

Principles of Applied Engineering

Scope and Sequence

Vision for **Principles of Applied Engineering** Course

Principles of Applied Engineering is a 10th grade MYP Design and CTE course which provides an overview of the various fields of science, technology, engineering, and mathematics and their interrelationships. Scholars will develop engineering communication skills, which include computer graphics, modeling, and presentations, by using a variety of computer hardware and software applications to complete assignments and projects. Upon completing this course, scholars will have an understanding of the various fields of engineering and will be able to make informed career decisions. Further, scholars will have worked on a design team to develop a product or system. Scholars will use multiple software applications to prepare and present course assignments.

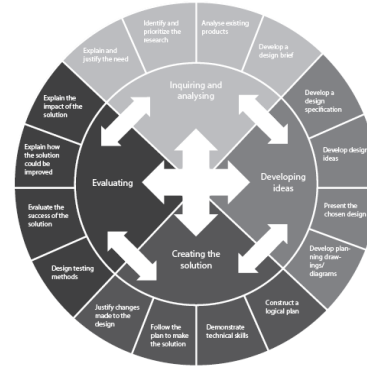

Year at a Glance

August	September	October	November	December	January	February	March	April	May
BREAK	Unit 1: What is Engineering?	Unit 2: Research, Drawing, and Modeling	Unit 3: Materials, Electricity, and Civil Engineering	BREAK	Unit 4: Mechanical Engineering and Robotics	Unit 5: Aerospace and Manufacturing Engineering	Unit 6: Chemical Engineering and the Profession of Engineering		

Time Frame	Unit Title	General Resource(s)
17 Class Periods	Unit 1: What is Engineering?	<ul style="list-style-type: none"> Engineering Fundamental: Design, Principles, and Careers, 2nd Edition Textbook; ISBN: 978-1-63126-285-2 Engineering Fundamental: Design, Principles, and Careers, 2nd Edition Lab Workbook; ISBN: 978-1-63126-286-9 Principles of Applied Engineering Projects and Supply Needs word document www.pitsco.com
9 Class Periods	Unit 2: Research, Drawing, and Modeling	
15 Class Periods	Unit 3: Materials, Electricity, and Civil Engineering (includes Common Midterm Project)	
10 Class Periods	Unit 4: Mechanical Engineering and Robotics	
10 Class Periods	Unit 5: Aerospace and Manufacturing Engineering	
22 Class Periods	Unit 6: Chemical Engineering and the Profession of Engineering (includes Common Final Project)	

Principles of Applied Engineering

Scope and Sequence

Objectives

<p>A. Inquiring and analyzing</p> <p>Students are presented with a design situation, from which they identify a problem that needs to be solved. They analyse the need for a solution and conduct an inquiry into the nature of the problem.</p> <p>In order to reach the aims of design, students should be able to:</p> <ol style="list-style-type: none"> explain and justify the need for a solution to a problem construct a research plan, which states and prioritizes the primary and secondary research needed to develop a solution to the problem analyse a group of similar products that inspire a solution to the problem develop a design brief, which presents the analysis of relevant 	<p>B. Developing ideas</p> <p>Students design tests to evaluate the solution, carry out those tests and objectively evaluate its success. Students identify areas where the solution could be improved and explain how their solution will impact on the client or target audience.</p> <p>In order to reach the aims of design, students should be able to:</p> <ol style="list-style-type: none"> develop a design specification, which outlines the success criteria for the design of a solution based on the data collected present a range of feasible design ideas, which can be correctly interpreted by others present the chosen design and outline the reasons for its selection develop accurate planning drawings/diagrams and outline requirements for the creation of the chosen solution.
<p>C. Creating the solution</p> <p>Students plan the creation of the chosen solution and follow the plan to create a prototype sufficient for testing and evaluation.</p> <p>In order to reach the aims of design, students should be able to:</p> <ol style="list-style-type: none"> construct a logical plan, which outlines the efficient use of time and resources, sufficient for peers to be able to follow to create the solution demonstrate excellent technical skills when making the solution follow the plan to create the solution, which functions as intended explain changes made to the chosen design and plan when making the solution present the solution as a whole. 	<p>D. Evaluating</p> <p>Students design tests to evaluate the solution, carry out those tests and objectively evaluate its success. Students identify areas where the solution could be improved and explain how their solution will impact on the client or target audience.</p> <p>In order to reach the aims of design, students should be able to:</p> <ol style="list-style-type: none"> describe detailed and relevant testing methods, which generate accurate data, to measure the success of the solution explain the success of the solution against the design specification describe how the solution could be improved describe the impact of the solution on the client/target audience.

Principles of Applied Engineering

Scope and Sequence

§130.362. Principles of Applied Engineering 2017-2018 (One Credit)

(a) General requirements. This course is recommended for students in Grades 9-10.

(b) Introduction

- (1) CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.
- (2) Planning, managing and providing scientific research and professional and technical services (e.g., physical science, social science, engineering) including laboratory and testing services, and research and development services.
- (3) Description. Principles of Applied Engineering provides an overview of the various fields of science, technology, engineering, and mathematics and their interrelationships. The students will develop engineering communication skills which include computer graphics, modeling and presentations by using a variety of computer hardware and software applications to complete assignments and projects. Upon completing this course, students will have an understanding of the various fields of engineering and will be able to make informed career decisions. Further, students will have worked on a design team to develop a product or system. Students will use multiple software applications to prepare and present course assignments. The original wording doesn't really help reader understand what they will actually learn.
- (4) Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.
- (5) Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.

(c) Knowledge and skills.

- (1) The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:
 - (A) Demonstrate knowledge of how to dress, speak, and conduct ones' self in a manner appropriate for the profession;
 - (B) Show the ability to cooperate, contribute, and collaborate as a member of a group in an effort to achieve a positive collective outcome;
 - (C) Present written and oral communication in a clear, concise, and effective manner;
 - (D) Demonstrate time management skills in prioritizing tasks, following schedules, and performing goal-relevant activities in a way that produces efficient results; and
 - (E) Demonstrate punctuality, dependability, reliability, and responsibility in performing assigned tasks as directed.
- (2) The student investigates the components of engineering and technology systems. The student is expected to:
 - (A) investigate and report on the history of engineering science;
 - (B) identify the inputs, processes, and outputs associated with technological systems;
 - (C) describe the difference between open and closed systems;
 - (D) describe how technological systems interact to achieve common goals;
 - (E) compare and contrast engineering, science, and technology careers; and
 - (F) conduct and present research on emerging and innovative technology; and
 - (G) demonstrate proficiency of the Engineering Design process.
- (3) The student presents conclusions, research findings, and designs using a variety of media throughout the course. The student is expected to:
 - (A) use clear and concise written, verbal, and visual communication techniques;
 - (B) maintain a design and computation engineering notebook;
 - (C) use sketching and computer-aided drafting and design (CADD) to develop and present ideas; Clarification
 - (D) use industry standard visualization techniques and media; and
 - (E) use the engineering documentation process to maintain a paper or digital portfolio.
- (4) The student uses appropriate tools and demonstrates safe work habits. The student is expected to:
 - (A) master relevant safety tests;
 - (B) follow lab safety guidelines as prescribed by instructor in compliance with local, state and federal regulations;
 - (C) recognize the classification of hazardous materials and wastes;
 - (D) dispose of hazardous materials and wastes appropriately;
 - (E) maintain, safely handle and properly store laboratory equipment;

Principles of Applied Engineering

Scope and Sequence

- (F) describe the implications of negligent or improper maintenance; and
 - (G) demonstrate the use of precision measuring instruments.
- (5) The student describes the factors that affect the progression of technology and the potential intended and unintended consequences of technological advances. The student is expected to:
- (A) describe how technology has affected individuals, societies, cultures, economies, and environments; (B) describe how the development and use of technology influenced past events;
 - (C) describe how and why technology progresses; and
 - (D) predict possible changes caused by the advances of technology.
- (6) The student thinks critically and applies fundamental principles of system modeling and design to multiple design projects. The student is expected to:
- (A) identify and describe the fundamental processes needed for a project, including the design process and prototype development;
 - (B) identify the chemical, mechanical, and physical properties of engineering materials;
 - (C) use problem-solving techniques to develop technological solutions;
 - (D) use consistent units for all measurements and computations; and
 - (E) assess risks and benefits of a design solution
- (7) The student understands the opportunities and careers in fields related to robotics, process control and automation systems. The student is expected to:
- (A) describe applications of robotics, process control and automation systems;
 - (B) apply design concepts to problems in robotics, process control and automation systems;
 - (C) identify fields and career opportunities related to robotics, process control and automation systems; and
 - (D) identify emerging issues trends in robotics, process control and automation systems.
- (8) The student understands the opportunities and career
- (A) describe the applications of electrical and mechanical systems;
 - (B) describe career opportunities in electrical and mechanical systems;
 - (C) identify emerging trends in electrical and mechanical systems; and
 - (D) describe and apply basic electronic theory.
- (9) The student demonstrates the ability to function as a team member while completing a comprehensive project. The student is expected to:
- (A) apply the design process as a team participant;
 - (B) assume different roles as a team member within the project;
 - (C) maintain an engineering notebook for the project;
 - (D) develop and test the model for the project; and
 - (E) Demonstrate communication skills by preparing and presenting the project;
- (10) The student demonstrates a knowledge of drafting by completing a series of drawings that can be published by various media. The student is expected to:
- (A) setup, create and modify drawings;
 - (B) store and retrieve geometry;
 - (C) understand the use of line-types in engineering drawings;
 - (D) draw 2D single view objects;
 - (E) create Multi-view working drawings using orthographic projection;
 - (F) dimension objects using current ANSI standards;
 - (G) draw single line 2D pictorial representations;
 - (H) create working drawings which include section views; and
 - (I) demonstrate a knowledge of screw thread design per ANSI standards by drawing a hex head bolt with standard, square and acme threads.
