEVISION

Children devote much of their free time to watching television—seemingly enamored of the screen—and continuous contact is thought to influence the way they understand and interpret both television and the world in which they live. Although children have everyday contact with other media and many other forms of expression and communication, visual media alone are seen as speaking a "universal language," accessible regardless of age. In the United States questions about program content and its use by children, about television's influence on children's attitudes, knowledge and behavior, and about the appropriate public policy toward children's television have been

central to the discussion of this medium throughout its half century as the electronic hearth.

Children's Programming

In the 1950s, children's programs and the benefits that television could presumably bring to the family were highly touted selling points for television sets. By 1951, the networks' schedules included up to 27 hours of children's programs. Like much of television programming, offerings for children continued radio's tradition of action-adventure themes and a pattern of late afternoon and evening broadcasts. An early reliance on movies as a program staple was

Barney and Friends

lessened in favor of half-hour live-action shows such as *The Lone Ranger*, *Sky King*, or *Lassie*, and host/puppet shows such as *The Howdy Doody Show* and *Kukla, Fran and Ollie*. By the

mid-1950s programs had found their place on Saturday morning, and by decade's end the thirty-minute, once-a-week format was established.

Ding Dong School

During the 1960s almost all other forms gave way to animation. Reduced costs resulting from limited action animation techniques, and the clear appeal of cartoons to children, transformed scheduling, and the institutionalization of Saturday morning cartoons became complete—an unexpected lucrative time slot for the networks. Popular shows included *The Flintstones*, *The Jetsons*, *Bullwinkle*, and *Space Ghost*.

The 1970s have been described as a video mosaic in which sixty- or ninety-minute shows incorporated a number of segments under umbrella labels such as *The New Super Friends Hour* or *Scooby Laff-a-Lympics*. These extended shows were designed to increase audience flow across the entire morning.

Children's programming in the 1980s was influenced by the "television revolution" as the growth of cable and VCR penetration began to erode the network audience, and international co-ventures began to change the production process. Cartoons remained the standard children's fare, but live action shows began to increase in number. Cable networks such as Nickelodeon and Disney, devoted primarily to children, as well as cable networks with extensive children's programming like Discovery, Learning Channel, USA, TBS, the Family Channel and Lifetime, have experimented extensively in programming for children. They have produced live-action programs, including game shows, puppet shows, magazine format news and variety programs, and

live action drama/adventures shows frequently incorporating anthropomorphic creatures into the storyline.

The 1990s have been influenced by the Children's Television Act with many educational shows joining the available programming. Since 1990, for example, eight of the nine Peabody Awards for children's programs were for informational or educational programs.

While it is the case that most of the television viewed by children is of programs not specifically considered "children's shows," the production of children's programming is big business, often defined by the ways in which "children's shows" are distinctive. "Children's shows" are those which garner a majority of a child audience, traditionally the Saturday morning programs. These shows are almost always profitable. Because the child audience changes rapidly, and because children do not seem to mind watching reruns, the programs are shown as many as four times a year, a factor that reduces production costs without reduction in program availability or profitability. Moreover, a strong syndication market for off-network children's shows adds to the profits.

For many of these reasons the major networks have traditionally exerted strong control over production in the five or six production houses they routinely use. Each network has a vice president for children's programming who uses other advisors and often relies on extensive marketing research, as do the Children's Television Workshop and the Nickelodeon cable network.

Both those who purchase and those who produce children's programs operate with assumptions about the child audience that, although changing, remain important. They assume, for example, that there are gender differences in preferences, but an important corollary is the assumption that, while girls will watch "boys' shows," boys will not watch "girls' shows." They assume that older children control the set, an assumption related to the axiom that younger children will watch "up" (in age appeal) but that older children will not watch "down." Producers and purchasers assume that children have a short attention span, that repetition is a key to education and entertainment, and that children prefer recognizable characters and stories.

The body of television content emerging from these economic and industrial practices, and based on these and similar assumptions, has been a central component of "childhood" since the 1950s. Because they are seen as a special "class" or "group" of both citizens and viewers, great concern for the role of television in the lives of children has accompanied the development of the medium. As a result of this concern issues surrounding children and television have often been framed as "social problems," issues of central concern to numerous groups. Large-scale academic research enterprises have been mounted to monitor, analyze, and explain relationships between television and children. Congress, regulatory agencies, advocacy groups, and the television networks have struggled continuously over research findings, public responsibility, and popular response. And significant policy decisions continue to be made based both on that research and on the political and economic power that is brought to bear on these issues.

The Effects of Television Violence

Throughout all these policy debates, citizens' actions, and network responses, the issue of violence in television programming has been central to concerns regarding children and television. As an aspect of television content, violence has traditionally been measured quantitatively by researchers who count incidents of real or threatened physical injury. Gerbner and his colleagues have conducted such analyses yearly since 1967. Their violence index shows a fairly stable level of prime-time violence over the past 25 years. The question then becomes what is the effect of this type of programming on children.

In the 1960s researchers used experimental methods to investigate the impact of media violence. Albert Bandura's social learning theory (also called observational learning or modeling theory) argued that children could easily learn and model behaviors observed on film or television. Sometimes known as the "Bobo doll" studies, these experiments demonstrated that children who viewed filmed violent actions were as likely to imitate those actions as were children who saw live modeling of those actions. Many extensions of this basic finding established that modeling was influenced by other attributes of the children such as their prior level of aggressiveness. Context and message, specifically the punish-

ment or reinforcement of the filmed aggressor, and the presence of an adult in the viewing or imitation context, emerged as other significant factors in the modeling behavior. Later laboratory studies used more realistic measures of aggression and programming that more closely resembled primetime television. Field experiments were also conducted, in which viewing in real life situations (home, camps, schools) was manipulated.

In a series of experiments, two opposing theories, catharsis and stimulation, were investigated. Catharsis holds that viewing violence purges the individual of negative feelings and thus lessens the likelihood of aggressive behavior. Stimulation predicted the opposite. No support for the catharsis theory emerged from the research; stimulation was found to be more likely.

Taken together, the experimental studies demonstrated that the process of televisual influence on children is indeed complicated. Still, the results from laboratory experiments do demonstrate that shortly after exposure to violent programming, children are more likely to show an increase in their own levels of aggression. But how would these laboratory findings translate into real life?

Correlational studies, surveys, tell little about cause and effect, but they do avoid the artificiality of laboratory studies. If viewing is associated with television violence, then individuals who watch a great deal of violent television should also score high on survey scales that measure aggressive behavior. The results from a large number of such surveys are remarkably consistent: there is a small but consistent association between viewing violent television and aggressive tendencies. Yet another form of survey research, panel studies, tackles the question of causality by looking at the same individuals over time. In the case of television violence, the question is: does television viewing at Time 1 relate to aggression at Time 2; or, conversely, could the causal linkage be reversed, suggesting that aggressive behavior leads to a propensity to view violent television content? Only a few such studies exist but, again, the findings are generally consistent. Although the effect is small, watching television violence encourages aggression.

What conclusions can be reached from this large, ongoing body of research? Television does contribute to aggressive behavior—however, television is only one of many causes of aggression. Many other factors unrelated to television influence violence, and the precise impact of televised violence will be modified by age, sex, family practices, and the way violence is presented. One statement is frequently repeated: television has large effects on a small number of individuals, and modest effects on a large number of people. The questions and approaches continue to be refined, and currently, groups funded by both the cable and network industries are studying levels of violence and its appearance in context, in order to provide better information on the type of violence being shown.

Television and Cognitive Development

While televisual violence is often the most visible and debated aspect of questions linking children and television, it

is hardly the only topic that concerns researchers. Other inquiries focused on potential effects of the medium on patterns of thinking and understanding has prompted extensive research. Posed negatively, the question is: does television mesmerize attention, promote passive or overstimulated children, while wrecking creativity and imagination? To explore such concerns, cognitive developmental approaches to television and children have typically examined attention, comprehension, and inference.

Children's attention to television has often been characterized as "active" versus "passive." Popular concern about the "zombie" viewer suggests that children enter some altered state of consciousness when viewing television. But this generalization has received little research support. However, one notion that seems to underlie many implicit theories of children's attraction to the screen is that children's viewing is governed by the novelty of the visual stimulus, rapid formal features such as movements, visual complexity, cuts, pans, zooms, which produce an orienting reflex.

A theory of active television viewing suggests that attention is linked to comprehension. Thus, when visual or auditory features of television content suggest to the young viewer that it is designed "for children," attention is turned to that content. When material is no longer comprehensible, becomes boring, or when distractions occur, attention is deflected. This theory of child attentional patterns has received substantial support and has indicated specific stages. Attention to television is fragmentary before the age of two; visual attention increases during the preschool years, with a major shift in amount and pattern of attention occurring between 24 and 30 months. Frequently beginning around the age of eight, visual attention to TV decreases (presumably as the decoding of television becomes routine), and the attention pattern begins to resemble that of an adult.

With regard to perception and evaluation of television content, children clearly operate on different dimensions than adults who produce programs. Understanding television programming requires a fairly complex set of tasks for children, including selective attention to the events portrayed, perceiving an orderly organization of events, and making inferences about information given implicitly. Comprehension research has examined both verbal and visual decoding and determined that comprehension is a function of both cognitive development and experience. Younger children have difficulty with a number of tasks involved in understanding television programs: separating central from peripheral content, comprehending the sequence of events, recalling events and segments, and understanding causation. As well, they find it difficult to complete such inferential tasks as understanding intersections of motivation, action, and consequence, or evaluating the "reality" of programs and characters. The comprehension of forms and conventions—sometimes termed "formal features"—is similarly grounded in developmental stages, with surprisingly early recognition of the time and space ellipses of cuts or the part whole relationship of zooms. Such complex storytelling func-

tions as point of view shots or flashbacks, however, are unclear to children through much of the first decade.

Television Within the Family

In most cases, this viewing and the development of skills and strategies occurs within a family context filled with other activities and other individuals. The average child watches television a little more than four hours a day. Childhood viewing peaks somewhere around 12 years of age and declines during adolescence to a little more than three hours per day. Children do most of their viewing during the weekday hours with only 10% of their viewing on Saturday and Sunday mornings. Viewing amount varies by gender and race, with studies showing that blue-collar families averaging more television viewing more than white-collar families and blacks viewing more than whites. Television provides the backdrop for growing up, and studies show that children often play, eat, do homework, and talk while "watching tv."

Viewing is not usually solitary. Children and adults view together and do many other things while watching. The family has a say in creating the context in which television will be consumed, a context involving who decides what to watch, sibling or parental conflict over viewing, and the rules for decision making. Although many families report few rules, there may be subtle as well as direct rules about television use. For example, children may not be allowed to watch until they have completed important tasks such as homework or chores, or there may be a requirement that television must be turned off at a certain time. When parents report rules, they report control of when younger children can watch; older children have rules about what they can watch.

Often this context is modified by processes of "mediation," a term used to refer to the role of social interaction in relation to television's use in the home and the potential impact of television within the family. Some mediation is direct and intentional—parents make specific comments about programs. Other mediation may be indirect or unintentional, as in general comments about alternative activities, discussions of social or personal issues generated by media content, and talk loosely tied to content. Parents and siblings may respond to questions with evaluative comments, interpretive comments, explanations of forms and codes, or discussions of morality or desirability of behavior.

One result related to the complexity of viewing practices has emerged very clearly from research conducted within a number of different contexts: interaction with parents during viewing increases comprehension and learning from television. In middle childhood, peer and sibling co-viewing involves talk about television action and evaluation of that action. Parental comments on the importance, truthfulness, and relevance of media are common at this age.

Learning from Television

In many ways general notions of how children learn from television and specific aspects of educational television were

revolutionized by the premier of *Sesame Street* in 1969. Viewed by over 6 million preschoolers every week in the United States and internationally, this production is also one of the most studied television programs. Research focused on *Sesame Street* has provided ample evidence to suggest that young children can learn skills from the show, and that these skills will contribute to their early educational success. Many other programs produced by the Children's Television Workshop, by public broadcasting stations, independent producers, and state departments of education have been constructed to teach educational concepts ranging from reading to international understanding.

Related to these educational programs are pro-social programs which model socially valued responses for viewers. Pro-social behavior is usually defined as "good for persons and society" and may include lessons on the value of cooperation, self-control, helping, sharing, and understanding those who are different. *Mr. Rogers' Neighborhood*, for example, is a classic pro-social program.

Even with the knowledge gained from research focused on television's ability to teach specific skills, the medium is frequently castigated for interfering in the education of children. Achievement, intellectual ability, grades, and reading show complex relationships with television viewing. For example, the relationship between television viewing and academic performance is not clear cut. Children who spend a great deal of time watching television do poorly in school but children who spend a moderate amount of time with TV perform better than non-viewers. The small negative relationship between IQ and television viewing masks some important subgroup differences, such as age (high IQ is positively correlated with viewing until the teens) and gender (with the negative relationship holding stronger for boys than for girls). Reading and television viewing are positively correlated up to a threshold of about ten hours of viewing per week. Only when television viewing rises above a certain level does it seem to be related to less reading. Overall, the data suggest that television has a small adverse effect on learning.

In addition to the many ways in which television can influence the learning of specific educational concepts, or the ways in which basic television behavior affects other forms of learning, the medium can also teach indirect lessons. Socialization, especially sex role socialization, has been a continuing concern because television so frequently presents basic images of gender. In prime-time programming men outnumber women two or three to one. Women are younger than men and tend to be cast in more stereotypical roles, and tend to be less active, more likely to be victimized, less aggressive, and more limited in employment than men. Children's programs are similarly sex-stereotyped; women are generally underrepresented, stereotyped, and less central to the program. Cultivation analysis suggests that a relationship exists between viewing and stereotypical conceptions about gender roles. Nonetheless, some improvement has been made. Research on the impact of gender representation reveals that children do

understand the images and want to be like same sex television characters, and it seems clear that counter-stereotypical images are helpful in combating stereotypes.

Some research examining race role socialization shows similar patterns, suggesting that limited portrayals and stereotyped roles can contribute to skewed perceptions by race. Although African Americans have frequently been portrayed negatively, other minority groups such as Asians and Hispanics have simply been missing from the screen world—a process sometimes called symbolic annihilation.

Beyond the content of fictional representations, parents would agree that children learn from television advertising. Researchers initially assumed children had minimal comprehension of the selling intent of advertising and children verbally described advertisement as an "informational service." Nonverbal measures, however, demonstrated that children understood that commercials persuaded them to buy products. Social scientists have studied a number of potential effects of advertising. These include the frequent requests for products, the modification of self-esteem, the relations of advertising to obesity, and to alcohol and cigarette consumption. This research has been dominated by a deficit model in which children are defined as unable to distinguish selling intent, or as easily misled by what they see.

History and Policy

Such vulnerability on the part of children explains, in part, the designation of "children and television" as a specific topic for political as well as intellectual concern. Politicians and the public worried about the effects of media on children long before television, of course. Novels, movies, music, radio, comic books, all came under scrutiny for their potential negative consequences on the behaviors and attitudes of the young. But in the 1950s, the spotlight turned to television.

The first congressional hearings, predictably, addressed violence on television, and were held in the House Interstate and Foreign Commerce Subcommittee in June 1952. Network representatives were called to testify about television and violence before the Senate Subcommittee on Juvenile Delinquency headed by Estes Kefauver in 1954 and 1955. In 1964 the same committee again held hearings and issued a report critical of television programming and concluding that television was a factor in shaping the attitudes and character of the young people.

In the wake of the urban unrest and violence of the 1960s, a Presidential Commission on the Causes and Prevention of Violence was formed to examine the issues of violence in society. The report, basing its conclusions on a review of existing research, indicted television as part of the problem of violence. At the instigation of Senator John Pastore of Rhode Island, the U.S. Surgeon General commissioned a series of studies of televised violence and its effects on children. This work resulted in what is popularly termed the Surgeon General's Report of 1972, in which 23 research projects in five volumes focused on many issues surrounding

television. The committee's main conclusion was that there was a causal link between viewing television violence and subsequent antisocial acts. Despite some initial confused reporting of the findings, the consensus that had emerged among the researchers was made clear in subsequent hearings. In 1982, a ten-year update of the Surgeon General's Report was released. It underscored the findings of the earlier report and also documented other areas in which television was having an impact, particularly on perceptions of reality, social relationships, health, and education.

During this long history of public regulatory debate on television, government commissions and citizen action groups were pursuing related agendas. Key to these interactions were the Federal Communications Commission (FCC), the Federal Trade Commission (FTC), and citizens' advocacy and action groups. Always involved in these disputes, whether directly or indirectly, were the major television networks, their industry associations, usually the National Association of Broadcasters (NAB), and advertisers. Action for Children's Television (ACT) was the citizens' group most directly engaged in legal procedures and policy actions.

Founded in 1968 by Peggy Charren, Action for Children's Television was formed to increase availability of quality programming for children. Unsuccessful at obtaining cooperation from the networks directly, ACT turned to political action. In 1970, the organization presented a petition to the FCC intended to change a number of FCC policies regarding children's programming. A resulting inquiry launched unprecedented response. Hearings were held, and in 1974 the *FCC Children's TV Report and Policy Statement* offered specific guidelines: a limit of nine and a half advertising minutes per hour in children's programs, the use of separation devices indicating divisions between commercials and programs, the elimination of host selling, and the directive that children's programs not be confined to one day—(Saturday morning television had become synonymous with children's television). Later reviews suggested that the networks were not meeting these requirements or their obligations to serve children, but further regulatory action in the 1980s was blocked by the shift toward a deregulatory stance at the FCC and in the courts.

At the Federal Trade Commission ACT was also at work, petitioning for the regulation of advertising directed at children. In 1977 the group presented a petition requesting that advertising of candy in children's programs be banned. The FTC responded with a notice that it would consider rulemaking to ban all ads to audiences too young to understand selling intent, to ban ads for sugared products, or to require that counter and corrective advertising be aired in order to counteract advertising of sugared products. Hearings were held, but lobbying efforts by networks and advertisers were very strong. Congress passed a bill eliminating the power of the FTC to rule on "unfair" practices, and restricting its focus to the regulation of "deceptive" practices. In 1981, the FTC issued a formal report dropping the

inquiry. Throughout the 1970s and 1980s ACT was engaged with the FCC and FTC in many other ways, representing petitions dealing with matters such as the banning of program length commercials (programs designed primarily to provide product exposure and create consumer demand), or the evaluation individual ads deemed deceptive.

Other citizen action groups have also been involved with issues surrounding television. The National Coalition on Television Violence (NCTV) has focused on television violence and efforts to educate the public and curb such content. The National Citizen Committee for Broadcasting monitored programs and identified companies that support television violence. The PTA threatened boycott of products and programs. The Coalition for Better Television (CBTV) was successful in pressuring some advertisers to boycott sponsors of programs with sexual themes.

But by the 1990s, the regulation of children's media was back on the legislative agenda. The 1990 Children's Television Act was the first congressional act that specifically regulated children's television. Most importantly, it imposed an obligation on broadcasters to serve the educational and informational needs of children. These are further defined as cognitive/intellectual or social/emotional needs. Although no minimum number of hours was established as a requirement, the obligation of some regularly scheduled programming specifically designed for children was established. Stations were also mandated to keep a log of that programming and to make the log available in a public inspection file. In a 1992 move widely viewed as an effort to stave off a federally imposed ratings system for violence, the three networks announced new standards, forswearing gratuitous violence; later they agreed to include on-screen advisories prior to the presentation of strong programs. In spite of these proposals all the issues emerged again in the Telecommunications Act of 1996.

A major legislative package that rewrote the 1934 Communications Act, the many provisions of the act will take years to sort out. But, in February 1996 the Telecommunications Act was signed into law. Of relevance to the children and television arena were provisions requiring the installation of an electronic monitoring device in television sets, a "V-chip" which would "read" violence ratings and allow families to block violent programming. Moreover, the networks have been charged with creating a self-designed and regulated ratings system, similar to that used by the Motion Picture Association of America, which would designate specific content depicting degrees of violence, sexual behavior, suitable language, and other controversial content. The bill includes the threat of a governmentally imposed system if the networks do not comply, but concerns about constitutionality and practicality of such a ratings system suggest that the issue will be under debate for many years.

In all these research and policy areas much of what we know comes from the study of children enjoying television as it has existed for almost half a century. But that traditional knowledge, like the traditional definition of television itself,

is being challenged by emerging telecommunications technologies. Cable, video games, and VCRs changed the face of television within the home. The Internet, a 500-channel world, increasing international programming ventures, and regulatory changes will change the way children interact with electronic media. The special place of children in human societies assures, however, that the concerns that have surrounded their interaction with television will remain central, even if they are shifted to new and different media.

CHILDREN'S TELEVISION WORKSHOP

U.S. Production Company

Children's Television Workshop (CTW) is a nonprofit organization created in 1967 for the purpose of producing the educational program *Sesame Street*. CTW was headed by Joan Ganz Cooney, a television producer who, with Lloyd Morrisett of the Markle Foundation, attracted funding from federal and private sources, including the U.S. Department of Health, Education, and Welfare, the National Institutes of Mental Health, the Carnegie and Ford foundations, and the Corporation for Public Broadcasting. *Sesame Street*, designed to promote the intellectual and cultural growth of preschoolers, particularly disadvantaged preschoolers, revolutionized children's educational television when it premiered in 1969 and established the CTW model for program development and research regarding children and television.

The CTW model refers to the unique process of educational program development at its workshop. It evolved under the direction of Cooney, Dr. Edward L. Palmer, director of research, and Dr. Gerald S. Lesser, chair of the CTW Board of Advisors. Each CTW series begins with extensive initial planning sessions involving producers, researchers, content experts, and advisors. The concepts developed in these sessions are then translated into program segments and pretested with the target audience. Frequently the testing extends for lengthy periods prior to actual production, so that producers can see how receptive the audience is to the educational messages embedded in the programs. In preparing for *Sesame Street*, for example, the research and design focused on demonstrable ability to attract attention, to appeal to the audience, and to be comprehensible. Researchers assessed the attention-holding power of material by presenting content in competition with potential distractions. The tactics which elicited most interactivity among viewers were explored further. The research concluded with tests for recall by appropriate audiences. As a result of these procedures *Sesame Street* went on air with

very specific attention-holding tactics such as fast movement, humor, slapstick, and animation. It was packaged in

Sesame Street

Photo courtesy of the Children's Television Workshop

a magazine format, and presented a carefully planned curriculum that focused on teaching letters and number skills.

Program development at CTW does not stop when programs are broadcast. In addition to the unusual attention to formative research, the CTW model also includes a strong commitment to summative research; as part of its summative research plan, the Educational Testing Service (ETS) was commissioned to evaluate the program. In a series of studies published by ETS in 1970 and 1972, researchers Ball and Bogatz found significant program-viewing impact and the development of a positive attitude toward school. Cook and Connor in a 1976 summary discovered that parental encouragement was vital to learning and that advantaged families were more likely to watch, thus ironically arguing that the gap between that group and the disadvantaged was not narrowed.

Sesame Street is clearly CTW's outstanding success, broadcast continuously since 1969. From its beginning as a weekday show designed to teach thinking skills and factual knowledge such as letters and number skills, the curriculum has been broadened to include goals such as reasoning, bilingual skills, acceptance of special needs, ecology, and health. The program is viewed by almost half of all U.S. preschoolers on a weekly basis. Internationally it has been broadcast in more than 40 countries and there are at least ten foreign-language versions.

Following the success of *Sesame Street* CTW went on to produce a number of other major educational programs, including *The Electric Company*, which premiered in 1971 and was in production for a decade. *The Electric Company* emphasized symbol and sound analysis and meaning in a half-hour program designed to help slower readers catch up and good readers reinforce their skills. *The Electric Company* used the CTW model, a magazine format, and a variety of entertaining and attention-grabbing production techniques. Formative research for the program included innovative eye movement and eye contact measures of appeal and attention. ETS evaluation found that *The Electric Company* fostered significant positive effects, particularly for the youngest target viewers. *Feeling Good*, a 24-episode experimental series, was programmed in 1974, designed to examine health issues and targeted particularly for young parents and low-income families. Funding difficulties and low ratings forced the program to be produced in stages with considerable format changes. Low public awareness of the program seemed to contribute to lack of demonstrable effects.

3-2-1 Contact, a 65-program series for 8- to 12-year-old children, premiered in 1980 and focused on science and technology. The goals were to promote scientific thinking, participation in science activities, and awareness of science as a career, particularly for women and minority children. It used a magazine format with continuing fea-

tures such as a mystery adventure dramatic component. Research by Mielke and Chen in 1980 and 1983 found *3-2-1 Contact* attractive to children, with particularly positive responses to the drama format used in the Bloodhound Gang segments.

Square One TV premiered in 1987 with the goal of increasing problem solving ability and positive attitude toward mathematics for 8- to 12-year-old children. Format features include Mathnet, game show parodies, and commercials. The program covers mathematical concepts from estimation through graphics, probabilities, and geometry. CTW research shows increases in problem-solving ability and more positive attitudes toward mathematics in the target age group. *Ghostwriter*, a series focusing on writing skills, premiered in 1992. The series' appeal was built around a computer that provided "ghostlike" clues which enabled a group of young people to solve problems. Of all the CTW programs, only *Sesame Street* is still in production, but because there is always a new audience of children available, most of the programs can still be seen. And these are only a sampling of major CTW projects. The workshop continues with many other projects on the air and in development.

By the 1980s, many of the funds for CTW were generated from *Sesame Street* product sales, the Sesame Place Amusement Park, and from Sesame Street Live, a touring company. CTW became an unhappy participant in the struggles over PBS funding in the mid-1990s when the financial success of *Sesame Street* was used as an example of why public funding was not needed to support educational children's programming. In spite of such difficulties the Children's Television Workshop—and *Sesame Street* in particular—remain a hallmark of children's programming in the United States.

CHINA

China's first TV station, Beijing Television, began broadcasting on 1 May 1958. Within two years, dozens of stations were set up in major cities like Shanghai and Guangzhou. Most stations had to rely on using planes, trains, or cars to send films and tapes from one to another.

The first setback for Chinese television came in early 1960 when the former Soviet Union withdrew economic aid from China. Many TV stations were closed and the number was reduced from 23 to 5. Then came the Cultural Revolution (1966-76), during which television's functions became a single one: to publicize, explain, and express "class struggles." Anti-imperialism, anti-revisionism, and anti-capitalism policies were erected for fulfilling the task of class struggle. Beijing Television's regular telecasting came to a halt on January 1967. Local stations followed its lead. It was not until the early 1970s that television development gradually became normal.

In the reform period starting from the late 1970s, television became the most rapidly growing and advanced medium. On 1 May 1978, Beijing Television changed to China Central Television (CCTV) as the country's only national network with the world's largest audience. In 1994 the country had near 700 stations, with one national, 30 provincial, 300 regional, and 350 local. A total of 220 channels are broadcasting nationwide. The change in TV set ownership is among the fastest in the world's television history. By 1993 China had 230 million TV sets, becoming the nation with the most TV sets in the world. Statistically, every Chinese family now owns a TV set. In 1978 every 100 urban families had only 0.59 color set. The number increased 100 times during the 1980s, rising to 59.04 sets in every 100 urban families. The estimated viewership in 1994 was about 80% of the population, nearly 900 million. They comprised 83% of urban population and 33% of rural population. Television has become the most important medium in people's daily life. About 54% of the people watched TV every day, while 32% read a newspaper and 35% listened to the radio every day.

The growth in TV stations, TV set ownership, and TV audience, demonstrate the extraordinary diffusion of television throughout China. From 1958 to 1984, stations grew in number from two to 683. Set ownership increased from a few thousand to 260 million between 1960 and 1984. And from 1975 to 1984 viewers increased from 18 million to 900 million.

Broadcasting technology also developed quickly. By 1990, 90% of the transmission facilities were manufactured domestically. In the 1960s only 3,000 to 5,000 TV sets were produced annually, a tiny figure compared to a population of seven million at the time. In the 1980s, 50-odd color TV enterprises with nearly 1,000 production lines were in operation. From 1978 to 1992 the output of TV sets increased 55.4 times, leaping from *seventh* to top place in the world,

with the biggest output of black-and-white television sets and third in color-set production.

Structure and System

The only form of television allowed in China is state ownership. No private television ownership is allowed, and no foreign television ownership is permitted. Receiving foreign TV programs via satellite is prohibited. For many years television was financed by the government. There are no license fees or direct charge for television. Television advertising did not exist until the economic reform started in the late 1970s.

Media theories undergirding the organization and uses of Chinese television flow directly from Marxist-Leninist doctrine. Mao Zedong, the founder and late chairman of the Chinese Communist Party, embellished Lenin's concept of media control and stressed that media must be run by the Party and become the Party's "loyal eyes, ears, and tongue." The Party requires that "Broadcasting must keep in line with the Party voluntarily, and serve the main Party objectives of the time."

Television's central task is to serve as the mouthpiece of the leadership, and is regarded as both a political institution and an ideological apparatus. It is used, to the greatest possible extent, by the Party and state command to impose ideological hegemony on the society. It is the Party and government that set the tone of propaganda for television. Although TV stations transmit news, deliver government orders or decrees, provide education and enrich the people's cultural life, in the past decades television was mainly used by the Party and state to popularize policies and directions and motivate the masses in the construction of communism.

A tight control system was maintained to make television function effectively. The Party is concurrently the owner, the manager, and the practitioner of television. Television is under the direct leadership and control of the Party and run by the government. All stations are under the dual jurisdiction of the Party's Central Propaganda Department and the government's Ministry of Radio, Film and Television. The Party's Propaganda Department is under the supervision of the Secretariat and the Political Bureau of the Party's Central Committee. Local supervision comes from the various provincial, municipal, and local Party propaganda departments and the provincial or municipal broadcasting administrative bureaus. The Propaganda Departments set media policies, determine programming content and themes, and issue operational directives. Technological, regulatory and administrative affairs are generally the concern of the government. As a political organ of the Party, virtually no independence of media is envisioned. Open debate on ideology is not allowed, nor is media criticism of the Party, government and high ranking officials, policies and affairs. The self-imposed censorship has long and extensively been used. Every individual in the

media circle knows well what he or she can do or cannot do. While routine material does not require approval from Party authorities, important editorials, news stories and sensitive programs all require prior endorsement by the Party authorities.

Programming and Production

Television programs consist of four categories: news (15%), entertainment (50%), feature and service (10%), and education (15%).

Although entertainment occupied the most hours, before the reform there were not many real entertainment programs. Most entertainment consisted of old films, with occasional live broadcast of operas. Newscasts were mostly what the official *People's Daily* reported. Production capability was low, equipment and facilities were simple, broadcasting hours and transmitting scales were limited and usually lasted three hours daily. Between 1958 and 1977 only 74 TV plays were produced.

Television has developed rapidly since the reform. Taboos were eliminated, restrictions lifted, and bold breakthroughs made. Both domestic and foreign news coverage have expanded. News on the frustration of economic reform, opinions from the audience, coverage of disaster, crime reports and human interest stories have been seen on a daily basis. A number of "firsts" have been tried, such as market information programs, sensitive topics, live telecasts of the Party's congress, and VIP interviews. In 1980 CCTV signed an agreement with Visnews and UPITV to receive international news stories via satellite. Now CCTV also receives international news stories from Asiavision, World TV News, and CNN.

Entertainment in the form of soap operas, traditional operas, and foreign feature films has become routine. In 1986 CCTV opened an English-language channel to serve foreigners in China. A dozen municipal and provincial stations now also have their English channels.

Education programs have been expanded to college courses offered by TV universities. More than 5,000 educational ground receiving terminals have been installed, allowing one million college students to study at home. In 20 years, five million people received continuing education through TV networks and 20 million farmers learned practical farming techniques in this way. Currently, two million students get their education or training via TV, including 1.2 million primary and middle school teachers. Service programs now range from commodity advertising, public announcement, weather and traffic reports, to date and stock information.

Production capacity has also been remarkably enhanced since the reform. In 1993 CCTV's news service increased to 11 programs per day, compared to only three before. During the 1960s and 1970s fewer than a dozen TV plays were made annually. In 1990 the number jumped to 1,500. In 1994 domestically produced TV plays reached 5,000. Broadcasting hours increased impressively as well. In an average week

of 1980, 2,018 hours of programs were broadcast nationwide. The number went up to 7,698 in 1985 and 22,298 in 1990, a 3.5-fold increase in five years and an 11-fold expansion in ten years. Nationwide, television now broadcasts 30,000 hours per week. Annually, domestic programming has reached 150,000-hours of programming.

Openness in Television

An epochal move towards openness in television has been made in the reform period. It started in economic and technological aspects, but soon was expanded to political and cultural aspects as well.

The first token of openness in television is the change in programming importation. Importation before the reform was quantitatively limited and politically and ideologically oriented. For 20 years, only the national network was authorized to import programs under tight control and restrictions. Programs were imported almost exclusively from socialist countries, and the content concentrated on the Soviet Revolution and their economic progress. Few programs were imported from the West and were restricted to those which exemplified that "socialism is promising, capitalism is hopeless."

In the late 1970s the ban was lifted. In 1986 U.S. Lorimar Productions signed a contract with Shanghai Television, providing 7,500 hours of American shows. Today, with some restrictions, central, regional, and local television stations are all looking to other countries as a source of programs. In the early 1970s imported programming occupied only less than one percent of the total programming. In 1982 the number jumped to eight percent. In 1994 it became 15%.

The second token of openness in television is the organizing of TV festivals. In 1986, STV held China's first international TV festival. Around 40 TV companies from 15 countries attended the festival. In 1994 more than 300 companies from 38 countries were present at the 5th Shanghai TV Festival, which was recognized as the largest TV festival ever held in Asia. Since 1990 another TV festival has been held every two years in Sichuan Province, providing one international TV festival in China every year. At the program market of the 1993 Sichuan TV festival, 1,723 TV serials were imported and 213 exported.

The third token of openness is the resurrection of advertising on television. Advertising was halted for three decades following the Party ascent to power in 1949. Over the last 15 years, economic and political reforms have revived the importance of the market forces and the power of advertising. Both domestic and foreign advertising have been resurrected. The majority of foreign programs were imported on barter agreements. In 1986 the figure went up to 115 million yuan, representing a 30-fold growth. In the 1980s, business increased at an annual rate of 50 to 60%, and reached 561 million yuan in 1990. In 1992 the sale of television advertising jumped to 2,050 million, accounting for over 30% of the country's total advertising revenue.

In recent years television has become the most commercialized and market oriented medium and has attracted the most advertising investment from both domestic and foreign clients. Presently, a large proportion of programming revenue, ranging from 40% to 70%, is being funded by advertising and other trade activities. Recently, a fully commercialized television service, Oriental Television, the first of its kind in China, was established in Shanghai. Its operation is stripping away all state financial support. The greater revenues from this source have not only lessened the government's control on finance, but also lessened its control on programming.

New Policies

These drastic changes in television may be attributed to the Party's new policies, including the modernization policy, decentralization policy, and relaxation and pluralism policy.

Under the modernization policy, the authorities have allocated large appropriations to the television industry. In 1967, the total investment in television was 20 million Chinese yuan, but in 1977 the budget was 50 million. In 1980 the expenditure rose to 670 million yuan. In 1985, the number reached to 1,780 million yuan and in 1989, the number became three billion. Entering the 1990s, television investment has exceeded five billion yuan annually.

The decentralization policy entitled "four-level development and management of radio and television services" was adopted in the early 1980s. The "four levels" refer to the country's system of divided administrative. With the central authority at the top, the other three levels are regions (30), local cities (about 450), and counties (approximately 1,900). This policy aimed particularly at extending television into rural areas and inland provinces. Within ten years a widely-penetrated television system was formulated. In the meantime, the number of relay stations grew to 10,000, a 100-fold increase.

Increasingly, television has played an important role in the people's leisure time. The decades-long preview system has been loosened. Except for some politically sensitive topics, most programs no longer need to be previewed by the authorities. The diversification and pluralism of programming has grown with passage of the reform years.

Satellite Broadcasting and Cable Service

Efforts have been made to develop broadcasting satellites to increase the penetration of television and to improve the quality of transmission. Along with terrestrial broadcasting China launched its first telecommunications satellite in 1970. In 1972 the first ground satellite-reception station was set up to assist in domestic and international program exchanges. During the 1980s, a total of five telecommunications and broadcasting satellites were launched, which made it possible to transmit television and radio programs from Beijing to all parts of the country. In 1992 CCTV opened its fourth channel via satellite, covering Hong Kong and Taiwan as well as the whole mainland. Now, 12 channels are transmitted via satellite. With more than 50,000 ground

satellite receiving stations, television broadcasting reaches 81.3% of the population

In 1991 China started cable television. In the past three years more than 15,000 cable TV stations have emerged, with a total subscription of 25 million households. The largest cable TV station is Shanghai Cable TV Station (SCTV) with its coverage of 1.2 million terminal users, making this system the biggest cable TV network in the world. SCTV is the country's first cable TV station to adopt the advanced techniques of combined transmission through optical and power cables. It has 12 channels with 13 sets of programs specialized in entertainment, economic information, news, sports, music, education, public service, and other services.

CHINA BEACH

U.S. War Drama

Sitting at the televisual intersection of the soap opera, medical show, and war drama, *China Beach* took the pursuit of serial ensemble dramatism to a self-conscious, provocative extreme. The program's premise was the exploration of personal and professional entanglements among American soldiers and civilians staffing a hospital and entertainment company during the Vietnam War. But the show's hybridization of filmic and televisual genres, its rhetorically complex invocation of popular music, and its pointed mod-

ernist-cum-postmodern reflexivity, eventually shifted the emphasis from the story to the telling. Ultimately the series approached a convergence of televisual narrative association with collectively shared cultural remembrance. *China Beach's* ensemble, the show ultimately implied, necessarily included the viewer inhabiting post-Vietnam America.

The program depicted issues familiar from dark war comedies like *M*A*S*H* and revisionist allegories like *Apocalypse Now*. Story lines explored the corruption or ineptitude

China Beach

of military authority; soldiers' inability to function in "normal" interaction; the medical staff's necessary posture of mordant irony; or the war's sudden curtailment of friendship or romance.

But the narration profoundly shifted the usual priorities of such plots by focusing on the women at the base, an emphasis fundamentally intended to undermine vainglorious heroism and to portray war instead, through "women's eyes," as a vast and elaborate conceit. Contemporary critics divided between those applauding the program's feminine deflation of war, and those who regarded the characters and their orientations toward war as wholly stereotypical invocations of femininity. John Leonard, writing for *Ms.*, anticipated both camps in an early review: on one hand he identified the show's "war-movie foxhole principle of diversity-as-paradigm, which is to say that if you're stuck with all these women, one must be a Madonna, another a whore, a third, Mother Courage, and a fourth, Major Barbara." On the other hand, he reveled in the power of such stereotypes to multiply dramatic possibilities.

Certainly *China Beach*'s two crucial protagonists amounted to carefully elaborated formulas. The camp's head nurse was the willful Colleen McMurphy, a woman proud of her composure and careful in her moral convictions, compassionate but capable of a scathingly condemning glance. K.C. was the calculating madam, alluring but hard, for whom the war brought nothing but higher profits, better contacts, and escalating entrepreneurial opportunities. These two roles constituted an important dialectic not primarily in character conflict, but in the orientation viewers were asked to take at any given time. They were played by exceptional performers whose portrayals complicated the stereotypes by importing still other formulas. Rather than a distanced Madonna, Dana Delany's McMurphy proved to be a passionate woman who—as a feminized, Irish Catholic version of *M*A*S*H*'s Hawkeye Pierce—found not mere escape, but potential redemption in relationships. Rather than a whore with a heart of gold, Marg Helgenberger's K.C. emerged as chillingly objective, independent, self-isolated and unaccountable—as formidable and unapologetic as any soap opera bitch. If McMurphy sought to discover a sheltering and resilient humanity in the ensemble's reciprocities, K.C.'s continual interest was the manipulation of the ensemble's pitifully predictable foibles from without. McMurphy, K.C., and their supporting characters merged the sentimental education of women's melodrama, the life-and-death ethical discourse of medical dramas, and the lurid bathos of the apocalyptic war story in an ambitious format. Here the simultaneous development of serial plot lines created (as on *St. Elsewhere* and *Hill Street Blues*) an ongoing, organically changing, symbolically charged fictional world.

Both melodramatic sentiment and the psychic dislocation of war were conveyed not only through juxtaposed storylines and generic recombination, but through the show's evocative use of Vietnam-era soul, blues, and rock. *China Beach* frequently used such nostalgic music to frame

the show's events as remembrances, laden with a sense of moral revisitation. Even more ambitiously, the program consistently invoked the audiences' feelings of nostalgic distance from the period in which the songs originated. That separation served as an analog for the feelings of distance which the protagonists, immersed in a war, were likely to feel from the society producing those songs. The viewer, like the dislocated combatant, was asked to yearn for the consolations of everyday 1960s American civilization (an invitation which drew on already prevalent revivals of 1960s counterculture among baby boomers and late 1980s youth).

In its final season, the show's convergence between the viewing audience and the protagonists took a considerable leap. The program now followed the characters into their post-war lives, reconstructing key events at *China Beach*—and the end of the war itself—through flashbacks. In an especially melodramatic plot, the show's narrative is controlled by the investigative efforts of K.C.'s dispossessed baby, now a film student whose hand-held video camera (an instrument of 1980s culture) becomes the show's eye as she interviews her mother's acquaintances in an attempt to find where K.C. has gone. In this season, the original ensemble has dispersed geographically, historically, and socially. Their separation exacerbates the multiplicity of vantages which gestated at *China Beach* during the war, and places the characters, sometimes disconcertingly and tragically, in situations which seem approachably contemporary with the viewing audience. Screen time became equally divided between fictive "past" and "present," making the entire narration an uprooted historical rumination. The viewer became implicated, not just in a *Rashomon*-like reconstruction of the war, but in an equally segmented and self-conscious sense of present American society, and its shared reflections.

Formal complication was not confined to music or narrative. *China Beach* used self-conscious, often expressionist lighting, sets, sound, and camera movement, which could vary dramatically from subplot to subplot. The military company's role as an entertainment unit was sometimes exploited to set characters in ironic plays-within-the-show, or to frame the allegorical dimension of musical performances.

For some critics, *China Beach* comprised, at its moment in the history of television production and viewership, a remarkable case of intrinsically televisual fiction. Others, however, regarded the program's overwrought televisual rhetoric differently. It was seen not as an exploration of the ethical and aesthetic possibilities of one of American culture's key sites for the fictional production of touchstone sentiments; rather, it was a conceited diminishment of history. Richard Zoglin of *Time* (a considerable forge of collective memory in its own right), accurately perceived the show's postmodern efforts to collapse wartime tragedy into contemporary viewers' casual nostalgia. But he seemed to think he was indicting the show by suggesting it reflected "the way dissent [against Vietnam] has become domesticated in America; what were radical antiwar views in the '60s are now mainstream TV attitudes." His assessment was accurate

but not necessarily lamentable. *China Beach* demonstrated the historical war's continuing ability to open special sentiments among contemporary audiences.

Zoglin and others' questionable worries over television's historical license were based in the assumption that *China Beach's* version of the war would remain exclusive, definitive, and unrecognized as fiction. But television, with its multiple representations in fiction, documentary and news programs dealing with Vietnam, clearly continues to deny that assumption.

—Michael Saenz

THE CHRISTIAN BROADCASTING NETWORK/ THE FAMILY CHANNEL

U.S. Cable Network

The Christian Broadcasting Network (CBN) grew from the vision of one man, Pat Robertson, who in 1960 bought a run-down UHF station in Portsmouth, Virginia, for a mere \$37,000. While many religious broadcasters relied on sermons to convey their message, Robertson developed a talk show approach on his new station, in which interviews, music, teaching, prayer and healing were all provided in a smoothly produced program format. CBN's first telethon to raise funds in the fall of 1963 was named *The 700 Club* because Robertson asked for 700 people to pledge \$10 a month to support the new station and keep it

Courtesy of the Christian Broadcasting Network

on the air. This became the name of Pat Robertson's religious talk show; he became host for the show, and a former Black Muslim Ben Kinchlow became co-host; the show is still running more than thirty years later.

Three innovations adopted by CBN helped the fledgling network grow rapidly to into one of the biggest religious broadcasting networks in the world. The first innovation was CBN's use of the telephone to provide ongoing contact with viewers. *The 700 Club* provides a telephone number on screen so that viewers can call to ask for prayer and counseling during and after each program. Viewers responded warmly to this semi-interactive relationship with the *700 Club* hosts; the hosts would write personalized follow-up letters to those who called. In 1979 sixty counseling centers across the nation were established to respond to calls 24 hours a day. By 1992 over forty million calls had been received; now in 1995 an average of a million calls a year have enabled CBN to meet the spiritual needs of millions, while at the same time, updating its data base of supporters. CBN's second innovation was to follow the lead of HBO and CNN and build its own satellite earth station as early as 1977. When CBN first started buying time on network affiliate stations, it had to transport videotapes of the *700 Club* episodes from station to station, which meant programs were usually days and sometimes weeks old by the time they were broadcast. This new satellite technology enabled CBN to transmit the shows live across the nation either for immediate broadcast, or for rebroadcast later.

CBN's third innovation was to provide 24-hour religious programming to the nation's growing network of cable stations. By 1980 the Continental Broadcasting Network, an alternative name for CBN Cable, provided a 24-hour satellite TV service reaching more than 5 million homes; cable operators were paid a few cents per month per viewer for providing a religious cable channel in their area. CBN Cable moved to become an advertiser-and-cable-system-funded family entertainment channel with limited religious programming. On 1 August 1988 CBN Cable changed its name to the Family Channel; two years later CBN sold the channel to International Family Entertainment to satisfy IRS requirements so that CBN would retain its tax exempt status.

CBN claim that the transaction provided them with more than \$600 million in total benefits—everything from cash to airtime. IFE became a publicly held 150 million dollar company when traded on the New York Stock Exchange in 1992. Effectively a small UHF religious station has become a cable programming giant in thirty years.

In 1980 *The 700 Club* changed format from an all religious show to a contemporary talk show with news elements, based on news bureaus in Virginia Beach, Washington D.C., and later in Jerusalem, Israel. *USam*, a morning news show, began in 1981 but was withdrawn after a year. *Another Life*, a daily soap opera featuring the adventures of a Christian family, ran for 800 episodes from 1981 to 1984,

and still airs in many countries around the world. Perhaps the most successful productions were the two animated Bible story series *Superbook* and *Flying House*. These two series were syndicated worldwide and when broadcast in Russia and the Ukraine in 1991 produced more than eleven million requests for gospel literature.

Program content on the *700 Club* stresses a biblical worldview, based on the belief that there exists a set of moral absolutes revealed in scripture that should undergird society's institutions, laws, and public policy. Like other conservative Christians, Robertson sees certain Supreme Court decisions in the 1960s as paving the way for a moral and spiritual decline in American society, and blames secular humanism as the source of the corruption and godlessness that leads to the social ills like abortion and the break-up of traditional families.

During the 1980s the growth of religious television and the resurgence of the New Religious Right in American politics went hand in hand. Historian James Heinz in his book *The Struggle to Redefine America* suggests that conservative evangelicalism won support because "it tapped into symbols that turn out to be powerfully resonant in the lives of many people." Robertson launched a bid for the Republican nomination for president in 1986, but was defeated by George Bush.

International Family Entertainment which owns the Family Channel, is completely separate from the Christian Broadcasting Network. The Family Channel has become a profitable secular family entertainment cable network, which is required to continue to broadcast *The 700 Club* in perpetuity, and will do so as long as it is controlled by the Robertson family through their Class A voting shares. With an assured commercial income from advertising, the future for the Family Channel looks bright. CBN depends heavily on the income of thrice annual fund raising telethons. Total revenues for Fiscal 1993 from donations, earned income and investments were \$186.4 million dollars. The significance of CBN is that it provides incontrovertible evidence that a generous section of the American television public continue to want to watch religious TV, and contribute millions of dollars every year to support such broadcasting ventures.

CHUNG, CONNIE

U.S. Broadcast Journalist

Connie Chung is one of a very small group of women who have achieved prominence in American network news. Along with Barbara Walters, Diane Sawyer and Jane Pauley, Chung is one of the leading female journalists on television. Until 1995 she co-anchored the *CBS Evening News* with Dan Rather, as well as *Eye to Eye with Connie Chung*, a prime-time news hour. Following considerable controversy over her interviewing style and reportorial skills, and during which it was reported that Rather had never been happy with the co-anchor arrangement, Chung parted ways with CBS in 1995.

Chung began her journalism career in 1969 as a copy person at WTTG-TV, Washington, D.C., a Metromedia affiliate, where she later became a news writer and on-air reporter. She first joined CBS News in 1971, working as a Washington-based correspondent from 1971 to 1976, covering Watergate, Capitol Hill and the 1972 presidential campaign. In 1976 she joined KNXT (now KCBS-TV), the CBS-owned television station in Los Angeles, working on both local and network broadcasts. In her seven years in Los Angeles, Chung co-anchored three daily newscasts, and was a substitute anchor for the *CBS Morning News* and CBS News' weekend and evening broadcasts. She also anchored CBS News' *Newsbreak* for the Pacific time zones.

Chung left CBS to join NBC News as a correspondent and anchor. Her assignments included anchoring the Saturday edition of the *NBC Nightly News*, *NBC News at Sunrise*, *NBC News Digest*, several primetime news specials and the newsmagazine, *1986*. She was also contributing correspondent and substitute anchor on the *NBC Nightly News* broadcast. Chung served as political analysis correspondent and podium correspondent during the 1988 president campaign and political conventions.

When she joined Dan Rather as co-anchor of the *CBS Evening News*, Chung became only the second woman to hold a network anchor job, following Barbara Walters' brief stint as co-anchor with Harry Reasoner on ABC in the mid-1970s. The male-female anchor pairing, already a staple of local news, seemed designed also to capitalize on Chung's recognizability. In the Q-ratings (a set of measurements

Connie Chung

Photo courtesy of Connie Chung/Tony Esparza

provided by a company called Marketing Evaluations, which gauge the popularity of people who appear on television), Chung has always scored extremely high. At the time she was named co-anchor, she had one of the highest Q-ratings of any woman in network news. In 1990 she was chosen "favorite interviewer" in *U.S. News and World Report's* Best of America survey.

In unexpected ways, Chung has foregrounded issues of concern to working women. In 1990, she took the unusual step of announcing plans to postpone her magazine series *Face to Face with Connie Chung* in order to take time to conceive a child with her husband, syndicated daytime television talk-show host Maury Povich.

Chung has also been part of the trend toward using newscast anchors on prime-time programs. Her work on nighttime news shows has sometimes drawn criticism, as when the short-lived *Saturday Night with Connie Chung* was tagged as "infotainment" and charged with undermining the credibility of network news by using controversial techniques such as news re-enactments. Chung was again involved in controversy in early 1995, when in an interview with Kathryn Gingrich, the mother of Speaker of the House Newt Gingrich, Chung urged her subject to whisper her son's comments about First Lady Hillary Clinton "just between us." The whisper was picked up by the microphone and used by Chung for broadcast, drawing attacks on Chung's journalistic integrity. This incident was followed by conflict over Chung's assignment to cover the Oklahoma City bombing incident, CBS' apparent plans to "demote" her to the position of weekend anchor, and possibly to cancel her prime-time program *Eye to Eye with Connie Chung*. Accompanied by an almost palpable strain on the set of the *CBS Evening News*, as well as by the program's declining ratings, these events led to Chung's departure from CBS amidst charges of sexism, and counter-charges of a lack of journalistic seriousness.

CITYTV

Canadian Television Station

Citytv, Toronto's fast-paced and image-driven independent television station, first went to air 28 September 1972 as a UHF channel. It was assured of financial security when the Canadian media-giant CHUM Ltd., who had purchased a 45% interest in Citytv from Montreal-based Multiple Access in 1979, acquired the remainder of shares in the struggling station in 1981. ChumCity's total enterprise includes the cable and satellite music-video channels MuchMusic and MusiquePlus (also franchised in Latin America as MuchaMusica); the national arts and culture channel Bravo!; and international syndication sales of Citytv's magazine programmes (such as *The New Music*, *Fashion Television*, *Media Television*, or *The Originals*). Citytv is now a consistently top-ranked channel within what is perhaps North America's most competitive market (Toronto has 53 television stations).

Built upon the programming keystones of news, music and movies, Citytv found early notoriety by broadcasting *Baby Blue Movies*, a series of late-night, soft-core porn films. While the "Baby Blues" are now off the air, Citytv still broadcasts an average of five movies a day, many of which are World or Canadian premiers. Similarly innovative in music programming, Citytv first telecast *The New Music*, a forerunner to both MTV and MuchMusic, in 1979. However, Citytv's most notable distinction lies in a conceptual approach which consistently attempts to expand the mobility and function of the medium. As Canada's first all-videotape station, Citytv initiated the practices of Electronic News Gathering and single-person reportage. Such techniques are exercised in the local news programme *CityPulse*, which foregoes anchor desks and news studios for an unconventional and tabloid-like momentum. The emphasis upon process, locality and informal interactivity is particularly evidenced in the ChumCity building, a refurbished 19th century gothic structure in which there are no studios, no sets or control rooms. Instead, the entire complex is wired to "shoot itself" through a series of strategically placed electronic "hydrants". In this manner, cameras are enabled to roam anywhere—the roof, stairwells, or the street—and are often integrated into the shot. Viewers then watch camera operators at work setting up, watch themselves viewing programmes in process through the building's large ground-floor windows, or see an interview through the eyes of an interviewee, via a second Hi-8 camera provided to the story subject. The concept of public access is expanded through *Speaker's Corner*, a video booth where, for a charity-addressed dollar, passers-by may confess their sins, declare their love, or sound off on pet peeves; the best of these are used as shorts between shows or collated into the weekly *Speaker's Corner* programme.

Courtesy of Citytv

Unlike many other Canadian networks or independent stations, Citytv does not bid for dramatic programmes produced in the United States, with the exception of importing the contemporary *Star Trek* series (*The Next Generation*, *Deep Space Nine*, and *Voyager*), and the occasional made-for-TV movie or miniseries. Citytv does buy syndicated daytime talk shows from the United States, which it airs during its weekday schedule. There are no game shows, children's programmes, soaps, sitcoms or sports on Citytv. Saturday and Sunday morning schedules are given over to community ethnic programming.

While often favoring style and self-promotion over substance and self-reflexivity, Citytv's accomplished characteristic lies in its process-oriented format. This is evident not only within the programmes per se, but the breaks in between programmes: station IDs, interstitials and promotional spots are tailored to intervene, as well as interweave, within the overall affect and tenor of the show. In this respect, Citytv successfully capitalizes upon the capacities of televisual "flow".

CIVIL RIGHTS MOVEMENT AND TELEVISION

American television coverage of the Civil Rights Movement ultimately contributed to a redefinition of the country's political as well as its televisual landscape. From the 1955 Montgomery bus boycotts to the 1964 Democratic National Convention in Atlantic City, technological innovations in portable cameras and electronic news gathering (ENG) equipment increasingly enabled television to bring the non-violent civil disobedience campaign of the Civil Rights Movement and the violent reprisals of Southern law enforcement agents to a new mass audience.

The NAACP's 1954 landmark Supreme Court case, *Brown v. Board of Education*, along with the brutal murder of 15-year-old Emmet Till in Mississippi and the subsequent acquittal of the two white men accused of his murder marked the beginning of America's modern Civil Rights Movement. The unprecedented media coverage of the Till case rendered it a *cause celebre* that helped to swell the membership ranks of civil rights organizations nationwide. As civil rights workers organized mass boycotts and civil disobedience campaigns to end legal segregation and white supremacist terror in the South, white segregationists mounted a counter-offensive that was swift and too often violent. Medgar Evers and other civil rights activists were assassinated. Black churches, businesses and residences with ties to the movement were bombed. Although this escalation of terror was intended to thwart the Civil Rights Movement, it had the effect of broadening support for civil rights.

These events were unfolding at the same time that the percentage of American homes equipped with television sets jumped from 56 to 92%. This was 1955 and television was securing its place in American society. Network news shows were also beginning to expand from the conventional fifteen to thirty minutes format, splitting the time between local and national issues. From the mid to late 1950s, these social, political, technological and cultural events began to converge. The ascendancy of television as the new arbiter of public opinion became increasingly apparent at this time to civil rights leaders and television news directors alike. Thus television's coverage of the Civil Rights Movement changed considerably, especially as the "anti-establishment politics" of the 1960s erupted. When television covered the consumer boycotts and the school desegregation battles in the early days of the Civil Rights Movement, it was usually in a detached manner with a particular focus on the most dramatic and sensational occurrences. As well, the coverage in the late 1950s was intermittent, with a field reporter conducting a stand-up report from a volatile scene. Alternatively, an in-studio anchor man would narrate the unfolding events captured on film. Rarely, if ever, did black participants speak for themselves or address directly America's newly constituted mass television audience. Nevertheless, civil rights leaders understood how central television exposure was becoming to the success of the movement.

The desire to bring the struggle for civil rights into American living rooms was not limited to civil rights workers, however. The drama and sensationalism of peaceful civil rights protesters in violent confrontation with brutal agents of Southern segregation was not lost on news producers. News programmers needed to fill their expanded news programs with live telecasts of newsworthy events, and the public clashes around the Civil Rights Movement were too violent and too important to ignore.

For example, among the most enduring images telecast from this period were: 1955—shots of numerous boycotted busses driving down deserted Alabama streets; 1957—angry white mobs of segregationists squaring-off against black students escorted by a phalanx of Federal Troops in front of Ole Miss, the University of Mississippi; 1965—Dr. Martin Luther King, Jr., leads a mass of black protesters across a bridge in Selma, Alabama. Most memorable, perhaps, of all these dramatic video images is the 1963 attack on young civil rights protesters by the Birmingham, Alabama, police and their dogs, and the fire department's decision to turn on fire hydrants to disperse the young black demonstrators, most of whom were children. Television cameras captured the water's force pushing young, black protesters down flooding streets like rubbish during a street cleaning. Unquestionably, this was compelling and revolutionary television.

By the early to mid 1960s, television was covering the explosive Civil Rights Movement regularly and forcefully. It was at this time that the young, articulate and telegenic Reverend Martin Luther King, Jr., had emerged from the Southern Christian Leadership Conference as the Movement's chief spokesman. Commenting on King's oratorical skills, one reporter noted that his "message and eloquence were met with rapt attention and enthusiastic support." He was the perfect visual symbol for a new era of American race relations. During this period television made it possible for civil rights workers to be seen and heard on an international scale. Fanny Lou Hamer's televised speech at the 1964 Democratic Convention in Atlantic City signaled a pivotal moment in the history of television's relationship to the civil rights campaign. Hamer's now famous "Is this America?" speech infuriated President Johnson, emboldened the networks, and riveted the nation. Even though Johnson directed the networks to kill the live feed carrying her speech on voting rights on behalf of the African American Mississippi Freedom Democratic Party (MFDP), the networks recognized the speech's powerful appeal and aired Hamer's address in its entirety later that night. Thus Hamer, a black woman and a sharecropper, became one of the first black civil rights activists to address the nation directly and on her own terms. King's historic "I Have a Dream" speech was delivered on 28 August 1963, at the March on Washington rally. King's speech not only reached the 300,000 people from civil rights organizations, church

Dr. Martin Luther King, Jr.

groups and labor unions who gathered at the nation's capital to demonstrate for unity, racial tolerance and passage of the civil rights bill, with the aid of television it reached the nation as well. Later that same year, television covered the assassinations of civil rights leader Medgar Evers, and months later that of President John F. Kennedy. These deaths devastated the civil rights community and television coverage of both events ensured that the nation mourned these losses as well. This phase of the movement also saw an influx of white, liberal college students and

adults from across the country into the deep South during the so-called "Freedom Summer" of 1964.

Civil rights organizers encouraged the participation of white liberals in the movement because organizers understood that the presence of whites would attract the television cameras and, by extension, the nation. No one was prepared for the tragic events that followed. As it turns out, television's incessant probing into the murders and subsequent month-long search for the bodies of two white, Northern civil rights workers, Michael Schwerner and

Andrew Goodman, and black, Southerner James Chaney did have a chilling effect on the nation. With the death of innocent white volunteers, television was convincing its suburban viewers around the country that the Civil Rights Movement did concern them as well. For it was difficult to turn on the television without news of the Schwerner, Chaney and Goodman search. From late June to 4 August 1964, television regularly and consistently transmitted news of the tragedy to the entire nation. Television ultimately legitimated and lent new urgency to the decade-long struggle for basic human and civil rights that the Civil Rights Movement had difficulty achieving prior to the television age. The incessant gaze of the television cameras on the murders and disappearance of Schwerner, Chaney and Goodman, following on the heels of the Evers and Kennedy assassinations, resulted in mobilizing national support for the Civil Rights Movement. In fact, it was television's coverage of the Civil Rights Movement's crises and catastrophes that became a prelude to the medium's subsequent involvement with and handling of the later social and political chaos surrounding the Black Power, Anti-War, Free Speech and Feminist Movements. As veteran civil rights reporters went on to cover the assassinations of Malcom X, Martin Luther King and Robert Kennedy, as well as the ghetto uprisings thereafter, a whole new visual and aural lexicon of crisis-television developed, one that in many ways still defines how television news is communicated.

By 1968, it was clear that television's powerful and visceral images of the civil rights struggle had permeated many levels of American social and political reality. These images had helped garner support for such liberal legislation as the 1964 Voting Rights Act and President Lyndon B. Johnson's "Great Society" and "War on Poverty" programs, all of which are legacies of the Civil Rights Movement. As volatile pictures of Watts, Detroit, Washington, D.C., and other cities going up in smoke hit the television airwaves, they provoked a strong reaction by the end of the decade, marked by the presidential campaign slogans calling for law and order. Consequently, many of the very images that supported the movement simultaneously helped to fuel the national backlash against it. This anti-civil rights backlash contributed to the 1968 presidential election of conservative Republican Richard M. Nixon.

While television news programs strove to cover the historic events of the day, entertainment shows responded to the Civil Rights Movement in their own fashion. With their concern over advertising revenues and corporate sponsorship, television's entertainment divisions decided on a turn to social relevance that did not tackle the controversy and social conflict of the Civil Rights Movement directly. Instead, it took the cautious route of slowly integrating (in racial terms) fictional programming by casting black characters in roles other than the usual domestic and comedic stereotypes. Beloved characterizations of domesticated blacks in such popular television shows as *Beulah*, *Amos 'n'*

Andy, *The Jack Benny Show*, and *The Danny Thomas Show*, for example, slowly gave way to integrated cast programs depicting the network's accommodationist position on the "new frontier" ideology of Kennedy liberalism wherein black characters were integrated into American society as long as they supported American law and order. Among these shows were *East Side/West Side* (1963–64), *The Defenders* (1961–65), *Naked City* (1958–63), *The Nurses* (1962–65), *I Spy* (1965–68), *Peyton Place* (1964–69), *Star Trek* (1966–69), *Mission: Impossible* (1966–73), *Daktari* (1966–69), *NYPD* (1967–69) and *Mod Squad* (1968–73), to name but a few. Rather than reflect the intense racial conflicts of bombed-out churches, blacks being beaten by Southern cops and massive demonstrations, these dramatic programs portrayed interracial cooperation and peaceful coexistence between black and white characters. For the first time on network television, many of the black characters in these shows were depicted as intelligent and heroic. While some of these shows were criticized for their lone black characters who staunchly upheld the status quo, these shows, nevertheless, did mark a significant transformation of the televisual universe. And for mass audiences accustomed to traditional white and black shows, the Civil Rights Movement brought a little more color to the television spectrum.

THE CIVIL WAR

U.S. Compilation Documentary

The *Civil War* premiered on the Public Broadcasting Service over five consecutive evenings (23 to 27 September 1990) amassing the largest audience for any series in public television history. Over 39 million Americans tuned into at least one episode of the telecast, and viewership averaged more than 14 million viewers each evening. Subsequent research indicated that nearly half the viewers would not have even been watching television at all if it had not been for *The Civil War*.

The widespread positive reaction to *The Civil War* was generally lavish and unprecedented. Film and television

critics from across the country were equally attentive and admiring. *Newsweek* reported “a documentary masterpiece”; *Time* “eloquen[t]...a pensive epic”; and *U.S. News and World Report* “the best Civil War film ever made.” David Thomson in *American Film* declared that *The Civil War* “is a film Walt Whitman might have dreamed.” And political pundit, George Will, wrote: “Our *Iliad* has found its Homer...if better use has ever been made of television, I have not seen it.”

Between 1990 and 1992, accolades for Ken Burns and the series took on institutional proportions. He won “Pro-

The Civil War
Photo courtesy of Florentine Films

ducer of the Year" from the Producers Guild of America; two Emmys (for "Outstanding Information Series" and "Outstanding Writing Achievement"); a Peabody; a DuPont-Columbia Award; a Golden Globe; a D.W. Griffith Award; two Grammys; a People's Choice Award for "Best Television Mini-Series"; and eight honorary doctorates from various of American colleges and universities, along with literally dozens of other recognitions.

The Civil War also became a phenomenon of popular culture. The series was mentioned on episodes of *Twin Peaks*, *thirtysomething*, and *Saturday Night Live* during the 1990-91 television season. Ken Burns appeared on *The Tonight Show*, and he was selected by the editors of *People* magazine as one of their "25 most intriguing people of 1990." The series, moreover, developed into a marketing sensation. The companion volume, published by Knopf, *The Civil War: An Illustrated History*, became a runaway bestseller; as did the nine episode videotaped version from Time-Life, and the Warner soundtrack, featuring the bitter-sweet anthem, "Ashokan Farewell," by Jay Ungar.

Several interlocking factors evidently contributed to this extraordinary level of interest, including its accompanying promotional campaign, the momentum of scheduling Sunday through Thursday, the synergetic merchandising of its ancillary products, and of course the quality of production itself. Most significantly, though, the series examined America's great civil conflict from a distinct perspective. A new generation of historians had already begun addressing the war from the so-called "bottom-up" point of view, underscoring the role of African-Americans, women, immigrants, workers, farmers, and common soldiers in the conflict. This fresh emphasis on social and cultural history had revitalized the Civil War as a subject, adding a more inclusive and human dimension to the traditional preoccupations with "great men," transcendent ideals, and battle strategies and statistics. The time was again propitious for creating a filmed version of the war between the states which included the accessibility of the newer approach. In Ken Burns' own words, "I don't think the story of the Civil War can be told too often. I think it surely ought to be retold for every generation."

Much of the success of Ken Burns' *The Civil War* must be attributed to the ways in which his account makes this nineteenth century conflict immediate and comprehensible in the 1990s. The great questions of race and continuing discrimination, of the changing roles of women and men in society, of big government versus local control, and of the individual struggle for meaning and conviction in modern life, all form essential parts of Burns' version of the war. In his own words, "I realized the power that the war still exerted over us."

To define and present that power on television Burns employed 24 prominent historians as consultants on the project. He melded together approximately 300 expert commentaries and another 900 first-person quotations from Civil War era letters, diaries, and memoirs. Exerpts from

these source materials were read by a wide assortment of distinguished performers, such as Sam Waterston, Jason Robards, Julie Harris, and Morgan Freeman, among many others.

Often these remarkable voices would be attached to specific historical characters—foot soldiers from both armies, wives or mothers left behind, slaves who escaped to fight on behalf of their own freedom. One of Burns' extraordinary techniques was to follow some of these individuals through long periods of time, using their own words to chronicle the devastating sense of battle weariness, the loneliness of divided families, and both the pain and joy of specific moments in personal histories.

Just as significantly, he attached pictures to these words. Using a vast collection of archival photographs, some rarely seen, the primary visual production techniques was the slow movement of the camera over the surfaces of still photographs. Audiences were allowed to move in for close-ups of faces and eyes, to survey spaces captured in more panoramic photos, and to see some individuals at different stages of their war experiences. The visual component of *The Civil War* also compared historical photographs of places with contemporary filmed shots of the same locations. The "reality" of bluffs over Vicksburg, a Chancellorsville battlefield, or Appamattox Courthouse was established by these multiple pictorial representations.

All these visual and aural techniques combined in a special sort of opportunity for the audience. The series invited one into a meditation more than an analysis, an intimate personal consideration of massive conflict, social upheaval, and cultural devastation.

Ken Burns, a hands-on and versatile producer, was personally involved in researching, fund raising, co-writing, shooting, directing, editing, scoring, and even promoting *The Civil War*. The series, a production of Burns' Florentine Films in association with WETA-TV in Washington, also boasted contributions by many of the filmmaker's usual collaborators, including his brother and co-producer, Ric Burns, writer Geoffrey C. Ward, and narrator David McCullough. Writer, historian, and master raconteur, Shelby Foote, emerged as the onscreen star of *The Civil War*, peppering the series with entertaining anecdotes during 89 separate appearances.

The Civil War took an estimated five years to complete and cost nearly \$3.5 million, garnered largely from support by General Motors, the National Endowment for the Humanities, and the Corporation for Public Broadcasting. By any standard that has gone before, *The Civil War* is a masterful historical documentary.

Burns now laughs about the apprehension he felt on the evening *The Civil War* premiered on prime-time television and changed his life forever. He remembers thinking long and hard about the remarks of several reviewers who predicted that the series would be "eaten alive," going head-to-head with network programming. He recalls being "completely unprepared for what was going to happen" next,

as the series averaged a 9.0 rating, an exceptional performance for public television. Ken Burns admits, "I was flabbergasted! I still sort of pinch myself about it. It's one of those rare instances in which something helped stitch the country together, however briefly, and the fact that I had a part in that is just tremendously satisfying."

CIVILISATION: A PERSONAL VIEW

British Arts Programme

Kenneth Clark's 13-part series produced by British Broadcasting Corporation's Channel 2 (BBC-2) in 1969 and released in the United States in 1970 on public television, remains a milestone in the history of arts television, the Public Broadcasting System, and the explication of high culture to interested laypeople. The series offers an extended definition of the essential qualities of Western civilisation through an examination of its chief monuments and important locations. While such a task may seem both arrogant and impossible, Clark's views are always stimulating and frequently entertaining. Civilisation, he suggests, is energetic, confident, humane, and compassionate, based on a belief in permanence and in the necessity of self-doubt.

As Clark would readily acknowledge, civilization is not always all of these things at once, which gives his chronological tour considerable drama inasmuch as episodes speak to each other; Abbot Suger enters into dialogue in the viewer's mind with Michelangelo, Beethoven, and Einstein. A self-confessed hero worshiper, Clark arranged each epi-

Civilisation

Photo courtesy of BBC

sode around one or more important figures, illustrating his Carlylean view that civilisation is the product of great men. Given his exploration of the visual possibilities of television (not always utilized in previous arts programming) and his particular intellectual biases, the programme draws its evidence primarily from art history, but takes a wider view than that description might suggest. In his memoir *The Other Half*, he commented that “I always . . . based my arguments on things seen—towns, bridges, cloisters, cathedrals, palaces,” but added that he considered the visual a “poin[t] of departure” rather than a final destination: “When I set about the programmes I had in mind Wagner’s ambition to make opera into a *gesamtkunstwerk*—text, spectacle and sound all united.”

Clark’s qualifications for the series included his position as a leading art historian and, beginning in 1937, his career as a pioneer of British television arts programming. He had also served in the Ministry of Information during World War II, an experience that seems to have contributed to his philosophy of arts television. “The first stage was to learn that every word must be scripted; the second that what viewers want from a programme on art is not ideas, but information; and the third that things must be said clearly, energetically and economically,” he wrote. Thus his first successful television series, *Five Revolutionary Painters* (which aired on ITA and which he discusses briefly in *The Other Half*), allowed him to both test his theory that the viewing public wanted to learn about individual artists and serve as a kind of dress rehearsal for the more ambitious *Civilisation*. As Clark noted, “I might not have been able to do the filmed sequences of *Civilisation* with as much vivacity if I had not ‘come up the hard way’ of live transmission”.

Following the social and political upheavals that marked 1968 in both Europe and the United States, *Civilisation* teaches that hard times do not inevitably crush the humane tradition that are central to Clark’s view of Western civilisation. Indeed, when David Attenborough suggested the title for the series, Clark’s typically self-deprecating response was, “I had no clear idea what [civilisation] meant, but I thought it was preferable to barbarism, and fancied that this was the moment to say so.” That the programme offers a personal (and in some ways idiosyncratic) look at nine centuries of European intellectual life is thus a crucial part of its appeal, inasmuch as it argues that to follow cultural matters—and care about them—is within the reach of television viewers.

Clark appreciated the fact that television remains a performer’s medium even when it deals with the abstract. This established the pattern for later pundit programmes such as Alistair Cooke’s *America* and Jacob Bronowski’s *The Ascent of Man*, which were, like *Civilisation*, directed by Michael Gill. In all three programs the cultural cicerone and his locations are the stimulus for the presentation of ideas.

“I am convinced that a combination of words and music, colour and movement can extend human experience in a way words alone cannot do,” he remarked in the foreword to the book version of *Civilisation*. His series aired only two years after BBC-2 switched to full-color broadcasting and was intended in part as a dramatic introduction to the possibilities of the new technology.

Civilisation came at an opportune time for American public television, appearing in that venue after the BBC had tried in vain to place the series with the commercial networks. The programme was underwritten by Xerox, which also provided \$450,000 for an hour-long promotional programme (produced by the BBC) to drum up business for the multipart broadcast. The nascent Public Broadcasting System received plaudits for carrying the programme, and Clark undoubtedly found his largest audience in the United States. The series’ reach in America was demonstrated by the precedent-setting Harper and Row tie-in book, which became a best-seller despite its \$15 price tag. Thus in addition to promulgating its comforting message about the survival of a high culture besieged for a millennium by the forces of darkness, *Civilisation* had in the United States the serendipitous effect of demonstrating that high-culture television could in fact draw significant numbers of viewers.

CLARK, DICK

U.S. Producer/Media Personality

With a career spanning fifty years, Dick Clark is one of television's most successful entrepreneurs of program production. Often acknowledged more for his youthful appearance than for his business acumen, Clark nevertheless has built an impressive production record since the 1950s with teen dance shows, prime-time programming, television specials, daytime game shows, made-for-television movies, and feature films.

As a teenager, Clark began his career in broadcasting in 1945 in the mailroom of station WRUN in Utica, New York, working his way up to weatherman and then newsman. After graduating from Syracuse University in 1951, Clark moved from radio into television broadcasting at station WKTV in Utica. Here, Clark hosted *Cactus Dick and the Santa Fe Riders*, a country-music program which became the training ground for his later television hosting persona. In 1952, Clark moved to Philadelphia and radio station WFIL as a disc jockey for *Dick Clark's Caravan of Music*. At that time, WFIL was affiliated with a television station which carried *Bandstand*, an afternoon teen dance show. Clark often substituted for Bob Horn, the show's regular host. When Horn was jailed for drunken driving in 1956, Clark took over as permanent host, boosting *Bandstand* into Philadelphia's best-known afternoon show. From that point on, he became a fixture in the American television broadcasting arena.

In 1957, the American Broadcasting Corporation (ABC) picked up the program for its daytime schedule, changing the name to *American Bandstand*. As a cornerstone of the afternoon lineup through 1963, the program was a boon for ABC, an inexpensively produced success for the network's target audience of youthful demographics. From 1963 through 1987, *American Bandstand* ran on a weekly basis to become one of the longest running shows in broadcast television.

In addition to Clark's hosting and producing duties for *American Bandstand*, he began to diversify in the 1950s by moving into the music publishing and recording industries. However, by the end of 1959, the federal government began to scrutinize Clark for a possible conflict between his broadcasting interests and his publishing and recording interests. At that time, payola, the practice of music industry companies paying radio personalities to play new records, was widespread throughout radio broadcasting. Clark, with the cultural scope of his network television program, became the prime target of the Congressional investigation into this illegal activity. Pressured by ABC to make a choice between broadcast and music industry interests, Clark opted for the former, divesting himself of his publishing and recording companies. Even though Clark was cleared of any illegal behavior, he had to testify before the Congressional Committee on payola practices in 1960.

Dick Clark

Photo courtesy of Dick Clark Productions, Inc.

Given the present state of cross-corporate links among the recording, broadcasting, cable and film industries, Clark's persecution would be highly unlikely now. Indeed, even at the time of the payola scandals, the networks and film studios, such as ABC and Disney, were already inextricably connected with program production, broadcasting and profits. In retrospect, Clark's problems stemmed as much from his embrace of a somewhat raucous, interracial youth culture and his involvement in the conflict between ASCAP, representing the old guard of the music publishing business, and BMI, representing the new breed of rock and roll songwriters.

A somewhat tarnished reputation did not hinder Clark's further success in the area of broadcast programming and film production with Dick Clark Productions (DCP). DCP produced *Where the Action Is*, another daily teenage music show, during the late 1960s, as well as feature exploitation films such *Psych-Out*, *The Savage Seven* and *Killers Three*. At this time, Clark also moved into the game show arena with *Missing Links* and *The Object Is*, culminating in the late 1970s with *The \$25,000 Pyramid*.

In addition, DCP produced *Elvis*, *Murder in Texas*, and *The Woman Who Willed a Miracle*, made-for-television

movies which garnered impressive audience ratings. The latter won an Emmy Award. On a more low-brow level, DCP also introduced *Bloopers and Practical Jokes*, another inexpensive, but extremely popular recurring television special. Clark also produces award shows, the *American Awards* and *The Golden Globe Awards*.

Often criticized for the lack of quality in DCP programs, Clark points to the networks and the audiences as the index of that quality. He gives them what they want. In an interview in *Newsweek* magazine in 1986, Clark points out, "If I were given the assignment of doing a classical-music hour for PBS, it would be exquisite and beautifully done." Despite the boyish good looks and charm that are the identifying characteristics of this American icon, it is Clark's economically efficient business savvy and his uncanny ability to measure the American public's cultural mood that have been his most important assets in television broadcasting.

—Rodney A. Buxton

DICK CLARK (Richard Wagstaff Clark). Born in Mt. Vernon, New York, U.S.A., 30 November 1929. Graduated from Syracuse University, 1951. Married: 1) Barbara Mallery, 1952 (divorced, 1961); child: Richard, Jr.; 2) Loretta Martin, 1962 (divorced, 1971); children: Duane and Cindy; 3) Karen Wigton, 1977. Announcer, station WRUN, Utica, New York, 1945–1950; staff announcer, station WOLF, Syracuse, New York, 1950; announcer, WRUN, 1951; announcer, station WKTV, Utica, 1951; announcer, station WFIL, Philadelphia, 1952; host, *American Bandstand*, 1956–89; formed Dick Clark Productions, 1956, producing more than 7,500 hours of television programming, including more than 30 series and 250 specials, and more than 20 movies for theatrical release and television. Founder: Dick Clark Media Archives. Inductee: Hollywood Walk of Fame, 1976; Broadcasting Magazine Hall of Fame, 1992; Rock 'n' Roll Hall of Fame, 1993; Academy of Television Arts and Sciences Hall of Fame, 1993. Recipient: Emmy Awards, 1979, 1983, 1985, 1986, and Daytime Emmy, Lifetime Achievement Award, 1994; MTV Award, 1987; Grammy National Trustees Award, 1990; named International Person of Year, NAPTE, 1990; Distinguished Service Award, National Association of Broadcasting, 1991; American D.J. Association, Lifetime Achievement Award, 1995; Person of the Year, Philadelphia Advertising Club. Address: Dick Clark Productions, 3003 West Olive Avenue, Burbank, California 91510-7811, U.S.A.

CLARKSON, ADRIENNE

Canadian Television Personality

Adrienne Clarkson has been a television personality and major cultural force in Canada for some twenty-five years. She began her career in broadcasting in 1965, as a

book reviewer on CBC-TV. She then became interviewer and host of the long-running CBC daytime magazine show *Take Thirty*. After ten years there, she spent seven years as

host of *The Fifth Estate*, another long-running magazine program, this one in prime time.

In 1982 Clarkson was appointed agent general for Ontario in France, a high-level government position in which she promoted the province and acted as a cultural liaison between the two countries. When she returned to Canada in 1987, she became president and publisher of McClelland and Stewart, one of Canada's most prestigious publishing firms, where she still maintains her own imprint—"Adrienne Clarkson Books." At the same time, she resumed her work in television as host and executive producer of her own CBC program—*Adrienne Clarkson's Summer Festival*—in 1988. Its successor, *Adrienne Clarkson Presents*, is a prime-time cultural affairs series on which Clarkson offers profiles of Canadian and international figures from the worlds of opera, ballet, folk-singing, and the other arts.

Despite the variety of her work in journalism, news, the arts, and cultural policy, Clarkson is perceived as an elitist. For twelve years, she has been lampooned by Canadian comics such as the *Royal Canadian AirFarce* and *Double Exposure*. In one skit, a haughty, modulated voice introduces itself, "I'M Adrienne Clarkson...and YOU'RE not..." Because her most recent programs have been arts-oriented and she has been involved in arts activities and posts of distinction, she is seen as having limited commercial appeal. Indeed, like most arts programs, hers do not garner high ratings but are highly regarded by critics.

Clarkson has won numerous television awards, including three Association of Canadian Television and Radio Artists (ACTRA) awards for *Take Thirty* and *The Fifth Estate*. In 1993, she was the recipient of a Gemini Award (which succeeded the ACTRAs as the national television awards) for Best Host in a Light Information, Variety, or Performing Arts Program for *Adrienne Clarkson Presents*.

In 1992 Clarkson wrote, produced and directed her first film, a full-length drama/documentary for television, called *Artemisia*, about the Seventeenth-century Italian painter, Artemisia Gentileschi, whose rape by an artist friend of her father's informed her work. Clarkson was passionately involved in her production, which was premiered at the 1992 Toronto International Film Festival and was then aired on Clarkson's series.

—Janice Kaye

ADRIENNE CLARKSON. Born in Hong Kong, 10 February 1939. Educated at Trinity College; University of Toronto, B.A. 1960, M.A. 1962; Sorbonne, Paris, France, 1963–64. Lecturer, University of Toronto, 1964–65; host and interviewer, *Take Thirty*, 1965–75; host, *Adrienne at Large*, 1975; host, *The Fifth Estate*, 1975–82; appointed agent general, France, 1982–87; producer and host of her own TV programs, since 1988; president and publisher, McClelland and

CLEARANCE

U.S. Broadcasting Policy

The term clearance, as applied in the context of American broadcasting, refers to the acceptance, by a local station, of a program provided by a broadcasting network or a supplier of syndicated programming. Ideally, an affiliate will carry a program when the network specifies. The number of clearances determines the potential audience size of a program. Networks hope to clear their programs with as many stations as possible. This will ensure greater advertising revenues. Clearance of a network program by an affiliate is thus crucial to the network's profitability. Likewise, affiliates who frequently reject network offerings risk their survivability if they are dropped by the network. Networks provide programming sure to compete successfully with programs provided by the other local stations. Moreover, the networks compensate affiliates to carry their programs. The practice of program clearance best illustrates the symbiotic nature of the network/affiliate relationship, a relationship established in law as well as in economic practice.

The Federal Communications Commission (FCC) recognized the problems inherent in "chain broadcasting" as early as 1943 when the Supreme Court attempted to clarify the role of networks as program suppliers in the "Network Case" (*NBC, Inc. et al. v. United States et al.*). To further prevent anti-competitive practices, the FCC implemented rules such as clearance and the Prime Time Access Rule. These regulations grant programming autonomy to affiliate stations, while in practice the stations are dependent on other program suppliers.

Clearances vary by daypart. Prime-time commands the highest number of clearances by affiliates. The stations can charge high rates for advertising time during top-rated network programs. Low-rated programs run a greater risk of being rejected by stations. Because more spots are available in a film, for example, it might be more lucrative for an affiliate to substitute it for the low-rated network offering.

An affiliate station will also sometimes reject a prime-time network program because of controversial subject mat-

ter. In order to appease the tastes and attitudes of their local communities, affiliates may not air particular programs, despite their potential for high ratings. In 1993, for example, the program *NYPD Blue* was rejected by 57 ABC affiliates before it aired because of objectionable material. It is an affiliate's legal right to reject any program in an attempt to serve the public interest. The choice to reject a program may prove most profitable to independent stations which opt to carry the "taboo" programs.

Preemption occurs when an affiliate cancels a program it has agreed to carry, or when a network interrupts a "cleared" program to broadcast a special event or breaking news story. Because of lost advertising time such preemptions can prove costly to both parties.

Affiliates give low clearances to network programs during morning, late afternoon, early evening and late night dayparts. During these times the predominant source of programming is syndicated material, often consisting of older network program with proven audience appeal.

Clearance of a syndicated program involves acceptance through purchase. To be truly profitable syndicators must "clear" (sell) a program in enough markets to represent at least 70% of all television households.

CLEESE, JOHN

British Actor

John Cleese belongs to a tradition of university humour which has supplied a recognisable strand of comedy to British television and radio from *Beyond the Fringe* in the late 1950s to *Blackadder* and beyond. The brilliance of his writing, the dominant nature of his performances (due largely to his extraordinary height), and the variety of his successes have made him undoubtedly the most influential figure of this group. He has always shown an unerring instinct for how far to go with any one project or idea, with the result that there is little in his large body of work that

could be counted as failure, though he is also highly critical, in hindsight, of anything he regards as not having worked precisely as he might have wanted it to.

Following the success of Cambridge Circus, the Cambridge University Footlights Club revue to which he contributed and which toured Britain and the world between 1963 and 1965, Cleese made his first big impact on television by writing and performing sketches on David Frost's *The Frost Report* (BBC). (He had already written material for *That Was the Week That Was*, the seminal BBC satire show

which had launched Frost's career). Fellow performers included Ronnie Barker and Ronnie Corbett, with whom he created the classic "class" sketches, and the show won the Golden Rose of Montreux in 1966. Cleese's written contributions were created in collaboration with his writing partner, Graham Chapman, then still a medical student at Cambridge. At the same time Cleese was also writing and performing in the cult BBC radio series *I'm Sorry, I'll Read That Again*, together with Cambridge Circus colleagues like Tim Brooke-Taylor and Bill Oddie. There were a total of eight series of this show between 1964 and 1973, probably the only thing Cleese ever over-did.

Cleese was now much in demand and his next major project, produced by David Frost for Rediffusion, was *At Last the 1948 Show*, a sketch-comedy series written and performed in collaboration with Chapman, Brooke-Taylor and Marty Feldman, two series of which were transmitted in 1967. Although not seen throughout the country, the show gained a cult following for the brilliance and unpredictability of its comedy and the innovative nature of its structure, in which the show was linked by a dumb blonde called the Lovely Aimi MacDonald. Cleese was now developing a full range of comic personae, including manic bullies, unreliable authority figures (especially lawyers and government ministers) and repressed Englishmen, all of which were later to gel in Basil Fawlty. The quality of invention in *At Last the 1948 Show* was consistently high and it gave the world of comedy one of its most enduring pieces—the "Four Yorkshiremen" sketch. It was also the recognised precursor to the series which remains, in spite of all his own retrospective criticism, Cleese's most significant contribution to television comedy, *Monty Python's Flying Circus* (BBC).

Beginning in 1969, *Monty Python's Flying Circus* teamed Cleese and Chapman with three other university comedians, Michael Palin and Terry Jones, who wrote together and had also contributed to *The Frost Report*, and Eric Idle. The team was completed by American animator Terry Gilliam. Four series were made between 1969 and 1974, though Cleese did not appear in the fourth, contributing only as a writer. This was probably the main reason for the comparative failure of the final series, because Cleese was clearly the dominant figure in the *Python* team and appeared in the sketches which made the greatest impact, thus becoming the figure most associated with the series in the public mind.

Two sketches in particular stand out in this regard: the "Dead Parrot" sketch, in which Cleese returns a defective pet bird to the shop where he bought it; and the "Ministry of Silly Walks" sketch, in which Cleese used his angular figure to startling effect. He was to be constantly exasperated in future years by people asking him to "do the silly walk". In *At Last the 1948 Show*, Cleese's appearances with Marty Feldman have a particular resonance. In *Monty Python's Flying Circus* his work with Michael Palin was similarly memorable.

John Cleese
Photo courtesy of John Cleese

The overall impact and influence of *Monty Python's Flying Circus* is difficult to overestimate. The intricate flow of each show, the abandonment of the traditional "punch line" to a sketch, the knowing experimentation with the medium and the general air of silliness combined with obscure intellectualism set a standard, one which comedians thereafter found hard to get away from. Producers like John Lloyd and writer-performers like Ben Elton acknowledge the enormous influence of *Monty Python's Flying Circus* on their own work. The word "pythonesque" entered the language, being used to describe any kind of bizarre juxtaposition.

Although there were no more series of *Monty Python* on television after 1974, largely because Cleese had had enough, the team continued to come together occasionally to make feature films, of which *Monty Python's Life of Brian* was the best and most controversial, given its religious theme. Cleese's discussion of the film with religious leaders on the chat show *Friday Night...Saturday Morning* in 1979 remains a television moment to cherish. The untimely death of Graham Chapman from cancer in 1989 put an end to the team for good.

By then, Cleese, having altered the world of sketch comedy for ever, had done the same for the sitcom. He was no stranger to sitcom, having written episodes of *Doctor in Charge*, together with Chapman. For *Fawlty Towers* he teamed up with his American wife Connie Booth to create

a comedy of character and incident which is almost faultless in its construction. The "situation" is a small hotel in the genteel English resort of Torquay, run by Basil Fawlty (Cleeese), his wife Sybil (Prunella Scales), the maid Polly (Booth), and the incompetent Spanish waiter Manuel (Andrew Sachs). Each episode is so packed with comic situations and complex plot developments, often bordering on farce, that it is no surprise that there were, in all, only twelve episodes ever made, in two series of six each from 1975 and 1979. Basil Fawlty is the ultimate Cleeese creation—a manic, snobbish, repressed English stereotype with a talent for disaster, whether it be trying to dispose of the dead body of a guest or coping with a party of German visitors.

Cleeese's television work after *Fawlty Towers* was sporadic and included the role of Petruchio in Jonathan Miller's production of *The Taming of the Shrew* for the BBC Television Shakespeare series and a guest appearance on the U.S. sitcom *Cheers*, as well as the two funniest *Party Political Broadcasts* (for the Social Democratic Party) ever made. He concentrated more on esoteric projects such as the comic training films he made through his own company, Video Arts, and books on psychotherapy written in collaboration with Dr. Robyn Skinner. He also pursued his work in feature films, enjoying great success with *A Fish Called Wanda*, in which he returned to one of his favourite subjects—the differences between English and American characters—already explored in one memorable episode of *Fawlty Towers*. The film also saw him play the role of a lawyer—the profession he had lampooned throughout his career and which he had originally studied to join.

—Steve Bryant

JOHN (MARWOOD) CLEESE. Born in Weston-super-Mare, Somerset, England, 27 October 1939. Attended Clifton Sports Academy; Downing College, Cambridge. Married: 1) Connie Booth, 1968 (divorced, 1978), child: Cynthia; 2) Barbara Trentham, 1981 (divorced, 1990), child: Camilla; 3) Alyce Faye Eichelberger, 1992. Appeared in London's West End, and later on Broadway, as member of the Cambridge Footlights company, 1963; first appeared on television in *The Frost Report* and *At Last the 1948 Show*, 1966; leading comedy star in *Monty Python* television series and films, from 1969, and subsequently as television's Basil Fawlty, *Fawlty Towers*; founder and director, Video Arts Ltd, company making industrial training films, 1972–89. LLD, University of St. Andrews. Recipient: Golden Rose of Montreux, 1966; *TV Times* Award for Funniest Man on TV, 1978–79; Emmy Award, 1987; British Academy of Film and Television Arts for Best Actor, 1988. Address: David Wilkinson Associates, 115 Hazlebury Road, London SW6 2LX, England.

CLOSED CAPTIONING

Closed captioning involves the display of subtitles superimposed over a portion of the television picture. These subtitles or captions are created to represent the audio portion of the television signal. While closed captioning was initially developed for the hearing-impaired, it can also be utilized as a teaching device by viewers for whom English is a second language and by children, and even adults, who are learning to read. It can even be used as a convenience device for viewers who mute their TV to take a phone call but activate closed captioning to continue the program dialogue.

The captions are "closed" to the general viewing audience because television producers believe that a continuous display of alphanumeric data across a TV screen is distracting and bothersome to the majority of viewers who are able to following the dialogue aurally. Any viewer can choose to "open" the closed captioning by activating a switch on newer television sets or utilizing a separate decoder with older television sets that do not include the necessary decoder circuitry.

The decoder circuitry is designed to "read" the closed captions embedded in the vertical blanking interval. The vertical blanking interval is that 21-line portion of the 525-line NTSC television signal which does not contain picture information. Various lines are used to carry technical data and one of these lines is specifically reserved for closed captioning.

Closed captioning is not a new idea. The concept was conceived in 1971 by engineers at the National Bureau of Standards. Further development involved WGBH-TV, the Boston public television station, Gallaudet University, the leading university for the hearing-impaired, and the National Technical Institute in Rochester, New York. In 1976, the Federal Communications Commission formerly authorized the use of line 21, the last line of the vertical blanking interval, for this purpose.

Closed captioning received a major boost with the passage of the Television Decoder Circuitry Act of 1990. This law mandated the inclusion of closed-captioned circuitry in every television receiver with a screen of 13 inches or more that was manufactured, assembled, imported, or shipped in interstate commerce beginning 1 July 1993. Most receivers sold prior to that date did not include the circuitry and viewers who wanted

to access closed captions were required to purchase a separate decoder box for approximately \$160.

The National Captioning Institute, an independent, non-profit corporation, worked with engineers to develop an inexpensive electronic chip that could perform the same function as the cumbersome decoder boxes. This chip, if included in every TV receiver, would cost as little as \$5 and this expense would presumably be absorbed into the total production cost of the sets. Citizen groups representing the hearing-impaired lobbied Congress to enact legislation requiring the inclusion of a decoder chip in all receivers. Some opposition from manufacturers groups was voiced during Congressional hearings, but the overwhelming number of those testifying supported the legislation. The bill passed both house and was signed into law on 15 October 1990.

Closed captioning is program dependent and not all programs are captioned. Most network and syndicated programs are captioned, however, and the percentage continues to grow. Locally produced programs are less likely to be captioned since stations lack the technical and financial resources to provide this service. Most cities do have one or more local newscasts with captions. Typically, the cost of this service is underwritten by a local health care provider or a charitable foundation.

Captions appear in either "roll-up" or "pop-up" fashion. The captions roll up the screen if the program is being aired live. Live captioning is done by skilled professionals using court stenographic techniques who can transcribe speech as rapid as 250 words per minute. The lag time between the spoken word and the caption is one to five seconds. The captions are not always word-for-word transcripts, but they do closely approximate the verbal message.

"Pop-up" captions are used for prerecorded programs and for commercials. These captions can be prepared more leisurely and are timed to match the flow of dialogue on the TV screen. Also, an attempt is made to place the caption under the person speaking at the time. In a two-person dialogue, the caption would pop-up on either the left or right half of the screen depending on the position of the speaker. Various icons are used to symbolize sounds; e.g., a musical note is placed next the caption when a person is singing.

The most challenging captions involve live sports coverage since there is no way to anticipate what program

participants will say. Newscasts are less difficult since the same TelePrompTer that cues on-air talent also cues the person preparing the captions.

Since the captions are encoded as part of the electronic signal, a closed captioned program may be transmitted in any form: over-the-air broadcast, satellite, cable, video cassette, or video disc. Programs containing captions are noted with a (CC) following the program title in *TV Guide* and similar listings.

—Norman Felsenthal

CLOSED CIRCUIT TELEVISION

Closed Circuit Television (CCTV) is a television transmission system in which live or prerecorded signals are sent over a closed loop to a finite and predetermined group of receivers, either via coaxial cable or as scrambled radio waves that are unscrambled at the point of reception.

CCTV takes numerous forms and performs functions ranging from image enhancement for the partially-sighted to the transmission of pay-per-view sports broadcasts. Although cable television is technically a form of CCTV the term is generally used to designate TV systems with more specialized applications than broadcast or cable television. These specialized systems are not subject to regulation by the Federal Communications Commission (FCC), though CCTV systems using scrambled radio waves are subject to common carrier tariffs and FCC conditions of service.

CCTV has many industrial and scientific applications, including electron microscopy, medical imaging and robotics, but the term “closed circuit TV” refers most often to security and surveillance camera systems. Other common forms of CCTV include live on-site video displays for special events (e.g. conventions, arena sports, rock concerts); pay-per-view telecasts of sporting events such as championship boxing matches, and “in-house” television channels in hospitals, airports, racetracks, schools, malls, grocery stores, and municipal buildings.

The conception of many of these uses of CCTV technology dates back to the earliest years of television. In the 1930s and 1940s, writers such as *New York Times* columnist Orrin Dunlap predicted that closed circuit TV systems would enhance industry, education, science, and commerce. Dunlap and other writers envisioned CCTV systems for supervising factory workers and for visually coordinating production in different areas of a factory, and anticipated CCTV systems replacing pneumatic tubes in office communications. In the world of science, closed circuit television was heralded as a way of viewing dangerous experiments as they took place; in the sphere of education, CCTV was seen as a way of bringing lessons simultaneously to different groups of students in a school or university.

Many of today’s CCTV systems were first implemented in the postwar years. For example, pay-per-view closed

circuit sports broadcasts can be traced back to a postwar Hollywood invention known as “theater television,” a CCTV system used for viewing sports in movie theaters that became a lucrative source of ancillary revenue for boxing promoters in the fifties, sixties, and seventies. With the growth of cable television and satellite delivery systems CCTV telecasts have become an integral part of the business of sports today, not only in the boxing industry but also in horseracing, baseball, and golf.

Educational TV and video advertising in retail stores are other CCTV applications that originate in the postwar period. The controversial Channel One, a now defunct commercial CCTV channel for schools founded in the 1980s, was only the latest of several CCTV experiments in education dating back to the 1950s. Today’s “on-site” media industry, which places video advertising monitors in grocery stores, shopping malls, and other retail sites, dates back to a series of tests involving closed circuit advertising in department stores that took place in the 1940s.

A closed circuit television viewing set-up

Although all of these applications of CCTV are fairly common, perhaps the most pervasive use of CCTV is for surveillance. Security cameras are now an ubiquitous feature of many institutions and places, from the corrections facility to the convenience store. In prisons, CCTV systems reduce the costs of staffing and operating observation towers and make it possible to maintain a constant watch on all areas of the facility. CCTV is also used as a means of monitoring performance in the workplace; in 1992, according to an article in *Personnel Journal*, there were ten million employees in the United States whose work is monitored via electronic security systems. Retail stores often install CCTV cameras as a safeguard against theft and robbery, a practice which municipal authorities have adopted as a way of curtailing crime in public housing and even on city streets. In the United Kingdom, for example, police in several cities have installed closed circuit cameras in busy public areas.

These uses of CCTV technology are not neutral; indeed, they are often a matter of some controversy. These controversies center on the status of legal evidence acquired via closed circuit TV, and on the Orwellian implications of constant perceived surveillance. Police use of CCTV security cameras in Britain has led to charges of civil liberties violations. A 1978 survey on the topic of CCTV in the workplace found that 77% of employers interviewed supported the use of CCTV on the job. However, it also found that a majority of employees felt that CCTV in the workplace constituted an unwarranted intrusion, and favored the passage of laws prohibiting such surveillance. Ironically, the ascendancy of more sophisticated electronic employee surveillance technologies such as keystroke monitoring of information workers has rendered CCTV somewhat obsolete as a visual management technology.

In addition to these civil liberties issues, another controversy surrounding security cameras concerns their effectiveness in crime prevention. The purpose of CCTV surveillance is usually deterrence of, rather than intervention in, criminal acts. Many security cameras go unmonitored and are thus ineffective as a means of halting crimes in progress. This fact was forcefully demonstrated by a highly publicized juvenile murder case in England in 1992. After the discovery of the victim's body and the apprehension of the perpetrators, police discovered that the initial abduction had been recorded by a shopping center's security cameras.

Another controversy surrounding CCTV is its use in the courtroom. In 1985, the state of California passed a law allowing children to testify via CCTV in child molestation cases. In response to a similar ruling, the Illinois Supreme Court ruled that this method of testimony was unconstitutional, as it violated a defendant's right to confront his/her accuser.

Although this particular case reflects a concern that the camera can somehow "lie" and that it is not equivalent to face-to-face interaction, the latest trends in CCTV applications seem to rely precisely on the equation of closed circuit vision with actual presence. New technological developments which seem to base themselves upon this premise

include "Teleconferencing," an audiovisual communications form designed to allow individuals in different places to interact via CCTV hookups, and "Virtual Reality," an imaging system which uses CCTV "goggles" in conjunction with advanced computer graphics and input devices to create the illusion of a three-dimensional, interactive environment for its viewer.

COCK, GERALD

British Broadcasting Executive and Producer

Gerald Cock was appointed by the BBC in 1935 to run its first Television Service (under the title director of television). At the time many BBC executives were skeptical about the value and potential of the new medium and Cock's achievement during his short reign—the pre-World War II service began in November 1936 and was closed in September 1939—was to push for the expansion of the television service in the face of the BBC's reluctance to adequately fund what became known as the "Cinderella Service". Unlike many senior BBC executives he regarded television as a natural successor to radio, rather than as a luxury or novelty.

Before joining the BBC during the 1920s Cock spent a colourful youth in the Americas, gold mining and ranching in Alaska, Utah and Mexico; he also worked as an extra in Hollywood. He started working for BBC radio during the 1920s and was appointed director of the Outside Broadcasts Department in 1925, where he encouraged the deployment of new technology and the development of new programme forms, whilst often dealing with a competitive press.

The Selsdon Report of 1935 recommended that the BBC be given responsibility for the development of a regular high-definition television service; at the time television's potential as a medium of live immediacy meant that Cock's experience in the Outside Broadcasts Department—which aspired to be topical and contemporary—made him an obvious choice to head the new division.

The service began regular transmissions in 1936 from Alexandra Palace. Despite few staff and two small studios, Cock was able to build up an effective and successful repertoire of programme achievements—including the live televising of the Coronation of George VI, tennis from Wimbledon, and even a programme where Cock himself answered viewers' phoned-in questions. In fact every type of programme that was to become popular after the war was already tried out during these prewar years, in part the result of the freedom to experiment that Cock allowed his producers.

The programming policy of the prewar service was overseen by Cock. He instigated a policy of "variety and balance" which was coordinated through Cecil Madden, programme organiser and chief liaison with the producers. This policy was congruent with Cock's realisation that television's main attraction was its advantage of allowing the viewer to "see at a distance" contemporary events. For him, this included not only the relay of current showbiz personalities and sporting events but also early television drama. As he put it in a 1939 *Radio Times* article:

Television is essentially a medium for topicalities . . . An original play or specially devised television production might be a weekly feature. If a National Theatre were in being, close co-operation between it and the BBC might have solved an extremely difficult problem. Excerpts from plays during their normal runs, televised from the studio or direct from the stage, with

perhaps a complete play at the end of its run would have attractive possibilities as part of a review of the nation's entertainment activities. But, in my view television is from its very nature more suitable for the dissemination of all kinds of information than for entertainment.

Cock's view of television is clearly inflected by his previous career as director of Outside Broadcasts for BBC radio, where the broadcasts were conceived as informative and enabling rather than entertainment; hence, the broadcast of "scenes" from current plays, congruent with Cock's overall attitude, served as informative views on the nature of contemporary drama and performance, and also providing a "what's on" function. Cock's own attitude towards television's function was as a relay service, its key benefits and attractions provided by the Outside Broadcast. For Cock, therefore, there was no need for large studios to house spectacular drama productions. However, the "Theatre Parade" relay of "scenes" from the West End theatre was far less popular than the studio production of complete plays. This meant that the demands on studio time and space were heavy, demands which were exacerbated as the ambitions of producers and the length of programmes increased.

Cock's vision for a topical television service was also undermined by underfunding and a general distrust of television by sports promoters and theatre managers; contrary to received history outside broadcasts of West End plays and scenes from plays were the exception after 1937, and the prewar television service largely consisted of what would later be considered studio-based light entertainment.

Unfortunately—and despite Cock's determined enthusiasm—current affairs television was not developed until the mid-1950s, and BBC Television News in vision was not introduced until 1954 (this was because senior executives assumed that seeing the news announcer in vision would distract the viewer from important information).

However, Cock himself is indirectly responsible for the gradual development of current affairs television. When the television service was closed in 1939 Cock went on to work as North American representative for the BBC in New York and California. He later gave evidence to the Hankey Committee, appointed to consider the resurrection of the television service after the war, and he wrote a key 1945 document, "Report on the Conditions for a Post-War Television Service", which stressed that news and current affairs should be "a main feature of the new service". However, senior BBC management were to disregard Cock's suggestions for a further ten years. By the late 1940s Cock was seriously ill. In 1948 a young radio producer, Grace Wyndham Goldie, had been offered a post in the television service; at the time she was working for the prestigious and highbrow Third Programme. Despite discouragement from two senior radio executives, it was Cock who encouraged her to work in television. Goldie was to become the single most important

personality in the development of British current affairs television, overseeing the development of programmes such as *Panorama* and *Tonight*—precisely the kind of programmes that Gerald Cock had envisaged as the *sine qua non* of television programming.

—Jason J. Jacobs

GERALD COCK. Born in 1887. Educated at Tonbridge School; Seaford Park. Commissioned Royal Engineers, BEF, France, and Belgium, 1915–20; served as captain, 1917. Traveled in United States, British Columbia, Mexico, working various jobs, including gold mining and ranching, 1909–15; returned to United Kingdom, 1915; conducted business in London,

1920–1924; first director of Outside Broadcasts, BBC, 1925; appointed first director of television, 1935; organized and directed first television service to be established in Europe, 1936–39; served as North American representative, BBC, 1940–41; Pacific Coast representative, BBC, 1942–45; retired, 1946. Member: Reform Club; Royal Victorian Order, 1935. Died 10 November 1973.

CODCO

Canadian Comedy Revue

CODCO, for Cod Company, is a pun on this theatre troupe’s origins. Founded as a theatrical revue in the early 1970s in the maritime island-province of Newfoundland, CODCO draws on the province’s cultural history of self-deprecating “Newfie” humour, frequently focusing on the cod fishing industry. From these roots, CODCO subsequently developed a half-hour, television comedy program of the same name, for national broadcast, produced in the Canadian Broadcasting Corporation’s regional studio in Halifax, Nova Scotia, and on location in St. John’s, Newfoundland.

Over six seasons of production history on the CBC, CODCO underwent two marked changes without losing its satirical edge or drive to endure in another form. Original CODCO member Andy Jones left the cast in 1991 to pursue solo theatrical projects. Then, in 1993, just months before Tommy Sexton’s death from AIDS-related causes and Greg Malone’s departure, CODCO went off the air. The death of the boyish, talented Sexton was a subject of national news and reflection on the role of humour in the television and cultural life of Canada. The remaining core members of CODCO, Mary Walsh and Cathy Jones, teamed up with two new members, maritime writers-actors Rick Mercer and Greg Thomey, and returned in the 1993–94 season in a half-hour newsmagazine satire, *This Hour Has 22 Minutes*. This foursome also deftly integrated their wacky *22 Minutes* characters to host the Juno Awards (1995), a television special celebrating Canadian popular music.

CODCO’s pointed satire takes aim at regional differences, national assumptions, politics, sexism, gender roles, gay codes, and television genres. The general format of CODCO’s satire is sketch comedy, with sets, costumes, and make-up that replicate the sources under attack. The CODCO members’ theatrical roots trained them to shape detailed caricatures, with nuances that dismantle not only the conventions of the source personas and genres but also the ideologies of a medium colonized by commercialism. Spun from the collective writing and acting skills of the

members, and ably directed by the experienced John Blanchard and David Acoma, the CODCO members’ sketches show the tightness of well rehearsed scene studies, rather than the loose burlesque of *Saturday Night Live*.

All four members cross-dress, and their ability to traverse sex roles plays to CODCO’s evident interest in social transgression and critique. Cathy Jones and Mary Walsh portray a variety of males, from macho through wimpy, along with their *femme fatales*, “loud feminists,” and pesky middle-aged, bingo-bent matrons. The sketches featuring the homely, dateless “Friday Night Girls” satirize the isolation of women in Newfoundland’s island life. Walsh’s Dakey Dunn, “Male Correspondent,” replete with gold chain, hairy chest, cigarette and beer, might explain the dilemma of the “Friday Night Girls”; in one monologue, Dakey admits to not completing high school and, in crude English, lays out a machismo view of economic and cultural matters as if he were in command of Newfiedom. Greg Malone’s Queen Elizabeth and his and Tommy Sexton’s gay queens share an excessive style and gay-rights politics that only satire can contain on broadcast television. In 1992, Sexton and Malone collaborated with musical theater satirist, John Gray, on a CBC special called *The National Doubt*, which features two mediaeval characters (played by Sexton and Malone) crossing Canada to take the nationalist pulse amid the regional climate that had developed since the Expo’ 67 celebrations 25 years earlier in Montreal.

Ivan Fecan, once the CBC’s “wunderkind” and former director of television programming, nurtured CODCO into a place on the network, first in a late-night slot and later in prime time. Placed back to back with *Kids in the Hall* to comprise an hour of “adult” programming (after 9:00 P.M.), CODCO’s satiric authority was enhanced by this yoking with the *Kids*’ misbehavior and, in context, with the juxtaposition to the CBC’s flagship national newscast, *The National* (later renamed *Primetime News*).

CODCO's transformation into *This Hour Has 22 Minutes* in the CBC's 1993–94 season brought Mary Walsh into her own as head writer and actor, working in collaboration with Cathy Jones, Greg Thomey, Rick Mercer and other writers. The newsmagazine format suits the topical satire of *22 Minutes*, whose title recalls *This Hours Has 7 Days*, a landmark CBC public affairs television program of the 1960s. Dinah Christie sang satirical songs on political and social issues of the day, providing an ironic and entertaining context for the interviews by *7 Days'* hosts-journalists (including the young Pierre Trudeau and Rene Levesque). By its very title, *This Hour Has 22 Minutes* alludes to the shrinkage of content and the prestige of the network since the era of *7 Days*. *22 Minutes'* parody of up-to-the minute news of Canadian, American, and international scope obeys the conventions of the contemporary newscast or newsmagazine, but its inventive satire comes from the members' understanding of the unspoken concerns underlying the news, the CBC, the television medium, and the Canadian culture.

As well as playing ever-smiling anchor-journalists, the cast of four portrays a range of continuing and new characters, including obsessive columnists, editorialists of the right and the left, and bizarre interview subjects. Mary Walsh's Marg Delahunty, a self-styled "commentator" with a tacky sense of dress, rails against the codes and inequities of patriarchal culture. Cathy Jones' Babe Bennet, "sexual affairs correspondent," looks and speaks like a hybrid of the late gossip columnist Hedda Hopper and a classic Hollywood screen star of the 1940s. Wearing a persistent smile, suit, hat and white gloves, the "femme" Babe glides through her mansion and verbally skewers men in power (institutional figures such as judges familiar from news items) for bizarre behavior against women. Rick Mercer and Greg Thomey's "The Right Answer" features a fast-talking pair of right-wing "media pundits," Stewart Steed and Steve Steel, who bang a desk bell to punctuate their spitting exchange of prejudices on social and political issues. The pair mimics the rhetoric of shock-talk radio and television figures, with Mercer's character's trademark suspenders specifically suggesting the dress code of the verbose Larry King. As television commen-

tators with licence to pontificate on any subject, Steed and Steel embody media style run amuck.

Television and its cultivation of media personas are under chronic scrutiny in the manic monologues of *22 Minutes*, often delivered distortingly close to the camera lens. The pace and bite of the satire are reminiscent of the wild flights of British television's *Monty Python's Flying Circus* and, later, *Spitting Image*. The frequently employed "in your face" camera technique literalizes the aggression of tabloid TV, and so confronts the unquestioning television viewer by the act of critiquing the uses of the television medium.

Like *CODCO*, *This Hour Has 22 Minutes* is risk-taking television comedy in that it tests its own satiric boundaries and is not guided by social decorum or by television's laugh meter. Nor does it play up or down to its television or studio audiences—or to other, live audiences. (*22 Minutes* is taped before a studio audience.)

COE, FRED

U.S. Producer

A prolific television, theater, and film producer and director, Fred Coe is closely identified with the "golden age" of live television. His television career started in 1945, when he became production manager for NBC in New York and worked with Worthington Miner on *Studio One*. In 1948, Coe began production of NBC's *Philco Television Playhouse*, a live dramatic-anthology series broadcast on Sunday evenings, from 9:00 to 10:00. From 1951 to 1955, *Philco Television Playhouse* alternated

with *Goodyear Television Playhouse* and became one of the top-rated programs of the early 1950s. Live programming of this type was used by NBC's programming chief Pat Weaver to differentiate television from motion pictures, to strengthen ties with its affiliates, and to enlarge the audience for TV sets (manufactured by NBC's parent company, RCA).

Coe was noted for using unknown writers and directors who were able to create works tailored for the new

medium: the writers included Paddy Chayefsky, Tad Mosel, Horton Foote, Gore Vidal, J.P. Miller, and Robert Alan Arthur; and the directors included Delbert Mann, Arthur Penn, and Vincent Donehue. Setting anthology drama on a course that established it as the most prestigious format on live television, Coe relied at first on TV adaptations of Broadway plays and musicals, then on literary classics, biographies, and old Hollywood movies, and finally on original television drama. The Philco series opened on 3 October 1948 with a one-hour version of George S. Kaufman and Edna Ferber's *Dinner at Eight*. In 1952, Coe produced the first play of the first playwright to achieve fame in television. The playwright was Paddy Chayefsky, and the play, *Holiday Song*. In 1953, Coe produced Chayefsky's *Marty* with Rod Steiger in the title role. Directed by Delbert Mann, *Marty* became the most popular anthology drama of the period, winning many awards and even initiating a Hollywood production trend of films based on TV drama. *Marty* the film, produced by Harold Hecht and released through United Artists in 1955, won Academy Awards for Best Picture, Best Actor (Ernest Borgnine), Direction (Delbert Mann), and Original Screenplay (Paddy Chayefsky). Other notable Coe productions included Chayefsky's *The Bachelor Party*, Horton Foote's *The Trip to the Bountiful*, and Tad Mosel's *Other People's Houses*. Productions such as these earned Coe and the *Philco Playhouse* the George Foster Peabody Award in 1954 and many other honors.

In 1954, Coe began producing *Producer's Showcase*, a 90-minute anthology series that aired every fourth Monday for three seasons. One aim of the series was to broadcast expensive color spectaculars to promote RCA's new color television system. The best example of this strategy was *Peter Pan*, a successful Broadway production of Sir James M. Barrie's fantasy which Coe brought to television almost intact. Starring Mary Martin, *Peter Pan* was broadcast on 7 March 1955 and was viewed by an estimated 65-75 million people, becoming the highest-rated show in TV's brief history. As a result of this memorable production and adaptations of such plays as Sherwood Anderson's *The Petrified Forest* (1955), which starred Humphrey Bogart and Lauren Bacall in their TV dramatic debuts, and Thornton Wilder's *Our Town*, which starred Paul Newman and Eva Marie Saint, Coe was awarded an Emmy for Best Producer of a Live Series in 1955.

NBC's programming strategies radically changed after 1956 to rely on the routines of series programming produced by West Coast suppliers on film. In 1957, Coe departed the network for CBS, where he produced *Playhouse 90* for three seasons. Among the best productions of the series were *Days of Wine and Roses* (1958), *The Plot to Kill Stalin* (1958), and *For Whom the Bell Tolls* (1959). Thereafter, Coe worked sporadically in television, producing specials for all three networks in the late 1960s and 1970s, and producing and directing several episodes of *The Adams Chronicles* for PBS in 1976.

Fred Coe

Photo courtesy of Wisconsin Center for Film and Theater Research

Anticipating the decline of live anthology drama on television, Coe brought anthology drama to Broadway by producing theatrical versions of TV plays by TV writers, among them William Gibson's *Two for the Seesaw* (1958) and *The Miracle Worker* (1959), Tad Mosel's *All the Way Home* (1960), and Herb Gardner's *A Thousand Clowns* (1962). Coe even converted two TV plays into films—*The Miracle Worker* (1962) and *A Thousand Clowns* (1966). Coe's legacy is a tradition of programming demonstrating television's unique aspects as a medium of dramatic expression.

COLE, GEORGE

British Actor

George Cole, in his alter ego of Arthur Daley in the long-running series *Minder*, is to countless British viewers the quintessence of the Cockney spiv, a mischief-causing small businessman always with an eye to the main chance and often caught treading on the toes of the law. Endearingly convinced against all the evidence of his own cunning, and equally often driven to distraction by the comical collapse of his schemes, the irrepressible Daley, with his salesman's patter and naive pretensions as a big-time wheeler and dealer, became an icon for the 1980s, representing the materialist sub-yuppie culture that was fostered under the capitalist leadership of Margaret Thatcher. Every episode of the comedy series, which co-starred Dennis Waterman as his dimwitted but resolutely honest bodyguard-cum-assistant Terry McCann, featured the launch of another of Daley's shady schemes, or "nice little earners" as he called them, and culminated in the hapless secondhand car salesman and would-be executive being exposed for some fiddle or other and having to be rescued from arrest, physical assault, or worse by his long-suffering minder. Other troubles in Daley's life, from which he took refuge in his drinking club, the Winchester, came from "Er indoors", the formidable Mrs. Daley, who was never seen.

STAGE

Two for the Seesaw; *A Trip to Bountiful*, *The Miracle Worker*; *All the Way Home* (co-producer); *A Thousand Clowns* (co-producer and director).

Minder, written by Leon Griffiths and filmed in some of the less picturesque parts of London, was not an instant success. The first two series failed to convince audiences, who welcomed Cole but were confused at the sight of tough-guy Dennis Waterman, fresh from the police series *The Sweeney*, taking a comic part. Thames Television persevered, however, and the public were gradually won over, the two stars becoming the highest-paid television actors in Britain. After six series, each billed as the last, Waterman finally withdrew to concentrate on other work, but Cole continued just a little longer, now with his nephew Ray (played by Gary Webster) as Terry's replacement.

The part of Arthur Daley was perfect for Cole, who had in fact been playing variations of the character for years on both the large and small screen (he made his film debut as early as 1941). He had been schooled in the finer points of comic acting as the protégé of the film comedian Alistair Sim and as a young man made a memorable impression as the cockney spiv Flash Harry, an embryonic Daley figure complete with funny walk, loud suits, catchy signature tune, and suitcase bulging with dodgy merchandise, in the *Saint Trinian's* films of the 1950s. His television career took off

in 1960, when he was seen as David Bliss in *A Life of Bliss*, which had started out as a radio series. Subsequently he continued to be associated chiefly with similar cockney roles, as in *A Man of Our Times*, in which he played the manager of a small furniture store, though in reality he has played a much wider variety of parts—including an aspiring playwright in *Don't Forget to Write*, a dedicated communist in *Comrade Dad*, the aristocratic and much put-upon Sir Giles Lynchwood in Tom Sharpe's hilarious *Blott on the Landscape*, and Henry Root in *Root Into Europe*, among other assorted characters.

It is, however, as the ever-likable if sometimes unscrupulous Arthur Daley that George Cole, an Officer of the British Empire, is best known. Such is his identification with the part that the actor reports that he frequently has trouble getting people to accept his cheques, fearing that they will not be honoured by the banks because of his on-screen reputation. The extensive use of cockney rhyming slang by Daley in the 70-odd episodes that were made of *Minder* is also said, incidentally, to have done much to keep this linguistic oddity from extinction.

—David Pickering

GEORGE COLE. Born in Tooting, London, England, 22 April 1925. Attended Surrey County Council Secondary School, Morden. Married: 1) Eileen Moore, 1954 (divorced, 1966); one son and one daughter; 2) Penelope Morrell, 1967; children: Tara and Toby. Served in Royal Air Force, 1943–7. Began career as stage actor in *The White Horse Inn* on tour, 1939; discovered by Alistair Sim in 1940 to play a cockney evacuee in the film *Cottage to Let*, 1941; subsequently specialized in chirpy cockney roles, notably Flash Harry in the *St. Trinian's* films; established reputation on television with the role of David Bliss in *A Life of Bliss*, 1960–61; best-known to television audiences as Arthur Daley in the long-running series *Minder*. Order of the British Empire, 1992. Address: Joy Jameson, 19 The Plaza, 535 King's Road, London SW10 0SZ, England.

THE COLGATE COMEDY HOUR

U.S. Variety Show

For approximately five-and-a-half seasons, NBC's *Colgate Comedy Hour* presented big budget musical variety television as head-to-head competition for *Ed Sullivan's Toast of the Town* on CBS. Featuring the top names in vaudeville, theater, radio and film, this live Sunday evening series was the first starring vehicle for many notable performers turning to television. Reflecting format variations by host, *The Colgate Comedy Hour* initially offered musical comedy, burlesque sketches, opera and/or night club comedy revues.

In his autobiography, *Take My Life*, comedian Eddie Cantor recalled proposing to NBC that he was prepared to host a television show but only once every four weeks in rotation with other comics. Colgate-Palmolive-Peet picked up the tab for three of the four weeks and *The Colgate Comedy Hour* was born with Cantor, Dean Martin and Jerry Lewis and Fred Allen as hosts. The fourth show of the month was sponsored originally by Frigidaire and appeared for a short time under the title *Michael Todd's Revue* with Todd producing and comic Bobby Clark scheduled to alternate with Bob Hope as host.

Cantor premiered *The Colgate Comedy Hour* on 10 September 1950, to rave reviews. Working the thread of a story line into the show for continuity, the veteran performer took his material out of the realm of vaudeville and turned it into more of a legitimate Broadway attraction. Martin and Lewis met with similar success. Dominating their hour, the energetic duo created a night club setting whose intimacy and ambience the trade press found continuously funny. Allen, on the other hand, found the large scale theatrical nature of the format too demanding and out of character for his more relaxed style of humor. Attempting to transfer elements of his successful radio show to video, he only met with disappointment. This was especially true when the characters of his famous Allen's Alley were foolishly turned into puppets. Allen showed improvement on subsequent

telecasts but was retired from the series after his fourth broadcast. Bitter about his experience, he promised he would not return to television unless provided a low-key format comparable to Dave Garroway's Chicago-based *Garroway at Large*. Clark produced better ratings and reviews

than Allen but ultimately he and the *Michael Todd Revue* suffered a similar fate.

Premiering with Jackie Gleason in its second season, *The Colgate Comedy Hour* was the highest budgeted, single-sponsor extravaganza on television with Colgate-Palmolive-Peet picking up a three million dollar a year talent-production-time tab. Back for their second year were Cantor and Martin and Lewis with Gleason, Abbott and Costello, Spike Jones, Tony Martin and Ezio Pinza slotted as starters. Ratings remained high for the original hosts but the Sullivan show began producing high budget specials that chipped away at the Colgate numbers when the new hosts appeared.

During the second season, *The Colgate Comedy Hour* also became the first commercial network series to originate on the west coast when Cantor hosted his program from Hollywood's El Capitan Theatre on 30 September 1951. Two years later, on 22 November 1953, a Donald O'Connor *Comedy Hour* became the first sponsored network program to be telecast in color. In an FCC-approved test of RCA's new compatible color system, several hundred persons monitored the broadcast in specially equipped viewing booths at a site distant from the Colgate production theater.

Despite an annual budget estimated at more than six million dollars, during the 1953–54 season *The Colgate Comedy Hour* began to experience problems. Many performers, hard pressed to continually generate new material, were considered stale and repetitious. Cantor and Martin and Lewis were still highly rated regulars but Cantor was feeling stressed. The diminutive showman had suffered a heart attack after a *Comedy Hour* appearance in September 1952, and, now nearly sixty years of age, he felt the work too demanding. This would be his last season. To attract and maintain an audience, new hosts, including the popular Jimmy Durante, were absorbed from NBC's faltering *All Star Revue*. Occasional "book" musicals, top flight shows such as *Anything Goes* with Ethel Merman and Frank Sinatra, were produced. The *Comedy Hour* also began to tour providing viewers with special broadcasts from glamorous locations—New York seen from the deck of the *S.S. United States*, among others.

During the 1954–55 season, the Sullivan show made significant inroads on *The Colgate Comedy Hour's* ratings. Martin and Lewis made fewer appearances and an emphasis was placed on performers working in big settings such as the Hollywood Bowl and Broadway's Latin Quarter. During the summer, Colgate collaborated with Paramount Pictures, the latter supplying guest stars and film clips from newly released motion pictures. The show moved away from comedy headlines; actor Charlton Heston hosted as did orchestra leader Guy Lombardo and musical star Gordon MacRae. To reflect these differences the show's name was changed to the *Colgate Variety Hour*, but, despite the changes, for the first time in its history, the series dropped out of the top twenty-five in Nielsen ratings while Sullivan moved into the top five.

A feuding Martin and Lewis kicked off the last season of the *Colgate Variety Hour* to good reviews but subsequent

shows proved it had become increasingly difficult to sustain acceptable ratings for a series of this budget magnitude. On 11 December 1955, Sullivan drew an overnight Trendex of 42.6. The *Variety Hour's* salute to theatrical legend George Abbott came in a distant third with a dismal 7.2. Two weeks later, on 25 December 1955 the Colgate series quietly left the air following a Christmas music broadcast by Fred Waring and his Pennsylvanians. Replaced with the poorly conceived *NBC Comedy Hour*, featuring unlikely host Leo Durocher, one of the most lavish, entertaining and at times extraordinary musical variety series in television history was just a memory. In May 1967 NBC presented a *Colgate Comedy Hour* revival but it was a revival in name only—in format or in star value.

COLLINS, BILL

Australian Television Personality

Bill Collins has been described as "Mr. Movies of Australia". He has presented films on television and on video since 1963 and has come to seem like a trusted and enthusiastic guarantor of whatever film he happens to be presenting. As a high-school English teacher, long interested in the cinema and its possible role in the classroom, he completed a Master's degree in education on the role of film in education and took a position as a lecturer in English at the Sydney Teachers' College. He regularly introduced trainee teachers to the place of film in the high-school English curriculum.

In 1963 he made his first appearance on television, producing and presenting a series of filmed segments on film appreciation. That same year he compiled a weekly column in the better of Australia's television guides, *TV Times*, entitled "The Golden Years of Hollywood". The column consisted of a series of reviews of upcoming Hollywood films to be screened on Australia's three commercial networks as well as the public broadcaster, the ABC. Collins' reviews were invariably to the point and reliable in their production credits at a time when this kind of information was not so easily available as it is nowadays. To write these reviews, Collins was having to preview many of the films. It seemed quite logical, then, when TCN Channel 9 (owned by Consolidated Press who co-published *TV Times* with the ABC) decided to have Collins host a Saturday night movie, with the generic name of *The Golden Years of Hollywood*. Collins continued to host the Saturday night movie on Channel 9 in Sydney until 1975 when he moved to the Seven Network. Channel 9 disputed that Collins had the legal right to call his Saturday night movie program *The Golden Years of Hollywood* and so the Seven program became *Bill Collins' Golden Years of Hollywood*. The change

sued Collins because his career as a movie host was now taking off. His Saturday night movie was now increasingly seen nationally and as his earnings increased Collins quit

Bill Collins

Photo courtesy of Bill Collins

his teaching job to concentrate full time on his television work. At Seven, Collins began to host a Sunday daytime film, *Bill Collins' Picture Time* and also a more general program featuring film clips and promotion for new releases, *Bill Collins' Show Business*.

Collins moved yet again in 1980 in a move that made him even busier. Rupert Murdoch had recently acquired the third commercial network which he renamed Network Ten. The latter had always lagged in the ratings and Murdoch was determined to change this situation even if it meant spending a lot of money—to hire Collins away. Collins now became a national figure to the point that other movie hosts on regional stations ceased to have any importance and little recognition. By this time he seemed to be everywhere. Not only did he host a double feature on a Saturday night under the old title of *The Golden Years of Hollywood*, a double feature on Sunday lunch time and afternoon, the midday movie during the week on a capital city by capital city basis but also an afternoon book review and promotion program. Thanks both to the size of his program budgets as well as his commercial standing, Collins was able to do live interviews with major Hollywood actors including his favourite, Clint Eastwood. He also published two books, lavishly illustrated, on his favourite films. In addition Collins also had his own series of Hollywood feature films on video which he hosted—*Bill Collins' Movie Collection*. Collins also made professional visits to fans across the country, these taking the form of breakfasts and lunches. To carry out these massive commitments, Collins now had a staff of researchers and his own press and publicity agents. In 1987 because of the introduction of new cross-ownership rules in Australia media, Murdoch sold off Network Ten. Collins continued there until 1994. The network suffered from financial problems, so there was a curtailment of his programs. However, in 1995, he, in effect, rejoined the Murdoch camp when he began presenting films on Australia's first cable network,

Foxtel, owned and operated by Murdoch's News Corporation and Telstra Corporation. Collins now hosts films produced by Twentieth Century-Fox on Foxtel Channel.

There is no gainsaying the achievement of Bill Collins. He appeared on Australian television at a time when Hollywood films, not only of the 1930s and 1940s, but also of the 1950s, were becoming available for television programming. He has helped to make Hollywood films popular with generations who were born after the Hollywood studio era. As befits a former teacher, his introductions to particular films are invariably interesting, enthusiastic and well researched. He will often display a still or a poster, brandish the book on which a film is based (he has an extensive collection of these, often extremely rare books), or play some of a film's theme music. All of these ploys are in the service of not only giving the audience particular features to look for in the upcoming film but also contextualising it in terms of such frames as the biography of one of the leading figures. Nor has Collins been afraid to expose his audience to some of the fruits of more critical research with references to such material as a critical study of John Ford or an article in the U.S. film studies journal *The Velvet Light Trap*. Altogether Bill Collins is one of the most durable and valuable figures in the history of Australian television.

—Albert Moran

BILL COLLINS. Born in Sydney, Australia, 1935. Educated at Sydney University, B.A., M.A., DipEd., and M.Ed. Taught in high school for four years; university lecturer; began reviewing movies in print (*TV Times*) and on television (ABC Television), 1963; moved from ABC to commercial station TCN Channel 9, 1967–75; movie host, ATN Channel 7 Sydney, 1975–79; presented movies nationally on the Network Ten, 1980–94; currently presenting movies on the Foxtel movie network.

COLOR TELEVISION

The early stages of color television experimentation in America overlap the technological development of monochromatic television. Color television was demonstrated by John Logie Baird as early as 1928, and a year later by Bell Telephone Laboratories. Experimental color broadcasting was initiated in 1940, when the Columbia Broadcasting System (CBS) publicly demonstrated a field sequential color television broadcasting system. This system employed successive fields scanned one at a time in one of the three primary colors; red, blue, or green. On the receiver end, a mechanical color wheel was used to reconstitute the primary colors in sequence to enable reproduction of the colors in the original scene. In their 1941 report confirming the National Television Systems Committee (NTSC) monochromatic standards, the Federal Communications

Commission (FCC) noted the potential benefits of the CBS color system but concurred with the NTSC assessment that color television required further testing before it could be standardized.

Further refinement of color television was temporarily suspended during World War II. After the war, work on the development of color TV resumed, and engineers were able to design a system that would operate within the 6 MHz channel allocation that had been established for black and white service. In a hearing which began 26 September 1949, and lasted for 62 days, CBS petitioned the FCC for commercialization of their 6-MHz, 405-line, 144-fields-per-second-field sequential color system. Due to the higher scanning rate, such a system was not compatible with the existing monochromatic standard.

The economic costs of adopting an incompatible system were a major factor in the FCC deliberations. If adopted, it appeared that consumers would carry the cost of modifying the existing two million monochrome receivers to follow the higher field-sequential scanning rates and reproduce color signal transmissions in monochrome. The projected costs of this modification varied, with a low figure of about \$25. In addition, it was also argued that when broadcasters elected to begin color service, they would lose that portion of the audience had not yet modified their monochrome receivers.

At the hearings, work on several experimental electronic color systems designed to be compatible with the existing monochrome system was presented to the commission. Color Television, Incorporated (CTI) demonstrated their line sequential color system which assigned the color portion of the signal to the successive lines of the image. In the first field, the uppermost line was scanned in green, the next line in blue, the next in red, and so on until the first field was complete. The second field was scanned in a similar manner, and the combination of the two fields produced a complete picture in color. The system operated at 525 lines, and 60 fields a second, corresponding to the existing monochrome service. The Radio Corporation of America (RCA) demonstrated its dot sequential color system in which color is assigned to successive picture elements or dots of the image. With this system, each line of any field is composed of dots in the three primary colors. The scanning system for this color design, (525/60), was also identical to the existing monochrome standard. Both the CTI and RCA color system were formally proposed to the commission as potential standards. In addition to these proposals, preliminary development of several other color systems were also presented. To many of the industry witnesses appearing before the commission, the demonstrations and discussions indicated that a satisfactory compatible system could be developed in a reasonable period of time and they urged that a decision regarding color be postponed.

Examining the various proposed color systems, the FCC determined that the shortcomings of the compatible systems were fundamental and noted that if a viable alternative compatible system could not be developed, and the field-sequential color system was eventually adopted, the costs of modifying an even greater number of monochrome receivers would be prohibitive, denying the public of color service altogether. The commission therefore felt that it was unwise to delay the decision and on 10 October 1950, decided that the adoption of the color field-sequential system proposed by CBS was in the public interest. RCA appealed this decision, all the way to the Supreme Court, but the commission's actions were upheld. The CBS station in New York began regular color broadcasts on 25 June 1951. However, due to the military demands of the Korean War and the reallocation of resources towards the war effort, color receiver production could not be dramatically in-

creased. On 19 October 1951, CBS discontinued color broadcasts due to the limited numbers of color receivers.

It was within this context that the NTSC, the entity which played a key role in setting monochrome standards in the United States, was reactivated to investigate the status of compatible color systems. On 21 July 1953, two years after their first meeting, the second NTSC approved a compatible all electronic color television dot sequential system (a modified version of RCA's system) and petitioned the FCC for adoption. On 17 December 1953 the FCC formally adopted a compatible color standard.

After the color standard was set in 1953, broadcasting stations were fairly quick to upgrade their transmission facilities to provide for color programming. Of the 158 stations operating in the top 40 cities, 106 had adopted color capabilities by 1957. Color programming offerings, however, remained fairly limited for quite some time. Although NBC increased its output of color programming to help its parent company, RCA, sell color receivers, the other major networks were not as supportive of this new innovation. As late as 1965, CBS provided only 800 hours of color programming the entire year and ABC only 600 hours. In addition to the limited programming, early sets were somewhat cumbersome to adjust for proper color reception, receiver prices remained fairly high, and manufacturers were reluctant to promote color receivers until the lucrative black and white market had been saturated. Consequently, consumers were fairly slow to adopt color technology. As of 1965, only 10% of U.S. homes had a color set. It was not until the late 1960s, over a decade after the standard was set, that color TV sales rose significantly. Today, approximately 95% of all U.S. homes have color television.

COLORIZATION

Colorization is a computerized process that adds color to a black-and-white movie or TV program. The process was invented by Wilson Markle and was first used in 1970 to add color to monochrome footage of the moon from the Apollo mission. In 1983, Markle founded Colorization, Inc. The word "colorization" soon became a generic name for the adding of color to black-and-white footage.

The process of colorizing a movie begins with a monochrome film print, preferably a new print struck from the original negative. From the film print, a high-quality videotape copy is made. Technicians, aided by a computer, determine the gray level of every object in every shot and note any movement of objects within shots. A computer adds color to each object, while keeping gray levels the same as in the monochrome original. Which color to use for which object is determined through common sense (green for grass, blue for the ocean) or by investigation. For example, movie studio photographs or costume vaults may provide guidance as to what color a hat should be. In cases where no such guidance is available, colorists pick their own colors, presumably with some aesthetic sensibility.

Colorization is an expensive and time-consuming process. *Popular Mechanics* reported in 1987 that it cost more than \$3,000 per minute of running time to colorize a movie. The economic justification for such an expenditure lay in audience demand. *Variety* estimated in 1988 that while it cost \$300,000 to colorize an old movie, the revenue generated by the release of the colorized version was \$500,000. This revenue came mostly from television syndication, although videocassette release was also important in some cases. Another important consideration was the opportunity to claim new copyrights on old films, thus extending the film's potential life as a profit center for the owner.

Colorization became extremely controversial in the late 1980s, especially with regard to "classic" monochrome films such as *Citizen Kane* (which ultimately was not colorized), *Casablanca*, *The Maltese Falcon*, and *It's a Wonderful Life*. With some exceptions, the dispute pitted film directors and critics (who opposed colorization) against copyright owners (who favored it). Among its opponents, TV critic Eric Mink viewed colorization as a "bastardization" of film. The Writers Guild of America West called it "cultural vandalism."

The case against colorization is most often couched in moral terms. According to this reasoning, colorization violates the moral right of the film director to create a work of art that has a final, permanent form and that will not be subject to alteration years later by unauthorized parties. Moral rights of artists, recognized in other countries, have no standing in United States law, which gives preference to the property rights of copyright holders. In film and television, the copyright holder is almost always a large film studio or production company, which employs the director as an author-for-hire, so to speak. To an extent, the battle over colorization was an attempt by directors and other creative

artists to prevent further erosion of their power to control their own work.

This position was often framed, somewhat spuriously, in more high-minded terms. For example, it was argued that colorization is an affront to film history. According to this line of thinking, the color version of a film drives the original monochrome version out of circulation, with the result that some viewers may not understand that *Casablanca* was shot in black and white. Similarly, as Stuart Klawans notes, the viewer might erroneously conclude that a color film such as *Gone with the Wind* was originally shot in monochrome and later colorized. If colorization can deceive to this extent, it must have a fairly convincing appearance, and, indeed, image quality and craftsmanship were probably the least-often-heard objections to colorizing.

As more movie "classics" became involved, the reaction against colorization took on the flavor of a moral panic. With colorization frequently the object of ridicule, the case in favor of the process became largely a defensive one: colorization does not harm the black-and-white original, and in fact encourages restoration of the original film and the striking of new prints; colorization is no more meddlesome than other, generally accepted practices in the televising of movies, such as interruption for commercials, editing for TV, cropping, time compression, and panning and scanning (not to mention the reduction in image size and the possibility of watching a color movie on a monochrome TV set); finally, any viewer who is offended by the color image can turn off the chroma on the TV set and watch in black-and-white.

It is worth emphasizing that the product of colorization is a videotape, not a film print. When a movie is colorized, nothing bad happens to the original film print, and the colorized version can only be watched on TV. Ultimately, the greatest impact of colorization may be upon old, monochrome TV series, if and when colorization loses its stigma. Indeed, one of the original ideas behind colorization was the creation of quasi-new TV series. As Earl Glick put it in 1984, "You couldn't make *Wyatt Earp* today for \$1 million an episode. But for \$50,000 a segment, you can turn it into color and have a brand new series—with no residuals to pay." As logical as this may sound, only *McHale's Navy* and a few other series have been colorized.

As of 1995, colorization is no longer a hot issue. Demand for colorized movies has shrunk drastically. Ted Turner, owner of hundreds of MGM, Warner Bros., and RKO titles and colorization's most outspoken advocate, has quietly stopped releasing colorized movies. The main legacy of colorization is the National Film Registry, established by Congress in 1988 in response to the colorization controversy. The Registry is a list of films, selected by experts and expanded annually, that, if colorized, will have to be labeled with a disclaimer. As Klawans points out, the hundreds of thousands of dollars spent on compiling the

registry would be much better spent on actual film (not to mention television) preservation.

COLTRANE, ROBBIE

British Actor

Robbie Coltrane is one of Britain's most popular and versatile actors. During the 1980s he became a household name following a succession of spirited comedic stage, cinema, and small screen appearances. In the 1990s Coltrane's celebrity has developed internationally; his acting repertoire has matured to include dramatic roles, as befits his more mellow temperament and professional confidence.

In the mid-1970s Coltrane became involved in repertory theater in Edinburgh, before a brief stint in New York, where he participated in several experimental films. Returning to England, Coltrane achieved his first major stage success in *The Slab Boys*, a bittersweet trilogy about Glaswegian youth written by ex-collegemate John Byrne. Relocating to London in the early 1980s, Coltrane became associated with the city's burgeoning, politically-charged stand-up comedy movement. There he headlined alongside the likes of Rik Mayall, Jennifer Saunders, Ade Edmondson, and Dawn French—to name only a few of the talents who would soon become, collectively and individually, the core of British broadcasting's "alternative" comedy. Coltrane's first television credits were earned in various programs, taking first sketch then narrative forms, centered around the satirical humor generated by this new wave troupe. He co-starred in *A Kick up the Eighties* and *Laugh???* *I Nearly Paid My Licence Fee*, he was a regular in *The Comic Strip Presents*, and frequently appeared as minor characters in shows such as *Blackadder's Christmas Carol*.

Effortlessly humorous, yet sharply critical, Coltrane proved to be an immediate audience favorite. Full-bodied and unpretentious, the Scotsman was often bracketed with his fellow comedic social commentator, Alexei Sayle. But whereas Sayle was manic and edgy, constantly exposing his

personal identity, Coltrane's exuberant delivery was channeled into his role-playing and his amazing ability to parody the self-righteous through imitation. The Scot's capacity to produce more mainstream material is evident in his prodigious work record, his marketability as a celebrity endorser

Robbie Coltrane

of commercial products, and his mass appeal across a variety of audiences and age groups.

Coltrane's enthusiasm for his performances is unassailable. His own personal passions and vices—chain-smoking, 1950s cars, American glitz, outrageous figures, an appreciation for the style (if not the substance) of Chandleresque masculinity—have become recurrent motifs that function as backdrops to his stage and screen personae. Since the mid-1980s, Coltrane has rapidly progressed from supporting roles in successful feature films like *Mona Lisa* and *Defence of the Realm* to made-to-measure, screen-stealing leads in *Henry V* (an homage to Orson Welles amidst a tribute to Olivier), *Nuns on the Run*, and *The Pope Must Die!* Occasionally miscast as a genial funnyman, Coltrane has starred in his share of lightweight comedies. But as a known box-office property, he is now able to choose his Hollywood offers more selectively—electing, for instance, to play the villain in the James Bond revival, *Goldeneye*.

Coltrane's thespian maturity has been achieved less in cinema than on the stage and in his television performances, where his ability to convincingly portray complex characters and convey contradictory emotions has more fully developed. His own enigmatic personality (jocular and acutely perceptive, sensitive, forthright, both worldly and down-to-earth), combined with his penchant for panache (with its mixture of grand style and garish display) often surface in his TV roles. As Danny McGlone in the hit 1987 miniseries *Tutti Frutti*, Coltrane portrayed the endearing, egotistical frontman of the Majestics—a group of aging rock 'n' rollers touring Scotland in search of newfound fame and fortune. The critical and popular acclaim accorded this black comedy was due in large measure to the affectionately self-mocking tone of John Byrnes' screenplays; he and Coltrane again collaborated several years later on the serio-comic historical adaptation *Boswell and Johnson's Tour of the Western Isles*. Coltrane's theatrical versatility, comedic range and gallery of accents were evident in his interpretation of Dario Fo's anti-establishment satire, *Mistero Buffo*. Juggling anger, hostility and humor between the numerous characterizations required in this one-man show, Coltrane performed the play at British venues in 1990, prior to its broadcast as a BBC miniseries.

That year marked a turning point for the Scotsman, who married and retreated to the more sedate pace of a converted Stirlingshire farmhouse. Proclaiming his hell-raising years to be over, Coltrane consciously sought dramatic roles. In a part written for him by social realist Jimmy McGovern, Coltrane played Dr. Eddie Fitzgerald, a forensic psychologist for the Manchester police force, in Granada TV's *Cracker*. "Fitz" applies his incredible mental agility to outwit suspects and solve a series of heinous crimes, all the while evidencing shortcomings of his own brought on by personal overindulgence and "deviant" behavior (drinking, smoking, debt, domestic ruin). Extremely well-received in Britain and North America, *Cracker's* nine stories represent Coltrane's most accomplished screen performance to date—

one rewarded with numerous industry honors, including the British Academy of Film and Television Arts' Award for Best Television Actor in 1995.

—Matthew Murray

ROBBIE COLTRANE. Born Anthony McMillan in Rutherglen, Glasgow, Scotland, 31 March 1950. Attended Trinity College, Glenalmond, Perthshire; Glasgow School of Art. One son with partner Rhona Irene Gemmell. Began career as actor with the Traverse Theatre Company and Borderline Theatre Company, Edinburgh; worked briefly as stand-up comedian in the United States, late 1970s, then returned to England to appear in various alternative television comedy shows and dramas; subsequently established reputation as character actor in films; returned to the U.S. to develop film career, 1989. Recipient: Montreux Television Festival Silver Rose Award, 1987; *Evening Standard* Peter Sellers Award, 1991; British Academy of Film and Television Arts Award, 1993, 1994, 1995; Monte Carlo Silver Nymph Best Actor Award, 1994; BPG Best Actor Award, 1994; Royal Television Society Best Actor Award, 1994; FIPA (French Academy) Best Actor Award, 1994; Cable Ace Best Actor Award, 1994; Cannes Film Festival Best Actor Award, 1994. Address: CDA 17, 47 Courtfield Road, London SW7 4DB, England.

COLUMBIA BROADCASTING SYSTEM

U.S. Network

The network CBS, traditionally referred to as the "Tiffany network" among major television broadcasting systems, has in recent years come more and more to resemble Wal-Mart. Ironically, this often prestige-laden television institution began almost as an afterthought. In 1927, when David Sarnoff did not see fit to include any of talent agent Arthur Judson's clients in his roster of stars for the new NBC radio networks, Judson defiantly founded his own network—United Independent Broadcasters. Soon merged with the Columbia Phonograph Company, the network went on the air on 18 September 1927 as the Columbia Phonograph Broadcasting Company. Within a year heavy losses compelled the sale of the company to Jerome Louchheim and Ike and Leon Levy, the latter the fiancée of the sister of William Paley. Paley, who had become enamored of radio as a result of advertising the family's La Palina brand cigars over a local station, bought the fledgling network, then consisting of 22 affiliates and 16 employees, for \$400,000 on 18 January 1929, and renamed it the Columbia Broadcasting System.

Relatively untested as a business executive, Paley immediately showed himself a superb entrepreneur. He insured the success of the new network by offering affiliates free programming in exchange for an option on advertising time, and was extremely aggressive in gaining advertising for the network. Paley's greatest gift, however, was in recognizing talent. He soon signed singers such as Bing Crosby, Kate Smith and Morton Downey for the network. Unfortunately, as soon as some of them gained fame at CBS they were lured away by the far richer and more popular NBC.

This was not to be the case with news. Starved for programming Paley initially allowed his network to be used by the likes of the demagogic Father Charles Coughlin. But by 1931, Paley had terminated Coughlin's broadcasts, and under the aegis of former *New York Times* editor Edward

Courtesy of CBS

Klauber and ex-United Press reporter Paul White, began building a solid news division.

CBS news did not come of age, however, until Klauber assigned the young Edward R. Murrow to London as director of European talks. On 13 March 1937 at the time of the Anschluss, Murrow teamed with former newspaper foreign correspondent William L. Shirer and a number of others to describe those events in what would become the forerunner of *The CBS World News Roundup*. Subsequently, during World War II, Murrow assembled a brilliant team of reporters, known collectively as "Murrow's Boys," including Eric Sevareid, Charles Collingwood, Howard K. Smith, Winston Burdett, Richard K. Hottelet, and Larry LeSueur.

In 1948, Paley turned the tables on NBC and signed some of its premier talent such as Jack Benny, Red Skelton, and Burns and Allen. He also stole a march on his rival in what they considered their undisputed realm—technology—when his CBS Research Center, under the direction of the brilliant inventor Peter Goldmark, developed the Long Playing phonograph recording technique and color television.

Even with this success Paley was still loathe to enter television broadcasting. But with prodding from Dr. Frank Stanton, whom he had appointed CBS president in 1946, and his growing awareness of how rapidly television was expanding, Paley began increasing CBS investment in television programming. Indeed with the talent that CBS had taken from NBC and homegrown artists and programming such as *I Love Lucy*, *Ed Sullivan*, *Arthur Godfrey*, and *Gunsmoke*, CBS dominated the audience rating system for almost twenty years.

The post-war years were hardly an undisturbed triumphal march for CBS. The network found itself dubbed the Communist Broadcasting System by conservatives during the McCarthy era. Nor did it distinguish itself by requiring loyalty oaths of its staff, and hiring a former FBI man as head of a loyalty clearance office. These actions were, however, redeemed to a large extent by Edward R. Murrow's 9 March 1954 *See It Now* broadcast investigating Senator McCarthy. Unfortunately, Murrow's penchant for controversy tarnished him in the eyes of many CBS executives and shortly thereafter, in 1961, he resigned to head the United States Information Agency.

More and more the news division, which thought of itself as the crown jewel at CBS, found itself subordinate to the entertainment values of the company, a trend highlighted at the end of the 1950s by the quiz show scandals. Indeed Paley, who had taken CBS public in 1937, now seemed to make profits his priority. Perhaps the clearest evidence of this development occurred when Fred Friendly, one of Murrow's closest associates and then CBS News division president, resigned after reruns of *I Love Lucy* were shown instead of the 1966 Senate hearings on the Vietnam War.

This tendency was only exacerbated in the sixties when, despite almost universal critical disdain, *The Beverly Hillbillies*, *Green Acres*, and *Petticoat Junction* were CBS' biggest hits. However, an abrupt shift away from these programs occurred in the early 1970s. Programming executives Robert Wood and Fred Silverman inaugurated a series of sitcoms such as *All in the Family*, *The Mary Tyler Moore Show*, and *M*A*S*H*. These changes had less to do with any contempt for the rural idiocy of the "barnyard comedies" than the need to appeal to a younger-urban audience with larger disposable incomes. But the newer programs, with their socially conscious themes, garnered both audience and critical acclaim.

During these years profits increased to such an extent that by 1974 the Columbia Broadcasting System had become CBS, Inc., and consisted not only of radio and TV networks but a publishing division (Holt, Reinhart and Winston), a magazine division (*Woman's Day*), a recording division (Columbia Records), and even for a time the New York Yankees (1964–1973). Nevertheless, CBS, Inc., was hardly serene. Indeed it was quite agitated over the question of who would succeed William S. Paley.

In violation of his own rule, Paley refused to retire. He did, however, force the 1973 retirement of his logical heir, Frank Stanton. He then installed and quickly forced the resignation of Arthur Taylor, John Backe, and Thomas Wyman as presidents and chief executive officers of CBS,

Inc. Anxiety about the succession at CBS began to threaten the network's independence. Declining ratings left the company vulnerable. The biggest threat came from a takeover bid by cable mogul Ted Turner. To defend itself against a takeover CBS turned to Loew's president, Lawrence Tisch, who soon owned a 25% share in the company and became president and CEO in 1986.

Within a year Tisch's cuts in personnel and budget, and his sale of assets such as the recording, magazines, and publishing divisions had alienated many. Dan Rather, who had succeeded the avuncular Walter Cronkite as the anchor on the *CBS Evening News* in 1981, wrote a scathing *New York Times* opinion editorial called "From Murrow to Mediocrity." By 1990, the year of Paley's death, *The CBS Evening News*, which had led in the ratings for eighteen years under Cronkite, and for a long period under Rather, fell to number three in the rankings.

After what seemed a brief ratings resurrection resulting from the success of the 1992 Winter Olympics, and the 1993 coup of wresting *The David Letterman Show* away from NBC, CBS was outbid for the television rights to NFL professional football by the fledgling FOX network and watched the defection of twelve choice affiliates to the same company. Despite repeated denials that the company was for sale, Tisch shopped it to perspective buyers such as former Paramount and Fox President Barry Diller. In November 1995 CBS was sold to the Westinghouse Corporation for \$5.4 billion, effectively bringing to a close CBS' history as an independent company.

COLUMBO

U.S. Police Drama

Columbo is a popular detective series featuring Peter Falk as Lieutenant Columbo. The character (who never had a first name), and the series are a creation of the writing/producing team of Richard Levinson and William Link. *Columbo* ran as a television series from 1971 to 1978, but the character had appeared in a short story, a live-television broadcast, and a stage play before making his first network television appearance in the made-for-television movie *Prescription: Murder* (1968). Originally written for Bing Crosby, the Columbo role went to Falk when Crosby opted not to end his retirement.

The series' original run was not in weekly hour-long episodes, but as a 90-minute "spoke" in the *NBC Mystery Movie* "wheel" concept: each week, one of three different series was shown on a rotating basis. *Columbo* was interspersed with *McMillan and Wife* (starring Rock Hudson and Susan St. James), and *McCloud* (starring Dennis Weaver). This suited Falk and the producers just fine since the pace of production would be much slower than was usually the case with weekly series. The 90-minute program length also allowed each episode to be more intricate than the typical one-hour installment, and intricacy was stock in trade for the character.

Columbo was not a "who-done-it." Indeed, the most distinguishing aspect of the series is the plot structure itself. Although this structure is just as rigid and successful as that in *Perry Mason*, *Dragnet*, or *The Rockford Files*, each episode is actually an inversion of the classic detective formula. In the classic formula, the crime is committed by an unknown person, a detective comes onto the case, clues are gathered, the detective solves the crime with the aid of his/her assistants, and the ability of the detective is proven true. In each *Columbo* plot, the crime *and* the culprit are shown in great detail. The audience sees the murder planned, committed, and covered up by the murderer. Since the audience knows who did it and how, the enigma becomes "how will Columbo figure it out?" The methods of the murderer are presented with such care that there is little doubt that the horrible crime will go unpunished—little doubt until Columbo comes onto the scene.

With his rumpled overcoat, stubby cigar, tousled hair and (apparently) confused attitude, Columbo rambles around in his old Peugeot, doggedly following the suspect of a homicide. The attitude and behavior, however, are all an act. Columbo is not confused but acutely aware, like a falcon circling its prey, waiting for a moment of weakness. Columbo bumbles about, often interfering with the activities of the uniformed police and gathering what seem to be the most unimportant clues. All the while he constantly pesters the person he has pegged as his central suspect.

At first even the murderer is amused at the lieutenant's style and usually seems inclined to assume that if this is the best the Los Angeles police can offer, the murder will never be found out. But whenever the suspect seems to be rid of the Lieutenant,

Columbo

Columbo turns with a bemused remark, something like "Oh, there's just one more thing" By the end of the episode, Columbo has taken an apparently minor discrepancy in the murderer's story and wound it into the noose with which to hang the suspect. Conclusions often feature a weary, yet agreeable, criminal admitting to his or her guilt as Columbo, in the form of some imaginative turnabout, delivers the final blow. If the suspect is a magician, the Lieutenant uses a magic "trick". If the crime was done by knowledge of movie special effects, Columbo uses similar special effects.

Columbo is the only regular character in the series. There is no grizzled police commissioner, no confidant with whom the case could be discussed. For Columbo, each guest villain becomes something of an ironic "Watson". Columbo and the murderer spend most of the story playing off each other. The Lieutenant discusses the twists and turns of the case, the possible motives, the implications of clues with his primary suspect, always rich, powerful, and arrogant, always happy to match wits with the apparently witless policeman on the doorstep. In the end the working-class hero overcomes the wealthy, privileged criminal.

Many influential writers, directors, and producers of the 1980s and 1990s worked on this series. Stephen J. Cannell (*The Rockford Files*, *The A-Team*, *Wiseguy*), Peter S. Fisher (*Murder*,

She Wrote), and Steven Bochco (*L. A. Law*, *Hill Street Blues*) were writers. Dean Hargrove (*Matlock*, *Perry Mason*) and Roland Kibbee (*Barney Miller*) were producers. The premiere episode was directed by a very young Steven Spielberg. Each episode featured a well-known character actor or minor star as the murderer. Robert Culp and Jack Cassidy had the highest number of returns as guest villain (three each).

Columbo won seven Emmys over the first run of the series, including three for Falk and one for the series itself. *Columbo* spawned only one spin-off, NBC's short-lived, *Mrs. Columbo* (name later changed to *Kate Columbo*, *Kate the Detective*, and *Kate Loves a Mystery*) with Kate Mulgrew in the title role. This series played against *Columbo* in several ways. Instead of Mrs. Columbo being absent each episode, the lieutenant was "unavailable". And here the plot followed the traditional detective format instead of the inverted one. It is not clear what caused this series to fail, but *Mrs. Columbo* was ill fated and ill advised. Both Link and Levinson disavowed it and Falk disliked the concept.

Following the success of Raymond Burr's return as Perry Mason in a series of made-for-television movies, Falk returned to *Columbo* on 6 February 1989, for a new "mystery wheel" concept (this time on ABC and alternating with Burt Reynolds in *B. L. Stryker* and Lou Gossett, Jr., in *Gideon Oliver*). Just as he left Rock Hudson and Dennis Weaver behind during his original run, the rumpled detective was the only one of the new "wheel" to survive. Indeed, like the character, *Columbo* always seems to be coming back as if to say "Oh, there's just one more thing . . ."

COMEDY, DOMESTIC SETTINGS

Domestic comedy is the term for a generic category coined by Horace Newcomb in his *TV: The Most Popular Art* (1974). In U.S. television the phrase provides a useful means of distinguishing between situation comedy, and the more broad-based, "comedy." Domestic comedies are identified by a character-based humor as opposed to that originating in a series of confusions or complications. Within a domestic comedy, qualities such as warmth, familial relationships, moral growth and audience inclusiveness predominate. In each episode a character experiences some sort of learning experience, often motivated by some ethical trial or test. The humor emanates from the audience's familiarity with the characters and their relationships with one another, and the overwhelming harmony of each story encourages the audience to problem-solve along with the characters.

Originally, domestic comedies were literally house-bound, and generally characterized by their stereotypical

nuclear family protagonists. Thus 1950s programs like *Leave it to Beaver*, *The Donna Reed Show*, and *The Adventures of Ozzie and Harriet* were considered seminal examples. Young Beaver, Mary, or Ricky experienced some sort of lightly-depicted minor dilemma (a lost sweater, making two dates for the same night, lying to a pen pal) which Ward, Donna or Ozzie then neatly dispatched of with some well-pointed words of advice. The child learned the moral lesson, only to be confronted with a new predicament the following week.

With time, the definitions of domestic comedy have changed and expanded. First, critical work has begun to explore whether many of these domestic comedies were in fact comedies at all. Nina Leibman has demonstrated in *Living Room Lectures* that despite the presence of a laugh track, most of these programs contained more generic similarity to domestic melodrama than any sort of comedic categories. Programs such as *Father Knows Best*, with their

The Munsters

The Donna Reed Show

Kate and Allie

Home Improvement

hyperbolic acting styles and crises, their reliance upon peripety and coincidence in problem-solving, their thematic and structural dependency on repetitive musical motifs, and their obsession with issues of gender and generational conflict, convincingly associates them more with their 1950s cinematic dramatic counterparts than with their television situation comedy cousins.

Second, Newcomb, Ella Taylor and others have demonstrated that domestic comedies need not take place in a suburban home to claim membership within the domestic comedy genre. Workplace domestic comedies such as *The Mary Tyler Moore Show*, *Cheers*, *Murphy Brown*, and *Ellen*, construct character-based comedies out of the ersatz familial relationships of a group of friends or co-workers. As in their more literal family forebears, these comedies place an emphasis on moral growth and development, warmth, and viewer identification in a representational (rather than presentational format).

Generic blends and hybrids cause further evolution of the term. Some programs such as *The Brady Bunch*, originated with a situation-type premise: what happens when a widower with three sons marries a widow with three daughters? Eventually, however (often within the first three episodes), the situation no longer motivates the central narrative and the individual episodes deal with topics that fall more neatly into the domestic comedy camp. For *The Brady Bunch*, then, moral imperatives provide the comedy when Greg tries smoking, Marcia is caught lying about a special prom guest, and Jan's resentment of her prettier, older sister motivates her to experiment with antisocial behavior. Similarly, domestic comedies, such as *The Dick van Dyke Show*, vacillate between outrageous acts of slapstick and confusion (Laura dyes her hair blonde, Laura gets her toe stuck in a bathtub faucet) to more poignant and morally complex episodes (Richie adopts a duck, Buddy gets fired). A program such as this (with stars who excel at physical comedy) might originate as a domestic premise, but then, in light of van Dyke's prowess for farce, reconfigure the narratives into situational exercises of complexity and confusion.

Domestic comedies of the 1970s sprang from two main sources. Norman Lear's were true familial settings in which the ironic familial head, Archie Bunker on *All in the Family*, George Jefferson on *The Jeffersons*, Maude on the program which bears her name, proved both a verbal provocateur and a victim while undergoing subtle moments of moral growth. Grant Tinker's MTM productions was home to a plethora of successful workplace domestic comedies such as *The Mary Tyler Moore Show*, *The Bob Newhart Show*, and *Rhoda*. Each of these programs reconfigured domestic troubles into professional ones and transformed business relationships into familial ones by ascribing certain familial roles to the office workers—the cranky boss becomes the father, the ditzzy newsman becomes a wild brother, etc.

During the 1980s domestic comedies retreated into near extinction, emerging in neoclassical incarnations such as *Family Ties*, and *The Cosby Show*. Like the domestic

comedies of the 1950s, these programs seem closer to domestic melodrama, with a particular emphasis on gender and class-based issues. The 1990s entries into the field are a skewed blend of sitcom, domestic comedy and family melodrama. *Roseanne*, and *Grace Under Fire*, for example, tackle the topics of incest, spouse abuse, alcoholism, masturbation, and unemployment within the hyperbolic representational stance of family melodrama. Yet the sarcasm and sheer cynicism of the central characters diffuse any seriousness associated with the problem, moving them out of melodrama and back into the generic sphere of domestic comedy. At the same time, the programs often insert situation comedy routines (drunkenness, mistaken identity, extravagant production numbers) right in the midst of a particularly bleak episode, rendering its generic identity cloudy at best. Domestic comedies remain a staple of series television, but, as with most television genres in an advanced evolutionary phase, the category has been expanded upon and complicated by its fusion with other generic elements.

COMEDY, WORKPLACE

Workplace comedies provide a convenient vehicle for the writers/producers of the television program to access all the essential components of series drama. The workplace frame adapts to changes in the production context, gives the characters a continuing mandate for action, provides the dramatic tension of continuing relationships among persons of different backgrounds, and offers the opportunity to introduce additional or visiting characters. The significant structural weakness of the workplace comedy is that it is deprived of the interaction between youth and maturity often central to situation and domestic comedy in television. But even this arrangement can be addressed by creating a work situation devoted to child nurturing, or by introducing the workers' family members who can appear regularly or randomly at the will of producers.

In pragmatic industrial terms, the workplace series provides a flexible format that can adapt to changes in the real world production context. With the workplace series, the departure of a cast member allows a new performer to assume the job responsibility and simultaneously introduce a new interpersonal dynamic to the ensemble—as with the departures of McLean Stevenson (Lt. Colonel Henry Blake) and Wayne Rogers (Capt. John [Trapper John] McKenzie) on *M*A*S*H*. The characters introduced by Harry Morgan (Col. Sherman Potter) and Mike Farrell (Capt. B.J. Hunnicut) did not simply replace the job functions of their predecessors, they created new personalities that varied the mix of relationships within the ensemble. The death of Nicholas Colasanto (Coach) was mourned on *Cheers* and his character was replaced by the much younger Woody Harrelson (Woody Boyd) who

portrayed a naive Indiana farmboy who had been taking a mail order bartending course from the Coach. *Cheers* writers and producers dealt with the departure of Shelley Long (Diane Chambers) with the introduction of Kirstie Alley's Rebecca Howe and an increased emphasis on the Kelsey Grammer (Dr. Frasier Crane) and Bebe Neuwirth (Dr. Lilith Stern) characters.

As these industrial strategies indicate, the humor in the workplace comedy may come from the personalities of the characters, the interaction of the characters, or the situations encountered by the characters. The successful series draw on all these elements, but the balance differs from program to program. Some shows emphasize character relationships, others are best at creating comedic situations, still others offer characters who are individually funny in their own right, often the case when a series is developed specifically to showcase the talents of a stand-up comedian.

Series like *Our Miss Brooks*, *Newhart*, *The Andy Griffith Show*, *The John Larroquette Show*, *Frasier*, and *The Mary Tyler Moore Show* drew many of their laughs from the antics of a few eccentric characters. Some of the comic characters were objects of ridicule, some were simply out-of-step with their surroundings, and some so superior to their surroundings that they were humorous. Richard Crenna's dimwitted Walter Denton was often a source of amusement on *Our Miss Brooks*; Don Knotts made the bumbling Barney Fife a laugh-getter on *The Andy Griffith Show*; and *Newhart's* Larry, Darryl, and Darryl needed only to appear on screen to draw anticipatory giggles from many viewers. Even *Rhoda's* unseen Carleton the Doorman acquired a unique comedic persona. On *The Mary Tyler Moore Show*, the pompous Ted Baxter, acerbic Sue Ann Nivens, and ditzzy Georgette Frank-

Alice

Night Court

WKRP in Cincinnati

lin Baxter were all ridiculous characters who inspired varying degrees of sympathy.

Workplace comedies can also draw on references to the popular forms they parody. The incompetent spy of *Get Smart* and the bumbling policemen of *Car 54, Where are You?* developed the comedy line by contradicting the premise of a strong, competent leading character. *The Wild, Wild West* and *The Rockford Files* parodied the Western and Detective forms so well that they are generally categorized among those forms instead of being regarded as comedies.

Persons in a work situation are granted a franchise to action by the nature of their work—the job requires them to deal with problems or participate in events related to their work. Professions such as law enforcement, medicine, and media provide ready made opportunities to place the characters in varied situations and involve them with a wide range of characters.

WKRP in Cincinnati, *Barney Miller*, *E/R*, *Taxi*, and *Night Court* often found their strength in creating bizarre situations, then letting the established characters play out the story. Episodes such as the *WKRP* Thanksgiving story in which Herb Tarlek and Mr. Carlson dropped live turkeys from a helicopter as a promotional gimmick take logical premises and carry them to illogical extremes.

The workplace setting facilitates interaction among characters of varied origin. Despite their diverse backgrounds, the characters on a workplace comedy are united by a common goal and are required to maintain even difficult relationships. Diahann Carroll's *Julia* was the first series to place a professional black woman in a starring role, but many other series have drawn humor from contrasting characters of different race, gender, ethnicity, regional, or class origin. *Barney Miller*'s Ron Glass, as Harris—a literate, urbane black man—constantly reminded his coworkers of racial stereotyping and his own departure from those stereotypes; Jack Soo as Yemana similarly made ironic reference to his Asian background. On *Designing Women* there were frequent references to the “hillbilly” background of Jean Smart's Charlene, and Meschach Taylor's Anthony often made mention of his race. In *M*A*S*H*, Cpl. Walter (Radar) O'Reilly's rural background and Major Charles Emerson Winchester's upper class Boston upbringing were frequent sources of humor.

In some instances, workplace comedies require that individuals who are not merely different, but actually hostile to one another, maintain a relationship and the resultant tension provides humor. In *The Dick Van Dyke Show*, Richard Deacon's character—the pompous producer Mel Cooley—was the butt of endless jokes by the writing staff. Robert Guillaume's *Benson* was constantly engaged in combat with Inga Swenson who portrayed the cook Gretchen, and a truce between Craig T. Nelson's Hayden Fox and the women's basketball coach Judy, in *Coach*, would have removed a consistent source of humor from that series.

The ability to introduce guest or visiting characters is another advantage of the workplace comedy. The criminals and complainants who visited the police station in *Barney Miller* or the varied defendants who appeared in *Night Court* all contributed to the general atmosphere of those series. Similarly, the patients on *The Bob Newhart Show* and *E/R* added interest and facilitated the development of new plotlines. In some cases, guest performers appeared only once; others became semi-regulars who would appear unexpectedly to add further complications to their stories.

In some workplace series, the families and friends of the working group also participate in the storylines. In the case of *The Mary Tyler Moore Show*, Mary's friend Rhoda and landlady Phyllis became such important characters that each was given a spinoff series of her own. *Murphy Brown*'s resident housepainter Eldin became a significant component of the series, and *The Andy Griffith Show* drew heavily on Andy's relationships with Aunt Bea and son Opie. Even *Get Smart* assumed a family aspect when Smart and Agent 99 were married and became the parents of twins. The relationship between Gabriel and Julie Kotter was frequently the focus of *Welcome Back, Kotter* episodes, and *The Dick Van Dyke Show* included numerous segments dealing with Rob and Laura Petrie's home life.

The workplace comedy, like the society it portrayed, has both evolved and gone through cyclical changes. The form of the series has definitely evolved. Contrasting one of the earliest workplace comedies, *Private Secretary*, with more recent series shows changes in casting, relationships, and narrative structure. *Private Secretary* centered around the activities of Susie McNamara, a private secretary in a New York City talent agency, a vehicle that provided for the introduction of numerous guest characters who appeared as clients. All the cast members were middle- and upper-middle class whites. Although the relationship between Susie and her boss was congenial, there was no doubt that Susie was by no means as intellectually or emotionally competent as the male authority figure for whom she worked. While the men carried out business, the women worried about relationships—especially that special relationship that would take them out of the office and into a blissful married life. Susie was central to every episode, and each episode came to closure, bringing with it no memory of previous episodes and leaving no character or situation changes to affect subsequent episodes.

By contrast, more recent series portray a broad range of racial and ethnic characters. Members of many races and nationalities pass through the bus terminal on *The John Larroquette Show*, and the majority are working class characters. Most series attempt to offer a broader representation of the population and the awareness of differences within the society has expanded definitions to include persons with disabilities, older and younger individuals, gay and lesbian characters, and people practicing faiths other than Protestant. Job responsibilities and character

traits are no longer always assigned on the basis of gender or ethnic stereotypes, and when they are this fact may give rise to more complication and humor.

Along with this broader range of characters comes a broader distribution of storyline emphases. *The Mary Tyler Moore Show* and subsequent MTM productions are often cited as a turning point in the evolution of series structure, with their refinement of the ensemble cast. Rather than focussing every episode on the actions of one clearly defined lead character, the ensemble allows any of several central characters to provide the story focus. In some series—for example, *Murphy Brown*—a central character will provide the stimulus for the actions of the featured character, but that character is still the focus of the storyline.

The narrative structure has made distinct changes with the move to more open stories, allowing growth and change. The series is allowed memory of previous events and stories are no longer required to return the situation to its state at the opening of the play. Episodes no longer require complete closure, and some problems require multiple episodes to reach resolution, or even continue indefinitely.

Topics addressed by the workplace comedy have experienced cyclical popularity, influenced by the dominant concerns of the society and by the economic influence of other popular forms. Comedy has often addressed social concerns, and the workplace comedy has assumed that joint opportunity and responsibility. From direct confrontation—as when Mary Richards learned her male predecessor had been more highly paid—to implicit endorsement of the abilities of under represented groups—as in Benson's steady rise to gubernatorial candidacy—the workplace comedies provide a forum for the expression of social issues and offer opportunities to consider new ideas and challenges to the existing order. At the same time, television comedies are a commercial form, directly influenced by the need to remain commercially viable. Examining the popular topics for the workplace comedy reinforces Steve Allen's charge that "Imitation is the sincerest form of television." Series do tend to borrow ideas from the headlines, from other media, and from one another. These notions receive broad attention for a time, then some are integrated into the form, others disappear. In this process, the television workplace series operates in the same manner as many other elements of modern culture, evolving slowly in the process of contested change.
